UNITED STATES DEPARTMENT OF AGRICULTURE

INVENTORY No. 111

Washington, D.C.

Issued May 1934

PLANT MATERIAL INTRODUCED BY THE DIVISION OF FOREIGN PLANT INTRODUCTION, BUREAU OF PLANT INDUSTRY, APRIL 1 TO JUNE 30, 1932 (Nos. 98257-100467)

CONTENTS

Introductory statement.....	1
Inventory.....	3
Index of common and scientific names.....	85

INTRODUCTORY STATEMENT

Inventory 111, including material received by the Division of Foreign Plant Introduction from April 1 to June 30, 1932 (nos. 98257 to 100467, inclusive), records conspicuously the collections of the Allison V. Armour expedition to the West Indies from December 1931 to April 1932, in which a widely varied range of tropical plants was gathered. Particular attention was paid to mangoes, of which 27 numbers were collected to be added to the permanent collection at Coconut Grove, Fla., where the test collection is established at the United States Plant Introduction Garden. A considerable number of palms were secured for the collection at the same garden, and a large number of ornamentals, including orchids, aroids, and bromeliads, as well as herbaceous perennials and flowering trees and shrubs, a total of 431 numbers.

The Erlanson-MacMillan expedition to Peru records in this inventory 328 introductions, of which 264 numbers were wild potatoes, the main object of the expedition. A considerable collection of native corn (99244-99288) was included.

In addition to the mangoes brought back by the Allison V. Armour expedition, the collection at Coconut Grove is increased by the collections from Puerto Rico (99760-99771, 99793-99801) and from Tahiti (99802-99804).

Through the kindness of Maj. Lionel de Rothschild, London, England, in sharing the material from the sixth Forrest expedition to southwestern China, this inventory records seeds numbered 99823-100103, 100141-100226, and 100281-100364, valued particularly for lilies, meconopsis, nomocharis, and primulas.

China is also represented by the collections received from Joseph Rock (99059-99070, 99676-99682), Albert Steward (99139-99242), and the botanical garden of Dr. Sun Yat Sen's memorial park, Nanking (98364-98387).

Special contributions for the specialists of the Division of Forage Crops and Diseases were received from the Union of Soviet Socialist Republics (98271-98304, 98524-98536), from Wales (99115-99138), from New South Wales (99327-99333), from Australia (99322-99325, 99467-99489, 100107-100113), and from New Zealand (100231-100251), including both grasses and legumes.

From the Union of Soviet Socialist Republics special collections for the use of other Department specialists were received, including cotton (98782-98790), peanuts (99302-99314), and sweetpotatoes (100253-100267).

PLANT MATERIAL INTRODUCED

Other collections, particularly of ornamentals, are recorded for the permanent collections of the several plant-introduction gardens maintained by this Division, particularly collections of species and varieties of maple.

The botanical determinations were made and the nomenclature determined by the late H. C. Skeels,¹ who had general supervision of this inventory.

KNOWLES A. RYERSON,
Principal Horticulturist, in Charge.

DIVISION OF FOREIGN PLANT INTRODUCTION,
Washington, D.C., October 27, 1933:

¹ Died Jan. 3, 1934.

INVENTORY²

**98257. ARUNDO PLINI Turra. Poa-
ceae. Grass.**

From Algeria, Africa. Roots presented by Dr. René Maire, University of Algiers, Algiers. Received April 2, 1932.

This species of *Aruno* is much smaller than *Aruno donar*, and the leaves are upright. It is native to the Mediterranean region and, in Algeria, is much used as a windbreak and as shading mats by the vegetable growers. Introduced as of possible value in experiments being carried on in the arid southwestern part of the United States.

**98258. SOLANUM TUBEROSUM L. Sol-
anaceae. Potato.**

From Germany. Tubers presented by the estate of Herr von Lockow, at Petkus, through Loyd V. Steere, agricultural attaché, Berlin. Received April 4, 1932.

Ackersegen. A wart-resistant table potato, with yellow flesh, that gives a high yield.

**98259. SOJA MAX (L.) Piper (*Glycine
hispida* Maxim.). Fabaceae. Soybean.**

From Japan. Seeds presented by T. B. Macaulay, Montreal, Canada. Received April 4, 1932.

Fukunaga. From the island of Hokkaido. A medium-sized, nearly round, straw-yellow bean with prominent dark-brown hilum.

98260. CITRUS sp. Rutaceae.

From Morocco. Seeds presented by M. H. Brayard, directeur de la Station Experimentale, Marrakech. Received April 4, 1932.

Rhobz el arsa. Introduced for trial as stock for the better varieties of lemon.

**98261. PSEUDOPHOENIX S ARGENTII
Wendl. Phoenicaceae. Palm.**

From the West Indies. Seeds presented by J. J. Albury, commissioner, The Bight, Cat Island, Bahamas, at the request of Hugh M. Matheson, Miami, Fla. Received March 30, 1932. Numbered in April 1932.

The so-called hog cabbage palm which grows wild on several of the Bahama keys. It does well in the rocky limestone formation of the islands.

For previous introduction see 96488.

**98262 to 98266. TRITICUM AESTIVUM
L. (*T. vulgare* Vill.). Poaceae.**

Common wheat.

From Australia. Seeds presented by H. Wenzholz, director of plant breeding, Department of Agriculture, New South Wales. Received March 29, 1932. Numbered in April 1932.

Grown at the experiment farm, Glen Innes, Sydney, New South Wales.

98262. *Bombard.* 98265. *Gluford.*

98263. *Cleveland.* 98266. *Yok.*

98264. *Ford.*

98267 to 98269.

From the Union of Soviet Socialist Republics. Cuttings presented by the director, Botanic Garden, Kamenetz-Podolsk, Ukraine. Received April 5, 1932.

98267. *TRADESCANTIA FLUMINENSIS* Vell. (*T. albiflora* Kunth). Commelinaceae.

Wandering-jew.

A trailing or pendulous herbaceous vine with ovate sessile leaves having sheaths with hairs only at the top. The white flowers, 1 inch wide, are hairy inside and are borne in axillary clusters. It is native to Brazil and Argentina.

98268. *TRADESCANTIA NAVICULARIS* Ort. Commelinaceae.

A stoloniferous creeping herbaceous perennial, native to Peru. The sessile ovate leaves are glabrous, and the bright-rose flowers are borne in terminal umbels.

98269. *ZEBRINA PENDULA* Schnizl. Commelinaceae.

Wandering-jew zebra.

A trailing half-succulent perennial herb native to Mexico, closely resembling *Tradescantia fluminensis*, but the leaf sheaths are hairy at both top and bottom. The sessile lanceolate leaves are silvery white above and red-purple beneath, and the flowers are rose red.

**98270. CITRUS GRANDIS (L.) Osbeck.
Rutaceae. Grapefruit.**

From Java. Plant and seeds presented by Mrs. Sophie H. Pownall, Banjoewangi. Received April 5, 1932.

A pink-fleshed grapefruit with a thick skin, introduced for the use of Department specialists.

² It should be understood that the names of horticultural varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Division of Foreign Plant Introduction and, further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identifications therefore must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this Division, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

98271 to 98304. Poaceae.

From the Union of Soviet Socialist Republics. Seeds presented by Wl. Kousnetzoff, in charge of forage plants, Institute of Plant Industry, Lenin Academy of Agricultural Sciences, Leningrad, at the request of Prof. N. I. Vavilov. Received March 25, 1932. Numbered in April 1932.

A collection of forage grasses introduced for the use of Department specialists.

98271 to 98275. *Alopecurus pratensis* L. Meadow foxtail.

98271. No. 8023. From the Voronezh Experiment Station.

98272. No. 8026. From the Voronezh Experiment Station.

98273. No. 8229. From Burjato-Mongolia.

98274. No. 8733. From Melitopol, Ukraine.

98275. No. 8733-a. From the Askania Nova Experiment Station, Ukraine.

98276 to 98288. *Bromus* spp. Bromegrass.

98276. *Bromus albidus* Bieb.

No. 11. From the Volga region in European Russia.

For previous introduction see 78772.

98277 to 98280. *Bromus erectus* Huds. Meadow bromegrass.

A perennial thickly cespitose grass with upright stems 1 to 3 feet high. Native to Europe and Asia Minor.

For previous introduction see 68066.

98277. No. 137. From Samara, European Russia.

98278. No. 171. From the Saratov Experiment Station.

98279. No. 497. From Irkutsk, Siberia.

98280. No. 500. From Krim.

98281 to 98284. *Bromus inermis* Leyss. Common bromegrass.

98281. No. 491. From the Samara Experiment Station.

98282. No. 511. From Saratov.

98283. No. 517. From the Askania Nova Experiment Station, Ukraine.

98284. No. 554. From the Volga region in European Russia.

98285. *Bromus japonicus* Thunb.

No. 1. From Tiflis, Caucasus region. A biennial, upright or ascending grass of wide distribution in Europe and Asia. It commonly becomes 1 to 2 feet high.

98286. *Bromus squarrosus* L.

No. 17. From Melitopol, Ukraine.

For previous introduction see 57515.

98287. *Bromus tectorum* L.

No. 28. From the Kharkov Experiment Station, Ukraine.

98288. *Bromus* sp.

No. 23. From Pamir.

98289 to 98291. *Dactylis glomerata* L. Orchard grass.

98289. No. 7696. From the Altai region, Siberia.

98290. No. 7776. From Omsk, Siberia.

98291. No. 8693. From the Kharkov Experiment Station, Ukraine.

98292 to 98296. *Festuca* spp. Fescue.

98271 to 98304—Continued.

98292 and 98293. *Festuca elatior* L. Meadow fescue.

98292. No. 6081. From the Ural region in Siberia.

98293. No. 7025. From Omsk, Siberia.

98294. *Festuca elatior arundinacea* (Schreb.) Celak.

No. 8031. From the Voronezh Experiment Station.

For previous introduction see 88909.

98295 and 98296. *Festuca ovina* L. Sheep fescue.

98295. No. 7779. From Omsk, Siberia.

98296. No. 9392. From Murman, Hibini.

98297 to 98299. *Lolium perenne* L. Perennial ryegrass.

98297. No. 6149. From the Tambov Government.

98298. No. 6585. From the Kaluga Government.

98299. No. 7648. From the Luga Government.

98300 to 98304. *Phleum* spp. Timothy.

98300. *Phleum phleoides* (L.) Karst.

No. 9421. From Priyenisseisk, Siberia. A perennial gray-green loosely cespitose grass with short creeping rhizomes and stems 1 to 2 feet high. It is native to dry stony places throughout central Europe.

For previous introduction see 95555.

98301 to 98304. *Phleum pratense* L.

98301. No. 6061. From the Tambov Government.

98302. No. 7765. From Oiretia, Siberia.

98303. No. 8827. From Vitebsk Government.

98304. No. 9002. From Mingrelia, Caucasus.

98305. *Casimiroa edulis* Llave. Rutaceae. White sapote.

From California. Bud wood presented by Mrs. Nancy Maltby, Carlsbad. Received April 5, 1932.

Bud wood from a tree 10 years old, which bears fruits weighing $1\frac{1}{4}$ pounds. The tree is over 20 feet tall.

For previous introduction see 73081.

98306 to 98316.

From Germany. Plants purchased from A. Hesse, Weener. Received April 6, 1932.

98306 to 98309. *Acer* spp. Aceraceae. Maple.

98306. *Acer caesium* Wall.

A tree up to 75 feet high, native to the slopes of the Himalayas between 7,000 and 10,000 feet altitude. The palmately five-lobed leaves, pale beneath, are cordate with serrate margins and are 6 to 8 inches long and broad. The flowers appear after the leaves in large pyramidal panicles and are followed by smooth fruits with the wings spreading nearly at right angles.

98307. *Acer orientale* L.

Variety *sempervirens*. A dwarf form with undivided entire or crenulate leaves, scarcely exceeding half an inch in length.

98308. *Acer cappadocicum* Gleditsch. Coliseum maple.

Variety *laetum rubrum*. A form in which the leaves are blood red while unfolding, later becoming green.

98306 to 98316—Continued.

98309. ACER LOBELII Ten.

A tree up to 60 feet high, with ascending branches and glaucous branchlets, related to the Coliseum maple (*Acer cappadocicum*) and also a native of Italy. The leaves, 4 to 6 inches across, are usually divided into five long-acuminate lobes and are dark green above and slightly paler beneath. The corymbs of small flowers are followed by winged fruits which spread at a wide angle.

For previous introduction see 97501.

98310. CARPINUS LAXIFLORA Blume. Betulaceae. Hornbeam.

A tree, native to Japan, 40 to 50 feet high. The obliquely elliptic to cordate long-pointed leaves are 2 to 3 inches long and have serrate margins. The inconspicuous flowers are borne in loose catkins 2 to 3 inches long.

98311 and 98312. CARPINUS TSCNONOSKII Maxim. Betulaceae. Hornbeam.

98311. A graceful shrubby tree up to 45 feet high, native to northeastern Asia, with the young branchlets and leaves softly pubescent. The elliptic to oblong leaves are 2 to 4 inches long and have irregularly finely serrate margins.

98312. Received as *C. yedoensis*.

98313. DAPHNE BLAGAYANA Freyer. Thymelaeaceae. Balkan daphne.

A low diffusely branched shrub native to the mountains of southeastern Europe. The obovate leaves, 1 to 2 inches long, are crowded at the end of the branchlets, and the creamy fragrant flowers, borne in heads, are followed by globose light-pink fruits.

For previous introduction see 92285.

98314. FAGUS SYLVATICA L. Fagaceae. European beech.

Variety *fastigiata*. A form with erect branches and smooth glossy leaves. Received as variety *dawyczkii*.

98315 and 98316. NOTHOFAGUS ANTARCTICA (Forst.) Oerst.

98315. A forest tree up to 100 feet high, native to Chile and closely related to the American beech (*Fagus grandifolia*). The branchlets are tomentulose, and the small leaves, about 1 inch long, are broadly ovate to oblong and have fine irregular teeth on the margin or occasionally bear small lobes.

98316. Variety *uliginosa*.

98317 to 98339.

From the Netherlands. Plants purchased from B. Ruys, Ltd., Royal Moerheim Nurseries, Dedemsvaart. Received April 6, 1932.

98317. ERYNGIUM sp. Apiaceae. Eryngo.

Jewel; a hybrid with dark-violet flowers.

98318. ERYNGIUM sp. Apiaceae. Eryngo.

Springfield seedling; a hybrid with dark steel-blue flowers which have blue stems.

98319. FUCHSIA LONGIPEDUNCULATA Hort. Onagraceae.

A name for which a place of publication and a description have not been found.

98320. GALEGA sp. Fabaceae. Goatsrue.

His Majesty; a high-growing hybrid with fine dark-blue flowers.

98321. GALEGA sp. Fabaceae. Goatsrue.

Lady Wilson; a hybrid with pinkish flowers.

98317 to 98339—Continued.

98322. HELENIUM AUTUMNALE L. Asteraceae. Sneezeweed.

Moerheim Beauty; a hybrid of erect habit. The strong flowers, which clear the foliage by several inches, are about 3 inches in diameter and have broad deep-crimson ray florets, shading to orange at the tips, surrounding a deep-purple disk which becomes golden as the stamens appear.

98323 to 98326. HOSTA spp. Liliaceae. Plantainlily.

98323 and 98324. HOSTA FORTUNEI (Baker) Bailey.

98323. A perennial herb, native to Japan, with slightly glaucous cordate leaves 6 to 8 inches long. The funnel-shaped pale-lilac flowers, 1 to 2 inches long, are borne in a raceme on a stalk 18 inches high.

98324. Variety *robusta*; a gigantic form with enormous leaves and flowers of the same color as the type.

98325. HOSTA SIEBOLDIANA (Hook.) Engler (*Funkia glauca* Sieb.). Cushion plantainlily.

A perennial herb, native to Japan, with very glaucous cordate leaves 10 to 15 inches long. The slender pale-lilac drooping flowers are borne on short stalks usually shorter than the leaves.

98326. HOSTA MINOR (Baker) Nakai.

Variety *alba*; a white-flowered form of this herbaceous perennial, native to China and Japan, with slightly cordate leaves, 4 to 6 inches long, on petioles as long as the blades. The small flowers are borne on long stalks 12 to 18 inches high.

98327 to 98329. KNIPHOFIA HYBRIDA Hort. Liliaceae. Torchlily.

98327. *Egypt*. Flowers a distinct shade of orange yellow.98328. *Excellence*. Elegant stems and flowers a very peculiar shade of red.98329. *Lord Roberts*. A variety with wonderful red flowers of distinct merit.

98330. LATHYRUS LATIFOLIUS L. Fabaceae. Perennial pea.

Rose Queen. A variety with large bright-pink flowers.

98331. PODOPHYLLUM EMODI Wall. Berberidaceae. Himalayan mayapple.

Variety *majus*; a very early flowering plant with foliage peculiarly marbled on long stems. The light-pink flowers, also on long stems, are raised just above the leaves and are followed by conspicuous fruits like the Spanish pepper.

98332 to 98339. PRIMULA JULIAE Kusnez. Primulaceae. Primrose.

98332. *Bunty*. A dwarf novelty, the finest of the Juliae-hybrid group. The flowers are as near blue as possible.98333. *Helena*. A hybrid with beautiful carmine-purple flowers.98334. *Helena* *purpurkissen*. A hybrid with very early, fine purple flowers.98335. *Juliana Gloria*. A very free-flowering dwarf hybrid with brilliant magenta-colored flowers with an orange eye.98336. *Magenta*. Flowers deep velvety crimson red with brilliant yellow eye.98337. *Mrs. MacGillatry*. An early variety with enormous quantities of fine lilac-pink flowers. (Originated in the Ruys Nurseries.)98338. *Pam*. A Juliae cross which is a dwarf with deep purple-crimson flowers; one of the finest and richest colors of this group.

98317 to 98339—Continued.

98339. *Wanda*. A very early dwarf hybrid with a mass of brilliant purple-blue flowers.

98340 to 98347.

From France. Seeds presented by the secretary general, Société Nationale d'Acclimatation de France, Paris. Received April 2, 1932.

98340. *ANNONA DIVERSIFOLIA* Safford. *Annonaceae*. *Ilama*.

A small tree, native to Mexico and tropical America, with brown-gray aromatic bark. The thin membranous leaves 5 inches long are broadly elliptical to oblanceolate. The broadly ovoid fruit, about 6 inches long, is clothed in dense grayish feltlike tomentum and, when mature, is usually covered with stout thick protuberances. The hard smooth golden-brown nutlike seeds are embedded in the edible cream-colored or rose-tinted flesh.

For previous introduction see 58850.

98341. *CARICA PAPAYA* L. *Papayaceae*. *Papaya*.

98342 and 98343. *CASIMIROA EDULIS* Llave. *Rutaceae*. *White sapote*.

98342. Originally from Hidalgo, Mexico.

98343. Originally from Tlaxcala, Mexico.

98344 to 98346. *PRUNUS CAPULI* Cav. *Amygdalaceae*. *Capulin*.

98344. Originally from Mexico, Mexico.

98345. Originally from Puebla, Mexico.

98346. Originally from Tlaxcala, Mexico.

98347. *PSIDIUM CATTLEIANUM* Sabine. *Myrtaceae*. *Strawberry guava*.

A form with red fruits.

For previous introduction see 94288.

98348 to 98350. *SACCHARUM OFFICINARUM* L. *Poaceae*. *Sugarcane*.

From British Guiana. Cuttings presented by the British Guiana Experiment Station, Georgetown. Received April 7, 1932.

98348. No. 10.

98349. No. 663-13.

98350. No. 666-18.

98351. *VITIS VINIFERA* L. *Vitaceae*. *European grape*.

From Algeria, Africa. Cuttings presented by Emil Vivet, Director of Agriculture, Algiers, through Oscar S. Heizer, American consul. Received April 7, 1932.

Valensi. A large round golden-yellow grape which forms a rather loose cluster and somewhat resembles the *Panse Précoce*.

98352 to 98362.

From the Union of Soviet Socialist Republics. Seeds presented by the director, Botanic Garden, Kamianetz Podilskyj, Ukraine. Received April 5, 1932.

98352 to 98356. *ALYSSUM* spp. *Brassicaceae*.

98352. *ALYSSUM ARGENTUM* Vitm. *Silver alyssum*.

A dwarf herbaceous perennial up to 15 inches high, native to Europe. The oblong spatulate leaves, 1 inch long, are silvery beneath, and the small yellow flowers appearing all summer are borne in dense clusters.

98352 to 98362—Continued.

98353. *ALYSSUM CALYCIUM* L.

A rather low annual alyssum from the mountains of Asia Minor. The lower leaves are obovate, the upper oblanceolate, and the flowers are in a simple raceme.

For previous introduction see 90608.

98354. *ALYSSUM MARITIMUM* (L.) Lam. *Sweet alyssum*.

Variety *Benthami*; a dwarf compact form, not over 6 inches high, with very pervasive scent.

98355. *ALYSSUM MONTANUM* L.

A tufted alpine perennial, native to the mountains of Europe. The pubescent plants, 2 to 3 inches high, have obovate leaves, and the fragrant yellow flowers are borne in simple racemes.

98356. *ALYSSUM SAXATILE* L. *Goldentuft*.

A low herbaceous perennial, native to Europe, forming dense mats. The oblanceolate hoary-tomentose leaves, 2 to 4 inches long, are entire or wavy margined, and the bright-yellow flowers are borne in small compact clusters on stems about 1 foot high.

98357. *DIANTHUS CHINENSIS* L. *Silenaceae*. *Chinese pink*.

Variety *Sequierii*; a form with the flowers in panicles and with squarrose-spreading bracts.

98358. *ECHINOPS KARATAVICUS* Regel and Schmalh. *Asteraceae*. *Globethistle*.

A stout hairy perennial composite from Turkistan, with a stem 1 or 2 feet high and elliptic-lanceolate or lanceolate pinnatifid leaves 6 to 8 inches long. The pale-blue flower heads are in small clusters.

98359. *ECHINOPS SPHAEROCEPHALUS* L. *Asteraceae*. *Common globethistle*.

A tall herbaceous perennial, native to southern Europe, with coarse stems 5 to 7 feet high. The large pinnatifid leaves are viscous pubescent above, tomentose beneath, and the broad lobes are armed with yellow spines. The white or bluish flowers are borne in globose masses.

98360. *KITAIBELIA VITIFOLIA* Willd. *Malvaceae*.

A robust herbaceous perennial up to 8 feet high, somewhat like abutilon, with five-lobed maple-like leaves and showy white or rose colored five-petaled flowers, clustered in the axils. Said to be useful in half-shady places. Native to Europe.

For previous introduction see 79503.

98361. *STATICE PINIFOLIA* Brot. *Plumbaginaceae*. *Thrift*.

A stemless herbaceous perennial with long rigid sharp-pointed leaves 4 to 6 inches long and pink flowers on three or four scapes 1 to 2 feet high. Native to Portugal.

98362. *STATICE SPLENDENS* Lag. and Rodr. *Plumbaginaceae*. *Thrift*.

A magenta-flowered herbaceous perennial with narrow linear basal leaves one half inch long and simple filiform scapes 2 inches high. Native to Spain.

98363. *MEDICAGO SATIVA* L. *Faba-ceae*. *Alfalfa*.

From Arabia. Seeds presented by K. S. Twitchell, mining engineer, Jidda, Hejaz. Received April 5, 1932.

A collection of native alfalfa introduced for the use of Department specialists.

98364 to 98387.

From China. Seeds presented by H. K. Fu, director, Botanic Garden, Dr. Sun Yat Sen's memorial park, Nanking. Received March 28, 1932. Numbered in April 1932.

98364 to 98366. *ABIES* spp. Pinaceae. Fir.

Collected in Szechwan Province.

98364. *ABIES BEISSNERIANA* Rehd. and Wils.

A fine tree up to 60 feet in height, with a trunk 2 to 3 feet in diameter, which grows along stream beds at about 11,000 feet altitude. The needles are not silvery beneath, and the erect cones are greenish white.

For previous introduction see 58499.

98365. *ABIES DELAVAYI* Franch.

A tall tree, often over 100 feet high, native to western China. The slightly grooved branchlets are lustrous red-brown and the emarginate linear leaves, about 1 inch long, are revolute on the margin, dark green above and with two white bands beneath. The violet-black cylindrical to ovoid cones are 2 to 4 inches long, and the scales are nearly 1 inch wide.

98366. *ABIES RECURVATA* Masters.

A tall tree up to 125 feet high, native to western China. The rough bark is dark gray or red brown, the lustrous branchlets are pale yellow-gray, and the sharp-pointed recurved linear leaves, more than 1 inch long, are shining blue-green above and paler beneath. The ovoid cones, 2 to 4 inches long, are violet-purple, finally becoming gray-brown.

98367. *BUDDLEIA LINDLEYANA* Fortune. Loganiaceae. Lindley butterflybush.

An upright shrub 6 to 8 feet high, collected in Chekiang Province, where it is native. The branchlets are four angled and slightly winged, and the ovate to oblong-lanceolate leaves are 2 to 4 inches long and have remotely denticulate margins. The purple-violet flowers are borne in rather dense upright spikes 6 to 8 inches long.

98368. *CASTANOPSIS HYSTRIX* A. DC. Fagaceae. Evergreen chinquapin.

A lofty tree 80 to 100 feet high, with trunks 3 feet in diameter, found in pine forests in Szechwan Province at 6,000 feet altitude. The smooth fawn-colored bark is flaky, and the straight ascending branches give the tree an oblong appearance. The burs are in long densely packed spikes, and the involucre are covered with long soft green spines. The small nuts are borne singly or in twos. This is one of the finest forest trees of the region. According to the natives, the wood is very durable and is not attacked by insects.

For previous introduction see 65759.

98369. *CROTON TIGLIUM* L. Euphorbiaceae. Croton-oil plant.

Collected in Szechwan Province. A small ornamental tree with ovate leaves varying in color from metallic green to bronze and orange. The powerful purgative, croton oil, is obtained from the seeds by crushing.

For previous introduction see 45196.

98370. *EUCOMMIA ULMOIDES* Oliver. Trochodendraceae. Tu-chung.

Shih mien shu, stone cotton tree, in reference to the asbestoslike threads of shining whitish color which appear when the pieces of bark or leaf are snapped across. A tree which reaches a height of 80 feet and seems to grow best when sheltered by other trees. It is native to the southwestern part of China.

For previous introduction see 46119.

98364 to 98387—Continued.

98371. *EXCHORDIA RACEMOSA* (Lindl.) Rehd. Rosaceae. Common pearlbrush.

A slender spreading shrub 9 to 12 feet high, native to eastern China. The elliptic to obovate leaves are 2 to 5 inches long and whitish beneath, and the white flowers, nearly 2 inches across, are borne in 6- to 10-flowered racemes.

98372. *GREWIA BILOBA* Don. Tiliaceae.

A shrub 6 to 9 feet high, with tomentose branchlets, native to northern China, and collected in Chekiang Province. The rhombic-ovate leaves, 2 to 5 inches long, are unequally and doubly serrate, sometimes three-lobed, and are densely stellate pubescent beneath. The creamy-yellow flowers, about one half inch across, are borne in 5- to 8-flowered umbels and are followed by orange-red 2- to 4-lobed fruits.

98373. *GYMNOCLADUS CHINENSIS* Baill. Caesalpiniaceae.

Closely resembling the Kentucky coffeetree (*G. dioica*), but the oblong-obtuse leaflets are smaller and are pubescent on both sides. The lilac-purple flowers are borne in large panicles and appear before the leaves.

98374. *MALLOTUS APELTA* (Lour.) Muell. Arg. Euphorbiaceae.

Collected in Chekiang Province. A large tropical shrubby perennial, native to southeastern China, closely related to the castor-bean (*Ricinus communis*). The leaves are alternate, broadly oval, and the fruit is a prickly capsule.

98375 to 98380. Collected in Szechwan Province.

98375. *ORMOSIA HOSIEI* Hemsl. and Wils.

Hung-tou Mu, red bean tree, so-called because the seeds are red and in a beanlike pod. The heavy wood is a rich-red color, beautifully marked, and is used for the very best furniture and high-grade cabinetwork. In the spring the tree is covered with large panicles of white and pink pea-shaped flowers, and at all seasons it is striking in appearance.

For previous introduction see 54033.

98376. *PICEA PURPUREA* Masters. Pinaceae. Spruce.

A large forest tree often over 100 feet high, native to China. It is closely related to *P. likiangensis*, from which it differs in having purple cones about 2 inches long. The shoots are usually densely covered with pale-gray spreading villous pubescence; the leaves are narrowly lanceolate, about one half inch long, and vary from deep green to glaucous. The trees vary in habit from pyramidal to spreading, and sometimes the branchlets are drooping.

98377. *PINUS TABULAEFORMIS DENSATA* (Masters) Rehd. Pinaceae. Pine.

A tree up to 75 feet high, native to China. The stiff leaves are 3 to 5 inches long, and the obliquely ovoid cones, 2 to 3 inches long, have the ends of the outer scales conspicuously swollen.

98378. *PINUS YUNNANENSIS* Franch. Pinaceae. Yunnan pine.

A large forest tree, native to Yunnan, China. The long slender drooping leaves are up to 10 inches long, and the cones, 2 to 4 inches long, have flat scales.

98379. *PYRACANTHA CRENATO-SERRATA* (Hance) Rehd. Malaceae. Firethorn.

An evergreen shrub up to 10 feet high, native to central and western China. The branchlets are rusty pubescent, and the elliptic to obovate leaves, 1 to 3 inches long, are entire or crenate, dark green and lustrous above and paler beneath. The umbels of small white flowers are followed by coral-red fruits.

98364 to 98387—Continued.

98380. *QUISQUALIS INDICA* L. Combretaceae.
Rangoon-creeper.

A rambling subscandent shrub, native to India, with opposite obovate leaves 4 inches long and short axillary and terminal spikes of tubular pink or red flowers. The obovoid fruits are 1 to 2 inches long and are sharply five-angled.

98381 to 98387. Collected in Chekiang Province.

98381. *RHAMNELLA FRANGULOIDES* (Maxim.) Weberbauer. Rhamnaceae.

A tree up to 30 feet high, native to China and Japan. The long-pointed oblong-ovate leaves, 2 to 5 inches long, are serrulate on the margin, and the small green flowers, in axillary cymes, are followed by cylindrical-oblong black fruits about one-third inch long.

98382. *RHEUM ALEXANDRAE* Batal. Polygonaceae.

A stout herbaceous perennial, native to China, with a rosette of elliptic-ovate dark glossy-green leaves and flower stems, 3 to 4 feet high, bearing large pale-yellow overlapping leaflike bracts.

For previous introduction see 84049.

98383. *SOPHORA FLAVESCENS* Ait. Fabaceae.

A subshrubby perennial, 3 to 4 feet high, with odd-pinnate leaves of 3 to 6 pairs of elliptical leaflets 1 to 2 inches long and loose racemes of creamy white pea-shaped flowers 1 inch long. It is native to northern China.

For previous introduction see 98124.

98384. *TSUGA CHINENSIS* (Franch.) Pritz. Pinaceae. Chinese hemlock.

A large forest tree, up to 150 feet high, native to western China. The branchlets are yellowish at first, later turning pale yellow-gray. The linear leaves, 1 inch long, are glossy dark green above and have broad whitish bands beneath which later become inconspicuous. The ovoid cones, 1 inch long, have lustrous yellow-brown scales.

98385. *XYLOSMA CONGESTUM* (Lour.) Merr. Flacourtiaceae.

A shrub or small tree, sometimes spiny, native to China and Japan. The ovate-serrate leaves are 1 to 2 inches long, and the small fragrant yellow flowers, in axillary racemes 1 inch long, are followed by globose black fruits one fourth inch in diameter.

98386. *ZANTHOXYLUM ALATUM PLANISPINUM* (Sieb. and Zucc.) Rehd. and Wils. Rutaceae. Prickly-ash.

A Japanese shrub 7 to 13 feet high, much branched at the base, sometimes with a short trunk. The dark-brown spreading branches, drooping a little at the tips, bear stout straight spines in pairs and evergreen pinnate leaves, dark green above and paler beneath. The small red fleshy fruits are persistent and emit a very agreeable aromatic odor when bruised. The shrub may be used as an ornamental or as a hedge plant.

For previous introduction see 98085.

98387. *ZANTHOXYLUM SCHINIFOLIUM* Sieb. and Zucc. Rutaceae. Prickly-ash.

A graceful Japanese shrub or small tree with attractive compound leaves and, in the autumn, rather conspicuous clusters of greenish or brownish fruits.

For previous introduction see 90676.

98388 to 98392. *VITIS VINIFERA* L. Vitaceae. European grape.

From the Union of Soviet Socialist Republics. Cuttings presented by Maj. C. R. Olberg, Tiflis, Transcaucasia, through the commercial attaché, Istanbul, Turkey. Received April 9, 1932.

A collection of commercial varieties introduced for the use of Department specialists.

98388. *Rozovii Kishmish*, light-red raisin grape.

98389. *Zheltii Kishmish*, yellow raisin grape.

98390. *Ackepu askjari*.

98391. *Meskahakie*.

98392. *Rozovii Kishmish*, light-red raisin grape.

98393. *CORDIA* sp. Boraginaceae.

From the West Indies. Seeds collected by Gaines R. Wilson, of Miami, Fla., at Albert Town, Fortune Island, Bahamas. Received March 28, 1932. Numbered in April 1932.

A tree growing in poor soil in an exposed position, where it has become both drought and hurricane resistant. The dark-green leaves looked thrifty, although there had been a drought for 4 months.

98394 to 98396. *FICUS* spp. Moraceae. Fig.

From Egypt. Cuttings presented by T. W. Brown, director, horticultural section, Cairo. Received April 15, 1932.

98394. *FICUS BENGHALENSIS* L. Banyan tree.

A large tree, 75 to 100 feet high, rooting from the branches. The branchlets are softly pubescent, the broadly ovate coriaceous leaves are 4 to 8 inches long, and the globose red fruits, borne in pairs, are about the size of small cherries. The tree is native to India and northern Africa.

98395. *FICUS ERIOBOTRYOIDES* Kunth and Bouche.

A tree with straight branches, brown pubescent branchlets, and oblong-ovate, coriaceous leaves 1 foot long and 3 to 4 inches wide. The native country is not known.

For previous introduction see 93271.

98396. *FICUS LACCIFERA* Roxb.

A tropical tree with oval or cordate shining-green leaves up to 7 inches long and smooth oval fruits the size of a gooseberry. Native to Silhet, India.

98397. *BOUGAINVILLEA GLABRA* Choisy. Nyctaginaceae. Lesser bougainvillea.

From the Canal Zone. Plants presented by J. E. Higgins, director, Experiment Gardens, Summit. Received April 13, 1932.

A form with pink flowers.

98398. *PERSEA AMERICANA* Mill. Lauraceae. Avocado.

From the Society Islands. Bud wood presented by Harrison W. Smith, Papeari, Tahiti. Received April 14, 1932.

Motuovini. A variety of excellent flavor and quality, originated by Mr. Smith.

98399 to 98417.

From the West Indies. Scions collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the 1931-32 Allison V. Armour expedition. Received April 11, 1932.

98399 to 98417—Continued.

98399. CITRUS AURANTIFOLIA (Christm.) Swingle. Rutaceae. Lime.

No. 2942. From Charlotteville, Tobago, February 20, 1932. Very acid and very juicy fruit; on the same tree were found large fruits with rough skin and small smooth-skinned fruits.

98400 to 98416. MANGIFERA INDICA L. Anacardiaceae. Mango.

Nos. 98400 to 98406 were presented by E. A. Walter, superintendent of the Agricultural Experiment Garden at St. Lucia, Windward Islands, March 8, 1932.

98400. No. 3717. *Tin creme*. A medium-sized oval yellow to green mango with smooth cream-flavored flesh with persistent fibers. It is an early mango in St. Lucia, ripening a small crop in February and March and the main crop from April until August.

98401. No. 3718. *La Rose*. A bright rose-colored medium-sized pear-shaped subacid mango which ripens in August.

98402. No. 3720. *Tin Tin*. The *Tin* mango seems to be a race of seedlings coming partly true to type. There is a theory that these seedlings came from a grafted mango. They are not immune to anthracnose, but fruit in February and March and again from April to August.

98403. No. 3721. *Amelie*. A medium-sized, green-yellow mango which has a red blush if grown in the sun; one of the most prized mangoes of the island. It is a midseason variety and rather stringy and not so good a shipper as the *Julie*.

98404. No. 3722. *Imperial*. A large very juicy yellow fruit with a small seed and very little fiber, which ripens in midseason.

98405. No. 3723. *Graham*. A seedling of the *Julie*, that has a larger fruit and develops a crimson blush when grown in the sun. It is preferred by many in the West Indies to the *Julie*, which seems to be the standard mango of the islands.

98406. No. 3724. *Julie*. This dwarf mango, with wedge-shaped squarish fruit that in sunlight develops a distinct red blush, is becoming the standard mango of the West Indies. It is a midseason variety, yielding a reasonably sure crop, and is a good shipper.

Nos. 98407 and 98408 were presented by Mr. Buffon, head gardener at Jardin d'Essais, Basse Terre, Guadeloupe, French West Indies, March 12, 1932.

98407. No. 3787. *D'Or*. A large round yellow mango, not fibrous, with a medium-sized seed and much juicy flesh, rather inclined toward the acid side.

98408. No. 3788. *Coq D'Inde* (turkey egg). A small yellow mango about the size of a turkey egg, with thin skin, a large seed, and highly perfumed yellow fibrous flesh. A midseason variety that may prove better than the ordinary "turpentine" mango.

98409. No. 3816. *Quanto*. From Tortola, British Virgin Islands, March 18, 1932. A mango of medium size with green skin, a small seed, and sweet yellow flesh without fiber but with a turpentine flavor. The tree is a heavy bearer and is introduced for comparison with the ordinary "turpentine" mango now growing in Florida, as stock or for crossing purposes.

98410. No. 3817. *Turkey breast*. From the French side of St. Martin Island, March 17, 1932. A large thick mango with a suture down one side, which gives it the appearance of a turkey's breast. The fruit is said to be

98399 to 98417—Continued.

fiberless, but as it was not ripe its quality could not be judged, but it is evidently the best mango of this region.

Nos. 98411 to 98416 were collected March 18, 1932, on Tortola.

98411. No. 3818. *Bullhead* or *Miss Niles*. Scions from a seedling tree 70 years old, on the estate of J. S. W. Georges, at Bough Bay. The large light-yellow fruits, up to a pound in weight, have small seeds, light-yellow, very juicy flesh with short fibers, and are not so strong flavored as most mangoes.

98412. No. 3819. *Cottage*. Scions from an old seedling tree 3 feet in diameter which was loaded with both fruit and flowers. The fruits are medium to small, very sweet, and rather fibrous. Evidently a rather early sort, which may have some character worth preserving.

98413. No. 3826. *Royal*. Presented by Roy Campbell, on whose place the tree was growing. A medium-sized seedling mango of scarlet color, not very fibrous, and of good flavor, but not the best. Its color will make it a valuable variety for use in breeding work.

98414. No. 3831. *Tortola seedling*. From an old seedling tree growing in the orchard plat at the Tortola Experiment Station. The fruit is said to be of good quality, somewhat acid, and very juicy, with less fiber than the common type. The skin is yellow, overlaid with a dark-red blush, similar in shape to the *Julie*, but larger, as the fruits weigh from three-fourths to 1 pound each.

98415. No. 3832. *Rector* or *Boar hog*. Collected near Sea Cow Bay. A large sweet yellow fruit with very little fiber. It is one of the largest-fruited mangoes on the island and is probably a midseason or late variety.

98416. No. 3833. *Kidney*. Collected near the experiment station. The large fruits are said to be greenish yellow when ripe and one of the best seedling mangoes on the island.

98417. ARMOURIA BEATA Lewton. Malvaceae.

No. 2617. A new genus and species from Beata Island, Dominican Republic, March 22, 1932. Seeds and scions of a shrub or small tree 15 to 20 feet high found on a rocky cliff. The leaves, over 2 inches long, are cordate, subobovate, roughish above, paler and softly stellate-tomentose beneath. The beautiful silver-shaped cream-colored flowers are solitary and over 3 inches in diameter.

98418 to 98444. ACER spp. Aceraceae.

From England. Plants purchased from W. Fromow & Sons, Chiswick, London, W. Received April 13, 1932.

98418 to 98427. ACER PALMATUM Thunb. Japanese maple.

98418. *Atropurpureum*; a vigorous handsome plant with bold dark-purple foliage.

98419. *Corallinum*; a pretty small-growing variety with bright coral-red foliage in spring.

98420. *Crispum*; a tree of very distinctive erect habit with green red-stalked leaves which have convoluted edges.

98421. *Decompositum*; a distinct variety with pretty green leaves.

98422. *Dissectum atropurpureum*; a variety with fine purple deeply serrated leaves, 9- to 10-parted.

98423. *Dissectum ornatum*; a variety with bronze-purple, deeply serrated leaves, 9- to 10-parted. It is very similar to *dissectum atropurpureum* except that the leaves are more bronzy.

98418 to 98444—Continued.

98424. *Dissectum palmatifidum*; a tree with bright-green very fine palmately divided leaves.

98425. *Dissectum variegatum*; a tree with very fine palmately divided leaves, prettily variegated rose and white.

98426. *Involutum*; a tree with five-lobed serrated leaves, edged with rose in the spring.

98427. *Involutum variegatum*; a tree with five-lobed serrated leaves, prettily variegated with white in the center and edged with rose; very pretty in the spring.

98428 to 98432. *ACER JAPONICUM* Thunb.
Fullmoon maple.

98428. A tree with light-green, many-lobed leaves which change in summer to red tints.

98429. *Aureum*; a splendid bright-golden form of the above; the finest golden maple.

98430. *Dissectum*; a distinct species with large broad foliage of dark green, marbled with yellow.

98431. *Laciniatum*; a beautiful form whose leaves have deeply lacinated lobes which are light green in the spring, changing to reddish in the summer and crimson in autumn.

98432. *Uribanishki*.

98433 to 98444. *ACER PALMATUM* Thunb.
Japanese maple.

98433. *Laciniatum*; bright-green, deeply lacinated leaves which change to red in autumn.

98434. *Laciniatum atropurpureum*; a dark-purple form of the above.

98435. *Linearifolium*; a very distinct form with light-green leaves having seven very narrow lobes.

98436. *Linearifolium purpureum*; a dark-purple form of the preceding.

98437. *Reticulatum* (flavescens); a form with pale yellow-green, seven-lobed, deeply serrated leaves with dark-green veins.

98438. *Roseum marginatum*; a very distinct and charming variety having light-green leaves with deeply cut lobes, margined with rose.

98439. *Rufescens*; a form with pale-green sharply serrated leaves with seven lobes.

98440. *Sanguineum*; a striking variety with five-lobed leaves of deep reddish crimson.

98441. *Sanguineum variegatum*; a striking variety with five-lobed leaves of deep reddish crimson variegated with bright scarlet, changing to white.

98442. *Septemlobum*; a form with seven-lobed, pale-green leaves which change to red in the autumn.

98443. *Seigenii*; a pretty variety with bright-red leaves in the spring which change in the summer.

98444. *Variegatum* (versicolor); a form with variegated green leaves spotted and striped, rose and white.

98445 to 98447. *MANGIFERA INDICA* L.
Anacardiaceae. Mango.

From the West Indies. Scions collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the 1931-32 Allison V. Armour expedition. Received April 14, 1932.

Presented February 17, 1932, by R. O. Williams, director, Trinidad Botanic Garden.

98445. No. 2898. *Graham*; a seedling of the *Julie* mango, originated locally and named after the

98445 to 98447—Continued.

originator. When grown in the wet part of the island, the mango is a yellowish green, but when grown in dry parts of the island it develops a crimson cheek. The fruit is larger than the *Julie*, and the tree is a good bearer.

98446. No. 2899. *Pere Louis*; a medium-sized, yellow mango of very good flavor and very little fiber. It has no turpentine taste.

98447. No. 2900. *Roseau*; a yellow-green mango of good flavor and little fiber, with no turpentine flavor. It is not as good as the *Julie* and is not a good shipper.

98448. *CITRUS AURANTIUM* L. Rutaceae. Seville orange.

From the West Indies. Seeds collected on Dominica, Windward Islands, and presented through the Division of Fruit and Vegetable Crops and Diseases. Received April 14, 1932.

Dominican sour orange.

98449. *CITRUS GRANDIS* (L.) Osbeck. Rutaceae. Grapefruit.

From the West Indies. Plants collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the 1931-32 Allison V. Armour expedition. Received April 11, 1932.

No. 2865. Presented February 16, 1932, by R. O. Williams, director, Trinidad Botanic Gardens. A wild grapefruit which is oval in shape and quite distinct from the common grapefruit of Florida.

98450 to 98481. *RHODODENDRON* spp. Ericaceae.

From England. Plants purchased from Harry White, Sunningdale Nursery, Windlesham, Surrey. Received April 15, 1932.

98450 to 98456. *RHODODENDRON AZALEODENDRON* Vilm. and Bois.

A collection of rhododendron-azalea hybrids.

98450. *Goenianum*.

98451. *Odoratium*.

98452. *Jackie*.

98453. *Katie*.

98454. *Nellie*.

98455. *Smithii aureum*.

98456. *Torlonianum*.

98457. *RHODODENDRON AMBIGUUM* Hemsl.

A low Chinese evergreen shrub with lanceolate leaves 2 to 3 inches long and flowers which are pale yellow spotted with greenish yellow and 2 inches across.

For previous introduction see 86758.

98458. *RHODODENDRON CALOSTROTUM* Balf. and Ward.

A low shrub a foot high, native to northeastern Burma between 11,000 and 12,000 feet altitude. The obovate leaves 1 inch long are densely covered above with greenish scales, and the lower surface is pale red with numerous flaky scales. The widely funnel-shaped flowers, 1 inch long, are bright red purple and are borne in pairs at the ends of the branchlets.

For previous introduction see 97384.

98459. *RHODODENDRON CANTABLE* Balf. f.

A shrub up to 3 feet high with small oval-elliptic leaves densely dotted brown beneath. The small flowers are a deep purplish blue.

For previous introduction see 59564.

98450 to 98481—Continued.

98460. RHODODENDRON CEPHALANTHUM Franch.

A shrub 2 feet high with small elliptical leaves which have brownish wool beneath. The tubular flowers are white.

For previous introduction see 59029.

98461. RHODODENDRON CHARTOPHYLLUM Franch.

A distinct species with the general characteristics of *R. yunnanense*, but the leaves are usually deciduous, more narrowly oblanceolate, and entirely wanting the bristles on the upper surface, which are typical of the true *R. yunnanense*. The form with leaves completely deciduous is called *R. chartophyllum praecox*. No doubt the two species, both of which grow in Yunnan, hybridize freely, and this probably explains the confusion between them in gardens.

For previous introduction see 97622.

98462. RHODODENDRON DASYPETALUM Balf. and Forr.

A low shrub 2 to 3 feet high, with scaly branchlets, native to Yunnan, China. The oblong-elliptic leaves, less than an inch long, are densely covered beneath with light-green overlapping scales. The openly funnel-shaped flowers, 1 inch long, are borne in terminal clusters of 1 to 2 flowers, and the bright purple-rose corolla is softly pubescent outside.

98463. RHODODENDRON FASTIGIATUM Franch.

A low erect shrub with scaly branchlets, native to Yunnan, China. The elliptic-oblanceolate leaves, one third inch long, are densely scaly on both surfaces, and the light-purple flowers, one-half inch long, are borne in terminal clusters of 4 or 5.

98464. RHODODENDRON SARGENTIANUM Rehd. and Wils.

A low alpine shrub up to 2 feet high, native to Szechwan, China. The broadly elliptic mucronate leaves half an inch long are reticulate and shining above, clothed with loose flaky scales beneath. The widely tubular lemon-yellow flowers, less than 1 inch long, are densely scaly outside and are borne in loosely capitate few-flowered clusters.

98465. RHODODENDRON HIPPOPHAEODES Balf. and Smith.

A shrub up to 3 feet high, native to swampy situations in the Likiang Snow Range, Yunnan, China. The small narrowly oblanceolate leaves obtusely mucronate are covered with contiguous scales above, more densely below; the scales often slightly overlapping are a uniform pale gray. The small flowers, pale lilac to rose, are not spotted.

For previous introduction see 97625.

98466. RHODODENDRON HYPOLEPIDOTUM (Franch.) Balf. and Forr.

A shrub over 4 feet high with scaly branchlets, found in open situations in pine forests at 13,000 feet altitude in southeastern Tibet. The oblanceolate leaves up to 2 inches long are scaly on both surfaces, the scales below being rather dense and very unequal, flaky, some pale, others darker; lateral nerves distinct. The small yellow flowers are in terminal clusters of 5 or 6.

For previous introduction see 59076.

98467. RHODODENDRON IMPEDITUM Balf. and Smith.

A low shrublet native to the Likiang Snow Range, Yunnan, China, between 15,000 and 16,000 feet altitude. The short branchlets are covered with small black scales, and the broadly elliptic leaves, less than 1 inch long, are deeply scaly on both surfaces, the scales below being about half their own diameter apart, more or less uniform but some darker. The openly funnel-shaped

98450 to 98481—Continued.

flowers, mauve or light purplish blue, are in terminal clusters of 1 or 2.

For previous introduction see 59263.

98468. RHODODENDRON LYSOLEPIS Hutchins.

A dwarf shrub with erect branches and spreading or recurved oblong-elliptic leaves, glistening glandular scaly above and with scattered scales beneath. The deep-violet to pink-violet flowers, 1 inch across, in terminal clusters of three, have a short-tubed corolla with the limb spreading at right angles. This specimen was described from plants cultivated at Kew.

98469. RHODODENDRON MULIENSE Balf. and Forr.

A low shrub less than 3 feet high with densely scaly branchlets. The oblong-elliptic leaves, less than 1 inch long, are densely scaly on both surfaces, and the bright-yellow flowers are in compact 5- to 6-flowered terminal umbels.

For previous introduction see 94120.

98470. RHODODENDRON MYRTILLOIDES Balf. and Ward.

A dwarf shrublet, 3 to 4 inches high, native to northeastern Burma. The obovate-lanceolate leaves less than 1 inch long are rounded to a thick point and are glaucous beneath with a few scattered scales. The solitary terminal shortly bell-shaped flowers about one-half inch long are plum colored outside and maroon inside and are on slender peduncles over 1 inch long.

98471. RHODODENDRON RACEMOSUM Franch.
Mayflower rhododendron.

An upright Chinese shrub up to 6 feet high, with scaly branchlets, elliptic to obovate leaves which are glabrous above and glaucous beneath, and few-flowered clusters of pink flowers so abundantly produced as to completely cover the plant.

For previous introduction see 97400.

98472. RHODODENDRON OLEIFOLIUM Franch.

An erect shrub native to Yunnan, China. The narrowly lanceolate evergreen leaves, 2 inches long, are glabrous above and densely glandular scaly beneath. The pink to almost white flowers, 1 inch long, are borne in 1- to 2-flowered terminal clusters.

For previous introduction see 58505.

98473. RHODODENDRON RUBIGINOSUM Franch.

A rigid evergreen shrub or tree up to 30 feet high, with scaly purplish branches, native to Yunnan, China, in open situations in forests between 7,500 and 11,000 feet altitude. The ovate to lanceolate leaves, 2 to 3 inches long, are densely covered beneath with brown-red scales. The broadly funnel-form flowers, varying from bright red to mauve spotted with brown, are produced in 4- to 8-flowered terminal clusters.

For previous introduction see 86762.

98474. RHODODENDRON RUSSATUM Balf. and Forr.

A small shrub up to 4 feet high, native to Yunnan, China. The oblong-lanceolate leaves, 1 inch long, are densely scaly on both surfaces, being rusty brown beneath. The white-throated deep purple-blue flowers are openly funnel-shaped and are borne in terminal clusters of 4 or 5.

98475. RHODODENDRON SCINTILLANS Balf. and Smith.

A small shrub with erect branches and densely scaly branchlets, native to Yunnan, China. The oblanceolate leaves, one-half inch long, are densely scaly on both surfaces, and the lavender-blue openly funnel-shaped flowers, one-half inch long, are borne in terminal clusters of three from the upper axils of the shoots.

For previous introduction see 59598.

98450 to 98481—Continued.

98476. RHODODENDRON SMIRNOWII Trautv.
Smirnow rhododendron.

A shrub or small tree about 20 feet high, with dark-green leaves, gray-hairy beneath, and compact heads of rose-red flowers each about 3 inches across. Native to the Caucasus region.

For previous introduction see 79042.

98477. RHODODENDRON TELMATEIUM Balf. and Smith.

A low shrubby plant up to 3 feet high, with oblong or narrowly lanceolate leaves about one-half inch long and solitary rose-purple flowers one-half inch long. Native to Yunnan, China.

For previous introduction see 94130.

98478. RHODODENDRON UNGERNII Trautv.

A shrub or small tree up to 20 feet high, with white-tomentose branchlets, native to the Caucasus region. The thick leathery oblong-lanceolate leaves are 4 to 8 inches long, glabrous and dark green above and covered beneath with gray to fawn dense woolly tomentum and scattered long-stalked glands. The funnel-campanulate, pale-rose flowers, 1 to 2 inches long, are borne in 20- to 30-flowered lax racemes.

98479. RHODODENDRON WEYRICHII Maxim.

A deciduous shrub up to 15 feet high, native to Japan and China. The broadly ovate to rhombic leaves, 1 to 3 inches long, are in clusters of 2 to 3 at the tips of the branchlets and turn vinous-purple in autumn. The rotate-funneliform red flowers, 1 to 3 inches across, appear before or with the leaves.

98480. RHODODENDRON YUNGNINGENSE Balf. f.

A low shrub 1 to 2 feet high with short densely scaly branchlets, native to Szechwan, China. The oblong-lanceolate leaves, one-third inch long, are densely covered with rust-brown scales, and the openly funnel-shaped deep-purple flowers are one-third inch long.

98481. RHODODENDRON YUNNANENSE Franch.
Yunnan rhododendron.

A low shrub, 6 feet or less high, with narrowly elliptic somewhat hairy leaves and few-flowered clusters of broadly funnel-shaped flowers, white with the upper lobes spotted blood red. Native to Yunnan, China.

98482. RHODENDRON CAUCASICON Pall.
Ericaceae. Caucasian rhododendron.

From England. Plants purchased from Robert Veitch & Son, Ltd., Royal Nurseries, Exeter. Received April 15, 1932.

Cunningham's sulphur.

98483 to 98503. Phoenicaceae. Palm.

From the West Indies, British Guiana, and Surinam. Seeds collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the 1931-32 Allison V. Armour expedition. Received April 18, 1932.

98483. ACROCOMIA SCLEROCARPA Mart.
Macauba palm.

No. 2961. From St. Vincent and Windward Islands, February 4, 1932. A beautiful palm 40 feet high, with a very spiny trunk, particularly when young, as its finely pinnate leaves are graceful and drooping. The large bunches of fruits are green with brown scurfy hairs at the basal portion.

For previous introduction see 93399.

98484. ARCHONTOPHOENIX ALEXANDRAE (F. Muell.) Wendl. and Drude.

No. 2983. From the Botanic Garden, Georgetown, British Guiana. A pinnate-leaved palm,

98483 to 98503—Continued.

70 to 80 feet high, with leaves several feet long of lanceolate usually entire leaflets, 1 to 2 feet long, and whitish beneath. The green-yellow flowers are borne in a cluster about 1 foot long and are followed by small round fruits. It is native to Queensland, Australia.

For previous introduction see 97805.

98485. ARECA TRIANDRA Roxb.

No. 2954. From the Botanic Station, Scarborough, Tobago. A graceful spineless palm ultimately about 25 feet high, usually with several trunks which bear crowns of pinnate leaves 4 to 6 feet in length. The fruits, about the size of an olive, are orange-scarlet. Native to India.

For previous introduction see 97807.

98486. ARECA sp.

No. 3727. Collected March 10, 1932, on the island of Martinique.

98487. BORASSUS FLABELLIFER L. Palmyra palm.

No. 2979. From the Botanic Gardens, Georgetown, British Guiana, February 25, 1932. A handsome though slow-growing palm found on the dry coastal regions of Ceylon where it appears able to withstand any amount of lime and is said to have been used successfully as a sand binder. In the number of ways in which this palm is used in Ceylon, it rivals the coconut.

For previous introduction see 93318.

98488. COCCOTRINAX MARTII (Griseb. and Wendl.) Beccari.

No. 3889. From the United States Naval Station, Guantanamo Bay, Cuba, March 25, 1932. A slender fan palm 25 feet high growing in calcareous and hard red clay soil where the rainfall is 16 inches annually. It resembles the silver palm, but has a bottle-like base.

98489. COCCOTRINAX sp.

No. 3873. From a tree in the Agricultural Experiment Station, Tortola, British Virgin Islands, March 19, 1932. A rather slender fan palm with tips of the pinnae drooping and the basal pinnae twisted in a position of a spiral, making some of the pinnae cross over the petiole of the leaf in a very characteristic manner. The shining black fruits are large for the genus.

98490. RHYTICOCOS AMARA (Jacq.) Beccari
(*Cocos amara* Jacq.).

No. 3728. From Martinique. A tall slender perfectly straight feather palm 50 feet high, with leaves 15 feet long. The golden-yellow fruits, 2 inches long by 1½ inches wide, are covered with a pulp filled with long fibers. This pulp ferments easily and develops butyric acid. The seed is large and of the characteristic coconut shape.

For previous introduction see 97282.

98491. COPERNICIA CERIFERA Mart.
Carnauba palm.

No. 2977. From the Botanic Garden, Georgetown, British Guiana. The wax palm of Brazil, which has fan-shaped leaves and grows to a height of 25 feet. From the leaves is obtained carnauba wax which is used in making phonograph records.

For previous introduction see 97811.

98492. ELAEIS MELANOCOCCA Gaertn.

No. 3683. Collected near the Station Onverwacht, Surinam, March 3, 1932. A wide-spreading low wild palm which grows in damp situations. It is closely related to the African oil palm (*Elaeis guineensis*). A clear oil is extracted from the kernels in small quantities by the natives, who prize it highly for cooking.

For previous introduction see 97911.

98483 to 98503—Continued.

98493. EUTERPE OLERACEA Mart.

No. 2955. *Manac* or *Manaque*. From Tobago, February 20, 1932. A graceful palm with a trunk seldom more than 4 inches in diameter. It is said that fats suitable for oils and soaps can be derived from the blue-black berrylike fruits.

For previous introduction see 97813.

Nos. 98494 to 98496 were collected in the Georgetown Botanic Garden, British Guiana.

98494. HYPHAENE THEBAICA (L.) Mart.
Doom palm.

No. 2980. A palm about 30 feet high, which is noted as one of the few branching palms. It grows in alkaline sandy soils and is native from Upper Egypt to central Africa. The stems of old trees sometimes fork 3 or 4 times. The beautiful yellow-brown fruits are borne in long clusters of 100 to 200. In Upper Egypt the poor people eat the fibrous husk, which tastes much like gingerbread but is rather hard. The hard tough wood is used for domestic utensils.

For previous introduction see 97814.

98495. LICUALA GRANDIS (Bull.) Linden.

No. 2978. A dwarf palm with the stem clothed with the dead leaf sheaths. The erect spreading fan-shaped leaves have closely plicate segments which are 2-lobed at the end. Native to the island of New Pommern, Bismarck Archipelago.

For previous introduction see 97815.

98496. LIVISTONA HOOGENDORPII Andre.

No. 2982. A form with blue fruits. A tall Javanese palm with fan-shaped leaves 4 to 6 feet wide on spiny petioles 3 to 5 feet long, red-brown at the base and becoming olive green near the blade. The blades are made up of 10 to 12 plicate pendulous segments with 5 to 7 acute lobes at the apex.

For previous introduction see 97914.

98497. MANICARIA SACCIFERA Gaertn.

No. 2940. *Monkey-cap* palm. Collected February 18, 1932, near Sangre Grande, Trinidad, in deep shady forest in poor wet soil that is probably acid. Unlike other palms, this Brazilian species has entire leaves which become about 30 feet long and 5 feet wide. The trunk is erect, ringed, and unarmed, and 15 to 20 feet high. The natives of Brazil use the immense leaves of this palm for thatching their huts and also for making a coarse cloth.

For previous introduction see 82600.

98498. MAURITIA FLEXUOSA L. f.

No. 2984. From the Botanic Garden, Georgetown, British Guiana, February 25, 1932. A palm native to tropical Brazil, which grows to a height of 150 feet and 30 inches in diameter. The fan-shaped leaves are from 9 to 16 feet long. This is one of the so-called ivory-nut palms. The fruit is spherical, about the size of a small apple, and covered with smooth reticulated scales. The spadix when loaded with fruit is of immense weight, often more than two men can carry.

For previous introduction see 97915.

98499. ENGLEROPHOENIX REGIA (Mart.) Kuntze.

No. 3684. *Maripa* palm. From the market at Paramaribo, Surinam, March 3, 1932. A massive ornate palm up to 50 feet high, with persistent leaf petioles and immense leaves, reminding one of the *Cohune*. The subacid fruits have thin fleshy pulp and are much appreciated by the natives.

For previous introduction see 97912.

98500. RAPHIA VINIFERA Beauv.

No. 3772. From Fort de France, Martinique, March 10, 1932. The *wine* palm of Africa. A

98483 to 98503—Continued.

striking pinnate palm with immense leaves rising almost upright from the rather low trunk, somewhat as do the leaves of the *Cohune* palm. It bears immense clusters of very decorative fruits that are covered with scales and polished like pieces of jade.

For previous introduction see 95211.

98501. COCCOTHRINAX BARBADENSIS (Lodd.) Beccari.

No. 3783. Presented by Mr. Buffon, superintendent of the Jardin d'Essais, Basseterre, St. Kitts, British West Indies, March 13, 1932. A tall slender fan palm with the aspect of the *Silver* palm, but much larger. The clusters of greenish fruits which later become black are not particularly attractive. The palm seems adapted to a strongly calcareous soil.

98502. LIVISTONA AUSTRALIS (R. Br.) Mart.
Australian fan palm.

No. 3686. From Paramaribo, Surinam, March 4, 1932. A tall slender palm from 30 to 40 feet high, with a smooth trunk 8 to 10 inches in diameter and a dense crown of circular leaves 3 to 4 feet in diameter, divided nearly to the base into narrow plicate segments. The moderately hard light-colored wood is occasionally used for light construction work; the leaves are used for making baskets; and the unexpanded fronds, after being dipped in boiling water, are dried, shredded, and the fiber used in making hats resembling Panama hats.

For previous introduction see 97917.

98503. THRINAX sp.

No. 3689. Presented by Dr. G. Stabel, Paramaribo, Surinam, March 4, 1932. A form with white fruits.

98504. PIGAFETTIA ELATA (Mart.) Wendl. Phoenicaceae. Palm.

From Buitenzorg, Java. Seeds presented by the 'sLands Plantentuin (Botanische Tuin). Received April 18, 1932.

A tall ornamental palm with a stout trunk, spiny above, and spreading pinnate foliage resembling that of the coconut. Native to the East Indies.

For previous introduction see 93981.

98505 and 98506. VITIS VINIFERA L. Vitaceae. European grape.

From Turkey. Cuttings received through the American Embassy, Istanbul. Received April 19, 1932.

Native varieties of grapes from the collection at the Halkali Agricultural School, Istanbul.

98505. *Chaoush*.

98506. *Pembe Chaoush*.

98507. AMYGDALUS PERSICA L. Amygdalaceae. Peach.

From Java. Seeds presented by A. M. Cramer, Wonosobo. Received April 19, 1932.

A naturalized peach from 6,000 feet altitude at Tosari; introduced for the use of Department specialists.

98508. CITRUS LIMONIA Osbeck. Rutaceae. Lemon.

From Morocco. Seeds presented by H. Brayard, director, Experiment Station, Marrakech. Received April 22, 1932.

Introduced for rootstock experiments by Department specialists.

98509. FICUS sp. Moraceae. Fig.

From Cuba. Cuttings presented by Señor Antonio Portuondo, Director General of Agriculture, Habana. Received April 22, 1932.

An ornamental ficus, somewhat like *F. myso-rensensis*, but with a heavy coating of brown hairs on the under side of the leaves.

98510 to 98514. Phoenicaceae. Palm.

From the West Indies, British Guiana, and Surinam. Seeds collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the 1931-32 Allison V. Armour expedition. Received April 18, 1932.

98510. ASTROCARYUM sp.

No. 2957. Collected on Tobago Island.

98511. ASTROCARYUM SEGREGATUM Drude.

No. 2987. Purchased February 23, 1932, in the market at Georgetown, British Guiana. A rather low-growing Brazilian palm with a spiny trunk and large pinnate leaves armed with large stout black spines along the midribs. The fragrant, oily, smooth fruits are about 2 inches in diameter. Native to eastern Brazil.

For previous introduction see 97809.

98512. ASTROCARYUM PARAMACA Mart.

No. 2685. Purchased in the market at Paramaribo, Surinam, March 2, 1932. A low-growing very attractive shade-loving palm from 6 to 8 feet high with the pinnae all on one plane. The inflorescence consists of a single central upright spadix to which the fruits are attached by peduncles 1 inch long. The fruits are small, 1 inch long, with tiny black spines and a tough oily endosperm.

For previous introduction see 97910.

98513. COCCOTHRINAX sp.

No. 2614. From Beata Island, Dominican Republic. A very handsome slender fan palm with a trunk 20 feet high and about 3 inches in diameter. The under side of the leaves is silvery and the fruit is dark purple. Found on sand dunes near the seacoast.

For previous introduction see 96483.

98514. MAURITIA FLEXUOSA L. f.

No. 3652. Collected in the Lamaha Savanna, British Guiana, February 26, 1932.

For previous introduction see 98498.

98515. DIOSCOREA sp. Dioscoreaceae. Yam.

From Puerto Rico. Tubers presented by T. B. McClelland, director, Agricultural Experiment Station, Mayaguez. Received April 19, 1932.

Morado; so called from its purple color just below the epidermis. The flesh below this is white or cream colored, and is of good quality. In comparative trials this year at the experiment station this yam outyielded all other varieties. The production from one plant was 22 pounds, but this figure is sometimes nearly doubled.

98516 to 98519.

From the West Indies, British Guiana, and Surinam. Seeds and tubers collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the 1931-32 Allison V. Armour expedition. Received April 11, 1932.

98516. COCOS NUCIFERA L. Phoenicaceae. Coconut.

No. 2724. *Claret*. Presented by S. H. Walter, curator, Botanic Garden, St. Lucia, Windward Islands, February 3, 1932. Seeds of a distinct variety with claret-colored husk. This is apparent only when the young coconut husk is cut.

98516 to 98519—Continued.**98517. XANTHOSOMA sp. Araceae. Yautia.**

No. 2908. Tubers purchased in the market at Paramaribo, Surinam, March 2, 1932.

98518. DIOSCOREA TRIFIDA L. f. Dioscoreaceae. Yampi.

No. 3677. *Bush yam*. Presented February 29, 1932, by Mr. Collins, secretary of the British Guiana Producers' Association in Georgetown, British Guiana. This is the yam grown by the Negroes of the interior. It is considered the best one grown in the colony.

98519. XANTHOSOMA CARACU Koch and Bouche. Araceae. Yautia.

No. 3768. March 8, 1932. Tubers purchased in the market at Castries, St. Lucia. Remarkable for their large size and uniform shape.

98520. ANANAS SATIVUS Schult. f. Bromeliaceae. Pineapple.

From Ceylon. Plants purchased from the manager of the publication depot and central seed store, Department of Agriculture, Peradeniya. Received April 25, 1932.

Mauritius.

98521 to 98523. Phoenicaceae. Palm.

From the West Indies and British Guiana. Seeds collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the 1931-32 Allison V. Armour expedition. Received April 11, 1932.

98521. NYPA FRUTICANS Wurmb. Nipa palm.

No. 2981. Presented March 23, 1932, by Professor Dash, Department of Agriculture, Georgetown, British Guiana. A very ornamental palm with a stout creeping underground stem and pinnate leaves about 20 feet long in erect clusters. The flat fruits, 5 inches long, 4 inches wide, and 2 inches thick, are crowded into a large round head which is borne on a special erect stalk. The juice obtained by cutting this stalk just below the fruiting head is a promising source of sugar and alcohol. The leaves are extensively used for thatching and for making baskets and mats.

98522. MAURITIA FLEXUOSA L. f.

No. 3652. Collected in the Lamaha Savanna, British Guiana, February 26, 1932.

For previous introduction and description see 98514.

98523. MAURITIA SETIGERA Griseb. and Wendl.

No. 2929. From the Scarborough Botanic Station, Tobago, February 19, 1932. A fan palm 60 feet high of magnificent proportions. Its fruits are covered with polished brown overlapping scales, are as large as hens' eggs, and very attractive. The tree was growing in acid soil and will probably do well in soil in which there is a considerable quantity of lime.

98524 to 98536. AGROPYRON spp. Poaceae. Wheatgrass.

From the Union of Soviet Socialist Republics. Seeds presented by N. Vavilov, Bureau of Introduction, Leningrad. Received April 8, 1932.

A collection of grasses to be tested by Department specialists for resistance to drought.

98524 and 98525. AGROPYRON CRISTATUM (L.) Gaertn.

98524. No. 7027. From the Omsk Experiment Station.

98525. No. 9051. From the Saratov Institute for the Study of Drought.

98526. AGROPYRON ELONGATUM (Host) Beauv.

No. 9052. From the Saratov Institute for Study of Drought.

98524 to 98536—Continued.

98527. *AGROPYRON GMELINI* (Griseb.) Scribn. and Smith.

No. 9053. From the Saratov Institute for the Study of Drought.

98528. *AGROPYRON ORIENTALE LASIANTHUM* Boiss.

No. 9026. From the Saratov Institute for the Study of Drought. An annual grass thickly branched at the base, with numerous mostly prostrate stems scarcely 8 inches high. Native to Asia Minor and northern Africa.

For previous introduction see 98201.

98529 to 98531. *AGROPYRON REPENS* (L.) Beauv.

For previous introduction see 94258.

98529. No. 9014. From the Experiment Station, Omsk, Siberia.

98530 and 98531. From the Saratov Institute for the Study of Drought.

98530. No. 9055. 98531. No. 9035.

98532 to 98534. *AGROPYRON SIBIRICUM* (Willd.) Beauv.

98532. No. 9009. From the Experiment Station, Omsk, Siberia.

98533. No. 9033. From the Saratov Institute for the Study of Drought.

98534. No. 5305. From Kasakstan, Aktyubinsk.

98535. *AGROPYRON TENERUM* Vasey.

No. 7786. From the Experiment Station, Omsk, Siberia.

98536. *AGROPYRON SIBIRICUM* (Willd.) Beauv.

No. 7951. From the Saratov Institute for the Study of Drought.

98537 to 98544. *ZEA MAYS* L. Poaceae. Corn.

From Australia. Seeds presented by Dr. H. Wenholz, director of plant breeding, Department of Agriculture, Sydney, New South Wales. Received February 18, 1932.

A collection of corn from the Glen Innes Experiment Farm, introduced for the use of Department specialists.

98537. 43-1-3-4-1. 98541. 43-1-2-2-1.

98538. G-43-2-3-4-2. 98542. G-43-2-3-3-2.

98539. G-55-5-1-1-1. 98543. G-55-5-1-1-2.

98540. G-43-1-1-5-1. 98544. G-44-1-1-2-1.

98545 to 98561.

From the West Indies and British Guiana. Seeds collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the 1931-32 Allison V. Armour expedition. Received April 11, 1932.

98545. *ATTALEA COHUNE* Mart. Phoeniceaceae. Cohune palm.

No. 2746. From the Botanic Garden on St. Vincent, Windward Islands. A magnificent feather-leaved palm, native to the West Indies and Central America, which reaches a height of 40 feet, with leaves about 20 feet long, produced abundantly at the top of the trunk. The yellowish flowers are borne very freely, and the ovoid fruit, 2 to 3 inches long, contains a seed or nut which yields an oil of considerable value, as it is of high quality and finds a ready sale for cooking purposes.

For previous instructions see 97542.

98545 to 98561—Continued.

98546. *BYRSONIMA SPICATA* (Cav.) DC. Malpighiaceae.

No. 2912. *Serrette*. From the Avena Forest Reserve in the northern part of Trinidad, February 16, 1932. A large tree with a girth of 10 feet, found in poor sandy soil. The narrow leaves are shiny green above the rusty brown beneath, and the yellow flowers, followed by acid edible fruits of the same color, make the tree a showy ornamental. The tough light wood is useful for general construction, and the bark is a source of tannin.

For previous introduction see 62006.

98547. *CARICA PAPAYA* L. Papayaceae. Papaya.

No. 2915. From Roseau, Dominica, Leeward Islands, January 29, 1932. A very sweet, firm-fleshed, large, long-fruited papaya grown from seed brought from São Paulo, Brazil, by Mrs. Green of Dominica. Introduced for comparison with varieties now growing in the United States.

98548. *CARYOCAR TUBERCULOSUM* (Aubl.) Baill. Caryocaraceae.

No. 2999. *Souari*. Presented February 29, 1932, by Mr. Collins, secretary of the British Guiana Producers' Association, Georgetown. A tree native to tropical America, up to 100 feet high, with digitately 3- to 5-foliolate leathery leaves and large white flowers in terminal racemes, followed by large drupeous fruits having a hard stone and an edible seed, one of the very largest and finest of the tropical world. It is nearly 3 inches long, over 1 inch wide, and almost 1 inch thick. The flavor is delicate, reminding one of the Brazil nut, but it is not so oily.

98549. *COLVILLEA RACEMOSA* Boj. Caesalpinaceae.

No. 2907. From the Botanic Garden, Trinidad, February 15, 1932. A tree said to become from 40 to 50 feet high. The pinnate leaves are 3 feet long, and the brilliant orange-scarlet curiously shaped flowers with 10 protruding stamens are borne in drooping racemes more than a foot long. The tree was discovered in Madagascar in 1824 and named for the Governor of Mauritius, Sir Charles Colville. In all probability it will stand no more frost than the poinciana. Like other leguminous trees, it is readily propagated from seeds.

For previous introduction see 79538.

98550. *COUROUPIA GUIANENSIS* Aubl. Lecythidaceae.

No. 2904. From Port-of-Spain, Trinidad, February 13, 1932. The famous *Cannon-ball* tree, distinguished by the trunk being covered for many feet with short crooked branches that bear showy flowers of the strangest structure, like a mouse trap, followed by fruits the size and shape of a cannon ball. These fruits are a russet brown and are packed with a pulp full of seeds that, when ripe, has one of the most repellent odors in the vegetable kingdom. The pulp stains anything it touches an inky black.

For previous introduction see 76777.

98551. *CYRTOSTACHYS RENDA* Blume. Phoeniceaceae. Palm.

No. 2834. *Sealing-wax* palm. From Port-of-Spain, Trinidad. A handsome palm with scarlet leaf sheaths. A Sumatran palm of stately habit about 25 feet high, with a slender spineless trunk crowned by a graceful cluster of pinnately divided leaves.

For previous introduction see 97546.

98552. *EUGENIA CALYCOLPOIDES* Griseb. Myrtaceae.

No. 2854. From the Trinidad Botanic Garden, February 13, 1932. A small tree, native to Trini-

98545 to 98561—Continued.

dad, with oblong-lanceolate membranous leaves 2 to 3 inches long. The small flowers are borne in axillary fascicles and are followed by ovoid scarlet berries one half inch long, said to be edible.

98555. JAFARANDIBA AUGUSTA (L.) Kuntze (*Gustavia augusta* L.). Lecythidaceae.

No. 2853. Presented February 13, 1932, by R. O. Williams, director, Botanic Garden, Port-of-Spain, Trinidad. A small evergreen tree, native to tropical America, which bears flowers 4 inches across, creamy white tinged with rose inside and externally rose colored. The stamens form a circle in the center of the flowers and are white at the base with rosy filaments and yellow anthers.

98554. HELICONIA PSITTACORUM L. f. Musaceae.

No. 2905. Collected February 15, 1932, on the Aripo Savanna, Port-of-Spain, Trinidad. A shrub 3 feet high with a small cluster of pretty and curiously shaped flowers at the top of the slender stems, orange yellow with black tips.

98555. JACARANDA FILICIFOLIA (Anders.) Don. Bignoniaceae.

No. 2901. From the Botanic Garden, Trinidad, February 12, 1932. A tree with blue-purple flowers and fernlike leaves.

98556. MANICARIA SACCIFERA Gaertn. Phoenicaceae. Palm.

No. 2940. *Monkey-cap* palm. Collected February 18, 1932, near Sangre Grande, Trinidad.

For previous introduction and description see 98497.

98557. OPERCULINA PTERODES (Choisy) Meisn. Convolvulaceae. Morning-glory.

No. 2959. From the Botanic Garden, Trinidad, February 15, 1932. A tuberous-rooted climbing vine, native to Trinidad, with large cordate-sinuate leaves and campanulate yellow flowers 2 inches across, said to open in the morning.

98558. PELTOGYNE PORPHYROCARDIA Griseb. Caesalpiniaceae.

No. 2913. *Purple heart*. From the Avena Forest Reserve, Trinidad, February 16, 1932. A much-branched timber tree which reaches a girth of 10 feet, with bifoliate leaves consisting of oblong-falcate leaflets about 1 inch long and small flowers in short racemes. The wood is a strange purple color, very hard and durable, and is used for a certain type of furniture. It is native to the West Indies.

98559. PICRODENDRON BACCATUM (L.) Krug. and Urb. (*P. arboreum* Planch.). Simaroubaceae.

No. 2846. From the Botanic Garden, Trinidad, February 13, 1932. A deciduous tree up to 40 feet high, native to Jamaica. The digitately compound leaves are made up of three elliptical to lanceolate leaflets 4 to 5 inches long, and the inconspicuous flowers are followed by orange-yellow fruits about 1 inch in diameter.

98560. RHEEDIA MACROPHYLLA (Mart.) Planch. and Triana. Clusiaceae.

No. 2860. From the Botanic Garden, Trinidad, February 15, 1932. A shrub with deep-green leathery foliage and fruit the shape and size of a lemon, with a rough watery skin and several large smooth seeds. The scanty pulp around the seeds is palatable and reminds one of the mangosteen.

98561. STACHYTARPHETA GRANDIFLORA Hort. Verbenaceae.

No. 2906. From the Botanic Garden, Trinidad, February 15, 1932. A name for which a place of publication and a description have not been found.

98562 to 98565. ORYZA SATIVA L. Poaceae.

From India. Seeds purchased through Arthur G. Frost, American consul general, Calcutta. Received April 19, 1932.

A collection of Patnai or Patna rice, introduced for the use of Department specialists.

98562. *Borna.* 98564. *Kotcho.*

98563. *Deshi.* 98565. *Nabashan.*

98566 and 98567.

From Chilóe Island, Chile, South America. Tubers collected by H. G. MacMillan and C. O. Erlanson, Bureau of Plant Industry. Received April 20, 1932.

98566. *DIOSCOREA* sp. Dioscoreaceae. Yam.

No. 186. *Silvestre*. Collected March 22, 1932.

98567. *DIOSCOREA* sp. Dioscoreaceae. Yam.

No. 143. Collected March 16, 1932.

98568. AGROPYRON PUNGENS (Pers.) Roem. and Schult. Poaceae.

Wheatgrass.

From the Union of Soviet Socialist Republics. Seeds presented by N. Vavilov, Bureau of Introduction, Leningrad. Received April 23, 1932.

From the Maikop region, Khutor Shuntuk, at 600 feet altitude. Introduced for the use of Department specialists working with drought-resistant forage crops.

98569 to 98572.

From Chile, South America. Seeds and tubers collected by H. G. MacMillan and C. O. Erlanson, Bureau of Plant Industry. Received April 20, 1932.

98569. *DIOSCOREA* sp. Dioscoreaceae. Yam.

No. 144. Collected March 16, 1932, on Chilóe Island.

98570. *SOLANUM TUBEROSUM* L. Solanaceae. Potato.

No. 102. Seed balls from a wild type of potato growing in a cultivated field on the farm of Mr. Ritter, south of Ancud, Chilóe Island. The balls are less than 1 inch in diameter and are round at the apex.

98571. *SOLANUM TUBEROSUM* L. Solanaceae. Potato.

No. 162. *Frutilla*. Collected March 22, 1932, in the garden of Francisco Schwerter, Puerto Montt. A small round irregular tuber with rather deep eyes, pink and white mottled skin, and white flesh. It is considered a very disease-resistant potato.

98572. (Undetermined.)

No. 153. Collected March 17, 1932, in the garden of Mr. Turner, Ancud, Chilóe Island. A plant cultivated for its medicinal properties and not as a food. Probably the same as no. 144 (98569).

98573 and 98574.

From Africa. Seeds presented by P. T. L. Putman, Avakuli, Stanleyville, Belgian Congo. Received April 22, 1932.

98573. (Undetermined.)

M-73. A large forest tree with edible fruits.

98574. *ERYTHROPHLOEUM* sp. Caesalpiniaceae.

M. 123. *Akoba* or *igbanda*. A black bean, seed of a leguminous forest tree, which is eaten by monkeys; but when shelled, steamed a little, and beaten into a paste it is used by the natives as an arrow poison.

98575 to 98721. SOLANUM TUBEROSUM
L. Solanaceae. Potato.

From Chile, South America. Tubers collected by H. G. MacMillan and C. O. Erlanson, Bureau of Plant Industry. Received April 20, 1932.

Nos. 98575 to 98577 were collected March 2, 1932, near Puerto Montt, Chile, on the farm of Mr. Schaefer.

98575. No. 38. A variety with large round tubers having red skin, yellow flesh, and eyes slightly sunken. It is said to have been of French origin.

98576. No. 39. An indigenous variety cultivated as a curiosity. The small tubers are irregularly round with deep wide eyes and red skin; the outer flesh is white, while the inner flesh is red.

98577. No. 40. *Blanca Alemana*. A cultivated commercial type, probably from introduced stock. The large oval tubers have white skin, shallow eyes, and white flesh. It is considered one of the best and most disease-resistant varieties.

Nos. 98578 to 98637 were collected March 9, 1932, at the Genetic Station, Ancud, Chiloé Island.

98578. No. 41. *Corahila Quilquico*. Station No. 272. Large irregularly round tubers with red skin, shallow eyes, and white flesh. Said to have come originally from the island of Quilquico, Chile.

98579. No. 42. *Blanca Alemana*. Station No. 283. Ovate flattened tubers with white skin and flesh and shallow eyes. Said to have come originally from Pudeto, Chiloé Island.

98580. No. 43. *Cisne Redondo*. Station No. 251. An indigenous sort producing small irregularly round pink tubers with shallow eyes and yellow-white flesh.

98581. No. 44. *Corahila Rilán*. The small round red tubers, of a variety originally from Rilán, Chiloé Island, have shallow pink eyes and yellow-white flesh.

98582. No. 45. *Corahila Chonchi*. Station No. 33. A variety indigenous to the island of Chonchi, Chiloé Province. The small round red tubers have pink eyes and yellow-white flesh.

98583. No. 46. *Corahila Santa Elvira*. Station No. 75. A variety, originally from the island of Santa Elvira, Chiloé Province, which has small round-ovate red tubers with shallow pink eyes and white flesh mottled with yellow.

98584. No. 47. *Rosada Caipulle*. Station No. 164. A variety indigenous to the island of Caipulle, Chiloé Province, which has large round to oval red tubers, yellow flesh, and shallow pink eyes.

98585. No. 48. *Corahila Alao*. Station No. 207. A variety indigenous to the island of Alao, Chiloé Province, which has large round red tubers with white flesh mottled with red (the red is in the vascular ring) and shallow pink eyes.

98586. No. 49. *Corahila Blanca Alemana*. Station No. 224. A small round to oval red tuber with shallow pink eyes and yellow flesh. It is probably a hybrid between indigenous and introduced stock.

98587. No. 50. *Corahila Chauilinee*. Station No. 12. A variety originally from the island of Chauilinee, Chiloé Province, with small round to oval red tubers, white flesh, and shallow pink eyes.

98588. No. 51. *Rosada Pudeto*. A variety originally from Pudeto, Chiloé, which has long ovate red tubers with yellow-white flesh and shallow narrow eyes.

98575 to 98721—Continued.

98589. No. 52. *Huevo*. An indigenous variety with large long-oval red tubers which have yellow flesh and deep long eyes.

98590. No. 53. *Volera Santa Elvira*. An indigenous type, originally from the island of Santa Elvira, with small long-ovate tubers which have gray skin, white flesh mottled with purple, and deep eyes with numerous buds.

98591. No. 54. *Blanca Alemana*. A round flattened tuber with white flesh and skin and shallow eyes. It is grown as a commercial potato and may be from introduced stock.

98592. No. 55. *Corahila Mechaico*. A variety originally from the island of Mechaico, Chiloé Province, which has ovate flattened red tubers with white flesh and shallow pink eyes.

98593. No. 56. *Blanca Alemana Pudeto*. A type, coming from Pudeto, Chiloé, with small round flattened red tubers which have shallow pink eyes and white flesh except the vascular ring, which is pink.

98594. No. 57. *Huevo Santa Elvira*. A variety originally from the island of Santa Elvira, Chiloé Province, which has small round red tubers with yellow flesh and deep eyes.

98595. No. 58. *Canales Jeske*. A variety indigenous to the islands of Chiloé Province. The large oval flattened red tubers have yellow-white flesh and shallow pink eyes.

98596. No. 59. *Alemana Elefant*. A type indigenous to Chiloé Province, with large irregularly round white tubers, white flesh, and deep eyes.

98597. No. 60. *Cisne Redonda*. An indigenous type having round flattened red tubers with shallow eyes and yellow-white flesh with the vascular ring red.

98598. No. 61. *Corahila Mechaico*. An indigenous type from the island of Mechaico, with small round flattened red tubers which have white flesh and shallow pink eyes.

98599. No. 62. *Corahila Santa Elvira*. A variety, originally from the island of Santa Elvira, Chiloé Province, having small round flattened red tubers, with shallow pink eyes and white flesh with the vascular ring red.

98600. No. 63. *Blanca Alemana Pudeto*. A type from Pudeto, Chiloé, with large ovate flattened white tubers which have white flesh and shallow eyes.

98601. No. 64. *Corahila Chelín*. A variety indigenous to the island of Chelín, Chiloé Province, with round to oval flattened red tubers which have white flesh and shallow eyes.

98602. No. 65. *Caigue*. An indigenous type with small round long-narrow red tubers which have shallow eyes and white flesh heavily mottled with red.

98603. No. 66. *Volera Santa Elvira*. A type indigenous to the island of Elvira, Chiloé Province, with small round gray tubers having white flesh and shallow blue eyes.

98604. No. 67. *Corahila Chonchi*. A type indigenous to the island of Chonchi, Chiloé Province. The tubers are small, long, round with red skin, white flesh, and shallow eyes.

98605. No. 68. *Corahila San José*. A type indigenous to San José, Chiloé Province, with round flattened red tubers, white to yellow flesh, and shallow eyes.

98606. No. 69. *Corahila Redondo Pudeto*. A type indigenous to Pudeto, Chiloé. The large irregularly round red tubers have shallow eyes and white flesh with a red vascular ring.

98575 to 98721—Continued.

98607. No. 70. *Corahila Trangui*. A round flattened red tuber with shallow eyes and yellow-white flesh.
98608. No. 71. *Corahila Alemana Pudeto*. A type indigenous to Pudeto, Chiloé. The ovate flattened white tubers have white flesh and shallow eyes.
98609. No. 72. *Corahila Quilquico*. A variety indigenous to the island of Quilquico, with small round red tubers which have white flesh and deep eyes.
98610. No. 73. *Corahila Quehue*. A variety indigenous to the island of Quehue. The large round flattened red tubers have shallow eyes and yellow flesh with a red vascular ring.
98611. No. 74. *Cisne*. Small elongate-round red tubers with yellow-white flesh and shallow pink eyes; a type indigenous to Chiloé Province.
98612. No. 75. *Corahila Mechaico*. A type indigenous to the island of Mechaico, with round flattened red tubers, yellow-white flesh, and shallow pink eyes.
98613. No. 76. *Corahila Quilquico*. Ovate flattened red tubers with yellow flesh and shallow pink eyes. This type is indigenous to the island of Quilquico.
98614. No. 77. *Cisne*. A type indigenous to Chiloé Province. The large round flattened red tubers have white flesh and shallow eyes.
98615. No. 78. *Corahila Rauco*. Large ovate red tubers with yellow-white flesh and shallow eyes; a type indigenous to the island of Rauco, Chiloé Province.
98616. No. 79. *Corahila Alao*. A variety having small round tubers with white skin mottled with blue, white flesh, and shallow eyes; it is indigenous to the island of Alao, Chiloé Province.
98617. No. 80. *Villarroela*. A type indigenous to Chiloé Province, with red ovate tubers, white flesh, and shallow eyes.
98618. No. 81. *Corahila Mechaico*. Elongated white tubers mottled with pink, which have yellow-white flesh and shallow eyes. The type is indigenous to the island of Mechaico, Chiloé Province.
98619. No. 82. *Corahila Vilupulle*. A type, indigenous to Chiloé Province, with oval tubers having thick red skin, white flesh, and shallow pink eyes.
98620. No. 83. *Corahila Quilquico*. A variety indigenous to the island of Quilquico. The elongate-flattened red tubers have white flesh and shallow eyes.
98621. No. 84. *Corahila Chonchi*. A variety indigenous to the island of Chonchi. The ovate tubers with pink and white mottled skin have white flesh and shallow eyes.
98622. No. 85. *Cisne*. A variety indigenous to Chiloé Province, with oval white tubers, white flesh, and shallow eyes.
98623. No. 86. *Chaulinee*. A type indigenous to Chiloé Province which has ovate red tubers with white flesh and shallow pink eyes.
98624. No. 87. *Corahila San José*. A type, indigenous to Chiloé Province, with elongated red tubers, white flesh, and shallow pink eyes.
98625. No. 88. *Corahila Rilán*. A variety, indigenous to the island of Rilán, with small ovate tubers, white flesh, and shallow eyes.
98626. No. 89. *Cisne Redondo*. A variety, indigenous to Chiloé Province, with round flattened red tubers, yellow-white flesh, and shallow pink eyes.

98575 to 98721—Continued.

98627. No. 90. *Corahila Rilán*. A variety, indigenous to the island of Rilán, with ovate red tubers which have white flesh and shallow pink eyes.
98628. No. 91. *Corahila Alao*. A variety, indigenous to the island of Alao, Chiloé Province, with elongated red tubers, yellow-white flesh, and shallow pink eyes.
- Nos. 98629 to 98631 are types indigenous to Chiloé Province.
98629. No. 92. *Corahila Vilupulle*. Oval red tubers with white flesh and shallow pink eyes.
98630. No. 93. *Americana*. Small elongated red tubers with yellow-white flesh and shallow pink eyes.
98631. No. 94. *Corahila Tenten*. Small round red tubers with white flesh and shallow pink eyes.
98632. No. 95. *Chelin*. A type, indigenous to the island of Chelin, Chiloé Province, with round red tubers which have white flesh and shallow eyes.
98633. No. 96. *Vilupulle*. A variety, indigenous to Chiloé Province, with ovate red tubers, shallow eyes, and yellow-white flesh.
98634. No. 97. *Blanca Alemana*. A variety, indigenous to Chiloé Province, with oval red tubers, shallow eyes, and white flesh with a red vascular ring.
98635. No. 98. A variety, indigenous to the island of Chiloé, with ovate red tubers, shallow eyes, and yellow flesh.
98636. No. 99. *Corahila Mechaico*. A variety, indigenous to the island of Mechaico, with ovate white tubers, shallow eyes, and white flesh.
98637. No. 100. *Corahila Tenten*. A variety, indigenous to the island of Tenten, with small ovate red tubers, shallow eyes, and yellow-white flesh.
- Nos. 98638 and 98639 were collected March 11, 1932, on the farm of Mr. Ritter, about 10 miles south of Ancud, Chiloé Island. They were grown from indigenous stock.
98638. No. 101. Large round red tubers with shallow eyes and white flesh.
98639. No. 103. Round red tubers with deep and pink eyes and white flesh.
- Nos. 98640 to 98653 are indigenous types from the farm of Mr. Sagner, about 5 miles south of Ancud, Chiloé Island.
98640. No. 104. *Corahila*. A commercial variety with flattened red tubers, shallow eyes, and white flesh.
98641. No. 105. A large irregularly round blue tuber with shallow white eyes and yellow-white flesh.
98642. No. 106. An ovate red tuber with deep eyes and yellow-white flesh.
98643. No. 107. Large elongated red tubers with shallow eyes and white flesh. This is the best commercial potato from native stock.
98644. No. 108. Large elongated red tubers with shallow eyes and yellow-white flesh with red center.
98645. No. 109. *Guapo*. Round red tubers with shallow pink eyes and yellow-white flesh.
98646. No. 110. Small round blue tubers with shallow white eyes and yellow-white flesh.
98647. No. 111. Large ovate red tubers with shallow eyes and yellow-white flesh with a red vascular ring.

98575 to 98721—Continued.

98648. No. 112. Large ovate red tubers with shallow pink eyes and yellow-white flesh slightly mottled with pink.
98649. No. 113. Large irregular tubers with mottled blue and white skin, deep white eyes, and white flesh with a purple vascular ring.
98650. No. 114. Ovate flattened red tubers with shallow white eyes and white flesh.
98651. No. 115. Large ovate red tubers with shallow eyes and white flesh. It is supposed to be more frost resistant than the usual types grown.
98652. No. 116. *Americana*. Large irregularly round tubers with mottled blue and white skin, deep eyes, and white flesh.
98653. No. 117. Large ovate red tubers with shallow eyes and yellow-white flesh. One of the best commercial types from native stock.
- Nos. 98654 to 98659 were collected March 14, 1932, near Ancud.
98654. No. 120. *Biscocha Maidama*. Small round light-violet tubers with shallow blue eyes and white flesh.
98655. No. 121. *Ñochas*. A variety native to the island of Chelin and reputed to be disease resistant. The tubers are long and narrow, with purple-black skin, shallow eyes, and white flesh spotted with purple, and a purple vascular ring. The vascular bundles of the stem are also purple at the nodes.
98656. No. 122. *Biscocha*. A variety, native to Mechaico, Chiloé Province, with large round tubers, blue, rather deep eyes, violet skin, and white flesh.
98657. No. 123. A variety, native to the island of Chipicum, Chiloé Province, with small irregularly round red tubers, which have deep and pink eyes and rose-colored flesh with a red vascular ring.
98658. No. 124. *Inglesa*. A variety, native to Caipulle, which has large irregularly round blue-violet tubers with deep eyes and yellow-white flesh with a purple vascular ring.
98659. No. 125. *Mantequilla*. A native variety.
- Nos. 98660 to 98683 were collected in the northern part of the island of Chiloé, March 16, 1932. Unless otherwise stated, they are all native varieties.
98660. No. 126. *Ficocha*. Small round-oval white tubers with shallow eyes and white flesh.
98661. No. 127. *Inglesa*. Large ovate purple tubers with shallow eyes and white flesh.
98662. No. 128. *Guilcaña*. Small round purple-black tubers with shallow eyes and white flesh with the center mottled in purple.
98663. No. 129. *Ficocha negra*. Small round light-violet tubers with shallow eyes and yellow-white flesh.
98664. No. 130. *Peane negra*. Small round dark-purple tubers with shallow eyes and white flesh.
98665. No. 131. *Vastonesa*. Small round light-violet tubers with numerous shallow eyes and white flesh.
98666. No. 132. *Guego*. Small round pink tubers with shallow eyes and yellow flesh.
98667. No. 133. *Emperadora*. Small round white tubers with shallow eyes and white flesh.
98668. No. 134. *Guapa*. Large oval red tubers with deep eyes and white flesh with a purple vascular ring.
98669. No. 135. *Americana*. Large oval tubers with mottled purple and white skin, deep eyes, and white flesh.

98575 to 98721—Continued.

98670. No. 136. *Quila*. Small elongated white tubers, mottled with purple, shallow eyes, and white flesh.
98671. No. 137. *Clavella*. Large oval tubers with the skin mottled red and white, deep and white eyes, and white flesh with a red vascular ring.
98672. No. 138. *Alemana*. Small oval white tubers with white flesh and shallow eyes. This may be of introduced stock.
98673. No. 139. *Chalupa negra*. Long narrow slightly curved purple-black tubers with shallow eyes and white flesh with purple vascular ring.
98674. No. 140. *Notra*. Long narrow red tubers with numerous deep eyes and white flesh heavily mottled with purple.
98675. No. 141. Long oval red tubers with deep eyes and yellow-white flesh.
98676. No. 142. Small ovate dark-violet tubers with rather deep eyes and white flesh with purple vascular ring.
98677. No. 145. *Mantequilla*. Small oval tubers, very uniform in size and shape, with deep eyes and yellow flesh. A potato with a good flavor.
98678. No. 146. *Huevo*. Large oval tubers with deep eyes, red skin, and yellow flesh.
98679. No. 147. *Americana*. Large ovate tubers with deep eyes, skin mottled white and purple, and white flesh.
98680. No. 148. *Blanco*. Large oval white tubers with shallow eyes and white flesh.
98681. No. 149. *Clavella*. Large ovate tubers with deep eyes, skin mottled white and violet, and white flesh.
98682. No. 150. Small round tubers with deep eyes, skin mottled purple and white, and white flesh with purple vascular ring.
98683. No. 151. Large oval purple tubers with few and shallow eyes and white flesh.
- Nos. 98684 and 98685 were collected in the garden of Mr. Turner at Ancud, Chiloé Island, March 17, 1932.
98684. No. 152. *Mantequilla*. A native potato with irregularly round yellow tubers, deep eyes, and yellow flesh.
98685. No. 154. A potato of uncertain origin, with medium-sized smooth oval white tubers, shallow eyes, and white flesh.
- Nos. 98686 to 98692 were collected in the garden of Mr. Werner, Punta, Chiloé Island, March 19, 1932.
98686. No. 155. A wild potato native to the forests of Cucao, with small elongate purple tubers, shallow eyes, and white flesh.
98687. No. 156. *Blanca silvestre*. A native potato with large oval flattened white tubers, shallow eyes, and white flesh.
98688. No. 157. *Colorado silvestre*. A native potato with large round-oval red tubers which have shallow eyes and white flesh.
98689. No. 158. *Blanca Alemana*. A commercially cultivated potato with very large oval white tubers with shallow eyes and white flesh.
98690. No. 159. *Colorado Argentina*. A potato of uncertain origin with large irregularly oval red tubers which have shallow eyes and white flesh.
98691. No. 160. *Corahila*. The native potato generally cultivated commercially in Chiloé and sent to northern Chile as seed potatoes. It has large long-oval red tubers, shallow eyes, and white flesh.

98575 to 98721—Continued:

98692. No. 161. *Mantequilla*. A native potato which is a good but small producer. The small irregularly round yellow tubers have deep eyes and yellow flesh.
98693. Nos. 162 and 163. *Frutilla*. Collected March 22, 1932, at Puerto Montt, on the mainland, Chile. A potato of uncertain origin. The small irregularly round tubers have rather deep eyes, pink and white mottled skin, and white flesh. A very disease-resistant potato.
No. 162. Collected in the garden of Francisco Schwertner.
No. 163. Collected on a farm near Puerto Montt.
98694. No. 164. *Corahila*. A potato grown commercially in the region of Puerto Montt and Puerto Varas. Collected on the farm of Fernando Wilhelm, who has grown the same variety for 17 years. This is a disease-resistant potato with large oval flattened red tubers, shallow eyes, and white flesh.
98695. No. 166. *Castrina*. Collected south of Ancud, Chiloe Island, March 22, 1932. A potato with small oval pink tubers with rather deep eyes and white flesh mottled with pink.
- Nos. 98696 to 98721 are native varieties collected in the northern part of the island of Chiloe.
98696. No. 167. *Nohsas*. Long narrow red tubers with shallow eyes and white flesh mottled with red.
98697. No. 168. *Sedas*. Small oval tubers mottled white and purple, with shallow eyes and white and purple flesh.
98698. No. 169. *Remenda*. Small oval tubers with deep eyes, skin mottled white and purple, and white flesh with purple center.
98699. No. 170. *Pahacoña*. Small oval white tubers with shallow eyes and white flesh.
98700. No. 171. *Caque blanco*. Small long-oval red tubers with shallow eyes and white flesh.
98701. No. 172. *Francesa negra*. Small round black-purple tubers with white around the shallow eyes and white flesh mottled with purple.
98702. No. 173. *Nereque*. Large long-narrow purplish tubers with shallow eyes and white flesh.
98703. No. 174. *Camota*. Small round purple tubers with white around the deep eyes and white flesh with a purple vascular ring.
98704. No. 175. *Limeña*. Small irregularly round red tubers with deep eyes and yellow-white flesh.
98705. No. 176. *Ficocha negra*. Small oval red tubers with shallow eyes and white flesh.
98706. No. 177. *Lichaguina*. Small oval blue-red tubers with deep eyes and yellow-white flesh.
98707. No. 178. *Maullina*. Small irregularly round white tubers mottled with pink, with deep eyes and white flesh.
98708. No. 179. *Ojos azules*. Small irregularly round yellow-white tubers with blue, deep eyes and yellow-white flesh.
98709. No. 180. *Alaseca*. Small oval flattened white tubers with shallow purple eyes and yellow-white flesh.
98710. No. 181. *Quilas*. Small long-narrow white and pink tubers with deep eyes and white flesh.
98711. No. 182. *Villarruela*. Large oval flat red tubers with shallow eyes and white flesh mottled with pink.

98575 to 98721—Continued.

98712. No. 183. *Guapa*. Small irregularly oval red tubers with deep eyes and white flesh.
98713. No. 184. *Francesa blanca*. Small oval white tubers with shallow eyes and yellow-white flesh.
98714. No. 185. *Chalupa*. Small long-narrow curved purple-black tubers with shallow eyes and white flesh with purple vascular ring.
98715. No. 187. *Vastonesa*. Small oval light-purple tubers with shallow eyes and white flesh with purple vascular ring.
98716. No. 188. *Mago*. Large irregularly round purple-black tubers with deep eyes and yellow-white flesh.
98717. No. 189. *Caballero*. Small smooth oval pink tubers with shallow eyes and white flesh.
98718. No. 190. *Quillipicume*. Small round red tubers with deep eyes and white flesh with red vascular ring.
98719. No. 191. *Guapa negra*. Small round oval purple-black tubers with shallow eyes and white flesh mottled with purple.
98720. No. 192. *Aitamirana*. Small long-oval pink tubers with shallow eyes and white flesh.
98721. No. 193. *Maidama*. Large irregularly oval red tubers with deep eyes and white flesh.
- 98722 to 98726. ORYZA SATIVA L.**
Poaceae. Rice.
- From India. Seeds presented by W. O'Brien, Corsley, Hyderabad, Deccan. Received April 21, 1932.
- A collection of paddy rice introduced for the use of Department specialists.
98722. *Badsha*. A very fine variety that matures in 5 months.
98723. *Basmali*. A fine variety with large grains that matures in 4 months.
98724. *Burmah* or *Black Poofoo*. A very superior variety that matures in 5 months.
98725. *Peshawari*. A very fine variety that matures in 5 months.
98726. *Rajanshal*. A medium-fine variety that matures in 4 months.
- 98727 to 98729.**

From Tahiti, Society Islands. Seeds collected by Martin L. Grant, University of Minnesota. Received April 15, 1932.

98727. CANAVALLIA MICROCARPA (DC.) Piper. Fabaceae.

No. 5055. A seashore perennial which climbs trees to a height of 20 feet. The purple flowers are in large spikelike racemes and the pods are flat or slightly swollen. It is closely related to *C. obtusifolia*.

For previous introduction see 30879.

98728. INDIGOFERA SUFFRUTICOSA Mill. Fabaceae. Indigo.

No. 4570. A slender, yellow-flowered bushy legume 3 to 5 feet high producing rather scanty growth, making it an indifferent cover crop.

For previous introduction see 97885.

98729. VIGNA LUTEA (Swartz) A. Gray (*V. marina* Merr.). Fabaceae.

No. 4452. A tropical perennial vine or creeper, native to the Philippines, where it has been found useful as a cover crop. It has also made good forage.

For previous introduction see 80772.

98730. CITRUS sp. Rutaceae.

From Puerto Rico. Cuttings presented by Edmund H. Twight, specialist in fruits, Bureau of Agricultural Development, Department of Agriculture and Commerce, Rio Piedras. Received April 21, 1932.

Rico No. 5. A light-yellow fruit between 3 and 4 inches in diameter, with thick rind, deep-yellow tender, very juicy flesh, and very few seeds. Introduced for the use of Department specialists interested in citrus breeding.

98731 and 98732.

From Ceylon. Seeds presented by Dr. Andreas Nell, Kandy. Received April 23, 1932.

98731. ATALANTIA MISSIONIS (Wight) Oliver. Rutaceae.

A small tree much resembling an orange tree in habit, with pale-gray bark, and branches armed with short stiff spines, rather large stiff leaves with indistinct veining and very sweet white flowers. The fruit is like a small dark orange. The pale yellow-white wood is close grained, smooth, and suitable for cabinetwork.

For previous introduction see 95350.

98732. ATALANTIA CEYLANICA (Arn.) Oliver. Rutaceae.

Yakinaran or *peykurundu*. A much-branched spiny shrub or small tree native to Ceylon and India. Chiefly of interest as a stock for the better varieties of citrus fruits.

For previous introduction see 41444.

98733 to 98736. CASTANEA CRENATA Sieb. and Zucc. Fagaceae. Japanese chestnut.

From Japan. Seeds purchased from the Yokohama Nursery Co., Yokohama. Received December 22, 1931. Numbered in April 1932.

A collection of chestnuts introduced for the use of Department specialists.

98733. From Iwate Ken. Midsuwasa Eirinsho, Iwate Ken, Esashi Gun, Yanagawa Mura.

98734. From Ginyose, Kyoto Fu, Minami, Kuwata Gun, Shino Mura.

98735. From Imakita, Kyoto Fu, Minami, Kuwata Gun, Shino Mura.

98736. From Akita Ken, Tsunodate Eirinsho, Akita Ken, Sanhoku Gun, Tsunodate machi.

98737. ZAMIA PORTORICENSIS Urban. Cycadaceae.

From Puerto Rico. Tubers presented by Henry C. Henricesen, Puerto Rico Agricultural Experiment Station, San Juan. Received April 25, 1932.

A cycad with a short stem 12 to 18 inches high, native to Puerto Rico. The pinnately compound leaves, 2 to 3 feet long, are made up of 20 to 34 smooth shining narrowly linear leaflets, 2 to 8 inches long, which are usually entire but may have 1 or 2 small teeth near the top. The oblong-cylindric fruiting cone, 10 inches long, is covered with gray tomentose scales.

98738 and 98739. PRUNUS ARMENIACA L. Amygdalaceae. Apricot.

From the Union of Soviet Socialist Republics. Scions presented by Maj. C. R. Olberg, Tiflis, Transcaucasia. Received April 26, 1932.

Native Armenian apricots about the size of small peaches, with very red skins. They compare favorably in flavor with the best of our apricots. Introduced for the use of Department specialists.

98738. *Mirsandjali*.

98739. *Hurman*.

98740. LILIUM GIGANTEUM Wall. Liliaceae. Giant lily.

From China. Seeds presented by Albert N. Steward, University of Nanking, Nanking. Received April 21, 1932.

Nan Pai Ho. Collected along a stream near Huang Chia Wan, Kweichow Province, at 5,000 feet altitude.

For previous introduction see 93213.

98741. ASYSTASIA GANGETICA (L.) Anders. Acanthaceae.

From the Seychelles Islands. Seeds presented by P. R. Dupont, director, Department of Agriculture. Received April 21, 1932.

A zigzag subshrub 1 to 4 feet tall, native to India. The cordate to ovate leaves are 1 to 4 inches long, and the yellow, dingy white or dark-violet flowers are narrow below and inflated above. It is considered a good pasture plant.

For previous introduction see 97926.

98742. CITRUS GRANDIS (L.) Osbeck. Rutaceae. Grapefruit.

From Hawaii. Plants presented by the Agricultural Experiment Station, Honolulu, through E. May, Division of Fruit and Vegetable Crops and Diseases, Bureau of Plant Industry. Received April 25, 1932.

Victoria Pomelo.

98743. LAPAGERIA ROSEA Ruiz and Pav. Liliaceae. Red Chile-bells.

From Chile, South America. Seeds presented by Z. Galemo, of the Escuela de Artilleria, Linares, Chile, through J. L. Colom, chief, Division of Agricultural Cooperation, Pan American Union, Washington, D.C. Received April 27, 1932.

Copihue, the Chilean national flower.

For previous introduction see 80434.

98744 to 98754. GOSSYPIUM spp. Malvaceae. Cotton.

From the Bahamas, West Indies. Seeds presented by Hugh H. Matheson, Miami, Fla. Received March 14 and 22, 1932. Numbered in April 1932.

Nos. 98744 to 98751 were collected by Gaines R. Wilson, and 98744 to 98749 are from Clarence town, Long Island, Bahamas.

98744. *GOSSYPIUM* sp.

98745. *GOSSYPIUM* sp.

From Deadman's Cay, 13 miles from Clarence town.

98746. *GOSSYPIUM* sp.

From near Billy Rowe's place.

98747. *GOSSYPIUM* sp.

Presented by W. C. P. Major, J. P.

98748. *GOSSYPIUM* sp.

Anguilla cotton.

98749. *GOSSYPIUM* sp.

Fly-a-way cotton.

98750. *GOSSYPIUM* sp.

From Highburn Cay.

98751. *GOSSYPIUM* sp.

From Port Nelson, Rum Cay.

98752. *GOSSYPIUM* sp.

From Albert Town, Fortune Island.

98744 to 98754—Continued.

98753. *Gossypium* sp.

From Albert Town, Fortune Island.

98754. *Gossypium* sp.

From Duncan Town, Great Rugged Island.

98755. *BRYOPHYLLUM PROLIFERUM*
Bowie. Crassulaceae.

Plants presented by George Pring, superintendent, Missouri Botanic Garden, St. Louis, Mo. Received April 23, 1932.

A tall robust succulent, native to southern Africa, with stems reaching a height of 12 feet. The new growth is four-angled, later becoming cylindrical, and the pinnatifid to pinnate leaves are much contorted and have finely crenate margins. The tubular yellowish flowers are borne in paniculate clusters.

98756 to 98778. *Gossypium* spp. Mal-
vaceae. Cotton.

From the West Indies. Seeds collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry with the 1931-32 Allison V. Armour expedition. Received April 21, 1932.

98756. *Gossypium* sp.

No. 1. From Nassau, New Providence Island, Bahamas.

98757. *Gossypium* sp.

No. 4. From Conception Island, Bahamas.

Nos. 98758 to 98761 were collected in the Bahama Islands, but the names of the islands were not given.

98758. *Gossypium* sp.

No. 5.

98759. *Gossypium* sp.

No. 6.

98760. *Gossypium* sp.

No. 9.

98761. *Gossypium* sp.

No. 11.

98762. *Gossypium* sp.

No. 14. From Great Inagua, Bahamas.

98763. *Gossypium* sp.

No. 21. From Saona Island, Dominican Republic.

Nos. 98764 to 98768 were collected on Beata Island, Dominican Republic.

98764. *Gossypium* sp.

No. 16.

98765. *Gossypium* sp.

No. 17.

98766. *Gossypium* sp.

No. 18.

98767. *Gossypium* sp.

No. 19.

98768. *Gossypium* sp.

No. 20.

98769. *Gossypium* sp.

No. 25. From St. Kitts, Leeward Islands.

98770. *Gossypium* sp.

No. 30. From Dominica, Leeward Islands.

98756 to 98778—Continued.

98771. *Gossypium* sp.

No. 36. From a town between the Bar de l'Isle and D'Ennery, St. Lucia, Windward Islands.

98772. *Gossypium* sp.

No. 87. From St. Lucia, Windward Islands.

98773. *Gossypium* sp.

No. 91. From Martinique, French West Indies.

98774. *Gossypium* sp.

No. 95. From Deer Point, Guantanamo Bay, Cuba.

98775. *Gossypium* sp.

No. 8. From the Bahamas.

98776. *Gossypium* sp.

No. 3. From Cat Island, Bahamas.

98777. *Gossypium* sp.

From St. Martin, colony of Curaçao.

98778. *Gossypium* sp.*Marie Galante* cotton, from Cannouna Island.98779. *HERNANDIA SONORA* L. Her-
nandiaceae.

From Trinidad. Seeds presented by the Bureau of Plant Quarantine. Received September 11, 1931. Numbered in April 1932.

A large soft-wooded tree growing very close to the beach line, with rather thin broad leaves and masses of very interesting, curiously shaped fruits. The black seed hangs in the center of a large white translucent inverted bell-shaped covering and may be seen through a hole in the bottom of this covering.

For previous introduction see 67185.

98780. *ZELKOVA SERRATA* (Thunb.)
Planch. Ulmaceae. Sawleaf zelkova.

From Japan. Seeds presented by M. Fujioka, director, Forest Experiment Station, Department of Agriculture and Forestry, Meguro, Tokyo, at the request of Dr. H. Ando, director, Imperial Agricultural Experiment Station, Tokyo. Received April 23, 1932.

Keaki. Collected in Yamagata in 1930. A handsome tree, native to Japan, up to 90 feet high, with a short trunk dividing into many upright spreading branches and forming a broad round-topped head. The sharply serrate leaves are ovate and are usually 2 to 3 inches long, or on young shoots, up to 8 inches long.

For previous introduction see 82488.

98781. *HIBISCUS TILIACEUS* L. Mal-
vaceae. Linden hibiscus.

From Straits Settlements. Seeds presented by R. Holtum, director, Botanic Gardens, Singapore. Received April 25, 1932.

A tall shrub or small tree up to 30 feet high, generally cultivated in the Tropics. The broadly cordate leaves are hoary beneath, and the yellow flowers are 2 to 3 inches long.

98782 to 98790. *Gossypium* spp. Mal-
vaceae. Cotton.

From the Union of Soviet Socialist Republics. Seeds presented by the Bureau of Introduction of the Institute of Plant Industry, Leningrad. Received May 2, 1932.

A collection of Russian cotton varieties, introduced for the use of Department specialists.

98782 to 98789. *Gossypium hirsutum* L.

Upland cotton.

98782 to 98790—Continued.

98782. No. 10337. From the Turkistan Selection Station.

98783. No. 36009. *Ak-Szhura*, variety 182. From the Selection Station, Gandzha, Azerbaijan.

98784. No. 133887. *King-Karajazskij*, variety 459. From the Selection Station, Gandzha, Azerbaijan.

98785. No. 36018. Variety 508. From the Turkistan Selection Station.

98786 to 98790. From the Selection Station, Gandzha, Azerbaijan.

98786. No. 106915. *King-Karajazskij*, variety 1138.

98787. No. 36029-a. *Thyeder*, variety 1306.

98788. No. 106914. *King-Karajazskij*, variety 1683.

98789. No. 106919. *King-Karajazskij*, variety 1827.

98790. *GOSSYPIMUM* sp.

Barraka.

98791 and 98792.

From Egypt. Roots presented by Alfred Bircher, Middle Egypt Botanic Station, El Safi. Received April 25, 1932.

98791. *ELETTARIA CARDAMOMUM* (L.) Maton. Zinziberaceae. **Cardamon.**

A perennial with large leafy shoots. The powdered dried fruits of this tropical Asiatic plant are used as a spice.

For previous introduction see 90895.

98792. *ZINZIBER MIOGA* Roscoe. Zinziberaceae.

A perennial herb about 3 feet high, found both wild and cultivated in Japan, with nearly linear smooth membranous leaves up to 15 inches long, white flowers in spikes over 3 inches long, and ovoid capsules. In summer and autumn the flowers with the bracts are eaten either raw or boiled and have a slight acid taste and an aromatic odor.

For previous introduction see 44579.

98793 to 98888.

From the West Indies, British Guiana, and Surinam. Roots and seeds collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the 1931-32 Allison V. Armour expedition. Received April 20, 1932.

98793. *ZINZIBER OFFICINALE* Roscoe. Zinziberaceae. **Ginger.**

No. 2891. Roots purchased in the market at Trinidad, February 17, 1932. This is the tropical ginger from which Jamaica ginger and candied ginger are made.

For previous introduction see 97821.

98794. *ABELMOSCHUS MOSCHATUS* (L.) Medic. Malvaceae.

No. 3693. *Musk okra*. Collected March 2, 1932, along a new road near the Saramacca Canal, back of Paramaribo, Surinam. An ornamental annual 3 to 12 feet high which bears large light-yellow flowers with deep dark-chocolate purple spots in the throat. The seeds have a musky odor and are used in the making of perfume.

For previous introduction see 97860.

98795. *ABROMA AUGUSTA* L. f. Sterculiaceae.

No. 3703. *Devil's cotton*. Collected March 2, 1932, in the experiment station, Paramaribo,

98793 to 98888—Continued.

Surinam. A quick-growing shrub, native to the East Indies, with large angular leaves and dull, deep dark-red flowers. The fiber is used for ropes and cordage in the Orient.

For previous introduction see 93169.

98796. *ANACARDIUM OCCIDENTALE* L. Anacardiaceae. **Cashew.**

No. 3715. Collected March 8, 1932, on the Baboneau Marquis estate, St. Lucia, Windward Islands. The cashew nut of commerce.

For previous introduction see 97751.

98797. *ANNONA SQUAMOSA* L. Annonaceae. **Sugar-apple.**

Seeds of a good fruit collected on Eleuthera, Bahama Islands.

98798. *ARISTOLOCHIA ELEGANS* Masters. Aristolochiaceae. **Calicoflower.**

No. 3719. March 1, 1932. Presented by Dr. G. Stahel, director, botanic garden, Paramaribo, Surinam. A perennial vine with long-stalked broadly ovate leaves 2 to 3 inches across and solitary flowers, which have no unpleasant odor, borne on the pendulous young wood. The flowers have a yellow-green tube 2 to 3 inches long and the cordate-circular limb, 3 inches across, is purple and white blotched, white outside with a yellow eye. It is native to Brazil.

For previous introduction see 91393.

98799. *ARTOCARPUS INTEGRATA* (Thunb.) L. Moraceae. **Jackfruit.**

No. 3692. From Paramaribo, Surinam, March 3, 1932. A very sweet variety introduced from Java about 20 years ago into Surinam and growing now in the Javanese village of Oranweg. The fleshy aril of this fruit has a sweet delicious tropical flavor and is of good texture.

For previous introduction see 97563.

98800 to 98803. *BAUHINIA* spp. Caesalpiniaceae.

98800. *BAUHINIA MONANDREA* KUNZ. **Butterfly bauhinia.**

No. 3812. Collected February 10, 1932, in the botanic garden at St. George, Grenada, Windward Islands. A small tree with gray bark and thick leaves, bearing large rose-colored flowers one petal of which is carmine spotted. Said to be a form which has escaped from cultivation in the West Indies.

For previous introduction see 97752.

98801 and 98802. *BAUHINIA TOMENTOSA* L. **St. Thomas tree.**

An erect shrub or small tree which has obtuse-ly lobed leathery leaves, broader than long, and few-flowered clusters of pale-yellow flowers, with the upper petals marked by deep-purple blotches. Native to India.

For previous introduction see 90900.

98801. No. 2960. From the botanic station, Scarborough, Tobago Island, February 19, 1932.

98802. No. 3698. From the experiment station, Paramaribo, Surinam, February 29, 1932.

98803. *BAUHINIA VAHLII* Wight and Arn. **Malu-creeper.**

No. 2827. Collected in the botanic garden at Port-of-Spain, Trinidad, February, 1932. An enormous-leaved vine that climbs over the tops of forest trees and bears large white flowers. It is native to India.

For previous introduction see 53567.

98793 to 98888—Continued.

98804. *BILLBERGIA* sp. Bromeliaceae.

No. 3716. From the experiment station, Paramaribo, Surinam, March 1, 1932. The billbergias are tropical American evergreen epiphytic herbs with a rosette of long spiny pineapple-like leaves from which arises a spicate panicle of 3- to 6-parted flowers. The colored bracts of the flower cluster are usually quite showy.

98805. *BRADBURYA PUBESCENS* (Benth.) Kuntze-Fabaceae.

No. 3704. Collected March 2, 1932, in the experiment station, Paramaribo, Surinam. A leguminous vine, native to tropical America, with trifoliate leaves and small yellowish flowers. It is used as a cover crop.

For previous introduction see 81410.

98806 and 98807. *BROMELIA PINGUI* L. Bromeliaceae.

A tropical succulent plant, 3 to 4 feet high, with spiny-margined leaves that turn red with age. The reddish flowers are in dense panicles, and the acid fruits, the size of plums, yield a cooling juice. Native to the West Indies.

For previous introduction see 82408.

98806. No. 3837. Collected March 15, 1932, on the mountain side above the village of Windward, Saba Island, Netherland West Indies.

98807. No. 3892. Collected March 27, 1932, on the island of Haiti.

98808. *BROWNEA GRANDICEPS* Jacq. Caesalpiniaceae.

No. 3794. From the Tivoli Garden, Martinique, French West Indies, March 9, 1932. A large handsome tropical American tree, up to 40 feet in height, with attractively mottled young foliage and bright-red flowers in large dense clusters borne at the ends of the branches.

For previous introduction see 67982.

98809. *BUCIDA BUCERAS* L. Combretaceae.

No. 3822. Collected March 14, 1932, near the village of Codrington, on Barbuda, Leeward Islands. A so-called oak with leaves up to 3 inches long and 2 inches wide. A tree up to 75 feet high with a diameter of 3 to 4 feet and having spatulate leaves clustered at the ends of the branches. The spikes of inconspicuous flowers are followed by small slightly fleshy drupes about one fourth inch long. It is native to tropical America.

For previous introduction see 97753.

98810. *CAESALPINIA SEPIARIA* Roxb. Caesalpiniaceae. Mysore thorn.

No. 3851. *Wait-a-bit*. Collected March 10, 1932, near Fort de France, Martinique, French West Indies. A very spiny, vinelike shrub with strong recurved spines on the twigs and petioles which catch one's clothes and hold fast. The long upright racemes of yellow flowers are very showy.

For previous introduction see 67678.

98811. *ANNESLIA TERGEMINA* (L.) Britt. and Rose (*Calliandra tergemina* Benth.). Mimosaceae.

No. 3765. *Bois patat*. Collected March 10, 1932, at Morne la Regale, Martinique. A shrub or small tree which makes an exceedingly attractive hedge and is in bloom most of the time. When the foliage first appears it is pink, turning to yellow-green and later to dark green. The showy part of the flower is the bundle of stamens colored in bands of pink, white, and red.

For previous introduction see 97757.

98793 to 98888—Continued.

98812. *CALOPHYLLUM ANTILLANUM* Britton (*C. calaba* Jacq.). Clusiaceae. Calaba-tree.

No. 3776. *Galba*. From Basse Terre, Guadeloupe, French West Indies, March 13, 1932. A large tree, up to 100 feet high, native to the West Indies. The dark-green leathery leaves, 3 to 6 inches long, and the small white fragrant flowers, borne in small racemes, are followed by hard-shelled fruits about 1 inch in diameter.

For previous introduction see 97836.

98813. *CANARIUM INDICUM* Stickm. (*C. commune* L.). Balsameaceae. Kanari.

No. 3702. Collected March 2, 1932, in the botanic garden at Paramaribo, Surinam. A large ornamental tree, native to the East Indies, and grown to a great extent as a shade tree and for its edible nuts. The tree is notable for its enormous buttressed trunk and ornamental yellow blossoms. The dark-purple fruits are produced in great abundance throughout most of the year. The hard-shelled nuts are very rich in oil.

For previous introduction see 66207.

98814. *CANAVALIA MARITIMA* (Aubl.) Thouars. Fabaceae.

No. 2935. Collected February 19, 1932, in the botanic station, Scarborough, Tobago Island. A strong-growing vine 10 feet high climbing over shrubs and fence rows. The thick pods are from 4 to 6 inches long.

For previous introduction see 97758.

98815. *CANELLA WINTERANA* (L.) Gaertn. Canellaceae.

No. 3834. *Wild cinnamon*. Collected March 14, 1932, near Martello Tower on Barbuda, Leeward Islands. An evergreen shrub or small tree, up to 45 feet high, native to the West Indies. The gray bark and the spatulate leaves, 4 inches long, are aromatic. The purple, red, or violet flowers are borne in terminal clusters and are followed by crimson or nearly black fruits about one-third inch in diameter.

98816. *CAPPARIS INDICA* (L.) Druce. Cappariaceae.

No. 3836. Collected March 14, 1932, on Barbuda, Leeward Islands. A shrub with attractive foliage, silvery white beneath, and large white flowers.

98817 to 98819. *CAPSICUM* spp. Solanaceae.

98817 and 98818. *CAPSICUM ANNUUM* L.

Common redpepper.

A beautiful deep-red redpepper shaped like a turban, flattened lengthwise; of mild flavor, not very hot.

98817. No. 3804. Purchased in the market at Pointe-à-Pitre, Guadeloupe, French West Indies, March 13, 1932.

98818. Purchased in the market at Georgetown, British Guiana.

98819. *CAPSICUM FRUTESCENS* L.

Bush redpepper.

No. 3823. Collected on the windward side of Saba Island, Netherland West Indies, at 1,500 feet altitude, March 15, 1932. An ornamental variety with thimble-shaped, almost black fruits, one-half inch long, which stand upright on their stems. Origin of the variety is unknown.

For previous introduction see 96503.

98820. *CARICA* sp. Papayaceae.

No. 2939. Collected February 20, 1932, on Tobago Island. A very sweet fruit with the characteristic papaya flavor.

98793 to 98888—Continued.

98821. *CASSIA OBOVATA* Collad. Caesalpiniaceae.

No. 3797. From Anguilla, Leeward Islands, March 16, 1932. A low bushy herbaceous shrub with typical cassialike yellow flowers and flat pods, rounded at both ends and crested in the middle. A tea made from the leaves and fresh twigs is used by the Negroes of Anguilla medicinally. It is a naturalized species, introduced probably from the Old World Tropics.

For previous introduction see 34809.

98822. *CASUARINA* sp. Casuarinaceae.

No. 3852. Collected March 16, 1932, near South Hill, Anguilla. A handsome species with smaller cones and larger coarser twigs than *C. equisetifolia*; possibly a hybrid.

98823. *CAYAPONIA AMERICANA* (Lam.) Cogn. Cucurbitaceae.

No. 3855. Collected March 19, 1932, near Harrington, Tortola, British Virgin Islands. A woody vine with large scabrous rough five-lobed leaves of very dark-green color. The long-ovoid fruits, less than 1 inch long, turn red when ripe.

98824. *CEDRELA ODORATA* L. Meliaceae.

Cigarbox-cedar.

No. 3800. From the Jardin d'Essais, Basse Terre, Guadeloupe. This is the *West Indian* or *Spanish* cedar, the soft fragrant wood of which is easily worked and in great demand for cigar boxes. It is also used as a shade tree in coffee plantations.

For previous introduction see 97976.

98825. *CLITORIA TERNATEA* L. Fabaceae.

No. 3824. Collected March 14, 1932, in the village of Codrington, Barbuda, Leeward Islands, where it was growing in dry rocky calcareous soil. An ornamental leguminous vine with pea-shaped blue or white flowers about 1 inch long.

For previous introduction see 90906.

98826. *CLUSIA ROSEA* Jacq. Clusiaceae.

No. 2892. From the Avena Forest Reserve, Trinidad, February 16, 1932. A Central American shrub or tree up to 30 feet high, usually epiphytic when young but eventually killing the host plant. The opposite entire broadly ovate leaves are very thick and leathery, and the large white flowers are often tinged with pink.

For previous introduction see 77024.

98827. *CLUSIA* sp. Clusiaceae.

No. 3825. From St. Cloud, near Basse Terre, Guadeloupe, French West Indies, March 13, 1932. A tree with crimson fruits 2 inches long with a five-parted stigma which persists, and thick dark-green foliage which seems never to be diseased.

98828 to 98831. *COCCOLOBA* spp. Polygonaceae.98828. *COCCOLOBA KRUGII* Lindau.

No. 3829. From near Codrington, Barbuda, Leeward Islands, March 14, 1932, where it forms a component of the scrub which thrives in the dry limestone soil of the island. A shrub or small tree up to 25 feet high, with smooth gray bark and slender branches, native to the West Indies. The light-green, somewhat leathery, broadly cordate leaves are 4 to 6 inches long, and the small green flowers with white stamens are borne in slender spikes and followed by small ovoid slightly fleshy black fruits.

98829 and 98830. *COCCOLOBA DIVERSIFOLIA* Jacq.

Collected on Barbuda Island March 14, 1932. A small tree 25 feet high, native to the West Indies. The ovate to elliptic-obovate coriaceous leaves are 2 to 6 inches long, and the small green flowers, followed by slightly fleshy black fruits, are borne in slender spikes longer than the leaves.

98793 to 98888—Continued.

98829. No. 3830. A larger-fruited form than no. 3829 (98828) and a promising ornamental.

98830. No. 3811. A small-leaved form that seems well able to withstand long periods of drought.

98831. *COCCOLOBA* sp.

No. 3874. Probably collected from trees on the dry rocky soil of Great Inagua, Bahama Islands.

98832. *CORDIA NITIDA* Vahl. Boraginaceae.

Glossy cordia.

No. 3868. *Red manjack* or *West Indian cherry*. Collected March 19, 1932, on Tortola, British Virgin Islands. A shrubby tree with harsh glossy foliage, white flowers, and red viscid berries which are eaten by the wild doves.

For previous introduction see 51118.

98833. *CRACCA TOXICARIA* (Pers.) Kuntze (*Tephrosia toxicaria* Pers.). Fabaceae.

No. 3713. Collected March 1, 1932, at Paramaribo, Surinam. A shrub up to 7 feet high, with leaves made up of nine or more leaflets, and racemes of white and pink flowers. It is used as a cover crop, and in Peru, where it is native, parts of the plant are crushed and thrown into the water to poison fish. It is now being tried as an ingredient of insecticides to replace arsenical salts.

For previous introduction see 81056.

98834 to 98842. *CROTALARIA* spp. Fabaceae.98834. *CROTALARIA ANAGYROIDES* H. B. K.

No. 3711. From Paramaribo, Surinam, March 1, 1932. A shrubby vigorous species over 7 feet high with mucronate pubescent trifoliate leaves and terminal inflorescences of brilliant yellow flowers.

For previous introduction see 97878.

98835. *CROTALARIA RETUSA* L.

No. 3860. Collected March 19, 1932, above the village of Roadtown, Tortola, British Virgin Islands.

For previous introduction see 97958.

98836 to 98839. *CROTALARIA INCANA* L.

For previous introduction see 97956.

98836. No. 3814. From Little Bay, St. Martin Island, March 17, 1932.

98837. No. 3638. Collected March 15, 1932, at Bottom, Saba, Netherland West Indies. A small species growing in the cultivated lands.

98838. No. 3853. Collected March 19, 1932, on Tortola, British Virgin Islands. A small-podded legume growing on a rock wall at Harrigan.

98839. No. 3813. Collected March 17, 1932, on the island of St. Martin. A low bushy herbaceous legume with densely pubescent soft delicate leaves. It may be a naturalized form escaped or introduced with forage.

98840 and 98841. *CROTALARIA JUNCEA* L.

Sunn-hemp.

For previous introduction see 97931.

98840. No. 2974. Collected February 25, 1932, in the Botanic Garden, Georgetown, British Guiana. A large plant 8 feet high with deep-orange or brilliant-yellow flowers 1 inch long borne on erect slender gray-pubescent branches. The short, somewhat flattened pods are covered with velvety pubescence.

98793 to 98888—Continued.

98841. No. 2973. From a private garden at St. George, Grenada, Windward Islands, February 9, 1932. Very similar to no. 2974 (98840), but a smaller plant.

98842. CROTALARIA RETUSA L.

No. 3876. Collected January 26, 1932, on Antigua, Leeward Islands.

For previous introduction see 98835.

98843. CYPERUS COMOSUS (Kunth) Poir. Cyperaceae.

No. 3701. Collected March 4, 1932, in the experiment station, Paramaribo, Surinam. A large handsome sedge which becomes 8 feet high in the wet lands of the experiment station at Paramaribo. Introduced for trial as an ornamental sedge for water gardens.

98844. DIOSPYROS PEREGRINA (Gaertn.) Guerke. Diospyraceae.

No. 2848. Collected February 13, 1932, at Port-of-Spain, Trinidad. An evergreen Indian species, with large leaves, which produce a very dense shade. The young foliage is blood red, and the white waxy blossoms are very fragrant. The fruits, over 1 inch in diameter, have sticky pulp which, in India, is used in calking boats. Introduced as an ornamental.

98845. DOLICHOS LABLAR L. Fabaceae.

Hyacinth-bean.

No. 3796. Collected March 15, 1932, in the village of Bottom, Saba, Netherland West Indies. This is the standard variety grown on the island, where it is known as the *Bonanist* bean and forms an important article of diet.

98846. ERYTHRINA VARIEGATA Stickm. Fabaceae.

Coraltree.

No. 3774. Collected March 12, 1932, in the Jardin d'Essais, Guadeloupe. A moderate-sized, quick-growing deciduous tree, native throughout India from the foot of the Himalayas into Burma and cultivated in many parts of the Tropics. The clusters of large bright-red flowers appear before the leaves. The pods, 4 to 8 inches long, contain several dark-carmine seeds. The flowers are dried for use as a dye; the bark is used for tanning and dyeing and yields an excellent pale straw-colored fiber. The leaves are used as cattle fodder; the bark and leaves are also used medicinally. The open-grained light wood is durable and does not split or warp; it is used for boxes, toys, and also for firewood. Much of the lacquered ware of India is made from the wood of this tree.

For previous introduction see 68335.

98847. ERYTHRINA GLAUCA Willd.

No. 3710. *Bois Immortelle*. From St. Louis, Windward Islands, March 8, 1932. The immortelles are spectacular trees as seen from the harbor in St. Lucia. Their salmon-colored flowers, borne by leafless branches on great spreading crowned trees, dot the landscape with color, making it gay and very attractive. There are several forms, though all have salmon-pink and yellow blossoms.

For previous introduction see 77163.

98848. EUGENIA AUSTRALIS Wendl. Myrtaceae.

Australian brush-cherry.

No. 3655. The so-called *Jammon*. Collected in the Botanic Garden, Georgetown. A form with small, almost black, fruits not over one-half inch long. An Australian tree up to 80 feet high, with ovate evergreen leaves 3 inches long, branching panicles of white flowers 1 inch across, and ovoid reddish edible fruits an inch long.

For previous introduction see 76938.

98849 to 98851. FICUS spp. Moraceae.

Fig.

98793 to 98888—Continued.

98849 and 98850. FICUS LAEVIGATA Vahl.

98849. No. 3726. Collected March 10, 1932, on the drier side of the island of Martinique. A rather attractive species with medium-sized glossy leaves and an abundance of white berries with irregular chocolate-brown spots.

98850. No. 3861. From near Harrington, Tortola, British Virgin Islands, March 19, 1932. A good-looking tree 15 feet high growing on the dry side of the island. The white fruits, less than one-half inch in diameter, turn pink as they ripen and are covered with irregular reddish spots.

98851. Ficus sp.

No. 3904. From Haiti, March 27, 1932. A tall buttressed tree with leaves like *F. altissima*, found at 1,000 feet altitude.

98852. GALACTIA LONGIFLORA Arnott. Fabaceae.

No. 2657. Collected January 26, 1932, on Boggy Peak, MacCarthy Valley, Antigua, Leeward Islands. A tropical leguminous vine with pinnately trifoliate leaves composed of rounded or retuse leaflets and handsome scarlet pealike flowers in small axillary racemes of great charm and beauty. Native to St. Vincent, British West Indies.

98853. HAMELIA ERECTA Jacq. Rubiaceae.

Scarletbush.

No. 3764. Collected March 10, 1932, in Lamentin, Martinique. A shrub or small tree up to 25 feet high, native to Florida and southward to Brazil. The opposite or verticillate, elliptic to ovate leaves, 2 to 6 inches long, are pubescent, and the cymes of tubular crimson, scarlet, or orange flowers, nearly 1 inch long, are followed by small dark-red to purple berries. Introduced for comparison with the forms now grown in the Southern States.

98854. HIPISCUS BIFURCATUS Cav. Malvaceae.

Rosemallow.

No. 3696. Collected March 3, 1932, from a pole-hole in the rocks in the middle of the Surinam River. A wild species, with large pink flowers 3 inches long, that occurs commonly along the Surinam River.

98855 to 98861. INDIGOFERA spp. Fabaceae.

Indigo.

98855 and 98856. INDIGOFERA TINCTORIA L.

True indigo.

For previous introduction see 45309.

98855. No. 3714. Collected February 6, 1932, on almost pure beach sand at Grand Bay, Cannouan, Grenadine Islands.

98856. No. 3801. Collected January 23, 1932, in an open field near the experiment station of St. Kitts, Leeward Islands.

98857 to 98859. INDIGO SUFRUTICOSA Mill.

A slender yellow-flowered bushy legume 3 to 5 feet high, producing a rather scanty growth which is not considered one of the best cover crops.

For previous introduction see 98728.

98857. No. 3835. From Barbuda, Leeward Islands, March 14, 1932.

98858. No. 3839. From the town of Bottom, Saba, Netherland West Indies, at 1,000 feet altitude, March 15, 1932. A low shrubby very fruitful species, covered with small sickle-shaped pods.

98859. No. 3875. From Beata Island, Dominican Republic, March 23, 1932. A woody plant 5 feet high found on the beach.

98793 to 98888—Continued.

98860 and 98861. *INDIGOFERA TINCTORIA* L.
True indigo.

For previous introduction and description see 98856.

98860. No. 3877. From the roadside in dry situations on the southern part of St. Martin Island, March 17, 1932.

98861. No. 2886. From Guantanamo, Cuba, March 24, 1932. Found in heavy clay soil on a high bluff above the river.

98862. *INGA LAURINA* (Swartz) Willd. *Mimosaceae*.
Guama.

No. 3761. *Pois doux*. From the Jardin d'Essais, Pointe-à-Pitre, Guadeloupe, Grand Terre Island, French West Indies, March 11, 1932. A valuable shade and windbreak tree with dark glossy-green leaves like a laurel and remarkably strong trunks which appear to withstand the hurricanes well. The tree is a rapid grower and produces pods containing beans surrounded by a sweet but insipid aril of which children are quite fond, hence the name *Pois doux* (sweet peas).

For previous introduction see 52511.

98863. *LONCHOCARPUS DOMINGENSIS* (Pers.) DC.
Fabaceae.

No. 3770. From the Botanic Garden, Basse Terre, Guadeloupe, March 12, 1932. The *Savoneth de Riviere* of Martinique. A medium-sized handsome spreading tree with long slender branches, large pinnate leaves, and violet or rose-colored flowers. A leguminous tree of real promise.

98864. *LUCUMA DUSSIANA* Pierre. *Sapotaceae*.

No. 3854. From the Basse Terre Botanic Garden, Guadeloupe, March 12, 1932. A small tropical tree with elliptic-obovate leathery leaves and edible ovoid or depressed-spherical fruits about twice as large as a hen's egg, with smooth yellowish skin and yellow-brown pulp. Native to Peru, where it is called *pomme pam*.

98865. *MABA GRISEBACHII* Hiern. *Diospyraceae*.

No. 3388. Presented by Cmdr. G. B. Keester, of the Naval Station at Guantanamo, Cuba, March 24, 1932. *Ebony* tree. A tree 1 foot in diameter found on the top of dry calcareous cliffs. The hard green fruits, with persistent 3-parted calyx, are filled with a sticky juicelike gambaoge that upon exposure to air turns very dark and almost iridescent. It is not astringent, but stains the hands deep yellow. The wood is said to be blue-black.

98866. *MALPIGHIA FUNICIFOLIA* L. *Malpighiaceae*.

No. 3805. Presented by Mrs. Lawton, wife of the American consular agent in Paramaribo, Surinam, March 1, 1932. A shrub that is quite generally cultivated in the West Indies, with pretty rose-colored flowers followed by brilliant red fruits the size of ordinary cherries, which have a thin skin and juicy orange-colored pulp of a refreshing flavor.

98867 and 98868. *MAMMEA AMERICANA* L. *Clusiaceae*.
Mamey.

A tropical tree with dark-green glossy foliage and large gray-green fruit. The skin of this fruit exudes a resinous, gummy juice which is used for killing chigoes and lice when applied locally.

For previous introduction see 47425.

98867. No. 3709. From the market at Georgetown, British Guiana, February 29, 1932.

98868. No. 3906. From near the citadel of Christophe, Haiti, March 27, 1932.

98793 to 98888—Continued.

98869. *MIMUSOPS BALATA* (Aubl.) Gaertn. f.
Sapotaceae.

No. 3895. From the Bayeux plantation in west-central Haiti, under observation of the Division of Rubber Plant Investigations, March 27, 1932. A tree which bears small round edible fruits, but is cultivated for its latex which is much like gutta-percha in character and is used in the trade for coating cables, etc.

98870. *UCHNA MOSSAMBICENSIS* Klotzsch. *Ochnaceae*.

No. 2971. From the Botanic Garden, Georgetown, British Guiana, February 25, 1932. An ornamental evergreen shrub which has large thick deep-green obovate leaves and terminal clusters of showy flowers, with the central disk and rather fleshy sepals wine red.

98871 and 98872. *PASSIFLORA LAURIFOLIA* L. *Passifloraceae*.
Waterlemon.

Pomme Liane. A strong vigorous vine, very suitable for arbors and trellises, with oval to ovate leaves and fragrant purple flowers about 2 inches in diameter. The ovoid-pointed fruit has a tough leathery shell which when green is six-striated with white stripes, but when quite ripe is a dull orange yellow. The numerous seeds are embedded in the juicy scented pulp, which is aromatic and delicious.

For previous introduction see 68038.

98871. No. 3771. From the market at Castries, St. Lucia, Windward Islands, March 8, 1932.

98872. No. 3775. From the market at Basse Terre, Guadeloupe, March 13, 1932.

98873. *PHASEOLUS LUNATUS* L. *Fabaceae*.
Lima bean.

No. 3795. *Run* bean. From Bottom, Saba, Netherland West Indies. A variety with brown-spotted seeds, which is one of the staple food plants of the island.

98874. *PHASEOLUS MUNGO* L. *Fabaceae*. *Urd*.

No. 3705. From Paramaribo, Surinam, March 3, 1932. A promising bean grown on sandy soils of the savanna back of Paramaribo by the Javanese colonists. It seemed to be growing and fruiting well in the strictly tropical climate and was probably introduced from Java by the Javanese.

98875. *PITHECOLLOBIUM DULCE* (Roxb.) Benth.
Mimosaceae.
Guamachil.

No. 2962. From the Botanic Garden, Georgetown, British Guiana, February 23, 1932. A large stately tree with pinnate leaves composed of obovate or oblong leaflets 1 inch long; the white flowers, finely pubescent, are followed by twisted pods 5 or 6 inches long and over 1 inch wide. It is widely cultivated in the Tropics as an ornamental. The pulpy arils are eaten by the poorer classes as food, and the bark yields a yellow dye.

For previous introduction see 92366.

98876. *PLUMERIA ALBA* L. *Apocynaceae*.

No. 3799. From Anguilla, Leeward Islands, March 16, 1932, where it was growing in the pot-holes in calcareous rocks and exposed to the drying salt-spray-laden trade winds. A tree up to 30 feet high, native to the West Indies. The linear-lanceolate subcoriaceous leaves, 10 inches long, are glabrous above and densely white-tomentose beneath. The salver-shaped flowers, 2 inches across, white with a yellow eye, are borne in compact clusters.

For previous introduction see 97576.

98793 to 98888—Continued.

98377. *PSIDIUM* sp. Myrtaceae.

No. 3807. From Kaleel, Surinam, March 4, 1932. A wild relative of the guava which bears fruits 1 inch in diameter composed mostly of angular hard seeds. Of possible value in breeding with the ordinary guava.

98873 and 98879. *QUASSIA AMARA* L. Simarubaceae.

A lofty tree, native to Surinam, which resembles the ash, with large showy red flowers, followed by beautiful and decorative fruits arranged in fives around a fleshy peduncle. The wood of this tree is extremely bitter and was found to be a remedy for certain fevers by a Negro named Quassi.

98378. No. 3661. From the Botanic Garden, Paramaribo, Surinam, March 2, 1932.

98379. No. 3802. Presented by Père Quentin, of Basse Terre, Guadeloupe, March 13, 1932.

98880. *RAVENALA GUYANENSIS* Steud. Musaceae.

No. 3866. From an Indian village near Paramaribo, Surinam, March 3, 1932. There are only two species in the genus, one in Madagascar and the other in Guiana. This species is not so large as the Madagascar one, but it rises to a height of 25 feet making a fanlike head. Its enormous flower spike is 9 feet long and as much as a man can carry. Unlike the Madagascar species, the seed of which has a deep-blue aril, this has an orange aril.

98881. *SAMANEA SAMAN* (Jacq.) Merr. (*Pithecolobium saman* Benth.). Mimosaceae.

No. 2966. From the Botanic Garden, Georgetown, British Guiana, February 24, 1932. The rain tree of the West Indies. A large spreading tree up to 60 feet high, native to Central America, but widely distributed throughout the Tropics as an ornamental and shade tree. The horizontal branches are extremely long, and between each pair of leaflets there is an extra-floral nectary, which exudes nectar and attracts insects. The dropping of this nectar has given the tree the reputation of producing rain. The dark pods, like carob beans, are filled with sweet pulp and are fed to stock. The wood is not very hard, but the heartwood is a handsome red color and takes a fine polish.

For previous introduction see 93364.

98882. *SICANA ODORIFERA* (Vell.) Naud. Cucurbitaceae. **Casabanana.**

No. 3772. From Fort-de-France, Martinique, French West Indies. A subtropical ornamental cucurbitaceous vine producing large fruits a foot or more long. Its texture and flavor are extremely pleasant, reminding one of a summer squash. For cultivation in the vine would require a strong trellis like the chayote.

For previous introduction see 92926.

98883. *STIGMAPHYLLON LINGULATUM* (Poir.) Small. Malpighiaceae.

No. 3850. From the village of Sandy Ground, Anguilla, Leeward Islands, March 16, 1932. A woody vine with glossy foliage and flowers which resemble those of crapemyrtle except that they are a pretty yellow color. The winged fruits are borne in pairs.

For previous introduction see 33585.

98884. *TAMARINDUS INDICA* L. Caesalpinaceae. **Tamarind.**

No. 3790. From a hillside above the village of Bottom, Saba, Netherland West Indies, March 15, 1932. A tree bearing unusually large fine fruits. Some of the pods were 8 to 9 inches long and over an inch wide.

98793 to 98888—Continued.

98885. *TRIMEZA MARTINICENSIS* (Jacq.) Herb. (*Cipura martinicensis* H. B. K.). Iridaceae.

No. 3503. From a terrace just below the rainforest edge in the St. Cloud region above Basse Terre, Guadeloupe, March 13, 1932. A yellow tigridialike plant 18 inches high, with small round rhizomes having intensely yellow flesh, light-green leaves, and small fugaceous yellow flowers.

For previous introduction see 97762.

98886. *VANGUERIA MADAGASCARIENSIS* Gmel. Rubiaceae.

No. 3762. From Guadeloupe, March 13, 1932. A small deciduous tree with large light-green leaves having prominent midribs. In March and April it bears quantities of globular green fruits over 1 inch in diameter, which become brown when ripe. The seeds are surrounded by slightly acid brown pulp, reminding one of the tamarind.

98887. *VIGNA LUTEA* (Swartz) A. Gray. Fabaceae.

No. 3885. From Road Town, Tortola, British Virgin Islands, March 19, 1932.

For previous introduction and description see 98728.

98888. *ZEA MAYS* L. Poaceae. **Corn.**

No. 3691. From the market, Paramaribo, Surinam, March 3, 1932. Introduced for the use of plant breeders who are searching for a strain resistant to the corn ear worm.

98889 to 98903.

From Egypt. Seeds presented by Alfred Bircher, Middle Egypt Botanic Garden, El Saff. Received April 23, 1932.

98889. *ACROCARPUS FRAXINIFOLIUS* Wight and Arn. Caesalpinaceae.

A lofty tree, native to the eastern Himalayas up to 4,000 feet altitude. The sapwood is white and the heartwood light red and moderately hard. The natives use the wood for planking and tea boxes.

For previous introduction see 57882.

98890. *BRAHEA DULCIS* (H. B. K.) Mart. Phoenicaceae. **Palma dulce.**

A short palm, up to 20 feet high, native to Mexico. The fan-shaped leaves, 4 to 5 feet long, are made up of about 50 linear leaflets, and the globose yellow edible fruits are borne on pendulous much-branched stalks 6 to 8 feet long.

98891. *BUTIA CAPITATA* (Mart.) Becc. Phoenicaceae. **Palm.**

A large palm, like the coconut, native to Argentina, with a spineless trunk, pinnate leaves, and large bunches of small edible fruits. It is said to be hardier than any species of *Cocos*.

For previous introduction see 82399.

98892. *CANTHUM PARVIFLORUM* Lam. Rubiaceae.

A rigid spiny shrub, native to India and Ceylon. The crowded leathery ovate to orbicular leaves are about 1 inch long, and the very small yellowish flowers, borne in cymes, are followed by obovate fruits less than 1 inch long.

98893. *CEREUS JAMACARU* DC. Cactaceae. **Mandacaru.**

A rigid upright cactus 12 to 16 feet high and 6 inches in diameter, native to Brazil. The new growth is azure, becoming dark green with age, and the large white flowers are 10 inches long and 8 inches across.

98889 to 98903—Continued.

98894. *DOVYALIS HEBECARPA* (Gardn.) Warb. (*Aberia gardnerii* Clos.). Flacourtiaceae.

A small, much-branched tree 16 to 20 feet high, native to India. The ovate-lanceolate leaves are 2 to 4 inches long, and the greenish flowers are followed by pale-purple edible fruits about 1 inch in diameter.

98895. *EUCLEA PSEUDEBENUS* E. Mey. Diospyraceae.

A shrub or small tree, native to southern Africa. The alternate entire linear coriaceous leaves are 1 to 3 inches long, and the inconspicuous flowers are followed by blue-black edible fruits about one-fourth inch in diameter.

98896. *EUGENIA SUPRA-AXILLARIS* Spring. Myrtaceae.

A glossy-leaved evergreen shrub from eastern Brazil, which bears clusters of white flowers and black one-seeded globose fruits in clusters of 3 to 10. The fruits are about the size of small cherries and somewhat resemble juniper berries in flavor.

For previous introduction see 47988.

98897. *JUNIPERUS BARBADENSIS* L. Pinaceae. Bermuda redcedar.

An evergreen tree, up to 40 feet high, native to the West Indies. The small spiny-pointed imbricated leaves are pale blue-green, and the depressed globose fruits are blue.

98898. *OPUNTIA PARAGUAYENSIS* Schum. Cactaceae. Pricklypear.

An erect shrubby branched cactus of the section *Platypuntia*. The flat joints, about 8 inches long and 3 inches wide, are spineless, but are beset with short yellow bristles that tend to disappear with age. The yellow flowers are over 2 inches across. Native to Escoban, Paraguay.

98899. *OPUNTIA TUNA* Mill. Cactaceae. Pricklypear.

An erect spreading treelike cactus 10 to 12 feet high, native to the West Indies and Mexico. The elliptical deep-green joints are 10 to 14 inches long; the yellow, fading to red, flowers are 3 to 4 inches across, and the dark-purple, round or pear-shaped edible fruits are 1 to 2 inches in diameter.

98900. *PACHIRA FASTUOSA* (DC.) Decaisne (*P. excelsa* Hort.). Bombacaceae.

A handsome tropical tree native to Mexico, with leaves not unlike those of the horse-chestnut but more leathery in texture. The attractive white flowers, 12 inches in diameter, have strap-shaped petals and large brushlike clusters of crimson and yellow stamens.

For previous introduction see 73879.

98901. *PROSOPIS SPICIGERA* L. Mimosaceae.

A low prickly tree with gray branches, native to India and Persia. The compound leaves are made up usually of four pinnae, each bearing 16 to 24 gray coriaceous leaflets less than one-half inch long. The small flowers are borne in axillary spikes and terminal panicles, and the pods, 4 to 6 inches long, contain an edible pulp.

98902. *TRECLIA AFRICANA* Decaisne. Moraceae.

A tropical African tree, related to the breadfruit, up to 80 feet high and yielding a whitish latex. The coriaceous ovate-elliptic leaves are 8 inches long and 4 inches broad. The large yellowish fruit, a foot or more in diameter, is said to weigh up to 30 pounds. The seeds are ground by the natives and used as meal.

98903. *VANGUERIA MADAGASCARIENSIS* Gmel. Rubiaceae.

For previous introduction and description see 98886.

98904 and 98905.

From the West Indies and Surinam. Seeds collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the 1931-32 Allison V. Armour expedition. Received April 11, 1932.

98904. (Undetermined).

No. 2763. From Mayero Island, one of the Grenadines, February 6, 1932. An unidentified orchid with very large seed pods.

98905. *SCHOMBURGKIA UNDULATA* Lindl. Orchidaceae.

No. 2763. Presented March 6, 1932, by Mrs. Lawrence, wife of the American consul at Paramaribo, Surinam. A showy orchid with purple flowers in many-flowered clusters at the tips of long flower stalks.

98906. *ARUNDINARIA MACROSPERMA* Michx. Poaceae. Southern cane.

From Louisiana. Cuttings presented by Charles E. Chambliss, Crowley, La. Received May 2, 1932.

A native American bamboo growing along streams in the southeastern part of the United States. The stems are 20 to 30 feet high with numerous short divergent branches and lanceolate leaves 10 to 15 inches long.

For previous introduction see 75148.

98907. *SOLANUM TUBEROSUM* L. Solanaceae. Potato.

From England. Tubers presented by Sutton & Sons, Reading. Received April 27, 1932.

Shamrock. Introduced for the use of Department specialists.

98908 to 98917.

From China. Seed purchased from L. Pfitsin, Harbin, Manchuria. Received December 23, 1931. Numbered in April 1932.

98908. *ACER GINNALA* Maxim. Aceraceae. Amur maple.

A shrub or small tree up to 25 feet high, native to northeastern Asia, with lustrous dark-green three-lobed serrate leaves, long-stalked panicles of yellowish flowers, and winged fruits which are conspicuously red during the summer. The leaves turn bright red in autumn.

For previous introduction see 77615.

98909. *FRAXINUS MANDSHURICA* Rupr. Oleaceae. Manchurian ash.

A handsome ash, often 100 feet high, native to eastern Asia. The leaves are up to 15 inches long with dull-green bristly leaflets. The tree is said to be susceptible to late spring frosts.

For previous introduction see 90781.

98910. *PINUS KORAIENSIS* Sieb. and Zucc. Pinaceae. Korean pine.

A 5-needle pine that occasionally becomes 150 feet high, with smooth red-gray bark. It produces valuable lumber and edible seeds and is also of ornamental value, being of slow growth and forming a dense broad pyramidal head of handsome foliage. Native to Japan.

For previous introduction see 93419.

98911. *ROSA* sp. Rosaceae.

98912. *RUBUS* sp. Rosaceae.

98913. *RUBUS* sp. Rosaceae.

98914. *RUBUS* sp. Rosaceae.

98915. *RUBUS* sp. Rosaceae.

98908 to 98917—Continued.

98916. *SYRINGA AMURENSIS* Rupr. Oleaceae.
Manchurian lilac.

A shrub or small tree with large clusters of white flowers.

For previous introduction see 92067.

98917. *VITIS AMURENSIS* Rupr. Vitaceae.
Amur grape.

A wild grape with large bunches of acid purple berries about the size of a marrowfat pea. They are eaten fresh and also made into wine. This variety is hardy in the region of Mefun, Manchuria.

98918 and 98919.

From the Philippine Islands. Cuttings presented by the chief of the division of forest investigation, Bureau of Forestry, Agricultural College, Laguna, through Arthur Fischer, director of forestry, Manila. Received May 9, 1932.

98918. *DEGUELIA ELLIPTICA* (Roxb.) Taub. (*Deris elliptica* Benth.). Fabaceae.

A large handsome climbing vine native to southeastern Asia. The compound leaves, 1 foot long, are made up of 9 to 13 thin leathery obovate leaflets 4 to 6 inches long, and the bright-red pea-shaped flowers, 1 inch long, are borne in lax racemes a foot in length. It yields the commercial tuba root, which is used in the manufacture of insecticides. The plant is at present extensively cultivated in the Malay Archipelago.

For previous introduction see 95366.

98919. *DEGUELIA POLYANTHA* (Perkins) Blake. Fabaceae.

A tropical woody climber with alternate pinnate leaves and small pinkish flowers in axillary racemes. It is closely related to *D. scandens* and is native to the Philippine Islands.

98920. *ARRACACIA XANTHORRHIZA* Bancroft. Apiaceae. Arracacha.

From Venezuela. Roots presented by H. Pittier, Caracas. Received May 10, 1932.

The arracacha is a biennial herb about 3 feet high, with carrotlike foliage and small umbels of purple flowers. It is native to northern South America, where it is cultivated for its roots, which may be white, yellow, or mulberry colored. The large fleshy roots are used as food in South America and Central America, being boiled like parsnips or sliced and fried. They also produce an excellent starch for laundry purposes. The plant is propagated either by seed or cuttings, and it will stand no frost.

For previous introduction see 78832.

98921. *CUCURBITA MOSCHATA* Duchesne. Cucurbitaceae. Cushaw.

From China. Seeds presented by W. T. Chang, Nanking University, Nanking. Received May 6, 1932.

98922 to 98924.

From Scotland. Seeds presented by the North of Scotland College of Agriculture, Craibstone, Aberdeen. Received May 9, 1932.

A collection of grasses introduced for the use of Department specialists.

98922. *DACTYLIS GLOMERATA* L. Poaceae.
Orchard grass.

Craibstone grazing cocksfoot.

98923. *LOLIUM PERENNE* L. Poaceae.
Perennial ryegrass.

Craibstone perennial ryegrass.

98922 to 98924—Continued.

98924. *PHELUM PRATENSE* L. Poaceae. Timothy.
Craibstone timothy hay.

98925 and 98926.

From Ceylon. Seeds presented by the manager of the publication depot and central seed store, Department of Agriculture, Peradeniya. Received May 9, 1932.

98925. *CRACCA CANDIDA* (DC.) Kuntze (*Tephrosia candida* DC.). Fabaceae.

A low shrub with slender branches and large clusters of reddish or white flowers. It is the preferred cover crop in the lime plantations of Dominica, West Indies, and widely distributed in tropical countries. The bark and leaves are used as a fish poison plant in Bengal and Burma, but tests show that as an insecticide it is much inferior to *C. vogelii*.

For previous introduction see 97764.

98926. *CRACCA VOGELII* (Hook. f.) Kuntze (*Tephrosia vogelii* Hook. f.). Fabaceae.

A shrubby legume native to tropical Africa. All parts of the plant are macerated and thrown into the water to kill fish. It is considered very valuable for its insecticidal properties, the seeds being found to contain the highest concentration of the toxic principle.

For previous introduction see 81414.

98927. *BROMUS INERMIS* Leyss. Poaceae. Common bromegrass.

From China. Seeds purchased from L. Ptitin, Harbin, Manchuria. Received May 9, 1932.

Koster. Introduced for the use of Department specialists working with forage crops.

98928. *CAVANILLESIA PLATANIFOLIA* H. B. K. Bombacaceae.

From the Canal Zone. Seeds presented by J. E. Higgins, director, Canal Zone Experiment Gardens, Summit. Received May 3, 1932.

A Colombian tree up to 100 feet high, with a large thick trunk, smooth pale bark, large shallowly 5- to 7-lobed leaves, and red flowers 1 inch long. The coarse pithlike wood is white or yellowish and is used for making canoes and rafts.

For previous introduction see 78818.

98929. *PRUNUS SALASII* Standl. Amygdalaceae.

From Central America. Seeds presented by Mr. Salas, director general, Agricultural Department, Guatemala, through Otto Katzenstein & Co., Atlanta, Ga. Received May 12, 1932.

A tropical evergreen cherry which is native to the highlands of Antigua, Guatemala, where it is known as the carreto. The light-green leathery narrow-oblong leaves are 3 to 5 inches long, and the small white flowers are in racemes about 6 inches long.

98930 to 98973. *MALUS SYLVESTRIS* Mill. (*Pyrus malus* L.). Malaceae. Apple.

From Germany. Plants presented by Dr. W. Gleisberg, Die Gartenbauwissenschaft, Fillnits und Elbe, through L. Späth, Berlin-Baumschulenweg. Received May 13, 1932.

A collection of selected stocks introduced for the use of Department specialists in their studies of fruit-tree root stocks.

98930. No. 3. *Grosser Bohnapfel*.

98931. No. 6. *Kasselrenett (Grosse Reinette)*.

98932. No. 7. *Kanadarenett*.

98930 to 98973—Continued.

98933. No. 8. *Guldparmån* (*Winter-Goldparmäne*).
 98934. No. 11. *Ananasrenett*.
 98935. No. 12.
 98936. No. 13.

 98972. No. 186.
 98973. No. 187.

98974. FRAGARIA sp. Rosaceae.

Strawberry.

From Sweden. Plants presented by Mr. Eckstrom. Central Bureau of Agriculture, Stockholm. Received May 25, 1932.

Abundance.

98975. GOSSYPIUM sp. Malvaceae.

Cotton.

From the Galápagos Islands. Seeds presented by George Stone. Received April 4, 1932.

Wild cotton collected on the island of Santa Maria.

98976 to 98999.

From the West Indies, British Guiana, and Surinam. Plants and seeds collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the 1931-32 Allison V. Armour expedition. Received April 11, 1932.

98976. RODRIGUEZIA SECUNDA H. B. K. Orchidaceae.

No. 3659. From Surinam, March 2, 1932. An epiphytic orchid with small delicate pseudobulbs, long slender leaves, and deep-rose flowers, borne in erect secund racemes 6 inches high. It grows commonly either on sapodilla or calabash trees in the savanna region around Paramaribo.

98977. ACACIA CHORIOPHYLLA Benth. Mimosaceae.

No. 3905. From Mariguana, Bahama Islands, March 29, 1932. A shrub or small tree with leathery pinnate leaves and pretty yellow flower heads followed by short thick pods in which the brown seeds are embedded in a white sweet aril. Introduced as an ornamental shrub or wind-break.

98978. ALBIZZIA CARIBAEA (Urban) Britton and Rose. Mimosaceae.

No. 2965. From the Botanic Garden, Georgetown, British Guiana, February 24, 1932. A tall

98976 to 98999—Continued.

gaunt naked-looking tree with slender branches, thin pinnate foliage, and papery pods 4 or 5 inches long and less than an inch wide, containing 11 or 12 seeds.

98979. LYSILOMA LATISILIQUA (L.) Benth. Mimosaceae.

No. 3887. From Blue Beach, near Guantanamo, Cuba, March 24, 1932. A small decorative tree 25 feet high, with pretty bipinnate leaves composed of obovate leaflets and papery pods of interesting structure. The outside of the dehiscent pod appears to flake off, leaving only the papery mesocarp to enclose the seeds; the dark margin of the pod persists.

98980. AMERIMNON LATIFOLIUM (Roxb.) Kuntze. Fabaceae.

No. 3657. From the Botanic Garden, Georgetown, British Guiana, February 24, 1932. A forest tree native to the Sikkim region in India. The pinnate leaves, 4 to 6 inches long, are made up of 5 to 7 orbicular coriaceous leaflets, and the small pea-shaped white flowers are borne in broad lax panicles. The brown strap-shaped pods are 2 to 3 inches long.

98981 and 98982. BRADBURYA VIRGINIANA (L.) Kuntze. Fabaceae. Piedmont butterfly-pea.

A long-podded vigorous legume, similar to the rice bean.

98981. No. 3815. From the Dutch side of the island of St. Martin, in a very dry locality, March 17, 1932.

98982. No. 3828. From Barbudo, Leeward Islands, March 14, 1932. Found in dry limestone soil.

98983. CAESALPINIA PAUCIJUGA Benth. Caesalpinaceae.

No. 2967. From the Botanic Garden, Georgetown, British Guiana, February 24, 1932. *Brazilletto wood*. A large beautiful spreading timber tree which is covered in season with racemes of small fragrant yellow flowers.

For previous introduction see 98070.

98984. CESTRUM LAURIFOLIUM L'Her. Solanaceae.

No. 3862. From the village of Harringan, Tortola, British Virgin Islands, March 19, 1932. An attractive shrub 10 to 15 feet high with dark-green leaves. The yellow funnelform flowers, one-half inch long, are followed by pretty black berries each with a persistent calyx and each bearing three ovate brown seeds flat on one side.

98985. GYMINDA LATIFOLIA (Swartz) Urban. Celastraceae.

No. 3842. *Maiden berry*. From Anguilla, Leeward Islands, March 16, 1932. A shrub or small tree, up to 30 feet high, native to the West Indies. The oblong to ovate, glossy-green, slightly leathery leaves are 1 to 3 inches long and the axillary clusters of small greenish flowers are followed by ellipsoid red drupes about a quarter of an inch long, said to be edible.

98986. COSTUS CYLINDRICUS Jacq. Zinziberaceae.

No. 2958. From Tobago Island, February 20, 1932. A rank-growing, forest-loving species with large dark-green leaves arranged spirally about the flower stalk, which is a terminal conelike structure with reddish bracts from above which pink-white flowers peep out.

98987 to 98990. DOLICHOLUS spp. Fabaceae.

98987. DOLICHOLUS sp.

No. 3810. From Charlotteville, Tobago Island, February 21, 1932. A legume collected in a lowland meadow.

98976 to 98999—Continued.

98998 and 98999. *DOLICHOLUS RETICULATUS* (Swartz.) Millsp.

A legume with yellow flowers and very short broad pods.

98998. No. 3843. Collected March 15, 1932, above the village of Bottom on the island of Saba.

98999. No. 3857. Collected on the mountain side back of Road Town, Tortola Island, March 1, 1932.

98990. *DOLICHOLUS MINIMUS* (L.) Medic.

No. 3858. From near the village of Harringan, Tortola Island, March 19, 1932. A legume which may have value as a green manure.

For previous introduction see 97311.

98991. *ESCHWEILERA* sp. Lecythidaceae.

No. 2857. From the Botanic Garden, Port-of-Spain, Trinidad, February 12, 1932. A large tree 50 feet tall, with fruits in clusters resembling acorns with their acorn cups. The seed is bean shaped, however, and strikingly different from any acorn.

98992. *EUGENIA LAMBERTIANA* DC. Myrtaceae.

No. 3779. From near St. Cloud, on Basse Terre, Guadeloupe, March 13, 1932. A tall shrub, native to the West Indies, with glossy dark-green oblong to elliptical leaves 4 to 6 inches long. The small flowers are followed by axillary clusters of 2 to 6 globular yellow fruits about one-half inch in diameter.

98993. *PHASEOLUS ADENANTHUS* G. Meyer. Fabaceae. **Bean.**

No. 3725. From Lamentin, Guadeloupe, March 10, 1932. A sparsely flowering legume of scraggly habit growing over underbrush. The white and purple flowers, borne on long peduncles, remind one of sweet peas.

For previous introduction see 97883.

98994. *GALACTIA LONGIFLORA* Arnott. Fabaceae.

No. 3859. From the road between the villages of Bottom and St. John, Saba Island, March 15, 1932.

For previous introduction and description see 98852.

98995. *GUZMANIA* sp. Bromeliaceae.

No. 3806. From the highlands of Guadeloupe, March 12, 1932. A bromeliad with leafy terminal inflorescences, not panicle, rising from the broad rather tender leaves which form a rosette. The leaves of the inflorescence differ little from the rest of the plant. A decorative species, but not a strikingly handsome one.

98996. *INDIGOFERA SUFFRUTICOSA* Mill. Fabaceae. **Indigo.**

No. 2616. From the beach of Beata Island, Dominican Republic, January 18, 1932.

98997. *INGA INGOIDES* Willd. Mimosaceae.

No. 2991. From the Botanic Garden, Georgetown, February 27, 1932. A tree 30 to 40 feet high, native to British Guiana. The compound leaves are made up of 3 to 4 pairs of elliptical leaflets 2 to 4 inches long, and the small tubular flowers are followed by tomentose four-angled pods 4 to 6 inches long.

98998. *IPOMOEA POLYANTHES* Roem. and Schult. Convolvulaceae.

No. 3763. From near the village of Vauclin, Martinique, March 10, 1932. A climbing herb with large bright-yellow flowers not abundant enough to make it a very showy species.

For previous introduction see 97769.

98976 to 98999—Continued.

98999. *NYMPHOIDES HUMBOLDTIANUM* (H. B. K.) Kuntze (*Limnanthemum humboldtianum* Griseb.). Menyanthaceae. **Floatingheart.**

No. 3808. From the Lamaha Canal, near Georgetown, British Guiana, February 27, 1932. A water plant having tiny white flowers, with fringed petals which rise a foot above the floating leaves.

99000 to 99023.

From the West Indies, British Guiana, and Surinam. Seeds collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the 1931-32 Allison V. Armour expedition. Received April 20, 1932.

99000. *MORA EXCELSA* Benth. Caesalpinaceae.

No. 3712. From Trinidad, February 16, 1932. A large forest tree, native to Guiana. The abruptly pinnate leaves are made up of 3 to 4 pairs of blunt leaflets 5 to 8 inches long, and the small flowers, borne in cylindrical spikes 6 to 10 inches long, are followed by oblong woody pods 3 to 6 inches long, each containing one seed.

99001. *PAULLINIA PINNATA* L. Sapindaceae.

No. 2990. From the Botanic Garden, Georgetown, British Guiana, February 27, 1932. A strong-growing vine that climbs 30 to 40 feet to the tops of trees. The bright-red fruits, the size of cherries, are borne in racemes 6 inches or more in length.

99002. *PELTOGYNE PORPHYROCARDIA* Griseb. Caesalpinaceae.

No. 2970. From the Botanic Garden, Georgetown, British Guiana, February 25, 1932.

For previous introduction and description see 98558.

99003. *PLATYMISCIUM POLYSTACHYUM* Benth. Fabaceae.

No. 2992. *Mormigo, palo de marimba*. From the Botanic Garden, Georgetown, British Guiana, February 25, 1932. A handsome tropical leguminous tree with opposite shining-green compound leaves made up of 3 to 5 ovate leaflets and racemes of small flowers. The wood is hard, streaked with black and red, and is considered excellent for cabinetwork.

For previous introduction see 80698.

99004. *SAMANEA SAMAN* (Jacq.) Merr. Mimosaceae.

No. 3706. From the Botanic Garden, Georgetown, British Guiana, February 23, 1932.

For previous introduction and description see 98881.

99005 and 99006. *TERAMNUS LABIALIS* (L.) Spreng. Fabaceae.

A legume found in dry places, growing over tall grasses. Its great productiveness and the vigor of its growth are in its favor as a cover crop, although there is little substance in its foliage.

99005. No. 3809. From near Richmond, Tobago Island, March 19, 1932.

99006. No. 3856. From the French side of the island of St. Martin, March 17, 1932.

99007 and 99008. *TRICHACHNE INSULARIS* (L.) Nees. Poaceae. **Grass.**

A tropical grass cultivated in Central America where it grows from 6 to 7 feet high.

For previous introduction see 52922.

99007. No. 3863. From the experiment station at Harringan, Tortola Island, March 19, 1932.

99008. No. 2809. From Nome Rouge, Grenada, Windward Islands, February 10, 1932.

99000 to 99023—Continued.

99009. (Undetermined.)

No. 3827. March 3, 1932, near Kabel Station, Surinam. A vine with large yellow flowers, found over tall forest trees at the edge of the Surinam River.

99010. *STEGNOSPERMA HALIMIFOLIUM* Benth. Phytolaccaceae.

No. 3878. Beata Island, Dominican Republic. A very pretty scandent shrub with fruits which are reddish brown when ripe and, when opening, show a magenta aril that almost conceals the shiny black seed. In habit it resembles the northern bittersweet, and it could be used in the same decorative way.

For previous introduction see 97901.

99011. *GUAIACUM OFFICINALE* L. Zygophyllaceae. *Logniumvitae*.

No. 3880. From Barbuda, Leeward Islands, March 14, 1932. An evergreen tree up to 30 feet high, native to tropical America. The pinnate leaves are made up of 4 to 6 obovate leaflets 2 inches long, and the small blue flowers are in terminal clusters. The yellow-brown wood is very hard and heavy and is valued for hubs, cogs, and pulleys.

99012. *DUGGENA HIRSUTA* (Jacq.) Britton. Rubiaceae.

No. 3781. From Basse Terre, Guadeloupe, French West Indies, March 13, 1932. A shrub up to 10 feet high, with long slender branches, native to the West Indies and northern South America. The lanceolate to ovate leaves are 2 to 8 inches long, and the small white flowers, borne in spicate panicles, are followed by white to blue berries one-fourth inch in diameter.

99013. *RUELLIA TUBEROSA* L. Acanthaceae.

No. 3841. From near the village of Bottom, Saba, Netherland West Indies, March 15, 1932. An erect or ascending finely pubescent herbaceous perennial 2 feet high, native to the West Indies, tropical America, and the southeastern part of the United States. The ovate to oblong leaves, 5 inches long, are undulate on the margin and have winged petioles, and the tubular purple flowers, 2 to 3 inches long, are borne in several-flowered cymes.

99014. (Undetermined.)

No. 3844. Collected near the edge of the rain forest of St. Cloud, above Basse Terre, Guadeloupe, French West Indies, March 13, 1932. A tree 50 feet high, bearing masses of yellow-brown fruit capsules that split open into three valves and show inside a parchmentlike mesocarp and 1 or 2 small seeds that are embedded in a deep orange-colored aril. When the fruit opens it resembles the northern bittersweet and could be used in the same decorative way.

99015. (Undetermined.)

No. 3792. From Saba, Netherland West Indies, March 15, 1932. An orchid growing on the mountain side, where it was exposed to the bright tropical sunlight.

99016. *BUNCHOSIA GLANDULOSA* (Cav.) DC. Malpighiaceae.

No. 3879. Collected March 17, 1932, near Little Bay, St. Martin Island, Netherland West Indies. A shrub or small tree 25 feet high, native to the West Indies. The oblanceolate to obovate leaves, 1 to 5 inches long, are bright green above and paler beneath, and the small yellow flowers, in panicles, are followed by ovoid yellow to orange drupes nearly half an inch in diameter. The fruits are said to be eaten by birds.

99000 to 99023—Continued.

99017. *CEPHAELIS MUSCOSA* Swartz. Rubiaceae.

No. 3782. From near St. Cloud, Basse Terre, Guadeloupe, March 13, 1932. A shrub or small tree up to 15 feet high, native to the West Indies and Brazil. The oblong-lanceolate leaves are 3 to 4 inches long, the small white flowers are in heads with pale-blue bracts, and the ripe berries are blue.

99018. *TAMONEA GUIANENSIS* Aubl. Melastomaceae.

No. 3780. From near St. Cloud, Basse Terre, Guadeloupe, March 13, 1932. A shrub or small tree up to 25 feet high, native to the West Indies. The oblong to ovate leaves, 3 to 8 inches long, are green and glabrous above and pale and scurfy beneath. The small white flowers are borne in many-flowered panicles.

99019. (Undetermined.)

No. 3707. From the Botanic Garden, Georgetown, British Guiana, February 27, 1932. A rank-growing woody vine which climbs to the tops of trees. The large opposite leaves are 4 inches wide by 5 inches long, and the immense woody pods are 7 inches by 4 inches. The large leaves make this desirable as a pergola vine for subtropical regions.

99020. *SCOLOPIA COCHINCHINENSIS* (Lour.) Clos. (*S. crenata* Clos.). Flacourtiaceae.

No. 3708. From the Botanic Garden, Georgetown, British Guiana, February 27, 1932. A thorny shrub or small tree, native to southern China. The lanceolate to ovate leaves, 2 to 6 inches long, are shining above, pale and reticulate beneath, and glandular crenate on the margin. The racemes of inconspicuous flowers are followed by red fruits about one-half inch in diameter.

99021. *ELAEODENDRON XYLOCARPUM* (Vent.) DC. Celastraceae.

No. 3864. From Tortola Island, March 19, 1932. A small tree up to 30 feet high, native to the West Indies. The elliptic to oblong coriaceous light-green leaves are 2 to 4 inches long, and the axillary clusters of small green flowers are followed by ellipsoid fruits 1 inch long.

99022. *CITHAREXYLUM FRUTICOSUM* L. Verbenaceae.

No. 3849. *Fairy tree*. From the village of Codrington, Barbuda, Leeward Islands, March 14, 1932. A tree up to 30 feet high, native to the West Indies, where the wood is used for furniture and general construction. The oblong to obovate leaves are 2 to 6 inches long. The small tubular flowers are borne in spikelike racemes and are followed by red-brown to black drupes about one-third inch in diameter.

99023. *ALLOPLECTUS CRISTATUS* (L.) Mart. Gesneriaceae.

No. 3752. From the island of Martinique, March 10, 1932. A most attractive vine with bright-red bracts and trumpet-shaped flowers that rise from these heads of clusters of bracts.

99024 to 99027. *VICIA FABA* L. Fabaceae. **Broadbean.**

From Peru. Seeds collected by H. G. MacMillan and C. O. Erlanson, Bureau of Plant Industry. Received May 17, 1932.

Haba. Broadbeans purchased in the market at Tarma, Peru; grown in the highlands at 10,000 feet altitude.

99024. No. 210. Purple beans.

99025. No. 211. White beans.

99026. No. 212. Purple-black beans.

99027. No. 213. White and purple-mottled beans.

99028 and 99029.

From Tasmania. Seeds presented by L. A. Evans, Sandy Bay, Hobart. Received May 18, 1932.

99028. *ANOPTERUS GLANDULOSUS* Labill. Escalloniaceae.

Mountain laurel. A tall evergreen Tasmanian shrub with spreading branches, oblong dentate leaves 4 to 6 inches long clustered at the ends of the branches, and axillary racemes of white flowers.

For previous introduction see 94259.

99029. *BLANDFORDIA MARGINATA* Herb. Liliaceae.

A stout herbaceous perennial, 2 to 3 feet high, native to Tasmania. The linear-lanceolate radical leaves are 1 to 3 feet long, and the upper ones are few, short, and erect. The rich brown-red tubular flowers are 1 to 2 inches long and are borne in dense racemes 6 to 8 inches long.

99030 to 99058.

From the West Indies, Surinam, and British Guiana. Plants collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the 1931-32 Allison V. Armour expedition. Received in April, 1932.

99030. *BROMELIA* sp. Bromeliaceae.

No. 3899. From Haiti, March 27, 1932. A pretty wine-red-leaved species growing on the battlements of the citadel of Haiti at 3,000 feet altitude, where cool moist conditions prevail during most of the year, but in the dry season the plants are subjected to intense heat and drought.

99031. *EPIDENDRUM* sp. Orchidaceae. Orchid.

No. 2626. From Saona, Dominican Republic, January 20, 1932. An orchid with yellow flowers.

99032. *EPIDENDRUM* sp. Orchidaceae. Orchid.

No. 2720. From St. Lucia, Windward Islands, February 3, 1932. An orchid with long racemes of delicate light-blue or lavender blooms, growing in masses on citrus trees in the moist valley beyond Bar de l'Isle.

99033. *HABENARIA* sp. Orchidaceae. Orchid.

No. 3754. From Martinique, March 10, 1932. A terrestrial orchid growing in full sunlight on the face of a cut in the mountain side in the rain-forest region between Fort-de-France and St. Pierre.

99034 to 99036. *ONCIDIUM* spp. Orchidaceae. Orchid.

Nos. 99034 and 99035 were presented by H. Caracciola, Port-of-Spain, Trinidad, February 19, 1932.

99034. *ONCIDIUM CEBOLLETA* Swartz.

No. 2910. An epiphytic orchid with small pseudobulbs, each with a single terete obscurely furrowed leaf 1 foot long. The rigid erect panicle about 2 feet high bears six-parted flowers having red-spotted green-yellow sepals and petals and a large bright-yellow labellum. It is native to Brazil.

99035. *ONCIDIUM PAFILO* Lindl.

Butterfly orchid.

No. 2911. An epiphytic orchid with oblong very leathery olive-green leaves, 6 to 8 inches long, mottled with purple brown. The flattened and jointed flower stem, 2 to 3 feet long, produces flowers several years in succession. The flowers are 4 to 5 inches long and 2 to 3 inches across and are mottled brown and yellow. It is native to the West Indies.

99036. *ONCIDIUM* sp.

No. 2572. From the village of Cotton Point, Rum Key, Bahamas, January 6, 1932. A large terrestrial or semiterrestrial orchid with leaves

99030 to 99058—Continued.

24 inches long and over an inch wide and an immense inflorescence over 8 feet tall, with many flowers which change color from light pink and yellow to deep pink or almost brown as they mature. The blossom has the fragrance of bee bread.

99037. *TILLANDSIA* sp. Bromeliaceae.

No. 2996. From the Sugar Experiment Station, Georgetown, British Guiana, February 25, 1932. A large species 3 feet long, bearing large attractive clusters of red and yellow flowers.

99038. *TILLANDSIA* sp. Bromeliaceae.

No. 3664. From near Charlotteville, Man of War Bay, Tobago, Windward Islands, February 20, 1932. A most attractive species, with long spikes of brilliant pink and yellow flowers.

99039 to 99041. *VANDA* spp. Orchidaceae. Orchid.

99039. *VANDA* sp.

No. 2688. From the Dominican Botanic Garden, January 29, 1932. Presented by F. A. Harcourt.

99040. *VANDA TERES* (Roxb.) Lindl.

No. 2835. *Agnes Joaquin.* Presented by Mrs. Fitt, Port-of-Spain, Trinidad, February 15, 1932. A vigorous hybrid which becomes 10 feet high and, when in full bloom, is a mass of lovely pink flowers. Some flowers are on the plant all the year.

99041. *VANDA TERES* (Roxb.) Lindl.

No. 2876. Presented February 16, 1932, by R. O. Williams, of the Botanic Garden, Trinidad. This straggling caustlike orchid with large rose-colored flowers on erect stalks is grown very commonly in the gardens of Trinidad. It seems to be very vigorous and hardy, and its long peduncles make the flowers especially adapted for cutting purposes. While not so vigorous as its hybrid, no. 2835 [99040], it is a very showy plant blooming in early spring all at once, whereas the hybrid *Agnes Joaquin* is in bloom most of the year.

99042. (Undetermined.)

No. 3893. From the United States Naval Station at Guantanamo, Cuba, March 24, 1932. A pink-flowered epiphytic orchid collected in one of the driest, most arid regions of Cuba.

Nos. 99043 and 99044 were collected on Saba, Netherland West Indies, March 15, 1932.

99043. (Undetermined.)

No. 3792. A terrestrial orchid found in the perpendicular wall of a mountain side exposed to the bright tropical sunlight.

99044. (Undetermined.)

No. 3867. A terrestrial orchid growing on a rock fence near the town of Bottom.

Nos. 99045 and 99046 were collected March 27 1932, in Haiti.

99045. (Undetermined.)

No. 3897. A semiterrestrial species, with handsome deep-purple flowers on a long-stalked inflorescence, growing on the decaying walls of the citadel at 3,000 feet altitude.

99046. (Undetermined.)

No. 3898. A terrestrial orchid collected on the decaying walls of the citadel at 1,000 feet altitude, where it is subjected to fogs and continual cold moisture in the winter. Flowers not seen.

99047. (Undetermined.)

No. 3753. From the island of Martinique, en route to St. Pierre, March 10, 1932. An epiphytic orchid with small but intensely pink flowers; of general appearance of a *Rodriquezia*.

99030 to 99058—Continued.

99048. (Undetermined.)

No. 26. Collected on the island of Beata, January 17, 1932; an epiphytic orchid, flowers not seen.

Nos. 99049 and 99050 were collected on St. Eustatius, Netherland West Indies, January 22, 1932.

99049. (Undetermined.)

No. 37. A large-seeded, attractive orchid growing on the rim of the crater. Flowers not seen.

99050. (Undetermined.)

No. 38. An attractive orchid with small greenish flowers.

99051. (Undetermined.)

From Grenada, Windward Islands. An orchid

99052. (Undetermined.)

An orchid.

99053. (Undetermined.)

An orchid from Great Inagua, Bahamas.

99054. (Undetermined.)

An orchid from Great Inagua, Bahamas.

99055. (Undetermined.)

An orchid from Paramaribo, Surinam.

99056. (Undetermined.)

No. 3896. From Haiti, March 27, 1932. An orchid found on the overhanging rocks at 100 feet altitude. In habit this reminds one of *Vanda teres*, with its long slender round stems hanging down in masses from the rocks. Flowers not seen.

99057. (Undetermined.)

No. 2763. From Mayero Island, February 6, 1932. An epiphytic orchid with very large seed pods. Flowers not seen.

99058. (Undetermined.)

An orchid, received without notes.

99059 to 99070. RHODODENDRON spp.—Ericaceae.

From Likiang, China. Seeds presented by Dr. Joseph F. Rock. Received May 11, 1932.

Collected on the western slopes of the Likiang Snow Range, Yunnan Province, in November and December 1931.

99059. RHODODENDRON sp.

A tree 12 to 16 feet high, with oblong to linear glabrous leaves and rich-pink flowers; collected in a limestone valley at 9,500 feet altitude.

99060. RHODODENDRON sp.

A shrub 3 to 5 feet high, with small glabrous leaves and pink to rose flowers, growing with pines and spruces at Atoda, 9,000 feet altitude.

99061. RHODODENDRON sp.

A shrub 3 feet high, with linear to elliptical glabrous leaves and pink flowers, collected at 10,000 feet altitude.

99062. RHODODENDRON sp.

A tree 10 feet high, with small leaves and red flowers, collected at 9,800 feet altitude.

99063. RHODODENDRON sp.

A very handsome shrub 3 to 4 feet high, with pink flowers.

99064. RHODODENDRON sp.

From the dense forests of Youngming, Bowutsu Valley, at 12,000 feet altitude. A tree 15 feet high with pink-purple flowers.

99059 to 99070—Continued.

99065. RHODODENDRON sp.

A tree 12 to 15 feet high, found along the streams in the Youngming forests.

Nos. 99066 to 99068 were collected on Mount Sengenague at altitudes between 10,000 and 13,000 feet.

99066. RHODODENDRON sp.

A shrub 5 to 6 feet high, with purple flowers.

99067. RHODODENDRON sp.

A shrub or tree 6 to 20 feet high, with flowers varying from pale lavender to deep purple.

99068. RHODODENDRON sp.

A shrub 7 to 8 feet tall, with oblong leaves, deeply rufous brown woolly beneath, and pink flowers.

99069. RHODODENDRON sp.

A globose shrub 2 feet high, with blue flowers, found in swampy meadows at 10,000 feet altitude.

99070. RHODODENDRON sp.

A shrub 3 to 5 feet tall, with dull-green leaves and blue flowers, found on sunny exposed slopes at 11,000 feet altitude.

99071 to 99114.

From Perù. Tubers collected by H. G. MacMillan and C. O. Erlanson, Bureau of Plant Industry. Received May 17, 1932.

99071 to 99074. OXALIS CRENATA Jacq. Oxalidaceae.

Oca. Cultivated forms from high alpine meadows between 10,000 and 11,000 feet altitude.

Nos. 99071 to 99073 were bought in the market at Tarma, April 22, 1932.

99071. No. 229. An herb 8 inches high, with elongate tubers which have yellow skin mottled with red, deep wide eyes, and yellow-white flesh. The flowers vary in color.

99072. No. 230. An ornamental herb, with red elongated edible tubers which have wide pink eyes and yellowish flesh, mottled with red.

99073. No. 231. An ornamental herb which has elongated edible tubers with yellow skin, wide yellow eyes, and yellow flesh.

99074. No. 260. Purchased in the market at Huancayo, April 24, 1932. Small oval tubers with yellow skin, shallow eyes, and yellow-white flesh.

99075 to 99109. SOLANUM spp. Solanaceae.

99075. SOLANUM NEOWEBERBAUERII Wittm.

No. 265. From near Chorillos, April 30, 1932. A rare wild potato native to the dry coastal region in the environs of Lima and Callao, Peru, growing always in stony situations and depending on fog for its water supply. The tubers are small, about one half inch in diameter, several to each plant. The plant belongs to a series of which *S. malitia* is the most common, occurring in arid sandy situations.

99076 to 99108. SOLANUM TUBEROSUM L.

Potato.

A collection of cultivated potatoes from the high alpine meadows between 3,000 and 11,000 feet altitude.

99076 and 99077. *Chuncho papas*. From Rio Colorado, near Merced, April 16, 1932. Cultivated by the Indians at 2,800 feet altitude.

99071 to 99114—Continued.

- 99078 and 99079. From the Hacienda Makko, near Tarma, April 20, 1932. A potato with large oval-flattened white tubers, shallow violet eyes, and white flesh. It is cultivated in alpine meadows at 11,500 feet altitude.
99078. No. 218. 99079. No. 219.
- Nos. 99080 to 99082 were bought in the market at Tarma, April 22, 1932. Cultivated in alpine meadows at 10,000 feet altitude.
99080. No. 221. Small round yellow-white tubers with violet eyes and yellow-white flesh.
99081. No. 222. Large round dark-purple tubers with deep and purple eyes and white flesh with purple vascular ring.
99082. No. 227. Large oval yellow-white tubers with deep eyes and yellow flesh.
- Nos. 99083 and 99084 were collected at the experiment station, Huancayo, Peru, April 24, 1932. Grown at 10,800 feet altitude.
99083. No. 234. Large oval white tubers with shallow white eyes and white flesh. This is the best commercial potato grown in this region.
99084. No. 235. Large elongated white tubers with shallow purple eyes and white flesh.
- Nos. 99085 to 99108 were bought in the market at Huancayo, April 24, 1932. Cultivated potatoes grown at 10,800 feet.
99085. No. 236. Large ovate white tubers mottled with purple, which have shallow purple eyes and white flesh.
99096. No. 237. Medium-sized oval red tubers with deep and pink eyes and white flesh.
99087. No. 238. Ovate white tubers mottled with dark purple which have deep and pink eyes and white flesh.
99088. No. 239. Small elongated red tubers with deep and pink eyes and white flesh with red vascular ring.
99089. No. 240. Irregularly ovate dark-purple tubers with shallow white eyes and yellow-white flesh.
99090. No. 241. Flattened ovate white tubers mottled with violet which have deep and violet eyes and white flesh.
99091. No. 242. Small round red tubers with deep and red eyes and white flesh tinged red at the eyes.
99092. No. 243. Small elongated red tubers with deep and red eyes and white flesh with red center.
99093. No. 244. Small round pink tubers with shallow pink eyes and yellow-white flesh.
99094. No. 245. Irregularly oval red tubers with deep and pink eyes and white flesh with red vascular ring.
99095. No. 246. Narrow-elongated dark-purple tubers with shallow purple eyes and white flesh with purple center, mottled except at the heart.
99096. No. 247. Narrow elongated white tubers mottled with red which have shallow pink eyes and gray-white flesh.
99097. No. 248. Elongated narrow white tubers mottled with violet which have shallow pink eyes and white flesh.
99098. No. 249. Large flat oval red tubers with few and shallow eyes and white flesh.

99071 to 99114—Continued.

99099. No. 250. Irregularly round dark-purple tubers with purple and deep eyes and white flesh.
99100. No. 251. Elongated dark-purple tubers with deep and purple eyes and white flesh with blue vascular ring.
99101. No. 252. Round dark-purple tubers with deep and purple eyes and white flesh with purple mottled center.
99102. No. 253. Round dark-purple tubers with deep and purple eyes and yellow flesh with purple marbling.
99103. No. 254. Round dark-purple tubers with deep and purple eyes.
99104. No. 255. Elongated white tubers mottled with red, which have shallow white eyes and white flesh with red center.
99105. No. 256. Elongated tubers with white skin mottled red, and shallow pink eyes.
99106. No. 257. Large elongated narrow tubers with yellow skin and shallow yellow eyes.
99107. No. 258. Elongated red tubers with shallow red eyes.
99108. No. 259. A round red-purple tuber with deep and purple eyes.
99109. SOLANUM WITTMACKII Bitter.
No. 266. A rare wild potato collected on Abancaes Hill, near Lima, at 500 feet altitude.
99110. TROPAEOLUM TUBEROSUM Ruiz and Pav. Tropaeolaceae.
No. 228. *Massua*. From the market at Tarma, April 22, 1932. A bright-yellow carrot-shaped edible tuber with deep eyes. It is cultivated in alpine meadows at 10,000 feet altitude.
- 99111 to 99114. ULLUCUS TUBEROSUS Caldas. Basellaceae.
Ullucu; purchased in the market at Tarma, April 22, 1932, but cultivated in high mountain meadows at 10,000 feet altitude.
99111. No. 223. Elongated tubers with yellow skin blotched with pink, shallow eyes, and yellow flesh with white center.
99112. No. 224. Elongated tubers with yellow skin, shallow eyes, and yellow flesh with white center.
99113. No. 225. Short slender tubers with red skin, shallow eyes, and yellow flesh with white center.
99114. No. 226. Ovate tubers with carrot-colored skin, somewhat deep eyes, and carrot-colored flesh with white center.
- 99115 to 99138.
- From Wales. Seeds presented by T. J. Jenkins, University College of Wales, Welsh Plant Breeding Station, Aberystwyth. Received May 2, 1932.
- 99115 to 99118. AGROPYRON spp. Poaceae.
99115. AGROPYRON CANINUM (L.) Beauv.
Awed wheatgrass.
Bs. 629. Harvested at Aberystwyth in 1930; original seed from Kew Gardens. A promising forage grass.
For previous introduction see 90124.
99116. AGROPYRON MULTIFLORUM LONGISETUM Hack.
Wheatgrass.
Bs. 380. Harvested at Aberystwyth in 1929; original seed from New Zealand.

99115 to 99138—Continued.

99117. *AGROPYRON REPENS* (L.) Beauv.
Couch grass.

Locally grown wild plants.

For previous introduction see 98531.

99118. *AGROPYRON SCABRUM* (R. Br.) Beauv.
Wheatgrass.

Bs. 379. Harvested at Aberystwyth in 1929; original seed from New Zealand.

99119 to 99128. *FESTUCA* spp. Poaceae. Fescue.

99119. *FESTUCA ELATIOR ARUNDINACEA* (Schreb.) Celak.

Bn. 87. Received from the Bureau of Introduction, Leningrad.

For previous introduction see 98294.

99120 to 99124. *FESTUCA ELATIOR* L.
Meadow fescue.

Nos. 99120 to 99122 were received from Garton's, Ltd., Warrington, England, in 1930.

99120. Bf. 152. No. 10, English Pure Line Strain.

99121. Bf. 153. No. 6, Danish Pedigree Strain.

99122. Bf. 154. No. 27, Dutch Indigenous Strain.

99123. Bf. 156. Sample received through the Bureau of Introduction, Leningrad, from Irkutsk Government, Union of Soviet Socialist Republics.

99124. 2bF (1) (M1/66); open-pollinated seed from a single plant of local origin.

99125. *FESTUCA GIGANTEA* (L.) Vill.
Great fescue.

597 (2) Bs. (1) (M1/67); seed from a single plant self-pollinated. Original seed came from wild plants near Belfast, Ireland.

99126. *FESTUCA OVINA* L. Sheep fescue.

B1. 1175. Sample from Sutton & Sons, Reading; described only as "sheep's fescue."

For previous introduction see 98296.

99127 and 99128. *FESTUCA RUBRA* L. Red fescue.

99127. B1. 728²/₃₀; Welsh Plant Breeding Station pedigree strain; original material from old British pastures.

99128. B1. 1176. Sample from Sutton & Sons; described as "Chewing's fescue."

99129. *HORDEUM MARITIMUM* With. Poaceae.
Grass.

Bs. 492. Sample harvested at Aberystwyth in 1930; original seed from Australia.

99130. *HORDEUM MURINUM* L. Poaceae. Grass.

Bs. 592-595. Seed harvested at Aberystwyth in 1930; original material native British grass.

For previous introduction see 78784.

99131 to 99138. *LOLIUM* spp. Poaceae.

99131 to 99136. *LOLIUM PERENNE* L.
Perennial ryegrass.

99131. Bs. 962. *Wimmera* ryegrass; 1930 seed from the Government Experiment Farm, Cowra, New South Wales; not yet tested at Aberystwyth.

99132. Ba. 1769. Original seed received from Australia as representative of typical and true *Wimmera* ryegrass; present sample harvested at Aberystwyth in 1928.

99115 to 99138—Continued.

99133. Ba. 2246. A mixture from the Hawke's Bay district of New Zealand, received from the Plant Research Station, Palmerston North, New Zealand.

Nos. 99134 and 99135 were received from Sutton & Sons, Reading, England.

99134. Ba. 2247. Commercial perennial ryegrass.

99135. Ba. 2248. British wild perennial ryegrass.

99136. Ba. 2251. Seed harvested from an old Hampshire pasture. Received from Leighton, Ltd., Whitechurch, Shropshire, England.

99137 and 99138. *LOLIUM TEMULENTUM* L.
Darnel.

99137. Bs. 548. Original seed received from the Basel Botanischer Garten; present sample harvested in Aberystwyth in 1930.

99138. Bs. 586. Original seed from Sutton & Sons, Reading; present seed harvested at Aberystwyth in 1930.

99139 to 99242.

From Kweichow and Hunan Provinces, China. Seeds presented by Albert N. Steward, Department of Botany, College of Agriculture, University of Nanking, Nanking. Received April 23, 1932.

99139 to 99141. *ACANTHOPANAX* spp. Araliaceae.

99139. *ACANTHOPANAX* sp.

No. 112. *Tze Teng Tai*. From a rocky slope in Laoshun, Fangchingshan, Kiangkouhsien, October 1, 1931. A shrub up to 15 feet tall, with black fruit.

99140. *ACANTHOPANAX* sp.

No. 105. *Tze Lao Pao*. Collected November 29, 1931, on a brushy slope near Tayoh, Tahoyen, Kiangkouhsien, at 4,000 feet altitude. A shrub up to 7 feet tall.

99141. *ACANTHOPANAX RICINIFOLIUM* Seem.

No. 109. *Tze Chiu*. From Miaowang, Kiangkouhsien, December 1, 1931, at 1,500 feet altitude. A tree about 60 feet tall and 25 inches in diameter, with black fruit. Found along the roadside.

99142. *ACER* sp. Aceraceae. Maple.

No. 12. *Ching Chuan*. From a rocky slope near Laoshan, Fangchingshan, Kiangkouhsien, October 1, 1931, at 7,000 feet altitude. A tree 30 feet high and a foot in diameter.

99143. *ACER* sp. Aceraceae. Maple.

No. 106. From a hillside in Papan, Kiangkouhsien, at 1,500 feet altitude, December 6, 1931. An evergreen tree about 35 feet high and 15 inches in diameter.

Nos. 99144 to 99150 were collected in Tahoyen, Kiangkouhsien.

99144. *ACTINIDIA CHINENSIS* Planch. Dilleniaceae.
Yangtao.

No. 94. From a brushy slope, November 26, 1931, at 3,000 feet altitude. A strong trailing shrub with edible brownish fruit covered with rusty hairs.

For previous introduction see 77643.

99145. *ARDISIA* sp. Myrsinaceae.

No. 89. *Pa Chao Ching Lung*. Collected November 7, 1931, on a brushy slope at 2,500 feet altitude. A low shrub about 3 feet tall, with scarlet fruit.

99139 to 99242—Continued.

99148. *BENZONIN* sp. Lauraceae.

No. 35. *Shui Mei Yah*. Collected September 5, 1931, at 3,000 feet altitude. A shrub about 20 feet high, with greenish fruit which becomes red and black, found on a brushy slope.

99147. *BERBERIS* sp. Berberidaceae. **Barberry.**

No. 84. From near Huangchiawan, November 26, 1931, at 4,500 feet altitude. A shrub with black fruit.

99148 to 99150. *BETULA* spp. Betulaceae. **Birch.**99148. *BETULA* sp.

No. 19. *Hua Kan Erh* or *Hua Shu*. Collected on a rocky slope near Huangchiawan, September 11, 1931, at 4,000 feet altitude. A tree about 50 feet high with brownish fruit.

Nos. 99149 and 99150 were collected October 20, 1931, on a rocky slope at 4,000 feet altitude.

99149. *BETULA* sp.

No. 11. *Tieh Hua Kan*, a tree 60 feet high and a foot in diameter.

99150. *BETULA* sp.

No. 11-A. *Tieh Hua Kan*, a tree 60 feet high and a foot in diameter.

Nos. 99151 and 99152 were collected in Fangchingshan, Kiangkouhsien, at 3,500 feet altitude.

99151. *CARPINUS* sp. Betulaceae. **Hornbeam.**

No. 26. From a rocky slope below Ssetzeah, October 4, 1931. A tree about 50 feet high and 10 inches in diameter, with brownish fruit.

99152. *CARPINUS* sp. Betulaceae. **Hornbeam.**

No. 45. From a rocky slope in the forest at Hweihsiangping, October 20, 1931. A tree about 65 feet tall and 15 inches in diameter, with brownish fruit.

99153. *CELASTRUS* sp. Celastraceae.

No. 53. From a brushy slope in Miaowang, Kiangkouhsien, September 26, 1931, at 1,500 feet altitude. A shrub about 15 feet high with yellow fruits. The seeds are covered with a red aril.

99154. *CELTIS KORAIENSIS* Nakai. Ulmaceae. **Hackberry.**

No. 58. *Chien Chiu Tze*. Collected along the roadside in Maolung, Kingkianghsien, November 6, 1931, at 2,000 feet altitude. A tree up to 40 feet high, with coarsely serrate, broadly ovate leaves 4 to 6 inches long and dull-orange, ovoid fruits one-fourth inch long.

99155. *CLEMATIS* sp. Ranunculaceae.

No. 13. *Hsiao Hsieh Teng*. From Laoshan, Fangchingshan, Kiangkouhsien, October 1, 1931, at 6,500 feet altitude. A twining herb, found along a forest roadside.

Nos. 99156 to 99163 were collected in Tahoyen, Kiangkouhsien.

99158. *CORNUS* sp. Cornaceae. **Dogwood.**

No. 63. *Teng Tai*. Collected September 3, 1931, at 3,000 feet altitude. A tree about 35 feet high and 15 inches in diameter, with black fruits; found near a stream.

99157. *CUNNINGHAMIA LANCEOLATA* (L.) Hook. Pinaceae. **China-fir.**

No. 31. *Sha Mu*. Collected October 10, 1931, at 3,500 feet altitude. A common forest tree about 65 feet tall growing on rocky slopes between 1,800 and 4,000 feet altitude.

99158. *CUPRESSUS FUNEBRIS* Endl. Pinaceae. **Mourning cypress.**

No. 69. *Pai Hsiang*. Collected October 15, 1931, at 3,000 feet altitude. A very graceful ever-

99139 to 99242—Continued.

green tree, native to China, growing on rocky slopes between 3,000 and 7,000 feet.

For previous introduction see 76900.

99159. *DAVIDIA INVOLUCRATA* Baill. Cornaceae. **Dovetree.**

No. 79. *Shan Mu Kou*. Collected November 25, 1931, at 4,500 feet altitude. A tree native to central and western China, which becomes 75 feet high with a shapely pyramidal crown, bright-green oval sharply toothed leaves 3 to 6 inches long, blooms with 2 or 3 large unequal snow-white bracts, followed by brownish pear-shaped fruits.

For previous introduction see 76030.

99160. *DECAISNEA FARGESII* Franch. Lardizabalaceae.

No. 82. From Huangchiawan, November 1, 1931, at 4,500 feet altitude. A handsome shrub up to 15 feet high with large pinnate leaves 3 feet long, greenish flowers in long pendulous racemes, and deep-blue fruits 3 to 4 inches long. Native to western China.

For previous introduction see 95507.

99161. *DIOSPYROS LOTUS* L. Diospyraceae. **Dateplum.**

No. 60. *Sze Tze*. Collected October 25, 1931, at 5,000 feet altitude. A tree about 20 feet high with small yellowish fruit. It is used as a stock on which to graft the better varieties of persimmons.

For previous introduction see 91515.

99162. *ELAEOCARPUS SIKKIMENSIS* Masters. Elaeocarpaceae.

No. 70. *Shuan Tsao*. From a rocky slope near Chingchaoaping, Tahoyen, Kiangkouhsien, November 8, 1931, at 2,000 feet altitude. A handsome evergreen tree with erect racemes of small white flowers and sharp-pointed serrate leaves about 8 inches long.

For previous introduction see 93204.

99163. *ENKIANTHUS* sp. Ericaceae.

No. 83. From Huangchiawan, November 25, 1931, at 4,500 feet altitude. A shrub up to 7 feet high, growing near a stream; the fruits are whitish.

99164. *EUGENIA* sp. Myrtaceae.

No. 62. From Chingchaoaping, Fangchingshan, Kiangkouhsien, October 23, 1931, at 3,500 feet altitude. A shrub up to 10 feet high with black fruits.

99165. *EUONYMUS ALATUS* (Thunb.) Rupr. Celastraceae. **Winged euonymus.**

No. 56. *Pan Lung Shu*. From Tahoyen, Kiangkouhsien, October 8, 1931, at 2,800 feet altitude. A spreading shrub up to 5 feet high, with corky branches, sharply toothed elliptic leaves about 2 inches long, small clusters of yellowish flowers, and small two-seeded fruits.

For previous introduction see 82508.

Nos. 99166 and 99167 are from Fangchingshan, Kiangkouhsien.

99166. *EURYA* sp. Theaceae.

No. 97. Collected November 26, 1931, at 2,800 feet altitude. A shrub or small tree up to 35 feet tall with black fruit. It is usually found on a brushy slope under forest trees.

99167. *EURYA* sp. Theaceae.

No. 65. *Pa Hua Mu*. From a forest slope near Machaoho, October 20, 1931, at 3,500 feet altitude. A very ornamental tree about 65 feet high, with scarlet flowers.

99139 to 99242—Continued.

99168. FAGUS sp. Fagaceae. Beech.

No. 15. From a rocky slope near Huangchiawan, Tahoyen, Kiangkoushien, October 15, 1931, at 5,000 feet altitude. A tree about 45 feet high and over 2 feet in diameter.

99169. FAGUS sp. Fagaceae. Beech.

No. 21. From a rocky slope at Hwehsiangping, Fangchingshan, Kiangkoushien, October 13, 1931, at 5,000 feet altitude. A tree about 65 feet high and over a foot in diameter.

99170 to 99172. FICUS spp. Moraceae. Fig.

99170. FICUS sp.

No. 34. From a brushy slope near Tahoyen, Kiangkoushien, September 5, 1931, at 3,000 feet altitude. A shrub about 7 feet tall with red fruits.

99171. FICUS sp.

No. 44. From Yingkianghsien, November 15, 1931, at 1,600 feet altitude. A shrub about 3 feet high with fruit tinged red, found along streams.

99172. FICUS sp.

No. 75. From Hwehsiangping, Fangchingshan, Kiangkoushien, October 11, 1931, at 5,000 feet altitude. A shrub about 7 feet high with fruit tinged red; growing on a brushy slope.

99173. FICUS PUMILA L. Climbing fig.

No. 110. From Mayang, Hunan Province, December 20, 1931, at 600 feet altitude. A woody vine about 35 feet long, growing on a tree trunk near the river.

99174. WARNERIA AUGUSTA Stickm. (*Gardenia florida* L.). Rubiaceae. Cape-jasmine.

No. 99. *Huang Tze Tze*. From Fangchingshan, Kiangkoushien, November 26, 1931, at 6,500 feet altitude. A bush about 7 feet high with yellowish fruits which are used for dyeing purposes.

99175. HELWINGIA sp. Cornaceae.

No. 3. From Liangfengyah, Tsuenyih, August 3, 1931, at 3,500 feet altitude. A deciduous shrub 3 to 5 feet high with small green-white flowers borne on the midrib of the leaves followed by black fruits.

99176 to 99179. HYDRANGEA spp. Hydrangeaceae.

Nos. 99176 to 99178 are from Tahoyen, Kiangkoushien.

99176. HYDRANGEA sp.

No. 10. Collected October 20, 1931, at 3,000 feet altitude. A shrub with brown capsules, growing on a brushy slope.

99177. HYDRANGEA sp.

No. 54. Collected September 20, 1931, at 2,800 feet altitude. A bush about 3 feet high; the sterile flowers are tinged with red and the capsules are brownish.

99178. HYDRANGEA sp.

No. 81. Collected November 15, 1931, at 4,500 feet altitude. A shrub with brownish capsules.

Nos. 99178 and 99180 were collected at Fangchingshan, Kiangkoushien.

99179. HYDRANGEA sp.

No. 33. From Machaobo, October 26, 1931, at 3,000 feet altitude. A trailing shrub about 18 feet long, found on a rocky slope beside the road.

99180. ILEX sp. Aquifoliaceae.

No. 48. From the roadside near Hwehsiangping, at 5,300 feet altitude, October 25, 1931. An evergreen shrub about 18 feet high with reddish fruit.

99139 to 99242—Continued.

99181. ILEX sp. Aquifoliaceae.

No. 93. From a brushy slope near Chingchaoping, Tahoyen, Kiangkoushien, November 14, 1931, at 2,500 feet altitude. An evergreen tree about 40 feet high and 15 inches in diameter, with bright-red fruits.

Nos. 99182 to 99184 were collected in Fangchingshan, Kiangkoushien.

99182. ILLICIUM sp. Magnoliaceae.

No. 29. *Hwei Hsiang*. From near Hwehsiangping, October 2, 1931, at 5,000 feet altitude. A tree up to 35 feet tall and 12 inches in diameter, commonly found on rocky slopes and in the forest.

99183. JUGLANS MANDSHURICA Maxim. Juglandaceae. Walnut.

No. 50. *Shan Heh Tao*. From near Fukwohsze, November 15, 1931, at 6,000 feet altitude. A tree over 30 feet high and 16 inches in diameter.

99184. KADSURA sp. Magnoliaceae.

No. 52. From Chawchang, November 1, 1931, at 3,500 feet altitude. A trailing shrub with red tinged fruit.

Nos. 99185 and 99186 were collected at Huangchiawan, Tahoyen, Kiangkoushien.

99185. LIGUSTRUM sp. Oleaceae. Privet.

No. 86. Collected November 25, 1931, at 4,500 feet altitude. A shrub about 15 feet high, with black fruit.

99186. LILIUM GIGANTEUM Wall. Liliaceae. Giant lily.

No. 39. *Nan Pai Ho*. Collected October 7, 1931, at 5,000 feet altitude.

For previous introduction and description see 98740.

99187. LIQUIDAMBAR FORMOSANA Hance. Hamamelidaceae. Formosa sweetgum.

No. 23. A handsome tree up to 100 feet high, with a straight trunk, a much-branched head, and frequently buttressed roots. The leaves turn to chestnut brown or red in the autumn and are retained late into the winter. This is one of the most widely distributed trees in China, being particularly abundant in western Hupeh. It is also cultivated in Japan.

For previous introduction see 71315.

Nos. 99188 to 99190 were collected in Tahoyen, Kiangkoushien.

99188. LIRODENDRON CHINENSE (Hemsl.) Sargent. Magnoliaceae. Chinese tuliptree.

No. 41. *Yah Choh Pan*. Collected October 28, 1931, at 3,200 feet altitude. A tree about 35 feet tall and 32 inches in diameter, found on a rocky slope.

99189. MICHELIA CHAMPACA L. Magnoliaceae. Champac.

No. 74. Collected October 25, 1931, at 3,000 feet altitude. A tall evergreen tree, native to the Himalayas, with pubescent branchlets, ovate-lanceolate leaves 8 to 10 inches long, and axillary, usually solitary, pale-yellow fragrant flowers 2 inches across.

For previous introduction see 93544.

99190. NEILLIA sp. Rosaceae.

No. 88. From Huangchiawan, November 25, 1931, at 4,500 feet altitude. A shrub about 7 feet high, growing along a stream.

99191 to 99193. PHOTINIA spp. Malaceae.

99191. PHOTINIA sp.

No. 59. From Fangchingshan, Kiangkoushien, November 9, 1931, at 2,500 feet altitude. A tree about 25 feet high and 8 inches in diameter with bright-red fruits, growing on a brushy slope.

99139 to 99242—Continued.

99192. *PHOTINIA* sp.

No. 113. From Chingchaoping, Tahoyen, Kiangkouhsien, October 23, 1931, at 3,000 feet altitude. A shrub about 15 feet high with red fruits, growing on a brushy slope.

Nos. 99193 to 99196 were collected at Fangchingshan, Kiangkouhsien.

99193. *PHOTINIA* sp.

No. 51. From Hweihsiangping, October 25, 1931, at 5,000 feet altitude. A tree about 15 feet high and 4 inches in diameter, with bright-red fruits. Found on a rocky forest slope.

99194. *SORBUS* sp. Malaceae. **Mountain-ash.**

No. 104. From Niutoushan, November 29, 1931, at 4,000 feet altitude. A tree up to 35 feet high and 4 inches in diameter with spreading branches, growing on a rocky forest slope.

99195. *PITTIOSPORUM* sp. Pittosporaceae.

No. 64. From a rocky slope near Machaoho, October 3, 1931, at 1,800 feet altitude. A shrub about 15 feet tall and 6 inches in diameter, with green fruits containing scarlet seeds.

99196. *PITTIOSPORUM GLABRATUM* Lindl. Pittosporaceae.

No. 90. From a brushy slope near Huangchia-wan, September 25, 1931, at 4,500 feet altitude.

99197. *PRUNUS* sp. Amygdalaceae. **Plum.**

No. 1. From Liangfengyah, Tsuenyih, August 23, 1931, at 2,800 feet altitude. A small sweet yellow-fleshed red plum.

99198. *PRUNUS* sp. Amygdalaceae. **Plum.**

No. 5. July 31, 1931. A plum, similar to no. 1 [99197].

Nos. 99199 and 99200 were collected in Tahoyen, Kiangkouhsien.

99199. *PYRACANTHA* sp. Malaceae. **Firethorn.**

No. 36. From Miaowang, October 25, 1931, between 1,800 and 3,000 feet altitude. A shrub up to 7 feet tall with bright-red fruits; commonly found along brushy slopes and dry stream beds.

99200. *PYRUS* sp. Malaceae. **Pear.**

No. 96. Collected on a brushy slope, November 26, 1931, at 2,800 feet altitude. A shrub about 7 feet tall, with yellowish fruit.

99201. *RHAMNELLA* sp. Rhamnaceae.

No. 6. From Liangfengyah, Tsuenyih, August 3, 1931, at 3,400 feet altitude. A deciduous shrub or small tree closely related to *Rhamnus*. The leaves are alternate, stipulate, serrulate, and the small green flowers, in axillary clusters, are followed by small orange-yellow one-seeded drupes which become black when ripe.

99202. *RHAMNUS* sp. Rhamnaceae. **Buckthorn.**

No. 78. From Tahoyen, Kiangkouhsien, November 20, 1931, at 2,500 feet altitude. A shrub about 7 feet high, with black fruits, growing along the roadside.

99203 to 99208. *RHODODENDRON* spp. Ericaceae.

Nos. 99203 to 99205 were collected near Hweihsiangping, Fangchingshan, Kiangkouhsien.

99203. *RHODODENDRON* sp.

No. 37. From a rocky slope, October 20, 1931, at 3,400 feet altitude. A shrub about 15 feet high.

99204. *RHODODENDRON* sp.

No. 46. From near Iaoshan, October 20, 1931, at 4,800 feet altitude. A common forest tree with the leaves silvery white beneath.

99139 to 99242—Continued.

99205. *RHODODENDRON* sp.

No. 72. Collected October 15, 1931, at 4,300 feet altitude. A shrub or small tree about 20 feet high, growing on a rocky slope.

99206. *RHODODENDRON* sp.

No. 85. From near Huangchiawan, Tahoyen, Kiangkouhsien, November 26, 1931, at 4,500 feet altitude. An evergreen shrub about 20 feet tall growing on a brushy slope.

99207. *RHODODENDRON* sp.

No. 103. *Ta Shieh Niu*. From a brushy slope near Niutoushan, Fangchingshan, Kiangkouhsien, November 21, 1931, at 4,000 feet altitude. A shrub or small tree about 15 feet high and 6 inches in diameter.

99208. *RHODODENDRON* sp.

No. 111. From Hweihsiangping, Fangchingshan, Kiangkouhsien, October 20, 1931, at 3,400 feet altitude. A shrub about 6 feet tall growing on a brushy slope.

99209. *RHUS* sp. Anacardiaceae. **Sumach.**

No. 73. *Chieh Shu*. From Tahoyen, Kiangkouhsien, November 5, 1931, at 3,100 feet altitude. A tree up to 15 feet high and 10 inches in diameter, growing on a brushy slope.

99210 to 99214. *ROSA* spp. Rosaceae. **Rose.**99210. *ROSA* sp.

No. 24. From Tahoyen, Kiangkouhsien, September 25, 1931, at 3,400 feet altitude. A trailing shrub about 15 feet long, with reddish fruit, growing on a rocky slope.

99211. *ROSA* sp.

No. 114. From Mingchiachang, Kiangkouhsien, December 2, 1931, at 1,200 feet altitude. A shrub with reddish fruits, growing along the roadside.

99212. *ROSA LAEVIGATA* Michx. **Cherokee rose.**

No. 107. *Hunan Kou*. From Mayang, Hunan Province, December 20, 1931, at 600 feet altitude.

99213. *ROSA MULTIFLORA* Thunb. **Japanese rose.**

No. 115. From Hehtehchang, Kiangkouhsien, December 3, 1931, at 900 feet altitude.

For previous introduction see 75691.

99214. *ROSA ROXBURGHII* Tratt. **Roxburghrose.**

No. 47. *Tze Li*. From Tahoyen, Kiangkouhsien, October 14, 1931, at 3,100 feet altitude. A common shrub about 7 feet high, with pinkish flowers followed by edible yellow-brown fruits.

99215 to 99218. *RUBUS* spp. Rosaceae.

Nos. 99215 and 99216 were collected July 23, 1931, at 3,400 feet altitude at Liangfengyah, Tsungyih.

99215. *RUBUS* sp.

No. 2. A widely distributed raspberry common along the roadsides and on brushy slopes. The orange-yellow fruits have a pleasant acid flavor and are three fifths of an inch in diameter.

99216. *RUBUS* sp.

No. 4. A shrub with small dark-red somewhat bitter fruits, separating from the receptacle like a raspberry, but the pedicel is easily deciduous so that the fully ripe fruit often falls together with the receptacle and pedicel.

99217. *RUBUS* sp.

No. 28. From Fangchingshan, Kiangkouhsien, October 1, 1931, at 6,800 feet altitude. A

99139 to 99242—Continued.

trailing shrub about 15 feet long with black fruits; collected from a rocky slope.

99218. *RUBUS* sp.

No. 32. *Tze Wu Pao*. From Tahoyen, Kiangkouhsien, September 25, 1931, at 3,400 feet altitude. A trailing shrub about 15 feet long with black fruits; collected from a brushy slope.

Nos. 99219 to 99221 were from Fangchingshan, Kiangkouhsien.

99219. *SCHIMA* sp. Theaceae.

No. 25. *Shwen Pan Tze*. October 2, 1931, at 5,300 feet altitude. An evergreen tree about 60 feet tall and 20 inches in diameter, with black fruits.

99220. *SCHIMA* sp. Theaceae.

No. 57. From Nantiyoh, November 18, 1931, at 2,800 feet altitude. An evergreen tree about 60 feet high and 16 inches in diameter, growing on a rocky brushy slope.

99221. *SLOANEA HEMSLEYANA* (Ito) Rehd. and Wils. Elaeocarpaceae.

No. 14. *Yo Chi Pa*. From a brushy slope near Machaoh, November 1, 1931, at 1,800 feet altitude. A tree about 60 feet tall and 4 feet in diameter.

99222. *SORBUS* sp. Malaceae. Mountain-ash.

No. 66. *Ai Li Tze*. From a rocky slope in the forest at Niutoushan, Tahoyen, Kiangkouhsien, September 7, 1931, at 3,900 feet altitude. A tree about 30 feet tall and 1 foot in diameter, with brownish fruit.

99223. *SORBUS* sp. Malaceae. Mountain-ash.

No. 76. From Fenghsiangping, Fangchingshan, Kiangkouhsien, October 18, 1931, at 4,800 feet altitude. A tree up to 60 feet tall and 18 inches in diameter, with fleshy pink fruits.

99224. *SPATHOLOBUS* sp. Fabaceae.

No. 18. *Wei Chan Tze*. From the city of Kiangkou, September 21, 1931, at 1,500 feet altitude. A trailing shrub about 30 feet long found commonly along the roadside. The winged fruits are tinged red.

99225. *STRANVAESIA* sp. Malaceae.

No. 68. *Shan Yang Niu*. From a rocky slope near Hwehsiangping, Fangchingshan, Kiangkouhsien, October 2, 1931, at 6,250 feet altitude. A tree up to 30 feet high and 16 inches in diameter.

Nos. 99226 to 99234 were collected in Tahoyen, Kiangkouhsien.

99226. *STRANVAESIA DAVIDIANA* Decaisne. Malaceae.

No. 102. *Shan Huang Tze*. Collected November 29, 1931, at 3,900 feet altitude. A shrub or tree about 15 feet high and 3 inches in diameter with bright-red fruits, found both on rocky slopes and in the forest.

For previous introduction see 93960.

99227. *STYRAX* sp. Styraceae.

No. 30. From a rocky slope, November 5, 1931, at 3,000 feet altitude. A tree up to 35 feet tall and 10 inches in diameter with grayish fruits.

99228. *TAXUS CHINENSIS* (Pilger) Rehder. Taxaceae. Chinese yew.

No. 49. *Shieh Pai*. Collected November 5, 1931, at 3,000 feet altitude. A tree about 30 feet high and 14 inches in diameter, with reddish fruits.

99229. *THEA OLEOSA* Lour. Theaceae.

No. 33. *Yu Cha* or *Shan Cha*. From a rocky slope, October 7, 1931, at 2,800 feet altitude. A

99139 to 99242—Continued.

shrub or tree about 25 feet high and 8 inches in diameter. The fruits are brownish and oil is extracted from the seeds.

99230. *VACCINIUM* sp. Vacciniaceae.

No. 98. Collected November 26, 1931, at 2,800 feet altitude from a brushy slope. A shrub about 7 feet tall with black fruits.

99231 to 99233. *VIBURNUM* spp. Caprifoliaceae.

Nos. 99231 and 99232 were collected November 25, 1931, at 4,500 feet altitude.

99231. *VIBURNUM* sp.

No. 80. A shrub about 10 feet tall with blue black fruits, growing on rocky slopes, usually along a stream.

99232. *VIBURNUM* sp.

No. 87. A shrub up to 15 feet high with bright-red fruits, found on a brushy slope.

99233. *VIBURNUM* sp.

No. 11. Collected November 27, 1931, at 2,800 feet altitude. A shrub about 7 feet high with red fruits, growing on brushy slopes.

99234. *ZANTHOXYLUM* sp. Rutaceae. Prickly-ash.

No. 40. *Tze Chiu*. From a rocky slope near Jenchi, October 28, 1931, at 3,200 feet altitude. A tree about 60 feet tall and 30 inches in diameter.

99235. *ZANTHOXYLUM* sp. Rutaceae. Prickly-ash.

No. 92. From a brushy slope in Chingchaoping, Kiangkouhsien, November 24, 1931, at 2,600 feet altitude. A thorny shrub about 15 feet tall, with brownish fruits and shining black seeds.

Nos. 99236 to 99238 were collected from rocky slopes in Fangchingshan, Kiangkouhsien.

99236. (Undetermined.)

No. 55. Collected near Soochiapo, October 25, 1931, at 3,000 feet altitude. An evergreen tree about 35 feet tall and 18 inches in diameter.

99237. (Undetermined.)

No. 77. Collected October 28, 1931, at 6,250 feet altitude. A tree about 30 feet tall and 16 inches in diameter, with reddish fruits.

99238. (Undetermined.)

No. 20. From near Chiulungtze, October 3, 1931, at 6,250 feet altitude. A tree about 30 feet tall and 10 inches in diameter with red fruits.

99239. (Undetermined.)

No. 17. From a brushy slope at Huangchiawan, Tahoyen, Kiangkouhsien, September 11, 1931, at 4,300 feet altitude. A shrub about 20 feet tall and 4 inches in diameter with black fruits.

99240. (Undetermined.)

No. 71. From a brushy slope at Chingchaoping, Tahoyen, Kiangkouhsien, October 28, 1931, at 3,000 feet altitude. A trailing shrub about 30 feet long; the pale-green fruits become brown when ripe.

99241. (Undetermined.)

No. 43. *Tung Ching*. From the forest margin at Laoshan, Fangchingshan, Kiangkouhsien, September 30, 1931, at 6,500 feet altitude. An evergreen shrub about 15 feet tall, with bluish fruits.

99242. (Undetermined.)

No. 108. *Tung Loh Tze*. From a forested slope at Fangchingshan, Kiangkouhsien, October 3, 1931, at 6,250 feet altitude. A tree about 30 feet tall and 1 foot in diameter, with bluish fruits.

99243. AMYGDALUS PERSICA L. Amygdalaceae. Peach.

From Australia. Plants purchased from George D. F. Althofer, "Glen Ora" Dripstone, New South Wales. Received May 24, 1932.

99244 to 99288. ZEA MAYS L. Poaceae. Corn.

From Peru. Seeds collected by H. G. MacMillan and C. O. Erlanson, Bureau of Plant Industry. Received May 17, 1932.

Nos. 99244 to 99287 were purchased in the market at Huancayo, Peru, April 24, 1932. Grown at 10,800 feet altitude.

99288. No. 202. From Rio Colorado, near Merced, Peru, at 3,000 feet altitude, April 16, 1932. A few grains of red corn taken from a native hut.

99289. BAMBUSA MULTIPLEX (Lour.) Raeusch. Hedge bamboo.

From Florida. Plant presented by J. H. Wells, Baldwin. Received May 15, 1929. Numbered in May 1932.

This distichous, or fern-leaved, variety of the hedge bamboo has slender culms with green stripes of various widths on a yellowish to pinkish ground color and is of dwarf habit, usually not more than 5 feet high. However, according to a statement by C. E. Pleas, of Chipley, Fla., from whom Mr. Wells obtained his original plant, the variety shows a strong tendency to revert to the species type, in which the leaves are much larger and fewer on the branchlets, and culms up to 30 feet in height are produced; the foliage then appears similar in form to that of the well-known varieties *Alphonse Karri* and *Argentea striata*. The new culms of this dwarf variety usually appear during June and extend their branches and leaves within a few weeks, differing in these respects from the type and from the large-growing varieties of the species.

99290. PHASEOLUS LUNATUS L. Fabaceae. Lima bean.

From Haiti. Seed presented by Pierre G. Sylvain, chef de la Section d'Horticulture, Service National de la Production Agricole, Port-au-Prince. Received May 18, 1932.

Variegated beans, purchased in the market at Port-au-Prince.

99291 to 99301. DIANTHUS WINTERI J. L. Gibson. Silenaceae. Pink.

From England. Plants purchased from Gibson & Amos, Ltd., Cranleigh, Surrey. Received May 27, 1932.

99291. <i>Betty Morton</i> .	99297. <i>Mrs. Wormald</i> .

99302 to 99314. ARACHIS HYPOGAEA L. Fabaceae. Peanut.

From the Union of Soviet Socialist Republics. Seeds presented by the director, Regional Oil Plant Station, Kruglik, northern Caucasus. Received May 5, 1932.

A collection of peanuts introduced for the use of Department specialists.

99302 to 99312. *Spanish variety*.

99302. No. 154.	99308. No. 161.

99313. No. 0433. *Valencia variety*.

99314. No. 0512. *Spanish variety*.

99315. LYSILOMA LATISILYQUA (L.) Benth. Mimosaceae.

From Cuba. Seeds collected in Oriente Province by J. G. Jack, Arnold Arboretum, and presented through Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos. Received June 6, 1932.

For previous introduction and description see 98979.

99316 to 99318. CAPSICUM ANNUM L. Solanaceae. Common redpepper.

From Spain. Seeds presented by the Granja Escuela de Capataces Agricolas y Estaciones Especiales de Valencia, through Señor Miguel de Echegaray, agricultural attaché, Spanish Embassy, Washington, D.C. Received May 23, 1932.

A collection of the best commercial varieties of mild-flavored sweet redpeppers grown in Spain.

99316. *Cornicabra*.

99317. *Grande comun*.

99318. *Morrón gordo*.

99319. CYRTOSPERMA SENEGALENSE (Schott) Engler. Araceae.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos. Received June 6, 1932.

A curious aroid which sends up its spathe on a spiny stem 10 feet high. The spathe itself is 16 inches long. The plant requires wet sandy soil, tropical conditions, and moist atmosphere.

For previous introduction see 90914.

99320. PHASEOLUS LUNATUS L. Fabaceae. Lima bean.

From Cuba. Seeds presented by Thomas R. Towns, Holguin. Received April 29, 1932.

A pole bean which grows for several years in Cuba and produces beans almost continuously. The pods are used as a green bean.

Introduced for the use of Department specialists.

99321. CITRUS HYSTRIX DC. Rutaceae. Cabuyao.

From India. Seeds presented by R. N. Parker, forest botanist, Forest Research Institute, New Forest, Dehra Dun. Received May 31, 1932.

From plants growing wild in Kumaon. A large thorny tree, 20 to 60 feet high, with leaves 6 to 8 inches long. The fruits vary in shape from oblate to pyriform-turbinate or oblong; the smooth to more or less corrugated thick rind is greenish lemon-yellow in color, and the flesh is greenish, juicy, and sharply acid. The tree is said to be very resistant to the citrus canker.

For previous introduction see 50309.

99322 to 99325.

From Australia. Seeds purchased from F. H. Brunning Pty, Ltd., Melbourne. Received May 17, 1932.

A collection of forage grasses introduced for Department specialists.

99322. DACTYLIS GLOMERATA L. Poaceae. Orchard grass.

Cocksfoot, Akaroa strain, New Zealand Government certified.

99323 to 99325. LOLIUM PERENNE L. Poaceae. Perennial ryegrass.

99323. Poverty Bay Perennial, New Zealand Government certified "mother" seed.

99324. Poverty Bay Perennial, New Zealand Government certified "maiden" seed.

99325. Victorian or Western District Perennial, genuine old pasture seed.

99326. TRIFOLIUM PRATENSE L. Fabaceae. Red clover.

From the Union of Soviet Socialist Republics. Seeds presented by the Kungursk elevator, Ural Regional Seed Producers, All-Russian Seed Producers' Union, city of Kungur, Ural District. Received May 25, 1932.

Introduced for the use of Department specialists.

99327 to 99333.

From Australia. Seeds purchased from the Glen Innes Experiment Farm, Plant Breeding Branch, Department of Agriculture, Sydney, New South Wales. Received May 28, 1932.

Forage grasses introduced for the use of Department specialists.

99327 to 99329. DACTYLIS GLOMERATA L. Poaceae. Orchard grass.**99327 to 99333—Continued.**

99327. G 30-205. Improved New Zealand cocksfoot.

99328. G 32-8. Improved cocksfoot.

99329. G 32-3. Commercial cocksfoot.

99330 and 99331. LOLIUM PERENNE L. Poaceae. Perennial ryegrass.

99330. G 30-29. Improved New Zealand perennial rye.

99331. G 32-4. Commercial perennial rye.

99332. PHALARIS TUBEROSA L. (*P. stenophylla* Hort.). Poaceae. Grass.

G 32-9.

99333. TRIFOLIUM PRATENSE L. Fabaceae. Red clover.

Commercial red clover.

99334 to 99337.

From Tobago, British West Indies. Seeds presented by E. J. H. Thomas, Charlotteville. Received May 26, 1932.

99334. CASSIA sp. Caesalpinaceae.

Easter blossom. A form with yellow flowers.

99335. ERYTHRINA sp. Fabaceae.

Mountain immortelle.

99336. ICHTHYOMETHIA PISCIPULA (L.) Hitchc. Fabaceae.

An attractive leguminous shade tree which becomes 50 feet high, with a spreading habit and large pinnate leaves. The large racemes of pale-pink flowers appear before the leaves and somewhat resemble those of the black locust. The wood is used for cart building.

For previous introduction see 97847.

99337. PASPALUM CONJUGATUM Berg. Poaceae. Grass.

A creeping perennial grass with the flowering stems sometimes 3 feet tall. This species, originally from Surinam, is found in moist places in the Tropics of both hemispheres and forms extensive and close mats.

For previous introduction see 76432.

99338. SORGHUM VIRGATUM (Hack.) Stapf. Poaceae. Grass.

From Africa. Seeds presented by Prof. August Chevalier, Museum of Natural History, Paris, France. Received May 25, 1932.

Seeds collected in the heart of the Sahara by Professor Chevalier on his recent trip across the Sahara to Timbuktu; they may prove of interest in the semidesert regions of the southwestern United States.

99339 to 99349.

From the Union of Soviet Socialist Republics. Seeds presented by the director, Regional Oil Plant Station, Kruglik, northern Caucasus. Received May 5, 1932.

99339. BRASSICA ALBA (L.) Boiss. Brassicaceae. White mustard.

The seeds of this white mustard are less pungent than those of the black mustard (*Brassica nigra*), but are used in the same way. The young leaves of both are useful as a potherb and also as a salad.

For previous introduction see 60774.

99340. CARTHAMUS TINCTORIUS L. Asteraceae. Safflower.

Used for oil and dye.

For previous introduction see 84283.

99339 to 99349—Continued.

99341. *CYPERUS ESCULENTUS* L. Cyperaceae
Chufa.

A sedge which produces small edible tubers that taste like very sweet almonds. The plant grows with the greatest facility, does not require moisture, and yields an abundant crop.

For previous introduction see 73845.

99342. *DRACOCEPHALUM* sp. Menthaceae.

99343. *GUIZOTIA ABYSSINICA* (L.f.) Cass. Asteraceae.

An annual plant 6 to 8 feet high, with showy yellow flower heads. The black shining seeds furnish the Niger oil of commerce.

For previous introduction see 75328.

99344. *LALLEMANTIA IBERICA* (Bieb.) Fisch. and Mey. Menthaceae.

A blue-flowered herbaceous perennial, native to semiarid regions in Asia Minor and Syria, whose seeds yield an oil said to be a high-grade drying oil.

For previous introduction see 72839.

99345. *RAPHANUS SATIVUS* L. Brassicaceae.
Radish.

Variety *oleiferus*.

99346. *RICINUS COMMUNIS* L. Euphorbiaceae.
Castor-bean.

Variety *praecox*.

99347 to 99349. *SESAMUM ORIENTALE* L. Pedaliaceae.
Sesame.

Locally grown varieties.

99350. *PISTACIA LENTISCUS* L. Anacardiaceae.
Lentisk.

From Italy. Seeds presented by the R. Orto Botanico di Palermo. Received May 4, 1932.

A wild shrub common in the Mediterranean regions where it grows on poor soil and withstands severe drought. It produces a gum used by the Arabs as a perfume. An edible oil known as shinia, used as a substitute for olive oil, is obtained from the berries.

For previous introduction see 97303.

99351 to 99377.

From the Union of Soviet Socialist Republics. Seeds collected by V. Gorbunova in Asia Minor and presented by Dr. V. P. Alekseev, chief, Bureau of Introduction, Institute of Plant Introduction, Leningrad. Received May 4, 1932.

99351 to 99356. *PISTACIA* spp. Anacardiaceae.

99351. *PISTACIA MUTICA* Fisch. and Mey.
Terebinth.

Seeds originally from Transcaucasia. A deciduous tree up to 35 feet high, with pinnate foliage. Native to the eastern Mediterranean region.

For previous introduction see 97304.

99352 to 99356. *PISTACIA VERA* L. Pistache.

99352. No. 1422. 99355. No. 1438.

99353. No. 1423. 99356. No. 1450.

99354. No. 1436.

99357 to 99377. *ELAEAGNUS ANGUSTIFOLIA* L. Elaeagnaceae.
Russian-olive.

Introduced for the use of Department specialists.

99357. No. 126. From Zaravshan.

99358. No. 127. From Zaravshan.

99351 to 99377—Continued.

99359 to 99364. From the Chirchik River.

99359. No. 234. 99362. No. 264.

99360. No. 256. 99363. No. 267.

99361. No. 260. 99364. No. 268.

99365 to 99368. From the Syr-Daria River.

99365. No. 285. 99367. No. 329.

99366. No. 300. 99368. No. 332.

99369. No. 356. From the Bokhara district.

99370 to 99372. From Zaravshan.

99370. No. 393. 99372. No. 403.

99371. No. 399.

99373. No. 617. From Farab, Amu-Daria.

99374 and 99375. From the Amu-Daria River.

99374. No. 618. 99375. No. 620.

99376. No. 621. From Amu-Daria.

99377. No. 622. From the Amu-Daria River.

99378 and 99379.

From Madagascar. Seeds presented by M. Raymond Decary, Ambovombe. Received June 3, 1932.

99378. *EUPHORBIA INTISY* Drake. Euphorbiaceae.

From Behara, Madagascar. An arborescent succulent, about 12 feet high, native to southern Madagascar in regions of limited rainfall, occasional frost, and varied soil conditions. At one time it was the most important rubber plant of Madagascar, but is now practically extinct commercially because of the lack of care used in harvesting the rubber. It has gray bark, dichotomous or somewhat whorled branches, and minute scattered leaves. The small and inconspicuous greenish flowers are in very short cymes near the tips of the branches.

For previous introduction see 78169.

99379. *EUPHORBIA* sp. Euphorbiaceae.

Received as *E. intisy*, but the seeds do not agree with the description for that species. Collected from trees in the administrator's garden at Ambovombe.

99380 to 99466.

From Italy. Seeds presented by S. W. McLeod Braggins, superintendent, Botanic Gardens, La Mortola, Ventimiglia. Received April 27, 1932.

99380. *ALECTRYON TOMENTOSUM* (F. Muell.) Radlk. (*Nephtium tomentosum* F. Muell.). Sapindaceae.

An Australian tree, 20 to 30 feet high, with rusty-velvety young branches, oval to lanceolate leaves 2 to 4 inches long, small flowers crowded in woolly panicles, and rather hard, depressed indehiscent fruits.

For previous introduction see 44521.

99381. *AMPHICOME ARGUTA* Royle. Bignoniaceae.

A low herbaceous perennial, not over 3 feet high, native to northern India. The compound leaves are made up of 5 to 9 deeply serrate lanceolate leaflets 2 inches long, and the rose-colored funnel-shaped flowers, 1 inch long, are borne in terminal racemes 6 to 8 inches long.

99382. *ANACAMPSEROS FILAMENTOSA* (Haw.) Sims. Portulacaceae.

A low succulent, native to southern Africa, with thick cobwebby ovate leaves one-fourth inch long and filamentous stipules longer than the leaves. The rather large rose-colored flowers are borne on 3- to 4-flowered scapes 2 to 3 inches long.

99380 to 99466—Continued.

99383. *ANISACANTHUS WRIGHTII* (Torr.) A. Gray.
Acanthaceae.

A low shrub, 2 to 4 feet high, native to southern Texas and northern Mexico. The linear to lanceolate leaves are 1 to 2 inches long, and the tubular red flowers, 2 inches long, are borne in interrupted one-sided spikes.

99384 to 99386. *ARISTOLOCHIA* spp. Aristolochiaceae.

99384. *ARISTOLOCHIA ALTISSIMA* Desf.

A somewhat woody evergreen vine climbing 12 to 18 feet high, native to southern Europe and northern Africa. The coriaceous cordate leaves are 2 to 3 inches long, and the purple-brown pipe-shaped flowers are about 2 inches long.

99385. *ARISTOLOCHIA MOLLISSIMA* Hance.

An ornamental vine, with ovate-cordate, rounded, silky-hairy leaves 2 to 3 inches long and erect solitary flowers about 1 inch long. Native to southern China.

99386. *ARISTOLOCHIA SEMPERVIRENS* L.

A prostrate or somewhat climbing vine, native to the island of Crete. The slightly leathery triangular-cordate leaves are 1 to 2 inches long, and the yellowish purple-striped flowers are smaller than those of *A. altissima*.

99387 to 99391. *ASPARAGUS* spp. Convallariaceae.

99387. *ASPARAGUS ACUTIFOLIUS* L.

A hardy evergreen species, native to Spain, which makes a beautiful hedge plant, somewhat resembling juniper. As the plants grow older there is a tendency to produce vinelike shoots. The tuberlike storage roots and drought-resistant foliage make it valuable for regions of scanty rainfall.

For previous introduction see 92149.

99388. *ASPARAGUS APHYLLUS* L.

A bushy perennial asparagus with rough angled stems, cladodes in fascicles of 4 to 12, and black berries. Native to southern Europe.

99389. *ASPARAGUS COOPERI* Baker.
Cooper asparagus.

A vining asparagus which climbs to a height of 10 to 12 feet, with a shrubby terete stem up to 2 inches in diameter at the base; the firm twining wirelike stem sends out many slender spreading threadlike ultimate branchlets from which the numerous minute needlelike cladodes spring in dense clusters. The very small flowers are not abundantly produced. Native to southern Africa.

For previous introduction see 38143.

99390. *ASPARAGUS CRISPUS* Lam.
Drooping asparagus.

A tuberous-rooted asparagus, native to southern Africa, with green herbaceous sarmentose stems 3 to 6 feet long. The zigzag reflexed branches bear reflexed 3-angled cladodes less than one-half inch long, and the fragrant white flowers, borne on axillary drooping pedicels, are followed by white or pinkish berries one-half inch across.

99391. *ASPARAGUS STIPULARIS* Forsk. (*A. horridus* L. f.).

A shrubby perennial, with erect, often climbing, angled stems, scalelike leaves, thick, often solitary sharp-pointed cladodes, and black berries. Native to southern Europe.

99392. *BAUHINIA GRANDIFLORA* Juss. Caesalpinaceae.

A small tree up to 20 feet high, with subcordate leaves slightly lobed at the apex and tomentose beneath. The large pure-white flowers, opening

99380 to 99466—Continued.

at night, are in clusters of 1 to 3 on axillary peduncles, and the obovate petals are clawed. Native to Peru.

For previous introduction see 81143.

99393. *BAUHINIA YUNNANENSIS* Franch. Caesalpinaceae.

A vigorous woody climber from southwestern China; the rounded 2-parted leathery leaves are over an inch long. The flowers, rosy white striped with purple, are in many-flowered pendulous racemes.

For previous introduction see 67635.

99394 to 99397. *BESCHORNERIA* spp. Amaryllidaceae.

99394. *BESCHORNERIA DEKOSTERIANA* C. Koch

A succulent, native to Mexico, with a rosette of about 20 thick oblanceolate leaves 2 to 3 feet long and 3 inches wide at the middle, the base being broad and thick. The green funnel-form flowers, 1 to 2 inches long, are borne in a deltoid panicle.

99395. *BESCHORNERIA PUBESCENS* Berger.

An agavelike plant with a rosette of stiff glaucous leaves 2 feet long by 2 inches wide and finely denticulate on the margin. The flower stem, 4 to 5 feet high, is bright red and bears green or yellow pubescent tubular flowers in the axils of showy bracts. It is said to be native to Mexico.

99396. *BESCHORNERIA TUBIFLORA* Kunth.

A stemless plant with a rosette of about 12 linear leaves 1 foot long, roughened on both surfaces and minutely striate. The flower stalk, 4 feet high, bears an erect raceme of drooping brown-green tubular flowers. It is native to Mexico.

99397. *BESCHORNERIA YUCCOIDES* C. Koch.

A yuccalike plant with a rosette of about 20 lanceolate glaucous-green leaves 1 to 2 feet long and 2 inches broad and a flower stalk 3 to 4 feet high, bearing a panicle of dark-green yellow-tinged flowers 3 inches long on drooping red pedicels. It is native to Mexico.

99398. *BRACHYLAENA DENTATA* (Thunb.) DC. Asteraceae.

A bushy plant with cuneate or somewhat three-lobed coarsely dentate hairy leaves and terminal spikelike heads of yellow flowers. Native to southern Africa.

99399. *BULBINE FRUTESCENS* (L.) Willd. Liliaceae.

A succulent with simple or branched stems 1 foot high, native to southern Africa. The subterete bright-green leaves are 6 to 9 inches long, and the small bright-yellow flowers are borne in a close raceme 6 to 12 inches long and 1 inch in diameter.

99400. *BYTTNERIA URTICIFOLIA* Schum. Sterculiaceae.

A spiny climbing shrub with grooved branches, native to Brazil and Argentina. The long-petioled, coarsely serrate, appressed-hairy leaves are broadly heart-shaped, and the green-purple flowers, one half inch across, are in stalked clusters of 3 to 5.

99401. *CAESALPINIA SEPIARIA* Roxb. Caesalpinaceae.
Mysore thorn.

For previous introduction and description see 99810.

99402. *CALLISTEMON SALIGNUS* (J. E. Smith) Sweet. Myrtaceae.

A tall shrub or small tree up to 40 feet high, native to Australia. The distinctly penninerved

99380 to 99466—Continued.

lanceolate leaves are 1 to 3 inches long, and the small flowers, in spikes 1 to 2 inches long, have bright-yellow stamens usually not more than one half inch long.

99403. *CALLISTEMON SALIGNUS* (J. E. Smith) Sweet. Myrtaceae.

Received as *C. paludosus*, which is a form with smaller leaves not over 2 inches long.

99404. *CARISSA GRANDIFLORA* (E. Mey.) DC. Apocynaceae.

A handsome shrub, native to southern Africa, which is now cultivated in southern Florida and California as an ornamental hedge plant and for its edible scarlet berries.

For previous introduction see 98222.

99405. *CASUARINA CUNNINGHAMIANA* Miquel. Casuarinaceae. **Cunningham beefwood.**

A slender-branched leafless Australian ornamental tree, the so-called beefwood, which has branchlets suggesting horsetails.

For previous introduction see 90679.

99406. *CHILIANTHUS ARBOREUS* (L. f.) Benth. Loganiaceae.

An erect evergreen shrub 6 to 10 feet high with four-angled or crisply winged branchlets and lanceolate leathery leaves 3 to 4 inches long, smooth above and gray-scummy beneath. The small cream-white flowers are in small clusters formed into a large lax panicle 8 inches across. It is native to southern Africa.

99407. *CHLOROPHYTUM CAFENSE* (L.) Kuntze (*C. elatum* R. Br.). Liliaceae.

A perennial herb, native to southern Africa, with a rosette of 12 to 20 bright-green lanceolate leaves 1 to 2 feet long, often variegated with white or yellow bands in garden varieties. The large panicle of small white flowers is borne on a stalk 3 to 4 feet high.

99408. *COLLETIA CRUCIATA* Gill. and Hook. Rhamnaceae. **Anchorplant.**

A shrub 3 to 4 feet high, native to southern Brazil and Uruguay. The elliptic flattened decurrent spiny branches have few entire elliptic leaves and bear the small white flowers in clusters in the axils of the spines.

99409. *CORDIA SERRATIFOLIA* H. B. K. Boraginaceae.

A tropical tree, native to Campeche, Mexico, with oblong acuminate coarsely serrate leaves nearly 3 inches long and very small white flowers in globular spikes.

99410. *COWANIA MEXICANA* D. Don. Rosaceae.

A shrub 3 to 6 feet high, with small crowded cuneate 3- to 7-cleft leaves less than one half inch long and cream-white flowers 1 inch across. It is native to Mexico.

For previous introduction see 88734.

99411. *CROTALARIA CANDICANS* Wight and Arn. Fabaceae.

A stiffly erect much-branched shrubby species with hairy and somewhat leathery broadly rounded leaves and panicles of small silky yellow flowers. It is native to southwestern India.

For previous introduction see 64066.

99412. *CROTALARIA POLYSPERMA* Kotschy. Fabaceae.

A subshrubby densely villous perennial herb 1 to 2 feet high, native to the Nile region in Africa. The trifoliate leaves have obovate-oblong leaflets 1 to 2 inches long, and the small blue flowers are in lax lateral racemes.

99380 to 99466—Continued.

99413. *DANAE RACEMOSA* (L.) Moench. Convolvulariaceae.

A much-branched evergreen Persian shrub 3 to 4 feet high, with alternate lanceolate leaflike cladodes 4 inches long, terminal racemes of small white flowers, and globose red berries.

For previous introduction see 78677.

99414. *DIMORPHOTHECA ECKLONIS* DC. Asteraceae. **Cape-marigold.**

A robust and erect subshrub 2 feet or more high, with crowded linear-lanceolate leaves and terminal flower heads having rays over 1 inch long, which are white above and purplish below. Native to southern Africa.

For previous introduction see 81153.

99415. *DOVYALIS CAFFRA* (Hook. and Harv.) Warb. (*Aberia caffra* Hook. and Harv.). Flacourtiaceae. **Kei-apple.**

A very prickly shrub or small tree, native to tropical Africa, where it is used as a hedge. The pale-green leaves are over 1 inch long and nearly 1 inch wide. The edible fruit resembles a small yellow apple and is so exceedingly acid when fresh that it is said to be used as a pickle without adding vinegar.

For previous introduction see 98223.

99416. *DYCKIA RARIFLORA* Schult. f. Bromeliaceae.

A stemless succulent resembling an agave, native to Brazil. The lanceolate stiff spiny-margined leaves, 6 inches long, are in a basal rosette, and the flower stalk, 1 to 2 feet high, bears a panicle of orange flowers about one-third inch long.

99417. *ELAEODENDRON CAFENSE* Eckl. and Zeyh. Celastraceae. **False-olive.**

An erect shrub native to southern Africa, with leathery ovate leaves 3 inches long and panicles of small white flowers followed by red drupes 1 inch long. The plant has stood 18° F. without injury.

For previous introduction see 88346.

99418. *ENCEPHALARTOS VILLOSUS* Lem. Cyca-
daceae.

A cycad with a short thick woolly and scaly trunk up to 6 feet high, native to southern Africa. The pinnately compound leaves are 6 feet long and are made up of numerous linear-lanceolate, spiny toothed, and sharp-pointed bright-green leaflets.

99419. *ENCHYLAENA TOMENTOSA* R. Br. Chenopodiaceae.

A procumbent or widely branched shrub up to 3 feet high, native to Australia. The branches are silvery woolly, the alternate linear leaves are about one-half inch long, and the small flowers develop into fleshy edible red or yellow berries about the size of small peas.

99420. *FELICIA ABYSSINICA* Schultz Bip. Astera-
ceae.

A low shrubby much-branched perennial 6 to 12 inches high, native to the Nile region in Africa. The closely alternate linear entire leaves are less than 1 inch long, and the blue or violet asterlike flowers, 1 inch across, are borne on solitary terminal peduncles 1 to 2 inches long.

99421. *GHELINA LEICHARDTII* F. Muell. Verbenaceae.

An excellent timber tree, native to Australia. The somewhat leathery ovate leaves, 3 to 6 inches long, are glabrous and rugose above and densely softly tomentose beneath. The small two-lipped flowers, white with purple markings, are borne in loose ovoid terminal panicles.

99380 to 99466—Continued.

99422. *GREWIA FLAVA* DC. Tiliaceae.

A rigid much-branched shrub, native to southern Africa. The oval crenulate leaves, 1 inch long, are glabrous above and anescent beneath. The small solitary yellow flowers are followed by two-lobed black edible fruits.

99423. *GYNOPOGON BUXIFOLIUS* (R. Br.) Schum. Apocynaceae.

A low spreading shrub, native to Australia. The thick rigid obovate to orbicular leaves, 1 inch long, are in pairs or in whorls of three, and the inconspicuous tubular flowers, in terminal clusters, are followed by ovoid orange fruits about one-half inch long.

99424. *GYMNOSPORIA BUXIFOLIA* (L.) Szysz. Celastraceae.

A spiny shrub, several feet high, native to southern Africa. The obovate toothed leaves are 1 to 2 inches long, and the small white flowers, in axillary clusters, are followed by small fruits about the size of a pea.

99425. *HAKEA CYCLOCARPA* Lindl. Proteaceae.

A glabrous shrub, 5 to 6 feet high, native to Western Australia. The thick entire oblong-lanceolate leaves are 4 to 6 inches long, and the axillary clusters of small silky pubescent flowers are followed by woody compressed two-valved capsules 1 to 2 inches long, recurved at the base, then incurved, with a broad inflexed beak having a dorsal truncate protuberance at the top of each valve.

99426. *HALLERIA LUCIDA* L. Scrophulariaceae.

A shrub or small tree up to 30 feet high, native to tropical and southern Africa. The broadly ovate leathery leaves, 2 to 4 inches long, have serrulate margins, and the curved tubular brown-red to orange-purple flowers, 1 inch long, are followed by dark-purple ovoid berries nearly 1 inch in diameter.

99427. *HESPERALOE PARVIFLORA* (Torr.) Coult. Liliaceae.

A stemless yuccalike plant, native to Texas and Mexico. The lanceolate concave leaves, 3 to 4 feet long by 1 inch wide, have coarse marginal threads, and the glaucous flower stalk, 3 to 4 feet high, bears a panicle of nodding rosy oblong flowers 1 to 2 inches long.

99428. *HIBISCUS MUTABILIS* L. Malvaceae.
Cotton rosemallow.

A double-flowered variety of a tall East Indian shrub, with large broad cordate leaves and large white flowers, which later change to red. It blooms in summer and late autumn and is widely planted in the Bermuda Islands in gardens and hedges.

For previous introduction see 90918.

99429. *INDIGOFERA MACROSTACHYA* Vent. Fabaceae.
Indigo.

A shrubby plant with hairy leaflets and pink flowers in dense racemes which are longer than the leaves.

For previous introduction see 62185.

99430 to 99432. *KALANCHOE* spp. Crassulaceae.99430. *KALANCHOE AEGYPTIACA* DC.

A branched fleshy plant with pale-green ovate-spatulate leaves, the oldest rounded, and small orange flowers in a rather large terminal panicle. Native to Mount Melhân, Egypt.

99431. *KALANCHOE THYRSIFLORA* HARV.

A suffrutescent succulent 2 to 4 feet high, native to southern Africa. The oblong-spatulate pale-green leaves are 4 to 6 inches long, and

99380 to 99466—Continued.

the coral-orange flowers are borne in a compact oblong panicle or thyrsus.

99432. *KALANCHOE WELWITSCHII* Britten.

An erect succulent plant, native to tropical Africa, with cylindrical stems 3 to 5 feet high and 1 inch in diameter at the base. The large ovate-lanceolate basal leaves are 8 to 10 inches long and crenate-dentate, with purple-margined teeth; the upper leaves are linear-lanceolate and nearly entire. The bright sulphur-yellow flowers, nearly 1 inch long, are borne in diffuse panicles.

For previous introduction see 86828.

99433. *LAVANDULA ABROTANOIDES* Lam. Menthaeae.

A perennial herb about 2 feet high, native to the Canary Islands. It has green bipinnate leaves and a branched spike of bluish flowers.

For previous introduction see 81173.

99434. *MAGYDARIS TOMENTOSA* (Desf.) Koch. Apiaceae.

A perennial herb with pinnatisect hairy leaves and small white flowers in many-flowered umbels. Native to Sicily.

99435 to 99441. *MELALEUCA* spp. Myrtaceae.99435. *MELALEUCA CUTICULARIS* Labill.

A tall shrub or small tree with twisted branches and bark in paperlike layers. The thick flat linear oblong leaves are one half inch long, and the small flowers are grouped in a scaly head. Native to Australia.

For previous introduction see 81175.

99436. *MELALEUCA DIOSMAEFOLIA* Andrews.

A tall rigid shrub, native to Western Australia. The spreading ovate-lanceolate leaves are less than one half inch long, and the rather large yellow-green flowers are in dense cylindrical spikes below the ends of the branches.

99437. *MELALEUCA LINARIIFOLIA* J. E. Smith.

A tall shrub or small tree, native to Australia. The rigid broadly linear leaves are 1 to 2 inches long, and the small white flowers are in pairs in spikes 1 to 2 inches long.

99438. *MELALEUCA NESOPHILA* F. Muell.
Pink melaleuca.

A tall shrub or tree with thick spongy bark, native to Western Australia. The thick ovate to oblong leaves are 1 inch long and obscurely 1- to 3-nerved, and the pink or rose-colored flowers are in heads 1 to 2 inches in diameter.

99439. *MELALEUCA PUBESCENS* Schauer.

A tall shrub or small tree native to Australia, with small linear leaves one half inch long crowded on the pubescent branches and small white flowers borne in loose cylindrical spikes.

For previous introduction see 90716.

99440. *MELALEUCA PULCHELLA* R. Br.

A spreading shrub 2 to 3 feet high, native to Western Australia. The scattered oblong-ovate spreading or recurved leaves are less than one-fourth inch long, and the rather large purple flowers are solitary or in scattered clusters of 2 or 3 near the ends of the branches.

99441. *MELALEUCA WILSONI* F. Muell.
Wilson melaleuca.

A tall shrub, native to Australia, with thick linear imbricated leaves one-fourth to one-half inch long and small red flowers scattered in loose spikes.

99380 to 99466—Continued.

99442. *MYOPORUM CRYSTALLINUM* Kunze. Myoporaceae.

An evergreen shrub, native to Australia, with leathery green leaves, pellucid-punctate beneath. Closely related to *M. obscura*.

99443. *NOTEA AFRICANA* (L.) Reichenb. Rhamnaceae.

An upright evergreen shrub 10 to 12 feet high, native to southern Africa. The oblong-lanceolate serrate leaves, 1 to 2 inches long, are pale green beneath, and the small white flowers are in terminal clusters. The whole plant is said to be saponaceous, and the macerated foliage is used by the natives in washing.

99444. *NOTELAEA EXCELSA* Webb. and Berth. Oleaceae.

An evergreen shrub up to 15 feet high, native to the Canary Islands. The small white flowers in axillary racemes, appear in May and are followed by globular fruits.

99445. *OLEA CHRYSOPHYLLA* Lam. Oleaceae.

A small evergreen tree, closely related to the cultivated olive. Its chief ornamental value lies in the golden color of the under surfaces of the leaves. Native to eastern Africa.

For previous introduction see 81185.

99446. *OLEA YERRUCOSA* (Roem. and Schult.) Link. Oleaceae.

A tree, native to southern Africa, with linear leaves 3 inches long, covered with small yellow scales beneath. The axillary panicles, 2 inches long, of small flowers are followed by dark globose scarcely fleshy fruits one-fourth inch in diameter.

99447. *OLEARIA ARGOPHYLLA* (Labill.) F. Muell. Asteraceae.

A tree 20 to 25 feet high, emitting a strong musky odor. The alternate, ovate to lanceolate, entire or denticulate leaves, 3 to 5 inches long, are reticulate above and clothed with silvery-silky hairs beneath. The small blue-white, asterlike flower heads are in large terminal corymbs. It is native to Australia.

For previous introduction see 86265.

99448. *PANDOREA RICASOLIANA* (Tanf.) Baill. Bignoniaceae. **Ricasol pandorea.**

An evergreen climbing shrub with pinnate leaves of 7 to 11 ovate-serrate leaflets 1 inch long, dark green above, pale beneath, and loose terminal panicles of large campanulate flowers 2 inches long, light pink striped with red. Native to southern Africa.

For previous introduction see 98092.

99449. *PHOENIX CANARIENSIS* Chabaud. Phoeniceae. **Canary date palm.**

A palm, native to the Canary Islands, closely resembling the common date palm (*Phoenix dactylifera*), but more slender and graceful in all its parts, and the leaves are more numerous.

Variety *macrocarpa*; a form with large fruits.

For previous introduction see 93324.

99450 to 99454. *PITTIOSPORUM* spp. Pittosporaceae.

99450. *PITTIOSPORUM COLENSOI* Hook. f.

A tree, up to 50 feet high, native to New Zealand, with lanceolate to obovate leathery leaves 2 to 4 inches long. The solitary axillary dark-purple flowers, one-half inch long, are followed by thick woody globose capsules.

99451. *PITTIOSPORUM HETEROPHYLLUM* Franch. **Rock pittosporum.**

A spreading shrub, 3 to 6 feet high, native to Szechwan and Yunnan, China, where it grows

99380 to 99466—Continued.

on cliffs and in rocky places in the arid valleys. The ovate leaves are medium sized, and the light-yellow flowers are borne near the tips of the new branchlets.

99452. *PITTIOSPORUM PROCERUM* Hort.

A name for which a place of publication and a description have not been found.

99453. *PITTIOSPORUM UNDLATUM* Vent. **Orange pittosporum.**

An Australian evergreen shrub or tree up to 40 feet high, often used as a hedge. The lanceolate leaves, 3 to 6 inches long, are undulate on the margin, and the white flowers, whose fragrance resembles that of orange blossoms, are in terminal clusters.

For previous introduction see 76042.

99454. *PITTIOSPORUM VIRIDIFLORUM* Sims. **Cape pittosporum.**

An erect shrub up to 25 feet high, native to southern Africa. It resembles the well known *P. tobira*, differing in having smaller green-yellow flowers in dense compound clusters.

99455. *PLEIOGYNIUM SOLANDRI* (Benth.) Engl. Anacardiaceae.

A tree up to 60 feet high and often 3 feet in diameter, native to Queensland, Australia. The pinnately compound leaves are made up of 7 to 9 obovate leaflets 2 to 3 inches long, and the small inconspicuous flowers, in axillary racemes, are followed by broadly top-shaped purple drupes 1 to 2 inches across.

99456. *PODACHAENIUM EMINENS* (Lag.) Schultz Bip. Asteraceae.

A tall slightly branched shrub 9 to 15 feet high, native to Mexico and Guatemala. The broadly ovate 5- to 7-lobed leaves are roughened above and gray tomentose beneath, and the daisylike white flowers, 1 inch across, are in flat-topped clusters of about 20 or more.

99457. *PODANTHUS MITIQUI* Lindl. Asteraceae.

An evergreen shrub 3 feet high, with yellow flowers appearing in autumn. Native to Chile.

99458. *PYCNOSTACHYS URTICIFOLIA* Hook. Menthaeae.

A much-branched herbaceous perennial 5 to 7 feet high, native to tropical and southern Africa. The densely pubescent ovate leaves, 3 to 4 inches long, are deeply cut into rounded lobes, and the small bright-blue flowers are in dense spikes 2 to 3 inches long.

99459. *RHODOSPHAERA RHODANTHEMA* (F. Muell.) Engler. Anacardiaceae.

An evergreen tree up to 70 feet high, native to Australia and closely resembling sumach. The pinnately compound leaves are made up of 7 to 9 lustrous dark-green ovate leaflets 2 to 3 inches long and the small crimson or pink flowers, borne in axillary and terminal panicles, are followed by globular red-brown fruits one half inch in diameter.

99460. *SALVIA GARDNERIANA* Hort. **Menthaeae. Sage.**

A name for which a place of publication and a description have not been found.

99461. *SOLLYA HETEROPHYLLA* Lindl. Pittosporaceae. **Australian bluebell-creeper.**

An evergreen climbing shrub 2 to 6 feet high, native to Australia. The leaves, 1 to 2 inches long, vary from lanceolate to ovate, and the bright-blue flowers, one half inch long, are borne in 8- to 12-flowered cymes.

99462. *SOPHORA DAVIDII* (Franch.) Komarow. Fabaceae.

A spiny shrub up to 6 feet high, with slender spreading pubescent branchlets, native to central

99380 to 99466—Continued.

and western China. The pinnately compound leaves, 1 to 2 inches long, have 11 to 15 small elliptic leaflets, and the violet to white pea-shaped flowers, one half inch long, are in racemes of 6 to 12 on short terminal branchlets.

99463. *SUTHERLANDIA FRUTESCENS* (L.) R. Br. Fabaceae.

A leguminous shrub about 3 feet high, with finely pinnate leaves and showy scarlet flowers produced in short axillary racemes. Native to the Mediterranean countries.

For previous introduction see 91239.

99464. *TEMPLETONIA RETUSA* (Vent.) R. Br. Fabaceae. Melbourne coralbush.

A tall shrub with angular sulcate glaucous branchlets, native to Australia. The simple leathery broadly ovate leaves are 1 inch long, and the axillary red or white flowers, 1 inch long, are solitary or in clusters of 2 or 3.

99465. *TRISTANIA LAURINA* (J. E. Smith) R. Br. Myrtaceae.

A tall evergreen tree with glaucous or silky pubescent branchlets, native to Australia. The lanceolate or obovate leaves are 2 to 4 inches long, and the small yellow flowers are in short axillary cymes.

For previous introduction see 76948.

99466. *WASHINGTONIA FILAMENTOSA* (Wendl.) Kuntze. Phoeniceaceae.

California Washington palm.

Variety *microsperma*; a form with small fruits.

99467 to 99489.

From Australia. Seeds presented by R. Crowe, director, Department of Agriculture, Melbourne, Victoria. Received June 3, 1932.

A collection of seeds introduced for the use of Department forage-crop specialists.

99467. *DACTYLIS GLOMERATA* L. Poaceae. Orchard grass.

Victorian seed.

99468 to 99472. *LOLIUM LOLIACEUM* (Bory and Chaub.) Hand.-Mazz. (*L. subulatum* Vis.). Poaceae. Wimmera ryegrass.

An annual bunch grass with much-branched slender prostrate or ascending stems 2 to 3 inches long. Native to dry sandy places along the coast of southeastern Europe.

For previous introduction see 88519.

99468. An early variety (mixed sample).

99469. A late variety (mixed sample).

99470. A midseason variety (mixed sample).

99471. *Rutherglen New Strain*.

99472. Commercial seed.

99473 to 99489. *TRIFOLIUM* spp. Fabaceae.

99473 and 99474. *TRIFOLIUM REPENS* L. White clover.

99473. *Goulburn Valley Wild* white.

99474. Victorian seed; a mixed sample.

99475 to 99489. *TRIFOLIUM SUBTERRANEUM* L. Subterranean clover.

An Australian clover which appears to have value as a forage crop in the southern United States.

For previous introduction see 93258.

99467 to 99489—Continued.

99475. *Bacchus* 99482. *Myall*.

Marsh. 99483. *Nangeela*.

99476. *Daliak*. 99484. *Springhurst*.

99477. *Dwalganup*. 99485. *Tallarook*.

99478. *Goroke*. 99486. *Wangaratta*.

99479. *Hill's small strain*. 99487. (*Wangaratta Selva*) "*Nerang*."

99480. *Kybybolite*. 99488. *Wenigup*.

99481. *Macarthur*. 99489. *White seeded*.

99490 to 99499. PHASEOLUS LUNATUS L. Fabaceae. Lima bean.

From Puerto Rico. Seeds presented by T. B. McClelland, director, Agricultural Experiment Station, Mayaguez. Received June 1, 1932.

A collection of lima beans introduced for comparison with the types now grown on the Pacific coast.

99490 to 99493. Collected by the agricultural agent at Vega Baja, Puerto Rico.

99490. A small red bean slightly mottled with brown.

99491. A mixed sample of brown beans.

99492. A medium-sized red bean mottled with brown.

99493. A small dark tan bean slightly mottled with brown.

99494 to 99499. Collected by the agricultural agent at Villalba, Puerto Rico.

99494. A medium-sized white bean raised in Puerto Rico from imported seed.

Nos. 99495 to 99499 are native beans.

99495. A white bean slightly larger than a navy bean.

99496. *Blancas de Tocan*; a white bean the size and shape of the navy bean.

99497. *Veleadas*; a gray bean mottled with red.

99498. *Colorados*; a red bean faintly mottled with brown.

99499. *Recheccas*; a small round red bean with white hilum.

99500 to 99575.

From the West Indies, British Guiana, and Surinam. Plants collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the 1931-32 Allison V. Armour expedition. Received April 11, 1932.

99500. *ADIANTUM TENERUM FARLEYENSE* Bonap. Polypodiaceae. Barbados maidenhair.

No. 2867. From the Botanic Garden, Trinidad, February 16, 1932. A fern with black-stemmed fronds up to 2 feet high, native to the West Indies. The closely overlapping pinnae bear light-green wedge-shaped leaflets with the outer margin deeply cut into 10 to 15 narrow lobes.

99501. *ADIANTUM TRAPEZIFORME* L. Polypodiaceae. Diamond maidenhair.

No. 2672. A tropical American fern with bipinnate leaves 18 inches or more long. The trapezoidal leaflets, 1 to 2 inches long, are lobed and have numerous spore cases.

99502. *ALLOPLECTUS CRISTATUS* (L.) Mart. Gesneriaceae.

99500 to 99575—Continued.

No. 3752. From the island of Martinique, March 10, 1932.

For introduction of seeds and description see 99023.

99503. *ALPINIA EXALTATA* (L. f.) Roem. and Schult. Zinziberaceae.

No. 3665. *Massala* or *masusa*. Purchased in the market at Paramaribo, Surinam, March 2, 1932. The purple-brown fruits of this plant are used to flavor curry sauce and to give it its yellow color. The flavor is superior to that of turmeric.

For previous introduction see 97924.

99504. *AMHERSTIA NOBILIS* Wall. Caesalpiniaceae.

No. 2870. From the Trinidad Botanic Garden, February 16, 1932. This is considered by many to be the most beautiful of all flowering trees and one of the most difficult to propagate. The tree is native to the Malay Peninsula and was named for Lady Amherst. It requires a high moist temperature and rich loam soil.

99505 to 99510. *ANANAS SATIVUS* Schult. f. Bromeliaceae. Pineapple.

99505. No. 3755. *Black Antigua*. From the St. Lucia Experiment Garden, March 8, 1932. A very sweet, tender-fleshed variety, excellent for home use but not for shipping.

99506. No. 3756. *Sugarloaf*. From the St. Lucia Experiment Garden, March 8, 1932. A good-shaped, desirable form of excellent quality.

99507. No. 3840. *Tortola*. From the Tortola Experiment Station, March 19, 1932. This pineapple of the Red Spanish type was selected as the most vigorous on the island. The fruit is about 8 inches long by 4 or 5 inches wide and is comparable to the Red Spanish in flavor.

99508. No. 3680. From Surinam, April 4, 1932. Collected in dense undergrowth near the Kadjoe Rapids. A wild pineapple introduced for breeding purposes.

99509. No. 3673. From the experiment garden at Paramaribo, Surinam, March 2, 1932.

99510. [Received without notes.]

99511 to 99513. *ANTHURIUM* spp. Araceae.99511. *ANTHURIUM GRANDIFOLIUM* Kunth.

No. 3786. From Basse Terre, Guadeloupe, French West Indies, March 13, 1932. A very handsome enormous-leaved aroid growing as an epiphyte on the trunks of trees at the edge of the rain forest. A stemless plant with long-stemmed, elongate-cordate, acute, leathery, shining-green leaves over 2 feet long, including the petiole. The brown-green tipped spadix is nearly a foot long. Native to Venezuela.

99512. *ANTHURIUM SELLOUM* C. Koch.

No. 2751. From St. Eustatius, Netherland West Indies, January 21, 1932. A magnificent dull-green leaved species found in forest undergrowth at 1,700 feet altitude. Its enormous leaves make it an exceptional ornamental. It is short-stemmed with somewhat leathery oblong-cordate leaves, stems 1 to 2 feet long, and leaf blades up to 3 feet long. The spadix is about a foot long, and the pale-green linear-lanceolate spathe is about 5 inches long. Native to the West Indies.

99513. *ANTHURIUM* sp.

No. 3883. From the Grenada Botanic Garden, February 9, 1932. An aroid with large leaves.

99500 to 99575—Continued.

99514. *ARALIA* sp. Araliaceae.

No. 3730. From the Jardin d'Essais, Tivoli, Martinique, March 10, 1932. A very handsome plant with dark-green glossy orbicular leaves 6 inches long by 4 inches wide which are not variegated and have coarsely serrated margins.

99515. *ARENCA ENGLERI* Beccari. Phoenicaceae. Palm.

A cluster palm with no trunk, which suckers from the ground and forms clumps 10 feet across. The pinnae are 16 inches long, over 1 inch wide, and fish-tail shaped. The red fruits are less than 1 inch in diameter.

For previous introduction see 97740.

99516 to 99518. *ARTOCARPUS COMMUNIS* Forst. Moraceae. Breadfruit.

99516. No. 2576. From Nassau, New Providence Island, January 9, 1932. A seedless grapefruit from the garden of Mrs. Edward George.

99517. No. 2820. From Grenada, Windward Islands.

99518. No. 3760. From Grande Terre, Guadeloupe, March 11, 1932.

99519. *ARTOCARPUS* sp. Moraceae.

No. 3865. From the experiment station at Harringan, Tortola, British Virgin Islands, March 19, 1932. A tree with beautiful broad dark-green leaves and light-pink seedless fruits from 1 to 2 inches long and 1 inch in diameter.

99520. *BACTRIS PAVONIANA* Mart. Phoenicaceae. Palm.

No. 2648. From Blubber Valley, Antigua, Leeward Islands, January 26, 1932. A beautiful palm, 50 feet tall, with feathery leaves, more striking than those of the Royal palm. The trunks of old trees are smooth, but those of young trees are covered with bands of black spines which later fall off. The leaves are also armed with black spines. The fruit is as large as a walnut. This is apparently an almost extinct species; Blubber Valley is the only place where it is found.

For previous introduction see 97280.

99521. *BAUHINIA MEGALANDRA* Griseb. Caesalpiniaceae.

No. 3884. From the Botanic Garden, Port-of-Spain, Trinidad, February 15, 1932. A tree, native to the West Indies, with deeply obcordate leaves 5 inches long and small white flowers, either solitary or in racemose clusters, at the tips of the branchlets.

99522. *BEGONIA* sp. Begoniaceae.

No. 3890. From Haiti, March 27, 1932. A pretty dwarf species found on the perpendicular walls of the citadel at 3,000 feet altitude. The rosettes of round leaves were pressed against the lichen-covered walls and made a very attractive show.

99523. *BEGONIA* sp. Begoniaceae.

From Dominica, Leeward Islands.

99524. *BENTINCKIA NICOBARICA* (Kurz) Beccari. Phoenicaceae. Palm.

No. 2842. From Port-of-Spain, Trinidad, February 15, 1932. A handsome feather palm, forming a single tall stem 70 feet high and 9 inches in diameter at the base. When young it reminds one of a *Kentia*, but it is a far statelier palm when full grown.

For previous introduction see 97281.

99525 to 99527. *BOUGAINVILLEA* spp. Nyctaginiaaceae.

99500 to 99575—Continued.

99525. *BOUGAINVILLEA SPECTABILIS* Willd.
Great bougainvillea.

No. 2689. *Mrs. Butt.* From the Dominican Botanic Garden, January 29, 1932. One of the best seedlings grown in Dominica. The flowers are a delicate shade of brick red.

99526. *BOUGAINVILLEA* sp.

No. 2864. March 23, 1932. A new orange sport, presented by R. O. Williams, director, Trinidad Botanic Garden.

99527. *BOUGAINVILLEA* sp.

March 23, 1932. A pink bougainvillea presented by R. O. Williams, director, Trinidad Botanic Garden.

99528 and 99529. *CACTUS INTORTUS* Mill. Cactaceae.

The *turkscap*, or *turkshead*, is one of the very showy and interesting forms of cactus which bears on top of its ovoid, ribbed basal portion a densely woolly head which grows 12 or more inches high and is covered with brown bristles. This head reminds one of a Turkish fez, although it is not red. The fruits are deep pink, the size of one's little finger tip, and are borne on the top of the head.

For previous introduction see 97564.

99528. No. 3789. From Saba, Netherland West Indies, March 15, 1932.

99529. No. 3846. From Anguilla, Leeward Islands, March 16, 1932.

99530. *CACTUS MELOCACTUS* L. Cactaceae.
Common turkscap.

A globular cactus, up to 15 inches in diameter, native to the West Indies. There are 10 to 20 ribs with clusters of radical spines, and the small red flowers and fruits are borne on a prolongation of the axis which is covered with small tubercles embedded in wool.

99531. *CALATHEA* sp. Marantaceae.

No. 2882. From the Aripo Savanna, Trinidad, February 14, 1932. An attractive vigorous-looking species with attractive foliage, the under side of which looks like changeable silk.

99532 and 99533. *CARLUDOVICA SCANDENS* Co-well. Cyathaceae.

A liana with palmlike leaves, related to the panama-hat palm, which attaches itself to precipitous cliffs and tall trees by means of aerial roots. Its large dark-green leaves resemble strikingly the first leaves of many palms, being parallel veined and only once divided.

99532. No. 2643. From Mount Misery, St. Kitts, Leeward Islands, January 24, 1932, at 1,700 feet altitude.

99533. No. 2776. From Roseau Valley, Dominica, Leeward Islands, January 30, 1932.

99534. *CARYOPHYLLUS MALACCENSIS* (L.) Stokes (*Eugenia malaccensis* L.). Myrtaceae. Ohia.

No. 2890. *Malac* or *Pomerac*. Plants and seeds from the market at Port-of-Spain, Trinidad, February 17, 1932. A tree with handsome large glossy leaves and large masses of flowers 1 inch or more across, filled with hundreds of beautiful deep rose-pink or crimson stamens. The crimson pear-shaped fruits, of characteristic flavor, are much esteemed here for preserves.

For previous introduction see 89027.

99535. *PITYROGRAMMA CALOMELANOS* (L.) Link (*Gymnogramma calomelanos* Kaulf.). Poly-podiaceae. Silver fern.

No. 2866. From the Botanic Garden, Trinidad, February 16, 1932. A black-stalked fern with

99500 to 99575—Continued.

leaves 1 to 3 feet long, native to the West Indies and Brazil. The ultimate leaflets are lanceolate, with a large lobelike auricle at the base, and the under side of the leaf is covered with a fine white powder.

99536. *CISSUS SICYOIDES* L. Vitaceae.

No. 3847. From Saba, Netherland West Indies, March 16, 1932. A quite glabrous form with dull-green fleshy foliage and cymes of reddish flowers, found near the beach where the spray could reach it.

99537. *CLUSIA ROSEA* Jacq. Clusiaceae.

No. 2892. From Trinidad.

For previous introduction and description see 98826.

99538. *CLUSIA* sp. Clusiaceae.

No. 3729. From Martinique, March 10, 1932. *Mountain mangrove* or *parrot apple*. A tree with large handsome dull-green leaves and large rather showy white flowers. The fruits remind one of a garcinia, a distant relative. Like the strangler fig tree, the clusias become epiphytic and strangle their hosts.

99539. *COCCOLOBA LATIFOLIA* Lam. Polygonaceae.

No. 3669. From Paramaribo, Surinam, March 3, 1932. A tree with dark-green leaves from 1 to 2 feet in diameter, found on poor lands of the coastal plain of Surinam. While not a striking tree in some respects, the large size of the leaves makes it attractive for dooryard and park purposes.

99540. *COCCOLOBA GRANDIFOLIA* Jacq. Polygonaceae.

No. 2656. From Antigua, Leeward Islands. A giant-leaved species which, when grown in the shade, has leaves 3 feet in diameter. It is a rare species related to the seagrape.

99541. *COCCOTHRINAX BARBADENSIS* (Lodd.) Baccari. Phoenicaceae. Palm.

No. 3740. From Guadeloupe, French West Indies. A tall slender fan palm with the aspect of the *Silver* palm, but much larger. The clusters of greenish fruits which later become black are not particularly attractive. The palm seems adapted to a strongly calcareous soil.

For previous introduction see 98501.

Nos. 99542 to 99552 were presented by M. Desiré Kervégant, in charge of the Jardin d'Essais, Fort de France, Martinique, French West Indies, March 10, 1932.

99542 to 99544. *XANTHOSOMA* spp. Araceae.

99542. *XANTHOSOMA* sp.

No. 3738. Variety *Nouvelle Caladonie*; recently brought to the island from the colony of New Caledonia in the Pacific. Petiole glaucous at first; margins of petioles and wings are pink.

99543. *XANTHOSOMA* sp.

Variety *Pierre*; one of the principal foods of the island. The petiole is pinkish maroon except near the top.

99544. *XANTHOSOMA* sp.

No. 3741. The leaf blade of this *yautia* stands horizontal with apex and basal lobes turned up. The petiole is green, with a narrow or wide pinkish line on margin of sinus wing, sometimes with small pinkish blotches on upper part of wing and often with long whitish streaks on the wings.

99545 and 99546. *COLOCASIA ESCULENTA* (L.) Schott. Araceae. Dasheen.

99500 to 99575—Continued.

99545. No. 3742. *Soupe*. The petiole of the leaf is moderately shaded with maroon, and there is a maroon petiolar spot on the blade.

99546. No. 3744. *Blanc*: a white variety which is one of the finest in cultivation at Tivoli, where the collection of economic plants is grown. There is a dull maroon petiolar spot on the leaf blade, and this color extends along the basal veins and the suture. The petiole is slightly shaded with maroon.

99547 to 99550. XANTHOSOMA spp. Araceae.

99547. XANTHOSOMA sp.

No. 3745. *Cama*. The petiole is green, often with irregular purple-maroon streaks or blotches on sinus wings and with a maroon line on the margin of each wing.

99548. XANTHOSOMA sp.

No. 3747. *Bouton*. Petioles glaucous maroon on lower half.

99549. XANTHOSOMA BRASILIENSE (Desf.) Engler.

No. 3748. *Calabou*. The leaves of this plant when properly cooked make one of the most delicately flavored green vegetables known; they are somewhat acrid in the raw state.

99550. XANTHOSOMA sp.

No. 3749. *Chou Dauc*. The basal lobes of the leaf blade are pointed, and the basal veins are naked at the base. The petiole is green with a glaucous bloom, and there is a pinkish line on the sinus wing.

99551. COLOCASIA ESCULENTA (L.) Schott. Araceae. Dasheen.

No. 3750. *Baton noir*. A variety with a dark-maroon leaf petiole, which is lighter near the top, and a green blade, slightly mottled with light green.

99552. XANTHOSOMA sp. Araceae.

No. 3751. *Boucané blanc*. A variety with the basal lobes of the leaf blades rounded and the petioles green, with a pinkish line on the margin of the recurved sinus wings.

99553. COLOCASIA sp. Araceae.

No. 3784. *Madere Blanche*. From Pointe-à-Pitre, Guadeloupe, French West Indies, purchased in the market, March 12, 1932. A variety with both leaf blades and petiole plain green.

99554. DIEFFENBACHIA sp. Araceae.

No. 3785. *Madère Noir*. Purchased in the market at Pointe-à-Pitre, Guadeloupe, March 12, 1932.

99555. COLOCASIA ESCULENTA (L.) Schott. Araceae. Dasheen.

The leaf blade of this variety has a maroon petiolar spot, and the petiole is plain green.

99556. CORYPHA UTAN Lam. Phoenicaceae. Palm.

No. 2633. From the Botanic Garden, Dominica, Leeward Islands, January 29, 1932. A palm with fan-shaped leaves with spiny petioles and an erect paniculate spadix. Native to the East Indies.

99557. CROTON ELUTERIA (L.) Swartz. Euphorbiaceae.

No. 3872. From Cat Island, Bahamas, January 5, 1932. A wild tree from which the natives collect the bark and sell it for medicinal purposes.

For previous introduction see 69065.

99500 to 99575—Continued.

99558. CYDISTA sp. Bignoniaceae.

No. 2817. From the Grenada Botanic Garden, February 10, 1932. A vine with beautiful deep-pink flowers which grows to the top of large forest trees.

99559. CYNOMETRA TRINITENSIS Oliver. Caesalpiniaceae.

No. 2869. Presented by R. O. Williams, of the Botanic Garden, Trinidad, February 16, 1932. A large native leguminous tree with leathery leaflets 4 inches long by over 1 inch wide, in pairs. The young pendent growths are pure white and give the tree a most striking appearance. The small white flowers, produced abundantly, make this an ornamental dooryard tree.

99560. CYRTOSTACHYS RENDA Blume. Phoenicaceae. Palm.

No. 2843. From Port-of-Spain, Trinidad, February 15, 1932.

For previous introduction and description see 98551.

99561 and 99562. DIOSCOREA spp. Dioscoreaceae. From Martinique, March 10, 1932.

99561. DIOSCOREA ALATA L. Winged yam.

No. 3757. *Caplaou*; a yam characterized by its large size and flat wedge shape. It ripens its tubers during the winter months, but is not prized so highly as the *Portugaise*.

99562. DIOSCOREA ROTUNDATA Poir. White Guinea yam.

No. 3759. *Portugaise*; a white-fleshed yam, usually of good size and excellent quality; the lower part of the vine is glaucous and vigorous vines usually grow thorns. This is the most highly prized of the yams of Martinique, and was probably introduced into the island from Portugal in the sixteenth century.

99563. DIOSPYROS sp. Diospyraceae. Persimmon.

No. 2968. From the Botanic Garden, Georgetown, British Guiana, February 25, 1932. Seeds of a dense-growing evergreen tree 25 to 30 feet high, with glossy-green leaves 6 inches long by 2 inches wide. The small fruits have an unpleasant odor.

99564. DIOSCOREA sp. Dioscoreaceae. Yam.

No. 3758. *San Martin*; from Martinique, March 10, 1932. A large white-fleshed yam with a long neck; the quality is rather poor, but, because it ripens its tubers in the winter, it is much grown on the island.

99565. EUGENIA sp. Myrtaceae.

No. 2691. *Guaea berry* tree: from the Dominica Botanic Garden, January 29, 1932. An erect-growing tree with smooth bark and glossy, fine-leaved foliage. The black berries are used in making liqueurs. It is native to the Virgin Islands.

99566 to 99568. EUTERPE spp. Phoenicaceae. Palm.

99566 and 99567. EUTERPE OLERACEA Mart.

Manac or *Manaque*. For previous introduction and description see 98493.

99566. No. 2883. From the Avena Forest Reserve, Trinidad, February 16, 1932.

99567. No. 3871. From the island of St. Kitts, January 24, 1923, at 700 feet altitude on Mount Misery, in what remains of the original wild forest of the island.

99500 to 99575—Continued.

99568. EUTERPE SP.

No. 2711. From St. Lucia, Windward Islands. A slender undergrowth palm, 30 to 40 feet tall and 3 inches in diameter. The pinnae are long and delicate, and the rachis and petiole are dark reddish green. The inflorescence varies from nearly white to cerise; the fruit is shining black.

For previous introduction see 97285.

Nos. 99569 and 99570 were collected on Carriacou, Grenadine Islands, in March 1932.

99569. FICUS BENJAMINA COMOSA (Roxb.) Kurz. Moraceae. Fig.

No. 2874. A strikingly handsome form with brilliant lemon-yellow fruits one half inch in diameter, many of which contain no seeds.

99570. FICUS SP.

No. 2794. A medium-sized tree found on a hillside exposed to the trade winds which sweep over the island. The light-green leathery leaves, 4 to 6 inches long, have prominent midribs. The branches are covered with very decorative small figs. Each fig has red-brown patterns of spots and areoles about each spot, giving it a most charming appearance.

For previous introduction see 97845.

99571. GARCINIA SP. Clusiaceae.

No. 3766. From the Jardin d'Essais, Fort de France, Martinique, March 9, 1932. Seeds of a species native to Cochinchina which was considered to be the true mangosteen by the authorities in the Jardin d'Essais where the tree has fruited. The very large leaves are leathery and the white flowers contain numerous stamens. The fruits, judging from shells found under the tree, are about the size of a mangosteen but thick walled and pyriform in shape, and are said to be yellow when ripe and very sour.

99572 and 99573. GIGANTOCHLOA SPP. Poaceae. Bamboo.

From Paramaribo Botanic Garden, Surinam, March 4, 1932. Two of the most valuable bamboo species of the Orient, which were introduced into Surinam over 20 years ago and are now over 60 feet high.

99572. GIGANTOCHLOA ASPERA Hort.

No. 3679. A clump bamboo.

For previous introduction see 71258.

99573. GIGANTOCHLOA VERTICILLATA (Willd.) Munro.

No. 3678. *Tali* bamboo of Java. A bamboo with culms over 4 inches in diameter, which is largely grown for its useful timber.

For previous introduction see 79568.

99574. GYNERIUM SAGITTATUM (Aubl.) Beauv. Poaceae. Uva grass.

No. 3672. *Pampas* grass; from the Botanic Garden, Paramaribo, Surinam, March 4, 1932. A stout reed, often 30 feet tall, native to the West Indies and southward to Paraguay. The lanceolate leaves are 6 feet long and are sharply serrulate on the margin. The inflorescence forms a plummy panicle 3 to 5 feet long, with the main axis erect and the branches drooping. Introduced for comparison with forms already in Florida.

99575. HELICONIA SP. Musaceae.

No. 3902. From Tobago Island, February 2, 1932. Seeds of a plant with striking scarlet bracts as large as one's hand which are edged with gold make this one of the showiest flowers of the rain forest.

99576 to 99650.

From the West Indies, British Guiana, and Surinam. Plants and seeds collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the 1931-32 Allison V. Armour expedition. Received April 11, 1932.

99576. HIBISCUS SP. Malvaceae.

No. 2693. From the Dominican Botanic Garden, January 29, 1932. Plants of an attractive yellow hybrid with coral-pink center, produced by Dr. Harland of Trinidad.

99577. HIBISCUS SP. Malvaceae.

No. 2893. Plants presented by Dr. S. C. Harland, of the Cotton Research Station, St. Augustine, Trinidad, February 17, 1932. The wine-red foliage and calyxes of this plant remind one somewhat of *H. sabbarifolia*, but the form of the leaves and floral parts are entirely distinct.

99578. HYMENOCALLIS ARENICOLA A. R. Northr. Amaryllidaceae.

No. 3894. From Conception Island, Bahamas, January 5, 1932. Plants of a West Indian spider-lily with erect spreading, fleshy dark-green lance-ovate leaves over a foot long and white flowers with a filiform tube about 2 inches long, in sessile umbels of 7 to 13 flowers. Native to the Bahamas.

99579. INGA SP. Mimosaceae.

No. 3760. Plants.

99580 to 99582. IXORA SPP. Rubiaceae.

99580. IXORA LUTEA Hutchinson.

No. 2668. Plants collected in the Botanic Garden, Dominica, January 28, 1932. A glabrous shrub with sessile or subsessile leaves, oblong with rounded or cordate base and sometimes an acuminate tip. It differs from *I. coccinea* by having a laxer inflorescence and pale-yellow flowers with larger ovate-rhomboid corolla lobes.

For the introduction of seeds see 97770.

99581. IXORA SP.

No. 2881. Plant presented by Mrs. Nora C Fitt, of Port-of-Spain, Trinidad, February 15, 1932. A very attractive light-pink hybrid.

99582. IXORA SP.

No. 3869. Plants collected at the Tortola Experiment Station, March 19, 1932. An attractive form with salmon-colored flowers, otherwise with characters of *I. coccinea*.

99583. JACARANDA CAERULEA (L.) Griseb. Bignoniaceae.

No. 2561. From Nassau, New Providence Island. Plants of a tree native to the West Indies, with bipinnate leaves made up of 2 to 8 branches, each bearing 8 to 16 pairs of obliquely oblong leaflets 1 inch long. The glabrous blue flowers, 1 to 2 inches long, are borne in lax panicles.

For the introduction of seeds see 96509.

99584. LECYTHIS ZABUCAJO Aubl. Lecythidaceae. Sapucaya nut.

No. 2889. Plant presented by R. O. Williams, of the Botanic Garden, Trinidad, February 17, 1932. The sapucaya nut is native to the Amazon Valley and adjacent regions, and many people consider it even better flavored than the Brazil nut. The somewhat triangular nuts, over 2 inches long and about an inch wide, are borne in large woody urn-shaped capsules about 10 inches in diameter with close-fitting lids at the top. The tree is a slow grower and requires a long time to reach the bearing stage.

For previous introduction see 98047.

99576 to 99650—Continued.

99585. *LODOICEA SONNERATI* (Giseke) Baill. (*L. sechellarum* Labill.). Phoenicaceae.

Double coconut.

Seeds from the Georgetown Botanic Garden, British Guiana, February, 1932. A lofty palm, frequently 100 feet in height, with palmate leaves the blades of which are 6 feet across. The fruits are probably the largest known, the individual nuts sometimes weighing 50 pounds; from the time of flowering to the full maturity of the seeds is said to cover a period of 10 years, and the palm itself does not attain full growth until after a hundred years. It is native to the Seychelles.

For previous introduction see 65048.

99586. *PHRYGANOCYDIA CORYMBOSA* (Vent.) Bur. (*Macfadaya corymbosa* Vent.). Bignoniaceae.

No. 2888. Plants presented by R. O. Williams, of the Botanic Garden, Trinidad, February 16, 1932. A rampant climber which covers the trees with a mass of dark-green foliage and several times a year with masses of large funnel-shaped flowers 3 inches in diameter and 3 inches long, mauve in color with a white throat and hooded yellow-green calyx.

99587 to 99593. *MANGIFERA INDICA* L. Anacardiaceae. Mango.

Nos. 99587 to 99592 were plants presented by M. Desiré Kervegant, Jardin d'Essais, Fort-de-France, Martinique, March 10, 1932. The West Indian varieties of mango appear to be, all of them, more or less stringy and of small size, but they have the reputation of being regular bearers in the drier parts of the various islands and to flower and fruit even where the ground never really dries out.

99587. No. 3732. *Amelie*, a variety which turns red if exposed to the bright sunlight.

99588. No. 3731. *Divine*, an oblong mango without a prominent heel. A rather early yellow fruit with a red blush when ripened in sunlight; not fiberless nor one of the best but prolific.

99589. No. 3735. *Julie*, considered probably the best shipping mango of the West Indies and commonly propagated by inarching. It is a squarish wedge-shaped variety that in the sunlight colors up with a red blush with an aromatic flavor.

99590. No. 3736. *Martij*, a selected seedling from the Tivoli garden.

99591. No. 3733. *Precinette*.

99592. No. 3734. *Sans Parcel*, a selected seedling grown in the Tivoli garden.

99593. No. 3821. *T'in*. Fruit purchased in the market at Basse Terre, Gaudeloupe, March 12, 1932. A very good yellow mango of medium size and thick round form with flesh much darker than the rind and of excellent quality. Fibers are short and not objectionable, seed small and rather thin leaving a large amount of flesh.

99594. *MARTINEZIA CORALLINA* Mart. Phoenicaceae. Palm.

No. 2888. *Gri Gri* or *fish tail palm*, a plant from the Avena Forest Reserve, Trinidad, February 16, 1932. A spiny palm with pinnate leaves about 9 feet long and clusters, 2 to 3 feet long, of small white flowers, followed by bright-red fruits nearly 1 inch in diameter. The pale-brown seeds are used for necklaces by the natives of Martinique where this palm is native.

For previous introduction see 81929.

99595. *MONODORA TENUIFOLIA* Benth. Annonaceae.

No. 2871. A plant presented by R. O. Williams, Botanic Garden, Trinidad, February 16, 1932.

99576 to 99650—Continued.

A tropical African tree or large shrub which flowers when the leaves have fallen and bears masses of flowers as showy as orchids, with white petals shading to yellow at the base and with crimson markings.

For previous introduction see 72437.

99596. *MONSTERA* sp. Araceae.

No. 2753. Plants from the Dominican Botanic Garden, January 29, 1932. An ornamental vine, native to Dominica, with deep glossy green leaves with few holes. The leaves are smaller and narrower than those of *M. deliciosa*.

99597. *MONSTERA* sp. Araceae.

No. 2754. Plants from the St. Vincent Botanic Garden, February 4, 1932, and called by T. Jackson, the curator of the garden, the "native species." It differs from *M. deliciosa* in having smaller, narrower leaves with few holes. It appears to be distinct also from no. 2753 [99596].

99598 and 99599. *MONTRICHARDIA ARBORESCENS* (L.) Schott. Araceae.

A tall-growing aroid forming dense thickets on low land near the sea and sometimes rising 10 feet with its treelike woody stems.

99598. No. 2948. Plants from Tobago, Windward Islands, February 20, 1932.

99599. No. 2997. *Mokka Mokka*. Seeds from the Sophia Sugar Station, British Guiana, February 25, 1932.

99600. *MORA EXCELSA* Benth. Caesalpiniaceae.

No. 2916. Plants from the mora forest of eastern Trinidad, February 18, 1932. A large forest tree, native to Guiana. The abruptly pinnate leaves are made up of 3 to 4 pairs of blunt leaflets 5 to 8 inches long, and the small flowers, borne in cylindrical spikes 6 to 10 inches long, are followed by oblong woody pods 3 to 6 inches long, each containing one seed.

For previous introduction see 99000.

99601. *MORAEA* sp. Iridaceae.

No. 2557. Plants presented by D. Lawrence, Nassau, New Providence Island, January 2, 1932. A plant with large coarse leaves over 3 feet tall, with single delicate blue and white and yellow-tinted fragrant sessile flowers about 3 inches in diameter arising singly from the leaves.

99602 and 99603. *MUSSAENDA* spp. Rubiaceae.

Plants presented by R. O. Williams, of the Botanic Garden, Trinidad, February 17, 1932.

99602. *MUSSAENDA ERYTHROPHYLLA* Schum. and Thonn.

No. 2875. A shade-loving scandent shrub; when in flower its brilliant scarlet bracts make it a remarkable sight. These bracts are enlarged sepals; one sepal in each flower cluster enlarges until it is 3 inches long and the size of an ordinary leaf and turns deep scarlet.

For previous introduction see 76700.

99603. *MUSSAENDA LUTEOLA* Delile.

No. 2909. A dwarf species of Rubiaceae, with small yellow flowers and large white bractlike sepals which are very showy. It reminds one somewhat of our northern dogwood.

For previous introduction see 66228.

99604. *NANNORRHOPS RITCHEIANA* (Griffith) Wendl. Phoenicaceae. Mazri palm.

No. 2804. Plants collected in the Botanic Garden, Grenada, February 10, 1932. A very rare cluster palm, native to Afghanistan and western India, which appears to be as hardy as the true date palm or more so. The leaves are very glau-

99576 to 99650—Continued.

cous, both above and below, and the back of the midrib peels off into a curious pubescent string. The terminal bud diverges into two branches.

For previous introduction see 44773.

99605. NEOMAMMILLARIA sp. Cactaceae. Cactus.

Plants from Guantanamo Bay, Cuba, March 26, 1932.

99606 and 99607. NORANTEA GUIANENSIS Aubl. Maregraviaceae.

A magnificent climber covering high forest trees. Its spikelike racemes, 3 feet long, are composed of rather inconspicuous flowers, but the fleshy nectar-bearing bracts, 1 inch long, which hang from the horizontally placed spikes are scarlet. In the Tropics it blooms in February and March.

99606. No. 2884. Collected in the Aripo Savanna, Trinidad, March 22, 1932.

99607. No. 3671. From the Agricultural Experiment Station, Paramaribo, Surinam, March 3, 1932.

99608. ORIBIGNYA SPECIOSA (Mart.) Barb.-Rodr. Phoenicaceae. Babassu nut.

No. 3667. Plants presented by Dr. G. Stahel, of the Botanic Garden, Paramaribo, Surinam. The *Uavassu* palm of Brazil and the Guianas is much like the *Cohune* palm, but its fruits, 3 to 4 inches long, are much larger. An edible oil is extracted from the seeds and is now being exported to the United States.

For previous introduction see 50595.

99609. PACHIRA AQUATICA Aubl. Bombacaceae. Guiana-chestnut.

No. 3000. Seeds from the Botanic Garden at Georgetown, British Guiana, February 26, 1932. A small tree, native to tropical America, with palmately compound leaves made up of 5 to 9 obovate leaflets 8 to 12 inches long. The large mallowlike pink to purple flowers are up to 14 inches long and have bright red stamens as long as the petals, and the brown capsules are 15 inches long by 3 to 5 inches in diameter.

99610 to 99612. PANDANUS spp. Pandanaceae.

99610 and 99611. PANDANUS PACIFICUS Veitch. Pacific screwpine.

Plants of a shrub or small tree with glossy dark-green leaves which make it a most desirable ornamental or hedge plant.

99610. No. 2685. From the Dominican Botanic Garden, March 23, 1932.

99611. No. 2887. From the Trinidad Botanic Garden, February 16, 1932.

99612. PANDANUS sp. Screwpine.

No. 2686. Plants presented by F. G. Harcourt from the collection in the Dominican Botanic Garden, January 29, 1932.

99613. (Undetermined.)

No. 3827. Plants collected near the Kabel station, Surinam, March 3, 1932. A vine with large yellow flowers growing over tall forest trees at the edge of the Surinam River.

For previous introduction see 99009.

99614. PASSIFLORA MALIFORMIS L. Passifloraceae.

No. 3769. Plant presented by M. Corbin, Jardin d'Essais, Grande Terre, Guadeloupe, March 11, 1932. The *Pomme Calabas* of Guadeloupe is characterized by having two large yellow-green bracts that hang down and cover the perfectly round fruit. This fruit is said to be intensely sour even when ripe.

99576 to 99650—Continued.

99615. PENTAS LANCEOLATA (Forsk.) Schum. (*P. carnea* Benth.). Rubiaceae.

No. 2873. Plant presented by R. O. Williams, director of the Trinidad Botanic Garden, February 16, 1932. A soft-wooded shrub 2 feet high, native to tropical Africa. The ovate-lanceolate leaves are 3 to 6 inches long, and the brilliant carmine flowers are in terminal heads. The plant does not thrive in the full sunlight.

99616. PEPEROMIA sp. Piperaceae.

No. 3820. Plants from the Matuba region of Grande Terre, Guadeloupe, March 13, 1932. A delicate creeping light-green form which roots at the nodes and stands shade well. It forms a mat of light green and would be very useful for the shady side of gardens in the subtropics.

99617. PEPEROMIA sp. Piperaceae.

No. 3902. Plants collected along the trail to the citadel, Haiti, March 27, 1932. A delicate small-leaved species with characters that may attract attention to it for hanging baskets and for rock gardens in the South.

99618. PETREA VOLUBILIS L. Verbenaceae.

No. 3870. From Antigua, January 26, 1932. *Alba*; a white variety which is not so attractive as the blue-flowered variety and its flowers drop earlier.

99619. PHLODENDRON TRIPARTITUM (Jacq.) Schott. Araceae.

No. 3901. Plants collected on the trail to the citadel, between 1,000 and 1,500 feet altitude, Haiti, March 27, 1932. A handsome aroid with rather thin deep-green trilobed membranous leaves, found climbing over rocks and tree trunks along the trail.

99620. PIPER BETLE L. Piperaceae.

No. 3767. Plants collected in the Javanese kampong, Cramerweg, Surinam, March 4, 1932. An ornamental vine, historically interesting, as the leaves of this vine are chewed by the Singhalese people.

99621. PLEOMELE FRAGRANS (L.) Salisb. Liliaceae.

No. 3793. Plants from Basse Terre, Guadeloupe, March 13, 1932. A foliage plant, native to tropical Africa, with a stem up to 20 feet high. The lanceolate leaves, 2 to 3 feet long, are spreading or recurved, and the heads of small yellow flowers are followed by orange-red berries. In Guadeloupe it is used as a hedge or windbreak. The canes, about 5 feet long, are planted closely together like piling and, taking root, make a remarkably dense living hedge; when in flower these hedges are said to fill the air with their fragrance.

99622. PLUMBAGO ROSEA L. Plumbaginaceae. Rose plumbago.

No. 3674. Plants from the Georgetown Botanic Garden, British Guiana, February 27, 1932. A zigzag half-climbing glabrous shrub 3 to 6 feet high, native to southern Asia. The clasping leaves are ovate to elliptic, and the red or scarlet salverform flowers, about 1 inch long, are borne in terminal spikes.

99623 to 99625. PLUMERIA spp. Apocynaceae. Frangipani.

99623. PLUMERIA ACUTIFOLIA Poir. Mexican frangipani.

No. 3900. From Haiti. Plant presented by C. F. Wood, American vice consul, March 26, 1932. A stiff erect small tree about 25 feet high, with naked branches except for clusters of leaves at the summit of each where also appear in early spring clusters of single white star-shaped flowers of delicious fragrance. The flowers are used in the manufacture of the perfume frangipani.

For previous introduction see 50668.

99576 to 99650—Continued.

99624. PLUMERIA OBTUSA L.

No. 2570. Plants from Rum Key (black lands), Bahama Islands, January 6, 1932. A tree, native to the West Indies, up to 20 feet high, but often flowering when only 6 feet high. The oblong to obovate leaves are 4 to 8 inches long, and the salverform flowers, 2 inches across, borne in terminal cymes, are white with a yellow eye.

99625. PLUMERIA ALBA L.

No. 2766. Plants from the island of Mayero, Grenadines. A tree up to 30 feet high, native to the West Indies. The linear-lanceolate subcoriaceous leaves, 10 inches long, are glabrous above and densely white tomentose beneath. The salver-shaped flowers, 2 inches across, are white with a yellow eye and are borne in compact clusters.

99626. POTHOS sp. Araceae.

No. 2885. Plants from the Aripo Savanna, Trinidad, February 14, 1932. An ornamental vine of great beauty with glossy dark-green entire leaves without variegation.

99627. PSEUDOPHOENIX SAONAE O. F. Cook. Phoeniceae. Palm.

No. 2620. Plants from Saona Island, off the southeast coast of the Dominican Republic, January 20, 1932. A tall palm over 25 feet high, with gray-green leaves and great bunches of brilliant scarlet fruits. It suggests in habit a small Royal palm.

For previous introduction see 96457.

99628 and 99629. PTYCHORAPHIS AUGUSTA (Kurz) Beccari. Phoeniceae. Palm.

A very tall feather palm from 80 to 100 feet high and 1 foot in diameter at the base. The crown of leaves, 8 to 12 feet long, with leaflets 2 to 3 feet long, makes a most graceful object in a landscape. Native to the Nicobar Islands, India.

99628. No. 2681. Plants presented by F. G. Harcourt, director, Dominican Botanic Garden, January 29, 1932.

99629. No. 2877. Plants presented by R. O. Williams, of the Botanic Garden, Trinidad, February 16, 1932.

99630. RAVENIA SPECTABILIS (Lindl.) Engler. Rutaceae.

No. 2872. Plant presented by R. O. Williams, of the Botanic Garden, Trinidad, February 16, 1932. A glabrous shrub, native to Cuba, with opposite trifoliate leaves and deep-pink to purple-red tubular flowers 1 inch across, borne singly or in few-flowered clusters.

99631. RHYTIDOCOS AMARA (Jacq.) Beccari (*Cocos amara* Jacq.). Phoeniceae. Palm.

No. 2702. Plants from Dominica, Leeward Islands.

For previous introduction of seeds and description see 98490.

99632. SAGUERUS PINNATUS Wurm. (*Arenga saccharifera* Labill.). Phoeniceae. Sugar palm.

No. 3666. *Gomuti* or *sugar* palm of the East Indies. Plants from Paramaribo, Surinam, March 3, 1932. A handsome palm 30 to 40 feet high, with immense leaves and enormous bunches of fruit. A rich-flavored palm sugar is made from the sap which flows from the bruised fruitstalk. It also furnishes a valuable black fibrous substance, ejoo fiber, superior in quality, cheapness, and durability to that obtained from the husk of the coconut and renowned for its power to resist moisture. It is used by the natives of the

99576 to 99650—Continued.

Indian Islands for every purpose of cordage. Underneath this material is found a substance of soft gossamerlike texture which is exported to China, where it is applied as oakum in caulking the seams of ships and more generally as tinder for kindling fire.

For previous introduction see 75246.

99633. ELSOTA DIVERSIFOLIA (L.) Blake (*Securidaca diversifolia* (L.) Blake. Polygalaceae.

No. 3670. Plants presented by Dr. G. Stahel, Paramaribo, Surinam, March 3, 1932. A trailing or climbing shrub with thick shining oblong to ovate leaves 2 to 6 inches long and racemes of rose-colored flowers. It is native to Central America and the West Indies.

For previous introductions see 88133.

99634. ELSOTA VIRGATA (Swartz) Kuntze. (*Securidaca virgata* Swartz). Polygalaceae.

No. 3891. Plants collected on a hillside on the route up to the citadel back of Cape Haitien, Haiti, March 27, 1932. A vinelike shrub with slender wandlike branches 20 feet long, native to the West Indies. The scattered oval leaves are less than 1 inch long, and the numerous small pink and yellow to orange flowers are borne in long slender racemes.

99635. SMILAX sp. Smilacaceae.

No. 2687. Plant from the Dominican Botanic Garden, January 29, 1932. A rank-growing variegated ornamental bushy shrub.

99636. SOCRATEA EXORRHIZA (Mart.) Wendl. Phoeniceae. Palm.

No. 3668. Plant presented by Dr. G. Stahel, of the experiment station, Paramaribo, Surinam, March 3, 1932. A tall handsome spineless palm, native to tropical South America, bearing small yellow flowers and olive-green fruits. It has a swollen cylindrical trunk elevated on a pyramid of exposed roots, giving it a remarkable appearance. The trunk, 35 feet or more high, bears at its summit a crown of large irregularly pinnate leaves.

For previous introduction see 80773.

99637. TRADESCANTIA sp. Commelinaceae. Spiderwort.

No. 3881. Plants from the Paramaribo Experiment Station, Surinam, March 5, 1932. A very attractive purple form that was growing wild at the experiment station.

99638. TRIMEZA MARTINICENSIS (Jacq.) Herb. (*Cipura martinicensis* H.B.K.). Iridaceae.

No. 2655. Plant from Antigua, Leeward Islands.

For previous introduction and description see 98885.

99639. IXORA FRAGRANS (Hook. and Arn.) A. Gray. Rubiaceae.

No. 2692. Plants presented by F. G. Harcourt, curator, Dominican Botanic Garden, January 29, 1932. A good-sized tree that bears masses of delicately perfumed white flowers.

99640. COLOCASIA ANTIQUORUM Schott. Araceae.

No. 3737. Plants presented by M. Desiré Kervégant, of the Jardin d'Essais, Martinique, March 10, 1932. *Malanga Blanc*; a white-fleshed variety considered the best-flavored sort grown in the volcanic soil of Martinique.

99641. ALOCASIA sp. Araceae.

No. 3743. Plants presented by M. Desiré Kervégant, of the Jardin d'Essais, Martinique, March 10, 1932. A very large-leaved form which is beautifully variegated with great irregular patches of almost white tissue on the dark-green leaves.

99576 to 99650—Continued.

99642. *ZEPHYRANTHES CARDINALIS* C. H. Wright (*Atamosco cardinalis* Britton). Amaryllidaceae. Zephyrilyl.

No. 2583. Plants from Nassau, New Providence Island, January 12, 1932. A low herbaceous perennial from a truncated bulb with shining green strap-shaped leaves 6 inches long. The cardinal-red, funnel-shaped flowers, 2 to 3 inches long, are borne on cylindrical scapes which are red at the base and green above.

99643. (Undetermined.)

No. 2555a. Plants from Nassau, New Providence Island, January 1, 1932. A dwarf palm with a curious bottle-shaped trunk and large heavy pinnate leaves, said to have been introduced from India.

99644. (Undetermined.)

No. 2700. Seedling of an undetermined wild palm, native to St. Kitts Island; presented by R. E. Kelsick, superintendent, Agricultural Experiment Station, Basseterre, January 23, 1932.

99645. (Undetermined.)

No. 2947. Plant collected on Tobago Island, February 20, 1932. A large and very vigorous vine with coriaceous heart-shaped leaves on long petioles and a habit which suggests its value as a porch or pergola vine.

99646. (Undetermined.)

No. 3778. Plants collected at the Union Experiment Station, St. Lucia, Windward Islands, March 3, 1932. A vigorous vine with many aerial roots, growing over a mango tree.

99647. (Undetermined.)

No. 2695. From Dominica, January 29, 1932. Plant presented by F. G. Harcourt, who collected it in Trinidad.

99648. (Undetermined.)

99649. (Undetermined.)

99650. (Undetermined.)

99651 to 99670.

From India. Seeds presented by G. Ghose & Co., Town-end, Darjeeling. Received May 6, 1932.

99651. *ACONITUM PALMATUM* Don. Ranunculaceae. Monkshood.

A leafy-stemmed perennial, 2 to 3 feet high, native to the temperate slopes of the Himalayas in India. The deeply five-lobed reniform leaves are 4 to 6 inches across, and the rather large green-blue flowers, on long pedicels, are borne in a sparse panicle.

99652. *ANEMONE RIVULARIS* Buch.-Ham.

A silky pubescent ornamental from 1 to 3 feet high, with three-parted basal leaves up to 6 inches in diameter and white or bluish flowers, over an inch long, in compound cymes. It is found in the Himalayan region at 5,000 feet altitude.

For previous introduction see 93183.

99653. *ASTER TRICEPHALUS* C. B. Clarke. Asteraceae.

A small vigorous subtropical herbaceous perennial with reddish flower heads. Native to Sikkim, India.

For previous introduction see 73146.

99654. *BETULA UTILIS* D. Don. Betulaceae. Birch.

A tree 40 to 60 feet high with red-brown trunk and branches and bark which peels off in papery flakes. It is native to the subtropical regions of the Himalayas. The oval, coarsely toothed,

99651 to 99670—Continued.

sharp-pointed leaves, 3 inches long, are dark green above and paler beneath. In winter the orange-chocolate color of the twigs is very striking.

For previous introduction see 73149.

99655. *CATHARTIA VILLOSA* Hook. f. Papaveraceae.

A hardy annual or biennial found in the Sikkim Himalayas. The abundance of long shaggy fulvous hairs and the bright-yellow glabrous flowers give it a handsome appearance. The cordate radical leaves are long-petioled and palmately five-lobed; the stem leaves are sessile and the uppermost pinnatifid. The large nodding flowers have golden anthers and a green fleshy stigma.

For previous introduction see 49624.

99656. *CHRYSANTHEMUM ATKINSONI* C. B. Clarke. Asteraceae.

A tuberous-rooted herbaceous perennial with woody stems 6 to 12 inches high, native to the Sikkim Himalayas in India. The oblong leaves, 4 to 6 inches long, are deeply pinnately divided into linear segments, and the purple flower heads, 1 to 2 inches across, are usually solitary at the thickened top of the stem.

99657. *CIRSIMUM INVOLUCRATUM* DC. Asteraceae. Thistle.

A stout herb, 2 to 6 feet high, native to India. The deeply pinnatifid leaves, 6 to 12 inches long, are white tomentose beneath, and the yellow-white to purple flower heads are 2 to 3 inches across.

99658. *CLINTONIA ALPINA* (Royle) Kunth. Con-vallariaceae.

A low perennial native to the temperate slopes of the Himalayas in India. The lanceolate sub-radical leaves are 4 to 9 inches long, and the small white funnel-shaped flowers are borne in a loose raceme on a scape 1 to 2 feet high.

99659. *CORTIA HOOKERI* C. B. Clarke. Apiaceae.

A stemless herbaceous perennial with a rosette of 3- to 4-times pinnate leaves, the ultimate segments being linear and about one fourth inch long. The white or purplish flowers are borne in sessile umbels which are up to 8 inches long and form a dense mass over the crown of the plant. It is native to the Sikkim region in India.

For previous introduction see 93189.

99660. *CREMANTHODIUM OBLONGATUM* C. B. Clarke. Asteraceae.

A perennial herb, 4 to 8 inches high, native to the Himalayas on the border between India and Tibet. The coriaceous pinnately nerved radical leaves are reniform and 2 to 3 inches broad, the leaves on the scape are reduced to oblong bracts, and the yellow flower heads are 1 to 2 inches across. Received as *C. elongatum*, which appears to be an error for *C. oblongatum*, with which the seeds agree.

99661. *CYANANTHUS LOBATUS* Wall. Campanulaceae.

A perennial herb with more or less prostrate shoots up to 2 feet high, with ovate-oblong lobed leaves an inch long and single blue flowers, somewhat like a periwinkle, sometimes an inch across, appearing in late summer. Native to the Himalayas.

For previous introduction see 78880.

99662. *GAULTHERIA PYROLOIDES* Hook. f. and Thoms. Ericaceae.

A low evergreen shrub less than a foot high, with narrow-elliptic leaves 1 to 2 inches long and large blue-black berries. Native to the Himalayas.

For previous introduction see 78354.

99651 to 99670—Continued.

99663. *GENTIANA STYLOPHORA* C. B. Clarke.
Gentianaceae. **Gentian.**

A stout herbaceous perennial, native to the slopes of the Himalayas between 11,000 and 14,000 feet altitude in Sikkim, India. The simple stems are 3 to 6 feet high, the lower leaves are elliptic and 12 inches long, and the upper leaves are sessile, about 5 inches long. The widely funnel-shaped solitary flowers are borne on axillary peduncles up to 8 inches long.

For previous introduction see 93897.

99664. *HERACLEUM WALICHII* DC. Apiaceae.

A coarse herb, native to northern India, with stems 3 to 4 feet high, white-hirsute beneath the nodes. The lower leaves are serrate, the upper three-parted, and the small flowers, in compound umbels, are followed by flat brown thin-winged fruits one quarter inch long.

99665. *IRIS CLARKEI* Baker. Iridaceae.
Clarke iris.

A curiously local Himalayan iris, native to a circumscribed area in the Sikkim and Bhutan regions at altitudes between 6,000 and 11,000 feet, in ground that is swampy half the year and frozen hard under snow during most of the remaining months. The narrow leaves, 2 feet long, droop at the tips, the upper surface is polished and shiny, and the under side is glaucous. The solid stem is 2 feet long and bears 1 or 2 lateral heads. The falls are blue-purple blotched with white and are reflexed laterally. The upper part of the haft is marked with yellow, and the red-purple lanceolate standards are poised horizontally. The styles form the highest point of the flower; they are keeled, very convex, and 1 to 2 inches long.

For previous introduction see 92316.

99666. *JUNIPERUS RECURVA* Buch.-Ham. Pinaceae.
Himalayan juniper.

A prostrate or erect shrub, or sometimes an erect tree up to 30 feet high, native to the temperate and alpine slopes of the Himalayas in India. The fastigate branches are decurved and then ascending with pendulous branchlets.

99667. *LACTUCA DUBYAEA* C. B. Clarke. Cichoraceae.

A low herbaceous perennial, 6 to 18 inches high, native to the slopes of the central Himalayas in northern India. The ovate-hastate hispid leaves, 3 to 6 inches long, vary from simple to pinnatifid, and the nodding yellow flower heads, 1 inch across, are clothed with black glandular hairs.

99668. *LYCHNIS NIGRESCENS* Edgew. Silenaceae.
Campion.

A low herb less than a foot high, native to the alpine slopes of the Sikkim Himalayas in northern India. The simple glandular-pubescent stems are one-flowered, the leaves are lanceolate to spatulate, and the nodding purple flowers have the calyx inflated to nearly 1 inch in diameter and lined with broad purple-brown nerves.

99669. *MECONOPSIS NAPAULENSIS* DC. Papaveraceae.

A stout perennial herb, 3 to 5 feet high, with the young parts clothed in softly villous golden hairs, native to the temperate slopes of the Sikkim Himalayas in India. The sinuate-lobed or pinnatifid leaves are 10 to 16 inches long, and the golden yellow flowers, 2 to 4 inches across, are in elongated racemes.

99670. *MYRIACTIS NEPALENSIS* Less. Asteraceae.

An erect annual, 2 to 3 feet high, native to temperate slopes of the Himalayas in northern India. The lanceolate to ovate leaves, 1 to 1.5 inches long, are coarsely serrate, and the small daisylike white flower heads are in panicles.

99671 and 99672.

From India. Seeds presented by R. N. Parker, forest botanist, Forest Research Institute, New Forest, Dehra Dun. Received May 31, 1932.

99671. *EVODIA MELIAEFOLIA* (Hance) Benth.
Rutaceae.

A small much-branched tree, native to India. The pinnately compound leaves are made up of 3 to 5 pairs of obliquely lanceolate leaflets 3 to 4 inches long, and the small white flowers are in cymes 8 inches across.

99672. *MUNDULEA SUBEROSA* (Roxb.) Benth.
Fabaceae.

A stout erect shrub with thick corky bark, native to India and Ceylon. The coriaceous leaves are made up of 6 to 10 pairs of oblong-lanceolate leaflets 1 to 2 inches long, and the red pea-shaped thinly silvery flowers, 1 inch long, are in dense terminal racemes.

99673 to 99675. *CAPSICUM ANNUUM* L.
Solanaceae. **Common redpepper.**

From Spain. Seeds presented by the Granja Escuela de Capataces Agrícolas y Estaciones Especiales de Valencia, through Señor Miguel de Echegaray, agricultural attaché, Spanish Embassy, Washington, D.C. Received May 31, 1932.

A collection of the best commercial varieties of mild-flavored sweet redpeppers grown in Spain.

99673. *Dulce de Bola.*

99674. *Agridulce Temprano.*

99675. *Picante Leren.*

99676 to 99682.

From Likiang, China. Seeds presented by Dr. Joseph F. Rock. Received May 11, 1932.

Collected on the slopes of the Likiang Snow Range, Yunnan Province, in November and December 1931.

99676. *BERBERIS* sp. Berberidaceae. **Barberry.**

From Taitzutung at 8,000 feet altitude in a pine forest. An attractive shrub 1 to 2 feet high, with small leaves and globose pruinose fruits.

99677. *CRATAEGUS* sp. Malaceae. **Hawthorn.**

From the forests of Youngming at 10,000 feet altitude. A very handsome tree with brilliant red fruits.

99678. *EPHEDRA LIKIANGENSIS* Florin. Gnetaceae.
Jointfir.

A stout erect shrub, sometimes 4 feet high, with elongated rigid, thick green branches. The minute scalelike leaves are one fifth of an inch long. The fleshy ovoid fruit, nearly one half inch in diameter, is yellowish carmine. Native to Yunnan, China.

99679. *EUONYMUS* sp. Celastraceae.

From open forest on the eastern slopes of the mountains at 11,000 feet altitude. A tree 30 feet high with round spreading crown and very attractive pink fruits.

99680. *HEMEROCALLIS FORRESTII* Diels. Liliaceae.
Daylily.

A very handsome plant about 2 feet high, with a thick rootstock, narrow lanceolate leaves, and golden-yellow flowers 2 to 3 inches long borne in many-flowered corymbs. Found in limestone meadows at 11,000 feet altitude.

For previous introduction see 58135.

99681. *INCARVILLEA GRANDIFLORA* Bur. and Franch. Bignoniaceae.

A very handsome bush, 2 to 3 feet high, found among limestone rocks between 10,000 and 11,000

99676 to 99682—Continued.

feet altitude. The large leaves are pinnatisect, and the large flowers are purplish red and produced in long terminal spikes.

For previous introduction see 59418.

99682. SYRINGA sp. Oleaceae. Lilac.

Trees from 15 to 20 feet high, with rich pink flowers, found in open forests at 11,000 feet altitude.

99683 to 99701.

From India. Seeds presented by R. N. Parker, forest botanist, Forest Research Institute, New Forest, Dehra Dun. Received May 3, 1932.

99683 to 99686. ACACIA spp. Mimosaceae.

99683. ACACIA sp.

99684. ACACIA GAGEANA Craib.

A Himalayan acacia with thorny branchlets and compound leaves about 6 inches long, composed of 8 to 11 pinnae and 30 to 40 papery, narrowly oblong, closely set pinnules about 1 inch long. The small flower heads, half an inch in diameter, are in large panicles.

99685. ACACIA MODESTA Wall.

A medium-sized tree with glabrous gray branches and dark-brown polished prickles, native to the foothills of the western and central Himalayas in India. The bipinnate leaves are made up of 4 to 6 pinnae, each bearing 6 to 8 obovate leathery leaflets about one-half inch long. The small green flowers, in spikes 2 to 3 inches long, are followed by straight strap-shaped glossy drab pods 2 to 3 inches long.

99686. ACACIA PENNATA (L.) Willd.

A climbing prickly shrub up to 20 feet high, with very narrow rigid leaflets and dense panicles of yellow flower heads. Native to the central and eastern Himalayas.

For previous introduction see 68326.

99687. ACACIA SUMA (Roxb.) Kurz. (*Mimosa suma* Roxb.). Mimosaceae.

A medium-sized tree with white bark, native to India. The bipinnate leaves have 20 to 40 pinnae each bearing 60 to 100 small pale-green rigid leaflets. The small nearly white flowers are in axillary spikes 3 to 4 inches long.

For previous introduction see 59652.

99688 to 99690. ALBIZZIA spp. Mimosaceae.

99688. ALBIZZIA CHINENSIS (Osbeck) Merr. (*A. stipulata* Boiv.).

A large rapidly growing tree, native to the subtropical regions of India. It is said to have been found very satisfactory in Assam as a shade for tea. The roots do not penetrate the soil deeply, and the foliage does not make a dense shade.

For previous introduction see 83955.

99689. ALBIZZIA LUCIDA (Roxb.) Benth.

A handsome spreading leguminous tree with attractive feathery leaves; native to the East Indies.

For previous introduction see 93176.

99690. ALBIZZIA PROCERA (Roxb.) Benth.

A tall handsome tropical tree often 60 to 80 feet high, with yellowish or green-white bark, large compound leaves, and terminal panicles of yellow-white flowers. In Burma, Bengal, and southern India where this tree is native the brown heartwood is used for making agricultural implements.

For previous introduction see 94179.

99683 to 99701—Continued.

99691. BAUHINIA VARIEGATA L. Caesalpiniaceae. Buddhist bauhinia.

An Indian tree up to 20 feet high, with broadly ovate leaves, two-lobed at the top, and small clusters of large white flowers, beautifully variegated with red and yellow.

For previous introduction see 77156.

99692. BUTEA PELLITA Hook. f. Fabaceae.

An erect shrub 3 feet or less in height, with large trifoliolate leaves and yellow flowers about one-half inch long in axillary racemes. The ovate-oblong woody coriaceous pod is about 3 inches in length. Native to the Himalayas.

99693. CAESALPINIA SAPPAN L. Caesalpiniaceae. Sappan.

A shrubby leguminous tree, native to India and the Malay Archipelago, which bears showy yellow flowers. The wood yields a red dye, and the bark is used for tanning. It is said to be an excellent hedge plant and to endure rather poor dry soils.

For previous introduction see 94182.

99694. CAESALPINIA SEPIARIA Roxb. Caesalpiniaceae. Mysore thorn.

For previous introduction and description see 99401.

99695. CASSIA DIDYMOBOTRYA Fres. Caesalpiniaceae.

A shrub or small tree, 7 to 10 feet high, native to Africa. The finely divided leaves are about a foot long, and the numerous yellow flowers are in erect racemes up to a foot in length.

For previous introduction see 88109.

99696. CASSIA SURATTENSIS Burm. f. (*C. glauca* Lam.). Caesalpiniaceae.

A tropical leguminous shrub or small tree with pale-green compound leaves and clusters of pale-yellow flowers. It is native to the East Indies.

For previous introduction see 86694.

99697. ERYTHRINA STRICTA Roxb. Fabaceae. Coral tree.

A large tree with whitish prickles, native to India. The trifoliolate leaves have ovate rhomboid leaflets 4 to 6 inches long, and the coral-red flowers, 1 to 2 inches long, are borne in dense racemes 6 inches long.

99698. MIMOSA SPEGAZZINI Pirota. Mimosaceae.

A much-branched climbing shrub with recurved spines, sensitive bipinnate leaves 2 to 3 inches long, and globular heads, about 1 inch in diameter, of rose-purple flowers. It is native to Argentina.

For previous introduction see 94779.

99699. SOPHORA SECUNDFLORA (Ort.) DC. Fabaceae.

A shrub or small tree, up to 35 feet high, native to Mexico. The evergreen pinnate leaves are made up of 7 to 11 elliptic to oblong leaflets 2 inches long, and the fragrant violet-blue flowers, 1 inch long, are in racemes.

99700. SOPHORA TOMENTOSA L. Fabaceae.

A small tree, native to India and Ceylon, with slender wandlike branches and pinnate leaves made up of 15 to 19 obovate leaflets, 1 to 2 inches long, densely gray downy beneath. The yellow pea-shaped flowers, nearly an inch long, are borne in racemes 6 inches long.

99683 to 99701—Continued.

99701. *WIGANDIA KUNTHII* Choisy. Hydrophyllaceae.

A shrub or tree up to 15 feet high, native to Mexico and Central America, the stems being hispid with stinging hairs. The coarsely crenate cordate leaves, 16 inches long, are tomentose beneath, and the small blue and white bell-shaped flowers are in 1-sided cymes.

99702. *ULMUS PUMILA* L. Ulmaceae.
Chinese elm.

From Nanking, China. Seeds presented by the College of Agriculture and Forestry, University of Nanking. Received June 1, 1932.

A hardy rapid-growing Chinese elm which is cold- and drought-resistant and thrives in poor soil.

For previous introduction see 93750.

99703 to 99706.

From Cluj, Rumania. Seeds presented by Dr. Al. Borza, directeur du Jardin Botanique de l'Université de Cluj. Received May 31, 1932.

99703. *ELAEAGNUS MACROPHYLLA* Thunb. Elaeagnaceae.
Broadleaf elaeagnus.

An evergreen shrub, up to 10 feet high, with silver-white branchlets, native to Japan. The broadly ovate leaves, 2 to 5 inches long, are densely silvery scaly beneath, and the small fragrant nodding flowers, in clusters of 4 to 6, are covered outside with silvery and brown scales. The red ellipsoidal fruits are about one-half inch long and covered with silvery scales.

99704 to 99706. *RUBUS* spp. Rosaceae.

99704. *RUBUS LACINIATUS* Willd.
Cutleaf blackberry.

A blackberry, native to Europe, with angled arching stems armed with hooked prickles. The 3 to 5 pinnately lobed and incisely toothed leaflets are pubescent beneath, the light-pink flowers are in large prickly panicles, and the sweet black fruits are about one-half inch long.

99705. *RUBUS LASIOSTYLUS* Focke.
Woolly raspberry.

A wild raspberry from western China, with blue-white bristly stems, small pinnate leaves, silvery beneath, magenta flowers, and rose-colored woolly fruits which are sweet but said to be of little use for eating.

For previous introduction see 66607.

99706. *RUBUS ROSAEFOLIUS* J. E. Smith.
Roseleaf raspberry.

A raspberry, native to southeastern Asia and evergreen in the Tropics. The hairy stems are 3 to 6 feet high, the pinnately compound leaves are made up of 2 to 7 pairs of ovate sharply serrate leaflets, and the white flowers, 1 to 2 inches across, are in small clusters and are followed by erect bright-red, thimble-shaped fruits nearly 2 inches long, edible but insipid.

99707 to 99759.

From India. Seeds presented by the curator, Lloyd Botanic Garden, Darjeeling. Received May 6, 1932.

99707. *ABIES SPECTABILIS* Lambert. Pinaceae.
Himalayan fir.

A tree sometimes 150 feet high, native to the Himalayas. The dark-green leaves are arranged in two opposite series, so as to leave a V-shaped opening along the top; the individual leaves are 1 to 2 inches long. The cones, about 5 inches long, are violet purple at first, becoming brown.

For previous introduction see 73140.

99707 to 99759—Continued.

99708 to 99712. *ACER* spp. Aceraceae. **Maple.**

99708. *ACER CAMPBELLII* Hook. f. and Thoms.

A tree up to 50 feet high, native to India. The bright-green 5- to 7-lobed leaves are 4 to 7 inches across and contrast sharply with the red petioles, 1 to 3 inches long. The small green and white flowers are borne in cymes 2 to 6 inches long.

For previous introduction see 68327.

99709. *ACER CAUDATUM* Wall.

A large tree with dark-gray bark and 5-lobed, red-stemmed leaves from 2 to 5 inches long. The shiny compact moderately hard wood is white with a faint pink tinge. The maple is found in the temperate Himalayas between 7,000 and 11,000 feet altitude.

For previous introduction see 65752.

99710. *ACER HOOKERI* Miquel.

A handsome tree 40 to 50 feet high, with deeply fissured brown bark, native to the Sikkim Himalayas at altitudes between 8,000 and 10,000 feet. The oval leaves, though usually green, are sometimes copper colored. The wood is gray, with small pores and very numerous fine red medullary rays.

For previous introduction see 68328.

99711. *ACER LAEVIGATUM* Wall.

A large tree, up to 40 feet high and 3 to 4 feet in diameter, native to the temperate slopes of the Himalayas in India. The oblong to entire leaves are 2 to 6 inches long, ovate, deeply reticulated, and the panicked cymes of small white flowers appear with the leaves.

For previous introduction see 58903.

99712. *ACER THOMSONI* Miquel.

A large handsome tree with thin gray bark and very large, shallow-lobed leaves up to 10 inches long. Native to Sikkim and Bhutan, India, at about 8,000 feet altitude.

For previous introduction see 62809.

99713. *ACONITUM LURIDUM* Hook. f. and Thoms. Ranunculaceae. **Monkshood.**

A perennial herb with simple erect stems 2 to 3 feet high, native to the alpine slopes of the Himalayas in India. The palmately five-lobed leaves, 2 to 3 inches across, have coarsely crenate margins, and the dull-red flowers, borne in a simple raceme, have a long straight beak and a broad domelike dorsal prominence.

99714. *ACONITUM* sp. Ranunculaceae. **Monkshood.**

Collected at 12,000 feet altitude.

99715. *ALLIUM WALLICHIANUM* Steud. Liliaceae. **Onion.**

A tall eastern onion, native to Asia, with narrow flat leaves about 3 feet long and purple flower heads.

For previous introduction see 97583.

99716. *ANAPHALIS ROYLEANA* DC. Asteraceae.

A perennial herb, 4 to 6 inches high, slightly woody at the base, native to the alpine slopes of the Himalayas up to 15,000 feet altitude. The sessile linear to oblong leaves are about 1 inch long and woolly beneath, and the small flower heads are densely white tomentose.

99717. *ANEMONE RIVULARIS* Buch.-Ham. Ranunculaceae.

For previous introduction and description see 99652.

99707 to 99759—Continued.

99718. *ARISAEMA SPECIOSUM* (Wall.) Mart.
Araceae.

A perennial herb with an oblique creeping rootstock often 5 inches in diameter, native to the temperate slopes of the Himalayas up to 10,000 feet altitude. The single leaf has a stout green petiole marbled with brown or purple and three slightly cordate leaflets, 16 to 19 inches long, edged with red or purple. The tube of the spathe, 2 to 4 inches long, is striped with purple, and the limb, 2 to 6 inches long, is banded with white and purple. The pink spadix has a threadlike purple tip 12 to 18 inches long.

99719. *ASTER DIPLOSTEPHIOIDES* (DC.) Benth.
Asteraceae.

A perennial herb 2 to 3 feet high, native to the alpine slopes of the Indian Himalayas up to 16,000 feet altitude. The entire lanceolate leaves are 2 to 3 inches long, and the blue to pale-purple flower heads are 1 to 3 inches across and are borne singly.

99720. *ASTER HIMALAICUS* C. B. Clarke. Asteraceae.

A low perennial herb, 12 to 18 inches high, native to the Indian Himalayas up to 15,000 feet altitude. The obovate-spatulate leaves are 1 to 2 inches long, and the lilac-blue flower heads, borne singly at the tips of the stems, are 1 to 2 inches across.

For previous introduction see 47642.

99721. *ASTILBE RIVULARIS* Buch.-Ham. Saxifragaceae.

A perennial herb with tawny hairy stems, 3 to 5 feet high, native to Nepal and western China. The biternate leaves have dentate ovate leaflets 1 to 3 inches long, and the creamy white flowers with pure-white stamens are borne in spikes gathered into large panicles at the top of the stems.

For previous introduction see 73147.

99722. *BUPLEURUM CANDOLLI* Wall. Apiaceae.

A perennial herb 1 to 3 feet high, native to the Himalayas up to 12,000 feet altitude. The linear to ovate leaves, 2 to 5 inches long, are entire, and the small yellow flowers are borne in compound umbels.

99723. *CALAMAGROSTIS EMODENSIS* Griseb. Poaceae.
Grass.

A perennial grass, 3 to 5 feet high, native to northern India up to 8,000 feet altitude. The pale glaucous-green leaves, 12 to 18 inches long, are somewhat leathery, and the soft silky pale-gray nodding panicles are 6 to 10 inches long.

99724. *CALLICARPA RUBELLA* Lindl. Verbenaceae.
Beautyberry.

A shrub or small tree up to 20 feet high, native to India and China. The ovate tomentose leaves are 5 inches long, and the small pink flowers in axillary cymes are followed by purple berries. Collected at 3,000 feet altitude.

99725. *CARYOTA URENS* L. Phoeniceaeae.

Toddy palm.

A palm up to 80 feet high and 18 inches in diameter, with twice pinnately divided leaves 20 feet long by 12 feet wide. The segments are curved and drooping. It is native to the Malay Archipelago.

For previous introduction see 91777.

99726. *CINNAMOMUM IMPRESSINERVIUM* Meisn.
Lauraceae.

An evergreen shrub or small tree with slender branches and silky branchlets, native to the Himalayas up to 6,000 feet altitude. The elliptic-lanceolate leaves, 3 to 5 inches long, have deeply impressed nerves, and the inconspicuous flowers are followed by dark-brown globular fruits less than one-half inch in diameter.

99707 to 99759—Continued.

99727. *CLEMATIS GREWIAEFLORA* DC. Ranunculaceae.

A woody climbing vine with densely tomentose, simply pinnate leaves, native to India. The 3 to 5 broadly cordate leaflets have serrate margins, and the tubular-campanulate tawny yellow flowers are 1 to 2 inches long.

99728. *CLERODENDRUM COLEBROOKIANUM* Walp.
Verbenaceae.

A low shrub, 4 to 8 feet high, with rose-purple or white flowers about an inch long and small blue fruits less than an inch in diameter. It is native to Sikkim and Assam, India, at rather low altitudes and will therefore probably not endure much cold.

For previous introduction see 61600.

99729. *CORTIA HOOKERI* C. B. Clarke. Apiaceae.

For previous introduction and description see 99659.

99730. *CURCULIGO CAPITULATA* (Lour.) Kuntze
(*C. recurvata* Ait.). Amaryllidaceae.

A stemless tuberous-rooted perennial, native to tropical Asia. The lanceolate plaited leaves, 1 to 3 feet long, are recurved, and the star-shaped drooping yellow flowers, about 1 inch across, are borne in dense heads on recurved stalks 3 inches long, covered with soft brown hairs.

99731. *HIEROCHLOE FLEXUOSA* Hook. f. Poaceae.
Grass.

An erect very slender sweet-scented perennial grass, 2 to 3 feet high, native to the Himalayas in Sikkim, India. The leaves are narrowly linear and the lax panicles, 2 to 3 inches long and broad, are made up of much-compressed brown spikelets.

99732. *HYPERICUM OBLONGIFOLIUM* Choisy (*H. cernuum* Roxb.). Hypericaceae. St. Johnswort.

A shrub 3 to 6 feet high, native to the temperate slopes of the Himalayas in India. The sessile ovate-lanceolate leaves are 1 to 3 inches long, and the nodding flowers, 2 inches across, are white on opening, turning light yellow with age.

99733. *IMPATIENS URTICIFOLIA* Wall. Impatientaceae.

A slender herb, 2 to 3 feet high, native to the temperate slopes of the Himalayas up to 12,000 feet altitude in Sikkim, India. The alternate membranous leaves, 4 to 6 inches long, are elliptic-ovate with a long point and have crenate margins. The flowers, nearly an inch in diameter, are yellow with white to purple streaks and are borne in small axillary clusters on slender pedicels.

99734. *INDIGOFERA DOSUA* Buch.-Ham. Fabaceae.
Indigo.

A low shrub with woody branches, covered with short gray or brownish pubescence. The leaves, 1 to 3 inches long, bear leaflets less than an inch long, which are dull green above and glaucous below. The racemes of bright-red flowers are 1 to 3 inches long with lanceolate-cuspidate silky bracts.

For previous introduction see 86679.

99735. *IRIS CLARKEI* Baker. Iridaceae.

Clarke iris.

For previous introduction and description see 99665.

99736. *JUNIPERUS RECURVA* Buch.-Ham. Pinaceae.
Himalayan juniper.

For previous introduction and description see 99666.

99707 to 99759—Continued.

99737. *LACTUCA LESSERTIANA* C. B. Clarke. *Cichoriaceae*.

A perennial herb, native to the temperate alpine slopes of the Himalayas up to 16,000 feet altitude in India. The stems, less than a foot high, are simple and slender or stout with many lateral branches. The membranous leaves, 1 to 8 inches long, vary from nearly entire to deeply pinnatifid, and the blue flower heads, nearly 1 inch long, are in 12- to 24-flowered panicles.

99738. *LOBELIA ROSEA* Wall. *Campanulaceae*.

A stout herb up to 12 feet high, with horizontal branches drooping at the tips, native to the sub-tropical slopes of the Himalayas in India. The narrowly lanceolate leaves, 6 inches long, are velvety above, and the rosy white flowers, nearly an inch long, are in crowded racemes.

99739. *LONICERA GLABRATA* Wall. *Caprifoliaceae*. **Honeysuckle.**

A shrubby climber, native to the temperate Himalayas up to 8,000 feet altitude. The cordate-oblong leathery leaves are 3 to 5 inches long, and the yellow flowers, an inch long, are tinged with purple outside and are followed by black fruits.

99740. *LONICERA TOMENTELLA* Hook. f. and Thoms. *Caprifoliaceae*. **Honeysuckle.**

A white-flowered honeysuckle, native to the interior valleys of the mountain region of north-eastern India, where it forms a shrub 10 to 12 feet high. The leaves are dark dull green, and the paired flowers hang from the axils of the leaves. The blue-black berries are about the size of peas.

For previous introduction see 47709.

99741 to 99743. *MEIBOMIA* spp. *Fabaceae*.

99741. *MEIBOMIA GYROIDES* (DC.) Kuntze (*Desmodium gyroides* DC.).

A shrubby leguminous plant 8 to 10 feet high, native to the warmer parts of the central and eastern Himalayas. It has pubescent leaves and terminal racemes of red-purple flowers.

For previous introduction see 77297.

99742. *MEIBOMIA HETEROCARPA* (L.) Kuntze (*Desmodium polycarpum* DC.).

An erect or suberect undershrub found throughout the Himalayas and Burma. All of the bushy species of this genus are said to contain good fibers, used in some cases for paper making.

For previous introduction see 94078.

99743. *MEIBOMIA TILIAEFOLIA* (D. Don.) Kuntze (*Desmodium tiliaefolium* Don.).

A hardy and more or less ornamental deciduous shrub with slender terete branches, thick green trifoliate leaves about 4 inches long, and red flowers in lax racemes often a foot long. The bark yields an excellent fiber which is used in rope making, the leaves are good fodder, and the roots are used medicinally as a tonic and diuretic. It is native to the Himalayas from 3,000 to 9,000 feet altitude.

For previous introduction see 93194.

99744. *OPHIOPOGON INTERMEDIUS* D. Don. *Liliaceae*.

A hardy perennial, indigenous to Ceylon, with grasslike leaves and white flowers. It reaches a height of about 1 foot and is suited to moist shady places.

For previous introduction see 91823.

99707 to 99759—Continued.

99745. *OXYSPORA PANICULATA* (D. Don.) DC. *Melastomaceae*.

A large spreading Himalayan shrub with opposite ovate leaves 5 inches long and large loose panicles of rose-purple flowers.

For previous introduction see 76907.

99746. *PAEDERIA FOETIDA* L. *Rubiaceae*

A slender attractive-looking climbing vine with glabrous ovate or lanceolate leaves on long petioles. The small pink flowers are in branching cymes. Native to India and the Malay Archipelago. The leaves or any part of the plant when bruised emit a most offensive odor.

For previous introduction see 41876.

99747. *PARNASSIA NUBICOLA* Wall. *Saxifragaceae*.

A perennial herb, 4 to 19 inches high, native to temperate and alpine slopes of the Himalayas up to 12,000 feet altitude. The 1 to 3 leaves are cordate-oblong, and the white flowers, an inch across, are borne singly.

99748. *PHOENIX RUPICOLA* T. Anders. *Phoenicaceae*. **Cliff date palm.**

A Himalayan palm with a solitary slender naked stem 15 to 20 feet high, bright-green leaves 10 feet long, and shining yellow oblong fruits.

For previous introduction see 76412.

99749. *PHYLLANTHUS EMBLICA* L. *Euphorbiaceae*. **Nelli.**

A small tree with slender branches bearing numerous linear 2-ranked leaves about one half inch long. The globose fruits are used as a purgative when raw or are cooked to make an acid sauce. Native to tropical Asia.

For previous introduction see 92925.

99750. *PHYLLANTHUS WIGHTIANUS* Muell. Arg. *Euphorbiaceae*.

A shrub with long spreading upcurved branches, native to India. The membranous oblique leaves are pale green above and glaucous beneath, and the solitary inconspicuous flowers are followed by small globular capsules covered with rusty bristles.

99751. *PRIMULA* sp. *Primulaceae*. **Primrose.**

Collected at 6,000 feet altitude.

99752. *SAXIFRAGA PURPURASCENS* Hook. f. and Thoms. *Saxifragaceae*. **Saxifrage.**

A beautiful herbaceous rock plant, native to the temperate regions of the Sikkim Himalayas between 10,000 and 14,000 feet altitude. The bright glossy green leaves are elegantly margined with red, and the scape and inflorescence are deep bright vinous red-purple.

For previous introduction see 63662.

99753. *SPIRAEA MICRANTHA* Hook. f. *Rosaceae*.

A very attractive shrub of rather lax habit found in the eastern temperate Himalayas between 6,000 and 10,000 feet altitude. The narrowly ovate, doubly toothed leaves are sometimes 7 inches long, and the small pale-pink flowers are borne in very long spreading panicles.

For previous introduction see 55705.

99754. *STYRAX HOOKERI* C. B. Clarke. *Styracaceae*. **Snowbell.**

A tree often 40 feet high, native to Sikkim and Bhutan, between 6,000 and 7,000 feet altitude. The white flowers, 1 inch long, are tomentose

99707 to 99759—Continued.

outside and the young branches are stellate-pubescent. The wood is white, close grained, and moderately hard.

For previous introduction see 86686.

99755. *SWERTIA CHIRAYITA* (Roxb.) Karst. (*S. chirata* Buch.-Ham.). Gentianaceae.

A tall herbaceous plant, native to India, with stems 2 to 5 feet high and subsessile leaves 2 to 4 inches long. The lurid green-yellow flowers, in large panicles, are tubular, with purple-veined lobes one-fourth inch long; they have two glandular depressions at the base of each lobe, with a fringe of long white or pink hairs at the summit.

99756. *SYMFLOCOS SUMUNTIA* Buch.-Ham. Sympllocaceae. Sweetleaf.

A small evergreen tree, native to the lower slopes of the Himalayas up to 7,000 feet altitude. The leathery oblong-lanceolate leaves, with crenate margins, are 3 to 5 inches long, and the small white flowers, borne in racemes 1 to 2 inches long, are followed by ovoid-cylindrical fruits less than one-half inch long.

99757. *THUNBERGIA LUTEA* T. Anders. Acanthaceae.

A slender perennial vine, native to the lower Himalayas up to 7,000 feet altitude. The ovate to lanceolate leaves are 6 inches long with toothed margins, and the funnel-shaped yellow flowers, 1 to 2 inches across, are in small axillary clusters.

99758. *TRACHYCARPUS MARTIANUS* (Wall.) Wendl. Phoenicaceae. Martius palm.

A slender-trunked fan-leaved palm from the temperate regions of the Himalayas where it grows to a height of 20 to 50 feet. The unarmed trunk bears at its summit a crown of rigid leathery roundish leaves 4 to 5 feet in diameter which are cut about halfway down into narrow two-lobed segments. The yellow flowers followed by blue fruits are borne on a nodding spadix about a foot in length.

For previous introduction see 55706.

99759. *XOLISMA OVALIFOLIA* (Wall.) Rehder. Ericaceae.

A shrub or small tree with ovate or somewhat oblong leathery leaves 3 to 6 inches long and racemes of white or bluish or sometimes flesh-colored flowers. Because of a poisonous principle, the young leaves and buds are useful as an insecticide.

For previous introduction see 68341.

99760 to 99771. *MANGIFERA INDICA* L. Anacardiaceae. Mango.

From Puerto Rico. Bud sticks presented by Edmund H. Twest, specialist in fruits, Insular Experiment Station, Rio Piedras. Received June 7, 1932.

A collection of mangoes introduced for the use of Department specialists working with fruit breeding.

99760. *Barsha*. No. 407.

99761. *Bombay Yellow*. No. 402.

99762. *Climoise*. No. 3320.

99763. *Divine*. No. 1822.

99764. *Emiria*. No. 205.

99765. *Kachmahua*. No. 3317.

99766. *Kistapal*. No. 101.

99767. *Martinique*. No. 1511.

99768. *Muller*. No. 2412.

99769. *Nucka*. No. 3418.

99770. *Singapur*. No. 1215.

99771. *Surka*. No. 3117.

99772 to 99789.

From Peru, South America. Seeds collected by H. G. MacMillan and C. O. Erlanson, Bureau of Plant Industry. Received May 19, 1932.

99772. *ASCLEPIAS CURASSAVICA* L. Asclepiadaceae. Bloodflower.

No. 216. From Rio Colorado, near Merced, April 28, 1932. An ornamental herb 3 feet high with red and yellow flowers, found on a wooded river bank at 2,800 feet altitude.

For previous introduction see 50678.

99773. *CANNA* sp. Cannaceae.

No. 203. From Rio Colorado, near Merced, April 16, 1932, at 2,800 feet altitude. A rare ornamental herb, 3 feet high, with red flowers. Found in black loam.

99774. *CAPSICUM ANNUM L.* Solanaceae. Common redpepper.

No. 208. *Aji*. From Rio Colorado, near Merced, April 16, 1932. A locally grown redpepper found in open black soil at 2,800 feet altitude. The almost round purple fruits, over an inch in diameter, are used by the Chuncho Indians.

99775. *CAPSICUM ANNUM L.* Solanaceae. Common redpepper.

No. 232. *Aji*. From the market at Tarma, April 23, 1932. A mixed sample of cultivated redpeppers grown at 10,000 feet altitude. The sample varied both as to color and shape.

99776. *CHAMAEDOREA* sp. Phoenicaceae. Palm.

No. 200. *Shia-Shia*. From Rio Colorado, near Merced, in the shade of the forest at 2,800 feet altitude, April 16, 1932. A liane with yellow flowers which are followed by dark-blue berries. The male flowers are very fragrant and are used as a perfume for clothing in the same manner as lavender is used.

99777. *CROTALARIA* sp. Fabaceae.

No. 215. From a wooded slope at 2,800 feet altitude in Rio Colorado, near Merced. An ornamental shrub 3 feet high.

99778. *CYPHOMANDRA BETACEA* (Cav.) Sendt. Solanaceae. Tree-tomato.

No. 263. *Tomaté*. Purchased in the market at Huancayo, April 24, 1932, but grown at 10,000 feet altitude. An ellipsoid, pointed, thick-skinned, maroon-colored fruit.

99779. *ERYTHROXYLON COCA* Lam. Erythroxylaceae. Cocaine-tree.

No. 197. *Coca*. From Rio Colorado, near Merced, at 2,800 feet altitude, April 16, 1932. A tropical shrub, native to Peru, 5 to 6 feet high, with rusty brown slender branches bearing clusters of obovate leaves at their tips. The yellowish flowers are borne in clusters of 3 to 5 in the axils of small scales which line the branchlets. It is grown commercially on a large scale throughout the warmer parts of South America, also in Java and Ceylon, for the sake of cocaine, which is extracted from the dried leaves.

For previous introduction see 78509.

99780. *INDIGOFERA SUFFRUTICOSA* Mill. Fabaceae. Indigo.

No. 199. *Añil*. From Rio Colorado, near Merced, April 16, 1932, at 2,800 feet altitude. A shrub 10 feet high growing in black loam and said to have escaped from cultivation.

For previous introduction see 98996.

99781. *LYCOPERSICON ESCULENTUM* Mill. Solanaceae. Tomato.

No. 209. *Tomaté*. From Rio Colorado, near Merced, April 16, 1932. A small red round tomato about an inch in diameter, cultivated by the Chuncho Indians at 2,800 feet altitude.

99772 to 99789—Continued.

99782. *LYCOPERSICON ESCULENTUM* Mill. Solanaceae. Tomato.

No. 233. *Tomaté*. Purchased in the market at Tarma, April 23, 1932. A small round red local variety, cultivated by the Indians at 10,000 feet altitude.

99783. *PASSIFLORA MOLLISSIMA* (H. B. K.) Bailey. Passifloraceae. Softleaf passionflower.

No. 264. *Tumbo*. Purchased in the market at Huancayo, Peru, April 24, 1932, but said to have been grown at 10,800 feet altitude. An edible variety with yellow elliptical pointed fruits.

99784. *ROLLINIA* sp. Annonaceae.

No. 206. From Rio Colorado, near Merced, in a tropical rain forest at 2,800 feet altitude, April 16, 1932. A native tree 40 to 50 feet high, with fruits 6 inches in diameter.

99785. *SOLANUM* sp. Solanaceae.

No. 196. Between Lima and Oroya, at 7,800 feet altitude, April 12, 1932. An herb 3 feet high, growing in open sandy soil. The lavender flowers are followed by berries on reflected peduncles.

99786. *COSMOS SULPHEREUS* Cav. Asteraceae. Yellow cosmos.

No. 207. From Rio Colorado, near Merced, in a tropical rain forest, at 2,800 feet altitude, April 16, 1932. An herb 3 feet high with showy yellow flowers.

For previous introduction see 51925.

99787. *ALONSOA ACUTIFOLIA* Ruiz and Pav. Scrophulariaceae.

No. 217. *Shohompay*. From the Hacienda Makko, near Tarma, at 11,500 feet altitude, in open alpine meadow, April 20, 1932. An ornamental herb, 2 feet high, with orange flowers; common at this altitude.

99788. (Undetermined.)

No. 214. From the Hacienda Makko, near Tarma, at 12,000 feet altitude, in alpine meadow, April 19, 1932. An herb 3 feet high, covered with bristles, which irritate the skin, as does the nettle. The drooping yellow flowers are very ornamental.

99789. (Undetermined.)

No. 220. From Rio Colorado, near Merced, on a wooded shady slope at 2,800 feet altitude, April 19, 1932. An ornamental herb with ultramarine blue berries.

99790 to 99792. *PHASEOLUS LUNATUS* L. Fabaceae. Lima bean.

From Cuba. Seeds presented by Mrs. F. S. Earle, Herradura. Received April 19, 1932.

Introduced for comparison with the varieties now being grown on the Pacific coast.

99790. A perennial bean with small white seeds.

99791. The commercial bean of this region.

99792. A locally grown speckled perennial lima bean.

99793 to 99801. *MANGIFERA INDICA* L. Anacardiaceae. Mango.

From Puerto Rico. Bud sticks presented by Edmund H. Twight, specialist in fruits, Insular Experiment Station, Rio Piedras. Received June 8, 1932.

A collection of mangoes introduced for the use of Department specialists working with fruit breeding. Except *Colombo Kidney*, all of the following are local selections. Most of them came from the island of Vieques and were probably originally from Martinique.

99793 to 99801—Continued.

99793. *Bayamon*. 99798. *Playa Grande*.

99794. *Colombo Kidney*. 99799. *Reine Amelie*.

99795. *Del Valle*. 99800. *Sorce*, No. 2.

99796. *Julie*. 99801. *Teté Nene*.

99797. *Lequillo*.

99802 to 99805.

From the Society Islands. Plants presented by Harrison W. Smith, Papeari, Tahiti. Received June 9, 1932.

99802 to 99804. *MANGIFERA INDICA* L. Anacardiaceae. Mango.

99802. *Brander mango*. A dwarf fruit with very small seed. This variety was previously called the *Rougier mango*.

99803. *Mission mango*. A beautiful, very sweet fruit. Its name is due to the fact that one of the Brothers at the mission has chiefly propagated it, and perhaps the original tree is in the mission grounds.

99804. *Tuehau mango*. This is considered, by some, the best and richest flavored mango of the islands, and it is said to come true from seed.

99805. *PERSEA AMERICANA* Mill. Lauraceae. Avocado.

Arue avocado.

99806. *PHASEOLUS LUNATUS* L. Fabaceae. Lima bean.

From Cuba. Seeds presented by Mrs. F. S. Earle, Herradura. Received June 6, 1932.

A white lima bean, grown in Cuba for export. Introduced for comparison with the varieties now being grown on the Pacific coast.

99807 and 99808.

From British Guiana. Seeds presented by Mr. Martyn, botanist, Georgetown Botanic Garden, through David Fairchild, agricultural explorer, Bureau of Plant Industry. Received June 6, 1932.

99807. *BRADBURYA PLUMIERI* (Turp.) Kuntze (*Centrosema plumieri* Turp.). Fabaceae.

A tropical ornamental vine, native to Brazil, with white and red flowers. It is of value as green manure.

For previous introduction see 91467.

99809. *NAUCLEA ESCULENTA* (Afzel.) Merr. (*Sarcoccephalus esculentus* Afzel.). Rubiaceae.

A scandent shrub or a tree up to 25 feet high, native to tropical Africa. The sharp-pointed elliptical leaves are 2 to 8 inches long, and the white, yellowish, or pale-pink fragrant flowers are in dense heads. The fruiting head, 2 to 4 inches in diameter, is deep red with a brown granulated surface and a solid edible core which occupies about a quarter of the diameter.

99809. *MEIBOMIA* sp. Fabaceae.

From the Seychelles Islands. Seeds presented by P. R. Dupont, director, Department of Agriculture. Received June 6, 1932.

Introduced for the use of Department forage-crop specialists.

99810 to 99818. *PHASEOLUS LUNATUS* L. Fabaceae. Lima bean.

From the Canal Zone. Seeds presented by J. E. Higgins, director, Canal Zone Experiment Gardens, Summit. Received June 6, 1932.

A collection of lima-bean types grown in Panama, introduced for comparison with the types now being grown on the Pacific coast.

99810 to 99818—Continued.

99810. A small red bean blotched with light gray.
 99811. A gray bean three-fourths inch long, heavily blotched with black around the edge.
 99812. A small bean mottled tan gray and black.
 99813. A medium-sized gray and light-brown bean, slightly mottled with black.
 99814. A small light-gray bean with a black line around the hilum.
 99815. A red bean blotched with light gray, very similar to 99810, but smaller.
 99816. A medium-sized gray and tan bean slightly mottled with black.
 99817. A medium-sized gray and black bean slightly mottled with brown.
 99818. A gray bean, three-fourths inch long, with a black blotch around the hilum and marked with black and brown around the edge.

99819 to 99822.

From Africa. Seeds presented by D. C. Edwards, Scott Agricultural Laboratories, Department of Agriculture, Nairobi, Kenya. Received June 6, 1932.

Introduced for the use of Department forage-crop specialists.

99819. *CROTALARIA AGATIFLORA* Schweinf. f. Fabaceae.

For previous introduction see 66039.

99820. *CROTALARIA DILLONIANA* Baker. Fabaceae.

For previous introduction see 64535.

99821. *LUPINUS MUTABILIS* Sweet. Fabaceae. South American lupine.

For previous introduction see 88274.

99822. *LUPINUS LUTEUS* L. Fabaceae. European yellow lupine.

For previous introduction see 88271.

99823 to 100103.

From China. Seeds collected by the sixth Forrest expedition, 1930-32, to southwestern China and presented by Maj. Lionel de Rothschild, London, England. Received June 9, 1932.

99823. *ABIES GEORGEI* Hort. Pinaceae. Fir.

A name for which a place of publication and a description have not been found.

99824 to 99827. *ACER* spp. Aceraceae. Maple.

99824. *ACER FRANCHETI* Pax.

F. 30491. A small tree about 15 feet high, native to central China. The light-green leaves, 3 to 4 inches long, have three broadly ovate remotely toothed lobes, and the small flowers, in short pubescent racemes appearing with the leaves, are followed by winged fruits, spreading at nearly right angles and having hairy nutlets.

99825. *ACER LAXIFLORUM* Pax.

F. 30462. Received as *A. jorrestii*, which is now considered the same as *A. laxiflorum*.

99826. *ACER LAXIFLORUM* Pax.

F. 30631. A tree up to 50 feet high, with cordate-oblong leaves 4 inches long, having 2 to 4 short lobes near the base and serrate margins. The yellowish flowers are borne in slender pendulous racemes and are followed by fruits spreading at right angles. It is native to western China.

For previous introduction see 93373.

99823 to 100103—Continued.

99827. *ACER* sp.

F. 30462.

99828. *ALLIUM* sp. Liliaceae. Onion.

F. 30944. Related to *A. prattii*.

99829 to 99834. *ANDROSACE* spp. Primulaceae. Rock jasmine.

99829. *ANDROSACE DELAVAYI* Franch.

G. F. 55. A caespitose perennial native to Yunnan, where it grows at an altitude of 13,000 feet near the zone of perpetual snow. The leaves are broadly cuneate-obovate, about one eighth of an inch long, and the white or rosy flowers are one third of an inch across.

99830 to 99833. *ANDROSACE SPINULIFERA* (Franch.) Kunth.

A low, densely hairy perennial herb with primrose-like flowers; native to China. The linear-obovate leaves, 3 inches long, are in rosettes, and the numerous purple flowers are in dense clusters on scapes 10 inches high.

99830. G. F. 40. 99832. G. F. 30323.

99831. G. F. 385. 99833. G. F. 30329.

99834. *ANDROSACE* sp.

G. F. 44. Related to *A. chamaejasme*.

99835 to 99840. *ASTER* spp. Asteraceae.

99835. *ASTER STATICEFOLIUS* Franch.

F. 30625. An aster from high altitudes in southwestern China. The stems, about a foot long, are often decumbent, and the oblong-spatulate leaves are more or less basal. The flower heads have yellow disk flowers and violet-blue rays.

99836. *ASTER* sp.

F. 30627.

99837. *ASTER* sp.

F. 30636.

99838. *ASTER* sp.

F. 30637.

99839. *ASTER* sp.

F. 30644.

99840. *ASTER* sp.

F. 30659.

99841. *ASTILBE RUBRA* Hook. f. and Thoms. Saxifragaceae.

F. 30438. A perennial herb 4 to 6 feet high, native to India, with stems and leaves covered with long fulvous hairs. The biternate leaves have obliquely cordate-ovate leaflets 1 to 3 inches long, and the small rose-red flowers are borne in robust panicles.

99842. *CANNA INDICA* L. Cannaceae.

F. 30949.

99843. *CASSIOPE FASTIGIATA* (Wall.) D. Don. Ericaceae.

F. 30488. A beautiful free-flowering alpine shrub about 9 inches high, found in shady situations in moist, peaty, well-drained soil between 11,000 and 13,000 feet altitude. The tiny leaves are imbricated in four rows, giving the stem a four-sided appearance, and have white membranous ciliated margins. The solitary, white, bell-shaped flowers have the corolla segments recurved, showing the pink center and curious awned stamens like those of the arbutus.

For previous introduction see 49623.

99823 to 100103—Continued.

99544. *CASSIOPE SELAGINOIDES* Hook. f. and Thoms. Ericaceae.

F. 30651. A species which closely resembles *C. fastigiata*, but is readily distinguished by the much more slender stems and the longer pedicels. It is native to the alpine slopes of the Himalayas in Sikkim, India, between 10,000 and 13,000 feet altitude.

99845. *CLETHRA DELAVAYI* Franch. Clethraceae.

F. 30518. A Chinese shrub or small tree up to 50 feet high with red branchlets and oblanceolate leaves which are pubescent beneath. The fragrant white flowers differ from those of the American summersweet (*Clethra alnifolia*) in having red calyxes and in being in solitary axillary racemes, while the summersweet has the racemes grouped together to form a panicle.

For previous introduction see 78372.

99846. *CODONOPSIS MACROCALYX* Diels. Campanulaceae.

F. 30943. A twining shrub, 1 to 2 feet high, with membranous, ovate, irregularly crenate leaves 1 to 2 inches long. The green flowers, tinged with maroon at the base, are less than an inch long. Native to the high mountains of southwestern China.

99847. *CODONOPSIS TUBULOSA* Kom. Campanulaceae.

F. 30505. A twining perennial, native to grassy meadows in the mountains of Yunnan at 7,000 feet altitude. The nearly sessile leaves are ovate-lanceolate, and the small tubular white flowers are solitary on very short peduncles.

99848. *COLURIA ELEGANS* Cardot. Rosaceae.

F. 30654. An alpine perennial, with a basal rosette of finely cut pinnate leaves 3 to 4 inches long and yellow flowers, nearly an inch across, on stems up to 8 inches high. Native to alpine meadows in Yunnan.

99849. *CORNUS CONTROVERSA* Hemsl. Cornaceae.
Giant dogwood.

F. 30457. This Chinese dogwood is one of the most striking of the genus; in its native home it sometimes becomes a tree 60 feet in height with a trunk 7 feet in girth. The numerous long branches extend at right angles to the trunk, with the lowest sometimes touching the ground. The white or slightly yellow flowers are in flat clusters 6 or 7 inches in diameter, appearing from late May to early June. As fast as they ripen, the black shining fruits which follow are eaten by birds.

For previous introduction see 90789.

99850. *COTONEASTER* sp. Malaceae.

F. 30634. Closely related to *C. acuminata*.

99851 to 99855. *CREMANTHODIUM* spp. Asteraceae.

99851. *CREMANTHODIUM CAMPANULATUM* (Franch.) Diels.

F. 30450. A low hairy perennial alpine with thick long-stemmed reniform basal leaves somewhat 7- to 10-lobed and small linear stem leaves. The tubular yellow flowers are in nodding heads. Native to Yunnan.

99852 to 99854. *CREMANTHODIUM RHODOCEPHALUM* Diels.

An alpine composite, 3 to 9 inches tall, with long-stemmed, rounded-reniform leaves, purple beneath, and gray-pink ray florets. Native to limestone cliffs in Yunnan.

99852. F. 30448.

99854. F. 30523.

99853. F. 30511.

99855. *CREMANTHODIUM* sp.

F. 30507.

99823 to 100103—Continued.

99856. *CYANANTHUS LONGIFLORUS* Franch. Campanulaceae.

F. 30947. A many-stemmed perennial form about 8 inches high, having lanceolate entire leaves with revolute margins, and sky-blue tubular flowers nearly 2 inches long. Native to Yunnan.

99857. *DIAPENSIA PURPUREA* Diels. Diapensiaceae.

F. 30497. A low caespitose bushy evergreen shrub with small leathery glabrous oblong-spatulate leaves less than an inch long and small rose-purple flowers. Native to western China.

Forma *albida*; a white-flowered form.

99858 to 99860. *DIDISSANDRA* spp. Gesneriaceae.

99858. *DIDISSANDRA GRANDIS* Craib.

F. 30611. A perennial herb about 10 inches high, with a rhizome half an inch thick. The flat leathery lanceolate leaves 2 to 4 inches long are in a rosette. The purple-blue and white flowers, less than an inch long, are in small clusters on stalks 6 inches high. Native to rocky places on the Chungtien Plateau, southwestern China.

For previous introduction see 93888.

99859 and 99860. *DIDISSANDRA SERICEA* Craib.

A rock plant with blue flowers and leaves forming rosettes.

For previous introduction see 83982.

99859. F. 30609.

99860. F. 30615.

99861. *DIPLARCHE MULTIFLORA* Hook. f. and Thoms. Ericaceae.

F. 30453. A low alpine shrub native to the Sikkim Himalayas in India, at an altitude of 11,000 feet. The crowded leathery linear-oblong leaves are less than one fourth of an inch long, and the small tubular rosy flowers are borne in dense clusters of 8 to 20 at the ends of the branches.

99862 and 99863. *ENKIANTHUS DEPLEXUS* (Griffith) C. Schneid. Ericaceae.

The whorled branches of this Himalayan shrub are characteristic of the entire genus and give the plant a peculiar appearance. The branchlets are red, and the margins and petioles of the obovate leaves, 1 to 3 inches long, are red when the leaves are young. The flowers, produced in dense drooping racemes, have yellow corollas, striped dark red with darker lobes.

For previous introduction see 93207.

99862. F. 30464.

99863. F. 30465.

99864. *EUPTLEA PLEIOSPERMA* Hook. f. and Thoms. Trochodendraceae.

F. 30481. A tree 30 to 40 feet high, native to Tibet, with ovate-crenate leaves which are glaucous beneath and have very long acuminate tips. The slender-stalked, red flowers, in axillary fascicles, appear before the leaves.

For previous introduction see 94002.

99865 to 99875. *GENTIANA* spp. Gentianaceae.
Gentian.

99865. *GENTIANA DETONSA* Rottb.

G. F. 65. A biennial gentian, with a very short stem and oblong leaves arranged more or less in a basal rosette. The flowers, borne singly, are deep blue with the corolla lobes waxy at the tips. It is native to the cold regions of northwestern China and is related to *G. crinita*.

For previous introduction see 79237.

99823 to 100103—Continued.

99866 and 99867. *GENTIANA PHYLLCALYX* C. B. Clarke.

A low alpine herb, 1 to 5 inches high, native to the slopes of the Himalayas in Sikkim, India, between 13,000 and 15,000 feet altitude. The obovate leaves are less than an inch long, and the tubular blue flowers, 1 to 2 inches long, are inflated in the middle and contracted at the mouth.

99866. G. F. 58. 99867. G. F. 59.

99868 and 99869. *GENTIANA STYLOPHORA* C. B. Clarke.

For previous introduction and description see 99663.

99868. G. F. 61. 99869. F. 30766.

99870. *GENTIANA* sp.

G. F. 62.

99871. *GENTIANA* sp.

G. F. 63. Related to *G. phyllocalyx*.

99872. *GENTIANA* sp.

G. F. 64 (Chungtien).

99873. *GENTIANA* sp.

F. 30596. An annual.

99874. *GENTIANA* sp.

F. 30601. An annual.

99875. *GENTIANA* sp.

F. 31008. Closely related to *G. microdonta*.

99876. *ILEX VENULOSA* Hook. f. Aquifoliaceae.
Holly.

F. 30479. A handsome tree native to the Khasia Hills in India. The elliptic-oblong glabrous leaves, 5 to 8 inches long, are abruptly contracted at the tip into a taillike appendage nearly 2 inches long. The crowded green-white flowers are followed by small red fruits.

99877. *INCARVILLEA GRANDIFLORA BREVIPES* Sprague. Bignoniaceae.

F. 30655. A low perennial herb native to Yunnan, China. The pinnately divided leaves, 1 foot long, are made up of ovate, nearly entire segments, and the brilliant-crimson, trumpet-shaped flowers, 2 to 3 inches long, are borne in clusters of 8 to 12 on scapes a foot high.

99878. *INCARVILLEA LUTEA* Bur. and Franch. Bignoniaceae.

F. 30642. A perennial herb native to southwestern China at altitudes between 10,000 and 12,000 feet. The long-petioled radical leaves, 8 to 15 inches long, are pinnately divided into broad-lanceolate crenate segments, and the pendulous yellow flowers, 2 inches across, are borne in clusters of 6 to 20 on scapes 2 to 4 feet high.

For previous introduction see 59418.

99879. *INULA HOOKERI* C. B. Clarke. Asteraceae.

F. 30439. A simple or branched perennial herb native to the Sikkim Himalayas in India between 7,000 and 10,000 feet altitude. The shaggy stem is 1 to 2 feet high, with elliptic-lanceolate membranous leaves 3 to 5 inches long and terminal clusters of 1 to 3 sunflowerlike heads 1 to 2 inches across.

99880 to 99882. *IRIS* spp. Iridaceae.

99880. *IRIS CHRYSOPHAGES* Dykes.
Goldvein iris.

F. 30516. One of the handsomest of the beardless irises: the velvety dark-purple flowers are

99823 to 100103—Continued.

brightened by golden reticulations at the throat, running into a signal patch in the blade.

For previous introduction see 93902.

99881. *IRIS FORRESTERI* Dykes. Yunnan iris.

F. 30626. An iris native to the Likiang Mountains, in Yunnan, between 12,000 and 13,000 feet altitude. The stem, 12 to 18 inches high, bears a single head of two flowers, although a lateral flowered branch sometimes develops. The short haft bears two central lines and broken lateral veins of brown-purple on a clear yellow ground. The oblong, ovate blade of the falls is often very long and drooping, of a clear lemon-yellow which becomes deeper around the end of the style branches, and is there marked with brown-purple veins. The oblanceolate yellow blade of the standards narrows to a deeply channeled yellow haft, shorter than the falls and slightly divergent. The broad, short-keeled deep-yellow styles, often discolored with purple, curve down onto the falls.

For previous introduction see 66577.

99882. *IRIS DELAVAYI* Micheli. *Delavay iris*.

F. 30662. An iris 2 to 4 feet high, with violet and white flowers. Native to southwestern China.

For previous introduction see 91431.

99883. *ISOPYRUM GRANDIFLORUM* Fisch. Ranunculaceae.

F. 30629. A low alpine perennial herb native to the western Himalayas in India at altitudes between 13,000 and 17,000 feet. The densely tufted radical leaves, 3 to 4 inches long, are finely ternately divided into cuneate-obovate lobes, and the solitary white flowers, an inch across, are borne on scapes 3 to 4 inches high.

99884 to 99903. *LILIUM* spp. Liliaceae. Lily.

99884 to 99886. *LILIUM BAKERIANUM DELAVAYI* (Franch.) Wilson.

A bell-shaped lily native to alpine meadows between 8,500 and 11,500 feet altitude in Yunnan. The stems are 2 to 3 feet high, the sessile leaves, 2 to 3 inches long, are linear to lanceolate, and the fragrant nodding cream-white flowers, 2 to 4 inches long, are heavily spotted and splashed with reddish purple on the inside.

99884. F. 30167. 99886. F. 30181.

99885. F. 30172.

99887 and 99888. *LILIUM BROWNII COLCHESTERI* Wilson.

A trumpet-flowered lily, native throughout China from sea level to an altitude of 5,000 feet, often cultivated for the bulbs, which are considered a table delicacy. The stems are 3 to 4 feet high, and the fragrant flowers, 4 to 6 inches long, are rose purple outside and creamy white inside, with the reflexed ends of the segments pure white.

99887. F. 29898. 99888. F. 30144.

99889 to 99891. *LILIUM DUCHARTREI* Franch.

A lily of the section Martagon, native to alpine and subalpine regions of western China. The stems are 2 to 5 feet high, the scattered lanceolate leaves are 2 to 4 inches long, and the fragrant nodding marble-white flowers, spotted and lined with vinous purple, are borne in umbels of 1 to 12.

99889. F. 30138. 99891. F. 30162.

99890. F. 30140.

99892 and 99893. *LILIUM GIGANTEUM* Wall.
Giant lily.

For previous introduction and description see 98740.

99892. F. 30151. 99893. F. 30168.

99823 to 100103—Continued.

99894. *LILIUM GIGANTEUM* YUNNANENSE Leichtlin.

F. 30143. A variety characterized by the dark stem, the horizontally spread leaves often tinged and blotched with brown purple, and the horizontally disposed flowers which are pure white outside. It is native to shady ravines and moist woods on the mountains of Hupeh and Yunnan.

99895 and 99896. *LILIUM HYACINTHINUM* Wilson.

An alpine lily, native to western China at altitudes between 10,000 and 12,000 feet. The stout erect shining-green stems are 3 to 4 feet tall, the scattered oblong-lanceolate leaves are 6 to 8 inches long, and the slightly fragrant, rose-lilac, funnel-shaped flowers, 1 to 2 inches long, are borne in racemes of 12 to 24.

99895. F. 29923. 99896. F. 30157.

99897 and 99898. *LILIUM NEPALENSE BURMANICUM* W. W. Smith.

A tall lily, 5 to 8 feet high, having a perianth intermediate between the Martagon and Eulirion sections and heavily blotched inside with purple.

For previous introduction see 95621.

99897. F. 29943. 99898. F. 29944.

99899. *LILIUM OCHRACEUM* Franch.

F. 30145. A rare and beautiful lily from Burma, not hardy in England except in the most favorable districts; it is an admirable cool greenhouse plant. This is a very variable species, producing flowers which range in color from deep golden yellow to pale yellow stained in varying degrees with deep wine purple.

For previous introduction see 95622.

99900 to 99902. *LILIUM TALIENSE* Franch.

A Martagon lily native to subalpine meadows in western China between 9,000 and 11,000 feet altitude. The stout gray-green stems, 3 to 5 feet high, are clothed with dense white scabrid pubescence, and the linear to lanceolate leaves are 2 to 4 inches long. The fragrant nodding purple-spotted white flowers, 2 inches long, are in subverticillate clusters of 2 to 12.

99900. F. 30156. 99902. F. 30176.

99901. F. 30161.

99903. *LILIUM* sp.

G. F. 68.

99904. *LONICERA HENRYI* Hemsl. Caprifoliaceae.
Henry honeysuckle.

F. 30477. A vine, native to western China, with long dark-green leaves and axillary clusters of odorless flowers which are rose colored when they first open, but soon change to orange-red.

For previous introduction see 93909.

99905. *MAGNOLIA INSIGNIS* Wall. Magnoliaceae.

F. 30508. A large tree, native to India, with lanceolate coriaceous leaves 8 inches long and fragrant pink flowers followed by bright-purple fruits 3 to 4 inches long.

For previous introduction see 95624.

99906. *MALUS YUNNANENSIS* (Franch.) C. Schneid. Malaceae. Apple.

F. 30476. A tree up to 30 feet high, native to western China. The slightly cordate-ovate leaves, 3 to 6 inches long, are sharply doubly serrate, sometimes with 3 to 5 pairs of short lobes, and are tomentose beneath. The small white flowers are in dense clusters 2 inches across and are followed by subglobose red fruits one-half inch in diameter. The leaves turn orange and scarlet in the autumn.

99823 to 100103—Continued.

99907. *MALUS* sp. Malaceae. Apple.

F. 30485 (near *M. theifera*).

99908 to 99943. *MECONOPSIS* spp. Papaveraceae.

99908 to 99910. *MECONOPSIS CONCINNA* Prain.

An attractive little alpine biennial with a rosette of small narrow deep-green leaves and deep purple-blue flowers nearly an inch across on numerous slender scapes 3 to 6 inches high. Native to southwestern China at high altitudes.

99908. F. 30088.

99910. F. 30113.

99909. F. 30106.

99911. *MECONOPSIS DELAVAYI* Franch.

F. 30080. A poppylike annual 6 to 10 inches high, with large drooping indigo-blue flowers; found in moist meadows on gravelly slopes between 11,000 and 12,500 feet altitude, usually in small groups or clumps.

For previous introduction see 58425.

99912 and 99913. *MECONOPSIS EXIMIA* Prain.

A very handsome poppylike biennial with nodding deep-blue-purple flowers with anthers of grayish yellow. It is found in open stony pastures in southwestern China at altitudes between 12,000 and 14,000 feet.

99912. F. 30084.

99913. F. 30085.

99914. *MECONOPSIS FORRESTII* Prain.

F. 30107. An alpine herb from southwestern China, covered throughout with yellow bristles. The small pale-green leaves are all basal, and the pale-blue flowers are in racemose cymes.

99915 to 99923. *MECONOPSIS HORRIDULA* Hook. f. and Thoms.

A low alpine perennial herb, native to the Sikkim Himalayas in India at altitudes between 14,000 and 17,000 feet. The lanceolate, nearly entire, prickly leaves are 3 to 5 inches long, and the blue-purple poppylike flowers, 1 to 2 inches across, are borne singly on scapes 4 to 8 inches high.

99915. F. 29934.

99920. F. 30100. A form with primrose flowers.

99934. F. 30087.

99931. F. 30094. A form with long styles.

99935. F. 30108. A magnificent form.

99823 to 100103—Continued.

99936. *MECONOPSIS RUDIS* Prain.

F. 30079. An annual alpine plant 2 to 3 feet high, native to southwestern China at altitudes between 13,000 and 15,000 feet. The stems and leaves are covered with straw-colored spreading spines, the nearly entire leaves are oblong-lanceolate, and the bright-blue flowers, in racemes 2 to 3 inches across, have numerous stamens with blue filaments and yellow anthers.

99937. *MECONOPSIS SPECIOSA* Prain.

F. 30103. An alpine perennial up to 3 feet high, with spiny oblong-lanceolate leaves and light-blue flowers 2 inches across in racemose 10- to 15-flowered cymes. Native to Yunnan.

99938 and 99939. *MECONOPSIS VENUSTA* Prain.

A charming alpine biennial with deep-purple to wine-colored flowers with orange anthers and roundish petals an inch long. The numerous scapes are 6 to 8 inches high, and the oblong-ovate leaves are in a basal rosette. Native to Yunnan.

99938. F. 30078. 99939. F. 30114.

G. F. 144.

99944. *NEILLIA SINENSIS* Oliver. Rosaceae.

Tube neillia.

F. 30475. A shrub 4 to 6 feet high, native to central China. The ovate leaves, 2 to 3 inches long, are incised-serrate and usually lobed, and the tubular pink flowers, less than an inch long, are in terminal racemes 2 to 3 inches long.

99945 to 99962. *NOMOCHARIS* spp. Liliaceae.99945. *NOMOCHARIS APERTA* (Franch.) Smith and Evans.

F. 30148. An erect alpine plant about a foot high, with a slender rhizome and small lanceolate leaves, often ternate at the upper end of the stem. The pink flowers, purplish punctate within, are at first nodding, then erect. Native to high altitudes near Tali, Yunnan.

99946. *NOMOCHARIS EUXANTHA* Smith and Evans.

F. 30155. A bulbous alpine plant 6 to 15 inches high, with linear-lanceolate leaves over an inch long and solitary nodding fragrant golden-yellow flowers spotted with purple. Native to western China.

99947. *NOMOCHARIS HENRICI* (Franch.) Wilson.

F. 30158. A lilylike plant with a slender stem 3 feet or more high with scattered linear-lanceolate, long-pointed leaves and axillary flowers 2 inches long, with a white or pinkish bell-shaped perianth, dusky red at the base. Native to Yunnan.

99948 to 99953. *NOMOCHARIS LOPHOPHORA* (Bur. and Franch.) Balf. f.

A bulbous plant with ovate to lanceolate leaves about 3 inches long and yellow somewhat lilylike flowers, often red punctate, borne singly on a scape 6 to 12 inches high.

For previous introduction see 95384.

99948. F. 30139. 99951. F. 30165.

99949. F. 30163, speckled. 99952. F. 30182.

99950. F. 30164. 99953. F. 30170.

99823 to 100103—Continued.

99954 to 99957. *NOMOCHARIS MAIREI* Leville.

A white-flowered, lilylike plant scarcely 2 feet high, with ovate verticillate leaves. Native to southwestern China.

99954. F. 30142. 99956. F. 30149.

99955. F. 30171. 99957. F. 30169.

99958. *NOMOCHARIS MELEAGRINA* Franch.

F. 30154. A large bulbous lilylike plant several feet high, native to the mountains of Szechwan. The linear-lanceolate leaves are long stemmed, and the rosy, brown-spotted flowers, 3 inches across, are on peduncles 6 inches long.

99959. *NOMOCHARIS NANA* (Klotzsch) Wilson.

F. 30152. A Himalayan lily about 6 inches high, with grasslike leaves 3 inches long and a small white nodding flower over an inch across.

99960 and 99961. *NOMOCHARIS PARDANTHINA* FARRERI W. E. Evans.

A plant about 2 feet high, with whorls of dark-green lanceolate leaves and from 1 to 10 rose-pink to white flowers of variable shade, color, and spotting. Native to alpine slopes among dwarf bamboos in Upper Burma. It differs from the type in having fimbriate inner perianth segments.

99960. F. 29815. 99961. F. 29942.

99962. *NOMOCHARIS* sp.F. 384. Closely related to *N. saluense*.99963. *OSBECKIA CAPITATA* Benth. Melastomaceae.

F. 30952. A perennial herb 1 to 2 feet high, native to India. The cordate to ovate leaves, 1 inch long, are hairy on both sides, and the mauve flowers, 1 inch across, are in heads.

99964. *PERANTHA* sp. Gesneriaceae.

F. 30612. The perianths are perennial herbs with the leaves all in a basal rosette and yellow flowers on a pilose peduncle. Three species are known from Yunnan—*P. minor*, *P. forrestii*, and *P. cordatula*.

99965. *PHILADELPHUS DELAVAYI* L. Henry. Hydrangeaceae. Mockorange.

F. 30619. A shrub 15 to 20 feet high, native to Yunnan. The remotely serrate ovate leaves, 2 to 4 inches long, are dark green above and gray tomentose beneath. The very fragrant flowers, nearly 2 inches across, have a violet-purple calyx and white petals slightly tinged with purple on the outside, and are borne in racemes.

99966. *PHOTINIA PRIONOPHYLLA* (Franch.) C. K. Schneid. Malaceae.

F. 30474. A shrub 3 to 4 feet high, with the habit of *Photinia arbutifolia*. The branches are white tomentose, the obovate leathery shining green leaves are about 3 inches long, and the small flowers are in corymbose cymes. Native to southwestern China.

99967. *POLYGONUM CALOSTACHYUM* Diels. Polygonaceae.

F. 30451. An alpine plant 1 to 2 feet high, with elliptic papyry long-petioled basal leaves 2 to 3 inches long, shorter-petioled stem leaves, and deep crimson flowers. Native to moist mountain meadows at 10,000 feet altitude in southwestern China.

99968 to 99974. *POTENTILLA* spp. Rosaceae.99968. *POTENTILLA FRUTICOSA* L. Shrubby cinquefoil.

F. 30442. A pale form.

99823 to 100103—Continued.

99969 and 99970. *POTENTILLA FRUTICOSA* VEITCHII (Wils.) Bean. Veitch cinquefoil.

A very fine form from Hupeh, with silky hairy gray-green leaves and white flowers.

99969. F. 30621. 99970. F. 30623.

99971 to 99973. *POTENTILLA FRUTICOSA* L. Shrubby cinquefoil.

99971. F. 30622. A form with yellow flowers.

99972. F. 30624. A form with orange-yellow flowers.

99973. F. 30649. A dwarf variety.

99974. *POTENTILLA SAUNDERSIANA* Royle. Cinquefoil.

F. 30607. A dwarf alpine perennial herb native to Tibet. The palmately 3- to 5-foliolate leaves have deeply incised leaflets less than an inch long, white tomentose beneath. The yellow flowers, in corymbs, are about one half inch across.

99975. *POPULUS* sp. Salicaceae. Poplar.

F. 30646.

99976 to 100086. *PRIMULA* spp. Primulaceae. Primrose.

99976. *PRIMULA AEMULA* Balf. and Forr.

F. 30211. A stout alpine primula 2 feet or more in height, of the section Maximowiczii. The narrow oblong-obovate, somewhat fleshy leaves are up to a foot long, and the bright-yellow flowers are on a stout scape over 2 feet high. Native to Yunnan, at an altitude of about 11,000 feet.

99977 and 99978. *PRIMULA AMETHYSTINA* Franch.

An alpine primula from southwestern China with papery, ovate-oblong leaves an inch long, and amethyst-colored flowers, half an inch across, in small umbels, on scapes 2 to 4 inches high.

99977. F. 30186. 99978. F. 30198.

99979 and 99980. *PRIMULA ANISODORA* Balf. and Forr.

A primrose about a foot and a half high, native to Yunnan, with broadly oval membranous leaves up to 8 inches long and whorls of aromatic flowers which are rich maroon crimson with a bright-yellow zone. This primrose belongs to the section Candelabra.

99979. F. 30217. 99980. F. 30272.

99981. *PRIMULA AURANTIACA* W. W. Smith.

F. 30293. A Chinese primrose of the section Candelabra, with a rosette of large serrate leaves 6 to 9 inches long and whorls of orange-yellow flowers on a spike nearly a foot high. Native to marshy places in southwestern China.

99982. *PRIMULA BATHANGENSIS* Petitm.

A Chinese primrose with heart-shaped, intensely green leaves and numerous clusters of yellow flowers borne on weak scapes.

99983. *PRIMULA BEESIANA* Forrest.

F. 30304. A remarkable free-flowering and hardy primrose found growing close to the snow line in the mountainous parts of Yunnan. Under favorable circumstances the scape rises to a height of over 3 feet, and produces, in the early summer, its whorls of showy glowing velvety purple flowers with conspicuous yellow eyes.

For previous introduction see 93925.

99984. *PRIMULA BEESIANA* × *BULLEYANA*.

A natural hybrid.

99823 to 100103—Continued.

99985 and 99986. *PRIMULA BREVIFOLIA* Forrest.

A Chinese primrose with a rosette of bright-green oblong leaves from which rises a purplish scape that ends in a cluster of half a dozen or more drooping flowers; each has a dark-purple calyx and a blue-purple corolla.

99985. F. 30235. 99986. F. 30263.

99987. *PRIMULA BRYOPHILA* Balf. and Forr.

F. 29925. A Burmese primula with somewhat strap-shaped leaves up to 6 inches long, with the lower surfaces densely yellow farinose. The purplish flowers are on a slender scape about 3 inches high. It belongs to the section Nivalis.

99988. *PRIMULA BULLEYANA* Forrest.

F. 30307. A beautiful primrose from Yunnan, where it grows between 9,000 and 11,000 feet altitude, almost up to the snow line. It is a stout plant and in the early summer is covered with splendid orange-scarlet flowers; the stems of these flowers are sometimes 20 inches long. The plant prefers a semi-shaded damp situation.

99989. *PRIMULA BURMANICA* Balf. and Ward.

A stout moisture-loving Candelabra primrose from western China with oblanceolate leaves up to a foot long and red-purple flowers borne on a scape 2 feet high.

For previous introduction see 95385.

99990 to 99994. *PRIMULA CALLIANTHA* Franch.

A primrose 4 to 9 inches high, found in moist open situations in western China from 12,000 to 14,000 feet altitude. The linear-lanceolate leaves are glabrous, thin, and green, and the fragrant flowers vary in color from rose lavender to rich purple.

99990. F. 30194. 99993. F. 30227. A fine form.

99991. F. 30201.

99992. F. 30215. 99994. F. 30244.

99995. *PRIMULA CERNUA* Franch.

F. 30666. Closely allied to *P. pinnatifida*, from which it differs in having broadly ovate leaves with scarcely crenulate margins and blue flowers. It is native to Yunnan.

99996. *PRIMULA CHIONANTHA* Balf. and Forr.

F. 30199. A stout herbaceous plant 1 to 2 feet high, with blunt narrowly oval leaves, sulphur farinose beneath, and clusters of white flowers borne in a many-flowered umbel at the apex of a stout scape. It does best in rich moist soil.

99997. *PRIMULA CHLORODRYAS* W. W. Smith.

F. 30232. A dwarf alpine primula of the *Dryadifolia* series, from Yunnan, with a dense rosette of ovate leaves less than an inch long which have yellow farinose lower surfaces and pale-yellow flowers on slender scapes 2 inches high. It is closely related to *P. dryadifolia* Franch.

99998 to 100000. *PRIMULA CHUNGENSIS* Balf. and Ward.

A primrose from Yunnan, with oval-oblong hairy leaves about 2 inches long and fragrant yellow flowers on a stout scape 18 inches high. It belongs to the section Candelabra.

99998. F. 30203. 100000. F. 30288.

99999. F. 30248.

100001. *PRIMULA CONICA* Balf. and Forr.

F. 30212. A hairy primula with oblong or oblanceolate leaves about 6 inches long and blue-purple flowers less than an inch long on a scape a foot high. Native to open pastures in Yunnan and a typical member of the section Muscarioides.

99823 to 100103—Continued.

100002 to 100004. *PRIMULA DRYADIFOLIA* Franch.

A rather uncommon primrose which forms cushions in the moist rocky places on the eastern slopes of the Likiang Snow Range, Yunnan, at 15,000 feet altitude. The somewhat shrubby plant is only 4 or 5 inches high, with small spatulate leaves, golden below, and long scapes bearing clusters of 3 to 15 nearly sessile flowers varying in color from violet to dark purple and from rose to rich crimson.

100002. [No data.] 100004. F. 30298.

100003. F. 30230.

100005. *PRIMULA DUBERNARDIANA* Forrest.

F. 30269. A handsome primula from southeastern Tibet where it forms dense cushions, 1 to 2 feet in diameter, in dry situations on the ledges and in the clefts of mountain cliffs at altitudes between 8,000 and 9,000 feet. The flowers are a beautiful shade of pale rose with a bright yellow eye.

100006. *PRIMULA ELEGANS* Duby.

F. 30344. A primula from the mountains of Kashmir, with oblanceolate glabrous crenate leaves and large lilac flowers in clusters of 3 to 8 on a slender scape.

100007. *PRIMULA EUOSMA* Craib.

F. 29662. A dwarf primula with a rather dense rosette of elliptic or obovate rounded leaves an inch or more long and fragrant flowers of a soft purple-rose color with a green-yellow eye on a scape 2 to 4 inches high. Native to Yunnan.

100008. *PRIMULA FARREERIANA* Balf. f.

F. 29646. A stout alpine perennial, farinose spatulate throughout, with long-stemmed spatulate leaves up to 9 inches long and small dark-purple fragrant flowers on a stout scape about 10 inches high. It is native to dark cold gullies in Kansu, and belongs to the section Nivalis.

100009 to 100012. *PRIMULA FLORIDA* Balf. and Forr.

A perennial herb, native to Yunnan, with ovate leaves, farinose beneath, which are spread flat on the ground. The scape bears an umbel of short-stalked purple-blue flowers with farinose chalcies.

100009. F. 30216. 100011. F. 30275.

100010. F. 30242. 100012. F. 30312.

100013. *PRIMULA FORRESTERI* Balf. f.

A handsome perennial primula from the mountains of northwestern Yunnan between 9,000 and 11,000 feet altitude, in dry sunny situations. The woody rootstock is said to live over 50 years, the large basal leaves are covered with glandular hairs and have the odor of apples, and the rich orange-yellow flowers are in large umbels.

100014. *PRIMULA FRANCHETH* Pax.

A plant found in moist rocky situations on mountain meadows between 10,000 and 12,000 feet altitude in southeastern Tibet.

100015. *PRIMULA GLACIALIS* Franch.

F. 30204. An attractive Chinese primula with a thick elongated rhizome, oblong-lanceolate obtuse leaves an inch long with white farinose undersurfaces, and violet flowers half an inch long on short peduncles 1 or 2 inches high. Native to Yunnan.

100016. *PRIMULA GRACILENTA* Dunn.

F. 30268. A perennial herb native to Yunnan. The petioled oblong leaves with irregularly wavy dentate margins are in a rosette from which arise the slender scapes 6 to 18 inches

99823 to 100103—Continued.

high. The deflexed lilac flowers, borne in a head, have a cylindrical corolla tube with oblong lobes each terminated by a short tail, giving a fringed effect.

100017. *PRIMULA HELODOXA* Balf.

A large Chinese primrose of the section Candelabra, with flower stalks like those of *P. japonica*, about 3 feet high, which have 7 or 8 tiers of soft-yellow flowers resembling in color and size those of *Jasminum primulinum*. It requires a moist but well-drained site.

For previous introduction see 92500.

100018. *PRIMULA LEPTA* Balf. and Forr.

F. 30273. A small delicate primula of the section Muscarioides, with a rosette of papers oblanceolate or oblong leaves about 2 inches long and deep-purple flowers less than an inch across on a fragile scape about 3 inches high. Native to Yunnan.

100019 and 100020. *PRIMULA LEUCOCHNOA* Hand.-Mazz.

An alpine primula of the section Nivalis, from southwestern China, with small linear-lanceolate somewhat fleshy leaves 5 to 8 inches long and purple flowers half an inch long on scapes about a foot high.

100019. F. 30286. 100020. F. 30290.

100021 to 100024. *PRIMULA LICHANGENSIS* Forrest.

A handsome primrose of the section Cortusoides, from southwestern China, where it reaches a height of 6 to 14 inches, growing on ledges and boulders in dry shady places. The foliage is very variable, and the fragrant flowers vary from rose to almost crimson with green-yellow eyes.

100021. F. 30209. 100023. F. 30253.

100022. F. 30250. 100024. F. 30300.

100025 and 100026. *PRIMULA LITTONIANA* Forrest.

A handsome plant of the section Muscarioides, 2 to 3 feet tall, growing in swampy meadows in southwestern China between 10,000 and 11,000 feet altitude. The gray-green hairy leaves form a rosette from which arise the scapes bearing pendent deep indigo-blue flowers in densely packed spikes sometimes 5 inches long. The blood-red bracts and calyxes of the flowers form a wonderful contrast to the blue flowers.

100025. F. 30249. 100026. F. 30299.

100027. *PRIMULA MALVACEA* Franch.

F. 30255. A primrose from the mountains of Yunnan, densely covered with short hairs; the bright-green leaves are about 3 inches long, and the thick scapes bear 2 or 3 umbels of reddish flowers.

100028 and 100029. *PRIMULA MINOR* Balf. and Ward.

A semialpine primula of the section Pulchella, native to open mountain slopes in dry situations in southwestern China. The broadly oblong-spatulate leaves are only 2 inches long, and the small violet flowers are borne on a scape about 2 inches high.

100028. F. 30338. 100029. F. 30343.

100030. *PRIMULA MULIENSIS* Hand.-Mazz.

F. 30257. A glabrous alpine primula with narrowly obovate acute leaves about 10 inches long, light green and somewhat fleshy, and pale-violet flowers, very fragrant, on a stout scape nearly 2 feet high. Native to Szechwan.

99823 to 100103—Continued.

100031 to 100034. *PRIMULA MUSCARIOIDES* Hemsl.

A primrose with rather fleshy light-green leaves 4 to 5 inches long. The scapes, twice as long as the leaves, bear heads of deep purple-blue or almost violet flowers. Native to moist open places on the edges of forests in Yunnan.

100031. F. 30234. 100033. F. 30274.

100032. F. 30266. 100034. F. 30291.

100035. *PRIMULA PINNATIFIDA* Franch.

F. 30318. A hardy alpine primula 3 to 10 inches high, native to Yunnan, where it is found in swampy alpine meadows between 12,000 and 15,000 feet altitude. The thin leaves are pinnatifid, and the spikes of beautiful bright-blue fragrant flowers are produced as soon as the snow disappears.

100036 to 100040. *PRIMULA POISSONI* Franch.

A glabrous primula with narrow-oblong, rather regularly serrate leaves and purplish flowers in whorls. Native to Yunnan.

100036. F. 30196.

100037. F. 30225.

100038. F. 30303.

100039. F. 30233. Variety *planiflora*.100040. F. 30265. Variety *planiflora*.100041 to 100043. *PRIMULA POLYNEURA* Franch.

A perennial primula with suborbicular, crenate-lobed leaves 1 to 3 inches long and scapes 4 to 16 inches tall, bearing umbels of purple flowers about half an inch across. It is native to central China.

For previous introduction see 93929.

100041. F. 30254. 100043. F. 30311.

100042. F. 30287.

100044 and 100045. *PRIMULA PULCHELLA* Franch.

A handsome primrose growing in limestone soil in rather moist meadows up to 11,000 feet altitude in Yunnan. The lanceolate leaves are yellowish beneath, and the large flowers are bluish purple.

100044. F. 30262. 100045. F. 30320.

100046. *PRIMULA PULCHELLOIDES* F. K. Ward.

F. 30310. A perennial herb native to Yunnan. The narrowly lanceolate leaves, 1 to 3 inches long, have revolute denticulate margins, and the stiff scapes, 6 to 9 inches high, bear umbels of light-violet flowers one half inch across.

100047. *PRIMULA RIGIDA* Balf. and Forr.

F. 30241. A purple-flowered primula with firm oblong-spatulate leaves 2 inches long, densely farinose beneath. The purple flowers, one half inch long, are on a stout rigid scape more than 2 inches high. A member of the section *Nivalis* and native to the Muli Mountains, Szechwan.

100048 and 100049. *PRIMULA ROCKII* W. W. Smith.

A small woody primula at 10,000 feet altitude in southwestern China. It is related to the section *Bullatae*, to which *P. forrestii* belongs, but very distinct from it. The leaves are smaller and darker green, and the large deep-orange flowers are single, on short peduncles, and droop.

For previous introduction see 95388.

100048. F. 30280. 100049. F. 30339.

99823 to 100103—Continued.

100050 to 100053. *PRIMULA SECUNDIFLORA* Franch.

A very fine perennial primula found on alpine meadows up to 15,000 feet altitude, almost the snow line, in southwestern China. When young, the ovate-oblong finely serrulate papery leaves, 2 to 4 inches long, are golden farinose beneath, and the stout scape, 8 to 14 inches high, bears a one-sided, 6- to 10-flowered umbel of flowers nearly an inch across which vary in color from bright violet to rich reddish purple.

100050. F. 30219.

100052. F. 30315.

100051. F. 30283.

100053. [No data.]

100054 to 100056. *PRIMULA SERRATIFOLIA* Franch.

A very attractive primula, native to western China, where it grows along the banks of streams. The leaves are bright green, and the lovely yellow flowers are striped with orange.

100054. F. 30193.

100055. F. 30224. A very fine form.

100056. F. 29886.

100057 to 100061. *PRIMULA SIKKIMENSIS* Hook.

A primrose found in moist meadows and along streams in the Himalayas at 13,000 feet altitude. The lanceolate drooping leaves are dull green on both sides, and the large bell-shaped rich-yellow flowers, on stalks up to 2 feet high, appear in June. It has the habit of *P. secundiflora*, and should be treated as a short-lived perennial.

For previous introduction see 93930.

100057. F. 30222.

100060. F. 30289.

100058. F. 30277.

100061. F. 30292.

100059. F. 30278.

100062. *PRIMULA SINOLISTERI* Balf. f.

A Chinese primrose of the type of *P. obconica*, which promises to be of horticultural value, since it does not have the irritant hairs. The acutely lobed leaves form compact masses, and the many trusses of flowers vary from white to lilac in color.

100063 to 100065. *PRIMULA SINOPLANTAGINEA* Balf. f.

A Chinese primula of the section *Nivalis*, native to Yunnan. The acute lanceolate leaves are yellow-farinose beneath, and the deep-purple flowers are on a thick scape 5 inches high.

100063. F. 30206.

100065. F. 30220.

100064. F. 30213.

100066 to 100070. *PRIMULA SINOPURPUREA* Balf. f.

This, one of the most striking primroses of the section *Nivalis*, is a stout herbaceous plant from 4 inches to 3 feet high, growing in acid soil in boggy meadows up to 14,000 feet altitude in southwestern China. The thin papery narrow leaves are bright green above and golden yellow beneath, and the large dense umbels of rich-purple or violet flowers appear in April and May.

100066. F. 30200.

100069. F. 30243.

100067. F. 30205.

100070. F. 30316.

100068. F. 30223.

99823 to 100103—Continued.

100071 and 100072. *PRIMULA SONCHIFOLIA* Franch.

A primrose with obovate-oblong, doubly sinuate, papery leaves 6 to 8 inches long, native to southwestern China. The simple umbel of short-campanulate violet flowers is borne on a pilose scape as long as the leaves.

For previous introduction see 95390.

100071. F. 30279. 100072. [No data.]

100073 and 100074. *PRIMULA SOULEI* Franch.

A Chinese primula, native to Szechwan, with long-stemmed, ovate-obtuse, crenulate leaves about an inch long and purple-violet flowers less than an inch long, on a scape 3 to 5 inches high.

100073. F. 30341. 100074. F. 30342.

100075 to 100077. *PRIMULA SZECHUANICA* Pax.

A glabrous perennial herb, native to central China, with thin ovate-oblong slightly dentate leaves 2 to 3 inches long. The stout scape, 8 inches high, bears an umbel of 5 to 10 nodding yellow flowers about half an inch across with reflexed lobes.

100075. [No data.] 100077. F. 30285.

100076. F. 30267.

100078. *PRIMULA VINCIFLORA* Franch.

F. 30334. A perennial primrose, native to China, and found in moist shady meadows at 12,000 feet altitude. The thin papery oblong dull-green leaves, covered with reddish glands, are all erect, or nearly so, forming a narrow erect crown. The scapes, up to 15 inches high, bear solitary purple-violet, vincalike flowers, 1 to 2 inches across.

For previous introduction see 93933.

100079. *PRIMULA VITTATA* Bur. and Franch.

F. 30240. A Chinese herbaceous perennial primrose with narrow leaves 6 inches long and purple flowers borne on a stout scape 8 inches high.

100080. *PRIMULA WILSONI* Dunn.

F. 30191. An aromatic perennial herb native to Yunnan. The bright-green lanceolate leaves, 6 to 8 inches long, are recurved, and the small rosy flowers have short rounded crenulate lobes.

100081 to 100084. *PRIMULA YARGONGENSIS* Petitm.

A primrose from eastern Tibet, with ovate-oblong obtuse leaves 1 to 2 inches long and 1 to 3 deep-lilac flowers on a thick scape 4 inches high.

For previous introduction see 93932.

100081. F. 30238. 100083. F. 30282.

100082. F. 30261. 100084. F. 30306.

100085. *PRIMULA YUNNANENSIS* Franch.

F. 30210. A dwarf alpine primrose native to Yunnan. The obovate leaves are less than one-half inch long, and the 1 or 2 purple flowers, an inch across, are borne on a scape only 2 or 3 inches high.

100086. *PRIMULA* sp.

F. 30665. A primrose near *P. malvacea*.

100087 to 100089. *RHODODENDRON* spp. Ericaceae.

100087. *RHODODENDRON CHRYSSEUM* Balf. and Ward.

F. 30942. A small shrub, 1 to 3 feet high, with densely scaly branchlets, native to Yunnan. The ovate-elliptic leaves, one-half inch long, are scaly on both sides and are aromatic. The

99823 to 100103—Continued.

bright-yellow openly campanulate flowers are one-half inch across and are borne in terminal clusters of 4 or 5.

100088. *RHODODENDRON* sp.

F. 30941. Series *Lapponicum*.

100089. *RHODODENDRON MOLLICOMUM* Balf. and Smith.

F. 30940. A small shrub with softly pubescent branchlets, native to Yunnan. The narrowly lanceolate leaves, 1 to 2 inches long, are softly pubescent on both sides, and the narrowly tubular crimson flowers are in small axillary clusters near the ends of the branchlets.

100090. *ROETTLEA FORRESTII* Diels. Gesneriaceae.

F. 30617. An alpine plant with a basal rosette of densely hairy narrow ovate leaves 3 to 5 inches long, and small canary-yellow flowers, one-third inch across, on scapes 3 to 9 inches high. Native to mossy boulders in very shady places in Yunnan.

100091 to 100093. *SORBUS* spp. Malaceae.

Mountain-ash.

100091. *SORBUS* sp.

F. 30492. A mountain-ash near *S. vestita*.

100092. *SORBUS* sp.

F. 30509.

100093. *SORBUS* sp.

F. 30635.

100094. *SPIRAEA CANESCENS GLAUCOPHYLLA* Franch. Rosaceae.

F. 30620. A white-flowered shrub, native to Yunnan, with broadly obovate leaves and many-flowered corymbs.

100095. *SYMPLOCOS PANICULATA* Miquel. Symplocaceae.

F. 30458. A shrub or small tree up to 35 feet high, native to China and Japan. The obovate sharply serrulate leaves are 1 to 3 inches long, the fragrant white flowers are in panicles 2 to 4 inches in length, and the bright-blue ellipsoid fruits are nearly half an inch long.

For previous introduction see 93963.

100096. *SYRINGA YUNNANENSIS* Franch. Oleaceae.

Yunnan lilac.

F. 30486. A handsome shrub of open spreading growth, related to *Syringa wilsonii*, but with pale-pink flowers in large panicles. The downy leaves have a distinct red midrib, the color being continued through the leafstalk. It is native to China.

For previous introduction see 91834.

100097. *TETRACENTRON SINENSE* Oliver. Magnoliaceae.

F. 30489. A tree up to 100 feet high, native to western and central China. The elliptic-ovate leaves, 3 to 5 inches long, are subordinate with closely serrulate margins, and the minute yellowish flowers are in racemes 4 to 8 inches long.

100098. *THERMOPSIS* sp. Fabaceae.

F. 30630. A form near *T. inflata*.

100099 to 100101. *TROLLIUS* spp. Ranunculaceae.

100099. *TROLLIUS PUMILUS* D. Don. Dwarf globeflower.

F. 30647. An alpine herbaceous perennial 1 foot high, native to the Himalayas in India. The thick orbicular leaves, 1 to 2 inches across, are five-parted into broadly three-lobed segments, and the solitary yellow flowers are 1 inch across.

99823 to 100103—Continued.

100100 and 100101. *TROLIUS YUNNANENSIS* (Franch.) Ulbr. Yunnan globeflower.

A large stout perennial, native to Yunnan, about 2 feet high, with trilobate-reniform, long-stemmed basal leaves with blades 3 inches long and yellow flowers 1 to 2 inches across.

100100. F. 30506. 100101. F. 30643.

100102. *VIBURNUM FLAVESCENS* W. W. Smith. Caprifoliaceae.

F. 30678. A shrub 6 to 10 feet high, native in dry places in the mountains of Yunnan. The rhomboid-ovate leaves are 2 to 3 inches long, with serrate margins, and the fragrant deep cream-yellow flowers are in terminal corymbs about 2 inches across. It is closely allied to *Viburnum oatifolium*.

100103. *XOLISMA OVALIFOLIA* (Wall.) Rehd. Ericaceae.

F. 30437.

For previous introduction and description see 99759.

100104 and 100105. *PHOENIX RECLINATA* Jacq. Phoenicaceae.

Senegal date palm.

From Africa. Seeds presented through the Royal Botanic Gardens, Kew, England. Received June 14, 1932.

A tropical and South African date palm, 20 to 30 feet high, with green reclinate pinnate leaves 6 to 9 feet long with rigid leaflets and yellowish fruits half an inch long with a sweetish pulp.

For previous introduction see 82666.

100104. From Bathurst, Gambia, Africa.

100105. From Zomba, Nyasaland, Africa.

100106. *ANANAS SATIVUS* Schult. f. Bromeliaceae. Pineapple.

From the West Indies. Plants presented by G. W. Ford, Haytian Pineapple Co., Cape Haitien, Haiti. Received June 14, 1932.

Smooth Cayenne.

100107 to 100113.

From Australia. Seeds presented by the experiment farm at Bathurst, at the request of the Department of Agriculture, Sydney, New South Wales. Received June 10, 1932.

A collection of forage grasses introduced for the use of Department specialists.

100107 to 100109. *DACTYLIS GLOMERATA* L. Poaceae. Orchard grass.

100107. *Scandia cocksfoot*; originally from Sweden.

100108. No. 2; from Wales.

100109. Originally from Spain.

100110 to 100112. *LOLIUM PERENNE* L. Poaceae. Perennial ryegrass.

100110. Originally from Spain.

100111. An evergreen form; originally from Scotland.

100112. *Victoria* ryegrass; originally from Sweden.

100113. *PHALARIS TUBEROSA* L. (*P. stenophylla* Hort.), Poaceae. Grass.

For previous introduction see 99332.

100114 to 100118. *CINCHONA* spp. Rubiaceae.

From British India. Seeds purchased from the Government cinchona plantation, Munsong, Kalimpong, Bengal. Received June 13, 1932.

Introduced for the use of Department specialists working with drug plants.

100114. *CINCHONA LEDGERIANA* Moens.

A tree, native to the Andes, yielding a bark remarkably rich in quinine which crystallizes readily as quinine sulphate. The percentage of the other alkaloids present is relatively small. The bark of this species matures in the fifth or sixth year and does not increase its quinine content after that.

For previous introduction see 78602.

100115. *CINCHONA LEDGERIANA* × *OFFICINALIS*.

100116. *CINCHONA LEDGERIANA* × *SUCCIRUBRA*.

100117. *CINCHONA OFFICINALIS* L.

100118. *CINCHONA SUCCIRUBRA* Pavon.

The bark of this tree contains a large quantity of alkaloids, of which a relatively large percentage is cinchonidine, which retards the separation of the quinine as sulphate. The bark of this species matures in the fourth or fifth year and does not increase in quinine content thereafter.

100119 to 100124. *HORDEUM VULGARE PALLIDUM* Seringe. Poaceae.

Six-rowed barley.

From India. Seeds presented by F. J. F. Shaw, Imperial economic botanist, Imperial Institute of Agricultural Research, Pusa, Bihar. Received June 14, 1932.

Introduced for the use of Department specialists interested in cereal investigations.

100119. Type 7. 100122. Type 14.

100120. Type 12. 100123. Type 20.

100121. Type 13. 100124. Type 21.

100125 to 100130. *ORYZA SATIVA* L. Poaceae. Rice.

From Madagascar. Seeds presented by Maison Grobot & Simphal, Paris, France. Received June 16, 1932.

A collection of rice introduced for the use of Department specialists interested in cereal investigations.

Samples of Vary-Lava, the finest rice of Madagascar. This rice closely resembles the *Java Giant* rice.

100131 to 100140. *ACACIA* spp. Mimosaceae.

From Italy. Seeds presented by Dr. Mario Calvino, Stazione Sperimentale di Floricoltura, San Remo. Received June 17, 1932.

100131. *ACACIA* sp. 100136. *ACACIA* sp.

Bon accueil precoce. *Joffre.*

100132. *ACACIA* sp. 100137. *ACACIA* sp.

Decurrens hybrida. *Tournaire A.*

100135. *ACACIA* sp. 100140. *ACACIA* sp.

Gaulois. *Tournaire No. 1.*

100141 to 100226.

From China. Seeds collected by the sixth Forrest expedition, 1930-32, to southwestern China, and presented by Maj. Lionel de Rothschild, London, England. Received June 17, 1932.

100141 to 100144. *ACONITUM* spp. Ranunculaceae. Monkshood.

100141. *ACONITUM DIELSIANUM* Hort.

F. 30953. A name for which a place of publication and a description have not been found.

100142. *ACONITUM* sp.

F. 30776. Related to *A. Forrestii*.

100143. *ACONITUM* sp.

G. F. 34.

100144. *ACONITUM* sp.

G. F. 35. Related to *A. Forrestii*.

100145. *ALLIUM POLYASTRUM* Diels. Liliaceae. Onion.

F. 30587. A stout herbaceous plant up to 2 feet high, with broad-linear leaves and rosy flowers, 30 to 60 in a head. Native to southwestern China.

100146. *ALLIUM* sp. Liliaceae. Onion.

F. 30844.

100147 to 100153. *ANEMONE* spp. Ranunculaceae.

100147 to 100149. *ANEMONE DEMISSA* Hook. f. and Thoms.

A lovely alpine plant, common in limestone soil in mountain meadows at altitudes between 11,000 and 13,000 feet in Yunnan. The leaves form a basal rosette, and the large white flowers are in umbels.

For previous introduction see 93876.

100147. G. F. 392.

100148. F. 29665. Variety *villosa*.

100149. F. 29686. Near variety *villosa*.

100150. *ANEMONE GLAUCIFOLIA* Franch.

G. F. 45. A plant 1 to 2 feet high, native to the mountains of southwestern China. The leaves are deeply pinnatifid, up to 6 inches long, and the showy violet flowers are 1 to 2 inches across.

100151. *ANEMONE NARCISSIFOLIA* L.

F. 30830. A stout herbaceous perennial with petioled 3- to 5-parted, deeply cut basal leaves sessile involucreal leaves, and an umbel of several white flowers an inch across, with yellow anthers. It is native to Europe and Asia.

For previous introduction see 91387.

100152. *ANEMONE* sp.

F. 29776 and F. 29865. Near to *A. demissa*.

100153. *ANEMONE* sp.

G. F. 53. A variety with white flowers, near to *A. demissa*.

100154. *ASTER STATICIFOLIUS* Franch. Asteraceae.

F. 30827.

For previous introduction and description see 99835.

100155. *ASTER* sp. Asteraceae.

F. 30814. Closely related to *A. Forrestii*.

100156. *ASTRAGALUS* sp. Fabaceae. Milkvetch.

F. 30819.

100141 to 100226—Continued.

100157. *BRIGGSIA MUSICOLA* (Diels) Craib. Gesneriaceae.

F. 30604. A stemless plant with hairy, oblong-lanceolate leaves 3 to 5 inches long and deep-orange flowers half an inch wide on scapes about 10 inches high. Native to southwestern China.

100158. *CASSIOPE FASTIGIATA* (Wall.) D. Don. Ericaceae.

F. 30874.

For previous introduction and description see 99843.

100159. *CASSIOPE SELAGINOIDES* Hook. f. and Thoms. Ericaceae.

F. 30791.

For previous introduction and description see 99844.

- 100187 to 100189. DRACOCEPHALUM spp. Menthaceae. **Dragonhead.**
- 100187 and 100188. DRACOCEPHALUM BULLATUM Forrest.
An alpine perennial 3 to 7 inches high, with rather stiff ovate-elliptic leaves, pale purple beneath, an inch or more in length, the lower one long-petioled, and bright-blue flowers in dense racemes. Native to southwestern China.
100187. F. 30762. 100188. G. F. 430.
100189. DRACOCEPHALUM ISABELLAE Forrest.
F. 30798. A mintlike perennial 12 to 18 inches high, native to China, with leaves 1 inch long, divided into 5 to 7 linear segments, and spikes, 5 to 6 inches long, made up of verticillate clusters of dragon-shaped, deep blue-purple flowers 1 to 2 inches long.
For previous introduction see 97603.
100190. ERIGERON MULTIRADIATUS (Lindl.) C. B. Clarke. Asteraceae. **Himalayan fleabane.**
F. 30846. A beautiful alpine composite native to wet grassy places the whole length of the Himalayan range from 7,000 to 12,000 feet altitude. It is a pubescent or hirsute herb up to 10 inches high,

100141 to 100226—Continued.

- with simple scapellike leafy stems and numerous radical leaves. The oblanceolate leaves, narrowed into a rather long petiole, are 4 to 8 inches long.
100191. HALENIA ELLIPTICA D. Don. Gentianaceae.
G. F. 30. An alpine herbaceous perennial 1 to 2 feet high, native to the temperate slopes of the Himalayas in India. The elliptic leaves are 2 to 3 inches long, and the pale-blue flowers are in a lax terminal panicle. The bell-shaped corolla, 1 inch long, is lobed half-way to the base, and at the base of each lobe is a spur about one-third inch long with a recurved tip.
100192. HEDYSARUM SP. Fabaceae.
F. 30747.
100193. IMPATIENS DELAVAYI Franch.
G. F. 31. A glabrous annual with erect branched stems a foot high, broadly ovate or rounded crenate leaves 1 to 2 inches long, and large showy rose-lilac flowers over an inch long. Native to southwestern China.
- 100194 to 100196. INCARVILLEA spp. Bignoniaceae.
100194. INCARVILLEA LUTEA Bur. and Franch.
G. F. 105.
For previous introduction and description see 99878.
100195. INCARVILLEA SP.
F. 30842. Closely related to *I. delavayi*.
100196. INCARVILLEA SP.
G. F. 32.
100197. INULA HOOKERI C. B. Clarke. Asteraceae.
F. 30550.
For previous introduction and description see 99879.
- 100198 to 100203. IRIS spp. Iridaceae.
100198. IRIS COLLETTII Hook. f.
F. 30545. A practically stemless iris, closely related to *I. nepalensis*, native to northeastern India and southwestern China. The leaves have two prominent veins on one side and three on the other, and the lilac flowers are 1 to 2 inches across and are borne on stems only 1 to 2 inches high.
100199. IRIS DELAVAYI Micheli. **Delavay iris.**
G. F. 82.
For previous introduction and description see 99882.
100200. IRIS FORRESTII Dykes. **Yunnan iris.**
F. 30741.
For previous introduction and description see 99881.
100201. IRIS SP.
F. 30866. A plant with blue flowers.
100202. IRIS SP.
F. 30867. A plant with blue flowers.
100203. IRIS SP.
G. F. 47. A plant closely related to *I. chrysographes*.
- 100204 and 100205. MEGACARPAEA DELAVAYI Franch. Brassicaceae.
An alpine perennial with a thick rhizome and an erect stem 1 to 2 feet high. The pinnatisect leaves are up to 6 inches long, and the small violet

100141 to 100226—Continued.

or purplish flowers are in dense corymbs. Native to southwestern China.

100204. F. 30843.

100205. F. 30877.

100206. *PAEONIA* sp. Ranunculaceae. Peony.

F. 30998. A plant closely related to *P. lutea*.

100207. *PAEONIA* sp. Ranunculaceae. Peony

G. F. 39. A plant closely related to *P. potaninii**

100208. *PODOPHYLLUM* sp. Berberidaceae.

Mayapple.

F. 30804. A plant closely related to *P. aurantiaca*.

100209 to 100212. *POLYGONUM* spp. Polygonaceae. Fleeceflower.

100209. *POLYGONUM* *EMODI* Meisn.

F. 31013. A trailing and creeping perennial herb native to the Himalayas at altitudes between 8,000 and 11,000 feet in India. The branches are 6 to 10 inches long, with rigid linear-lanceolate leaves 1 to 2 inches long and short ascending branches bearing racemes of small red flowers.

100210. *POLYGONUM* *FORRESTII* Diels.

F. 30860. A low herbaceous plant with a long creeping rootstock, found on hillsides in Yunnan. It is from 2 to 4 inches high, with white or cream-white flowers.

100211. *POLYGONUM* *SPHAEROSTACHYUM* Meisn.

F. 30795. A perennial herb 6 to 12 inches high, native to the Himalayas at an altitude of 15,000 feet in India and Tibet. The long-petioled radicle leaves are linear-lanceolate with crenulate margins, and small drooping crimson flowers are borne in solitary erect cylindrical or capitate spikes.

100212. *POLYGONUM* sp.

F. 30835.

100213. *CONVOLVULUS* sp. Convolvulaceae.

F. 30847.

100214 to 100218. *POTENTILLA* spp. Rosaceae. Cinquefoil.

100214. *POTENTILLA* *ARTICULATA* Franch.

F. 30755. A low alpine perennial with a thick rhizome, digitately trifoliate hairy pale-green leaves only half an inch long, and light-yellow flowers half an inch across, on stems 2 to 3 inches high. Native to southwestern China.

100215. *POTENTILLA* *CORIANDRIFOLIA* D. Don.

F. 30782. Variety *dumosa*; a bushy variety of *P. coriandrifolia* which is a tufted herb 4 inches in diameter, found in rock crevices and open thin turf at Bhutan, India, at 13,000 feet altitude. The white flowers have dark-red centers.

100216. *POTENTILLA* *ERICARPA* Wall.

F. 30821. A perennial herb with a stout rootstock from which arise branches 4 to 10 inches long, densely clothed with imbricating woolly stipular sheaths. From the tips of these branches grow the slender suberect flowering stems bearing thin three-lobed and incised leaves about 1 inch long and solitary yellow flowers 1 to 2 inches across. It is native to northern India.

For previous introduction see 93924.

100217. *POTENTILLA* *SAUNDERSIANA* Royle.

F. 30773.

100141 to 100226—Continued.

For previous introduction and description see 99974.

100218. *POTENTILLA* *STENOPHYLLA* (Franch.) Diels.

F. 30836. A plant 3 to 4 inches high, with a thick rhizome, pinnate leaves 2 or 3 inches long, and orange-yellow flowers on scapes 4 inches high. Native to Yunnan.

100219 to 100222. *SAXIFRAGA* spp. Saxifragaceae. Saxifrage.

100219. *SAXIFRAGA* sp.

F. 30837.

100220. *SAXIFRAGA* sp.

F. 30839.

100221. *SAXIFRAGA* sp.

F. 30840. A form closely related to *S. montana*.

100222. *SAXIFRAGA* sp.

F. 30921.

100223. *SOLMS-LAUBACHIA* *PULCHERRIMA* Muschler. Brassicaceae.

G. F. 37. A dwarf alpine? to 4 inches high, with ovate or ovate-lanceolate leaves an inch long, appressed to the stem, and bright turquoise-blue aromatic flowers 2 inches or more long on one-flowered scapes. Native to southwestern China.

100224. *SOLMS-LAUBACHIA* sp. Brassicaceae.

F. 30803.

100225. *SPENCERIA* *RAMALANA* Trimen. Rosaceae.

G. F. 49. A free-flowering and attractive herbaceous perennial about a foot high, with erect or ascending stems, covered with silvery hairs. The stem leaves are reduced to 1 or 2 pairs of narrowly oval leaflets, and the golden or red-yellow flowers are in stiff open racemes. Native to dry upland pastures of western Szechwan and Yunnan.

100226. *TROLLIUS* sp. Ranunculaceae. Globeflower.

G. F. 70. A form closely related to *T. patulus*.

100227. *BAMBUSA* *MULTIPLEX* (Lour.) Raeusch. Poaceae. Hedge bamboo.

From Florida. Plants presented by Harold Mowry, Agricultural Experiment Station, Gainesville. Received June 21, 1932.

Plants from a bamboo hedge at the Gainesville station, grown under the name *Arundinaria nitida*. The hedge is kept pruned to a height of about 4½ feet, but the culms probably would grow eventually to 15 feet or more if permitted. The new culms appear early in May.

100228 to 100230. *CINCHONA* spp. Rubiaceae.

From Jamaica, West Indies. Cuttings presented by Col. Victor E. Ruehl, Caldwell, N.J. Received June 18, 1932.

100228. *CINCHONA* sp.

No. 1. Ruehl.

100229. *CINCHONA* sp.

No. 2. Jamaica.

100230. *CINCHONA* sp.

No. 3. Jamaica.

100231 to 100251.

From New Zealand. Seeds presented by Bruce Levy, agronomist, Plant Research Station, Palmerston North. Received June 13, 1932.

Introduced for the use of Department specialists interested in forage crops.

100231 and 100232. *AGROSTIS TENUIS* Sibth. Poaceae. **Bentgrass.**

100231. Brown top Bt 526 (ordinary New Zealand brown top).

100232. Brown top Bt 539 (New Zealand dry-land type).

100233 to 100235. *DACTYLIS GLOMERATA* L. Poaceae. **Orchard grass.**

100233. Cocksfoot Bc 193. A native variety.

100234. Cocksfoot Bc 216. A native variety.

100235. Cocksfoot Bc 217. An imported variety.

100236 to 100241. *LOLIUM PERENNE* L. Poaceae. **Perennial ryegrass.**

100236. Ba 74. Bad false perennial.

100237. Ba 192. Average false perennial.

100238. Ba 1748. Good false perennial.

100239. Ba 1815. Italian ryegrass sold as perennial.

100240. Ba 2734. New Zealand certified.

100241. Ba 1871. New Zealand selection.

100242 and 100243. *TRIFOLIUM PRATENSE* L. Fabaceae. **Red clover.**

100242. Aa 172. New Zealand broad red clover.

100243. Aa 201. New Zealand broad red clover.

100244 to 100251. *TRIFOLIUM REPENS* L. Fabaceae. **White clover.**

100244. Ac 138. New Zealand white clover, type no. 2.

100245. Ac 617. New Zealand Dutch white clover.

100246. Ac 621. Average New Zealand commercial.

100247. Ac 654. Average New Zealand commercial.

100248. Ac 706. New Zealand Dutch white clover.

100249. Ac 827. New Zealand certified, type no. 1.

100250. Ac 910. New Zealand white clover, type no. 2.

100251. Ac 2008. New Zealand certified, type no. 1.

100252. *ANABASIS APHYLLA* L. Chenopodiaceae.

From the Union of Soviet Socialist Republics. Seeds presented by the Institute of Plant Industry, Leningrad, at the request of Dr. N. I. Vavilov. Received June 21, 1932.

An upright shrub 2 feet high with green branches, scalalike leaves, and inconspicuous flowers. It is native to the Mediterranean region and is used as a sand binder.

100253 to 100267. *IPOMOEA BATATAS* (L.) Poir. Convolvulaceae. **Sweetpotato.**

From the Union of Soviet Socialist Republics. Tubers presented by the Sukhum subtropical branch of the All-Union Institute of Plant Indus-

100253 to 100267—Continued.

try, through V. P. Alekseev, chief of the Bureau of Introduction, Leningrad. Received June 21, 1932.

A collection of new varieties developed at the Sukhum station; introduced for the use of Department specialists interested in sweetpotatoes.

100253. No. 33.	100281. No. 95.
100254. No. 36.	100282. No. 108.

100260. No. 91.	

100268 to 100278.

From the Union of Soviet Socialist Republics. Seeds presented by the Sukhum subtropical branch of the All-Union Institute of Plant Industry, Sukhum, Caucasus. Received June 21, 1932.

100288. *BUTIA CAPITATA* (Mart.) Becc. (*Cocos capitata* Mart.). **Phoenixaceae. Palm.**

No. 135554. A large coconutlike palm, native to Argentina, with a spineless trunk, pinnate leaves, and large bunches of small edible fruits. It is said to be harder than any other species of *Butia*.

For previous introduction see 98891.

100269 to 100275. *BUTIA CAPITATA* × *ERIOSPATHA*. **Phoenixaceae. Palm.**

A natural hybrid combining characters of both parents. The fruit very closely resembles in flavor the best Japanese loquats. The tree will probably thrive wherever the Satsuma orange is a commercial crop.

For previous introduction see 98230.

100269. No. 135311.	100273. No. 135526.
100270. No. 135312.	100274. No. 135527.

100272. No. 135316.	

100276. *JUGLANS REGIA* L. **Juglandaceae.**

Persian walnut.

No. 135519. A variety native to the Caucasus region.

100277. *BUTIA CAPITATA ODORATA* (Barb.-Rodr.) Becc. **Phoenixaceae. Palm.**

No. 135553. A palm about 15 feet high, much like the date palm, bearing large bunches of edible fragrant fruits about an inch in diameter. It is native to Brazil.

100278. *VACCINIUM ARCTOSTAPHYLOS* L. **Vacciniaceae. Caucasian whortleberry.**

No. 135937. A deciduous shrub up to 10 feet high, native to the Caucasus region. The oblong-ovate finely toothed leaves are 2 to 4 inches long and turn purple red in the autumn. The small bell-shaped flowers are borne in racemes 2 inches long and are white with a purple tinge. The globose purple berries are nearly one-half inch in diameter.

100279 and 100280. *EPIDENDRUM BICORNUTUM* Hook. **Orchidaceae. Orchid.**

From the West Indies. Plants collected by David Fairchild and P. H. Dorsett, agricultural explorers, with the 1931-32 Allison V. Armour expedition. Received April 11, 1932.

100279 and 100280—Continued

The virgin orchid: from the rocks near the sea-coast at Man of War Bay, Tobago, Windward Islands. A tropical American epiphytic orchid with pseudobulbs 1 to 2 feet long and short leathery leaves. The fragrant white flowers, with small crimson spots on the three-lobed lip, are borne in slender racemes.

100279. No. 2943. February 21, 1932.

100280. No. 2930. February 19, 1932.

100281 to 100364.

From China. Seeds collected by the sixth Forrest expedition, 1930-32, to southwestern China and presented by Maj. Lionel de Rothschild, London, England. Received June 23, 1932.

100281. *CORYLOPSIS* sp. Hamamelidaceae.

F. 29915.

100282 to 100287. *PRIMULA* spp. Primulaceae. Primrose.

100282. *PRIMULA* sp.

100326. RHODODENDRON ADENOPHORUM Balf. and Smith.

F. 30888. A shrub up to 7 feet high, with thick lanceolate leaves 5 inches long and rose-colored flowers over an inch long in lax umbels. Native to Yunnan.

For previous introduction see 94101.

100327. RHODODENDRON APERANTUM Balf. and Ward.

F. 29938. A dwarf spreading shrub 6 to 20 inches high, native to northeastern Burma, at altitudes between 12,000 and 14,000 feet. The oval to oblanceolate leaves, 2 inches long, are almost sessile in whorls at the ends of the branchlets. The tubular-campanulate flowers, in various shades from white to rose, deep-rose, orange, and yellow, are about 2 inches long and are borne in 1- to 4-flowered lax umbels.

100328. RHODODENDRON ARIZELUM Balf. and Forr.

F. 29785. A shrub or small tree 10 to 20 feet high, native to Burma and Tibet. The branchlets are clothed in cinnamon or gray tomentum, and the oval to oblanceolate leaves, 6 inches long, are dark green and rugulose above and cinnamon or brown tomentose beneath. The obliquely campanulate flowers, 2 inches across, are white, creamy yellow, or yellow tinged with rose, with crimson blotches at the base, and are borne in racemose umbels of 15 to 25 flowers.

100329. RHODODENDRON BEESIANUM Diels.

F. 30894. A shrub 15 to 20 feet high, with leathery, purple-green narrowly oblanceolate leaves about 6 inches long and deep rich-rose flowers up to 2 inches across. Allied to *R. delavayi* and native to Yunnan.

For previous introduction see 94108.

100330 and 100331. RHODODENDRON GRIERSONIANUM Balf. and Forr.

A shrub 5 to 10 feet high, native to western Yunnan. The narrowly lanceolate leaves, 4 to 8 inches long, are green above and covered beneath with a loose whitish to buff woolly tomentum. The funnel-campanulate flowers, in clusters of 5 to 12, are 2 to 3 inches long and are bright geranium-scarlet, dappled inside with darker spots.

For previous introduction see 97665.

100330. F. 29762.

100331. F. 30392.

100332 and 100333. RHODODENDRON BULLATUM Franch.

A loosely branched shrub up to 8 feet high, native to Yunnan. The branchlets are densely and softly woolly, the elliptic-ovate leaves, 2 to 4 inches long, are puckered above and loosely woolly pubescent beneath, and the broadly tubular pink-tinged white flowers, 2 to 3 inches long, are borne in terminal clusters.

100332. F. 30393.

100333. G. F. 16.

100334. RHODODENDRON CALOXANTHUM Balf. and Farr.

F. 29647. A shrub 3 to 5 feet high, native to northeastern Burma between 11,000 and 12,000 feet altitude. The leathery broadly elliptic to orbicular leaves, 2 inches across, are dark green above and pale glaucous green beneath with scattered glandular hairs. The campanulate

100281 to 100364—Continued.

citron or sulphur-yellow flowers, over 1 inch long, are borne in 4- to 6-flowered umbels.

100335. RHODODENDRON CANTABILE Balf. f.

F. 30395.

For previous introduction and description see 98459.

100336. RHODODENDRON CHAETOMALLUM Balf. and Forr.

F. 30539. A shrub 4 to 5 feet high, with thin twiggy branches densely clothed with branched bristly hairs. The oblong-ovate leathery leaves are about 4 inches long, dark olive green above, and covered beneath with tawny wool. The deep-crimson tubular-campanulate flowers, 2 inches long, are borne in 4- to 6-flowered terminal umbels. It is native to Tibet and Yunnan between 11,000 and 13,000 feet altitude.

100337. RHODODENDRON DECORUM Franch.

F. 30887. A western Chinese evergreen shrub with glabrous leaves, glaucous beneath, and broadly bell-shaped white or pink flowers 2 inches across.

For previous introduction see 97661.

100338. RHODODENDRON EUCHAITES Balf. and Forr.

F. 29545. A shrub or small tree 15 to 20 feet high, closely related to *R. neriflorum*, native to northeastern Burma and adjacent Yunnan. The oblong to oval leaves, 2 to 4 inches long, are dark green and smooth above and white waxy beneath. The bright-crimson fleshy tubular-campanulate flowers are 1 to 2 inches long and are borne in umbels of 5 to 12.

100339 and 100340. RHODODENDRON FACETUM Balf. and Ward.

A tree 15 to 20 feet high, with the branchlets covered with fine white or tawny farinose pubescence, native to rain forests at 9,000 feet altitude in northeastern Burma and adjacent Yunnan. The oblong-elliptic to oblong-lanceolate leathery leaves are 5 to 8 inches long, and the fleshy tubular-campanulate flowers, 2 inches long, are scarlet with deeper spots.

100339. F. 29926.

100340. F. 30375.

100341. RHODODENDRON FICTOLACTEUM Balf. f.

F. 30893. A tree up to 45 feet high, with cinnamon-tomentose branchlets, native to Yunnan. The oblong-ovate to oblanceolate leaves are 6 to 12 inches long, dark green and rugulose above and clothed with buff to rusty brown tomentum beneath. The obliquely campanulate flowers, 2 inches long and twice as broad, vary from white to creamy white or rose tinted, with a deep-crimson basal blotch and radiating spots, and are borne in corymbs of 12 to 15 flowers each.

100342. RHODODENDRON GLISCHRUM Balf. and Smith.

G. F. 2. A tree up to 25 feet high, native to Yunnan and Burma. The oblanceolate leaves, 4 to 10 inches long, are bright green above and are densely hispid with long curved setae beneath. The campanulate flowers, 2 inches long, are deep rose with a crimson blotch at the base and are borne in a racemose umbel of about 10.

100343. RHODODENDRON HABROTTRICHUM Balf. and Smith.

F. 29588. A shrub 4 to 10 feet high, with branchlets densely clothed with coarse glandular bristles. The elliptic-oblong leathery leaves, 4 to 7 inches long, are dark green above and pale green beneath, and the funnel-campanulate flowers, 2 inches long, are white or

100281 to 100364—Continued.

pale-rose and are borne in compact, many-flowered umbels. It is native to Yunnan.

100344 and 100345. RHODODENDRON HIPPOPHAEOIDES Balf. and Smith.

For previous introduction and description see 98465.

100344. G. F. 5. 100345. G. F. 21.

100346. RHODODENDRON KYAWI Lace and Smith.

F. 29929. A shrub 15 to 20 feet high, native to northeastern Burma. The oblong to oblong-oval leaves, 6 to 12 inches long, are bright green above and pale green beneath, and the tubular-campanulate flowers, 2 to 3 inches long, are deep crimson and are borne in racemose corymbs of 12 to 16.

100347. RHODODENDRON LEPTOTHRIUM Balf. and Forr.

G. F. 23. A shrub 2 to 5 feet high, with leaves bright green on both sides and purple-red flowers; found at 10,500 feet altitude in Yunnan.

For previous introduction see 94042.

100348. RHODODENDRON LITIENSE Balf. and Forr.

G. F. 3. A shrub 4 to 9 feet high, with densely glandular branchlets, native to Yunnan. The thin, leathery, oblong to oblong-oval leaves, 2 to 3 inches long, are green above and glaucous beneath, and the widely campanulate clear-yellow flowers, 1 inch long, are borne in racemose umbels of 5 or 6.

100349. RHODODENDRON MEGALYX Balf. and Ward.

F. 29809. A bushy tree 10 to 16 feet high, native to northeastern Burma between 7,000 and 9,000 feet altitude. The elliptic to obovate-elliptic leaves, 4 to 6 inches long, are glabrous above and glaucous with small scales beneath. The fragrant white flowers, in clusters of about five, have a bell-shaped calyx 1 inch long, and the broadly funnel-shaped corolla is more than 2 inches long.

100350. RHODODENDRON PRONUM Tagg. and Forr.

G. F. 26. A stunted prostrate shrub 3 to 10 feet high, native to Yunnan between 12,000 and 15,000 feet altitude. The oblong-elliptic to oblanceolate leaves, 1 to 3 inches long, are dull and slightly rugulose above and covered beneath with dull-gray to fawn loosely felted tomentum. The obliquely campanulate flowers, more than an inch long, are creamy yellow with copious deep-crimson markings and are borne in a racemose umbel of 8 to 12 flowers surrounded by the persistent bud scales and bracts.

100351 and 100352. RHODODENDRON PROSTRATUM W. W. Smith.

A prostrate shrub with bristly branchlets 4 inches high, native to Yunnan between 15,000 and 16,000 feet altitude. The broadly oblong-elliptic leaves, less than 1 inch long, are glossy and reticulate above and densely covered beneath with brown scales. The pink-violet, red-spotted flowers, less than 1 inch long, are widely funnel-shaped and are borne in small terminal clusters.

100351. F. 30543. 100352. F. 30891.

100353. RHODODENDRON RACEMOSUM Franch. **Mayflower rhododendron.**

G. F. 10.

For previous introduction and description see 98471.

25842-34—6

100281 to 100364—Continued.

100354. RHODODENDRON SPERABILE Balf. and Farr.

F. 30912. A shrub 3 to 6 feet high, native to northeastern Burma between 10,000 and 12,000 feet altitude. The lanceolate to elliptic leaves, 2 to 4 inches long, are dark green above and clothed beneath with pale-cinnamon to tawny thick woolly tomentum. The fleshy tubular-campanulate flowers, 1 to 2 inches long, are scarlet, marked at the base with dark spots, and are borne in 4- or 5-flowered terminal umbels.

100355 to 100358. RHODODENDRON STEWARTIANUM Diels.

A graceful shrub 3 to 7 feet high, native to the Burma-Yunnan border between 10,000 and 14,000 feet altitude. The leathery elliptic to obovate leaves, 2 to 5 inches long, are bright green above and covered beneath with a thin cream-yellow farinose indumentum. The tubular-campanulate flowers, 2 inches long, vary from pure white or soft yellow through white flushed rose to deep rose margined with deep crimson.

100355. G. F. 4. 100357. F. 29685.

100356. F. 29663. 100358. F. 30533.

100359. RHODODENDRON SUB-EROSUM Balf. and Forr.

F. 29687. A shrub 5 to 7 feet high, closely resembling *R. yunnanense*, native to Yunnan. The evergreen oblanceolate to obovate leaves, 2 to 3 inches long, are smooth above but bristly on the margin, with fleshy scales beneath. The slightly irregular flowers, about 1 inch long, are faintly flushed rose with deep-rose markings and are borne in terminal or lateral 3- to 5-flowered clusters.

100360. RHODODENDRON TALIENSE Franch.

G. F. 1. A loosely branched shrub 4 to 8 feet high, native to Yunnan. The broadly lanceolate to oblong-ovate leaves, 2 to 5 inches long, are dark green and rugulose above and covered beneath with a tawny feltlike tomentum. The funnel-campanulate flowers, 1 to 2 inches long, are clear cream yellow or flushed rose with deep-crimson markings and are borne in umbels of 10 to 15 flowers.

100361. RHODODENDRON TEPHROPEPLUM Balf. and Farr.

F. 29655. A flow shrub 2 to 4 feet high, with stiff branches, native to the Burma-Tibet border at 14,000 feet altitude. The oblong-ovate leaves, 1 to 2 inches long, are slightly scaly above and densely scaly beneath with small black scales. The magenta-rose flowers, with crimson-purple tubes 1 inch long, are borne in terminal clusters of 3 or 4 flowers each.

100362. RHODODENDRON TRAILLIANUM Forr. and Smith.

F. 30531. A shrub or small tree, up to 30 feet high, native to Yunnan. The elliptic to broadly oblong-lanceolate leaves, 3 to 6 inches long, are glabrous above and clad beneath with a suedelike green-gray or dull tawny tomentum. The funnel-campanulate flowers, 1 to 2 inches long, are white or rose white with deep-crimson spots and are borne in racemose umbels of 10 to 15 flowers.

100363. RUBUS LINEATUS Reinw. Rosaceae.

F. 29971. A perennial herb with very few prickles, native to the Himalayas in India and Java. The palmately divided leaves have 3 to 5 coriaceous lanceolate leaflets, 5 inches long, silky silvery tomentum beneath, and the white flowers, 1 inch across, borne in elongated silvery panicles, are followed by edible pink to yellow fruits.

100281 to 100364—Continued.

100364. *STACHYURUS HIMALAICUS* Hook. f. and Thoms. Stachyuraceae.

F. 29930. A small tree, native to the eastern temperate slopes of the Himalayas in India. The ovate membranous leaves, 6 inches long, have serrate margins, and the small flowers, in erect spikes 2 to 3 inches long, are followed by fleshy berries the size of a small pea.

100365 to 100368.

From Guatemala City, Guatemala. Cuttings presented by Col. Victor E. Ruehl, Caldwell, N.J. Received June 24, 1932.

100365 to 100367. *CINCHONA* spp. Rubiaceae.

100365. *CINCHONA* sp.

Cautarea; Quina blanca from Yutiopa.

100366. *CINCHONA* sp.

No. 5.

100367. *CINCHONA* sp.

No. 4.

100368. *EUPHORBIA LANCIFOLIA* Schlecht. Euphorbiaceae.

Irbut. A fleshy plant with broadly lanceolate dark-green leaves about 3 inches long and inconspicuous small flowers in terminal and axillary cymes. Native to southern Mexico. Introduced for its medicinal properties.

100369. *SACCIOLEPIS CONTRACTA* (Wight and Arn.) Hitchc. Poaceae.
Grass.

From Hawaii. Seeds presented by J. M. Westgate, director, through C. P. Wilsie, agronomist, Hawaii Agricultural Experiment Station, Honolulu. Received June 22, 1932.

Glennwood grass; an annual glabrous grass with erect stems up to 3 feet high and flat leaves 2 to 4 inches long. The spike-like panicle is about 2 inches long. Native to Hawaii.

100370 to 100376. *ORYZA SATIVA* L. Poaceae. Rice.

From Australia. Seeds presented by the Rice Research Station, Yanco, New South Wales. Received June 16, 1932.

Introduced for the use of Department specialists interested in cereal investigations.

100370. *Caloro*. Selection 21.

100371. *Caloro*. Selection 46.

100372. *Caloro*. Selection 316.

100373. *Colusa*. Selection 180.

100374. *Colusa*. Selection 188-1.

100375. Selection 2179-6.

100376. Selection 2188.

100377. *CEDRELA ODORATA* L. Meliaceae. Cigarbox-cedar.

From Hawaii. Seeds presented by Harold Lyon, in charge, department of botany and forestry, experiment station of the Hawaiian Sugar Planters' Association, Honolulu. Received June 16, 1932.

For previous introduction and description see 98824.

100378. *CASTANEA HENRYI* (Skan) Rehd. and Wils. Fagaceae. Chestnut.

From China. Seeds collected by Peter Liu and sent through Owen L. Dawson, agricultural commissioner, Shanghai. Received January 7, 1932. Numbered in June 1932.

Chu Lee or *Chun Lee*, pearl chestnut; an edible chestnut from Chekiang Province. The tree becomes 25 to 30 feet high, with oblong-lanceolate long-acuminate leaves, green on both sides. The burs are either solitary or two in a bunch and contain usually but one seed.

For previous introduction see 95633.

100379 to 100467. *SOLANUM TUBEROSUM* L. Solanaceae. Potato.

From Peru. Tubers collected by H. G. MacMillan and C. O. Erlanson, Bureau of Plant Industry. Received June 28, 1932.

Nos. 100379 to 100413 were collected in May 1932 in the region of Cuzco, at 11,000 feet altitude.

100379. No. 281. Small round pink tubers with deep round eyes and yellow-white flesh.

100380. No. 282. Large round pink tubers with deep eyes having long brows and white flesh.

100381. No. 283. Small long flattened pink tubers with pink eyes, medium deep and yellow-white flesh.

100382. No. 284. Small irregularly round purple tubers with deep round small eyes and yellow-white flesh.

100383. No. 285. Small long white tubers with shallow elongated eyes and white flesh.

100384. No. 286. Small elongated purple tubers with thick skin, long shallow eyes, and white flesh.

100385. No. 287. Elongated red tubers of medium size with elongated red eyes and white flesh.

100386. No. 288. Elongated purple tubers of medium size with shallow elongated eyes and white flesh with slightly purple vascular ring.

100387. No. 289. Medium size, irregularly round white tubers with deep round white eyes and yellow-white flesh.

100388. No. 290. Large round pink and white mottled tubers with round shallow eyes and yellow-white flesh.

100389. No. 291. Large elongated black tubers with slightly elongated shallow eyes and white flesh with a purple vascular ring.

100390. No. 292. Large irregularly round pink tubers mottled with white, deep round pink eyes, and white flesh.

100391. No. 293. Small elongated pink tubers mottled with white, shallow elongated eyes, and white flesh.

100392. No. 294. Irregularly round yellow tubers of medium size with medium shallow pink eyes and yellow flesh.

100393. No. 295. Curved elongated yellow-white tubers with shallow white eyes and yellow-white flesh.

100394. No. 296. Ovate flattened black tubers mottled with white, which have medium shallow eyes and very white flesh.

100395. No. 297. Small ovate, pink and white mottled tubers with round shallow eyes and white flesh.

100379 to 100467—Continued.

100396. No. 298. Irregularly round white tubers with deep round white eyes and yellow-white flesh. Found in black soil.
100397. No. 299. Large ovate smooth red and white mottled tubers with round shallow eyes and white flesh.
100398. No. 300. Small dark-red elongated pointed tubers with shallow elongated eyes and white flesh with a red vascular ring.
100399. No. 301. Small white elongated tubers slightly mottled with red with shallow elongated eyes and very white flesh.
100400. No. 302. Large irregularly round pink tubers with deep round red eyes and white flesh.
100401. No. 303. Medium-sized irregularly round red-purple tubers with round shallow eyes and yellow flesh.
100402. No. 304. Medium-sized irregularly round red-purple tubers with deep elongated eyes and yellow flesh.
100403. No. 305. Irregularly ovate medium-sized, black-purple tubers with deep long eyes and white flesh flecked with purple.
100404. No. 306. Large red elongated tubers with deep elongated eyes and yellow flesh.
100405. No. 307. Medium-sized red and white mottled ovate tubers with deep elongated eyes and white flesh.
100406. No. 308. Medium-sized ovate tubers, very much mottled with red and white, which have shallow elongated eyes and white flesh.
100407. No. 309. Small irregularly round red and white mottled tubers with a thick skin, deep eyes, and yellow-white flesh.
100408. No. 310. Flattened ovate smooth tan tubers with shallow eyes and white flesh.
100409. No. 311. Small irregularly round pink tubers with deep round eyes and very white flesh.
100410. No. 312. Small irregularly round white tubers with deep round eyes and white flesh.
100411. No. 313. Small elongated and pointed red tubers with shallow eyes and white flesh.
100412. No. 314. Large round white tubers with shallow eyes and white flesh.
100413. No. 315. Small elongated mottled red tubers with numerous bright red eyes and white flesh.
100414. No. 316. A wild variety collected in the region of Ckaira, Peru, May 15, 1932, at 11,000 feet altitude. Small round white tubers with shallow eyes and white flesh.
- Nos. 100415 to 100423 were bought in a market May 23, 1932, in the region of Machu Picchu.
100415. No. 327. Small round tubers with white skin, deep eyes, and white flesh.
100416. No. 328. Small round white tubers with deep and pink eyes and white flesh.
100417. No. 329. Medium-sized, dark-purple ovate tubers with shallow eyes and white flesh.
100418. No. 330. Medium-sized, dark-red ovate tubers with deep eyes and white flesh.
100419. No. 331. Medium-sized ovate pink tubers with deep eyes and white flesh.
100420. No. 332. Medium-sized, flattened-oval red tubers with long shallow eyes and white flesh.

100379 to 100467—Continued.

100421. No. 333. Medium-sized, flattened-oval red and white mottled tubers with shallow eyes and white flesh.
100422. No. 334. Small oval pink tubers with deep round eyes and white flesh.
100423. No. 335. Small round pink tubers with shallow eyes and white flesh.
- Nos. 100424 to 100466 were collected May 25, 1932, in the Cuzco Valley, Peru, at 11,000 feet altitude.
100424. No. 336. *Yurac-Suyto*. Narrow elongated purple tubers with shallow eyes and yellow flesh.
100425. No. 337. *Huayruro*. Large oval pink and purple mottled tubers with shallow eyes and white flesh.
100426. No. 338. *Sullu-sullu*. Small round purple tubers with very deep eyes and yellow-white flesh.
100427. No. 339. *Huallata-cusi*. Elongated purple tubers with medium deep eyes and white flesh with purple center and vascular ring.
100428. No. 340. *Puca-Tiquilla*. Large irregularly ovate purple tubers with deep eyes and white flesh.
100429. No. 341. *Yana-cusi*. Small ovate purple tubers with medium deep eyes and white flesh.
100430. No. 342. *Lequecho*. Small oval purple tubers mottled with white which have medium deep eyes and yellow flesh.
100431. No. 343. *Tomira-pueva*. Large dark-red oval tubers with deep eyes and white flesh.
100432. No. 344. *Socco-huayco*. Small round black tubers with deep eyes and yellow flesh with purple center.
100433. No. 345. *Verundones*. Large long purple tubers with deep eyes and yellow flesh.
100434. No. 346. *Chuño-ñahuí*. Small round white tubers mottled with purple which have deep eyes with prominent brow and white flesh.
100435. No. 347. *Trompus*. Large oval purple tubers with shallow eyes and white flesh streaked with purple.
100436. No. 348. *Sali-tomira*. Round medium-sized purple tubers with deep eyes and white flesh.
100437. No. 349. *Mora-Kompis*. Small round black and white mottled tubers with shallow eyes and white flesh.
100438. No. 350. *Chaquilla*. Medium-sized, dark-red elongated tubers with shallow eyes and white flesh.
100439. No. 351. *Yana-gguchillo*. Long narrow curved black tubers with thick skin, shallow eyes, and white flesh with purple in the center and a purple vascular ring.
100440. No. 352. *Paspa-Succho*. Small round white tubers with shallow pink eyes and white flesh.
100441. No. 353. *Puca-pumamaqui*. Narrow elongated pink tubers with shallow eyes and white flesh.
100442. No. 354. *Yana-ggucco*. Round purple medium-sized tubers with shallow eyes and yellow flesh flecked with purple.
100443. No. 355. *Yurac-tomira*. Small round white tubers with shallow eyes and white flesh.
100444. No. 356. *Tomira*. Small round pink tubers with deep eyes and yellow flesh.

100379 to 100467—Continued.

109445. No. 357. *Yana-Ruaña*. Medium-sized round purple tubers with deep eyes and yellow-white flesh.
102446. No. 358. *Puca-mama*. Small round dark red tubers with very deep eyes and yellow-white flesh.
100447. No. 359. *Huaycu-muscacha*. Round medium-sized purple tubers with deep eyes and white flesh.
100449. No. 360. *Puca-cusi*. Small round white tubers mottled with purple with deep eyes and white flesh.
100449. No. 361. *Kcompis*. Small round pink tubers with shallow eyes and white flesh.
100450. No. 362. *Yana-tiquilla*. Small round purple tubers with deep eyes and white flesh.
100451. No. 363. *Pogque-cusi*. Small round tubers with white skin tinged with purple, shallow eyes, and white flesh.
100452. No. 364. *Orcco-huaña*. Long narrow white tubers tinged with purple, deep eyes with wide brows, and very white flesh.
100453. No. 365. *Aequiñas-chipetinas*. Round purple medium-sized tubers with deep eyes and yellow-white flesh.
100454. No. 366. *Mora-Kompis*. Small round white tubers mottled with pink which have deep eyes and white flesh.
100455. No. 367. *Kanqueras*. Round medium-sized red tubers with deep eyes and white flesh.
100456. No. 368. *Yana-huaña*. Small round dark-red tubers with deep eyes and yellow-white flesh.

100379 to 100467—Continued.

100457. No. 369. *Mora-Quehuillo*. Very long curved white tubers mottled with purple with wide narrow eyes and white flesh with a purple vascular ring.
100458. No. 370. *Kcompis*. Small round pink tubers with shallow eyes and yellow-white flesh.
100459. No. 371. *Yana-Qquecco*. Round medium-sized purple tubers with deep eyes and yellow-white flesh with a pink vascular ring.
100460. No. 372. *Cuchauma*. Oblong purple tubers with deep eyes and white flesh.
100461. No. 373. *Yurac-Awa-caya*. Long narrow white tubers with shallow eyes and white flesh.
100462. No. 374. *Qquello-huaccoto*. Small round white tubers with medium deep eyes and white flesh.
100463. No. 375. *Huaccanquilla*. Small round pink tubers with shallow eyes and white flesh.
100464. No. 376. *Huasq-uiña*. Long red tubers with deep eyes and white flesh which is red at the eyes.
100465. No. 377. *Yurac-compis*. Small round white tubers with pink shallow eyes and yellow-white flesh.
100466. No. 378. *Tomira-veru*. Round medium-sized tubers with thick red skin, deep eyes, and white flesh.
100467. No. 280. Collected May 17, 1932, in the region of Cuzco, Peru, at 11,060 feet altitude. Small irregularly round red-purple tubers with deep round eyes and yellow-white flesh.

UNITED STATES DEPARTMENT OF AGRICULTURE

INVENTORY No. 112

Washington, D. C.

Issued September 1934

PLANT MATERIAL INTRODUCED BY THE DIVISION OF FOREIGN PLANT INTRODUCTION, BUREAU OF PLANT INDUSTRY, JULY 1 TO SEPTEMBER 30, 1932 (Nos. 100468-101157)

CONTENTS

	Page
Introductory statement.....	1
Inventory.....	3
Index of common and scientific names.....	27

INTRODUCTORY STATEMENT

Inventory no. 112 lists the introductions (nos. 100468-101157) received by the Division of Foreign Plant Introduction during the period from July 1 to September 30, 1932. It records the further kindness of Maj. Lionel de Rothschild and the Honorable Henry MacLaren in presenting additional seeds from the sixth Forrest expedition to southwestern China.

Nos. 100724-100798, *Solanum tuberosum*, collected by C. O. Erlanson and H. G. MacMillan, represent the last collection from that expedition to South America, together with various miscellaneous collections (100688-100709, 100713-100718, 100833-100837) gathered in the same territory.

The principal collections represent very large special collections made for Department specialists, as, for example, two sugar collections, one from Charles H. Thrall, Habana, Cuba (101115-101130), and one from the experiment station of the Hawaiian Sugar Planters' Association, Hawaii (101028-101057); forage plants, chiefly grasses, from New Zealand (100660-100676), and from Wales (100678-100681); a collection of cinchona, Guatemalan cuttings, from Colonel Ruehl (100799-100832); and seeds purchased from the Hindustan Nursery Co., Calcutta, India (100986-100988), and the Chandra Nursery, Rhenock, Sikkim State, Bengal (101064).

The botanical determinations of these introductions have been made and the nomenclature determined by the late H. C. Skeels,¹ who had general supervision of this inventory.

KNOWLES A. RYERSON,
Principal Horticulturist, in Charge.

DIVISION OF FOREIGN PLANT INTRODUCTION,
Washington, D.C., November 15, 1933.

¹ Died Jan. 3, 1934.

INVENTORY²

100468 and 100469.

From Palestine. Cuttings presented by A. Khazanoff, Jewish Colonization Society, Haifa. Received July 2, 1932.

100468. *CERATONIA SILIQUA* L. Caesalpiaceae.
Carob.

100469. *FICUS SYCOMORUS* L. Moraceae.
Sycomore fig.

100470 to 100475. *FRAGARIA* spp. Rosaceae. Strawberry.

From Australia. Plants presented by Herbert J. Rumsey & Sons, Ltd., Dundas, New South Wales. Received June 29, 1932. Numbered in July 1932.

A collection of Australian strawberries, introduced for the use of Department specialists.

100470. *FRAGARIA* sp.

Captain Cook.

100471. *FRAGARIA* sp.

Creswell's Seedling. A variety which forms few runners.

100472. *FRAGARIA* sp.

Illawarra.

100473. *FRAGARIA* sp.

Port Macquarie.

100474. *FRAGARIA* sp.

Phenomenal.

100475. *FRAGARIA* sp.

Rhodes Special. A very early variety.

100476 to 100478. *CAPSICUM ANNUM* L. Solanaceae. Common redpepper.

From Spain. Seeds from the Murcia district, presented through Señor Miquel de Echegaray, agricultural attaché, Spanish Embassy, Washington, D.C. Received June 22, 1932. Numbered in July 1932.

A collection of the best commercial varieties of redpeppers grown in the Murcia district of Spain.

100476. *Pimiento del pico.*

100477. *Pimiento gordo.*

100478. *Pimiento morrón.*

100479. *LOLIUM PERENNE* L. Poaceae. Perennial ryegrass.

From Manchuria. Seeds presented by L. Pftisin. Received June 27, 1932. Numbered in July 1932.

Collected near Harbin in March 1932 and introduced for the use of Department specialists.

100480. *ARGANIA SPINOSA* (L.) Skeels (*A. sideroxylon* Roem. and Schult.). Sapotaceae. Argan.

From Morocco. Seeds presented by H. Brayard. Ingenieur Horticole, Directeur de la Ferme Experimentale, Marrakech. Received June 24, 1932. Numbered in July 1932.

The Argan tree of western Morocco is endemic to that part of the African Continent. It grows to a large size and bears an abundance of very acid fruits, somewhat resembling small plums, that are eaten by cattle and goats. The seeds are very thick-walled and contain an oil which is used by the natives as a food and also for illuminating purposes.

For previous introduction see 91650.

100481. *IPOMOEA BATATAS* (L.) Poir. Convolvulaceae. Sweetpotato.

From Peru. Tubers collected by H. G. MacMillan and C. O. Erlanson, Bureau of Plant Industry. Received June 28, 1932. Numbered in July 1932.

No. 317. Collected May 17, 1932, in the region of Cuzco at 11,000 feet altitude. Large, elongated, red tubers with white flesh mottled with purple and purple centers.

100482 to 100496.

From China: Seeds collected by the sixth Forrest expedition, 1930-32, to southwestern China and presented by Maj. Lionel de Rothschild, London, England. Received July 1, 1932.

100482. *ANAPHALIS CUNEIFOLIA* Hook. f. Asteraceae.

No. 30519. A perennial alpine herb 6 to 12 inches high, native to Sikkim, India. The slender ascending stems are soft woolly, the linear-oblong to spatulate leaves are 1 to 2 inches long, and the small woolly flower heads are borne in corymbose clusters.

100483 to 100485. *ASTER* spp. Asteraceae.

² It should be understood that the names of varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Division of Foreign Plant Introduction, and, further, that the printing of such names here does not constitute their official publication and adoption to this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identification, therefore, must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this division, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

100482 to 100496—Continued.

100483. *ASTER FUSCESCENS* Bur. and Franch.

No. 30444. A stout rigid perennial about a foot high, with ascending stems and broadly ovate or roundish leaves about 2 inches long, the lowermost with long petioles, and flower heads half an inch across in rather dense corymbs. Native to Szechwan, China.

100484. *ASTER* sp.

No. 30443.

100485. *ASTER* sp.

No. 30524.

100486. *DORONICUM YUNNANENSE* Hort. Asteraceae.

No. 30434. A name for which a place of publication and a description have not been found.

100487. *ERIGERON MULTIRADIATUS* (Lindl.) C. & B. Clarke. Asteraceae. Himalayan fleabane.

No. 30517. A beautiful alpine composite native to wet grassy places the whole length of the Himalayan range from 7,000 to 12,000 feet altitude. It is a pubescent or hirsute herb up to 10 inches high, with simple scapellike leafy stems and numerous radical leaves. The oblanceolate leaves, narrowed into a rather long petiole, are 4 to 8 inches long.

For previous introduction see 100190.

100488. *HEDYSARUM* sp. Fabaceae.

No. 30525.

100489. *MEGACARPAEA DELAVAYI* Franch. Brassicaceae.

No. 30514. An alpine perennial with a thick rhizome and an erect stem 1 to 2 feet high. The pinnatisect leaves are up to 6 inches long, and the small violet or purplish flowers are in dense corymbs. Native to southwestern China.

For previous introduction see 100205.

100490. *NARDOSTACHYS JATAMANSI* (W. M. Jones) DC. (*N. grandiflora* DC.). Valerianaceae.

No. 30435. A low perennial herb 1 to 2 feet high, native to the alpine Himalayas in Sikkim, India. The lanceolate-spatulate radical leaves are 6 to 8 inches long, and the tubular-campanulate rosy flowers, one fourth inch long, are in small heads which are gathered into cymes.

100491. *PEGAEOPHYTON SINENSE* (Hemsl.) Hayek and Hand.-Mazz. Brassicaceae.

No. 30428. A stemless plant, possibly a biennial, 2 to 3 inches high, with a rather dense rosette of very narrow leaves and small flowers, half an inch across, borne singly on short peduncles. Native to western China.

100492. *SALVIA EVANSIANA* Hort. Menthaceae. Sage.

No. 30433. A name for which a place of publication and a description have not been found.

100493. *SAXIFRAGA* sp. Saxifragaceae. Saxifrage.

No. 30441. A species which somewhat resembles *S. rufescens*.

100494 to 100496. *SENECIO* spp. Asteraceae.10494. *SENECIO STENOGLOSSUS* Franch.

No. 30431. A perennial herb with very slender hairy stems, 1 to 2 feet high, and reniform or cordate leaves about 5 inches long. The brownish flower heads are in corymbose racemes. Native to Yunnan.

100495. *SENECIO* sp.

No. 30430.

100496. *SENECIO* sp.

No. 30455.

100497 to 100499.

From Australia. Seeds presented by R. Allsop manager, Queensland Acclimatisation Society. Received June 30, 1932. Numbered in July 1932.

100497. *CARICA PAPAYA* L. Papayaceae. Papaya.

Long Tom (2 A.S. strain).

100498. *CARICA PAPAYA* L. Papayaceae. Papaya.

New Era (2 D.S. strain).

100499. *PASSIFLORA QUADRANGULARIS* L. Passifloraceae. Giant granadilla.

Long type (2 D.S. strain).

100500 to 100618.

From China. Seeds collected by the sixth Forrest expedition, 1930-32, to southwestern China and presented by Maj. Lionel de Rothschild, London, England. Received July 2, 1932.

100500. *ABIES CHENSSENSIS* Van Tiegh. Pinaceae. Fir.

No. 30663. A tree up to 120 feet high, native to central China. The horizontally spreading, two-ranked leaves, about 1 inch long, are shining dark-green above, with two gray-green bands beneath. The cinnamon-brown, ovoid-oblong cones are 3 to 5 inches long.

100501. *ABIES DELAVAYI* Franch. Pinaceae. Fir.

No. 30975. A tall tree, often 100 feet high, native to western China. The slightly grooved branchlets are lustrous red brown, and the emarginate linear leaves, about 1 inch long, are revolute on the margin, dark green above and with two white bands beneath. The violet-black, cylindrical to ovoid cones are 2 to 4 inches long, and the scales are nearly 1 inch wide.

For previous introduction see 98365.

100502 to 100508. *ACER* spp. Aceraceae. Maple.100502. *ACER CAMPBELLII* Hook. f. and Thoms.

No. 29743. Variety *yunnanense* of one of the principal maples of the northeastern Himalayas, where it grows at altitudes over 7,000 feet. The beautiful green leaves with their red stalks make this tree decidedly ornamental. The light-gray, moderately hard wood is used for planking and for cabinetwork.

100503. *ACER DAVIDI* Franch.

No. 29881. A native Chinese maple, 50 to 60 feet high, with large, oval, heart-shaped, coarsely toothed leaves and long pendent clusters of samaras.

For previous introduction see 97498.

100504. *ACER LAXIFLORUM* Pax. (*A. Forrestii* Diels).

No. 30726. A tree up to 50 feet high, with cordate-oblong leaves 4 inches long, having 2 to 4 short lobes near the base and serrate margins. The yellowish flowers are borne in slender pendulous racemes and are followed by fruits with the wings spreading at right angles. It is native to western China.

For previous introduction see 99826.

100505. *ACER* sp.

G. F. 96.

100506. *ACER* sp.

G. F. 462.

100507. *ACER* sp.No. 29592. Closely related to *A. laevigatum*.100508. *ACER* sp.No. 30721. Closely related to *A. pazii*.

100500 to 100618—Continued.

100509 to 100511. *AMYGDALUS* spp. Amygdalaceae.

100509. *AMYGDALUS KANSUENSIS* (Rehder) Skeels.

G. F. 85-a. A thorny shrub, 6 to 10 feet high, with black stems and pink flowers which appear before the leaves. The small fruits, the size of a marble or larger, contain no flesh. This species occurs on dry arid loess slopes and endures temperatures of -10° to -20° F. It is an early flowering shrub, blooming at an altitude of 8,500 to 9,000 feet when the country is still covered with snow and the streams are frozen.

100510. *AMYGDALUS PERSICA* L. Peach.

G. F. 85.

100511. *AMYGDALUS* sp.

G. F. 316.

100512. *BERBERIS* sp. Berberidaceae. **Barberry.**

G. F. 75. Closely related to *B. yunnanensis*.

100513. *BERBERIS* sp. Berberidaceae. **Barberry.**

F. 30717.

100514. *BETULA* sp. Betulaceae. **Birch.**

F. 29410.

100515. *BETULA* sp. Betulaceae. **Birch.**

F. 30831.

100516. *BUDDLEIA FALLOWIANA* Balf. and Smith. Loganiaceae.

F. 30932. A graceful shrubby plant with silvery woolly foliage and small, white, fragrant flowers, with orange centers, in dense cylindrical spikes.

100517. *CARAGANA* sp. Fabaceae.

G. F. 95. Flowers yellow.

100518. *CARPINUS* sp. Betulaceae. **Hornbeam.**

F. 29607.

100519. *CARPINUS* sp. Betulaceae. **Hornbeam.**

G. F. 74.

100520. *CATALPA DUCLOUXII* Dode. Bignoniaceae.

G. F. 324. A small tree, native to central and western China, with ovate-cordate leaves 4 to 8 inches long. The rose-pink flowers, more than an inch long, are borne in corymbose clusters.

100521. *CEPHALOTAXUS FORTUNEI* Hook. Taxaceae. **Chinese plum-yew.**

G. F. 88. A small tree up to 30 feet high, native to central China. The linear leaves, 2 to 3 inches long, spread nearly horizontally and are glossy green above with two pale bands beneath, and the ovoid purple fruits are 1 inch long.

100522 to 100525. *CLEMATIS* spp. Ranunculaceae.

100522 and 100523. *CLEMATIS MONTANA* Buch-Ham. **Anemone clematis.**

An ornamental vigorous climber, 30 feet or more in length, with solitary, pure-white flowers. It is native to the Himalayas.

100522. F. 30725. A variety with large flowers.

100523. F. 30505. A variety with small flowers.

100524. *CLEMATIS RANUNCULOIDES* Franch.

G. F. 91. A clematis from southwestern China, with a short thick woody rhizome and an erect simple flowering stem 1 to 2 feet high. The prominently nerved leathery leaves are trifid or trilobed and from 1 to 2 inches long, and the 1 to 3 nodding flowers are rose colored. The plant strongly suggests a ranunculus.

100500 to 100618—Continued.

100525. *CLEMATIS* sp.

F. 30743.

100526 to 100528. *CLETHRA* spp. Clethraceae.

100526 and 100527. *CLETHRA DELAVAYI* Franch.

A Chinese shrub or small tree up to 50 feet high, with red branchlets and oblanceolate leaves which are pubescent beneath. The fragrant white flowers differ from those of the sweet pepperbush, *Clethra alnifolia*, in having red calyxes and in being in solitary racemes, while the sweet pepperbush has the racemes grouped together to form a panicle.

100526. F. 30956. The typical form.

100527. F. 30974.

100528. *CLETHRA* sp.

F. 29866.

100529. *CORYLOPSIS* sp. Hamamelidaceae.

F. 30968.

100530 to 100533. *COTONEASTER* spp. Malaceae.

100530. *COTONEASTER* sp.

F. 30553. Closely related to *C. acuminata*.

100531. *COTONEASTER* sp.

F. 30598.

100532. *COTONEASTER* sp.

G. F. 77. Closely related to *C. pannosa*.

100533. *COTONEASTER* sp.

G. F. 94. Closely related to *C. pannosa*.

100534. *CRATAEGUS HENRYI* Dunn. Malaceae. **Hawthorn.**

F. 30713. A handsome hawthorn from southwestern China, 10 to 20 feet high, with unarmed branches, leathery toothed but not lobed ovate leaves 1 to 3 inches long. The white flowers are followed by globose red fruits half an inch in diameter.

100535 to 100537. *DAPHNIPHYLLUM* spp. Euphorbiaceae.

100535. *DAPHNIPHYLLUM* sp.

F. 30409.

100536. *DAPHNIPHYLLUM* sp.

G. F. 90. Closely related to *D. beddomei*.

100537. *DAPHNIPHYLLUM* sp.

G. F. 332.

100538. *DECAISNEA FARGESII* Franch. **Lardizabalaceae.**

F. 30466. A handsome deciduous shrub up to 15 feet high, with large drooping pinnate leaves 3 feet long, greenish flowers in pendulous racemes a foot or more long, and deep-blue fruits 3 to 4 inches long. Native to western China.

For previous introduction see 99160.

100539. *DIAPENSIA PURPUREA* Diels. **Diapensiaceae.**

F. 30806. Forma *rosea*: a pink-flowered form of this low caespitose bushy evergreen shrub with leathery glabrous oblong-spatulate leaves less than an inch long. Native to western China.

For previous introduction see 99857.

100540. *DICHOTOMANTHES TRISTANIAECARPA* Kurz. **Amygdalaceae.**

F. 30966. A shrubby plant with oblong-ovate strongly serrate mucronate leaves an inch long, smooth above and woolly beneath, and flowers in terminal cymes. Native to southwestern China.

100500 to 100618—Continued.

100541. ENKIANTHUS DEFLEXUS (Griffith) C. Schneid. Ericaceae.

F. 29710. The whorled branches of this Himalayan shrub are characteristic of the entire genus and give the plant a peculiar appearance. The branchlets are red, and the margins and petioles of the obovate leaves, 1 to 3 inches long, are red when the leaves are young. The flowers, produced in dense drooping racemes, have yellow corollas, striped dark red, with darker lobes.

For previous introduction see 99862.

100542. ENKIANTHUS sp. Ericaceae.

G. F. 300.

100543. EPILOBIUM sp. Onagraceae.

G. F. 346.

0544. EUONYMUS sp. Celastraceae.

G. F. 42.

00545. EUONYMUS sp. Celastraceae.

G. F. 337.

100546. VIBURNUM sp. Caprifoliaceae.

F. 29497.

100547. EUONYMUS sp. Celastraceae.

F. 30716. Closely related to *E. crebria*.

100548. EUPTELEA PLEIOSPERMA Hook. f. and Thoms. Trochodendraceae.

G. F. 73. A tree 30 to 40 feet high, native to Tibet, with ovate-crenate leaves which are glaucous beneath and have very long acuminate tips. The slender-stalked red flowers, in axillary fascicles, appear before the leaves.

For previous introduction see 99864.

100549. FRAXINUS sp. Oleaceae. Ash.

F. 30563.

100550 to 100552. GAULTHERIA spp. Ericaceae.

100550 and 100551. GAULTHERIA TRICHOPHYLLA Royle.

A low evergreen shrub of densely tufted habit, 3 to 6 inches high, spreading by means of underground shoots; the slender, wiry, bristly stems are covered with small leaves, 12 or more to the inch. The narrow-oblong stalkless leaves, one fourth inch long and about one eighth inch wide, are smooth on both surfaces but bristly on the margins, glossy dark green above and pale beneath. The solitary bell-shaped pink flowers are borne in the leaf axils and are followed by blue-black fruits. Native to the Himalayas up to 13,000 feet altitude.

100550. F. 30556.

100551. F. 30879.

100552. GAULTHERIA sp.

F. 29803.

100553 to 100555. GORDONIA spp. Theaceae.

Closely related to *G. chrysantra*.

100553. G. F. 98.

100554. G. F. 103.

100555. F. 30964.

100556 to 100558. HYDRANGEA spp. Hydrangeaceae.

100556 and 100557. HYDRANGEA YUNNANENSIS Rehd.

A shrub about 3 feet high, with membranous oblong or oblong-lanceolate dentate light-green leaves 3 to 5 inches long. The white sterile flowers are over an inch across, and the blue fertile flowers are in nearly flat cymes. It is

100500 to 100618—Continued.

closely related to *H. davidii* and is native to Yunnan.

100558. F. 29755.

100557. F. 29842.

100558. HYDRANGEA sp.

F. 29624.

100559. HYPERICUM PATULUM HENRYI Veitch. Hypericaceae. Henry hypericum.

F. 30989. This variety is hardier than the typical form and sturdier in habit. The ovate dark-green leaves are 2 to 3 inches long, and the rich yellow flowers are about 2 inches wide. Native to Yunnan.

100560. HYPERICUM sp. Hypericaceae.

F. 29674. Closely related to *H. hookeri*.

100561. ILEX MICROCOCCA Maxim. Aquifoliaceae. Holly.

F. 29908. A holly with oblong papery leaves 3 to 4 inches long and very small red berries one sixth inch in length. Native to Japan and China.

100562. ILEX sp. Aquifoliaceae. Holly.

F. 30561. Closely related to *I. corallina*.

100563. ILICICUM sp. Magnoliaceae.

G. F. 76. Closely related to *I. yunnanensis*.

100564 to 100570. JUNIPERUS sp. Pinaceae. Juniper.

100564. JUNIPERUS RECURVA Buch.-Ham. Himalayan juniper.

F. 29591. A prostrate or erect shrub, or sometimes an erect tree up to 30 feet high, native to the temperate and alpine slopes of the Himalayas in India. The fastigate branches are decurved and then ascending with pendulous branchlets.

For previous introduction see 99736.

100565. JUNIPERUS SQUAMATA Buch.-Ham.

F. 30847. A decumbent shrub, native to the eastern Himalayas and western China. The thick branchlets are ascending at the tip and bear crowded blue-green leaves with two gray-white bands above. The globose-ovoid, blue-black fruits are one-fourth to one-third inch across.

100568 and 100567. JUNIPERUS SQUAMATA FARGESII Rehd. and Wils.

A tree up to 70 feet high with longer, narrower, and more spreading leaves than the usual shrub form, F. 30847 (No. 100565), and the fruits are ovoid. It is native to the China-Tibet border.

100568. F. 30560.

100567. F. 30972.

100568. JUNIPERUS SQUAMATA WILSONII Rehd.

F. 30918. An upright shrub up to 6 feet high, native to western China. The short branchlets are recurved at the tip, and the broadly lanceolate leaves, about one sixth inch long, are broader, shorter, and more crowded than those of the usual form.

100569 and 100570. JUNIPERUS WALLICHIANA Hook. f.

Varying from a shrub up to a tree 60 feet high, this juniper is native to the eastern Himalayas and western China. The slender branchlets bear bright-green scalelike leaves, and the blue-black ovoid erect fruits are nearly one half inch long.

100569. F. 30554.

100570. F. 30855.

100500 to 100618—Continued.

100571. *KETELEERIA DAVIDIANA* (Bertrand) Beissn. Pinaceae.

F. 30961. A coniferous tree, native to western China, which is closely allied to the firs. It sometimes becomes 100 feet tall, is of pyramidal habit, and has handsome glossy green firlike foliage. The tree is said to be somewhat tender to frost and therefore probably adapted for growing only in the southern half of the United States.

100572. *LEPTODERMIS* sp. Rubiaceae.

F. 29657.

100573. *LESPEDEZA FORMOSA* (Vogel) Koehne. Fabaceae. Purple bushclover.

F. 30580. An erect semishrubby plant 6 to 12 feet high, with trifoliate leaves of oblong leaflets and racemes of rose-purple flowers. It is native to Chosen.

For previous introduction see 94006.

100574. *LIGUSTRUM IONANDRUM* Diels. Oleaceae. Privet.

G. F. 321. A compact shrub 10 to 12 feet high, found among limestone boulders at 10,000 feet altitude in southwestern China. It has elliptical leaves and short terminal clusters of fragrant cream-colored flowers.

100575 to 100577. *PAEONIA* spp. Ranunculaceae. Peony.

100575 and 100576. *PAEONIA DELAVAYI* Franch.

A very attractive vigorous shrub 4 feet high, growing on steep slopes among limestone boulders and in alpine meadows between 10,000 and 13,000 feet altitude. The deep-crimson flowers are 3 inches in diameter. Native to southwestern China.

100575. G. F. 81.

100576. G. F. 322.

100577. *PAEONIA LUTEA* Delavay. Golden peony.

F. 30848. A shrubby Chinese peony with a short woody stem 1 or 2 feet high and deep-green, leathery, three-parted leaves, white beneath, and about a foot in length. The golden-yellow single or slightly double flowers are over 2 inches across.

100578. *PARASYRINGA SEMPERVIRENS* (Franch.) W. W. Smith. Oleaceae.

F. 30859. An evergreen rather privetlike shrub, up to 9 feet high, found in mountainous regions of Yunnan, up to 12,000 feet altitude. The foliage is leathery, the fragrant flowers are light creamy yellow, and the berries are black.

100579 to 100581. *PHILADELPHUS DELAVAYI* L. Henry. Hydrangeaceae. Mockorange.

A shrub 15 to 20 feet high, native to Yunnan. The remotely serrate ovate leaves, 2 to 4 inches long, are dark green above and tomentose beneath. The very fragrant flowers, nearly 2 inches across, have a violet-purple calyx and white petals slightly tinged with purple on the outside, and are borne in racemes.

For previous introduction see 99965.

100579. G. F. 343.

100580. F. 30377.

100581. F. 30723.

100582. *PHOEBE* sp. Lauraceae.

F. 30729.

100583. *PHOTINIA* sp. Malaceae.

F. 29760.

100500 to 100618—Continued.

100584. *PICEA LIKIANGENSIS* (Franch.) E. Pritz. Pinaceae. Spruce.

G. F. 104. A tree up to 80 feet high, native to western China. The light yellow-gray branchlets are sparingly hairy, the quadrangular, slightly compressed leaves, one half inch long, are white above, and the cones, about 2 inches long, have rhombic-ovate, erose, flexible scales.

100585. *PIERIS* sp. Ericaceae.

G. F. 72.

100586. *PINUS YUNNANENSIS* Franch. Pinaceae. Yunnan pine.

G. F. 86. A large forest tree, native to Yunnan. The long slender, drooping leaves are up to 10 inches long, and the cones, 2 to 4 inches long, have flat scales.

For previous introduction see 98378.

100587. *PIPTANTHUS* sp. Fabaceae.

G. F. 99.

100588. *PITTSOPORUM* sp. Pittosporaceae.

F. 30720.

100589. *POTENTILLA FRUTICOSA VEITCHII* (Wilson) Bean. Rosaceae. Veitch cinquefoil.

F. 30767. A very fine form from Hupé, with silky, hairy, gray-green leaves and white flowers.

For previous introduction see 99970.

100590. *PRUNUS* sp. Amygdalaceae.

F. 30705. A plum.

100591. *PRUNUS* sp. Amygdalaceae.

F. 30706. A plum.

100592. *PTEROLOBIUM* sp. Caesalpiniaceae.

F. 29972.

100593. *RHODOLEIA* sp. Hamamelidaceae.

G. F. 102. Closely related to *R. championii*.

100594 to 100600. *ROSA* spp. Rosaceae. Rose.

100594. *ROSA LONGICUSPIS* Bertol.

F. 30988. A rambling bush about 20 feet high, native to western China, with sparse short prickles, large, dark-green leaves, and white flowers 2 inches wide, in very large lax corymbs.

100595. *ROSA PRAELUCENS* Hort.

G. F. 79. A name for which a place of publication and a description have not been found.

100596. *ROSA* sp.

G. F. 92. Closely related to *R. moyesii*.

100597. *ROSA* sp.

G. F. 93. Flowers white.

100598. *ROSA* sp.

F. 97.

100599. *ROSA* sp.

F. 30549. Closely related to *R. sericea*.

100600. *ROSA* sp.

F. 30993. Closely related to *R. moyesii*.

100601 to 100603. *SORBUS* spp. Malaceae. Mountain-ash.

100601. *SORBUS HARROWIANA* (Balf. and Smith) Rehder.

F. 29775. A tree up to 40 feet high, native to China, with compound leaves made up of 3 to 9 oblong serrulate coriaceous leaflets 8 inches

100500 to 100618—Continued.

long. The small white flowers, in compound terminal corymbs 6 to 8 inches across, are followed by ovoid fruits a quarter of an inch in diameter.

For previous introduction see 93951.

100602. *SORBUS* sp.

F. 30970.

100603. *SORBUS* sp.

F. 30991.

100604 to 100606. *SPIRAEA* spp. Rosaceae. **Spirea.**

100604. *SPIRAEA* sp.

G. F. 80. Closely related to *S. canescens glaucophylla*.

100605. *SPIRAEA* sp.

F. 30863. Closely related to *S. sinobrahuaica*.

100606. *SPIRAEA* sp.

F. 31001. Closely related to *S. arcuata*.

100607. *STACHYURUS HIMALAICUS* Hook. f. and Thoms. Stachyuraceae.

F. 29930. A small tree native to the eastern temperate slopes of the Himalayas in India. The ovate membranous leaves, 6 inches long, have serrate margins, and the small flowers in erect spikes, 2 to 3 inches long, are followed by fleshy berries the size of a small pea.

For previous introduction see 100364.

100608. *SYRINGA* sp. Oleaceae. **Lilac.**

F. 30898. Closely related to *S. yunnanensis*.

100609. *TILIA CHINENSIS* Maxim. Tiliaceae. **Linden.**

F. 30558. A Chinese linden with long-stemmed roundish serrate leaves, ashly pubescent beneath, and oblong-linear bracts about as long as the petioles. Native to Kansu, western China.

100610. *TRIPTERYGIUM FORRESTII* Loesner. Celastraceae.

F. 30971. A shrub about 3 feet high, with oval crenulate serrate papery leaves 2 to 3 inches long and terminal panicles of small green-brown flowers. Native to open situations in the Tali Range, Yunnan.

100611 to 100614. *TSUGA* spp. Pinaceae. **Hemlock.**

100611. *TSUGA CHINENSIS* (Franch.) Pritz. **Chinese hemlock.**

G. F. 87. A large forest tree up to 150 feet high, native to western China. The branchlets are yellowish at first, later turning pale yellow-gray. The linear leaves, 1 inch long, are glossy, dark green above and have broad whitish bands beneath which later become inconspicuous. The ovoid cones, 1 inch long, have lustrous yellow-brown scales.

For previous introduction see 98384.

100612 and 100613. *TSUGA YUNNANENSIS* (Franch.) Masters. **Yunnan hemlock.**

A forest tree up to 150 feet high, with trunks 6 to 7 feet in diameter. The branchlets are covered with a rufous-gray pubescence, and the leaves, up to an inch long, are rounded at the apex and have white lines beneath. The small dull cones, 1 inch long, have fewer scales than those of *T. chinensis*. Native to western China at 11,000 feet altitude.

100612. G. F. 78.

100613. F. 30976.

100500 to 100618—Continued.

100614. *TSUGA* sp.

G. F. 83.

100615. *VACCINIUM DELAVAYI* Franch. **Vacciniaceae. Blueberry.**

F. 30986. A bushy shrub with grayish bark, leathery, shining-green, obovate leaves half an inch long, very small white flowers in small racemes, and small globose capsules. Native to Yunnan.

100616. *VACCINIUM* sp. **Vacciniaceae. Blueberry.**

F. 30688. Closely related to *V. fragile*.

100617. *VIBURNUM* sp. **Caprifoliaceae.**

F. 30727.

100618. (Undetermined.)

F. 29882.

100619 to 100632.

From Australia. Seeds presented by Edwin Ashby, Wittunga, Blackwood, South Australia. Received June 28, 1932. Numbered in July 1932.

100619. *ALYOGYNE HAKEAEFOLIA* (Giordano) Alefeld. **Malvaceae.**

An erect evergreen shrub, native to Australia, with narrow-lobed or deeply serrate leaves and large purple-lilac flowers with dark centers. It is closely related to cotton.

For previous introduction see 93829.

100620 to 100622. *CASSIA* spp. **Caesalpiniaceae.**

100620. *CASSIA ARTEMISIOIDES* Gaud.

Wormwood senna.

An erect bushy shrub covered with silky white tomentum. The leaves are made up of 3 to 6 pairs of linear-terete leaflets 1 inch long, and the yellow flowers are in short dense racemes. It is native to Australia.

For previous introduction see 90850.

100621. *CASSIA PLEUROCARPA* F. Muell.

A tall, erect Australian shrub with 4 or 5 rather distinct pairs of thick, oblong leaflets and loose racemes of yellow flowers.

100622. *CASSIA* sp.

100623. *CHORIZEMA ILLICIFOLIUM* Labill. **Fabaceae.**

A showy, graceful shrub from Western Australia, from 3 to 4 feet high, with brilliant orange-red, pea-shaped flowers. It blooms for many months in winter and spring.

100624. *CHORIZEMA NERVOSUM* T. Moore. **Fabaceae.**

An erect rigid shrub 12 inches high with pubescent branchlets, native to Western Australia. The broadly cordate leaves, one-half inch long, have undulate margins, and the small, orange-red, pea-shaped flowers are in loose racemes.

100625. *CLIANTHUS PUNICEUS* (Don) Soland. **Fabaceae. Red parrothead.**

A drooping undershrub, native to New Zealand, with dark-green pinnate leaves and long, pendulous racemes of bright-scarlet flowers.

100626 to 100628. *GREVILLEA* spp. **Proteaceae.**

100626. *GREVILLEA BIPINNATIFIDA* R. Br.

A prostrate or diffuse evergreen shrub 3 to 4 feet high, native to Western Australia. The broadly ovate leaves, 4 inches long and 3 inches wide, are twice divided into wedge-shaped segments. The silky pubescent, red flowers are in loose racemes 4 inches long or gathered together in a large terminal panicle.

100619 to 100632—Continued.

100627. *GREVILLEA BUXIFOLIA* (J. E. Smith) R. Br.

An evergreen shrub about 6 feet high, which stands cutting back well and produces an abundance of small pink flowers. It is native to South Australia.

100628. *GREVILLEA WILSONI* A. Cunn.

An erect shrub 3 to 5 feet high, with glabrous and glaucous branchlets, native to Western Australia. The leaves are 1 to 3 times ternately divided into narrow-linear or subulate, rigid, pungent-pointed segments 1 inch long. The brilliant-red flowers are borne in loose, erect, often-branched racemes.

100629. *HIBISCUS HUEGELII* Endl. Malvaceae.

Variety *alba*. A tall shrub, native to Australia, with 3- to 5-lobed coarsely toothed leaves 1 to 3 inches long and large white flowers, 4 to 5 inches across, with twisted petals.

For previous introduction see 95327.

100630. *HOVEA FUNGENS* Benth. Fabaceae.

A rigidly erect evergreen shrub up to 3 feet high, with linear-lanceolate, coriaceous, sharp-pointed leaves less than an inch long. The branches are covered from the bottom to the top with clusters of brilliant deep-blue flowers. The flowering season is long.

100631. *OXYLOBIUM LANCEOLATUM* (Vent.) Druce (*O. callistachys* Benth.). Fabaceae.

A tall evergreen shrub, native to Australia, with whorls of lanceolate leaves, 3 to 5 inches long, and yellow flowers in dense terminal racemes 6 inches long.

For previous introduction see 90862.

100632. *VIMINARIA DENUDATA* J. E. Smith. Fabaceae. Rush-broom.

An Australian shrub with rushlike stems up to 20 feet high, long, wiry, pendulous branches, leaves reduced to filiform petioles 6 to 9 inches long, and long, terminal racemes of orange-yellow flowers.

100633. *AMYGDALUS PERSICA* L. Amygdalaceae. Peach.

From Africa. Seeds presented by C. C. Taylor, American agricultural attaché, United States Department of Agriculture, Pretoria, Union of South Africa. Received June 24, 1932. Numbered in July 1932.

Vaull Mammoth. Introduced for the use of Department specialists interested in fruit breeding.

100634 to 100636. *SESAMUM ORIENTALE* L. Pedaliaceae. Sesame.

From Morocco. Seeds presented by Dr. E. Miede, Chef du Service de l'Agriculture, Directeur de la Station de Selection et d'Essais de Semences, Rabat. Received June 28, 1932. Numbered in July 1932.

100634. *Rouge de Damas*.

100635. *Du Haouz* (Maroc).

100636. *Rouge de Palestine*.

100637 to 100645.

From the Union of Soviet Socialist Republics. Seeds presented by the Nikita Botanic Garden, through the Bureau of Introduction, Institute of Plant Industry, Leningrad. Received June 30, 1932. Numbered in July 1932.

100637. *ASPARAGUS VERTICILLATUS* L. Convolvulariaceae.

No. 266. A semiwoody climbing vine, with stems 10 to 15 feet long, green, angled, flexuose

100637 to 100645—Continued.

branches, and filiform cladodes 2 inches long. The funnel-shaped, green-yellow flowers are in clusters of 1 to 4 and are followed by red berries a quarter of an inch in diameter. Native to Persia and Siberia.

For previous introduction see 91398.

100638. *EREMURUS TAURICUS* Stev. Liliaceae. Desertcandle.

No. 271. A large xerophytic perennial with a rosette of broadly linear, acute leaves a foot or more long and white flowers in a simple dense raceme over a foot long on a stout scape as long as the leaves. It is native to the mountains of Turkey and closely related to the yellow-flowered *E. spectabilis*.

100639. *LACTUCA SALIGNA* L. Cichoriaceae.

No. 71. A stiff, erect, biennial plant, 2 to 4 feet high, native to Europe. The lanceolate to oblong leaves are toothed or lobed on the margin and are upright against the stem. The small heads of pale-yellow flowers are crowded so as to appear to be clustered in a simple spike.

100640. *PAEONIA TENUIFOLIA* L. Ranunculaceae. Fringed peony.

No. 325. A hardy herbaceous perennial a foot or more high, densely leafy, with ternate, much-divided leaves and an erect dark-crimson flower about 3 inches across. It is native to the Caucasus region.

For previous introduction see 90640.

100641. *PAEONIA TRIERNATA* Pall. Ranunculaceae. Peony.

No. 324. A perennial herb, native to Siberia, usually about 3 feet high, with triternate leaves and purple flowers.

For previous introduction see 90641.

100642. *ROSA SPINOSISSIMA* L. Rosaceae. Scotch rose.

No. 350. A low shrub usually 3 to 4 feet high, with spreading or recurving branches and densely prickly branchlets. It is native to Europe. The compound leaves are made up of 5 to 11 orbicular serrate leaflets about an inch long, and the pink, white, or yellow flowers, 2 inches across, are solitary but borne on numerous short branchlets along the stems.

For previous introduction see 90645.

100643 to 100645. *TULIPA* spp. Liliaceae. Tulip.

100643. *TULIPA ALTAICA* Pall.

No. 601. A tulip from the Altai Mountains, with oblong-lanceolate leaves slightly exceeding the flowers. The flower segments are alternately lanceolate and spatulate-oblong.

100644. *TULIPA MICHELIANA* Hoog.

No. 604. A tulip, native to the Caspian region, with a pubescent scape 12 inches high. The lanceolate to linear-lanceolate leaves, usually four, are striped with brown and have undulate margins. The large, single flowers are lilac-scarlet outside and vermilion-scarlet inside, with black, lanceolate blotches at the base.

100645. *TULIPA SCHRENKII* Regel.

No. 281. A tulip from Turkistan, with broadly campanulate yellow or purple-yellow flowers borne on a stem nearly a foot high. The leaves are wavy margined.

100646 to 100658.

From the Philippine Islands. Seeds presented by Arthur F. Fischer, director, Bureau of Forestry, Manila. Received June 27, 1932. Numbered in July 1932.

100646 to 100658—Continued.

100646. *ALBIZZIA ACLE* (Blanco) Merr. Mimosaceae.

Akle. A large tree up to 100 feet high and 3 to 4 feet in diameter, native to the Philippines. It bears bipinnate leaves, with two pinnae each bearing 3 to 6 pairs of ovate leaflets 2 to 6 inches long, and yellow-green flowers, borne in small heads, followed by flat pods 10 to 15 inches long, constricted between the seeds.

For previous introduction see 94178.

100647. *ARTOCARPUS BLANCOI* (Elmer) Merr. Moraceae.

Antipolo. This tree, which closely resembles the true breadfruit, *A. communis*, is strictly wild, never cultivated, and has inedible fruits.

100648. *EUPHORIA DIDYMA* Blanco. Sapindaceae.

Alpay or *alupog*. A small attractive tree up to 50 feet high, with compound leaves made up of prominently veined leathery leaflets and compact terminal clusters of small flowers followed by green warty fruits an inch in diameter having a shell-like rind and juicy sweet translucent pulp enclosing a large seed. Native to the Philippine Islands.

100649. *GARDENIA PSEUDOPSISIDUM* (Blanco) Vill. Rubiaceae.

A small tree, 9 to 12 feet high, native to the Philippine Islands. The opposite leaves are lanceolate and acuminate, and the solitary, axillary, white flowers are followed by round fruits resembling guavas, but not edible.

100650. *HERITIERA LITTORALIS* Ait. Sterculiaceae.

Duñigon-late. A medium-sized tree with a dense crown and entire leathery leaves which are dark green above and silvery beneath. The hard durable wood is classed among the best of the Philippine hardwoods. The tree is a good ornamental and makes an excellent windbreak.

100651. *MYRISTICIA PHILIPPENSIS* Lam. Myristicaceae.

Duguan. A Philippine tree up to 75 feet high, with a slightly buttressed, somewhat irregular trunk. It has alternate entire evergreen leaves and small inconspicuous flowers in axillary clusters. The soft wood is not durable and is used locally for temporary construction, boxes, and dry measures.

100652. *PAHUDIA RHOMBOIDEA* (Blanco) Prain. Caesalpiniaceae.

Tindalo. A tree up to 4 feet in diameter, straight but not tall. The wood is hard, heavy, seasons well, and is rarely attacked by termites. It is a well-known Philippine cabinetwood.

100653. *PALAUQUIM LUZONIENSE* (Vill.) Vidal. Sapotaceae.

Nato. A large tropical evergreen tree with lanceolate or obovate acute leathery, dark-green leaves 5 inches long and small axillary brownish flowers. Native to Luzon, Philippine Islands.

100654. *PARKIA JAVANICA* (Lam.) Merr. (*P. timoriana* Merr.). Mimosaceae. **Kupang.**

A huge and remarkably handsome, quick-growing tree, attaining a height of over 120 feet, with a clear smooth trunk and beautiful, fine-leathery pinnate leaves. Native to the Malay Peninsula, Burma, etc. It has been introduced into Ceylon, where it has become well established. The long pods, which grow in clusters, contain a quantity of white, powdery, farinaceous substance.

100655. *SAPIUM LUZONICUM* (Vidal) Merr. Euphorbiaceae.

Balakat-gubat. An evergreen tree with alternate oval leathery elliptic leaves about 4 inches

100646 to 100658—Continued.

long, very small yellowish flowers, subtended by large bracts an inch long, in spike-like racemes. Native to the Philippines.

100656. *STREBLUS ASPER* Lour. Moraceae.

Malios or *aludig*. A drought-resistant tree with drooping branches and dark-green foliage. It produces small, yellowish, rather sweet fruits somewhat resembling corn kernels in appearance. Native to tropical Asia.

100657. *TERMINALIA NITENS* Presl. Combretaceae.

Sakat. A tropical evergreen tree, native to Luzon, Philippine Islands. The alternate, very smooth leaves are obovate, abruptly acuminate, and shining green above. The small inconspicuous flowers are in racemes about the same length as the leaves.

100658. *WRIGHTIA LANITI* (Blanco) Merr. Apocynaceae.

Lanete. A medium-sized tree native to the Philippines, with opposite, unequally pinnate leaves which have about four pairs of lanceolate, hairy leaflets. The fruit is a cylindrical follicle about 4 inches long. The tree exudes a milky sap.

100659. *SOJA MAX* (L.) Piper. Fabaceae. **Soybean.**

From Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received May 6, 1930. Numbered in July 1932.

No. 3820. *Chichibu duizu*. Purchased in Kumagaya, Japan, February 11, 1930. Large, oval, yellow-green beans, with pale hilum, which are used quite extensively in the Saitama Prefecture in Japan for the manufacture of green flour, utilized in the making of confections.

100660 to 100676.

From New Zealand. Seeds purchased from R. E. Alexander, director, Canterbury Agricultural College, Lincoln. Received July 1, 1932.

A collection of New Zealand forage plants introduced for the use of Department specialists.

100660 and 100661. *DACTYLIS GLOMERATA* L. Poaceae. **Orchard grass.**

100660. *Cocksfoot* strain.

100661. *Akaroa*.

100662 to 100674. *DANTHONIA* spp. Poaceae. **Grass.**

100662. *DANTHONIA BUCHANANI* Hook. f.

Strain C. A. C. 30: 10.8.

100663 to 100670. *DANTHONIA PILOSA* R. Br.

A perennial Australian grass, said to be an excellent pasture grass. It seeds freely and gives good fodder in early spring. This grass does well on dry clay hills or stony flats and is considered equally good either for sheep or cattle.

100663. A commercial variety.

100664. C. A. C. 31: 253.1.

100665. C. A. C. 31: 32.3.

100666. C. A. C. 31: 30.4.

100667. C. A. C. 31: 54.2.

100668. C. A. C. 31: 225.2.

100669. C. A. C. 31: 139.3.

100670. C. A. C. 31: 136.1.

100660 to 100676—Continued.

100671 to 100674. *DANTHONIA SEMIANNULARIS* (Labill.) R. Br. Wallaby grass.

A perennial, fine-leaved, tussocky grass, 1 to 2 feet high, which provides feed for the greater part of the year. It is said to be a good winter grass, will stand a great amount of grazing, and its palatability both for cattle and sheep is well known.

100671. A New Zealand commercial variety.

100672. C. A. C. 30: 5.1.

100673. C. A. C. 31: 114.3.

100674. C. A. C. 31: 28.8.

100675. *LOLIUM PERENNE* L. Poaceae. Perennial ryegrass.

2/2. A commercial strain.

100676. *TRIFOLIUM PRATENSE* L. Fabaceae. Red clover.

A New Zealand commercial strain.

100677. *ANANAS SATIVUS* Schult. f. Pineapple. Bromeliaceae.

From the American Virgin Islands. Plants presented by J. B. Thompson, director, Agricultural Experiment Station, St. Croix. Received May 20, 1930. Numbered in July 1932.

Blue Bond. The leaves of this variety are without marginal spines, and the small to medium-sized fruits, purple-green before they are ripe, are of excellent quality. The fruits are smaller and quite unlike the *Smooth Cayenne*.

100678 to 100681.

From Wales. Seeds purchased from the Welsh Plant Breeding Station, University College of Wales, Aberystwyth. Received July 6, 1932.

Introduced for the use of Department specialists.

100678 and 100679. *DACTYLIS GLOMERATA* L. Poaceae. Orchard grass.

100678. S.-26. Pasture-hay type.

100679. S.-29. *Cocksfoot*, a pasture type.

100680 and 100681. *PHLEUM PRATENSE* L. Poaceae. Timothy.

100680. S.-43. Pasture-hay type.

100681. S.-51. Leafy-hay type.

100682. *CASSIA TIMORIENSIS* DC. Caesalpinaceae.

From the Philippine Islands. Seeds presented by Manuel L. Roxas, director, Bureau of Plant Industry, Manila. Received July 6, 1932.

A rather low tree with slender, downy branches, pale-green leaves up to 9 inches long, bright-yellow flowers, and thin glossy flexible pods sometimes 6 inches long. The tree is distributed throughout the Malay Archipelago and the Philippine Islands.

For previous introduction see 94095.

100683 to 100687.

From the Philippine Islands. Seeds presented by Arthur F. Fischer, director, Bureau of Forestry, Manila. Received July 6, 1932.

100683. *CALOPHYLLUM BLANCOI* Planch. and Triana. Clusiaceae.

Bitanhol. An attractive tropical tree with opposite entire, linear-oblong, papery leaves about 8 inches long and small flowers in dense terminal and axillary racemes. Native to the Philippines.

100684. *DIPLODISCUS PANICULATUS* Turcz. Tiliaceae.

Baloho. A large shrub or small tree with alternate, oblong-elliptic, entire leaves, green above

100683 to 100687—Continued.

and densely white punctate beneath. The reddish flowers are in lax axillary and terminal panicles. Native to the Philippines.

100685. *MALLOTUS PHILIPPENSIS* (Lam.) Muell. Arg. Euphorbiaceae.

Banato. A small dioecious tree with long-stalked leaves, glabrous above, rusty tomentose beneath, and minutely scarlet dotted. The globose scarlet capsules, one third inch in diameter, are covered with a bright-red powder which is collected for export to be used in dyeing silk and in medicine. Native to India up to 4,500 feet altitude.

100686. *MANGIFERA ALTISSIMA* Blanco. Anacardiaceae.

Pahutan. A Philippine relative to the mango, which is found from northern Luzon to southern Mindanao, where it forms a large tree, sometimes 100 feet in height. The leaves are long, narrow, and pointed at both ends, and the small, fragrant, white flowers are borne in large numbers in branched clusters. The smooth, green or yellow mangolike fruits, 2 to 3 inches long, are used for making pickles.

100687. *TOONA CALANTAS* Merr. and Rolfe. Meliaceae.

Kalantas. A tall, ornamental, tropical tree with handsome pinnate foliage and whitish inconspicuous flowers in large terminal panicles. The capsule is over an inch long. In the Philippines, where this tree is native, the fragrant wood is of considerable commercial importance.

100688 to 100709.

From South America. Seeds collected by H. G. MacMillan and C. O. Erlanson, Bureau of Plant Industry. Received June 28, 1932. Numbered in July 1932.

100688. *ANNONA CHERIMOLA* Mill. Annonaceae. Cherimoya.

No. 269. From the market at Arequipa, Peru, May 10, 1932. Origin of fruit not known.

100689. *ANNONA MURICATA* L. Annonaceae. Soursop.

No. 273. *Guanabana.* From the market at Arequipa, Peru, May 8, 1932. Origin of fruit not known.

100690. *CAPSIUM ANNUM L.* Solanaceae. Common redpepper.

No. 380. From the market of Cuzco, Peru, May 18, 1932. A locally grown yellow redpepper, 3 inches long, grown at 11,000 feet altitude.

100691. *CUCUMIS MELO L.* Cucurbitaceae. Melon.

No. 29. *Melones limeños.* From the market of Temuco, Chile, February 23, 1932. A muskmelon about 6 inches in diameter, flattened endwise, striped longitudinally orange and green. The flesh is yellow and sweet.

100692. *ESCALLONIA MACRANTHA* Hook. and Arn. Escalloniaceae.

No. 34. *Siete Camisas.* From Ancud, Chiloe Island, Chile, March 6, 1932. A dense evergreen shrub, 6 to 10 feet high, native to the island of Chiloe. The shining dark-green, obovate leaves are 1 to 3 inches long, and the bright rose-red flowers, more than half an inch across, are in terminal racemes.

100693. *FRANCOA* sp. Saxifragaceae.

No. 118. From near Ancud, Chiloe Island, Chile, March 13, 1932. An herb with a rosette of leaves and a spike of capsules, growing in moist shaded places. Flowers not seen.

100694. *LIBERTIA* sp. Iridaceae.

No. 35. From Ancud, Chiloe Island, Chile, March 6, 1932. An herb 2 feet high, found on moist banks near the seashore. Flowers not seen.

100688 to 100709—Continued.

100685. *LIBERTIA* sp. Iridaceae.

No. 119. From near Ancud, Chiloé Island, Chile, March 13, 1932. A plant about 2 feet high, with narrow linear leaves; the fruit is a 3-valved capsule. Found in moist shaded situations. Flowers not seen.

100686. *SILENE ARMERIA* L. Silenaceae.
Sweet-william catchfly.

No. 32. Collected March 2, 1932, near Puerto Montt, Chile. A naturalized herb 8 inches high, with pink flowers, found in moist meadows.

100697. *LYCOPERSICON ESCULENTUM* Mill. Solanaceae. Tomato.

No. 321. From the market at Cuzco, Peru, May 17, 1932. Small round red tomatoes less than an inch in diameter. Grown at 11,000 feet altitude.

100698. *LYCOPERSICON ESCULENTUM* Mill. Solanaceae. Tomato.

No. 31. A cultivated variety from a garden near Temuco, Chile, February 26, 1932. An herb 3 feet high, with the stems covered with long-haired pubescence, yellow flowers, and round, perfectly smooth red fruits over an inch in diameter. It is said to be indigenous.

100699. *MUTISIA VICIAEFOLIA* Cav. Asteraceae.

No. 276. From the roadside near Cuzco, Peru, at 11,500 feet altitude, May 4, 1932. A composite from 3 to 6 feet high, with sub-woody purplish stems, vetchlike foliage, and solitary, terminal, or axillary large yellow flowers.

100700. *NEMASTYLIS PEARCEI* Baker. Iridaceae.

No. 323. Collected May 20, 1932, in open meadow at 11,500 feet altitude in the hills near Cuzco, Peru. A bulbous herb 8 inches high, with large dark-blue flowers very similar to an iris. The single root leaf is linear and plicate, and the blue flowers, less than an inch long, are 1 to 4 on the spathe.

100701. *PASSIFLORA MOLLISSIMA* (H. B. K.) Bailey. Passifloraceae. Softleaf passionflower.

No. 318. From the market at Cuzco, Peru, May 17, 1932. An edible variety with ovate pointed yellow fruits.

For previous introduction see 99783.

100702 to 100705. *PHASEOLUS* spp. Fabaceae.100702 and 100703. *PHASEOLUS LUNATUS* L. Lima bean.

Introduced for comparison with types now being grown on the Pacific coast.

100702. No. 268. From the market at Arequipa, Peru, May 7, 1932. White beans.

100703. No. 322. *Pallares*. Bought at Cuzco, Peru, May 24, 1932, but grown at Ica, Peru. A cultivated variety.100704 and 100705. *PHASEOLUS VULGARIS* L. Common bean.

100704. No. 320. From the market at Cuzco, Peru, May 17, 1932. A mixed sample of beans, grown at 11,000 feet altitude.

100705. No. 270. From the market at Arequipa, Peru, May 7, 1932. A mixed sample.

100706. *ROSA* sp. Rosaceae. Rose.

No. 30. From near Lago Puyehue, about 25 miles east of Osorno, Chile, February 26, 1932. A shrub 6 feet high, with pink flowers and bright-orange, pyriform-ovate hips, slightly bristly at the base. Growing wild in light loam in a roadside thicket.

100688 to 100709—Continued.

100707. *SISYRINCHIUM* sp. Iridaceae.

No. 324. From Cuzco, Peru, May 20, 1932. A small herb 6 inches high, suitable for the rock garden, found in an open meadow in the hills at 11,500 feet altitude. The flowers are blue.

100708. *SOLANUM* sp. Solanaceae.

No. 279. From near Cuzco, Peru, May 19, 1932. A low herb 6 inches high, with purple flowers and yellow berries, collected in moist loam at 11,500 feet altitude.

100709. *SOLANUM* sp. Solanaceae.

No. 381. From near Cuzco, Peru, May 18, 1932. A plant 4 feet high, with green-white berries, found in open meadow at 11,000 feet altitude.

100710. *PENNISETUM CHILENSE* (Desv.) Jacks. Poaceae. Grass.

From Chile. Seeds presented by C. de la Barra, commercial secretary, Chilean Embassy, Washington, D.C. Received July 12, 1932.

Ratonera. A glaucous perennial 4 to 7 feet high, native to Chile, with flat or folded leaves and dense, rather stiff, gray to pale-purple panicles 6 to 8 inches long.

100711. *ANNONA SQUAMOSA* L. Annonaceae. Sugar-apple.

From the West Indies. Seeds collected by David Fairchild and P. H. Dorsett, agricultural explorers, Bureau of Plant Industry, with the Allison V. Armour expedition, 1931-32. Received February 2, 1932. Numbered in July 1932.

Introduced for comparison with the hybrid cherimoyas now growing in southern Florida.

100712. *CARICA PAPAYA* L. Papaya-ceae. Papaya.

From the Philippine Islands. Seeds presented by the director of Plant Industry, Manila. Received January 4, 1931. Numbered in July 1932.

No. 137. A variety with purple fruits.

100713 to 100718.

From Bolivia. Tubers collected by H. G. Mac-Millan and C. O. Erlanson, Bureau of Plant Industry. Received July 12, 1932.

100713 to 100717. *OXALIS TUBEROSA* Molina. Oxalidaceae.

Oca. A plant native to South America, related to the woodsorrel of the United States. It is grown in the Andes for its edible tubers.

100713 to 100716. Collected at La Paz at 12,500 feet altitude, June 10, 1932.

100713. No. 425. Short yellow tubers with red eyes.

100714. No. 426. Small, thin, irregular, red and white tubers.

100715. No. 427. Short, thick, red tubers.

100716. No. 428. Very long, thin, dark-red tubers.

100717. No. 394. From Cochabamba, June 5, 1932, at 8,300 feet altitude. Long, slim, round, yellow tubers with closed red eyes and yellow, carrotlike flesh.

100718. *CANNA INDICA* L. Cannaceae.

No. 468 *Ajira*. From La Paz, June 20, 1932, at 10,000 feet altitude. A root regarded as a great delicacy among the Bolivians. It is used to flavor ice cream.

100719. CINNAMOMUM BURMANNI
Blume. Lauraceae.

From Sumatra. Seeds presented by Edward Jacobson, Fort de Kock. Received July 9, 1932.

An evergreen tree, native to Java, with shining green, ovate-oblong, papery leaves of variable size, usually 2 to 6 inches long, emitting a cinnamon aroma.

For previous introduction see 94258.

100720. LIGUSTRUM JAPONICUM ROTUNDFOLIUM Blume (*L. coriaceum* Carr.). Oleaceae. Dwarf privet.

From South Carolina. Cuttings presented by the Pinehurst Nursery, Summerville. Received July 14, 1932.

A compact form of the Japanese privet, up to 6 feet high, with crowded, suborbicular, lustrous, evergreen leaves 2 to 3 inches long, and dense panicles, 2 to 4 inches long, of small white flowers followed by small, blue-black, subglobose fruits.

100721. SESAMUM ORIENTALE L. Pedaliaceae. Sesame.

From Palestine. Seeds presented by the director of Agriculture, Forests, and Fisheries, Jerusalem. Received July 13, 1932.

From the Government Experiment Station at Beisan. One of the best types grown.

100722. CARYOPHYLLUS JAMBOS (L.) Stokes (Eugenia jambos L.). Myrtaceae. Rose-apple.

From the West Indies. Seeds presented by Stephen Haws, Mount Joy, Dominica, British West Indies. Received June 19, 1931. Numbered in July 1932.

A medium-sized handsome tree, native to India and the Malay Peninsula, but cultivated in many tropical countries for the edible, fragrant, pinkish fruits which are about the size of a hen's egg, of a sweetish acid taste, and said to be used as preserves. It thrives best in moist regions at elevations up to 3,000 feet, preferring a deep rich soil; it is propagated by seed.

For previous introduction see 93358.

100723. MEDICAGO SATIVA L. Fabaceae. Alfalfa.

From Turkey. Seeds presented by Charles E. Allen, American consul, Istanbul, through the State Department. Received July 20, 1932.

Turkish alfalfa, introduced for the use of Department specialists interested in forage crops.

100724 to 100798. SOLANUM TUBEROSUM. Solanaceae. Potato.

From South America. Tubers collected by H. G. MacMillan and C. O. Erlanson, Bureau of Plant Industry. Received July 12, 1932.

100724 and 100725. Collected in the region of Cuzco, Peru, May 25 and 26, 1932, at 11,000 feet altitude.

100724. No. 382. Medium-sized, elongated, gray-purple tubers, with heavy-browed, shallow eyes and white flesh with purple vascular ring.

100725. No. 383. Medium-sized, ovate, flattened tubers, with white skin mottled with red, shallow eyes and white flesh.

100726 to 100735. Collected June 5, 1932, at Cochabamba, Bolivia, at 8,300 feet altitude.

100728. No. 384. Round, purple and red mottled tubers, which have yellow-white flesh and deep eyes with pink buds.

100724 to 100798—Continued.

100727. No. 385. Round white tubers tinted with pink, deep open eyes and white flesh.

100728. No. 386. Long, slim, curved or curled, twisted tubers, with thick dark skin, deep closed eyes, and white flesh with the center purple.

100729. No. 387. Long, cylindrical tubers, with thick gray-black skin which becomes purple when cut, shallow eyes, and yellow-white flesh.

100730. No. 388. Long, cylindrical, pink tubers with deep white eyes.

100731. No. 389. Round, pink and white tubers, flat at the bud end, with open, medium flat eyes and white flesh.

100732. No. 390. Large, long, cylindrical, tan-white tubers, with deep eyes and lightly mottled white flesh.

100733. No. 391. Round white tubers, some spotted with pink, with open flat eyes, some showing pink, and white flesh.

100734. No. 392. Small, round yellow tubers spotted with red, shallow eyes with long eyebrows, and flesh yellow at vascular region, fading to white at center of potato.

100735. No. 393. Round, small to medium-sized, dark-purple tubers, with deep open eyes full of red buds, and yellow-white flesh with purple spots in the vascular ring.

100736 to 100798. Collected from June 9 to June 19, near La Paz, Bolivia, at 12,500 feet altitude.

100736. No. 401. *Chaclo Chaclo*. Medium to small pink tubers generally pointed at the bud end, with numerous deep, straight eyes and yellow-white flesh flecked with red inside the vascular ring.

100737. No. 402. *Cunduma*. Small, round, black tubers, except around the numerous deep eyes, where they are yellowish white, and yellowish flesh with purple flecks, heaviest at the stem end. This is locally known as a sweetpotato, *papa dulce*.

100738. No. 403. *Rinkel*. Round, medium-sized tubers, yellowish to dirty white and black around the stem; the center of the medium to deep eyes is white, surrounded by black, and the flesh is clear yellow. Known locally as a sweetpotato, *papa dulce*.

100739. No. 404. *Chapallo*. Small-sized, round brown-tan tubers with clear yellowish flesh and deep, brown-tan eyes with bulging eyebrows.

100740. No. 405. *Thuila Nimilla*. Medium-sized, round, pink tubers with deep, pink eyes and white flesh.

100741. No. 406. *Cholo Colorado*. Small-sized round red tubers with eyes exceptionally deep, open at the stem end, deeply notched at the bud end. The yellowish flesh is flecked throughout with red.

100742. No. 407. *Follhaco*. Tubers medium-sized, round, eyes medium deep, bulging between the eyes, skin red, white below the eyes. Flesh clear white.

100743. No. 408. *Choquefrit*. Round, medium-sized, white tubers, tinted pink at the stem end, medium to shallow eyes with very long eyebrows and clear white flesh. This is known as a bitter variety.

100744. No. 409. *Pidriaja*. Medium-sized, round, flat, pink to purple tubers with white flesh. The deep open eyes have short eyebrows and vary in color as the tuber does.

100745. No. 410. *Pulo Colorado*. Long, cylindrical, medium-sized, red tubers with thick skin, which is slightly darker at the few shallow eyes; the flesh is yellowish white.

100724 to 100798—Continued.

100748. No. 411. *Piño llulluchi*. Long, cylindrical, medium-sized tubers with thick, red skin, medium closed, long eyes, and white flesh with a yellow tinge and a red vascular ring.
100747. No. 412. *Kunurana*. Small, round, white tubers tinted with pink, which have deep, open, bright pink eyes and yellow-white flesh. Known as a sweetpotato, *papa dulce*.
100748. No. 413. *Piño Blanco*. Long, cylindrical, medium-sized, yellow-white tubers with medium to deep, partly closed eyes with long eyebrows, and white flesh.
100749. No. 414. *Fina Yunka Tujro*. Small, long, cylindrical, gray-purple tubers with thick skin, shallow to medium eyes, nearly closed with long eyebrows, and yellow-white flesh. It is known as a sweetpotato, *papa dulce*.
100750. No. 415. *Laisalla*. Long, cylindrical, bright-purple tubers with shallow, closed eyes and extra long eyebrows, and clear white flesh.
100751. No. 416. *Lague*. Long, cylindrical, white tubers with a faint tinge of pink, shallow eyes and pure white flesh. This is known as a bitter potato.
100752. No. 417. Long, pointed, medium-sized, gray-black tubers with medium-closed, short eyes and white flesh, with sharply defined irregular purple areas, especially at the center of the tuber.
100753. No. 418. Small, long, cylindrical, tan white tubers with white flesh and medium to shallow open eyes with short eyebrows.
100754. No. 419. *Fina Sulimana*. Small, long, cylindrical tubers with the skin sharply mottled with white and purple, shallow half-closed eyes with curved eyebrows, and clear white flesh. A sweetpotato, *papa dulce*.
100755. No. 420. *Piño Huila*. Small, cylindrical, long, pointed, pink-red tubers with shallow, open, bright pink eyes and yellow-white flesh. Regarded as a very fine sweet-potato.
100756. No. 421. Round purple tubers which vary in size from large to small, with deep, open eyes and pale yellow flesh.
100757. No. 422. Medium-sized, cylindrical, long, pointed, white tubers with numerous deep to medium, closed eyes and white flesh.
100758. No. 423. Cylindrical, long, pointed, gray to purple tubers with numerous medium to deep, closed eyes and white flesh.
100759. No. 424. Flat, round, purple tubers with dirty, white flesh and open, shallow, purple eyes with exceptionally long eyebrows.
100760. No. 429. Medium-sized, long, oval tubers with thin pink-tan skin and shallow eyes.
100761. No. 430. Smooth, round, medium-sized, yellow tubers with clear yellow flesh and medium-open eyes with pink buds.
100762. No. 431. Large, round to long, oval tubers with smooth gray-tan skin overlaid with faint purple, white flesh, and shallow open eyes which are generally pink.
100763. No. 432. Medium-sized long cylindrical smooth light-yellow tubers with clear light-yellow flesh and shallow open eyes with pink buds.
100764. No. 433. Smooth tubers which vary in shape from round to rough cylindrical and in color from red to purple. The eyes are generally deep and closed and of bright color; the

100724 to 100798—Continued.

- light-yellow flesh is mottled with red inside the vascular ring.
100765. No. 434. Large, long, pointed, smooth white tubers with patches of red, the shallow open eyes are distinctly red, and the clear white flesh is of heavy consistency.
100766. No. 435. Medium to large, long, exceptionally flat, white tubers with occasional purple spots, with very shallow flat colorless eyes, and yellow watery flesh with light fleckings of purple at the bud end.
100767. No. 436. Large, long, pointed, dark-gray tubers with a tendency to curve, white flesh with the vascular ring and the center of the tubers purple, and medium to shallow, open eyes with, usually, purple buds.
100768. No. 437. Medium-sized, round, black-gray tubers with clear yellow flesh and deep, open, purple eyes with dark buds.
100769. No. 438. Large, round to flat-oblong, smooth tubers with thin red-gray skin, medium-opened eyes with red buds, and light-yellow flesh mottled throughout with red.
100770. No. 439. Medium-sized, round tubers, white at the bud end, red-purple at the stem end, with medium to deep eyes, closed at the stem end, open at the bud end, and with white buds; the flesh is clear white.
100771. No. 440. Medium-sized, round, red-purple tubers, distinctly marked with tan around the eyes; the flesh is dirty white, and the very deep, nearly closed eyes have no color in the buds.
100772. No. 441. Medium-sized, round tubers, pink at the stem end, white to tan at the bud end, with medium to deep, open eyes which have no color in the buds.
100773. No. 442. Round, medium-sized, smooth, pink tubers with medium to deep eyes with pink buds.
100774. No. 443. Round, flat tubers with white skin faintly streaked crosswise with purple, and which vary in size from medium to large, with shallow, bulging, colorless eyes and clear white flesh.
100775. No. 444. Large, round, deep-red, uniformly smooth tubers with medium to deep, open, red eyes.
100776. No. 445. Long, thin-pointed, tan and purple spotted tubers with shallow closed eyes having long eyebrows, and white flesh flecked with purple inside the vascular ring towards the bud end.
100777. No. 446. Long, cylindrical, pointed, dark-red, uniformly smooth tubers with a tendency to be flat. The shallow eyes have long eyebrows and light-red buds, and the dark-red flesh is lightly mottled with white.
100778. No. 447. Large, round, white tubers with deep closed eyes and white flesh.
100779. No. 448. Long, cylindrical, blunt, white tubers, faintly spotted with purple, with numerous, very deep, closed eyes and white flesh with distinct stippings of purple in the vascular ring.
100780. No. 449. Round, medium-sized, tan tubers with a pink tinge, deep colorless eyes, and yellow flesh.
100781. No. 450. Large, cylindrical, long, smooth tubers, pink-tan at the stem end, merging to purple-tan at the bud end, with medium open eyes which have very long eyebrows and colorless buds, and clear white flesh.
100782. No. 451. Medium-sized, round, uniformly dark-red tubers with white flesh and deep, open eyes with very long eyebrows.

100724 to 100798—Continued.

100783. No. 452. Round, oval, medium-sized, white tubers, faintly pink at the shallow open eyes, with clear white flesh.
100784. No. 453. Round, smooth, medium-sized, white tubers with shallow colorless eyes and white flesh, faintly tinged with yellow.
100785. No. 454. Long, cylindrical, pointed, purple tubers with deep, closed eyes and white flesh with a yellowish tinge and purple mottling near the epidermis in the bud-end half.
100786. No. 455. Medium-sized, round, dark-pink tubers with medium to deep, open eyes of a brighter pink and white flesh.
100787. No. 456. Medium-sized, flat, oval, bright-purple tubers with dirty-white flesh and flat, open eyes with long eyebrows.
100788. No. 457. Large, round, uniformly red tubers with deep wide-open eyes and white flesh, the center of which has a water-soaked appearance.
100789. No. 458. Small, long, pointed, pink tubers, some of which are curved, with medium, closed eyes and white flesh, which is red inside the vascular ring.
100790. No. 459. Round to cylindrical, medium-sized, smooth white tubers with shallow, open, pink eyes and white flesh.
100791. No. 460. Medium-sized, round, tan-white tubers with small, open, light-pink eyes and light-pink eyebrows. The flesh is a uniform yellow.
100792. No. 461. Small, smooth, flat oval, pointed, white tubers with very flat, colorless eyes and yellow-white flesh.
100793. No. 462. Medium to small, round, gray-tan tubers with medium, open eyes and yellow-white flesh.
100794. No. 463. Round to cylindrical tubers, spotted purple at the stem end and tan-white at the bud end, shallow, open eyes with purple buds and white flesh.
100795. No. 464. Small, cylindrical, pointed, white tubers with deep, semiopen eyes and clear white flesh.
100796. No. 465. Medium-sized, round, pink-purple tubers with medium, open eyes which are pink at the bud end, and yellow-white flesh.
100797. No. 466. Medium to small, round to cylindrical, white tubers with clear white flesh and medium to shallow, open eyes, which are pink around the buds.
100798. No. 467. Small, long, pointed, white tubers, faintly pink around the lenticels, with a tendency to be flat and curved, shallow, closed eyes, and dirty-white flesh.

100799 to 100832. CINCHONA spp.
Rubiaceae.

From Guatemala. Cuttings presented by Col. Victor E. Ruehl, Caldwell, N.J. Received July 13, 1932.

| | Scarlet runner bean. |

No. 396. *Porotos*. Large white beans. Introduced for comparison with the types now being grown on the Pacific coast.

100838 and 100839.

From Tasmania. Seeds collected by the late Gustave Weindorfer in Cradle Valley and presented by L. A. Evans, Department of Agriculture, Hobart. Received July 25, 1932.

- | | |
|--------------------------------------|---|
| 100838. ATHROTAXIS CUPRESSOIDES Don. | Pinaceae. |
| | An evergreen tree about 40 feet high, somewhat resembling cryptomeria, with ascending branches covered with closely appressed, broad, obtuse leaves one sixth of an inch long and small woody spherical cones half an inch in diameter. |

100838 and 100839—Continued.

100839. RHAGODIA NUTANS R. Br. Chenopodiaceae.

A slender prostrate or procumbent perennial herb, native to Australia, with stems 2 to 3 feet long. The opposite or alternate leaves, 1 inch long, vary from broadly hastate to lanceolate, and the inconspicuous flowers are borne in axillary and terminal clusters.

100840. TRIFOLIUM PRATENSE L.
Fabaceae. Red clover.

From the Union of Soviet Socialist Republics. Seeds presented by the Institute of Applied Botany, Leningrad. Received July 26, 1932.

Double-crop Ukrainian variety of red clover from the Kiev grain elevator. Introduced for the use of Department specialists.

100841. MANGIFERA sp. Anacardiaceae.

From the Philippine Islands. Seeds presented by S. N. Parmelee through L. A. Whitney, Honolulu, Hawaii. Received July 28, 1932.

This variety of mango produces luscious fruit and is adapted to localities in which *M. indica* will not thrive.

100842 to 100846. LONICERA spp.
Caprifoliaceae. Honeysuckle.

From Jamaica Plain, Mass. Cuttings presented by the Arnold Arboretum. Received August 1, 1932.

100842. LONICERA ALTMANNII PILOIUSCULA Reherder.

A hardy deciduous shrub, eventually about 6 feet high, with broadly or narrowly ovate, acute leaves 1 to 2 inches long, pale and softly pubescent beneath. The yellow-white flowers are followed in June or July by globose orange-red berries one-third inch in diameter. Native to Turkistan.

100843. LONICERA GYNOCLAMYDEA Hemsl.

An upright deciduous shrub, with purplish branchlets and narrow lanceolate acuminate pubescent leaves 2 to 4 inches long. The pink-tinted white flowers, half an inch long, are followed by pale-purple or white berries. Native to western China.

100844. LONICERA KOROLKOVII Stapf.
Blueleaf honeysuckle.

A spreading shrub 10 to 12 feet high, with blue-green, ovate or elliptic leaves about 1 inch long, slightly pubescent above and densely so beneath. The pink flowers, over one-half inch long, are succeeded by bright-red berries. Native to Turkistan.

100845. LONICERA MAXIMOWICZII SACHALINENSIS Schmidt.

A Manchurian honeysuckle which develops into a shrub 9 feet high, with elliptic or oblong, dark-green leaves 2 inches long. The violet-red flowers, about one-half inch long, are followed by ovoid red berries.

100846. LONICERA TENUIPES Nakai.

A spreading bush 5 feet high, with shining dark-green, elliptic or oblong, hairy leaves, 1 or 2 inches long, numerous small, deep-pink flowers, and ellipsoid red berries. Native to Japan.

100847. RHAPHIS ACICULATA (Retz.)
Desv. Poaceae. Grass.

From Guam. Seeds presented by C. W. Edwards, director, Guam Agricultural Experiment Station. Received July 28, 1932.

A grass generally distributed throughout tropical Asia, the Polynesian Islands, and Australia. At

100847—Continued.

Hong Kong it is used extensively for lawns. In the Philippines and India it furnishes a good deal of native pasturage, but is objectionable from the fact that when it is allowed to fruit, the fruits are sharp-pointed, like needles, causing some injury to the animals and a nuisance in sticking to clothing. It has been tried in Florida, where it succeeds well enough, but thus far has not proved to be aggressive.

100848 to 100907.

From China. Seeds collected by the sixth Forrest expedition, 1930-32, to southwestern China, and presented by Henry McLaren, Bodnant, Tal-y-Cafn, North Wales. Received August 1, 1932.

100848. ABIES CHENSSENSIS Van Tiegh. Pinaceae. Fir.

F. 30663. For previous introduction and description see 100500.

100849. ABIES GEORGEI Hort. Pinaceae. Fir.

A name for which a place of publication and a description have not been found.

For previous introduction see 99823.

100850 to 100852. ACER spp. Aceraceae. Maple.

100850. ACER DAVIDI Franch.

F. 29881.

For previous introduction and description see 100503.

100851. ACER LAXIFLORUM Pax. (*A. forrestii* Diels).

F. 30726.

For previous introduction and description see 100504.

100852. ACER sp.

F. 29592.

100853 to 100858. ASTER spp. Asteraceae.

100853. ASTER STATICEFOLIUS Franch.

F. 30625. An aster from high altitudes in southwestern China. The stems, about a foot long, are often decumbent, and the oblong-spatulate leaves are more or less basal. The flower heads have yellow disk flowers and violet-blue rays.

For previous introduction see 100154.

100858. ASTER sp.

F. 30814. Closely related to *A. forrestii*.

100859. BUDDLEIA FALLOWIANA Balf. and Smith. Loganiaceae.

F. 30932.

For previous introduction and description see 100516.

100860. CARPINUS sp. Betulaceae. Hornbeam.

G. F. 74.

100861. CHRITA sp. Gesneriaceae.

F. 29436. A form closely related to *C. trailliana*.

100848 to 100907—Continued.

100862. *CLETHRA DELAVAYI* Franch. Clethraceae.

F. 30518.

For previous introduction and description see 100526.

100863. *CODONOPSIS TUBULOSA* Kom. Campanulaceae.

F. 30505. A twining perennial, native to grassy meadows in the mountains of Yunnan at 7,000 feet altitude. The nearly sessile leaves are ovate-lanceolate, and the small tubular white flowers are solitary on very short peduncles.

For previous introduction see 99847.

100864. *CODONOPSIS* sp. Campanulaceae.

G. F. 51.

100865. *CRATAEGUS HENRYI* Dunn. Malaceae.
Hawthorn.

F. 30713.

For previous introduction and description see 100534.

100866 to 100869. *CREMANTHODIUM* spp. Asteraceae.

100866 to 100868. *CREMANTHODIUM RHODOCEPHALUM* Diels.

An alpine composite, 3 to 9 inches tall, with long-stemmed, rounded-reniform leaves, purple beneath, and gray-pink ray florets. Native to limestone cliffs in Yunnan.

For previous introduction see 99852.

100866. F. 30448.

G. F. 332.

100871. *DECAISNEA FARGESH* Franch. Lardizabalaceae.

F. 30466.

For previous introduction and description see 100538.

100872. *DICRANOSTIGMA* sp. Papaveraceae.

F. 30077.

100873. *DIDISSANDRA SERICEA* Craib. Gesneriaceae.

F. 30615. A rock plant with leaves forming rosettes, and blue flowers.

For previous introduction see 99860.

100874. *EPILABIUM* sp. Onagraceae.

G. F. 345.

100875. *EUPTELEA PLEIOSPERMA* Hook. f. and Thoms. Trochodendraceae.

G. F. 73.

For previous introduction and description see 100548.

100876 and 100877. *HYDRANGEA YUNNANENSIS* Rehder. Hydrangeaceae.

For previous introduction and description see 100556.

100876. F. 29755.

100877. F. 29842.

100848 to 100907—Continued.

100878. *JUNIPERUS RECURVA* Buch.-Ham. Pinaceae.
Himalayan juniper.

F. 29591.

For previous introduction and description see 100564.

100879. *LESPEDEZA FORMOSA* (Vogel) Koehne. Fabaceae.
Purple bushclover.

F. 30850.

For previous introduction and description see 100573.

100880. *PARASYRINGA SEMPERVIRENS* (Franch. W. W. Smith. Oleaceae.

F. 30859.

For previous introduction and description see 100578.

100881. *PHOTINIA FLAVIDIFLORA* W. W. Smith. Malaceae.

F. 29542. An evergreen shrub 12 to 20 feet high, with thick, leathery, oblanceolate or elliptic leaves 6 to 8 inches long, and small cream-yellow flowers in dense terminal corymbs about 4 inches long. Native to southwestern China.

100882. *PICEA LIKIANGENSIS* (Franch.) E. Pritz. Pinaceae.
Spruce.

G. F. 104.

For previous introduction and description see 100584.

100883. *POPULUS* sp. Salicaceae. Poplar.

F. 30646.

100884 to 100886. *POTENTILLA* spp. Rosaceae.
Cinquefoil.

100884. *POTENTILLA ERIOCARPA* Wall.

F. 30821. A perennial herb with a stout rootstock from which arise branches 4 to 10 inches long, densely clothed with imbricating woolly stipular sheaths. From the tips of these branches grow the slender, suberect, flowering stems bearing thin three-lobed and incised leaves about 1 inch long, and solitary yellow flowers 1 to 2 inches across. It is native to northern India.

For previous introduction see 100216.

100885. *POTENTILLA FRUTICOSA* L. Shrubby cinquefoil.

F. 30442. A pale form.

For previous introduction see 99973.

100886. *POTENTILLA FRUTICOSA VEITCHII* (Wils.) Bean. Veitch cinquefoil.

F. 30621.

For previous introduction and description see 100589.

100887. *MALUS* sp. Malaceae. Apple.

F. 30739. Closely related to *M. theifera*.

100888 to 100901. *RHODODENDRON* spp. Ericaceae.

100888 and 100889. *RHODODENDRON BULLATUM* Franch.

For previous introduction and description see 100333.

100888. G. F. 16.

100889. F. 30393.

100890. *RHODODENDRON EUCHAITES* Balf. and Forr.

F. 29545.

For previous introduction and description see 100338.

100848 to 100907—Continued.

100891. *RHODODENDRON FACETUM* Balf. and Ward.
F. 29926.
For previous introduction and description see 100339.
100892. *RHODODENDRON GRIERSONIANUM* Balf. and Forr.
F. 29762.
For previous introduction and description see 97665.
100893. *RHODODENDRON HIPPOPHAEOIDES* Balf. and Smith.
G. F. 21.
For previous introduction and description see 100344.
100894. *RHODODENDRON KYAWI* Lace and Smith.
F. 29929.
For previous introduction and description see 100346.
- 100895 and 100896. *RHODODENDRON LITIENSE* Balf. and Forr.
For previous introduction and description see 100348.
100895. G. F. 7.
100896. G. F. 3.
100897. *RHODODENDRON MOLLIICUM* Balf. and Smith.
F. 30940.
For previous introduction and description see 100089.
- 100898 and 100399. *RHODODENDRON STEWARTIANUM* Diels.
For previous introduction and description see 100357.
100898. F. 29663.
100899. F. 29655.
100900. *RHODODENDRON TEPHROPEPLUM* Balf. and Farr.
F. 29655.
For previous introduction and description see 100361.
100901. *RHODODENDRON* sp.
G. F. 17. Selense series.
100902. *SCHIZANDRA CHINENSIS* (Turcz.) Baill. Magnoliaceae.
F. 30468. A woody vine, native to northeastern China, with shining dark-green, oval leaves and clusters of coral-colored berries.
For previous introduction see 94045.
100903. *SORBUS* sp. Malaceae. Mountain-ash.
F. 30970.
100904. *SPIRAEA* sp. Rosaceae. Spirea.
G. F. 80. Closely related to *S. canescens glaucophylla*.
100905. *SYRINGA YUNNANENSIS* Franch. Oleaceae. Yunnan lilac.
F. 30486.
For previous introduction and description see 100096.
100906. *VACCINIUM FRAGILE* Franch. Vacciniaceae.
F. 30688. A low shrub, native to western China, with small rigid, broadly oval leaves about one half inch long and small rose-purple flowers in

100848 to 100907—Continued.

- dense thyrsoid racemes, 1 to 2 inches long, followed by small globose fruits.
100907. *VIBURNUM* sp. Caprifoliaceae.
F. 30719.
100908. *MANGIFERA ODORATA* Griffith. Anacardiaceae.
From the Philippine Islands. Seeds presented by S. N. Parmelee, Hawaii, through L. A. Whitney, Honolulu. Received August 1, 1932.
This Philippine tree is very similar to the mango in habit, foliage, and flowers. The fruits, about the size of a carabao mango, but more rounded, are green, thick-skinned, sweet, and juicy, very aromatic, with yellow flesh containing numerous coarse fibers.
- 100909 and 100910. *PERSEA AMERICANA* Mill. Lauraceae. Avocado.
From Pasadena, Calif. Scions purchased from Carter Barrett, avocado specialist. Received August 2, 1932.
100909. *Kanola*. Small, round, purple fruit with yellow flesh, free from fiber and of rich flavor. The seed is comparatively small for a fruit of this form.
100910. *Mayapan*. This variety possesses several excellent commercial characteristics—round form, desirable size (nearly 1 pound), attractive purple color, thick firm skin, and flesh of excellent quality; the seed is not large.
100911. *PHOENIX ACAULIS* Buch.-Ham. Phoeniceae. Date palm.
From India. Seeds collected in the Dehra Dun forests and presented through the Royal Botanic Gardens, Kew, England. Received August 2, 1932.
A low pinnate-leaved palm, native to northern and central India. The short bulbous trunk is 6 to 8 inches in diameter, the leaves are 2 to 6 feet long with the rigid leaflets arranged in clustered fascicles, and the elliptic-oblong fruits, less than an inch long, are bright red to blue-black.
100912. *BALSAMOCITRUS PANICULATA* (Schum.) Swingle. Rutaceae.
From Africa. Seeds presented by the Agricultural Department, Ibadan, Nigeria, through W. T. Swingle, Bureau of Plant Industry. Received August 2, 1932.
A spiny shrub, native to western tropical Africa, with membranous trifoliolate leaves consisting of oblong-ovate leaflets, 1 to 3 inches long, small, white flowers, and globose woody fruits.
- 100913 to 100933. *ORYZA SATIVA* L. Poaceae. Rice.
From China. Seeds presented by F. A. McClure, Lingnan University, Canton. Received August 3, 1932.
A collection of native rices, introduced for the use of Department specialists.

100934 to 100941.

From Guam. Seeds and scions presented by S. R. Vandenberg, associate entomologist at the Guam Agricultural Experiment Station, through the director, C. W. Edwards. Received August 8, 1932.

100934. CITRUS HYSTRIX DC. Rutaceae.
Cabuyao.

Seeds of a large thorny tree, 20 to 30 feet high, with leaves 6 to 8 inches long. The fruits vary in shape from oblate to pyriform-turbinate or oblong; the smooth or more or less corrugated thick rind is greenish lemon-yellow, and the greenish flesh is juicy and sharply acid. The tree is said to be resistant to the citrus canker.

For previous introduction see 99321.

100935. MANGIFERA INDICA L. Anacardiaceae.
Mango.

Seeds of the *Carabao* and *Saigon* mangoes.

100936 to 100941. PERSEA AMERICANA Mill.
Lauraceae. Avocado.

Nos. 100936 to 100938 were scions collected on the ranch of T. Villagomez, near Barrigado.

100938. No. 1. Largest tree west of ranch.

100937. No. 2. Tree north of largest tree west of ranch.

100938. No. 3. Tree closest to the road near the patrol quarters.

100939. No. 4. Scions from a small tree east of the mango trees at the ranch of Juan Taitano, Barrigado.

Nos. 100940 and 100941 were scions collected at Dededo.

100940. No. 5. From the ranch of José Luga.

100941. No. 6. From the ranch of Joe Tames.

100942 to 100944. PERSEA spp. Lauraceae.

From Costa Rica. Scions collected by H. E. Stork, professor of botany, Carleton College, Northfield, Minn. Received August 5, 1932.

100942. PERSEA sp.

Collected at 5,500 feet altitude between Station Maria Dota and Estrella, Costa Rica.

100943. PERSEA sp.

The best native variety of *aguacuate*, from Estrella, Costa Rica, at 4,800 feet altitude.

100944. PERSEA sp.

A red fruit collected July 23, 1932, at Estrella, Costa Rica, at 5,000 feet altitude.

100945 to 100947. PHASEOLUS VULGARIS L. Fabaceae. Common bean.

From South America. Seeds collected by H. G. MacMillan and C. O. Erlanson, Bureau of Plant Industry. Received August 2, 1932.

Locally grown varieties.

100948 to 100950.

From Honduras. Plants presented by Wilson Popenoe, research department, United Fruit Co., Tela. Received August 6, 1932.

100948. GARCINIA MANGOSTANA L. Clusiaceae.
Mangosteen.

100949. GUADUA ANGUSTIFOLIA Kunth. Poaceae.

A giant bamboo, 60 to 90 feet tall, which grows wild from Honduras to Paraguay. The slender

100948 to 100950—Continued.

foliage is of great beauty, comparing with that of ordinary trees as ostrich feathers do with goose quills. The hollow culm is up to 6 inches in diameter, with nodes as much as 20 inches apart, and the wood is sometimes nearly an inch thick. The branches are very thorny.

100950. MUSA PARADISIACA SAPIENTUM (L.)
Kuntze. Musaceae. Banana.

A large commercial variety of good quality.

100951. SESAMUM CAPENSE Burm. f. Pedaliaceae.

From Africa. Seeds presented by Dr. I. B. Pole Evans, chief, Bureau of Plant Industry, Pretoria, Union of South Africa. Received August 4, 1932.

Collected on the Springbok Flats in the Transvaal, where the average annual rainfall is 4 inches. An erect simple or branched herbaceous plant up to 6 feet high, native to southern Africa. The leaves are palmately divided into 3 to 5 ovate to linear leaflets 1 to 3 inches long, and the tubular violet flowers are 1 inch long; the lobes spread about 1 inch.

100952. WITHANIA SOMNIFERA (L.)
Dunal. Solanaceae.

From Africa. Seeds presented by D. C. Edwards, Scott Agricultural Laboratories, Department of Agriculture, Nairobi, Kenya. Received August 4, 1932.

An erect much-branched shrub with round stems 3 to 4 feet high, native to tropical Africa and India. The oblong to obovate, slightly sinuate leaves are 2 to 3 inches long, and the small flowers, in axillary clusters, are followed by globose berrylike fruits one-fourth inch in diameter, surrounded by the inflated calyx. In India the powdered fruit is used as a vegetable rennet.

100953. PHASEOLUS LUNATUS L. Fabaceae. Lima bean.

From India. Seeds purchased through Winfield H. Scott, American consul, Rangoon, Burma. Received August 8, 1932.

Burma butter. A native variety largely grown in the vicinity of Rangoon. Introduced for comparison with types now being grown on the Pacific coast.

100954 to 100968. ANTIRRHINUM spp. Scrophulariaceae. Snapdragon.

From Germany. Seeds presented by Dr. Erwin Baur, Kaiser Wilhelm Institut für Züchtungsforschung, Münchenberg (Mark). Received August 5, 1932.

100954 and 100955. ANTIRRHINUM GLUTINOSUM
Boiss. and Reut.

100956. ANTIRRHINUM HISPANICUM Chav.

100957. ANTIRRHINUM IBANJEZI Hort.

100958. ANTIRRHINUM LATIFOLIUM Mill.

100959 and 100960. ANTIRRHINUM MOLLE L.

100961. ANTIRRHINUM MEONANTHUM Hoffm.
and Link.

100962. ANTIRRHINUM SICULUM Mill.

100963. ANTIRRHINUM TORTUOSUM Bosc.

100964. ANTIRRHINUM VALENTINUM Hort.

100965 to 100968. ANTIRRHINUM spp.

100969 to 100979.

From the Union of Soviet Socialist Republics. Seeds presented by the Institute of Plant Industry, Leningrad. Received August 8, 1932.

100969 to 100978. CICER ARIETINUM L. Fabaceae. Chickpea.		100974 to 100978. Fabaceae. Chickpea.	
F.P.I.	Leningrad No.	F.P.I.	Leningrad No.

100973.....	596	100978.....	918

100979. PRUNUS sp. Amygdalaceae.

A cherry.

100980. GLAUCOTHECA ARMATA (S. Wats.) O. F. Cook. Phoenicaceae. Blue palm.

From Mexico. Seeds purchased from Howard E. Gates, Anaheim, Calif. Received August 9, 1932.

From the Rancho Catacifu, Baja California. A stout fan palm with a robust trunk up to 8 feet in diameter and 20 feet high, crowned by numerous glaucous-blue leaves nearly circular in outline and deeply cut into many segments. The flowers are dull purple.

100981 and 100982. LEUCOCORYNE IXIODES (Sims) Lindl. Liliaceae.

From South America. Bulbs presented by Señor Salvador Izquierdo, Santiago, Chile. Received May 23, 1932. Numbered in August 1932.

Huilla. A bulbous plant with linear-convex leaves and green-violet flowers about an inch across, with yellow anthers on a scape 5 or 6 inches high. Native to Chile.

100981. A form with white flowers.

100982. A form with violet flowers.

100983 and 100984. PHOENIX spp. Phoenicaceae.

From England. Seeds presented by the curator of the Royal Botanic Gardens, Kew. Received August 9, 1932.

100983. PHOENIX ACAULIS Buch.-Ham. Date palm.

For previous introduction and description see 100911.

100984. PHOENIX RUPICOLA T. Anders. Cliff date palm.

A Himalayan palm with a solitary, slender, naked stem 15 to 20 feet high, bright-green leaves 10 feet long, and shining yellow oblong fruits.

For previous introduction see 99748.

100985. (Undetermined.)

From Madagascar. Seeds collected by Rev. A. Burgess and presented by V. B. Stolee, St. Paul, Minn. Received July 14, 1932.

Of possible value as a source of rubber.

100986 to 100988. CINCHONA spp. Rubiaceae.

From India. Seeds purchased from Barnard & Co., Hindustan Nursery, Calcutta, through A. C. Frost, American consul-general, Calcutta. Received August 10, 1932.

Introduced for the use of Department specialists working with drug plants.

100986 to 100988—Continued.

100986. CINCHONA LEDGERIANA Moens.

A tree, native to the Andes, yielding a bark remarkably rich in quinine which crystallizes readily as quinine sulphate. The percentage of the other alkaloids present is relatively small. The bark of this species matures in the fifth or sixth year and does not increase its quinine content after that.

For previous introduction see 100114.

100987. CINCHONA OFFICINALIS L.

A small tree only 20 feet high, native to Peru and Ecuador in the high valleys of the Andes. It is now the most important species grown in the Nilgiri Hills in India.

For previous introduction see 100117.

100988. CINCHONA SUCCIRUBRA Pavon.

The bark of this tree contains a large quantity of alkaloids, of which a relatively large percentage is cinchonidine, which retards the separation of the quinine as sulphate. The bark of this species matures in the fourth or fifth year and does not increase in quinine content thereafter.

For previous introduction see 100118.

100989. MALUS SYLVESTRIS Mill. (Pyrus malus L.). Malaceae. Apple.

From Canada. Budsticks presented by W. S. Blair, Experimental Farm, Kentville, Nova Scotia. Received August 15, 1932.

A red sport of the Gravenstein apple. Introduced for the use of Department specialists.

100990 and 100991. SESAMUM spp. Pedaliaceae. Sesame.

From Africa. Seeds presented by the director, Botanic Garden, Eala, Belgian Congo. Received August 11, 1932.

100990. SESAMUM ORIENTALE L.

A species possessing considerable drought resistance.

100991. SESAMUM RADIATUM Schum.

An erect-growing, oil-producing species.

100992 to 101002.

From the Canal Zone. Budsticks and plants presented by J. E. Higgins, Canal Zone Experiment Gardens, through Walter R. Lindsay, in charge. Received August 16, 1932.

100992. ANNONA sp. Annonaceae.

100993 to 101002. PERSEA AMERICANA Mill. Lauraceae. Avocado.

100993. *Cauthers*; a seedling tree, brought from Haiti about 12 years ago and planted at Pedro Miguel. The red pyriform smooth fruits weigh up to a pound, the yellow buttery flesh is free from fiber and has a pleasant nutty flavor; the seed is large and loose in the cavity; and the fruit keeps well.

100994. *Enoi*; a seedling introduced from Honolulu, Hawaii. The smooth, light-green, pyriform fruits, 12 inches long, have a long, slightly curved neck; the light-yellow flesh is free from fiber and has a rich flavor. The seed is medium to large. This is not considered a good commercial variety on account of its large size and poor keeping qualities.

100995. *Gerrans*; a seedling probably of Haitian stock. The smooth, purple, oval fruits have smooth, fine-grained flesh, free from fiber and of excellent flavor, yellow near the seed but tinged to green near the rind. The small seed is loose in its cavity; the fruits weigh about a pound each, and their keeping quality is very good.

100992 to 101002—Continued.

100996. *Haley*; a seedling of the Guatemala race which was planted in Hawaii in 1913. The trees are prolific and produce fruit in clusters which ripen in November and December. The rough green fruits, with a slightly purplish tinge when fully ripe, have a thick tough skin, are oval to obovate in shape, 6 inches long by over 4 inches thick, and weigh up to 40 ounces. The flesh is creamy yellow, free from fiber, and of a rich nutty flavor. The seed is small to medium in size and fits tightly in the cavity.

100997. *Lupfer*; a seedling, probably of the Ecuadoran race. The small fruits, weighing up to a pound and a half, have slightly rough, thin, green skin and greenish flesh, free from fiber and of a very pleasing flavor.

100998. *Moanalua*; a seedling from Hawaii whose small fruits vary in shape from round to pyriform. The thick, hard, coriaceous, dark-green rind is pitted with small yellowish dots. The fine-grained, melting, somewhat buttery yellowish flesh is tinged to green near the rind. The medium large seed fits tightly in the cavity.

100999. *Nicaragua*.

101000. *San Clemente*.

101001. *Trinidad*. Plants brought from Trinidad.

101002. *Tumaco*. Plants received from Colombia in 1925 by Mr. Johansen.

101003. DAMNACANTHUS INDICUS Gaertn. f. Rubiaceae.

From Japan. Plants collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received March 26, 1930. Numbered in August 1932.

No. 4391. *Tuge*; a spiny evergreen shrub, native to India and Japan. The small, opposite, leathery leaves are broadly ovate, and the small, fragrant, axillary, white flowers are followed by coral-red berries which remain on the bush until the flowers of the next season appear.

101004 to 101007. ESCALLONIA spp. Escalloniaceae.

From England. Seeds presented by the director, Botanic Garden, University of Cambridge, Cambridge. Received August 19, 1932.

101004. *ESCALLONIA EXONIENSIS* Veitch.

A hybrid between *E. pterocladon* and *E. rubra*, which forms an evergreen shrub or small tree up to 20 feet high. The ovate, glossy green, serrate leaves are 1 to 2 inches long, and the small, white or rose-tinted flowers are produced from June to October in England.

101005. *ESCALLONIA FLORIBUNDA* H. B. K.

An evergreen shrub or small tree, native from Venezuela to Peru. The obovate, nearly entire leaves are 2 to 4 inches long, and the pure white flowers, one half inch across, are borne in compound panicles up to 9 inches long and have a fragrance like hawthorn.

101006. *ESCALLONIA MACRANTHA* Hook. and Arn.

For previous introduction and description see 100692.

101007. *ESCALLONIA PTEROCLADON* Hook.

A bushy evergreen shrub 4 to 8 feet high, native to Patagonia. The narrowly obovate leaves, 1 inch long, are slightly toothed, and the small white flowers are in slender racemes 1 to 3 inches long terminating the short leafy rigid twigs.

For previous introduction see 91817.

101008. VERBENA sp. Verbenaceae. Vervain.

From the British West Indies. Plants presented by the director of agriculture, Hope, Kingston, Jamaica. Received August 19, 1932.

Introduced for the use of Department specialists working with drug plants.

101009. SACCHARUM OFFICINARUM L. Poaceae. Sugarcane.

From South America. Cuttings presented by Dr. Cross, from the experiment station at Tucuman, Argentina. Received August 8, 1932.

A variety of cane which should prove excellent for Louisiana. Introduced for the use of Department specialists.

101010. MANGIFERA INDICA L. Anacardiaceae. Mango.

From Puerto Rico. Budwood presented by Edmund H. Twight, specialist in fruits, Insular Experiment Station, Rio Piedras. Received August 20, 1932.

Introduced for the use of Department specialists working with fruit breedings.

101011. ERYTHRINA POEPPIGIANA (Walp.) O. F. Cook (E. micropteryx Poepp.). Fabaceae.

From the West Indies. Seed presented by E. J. H. Thomas, Charlotteville, Tobago, Windward Islands. Received August 17, 1932.

Mountain immortelle; a handsome, tender, leguminous tree with red flowers, native to Peru.

101012. LONCHOCARPUS sp. Fabaceae.

From the West Indies. Seeds presented by E. J. H. Thomas, Charlotteville, Tobago Island, through David Fairchild. Received August 17, 1932.

Black Mahoe; an attractive leguminous tree which may be useful as a street tree.

101013. ALCHORNEA CORDIFOLIA (Schum.) Muell. Arg. Euphorbiaceae.

From Cuba. Cuttings presented by Dr. Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos. Received August 22, 1932.

Christmas bush; so called because of the long pendent spikes of brilliant red berries produced at Christmas time. It is an ornamental tropical shrub native to western Africa.

101014 to 101018. ORYZA SATIVA L. Poaceae. Rice.

From South America. Seeds presented by J. Sydney Dash, director, Department of Agriculture, Georgetown, Demerara, British Guiana. Received August 17, 1932.

A collection of locally grown, long-grained varieties.

101014. *Demerara Creole*. 101017. No. 75.

101015. *Blue Stick*. 101018. No. 79.

101016. No. H 7.

101019 to 101023. AVENA spp. Poaceae. Oats.

From Africa. Seeds presented by the Stellenbosch-Elsenburg College of Agriculture, University of Stellenbosch, Union of South Africa. Received August 25, 1932.

A collection of oat varieties introduced for the use of Department specialists.

101019 to 101023—Continued.

101019 to 101022. AVENA BYZANTINA Koch.

101019. Boer. 101021. Sidonian.

101020. River Platte. 101022. Smyrna.

101023. AVENA BYZANTINA X SATIVA.

Langgewens.

101024 to 101026.

From Cuba. Seeds presented by Dr. Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos. Received August 22, 1932.

101024. CORDIA LEUCOSEBESTENA Griseb. Boraginaceae.

A Cuban tree with small, rounded-obtusuleaves and white flowers in corymblike cymes.

101025. ESPADAEA AMOENA A. Rich. Solanaceae.

A tree, native to Cuba, very common along the seacoast. The black and yellow wood is very hard and durable, and the fruits are small and bright yellow.

101026. MALPIGHIA URENS L. Malpighiaceae.

A shrub 5 to 15 feet high, native to the West Indies. The elliptical leaves, 1 to 5 inches long, have lines of stringing hairs beneath, and the umbels of small purple flowers are followed by purple berries about one-half inch in diameter.

101027. ANDROPOGON AMBOINICUS (L.) Merr. Poaceae. Grass.

From Australia. Seeds presented by the agronomist, Department of Agriculture, Sydney, New South Wales. Received August 23, 1932.

A tall, perennial, East Indian grass, about 4 feet high, with narrowly linear leaves up to 20 inches in length. It is of possible value as a forage grass.

101028 to 101057. SACCHARUM OFFICINARUM L. Poaceae. Sugarcane.

From Hawaii. Cuttings presented by the experiment station of the Hawaiian Sugar Planters' Association, Honolulu. Received August 30, 1932.

101028. Akilolo. 101044. Molakai no. 1194.

101029. Aueta. 101045. Molakai no. 1231.

101030. Halatii. 101046. Molakai no. 1338.

101031. Hinahina. 101047. Molakai no. 1395.

101032. Iliopua. 101048. Opukea.

101033. Kea. 101049. Parkaweli.

101034. Lahi (pink striped). 101050. Pohina.

101035. Latu. 101051. Uahi-a-Pele.

101036. Lehu. 101052. U B 1.

101037. Laukona. 101053. U B 14.

101038. Maikaiko. 101054. U D 75.

101039. Maikaiko (striped). 101055. Udiiio.

101040. Manutele. 101056. U H 3.

101041. Mikioi. 101057. 29-3458.

101042. Moano. 101057. 29-3458.

101043. Molakai no. 1191.

101058. GOSSYPIUM BARBADENSE L. Malvaceae. Cotton.

From Egypt. Seeds presented by the Department of Agriculture, Giza, through André Cattani,

101058—Continued.

attaché, Royal Egyptian Legation, Washington, D.C. Received August 27, 1932.

Giza No. 5.

Introduced for the use of Department specialists.

101059 to 101062. PHASEOLUS LUNATUS L. Fabaceae. Lima bean.

From the Netherland East Indies. Seeds presented by A. M. Cramer, Wonosobo, Java. Received August 26, 1932.

A collection of lima beans, introduced for comparison with types now being grown on the Pacific coast.

In Java the lima bean bears for several years and then dies down to the ground, but later it sprouts from the old roots and becomes as vigorous as before. The beans are used both fresh and dried.

101059. A dark-tan bean heavily marked with black.

101060. A dark-tan bean with scattered black markings.

101061. A light-tan bean.

101062. A dark-tan bean.

101063. WARIONIA SAHARAE Benth. and Coss. Asteraceae.

From Africa. Seeds presented by H. Brayard, Directeur de la Ferme Experimentale, Marrakech, Morocco. Received August 29, 1932.

A striking tree composite, native to the Sahara Desert of western Algeria and Morocco, which becomes more than 10 feet high and bears great yellow flowers which are almost as large as those of the artichoke.

101064. CINCHONA CALISAYA Wedd. Rubiaceae.

From British India. Seeds purchased from the Chandra Nursery, Rhenock, Sikkim State, Bengal. Received August 29, 1932.

A tropical shrub with opposite, oblong or oblong-lanceolate, shining green leaves, and terminal panicles of small white and pink flowers. It is one of the sources of quinine and is native to Bolivia.

101065 to 101074.

From the Union of Soviet Socialist Republics. Seeds presented by the chief of the Bureau of Introduction, Institute of Plant Industry, Leningrad. Received August 29, 1932.

101065. EUCALYPTUS CINEREA F. Muell. Myrtaceae.

No. 140714. *Silver stringybark*. A moderate-sized Australian tree with white-brown bark, opposite cordate leaves 2 to 4 inches long, and terminal corymbs of small flowers followed by small subglobose fruits.

101066. EUCALYPTUS URNIGERA Hook. f. Myrtaceae.

No. 140715. A tall shapely tree, native to the mountains of Tasmania, and said to be one of the hardiest of the eucalypts. The pale-yellow flowers in clusters of three are followed by urn-shaped capsules.

101067 to 101074. PARTHENUM ARGENTATUM A. Gray. Asteraceae. Guayule.

A spreading much-branched subtropical shrub, rarely 3 feet high, with small, silvery green-gray leaves and a profusion of small yellow flowers borne in loose clusters on slender stems. The shrub is native to a comparatively small area in southwestern Texas and northern Mexico. The dried plants are ground, and the rubber is extracted by chemical processes.

101065 to 101074—Continued.

101075. *SESAMUM ORIENTALE* L.
Pedaliaceae. Sesame.

From Africa. Seeds presented by the director of the Botanic Garden, Eala, Belgian Congo. Received August 30, 1932.

Introduced for breeding investigations being carried on by Department specialists.

101076. *SASA VEITCHII* (Carr.) Rehder.
Poaceae. Bamboo.

From New Jersey. Plants presented by W. A. Manda, South Orange. Received September 1, 1932.

A large-leaved, shade-loving bamboo of running habit which grows to a maximum height of 2½ feet. The leaves, usually five to a branch, are up to 7 inches long by 1½ inches wide. In autumn they have the peculiar habit of drying out and bleaching in a rather narrow and regular strip around the margin, which gave rise to one of the specific synonyms, *albo-marginata*.

101077. *CASSIA GRANDIS* L. f. *Caesalpinhiaceae*. Pink-shower.

From Cuba. Seeds collected at the Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, by T. A. Fennell, Bureau of Plant Industry. Received May 9, 1930. Numbered in August 1932.

A leguminous tree that produces masses of pale-pink flowers in the early spring, before the leaves appear. It is adapted for park and garden work in Florida where *Cassia fistula* and others of the genus have done well.

101078 to 101080.

From Africa. Seeds presented by Moses Albert Azancot, Tangier, Morocco. Received September 1, 1932.

101078. *COUSINIA* sp. Asteraceae.

Taimat. A prickly leaved thistlelike plant growing wild around wheat fields. The flower buds are boiled in salted water and eaten, tasting something like asparagus. The uncooked juice of the plant is used with apparent success as a substitute for rennet by the local cheese manufacturers of Tangier.

101079. *VICIA FABA* L. Fabaceae. Broadbean.

A small bean used in Morocco as feed for cattle and goats. They are sown broadcast.

101080. *SCOLYMUS* sp. Cichoriaceae.

Tagarneena. A wild plant used by the natives as a vegetable.

101081. *AMYGDALUS PERSICA* L. Amygdalaceae. Peach.

From Africa. Scions presented by O. S. H. Reinecke, Department of Pomology, College of Agriculture, Stellenbosch, Union of South Africa. Received September 8, 1932.

Inkoos, an early, white-fleshed, freestone peach which originated in South Africa and is said to withstand warm weather during a normal cold winter.

For previous introduction see 93826.

101082 and 101083.

From South America. Seeds from Surinam, presented through David Fairchild. Received September 1, 1932.

101082 and 101083—Continued.

101082. *EUTERPE OLERACEA* Mart. *Phoenicaceae*. Palm.

Manac or *manaque*; a tall graceful forest palm with a trunk seldom more than 4 inches in diameter. The pinnate leaves droop gracefully and the tree is found singly, not in clusters. It is said that fats suitable for oils and soaps can be derived from the blue-black, berrylike fruits.

For previous introduction see 99567.

101083. *RAVENALA GUYANENSIS* Steud. *Musaceae*.

There are only two species of this genus, one in Madagascar and the other in tropical South America. This species is not so large as the Madagascar one, but it rises to a height of 25 feet, making a fanlike head. Its enormous flower spike is 9 feet long and as much as a man can carry. Unlike the Madagascar species, the seeds of which have a deep-blue aril, the seeds of this have an orange aril.

For previous introduction see 98880.

101084. *ARALIA CHINENSIS* L. *Araliaceae*. Chinese aralia.

From Washington, D.C. Seeds collected by Paul Russell in the park west of the Department of Commerce Building. Received September 12, 1932.

A tall shrub up to 25 feet high, native to China, with bipinnate leaves made up of ovate, closely serrate leaflets 2 to 4 inches long and panicles of small white flowers followed by small black fruits. While the typical form has prickly stems, this plant is absolutely unarmed.

For previous introduction see 93878.

101085 to 101090.

From Africa. Seeds presented by Alfred Bircher, Middle Egypt Botanic Station, El Saf, Egypt. Received September 8, 1932.

101085. *DOYYALIS CAFFRA* (Hook. and Harv.) Warb. (*Aberia caffra* Hook. and Harv.). *Flacourtiaceae*. Kei-apple.

A very prickly shrub or small tree, native to tropical Africa, where it is used as a hedge. The pale-green leaves are over an inch long and nearly an inch wide. The edible fruit resembles a small yellow apple and is so exceedingly acid when fresh that it is said to be used as pickles without adding vinegar.

For previous introduction see 99415.

101086. *DOYYALIS MACROCALYX* (Oliver) Warb. *Flacourtiaceae*.

A small tree native to Angola, Africa. The thinly coriaceous leaves, 2 to 3 inches long, are elliptical to ovate, and the inconspicuous flowers, in small axillary clusters, are followed by orange-scarlet ovoid berries one half inch long. The fruit is surrounded by the persistent calyx which is fimbriate-ciliate with slender capitate glandular hairs.

101087. *EUGENIA PUNGENS* Berg. *Myrtaceae*. Guabiyu.

A bush native to South America, with pungent leaves and myrtlelike flowers. The black fruits, generally in pairs, are about an inch across and contain a sweet yellow flesh, enclosing 1 or 2 large green seeds.

101088. *GREWIA TILIAEFOLIA* Vahl. *Tiliaceae*.

A small tree, native to India and tropical Africa, with purple branchlets and dentate, obliquely cordate leaves 4 inches long. The small flowers are in axillary clusters and the 1- to 4-lobed black fruits, about the size of small peas, are eaten by the natives.

101085 to 101090—Continued.

101089. *MADHUCA INDICA* Gmel. (*Bassia latifolia* Roxb.). Sapotaceae. **Mahwa.**

A tree, native to India, with a short trunk and many spreading branches, forming a dense rounded crown 40 to 50 feet high. The flowers have a velvety chocolate-colored calyx and a pale-cream colored corolla with thick juicy petals which are used as food.

101090. *SORINDEIA JUGLANDIFOLIA* (Rich.) Planch. Anacardiaceae.

A glabrous shrub or small tree, native to tropical Africa. The unequally pinnate leaves are made up of 7 to 11 oblong-elliptical coriaceous leaflets 2 to 4 inches long, and the inconspicuous flowers are followed by fleshy fruits that are said to be eaten by the natives.

101091. *BAUHINIA MALABARICA* Roxb. Caesalpiniaceae.

From French Indo-China. Seeds presented by M. Poilane, Institut des Recherches Agronomiques de l'Indochine, Division de Botanique, Tonkin. Received September 9, 1932.

A small, erect, bushy tree, native to southeastern Asia, with thick rigid deeply bifid somewhat heart-shaped leaves 2 to 3 inches long. The small white flowers are in dense sessile axillary clusters. The rather turgid straight firm narrow pods are a foot long.

For previous introduction see 94181.

101092. *AGASTACHE RUPESTRIS* (Greene) Standl. Menthaceae.

From Arizona. Seeds collected near Payson by Mrs. W. B. Collom and presented by W. R. Maxon, Smithsonian Institution, Washington, D. C. Received September 12, 1932.

An aromatic perennial herb 1 to 3 feet high, native to the mountains of southwestern New Mexico. The linear-lanceolate entire leaves are about 2 inches long, and the greenish, red-purple tubular flowers, 1 inch long, are borne in loose panicles.

101093. *PERSEA AMERICANA* Mill. Lauraceae. **Avocado.**

From Mexico. Plants raised from seed obtained in Mexico by A. G. Galloway, Bureau of Plant Quarantine. Received September 9, 1932.

A collection of thin-skinned types.

101094. *PHOENIX HANCEANA* Naudin. Phoenicaceae. **Date palm.**

From England. Seeds presented by the Royal Botanic Gardens, Kew. Received September 7, 1932.

A Chinese relative of the date palm; it has short tufted stems and pinnate foliage.

101095. *ARUNDINARIA* sp. Poaceae. **Bamboo.**

From Japan. Seeds purchased from T. Sakata & Co., Yokohama. Received September 13, 1932.

Received as *Bambusa chino*.

101096 to 101100. *AMYGDALUS COMMUNIS* L. Amygdalaceae. **Almond.**

From Africa. Seeds presented by J. B. Plessis, Chef du Jardin d'Essais, Sfax, Tunisia. Received September 15, 1932.

A collection of almonds from trees in the Botanical Garden of Sfax.

101098. *Abiod*.

101097. *Constantini*.

101096 to 101100—Continued.

101098. *Grosse Tendre*.

101099. *Guernatzei Corne de Gazelle*.

101100. *Zanf*.

101101 to 101108.

From New Zealand. Seeds presented by J. W. Hadfield, agronomist, Fields Division and Plant Research Station, Department of Agriculture, Palmerston North. Received September 16, 1932.

A collection of New Zealand-grown certified pasture seeds, introduced for comparison with varieties and strains generally used in this country.

101101. *AGROSTIS TENUIS* Sibth. Poaceae. **Brown top.**

For previous introduction see 100232.

101102 and 101103. *DACTYLIS GLOMERATA* L. Poaceae. **Orchard grass.**

New Zealand cocksfoot, a permanent pasture grass.

101104 and 101105. *LOLIUM PERENNE* L. Poaceae. **Perennial ryegrass.**

101104. Certified mother seed.

101105. Permanent pasture seed.

101106. *TRIFOLIUM PRATENSE* L. Fabaceae. **Red clover.**

New Zealand certified Montgomery Late.

101107 and 101108. *TRIFOLIUM REPENS* L. Fabaceae. **White clover.**

101107. Certified mother seed.

101108. Certified permanent pasture seed.

101109. *SCHISMOCARPUS PACHYPUS* Blake. Loasaceae.

From Mexico. Plants collected by G. N. Collins and J. H. Kempton, with the Allison V. Armour expedition to Mexico and the West Indies, 1931. Received April 15, 1931. Numbered in September 1932.

No. 9192. A rather fleshy, herbaceous perennial about 20 inches high, with a tuberous root about 3 inches in diameter, alternate ovate leaves, and a terminal panicle of rather large yellow flowers. Native to Oaxaca, Mexico.

101110 and 101111. *FRAGARIA* spp. Rosaceae. **Strawberry.**

From Germany. Plants presented by Karl Lüpke, Lemgo in Lippe. Received September 20, 1932.

101110. *FRAGARIA* sp.

Deutsch Ebern.

101111. *FRAGARIA* sp.

Oleeschlesien.

101112 to 101114. *ALLIUM* spp. Liliaceae.

From China. Seeds and bulbs presented by Tai Yih Wang, of the Sun Yat Sen Memorial Park Commission. Received September 20, 1932.

101112 and 101113. *ALLIUM CEPA* L. **Onion.**

Australia-Brown; the variety most commonly grown in this region was introduced and distributed by the University of Nanking about 20 years ago.

101112. Seed collected in the Sun Yat Sen Memorial Park.

101113. Seed collected from farmers.

101112 to 101114—Continued.

101114. *ALLIUM SATIVUM* L. Garlic.

Bulbs collected in the Sun Yat Sen Memorial Park.

101115 to 101130. *SACCHARUM OFFICINARUM* L. Poaceae. Sugarcane.

From Cuba. Cuttings presented by Charles H. Thrall, Club Azucarero de Cuba, Habana. Received September 22, 1932.

101115. *Bamboo Blanca*.

101116. *Batjan*.

101117. *Batjan Green sport*.

101118. *Bocoyo*.

101119. *Bravade Perico*.

101120. B-208.

101121. *Green Stripe Preanger*.

101122. *Negrita*.

101123. *Pundia*.

101124. *Red Preanger*.

101125. *Red Tip*.

101126. Striped sport of P.O.J. 2714.

101127. *Tibboo Mird*.

101128. *Uba Natal*.

101129. *Yellow Bamboo*.

101130. *Yellow Tip*.

101131 to 101134.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos. Received September 16, 1932.

101131. *ARIKURYROBA SCHIZOPHYLLA* (Mart.) Bailey (*Cocos schizophylla* Mart.). Phoenicaceae. Palm.

A slender, straight-stemmed palm with pinnate leaves.

For previous introduction see 91775.

101132. *ARISTOLOCHIA OBLONGATA* Jacq. Aristolochiaceae.

A tropical climber, native to Venezuela, with oblong, cordate, obtuse, dull-green leaves 1 to 2 inches long and odorless pale-yellow flowers about 4 inches long.

101133. *CLUSIA MINOR* L. Clusiaceae.

A tropical American tree 25 feet high, often starting as an epiphyte, with thick obovate leaves 4 to 6 inches long and axillary solitary showy pink flowers.

101134. *KOPSIA FRUTICOSA* (Ker) A.D.C. Apocynaceae.

A large evergreen shrub with elliptic leaves 4 to 8 inches long. The flowers, over an inch long and 2 inches across, have pink corolla tubes with red mouths and grow in cymes. The pyriform fruits, 1 inch long, are greenish purple. It is native to Burma.

101135 to 101138. *ELAEIS GUINEENSIS* Jacq. Phoenicaceae. African oil palm.

From Africa. Seeds presented by Laurentino Pereira Coelho, Chefe da Divisão Técnica dos Serviços Agrícolas, Luanda, Angola. Received September 22, 1932.

101135. *Difumbe*. 101137. *Dissombo*.

101136. *Diholo*. 101138. *Ussu*.

101139. *DIOSPYROS DISCOLOR* Willd. Diospyraceae. Mabelo.

From Hawaii. Seeds presented by W. T. Pope, senior horticulturist, Agricultural Experiment Station, United States Department of Agriculture, Honolulu. Received September 19, 1932.

A medium-sized Philippine tree of vigorous growth, with shining leaves 5 to 10 inches long, pubescent beneath. The velvety dull-reddish, thin-skinned fruits, 3 inches long and nearly 4 inches in diameter, have firm, rather dry sweet flesh of a rather indefinite flavor and 4 to 8 large seeds. Notwithstanding its size and attractive appearance, it has never gained favor with Europeans, although very popular with the natives.

For previous introduction see 95086.

101140 to 101143.

From Manchuria. Seeds collected by L. Ptitin. Received September 20, 1932.

A collection of fodder grasses collected on the Manchurian prairie grasslands between Anda and Harbin. Introduced for the use of Department specialists.

101140. *AGROPYRON STRIGOSUM* (Bieb.) Boiss. Poaceae. Grass.

101141. *GLYCERIA REMOTA JAPONICA* Hack. Poaceae. Grass.

101142. *POA COMPRESSA* L. Poaceae. Canada bluegrass.

101143. *POA PRATENSIS* L. Poaceae. Kentucky bluegrass.

101144 and 101145.

From India. Seeds presented by the Agri-Horticultural Society of India, Calcutta. Received September 22, 1932.

101144. *PHOENIX RECLINATA* Jacq. Phoenicaceae. Senegal date palm.

A tropical and South African date palm, 20 to 30 feet high, with green reclinate pinnate leaves 6 to 9 feet long, with rigid leaflets and yellowish fruits half an inch long having a sweetish pulp.

For previous introduction see 100105.

101145. *PHOENIX SYLVESTRIS* (L.) Roxb. Phoenicaceae. India date palm.

A pinnate-leaved palm, 25 to 40 feet high, with leaves about 15 feet long and orange-yellow fruits. Native to India.

101146 to 101155.

From New Zealand. Seeds presented by A. Wilkinson, secretary, New Zealand Alpine and Rock Garden Society, Nelson. Received September 27, 1932.

101146. *GENTIANA CORYMBIFERA* T. Kirk. Gentianaceae. Gentian.

A perennial herb with usually simple stems 6 to 20 inches high, native to New Zealand. The radical leaves, 2 to 4 inches long, are oblong-spatulate, and the stem leaves, 1 to 2 inches long, are linear-lanceolate. The large white flowers, nearly an inch across, are borne in large compact terminal umbels 2 to 6 inches in diameter.

101147. *IXERBA BREXIODES* A. Cunn. Escalloniaceae.

Tawari. A beautiful evergreen tree sometimes 70 feet tall, with thick, leathery, coarsely serrate leaves 3 to 7 inches long and very handsome waxy white flowers over an inch wide, occurring in flat panicles. In New Zealand, where it is not common, it is considered by some to be the most beautiful tree indigenous to that country.

101146 to 101155—Continued.

101148. *NOTOSPARTIUM CARMICHAELIAE* Hook. f. Fabaceae.

Pink broom. A beautiful, moderate-sized, leguminous shrub with leafless, broomlike branches on which the short racemes of pink or purplish flowers are freely produced. It is native to New Zealand.

101149. *OLEARIA MACRODONTA* Baker. Asteraceae.

A shrub or small tree, up to 20 feet high, native to New Zealand. The rigid, coriaceous, ovate, or oblong leaves, 2 to 4 inches long, are glabrous above and covered beneath with closely appressed white tomentum. The small heads of whitish or reddish flowers are borne in large much-branched corymbs.

101150. *PITTIOSPORUM DALLI* Cheeseman. Pittosporaceae.

A round-topped tree up to 18 feet high, native to New Zealand, with sharply toothed, oblong, leathery leaves 2 to 4 inches long and dense, terminal, compound clusters of fragrant white flowers half an inch broad.

101151. *RHOPALOSTYLIS SAPIDA* (Soland.) Wendl. and Drude. Phoeniceae. Mikan palm..

A New Zealand palm 30 feet high, with a green-tinged stem, pinnate leaves 14 feet long, and large clusters of pale-pink flowers.

101152. *RUBUS SCHMIDELIOIDES* A. Cunn. Rosaceae.

A scrambling or climbing shrub native to New Zealand. The 3- to 5-foliolate leaves have coriaceous, broadly cordate-serrate leaflets 2 to 4 inches long, and the small white flowers, in panicles 2 to 8 inches long, are followed by pale-yellow edible fruits about one-third inch in diameter.

101146 to 101155—Continued.

101153. *SENECIO CRUSTII* Hort. Asteraceae.

A name for which a place of publication and a description have not been found.

101154. *SENECIO PERDICIOIDES* Hook. f. Asteraceae.

A round-topped New Zealand shrub 2 to 6 feet high, with toothed oblong leaves 2 inches long and leafy corymbs of top-shaped yellow flower heads.

101155. *SOPHORA PROSTRATA* J. Buch. Fabaceae.

A rigid much-branched shrub 2 to 5 feet high, native to New Zealand. The compound leaves are made up of 2 to 4 pairs of very small oblong-ovate leaflets, and the bright-yellow flowers, nearly an inch long, are in clusters of 2 to 3, or solitary.

101156. *ANNONA RETICULATA* L. Annonaceae. Custard-apple.

From India. Seeds presented by Rev. A. L. Grey, superintendent, Sind-Baluchistan District, Methodist Episcopal Church, Karachi. Received September 29, 1932.

Sita Phal, or custard-apple. An excellent local variety.

101157. *PHASEOLUS VULGARIS* L. Fabaceae. Common bean.

From Oslo, Norway. Seeds collected by W. E. Whitehouse, Bureau of Plant Industry. Received September 20, 1932.

Introduced for the use of Department specialists.

Introductory statement.....	1
Inventory.....	3
Index of common and scientific names.....	22

INTRODUCTORY STATEMENT

Inventory no. 113 records the material received by the Division of Foreign Plant Introduction between October 1 and December 31, 1932, a total of 427 numbers (101158-101584), part of which represents material for the use of the Division and part for other divisions and agencies.

Although possibly not obvious to the uninformed reader, the great number of entries of material from Robert M. Grey, superintendent of the Atkins Institution of the Arnold Arboretum at Soledad, Cienfuegos, Cuba (101159-101162, 101212-101215, 101243-101252, 101257, 101260-101265, 101292-101295, 101435-101437, 101462-101464), represent the growing interrelation of that garden and the Department's garden at Coconut Grove, Fla., from which considerable collections of seeds and plants have gone to the garden at Soledad. By this interchange of material each garden is able to increase its collection and study new plants under different climatic conditions—a relation that is cordially appreciated.

Less conspicuous but as important are the contributions, from several sources, of seeds and bulbs of various species of *Allium*, eventually intended for the use of cooperating specialists in California, also of cats and cottons for Department specialists.

The studies of bamboo are assisted by the accession of 5 numbers, 3 from a French nursery and 2 from an old planting in Florida, all species or forms that contribute to the studies of the difficult variations of this group.

Through the courtesy of Dr. H. Humbert, Muséum National d'Histoire Naturelle, Paris, France, our succulent collection is increased by a collection of species of *Bryophyllum*, *Kalanchoe*, and *Kitchingia* native to Madagascar (101356-101374), for comparative study with previous introductions. From France also, through Prof. D. Bois, of the Muséum National d'Histoire Naturelle, Paris, was received a large collection of cuttings of *Ficus* species (101309-101343), intended for the work with that genus now under way at Coconut Grove, Fla. Unfortunately, this admirable collection was largely lost, as most of the cuttings did not root.

In a miscellaneous collection of seeds sent by the courtesy of B. V. Skvortzov, Harbin, Manchuria (101395-101406) are several interesting herbs, not spectacular but of garden value. The *Agastache rugosa* is a nepetalike plant with a long period of summer blooming; another, *Scutellaria baicalensis*, has much more showy blue-purple flowers than any of its relatives grown here.

Although there are other collections of plants from that area, the two collections from Edwin Ashby, Wittunga, Blackwood, South Australia (101195-101204, 101346-101354) contain seeds of many interesting species and varieties of

Callistemon and *Calothamnus*. These are plants that have been recognized in California, but have not been as well tested in the Gulf States, although some species seem more than promising within rather restricted areas.

The botanical determinations were made and the nomenclature determined by the late H.C. Skeels,¹ who had general supervision of this inventory.

KNOWLES A. RYERSON,
Principal Horticulturist, in Charge.

DIVISION OF FOREIGN PLANT INTRODUCTION,
Washington, D.C., December 20, 1933.

¹ Died Jan. 3, 1934.

INVENTORY²

101158. *NEPHELIUM LAPPACEUM* L. Sapindaceae. Rambutan.

From Central America. Seeds presented by Wilson Popenoe, research department, United Fruit Co., Tela, Honduras. Received October 6, 1932.

An erect stately tropical tree 35 to 40 feet high, native to the Malay Archipelago and not yet extensively cultivated elsewhere. The compound leaves are composed of 5 to 7 pairs of elliptic, obovate or oblong, glabrate leaflets about 4 inches long, shining and dark green above, paler beneath. The small flowers are in loose axillary and terminal panicles. The fruits, which are produced in clusters of 10 or 12, are oval, about 2 inches in length, and covered with soft fleshy spines less than an inch long. They are crimson, somewhat greenish, yellowish, or orange-yellow. The outer covering from which the spines arise is thin and leathery and is easily torn off, exposing the white translucent flesh (aril) which adheres to the oblong and flattened seed. The flavor is mild acid, somewhat suggesting that of the grape.

For previous introduction see 95367.

101159 to 101162.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos. Received October 3, 1932.

101159. *CITHAREXYLUM CAUDATUM* L. Verbena- ceae.

A shrub 10 to 12 feet high, native to the West Indies. The elliptical to oblong leathery leaves are 3 to 5 inches long, and the white tubular flowers, borne in erect racemes 4 to 9 inches long, are followed by ovoid-oblong black fruits about one-fourth inch long.

101160. *EUGENIA* sp. Myrtaceae.

101161. *JATROPHA HASTATA* Jacq. Euphorbia- ceae.

A shrubby perennial about 3 feet high with obovate to oblanceolate hastate leaves and umbel-like cymes of small scarlet flowers. It is native to Cuba.

For previous introduction see 90983.

101159 to 101162—Continued

101162. *OCOTEA CORIACEA* (Swartz) Britton. Lauraceae.

An evergreen tree 30 to 40 feet high with oblong-lanceolate coriaceous leaves 2 to 6 inches long and panicles of small whitish flowers followed by dark-blue fruits nearly an inch long with red or yellow persistent calyx bases. It is native to the West Indies.

For previous introduction see 90929.

101163. *FIGUS CARICA* L. Moraceae. Common fig.

From Florida. Cuttings presented by H. E. Ellis, Jacksonville. Received February 1, 1930. Numbered in October 1932.

A seedless fig developed by George E. Shepherd, Riverside, Jacksonville, Fla.

101164 to 101168.

From Greece. Seeds and bulbs presented by Prof. P. Th. Anagnostopoulos, École Supérieure d'Agriculture, Athens. Received October 7, 1932.

101164 to 101166. *CROCUS* spp. Iridaceae.

101164. *CROCUS BORYI* J. Gay.

An autumn-flowering crocus with 3 to 6 linear-lanceolate leaves and white flowers somewhat lilac lined at the base outside and having a yellow throat. The anthers are white and somewhat longer than the filaments, and the scarlet style branches are divided into capillary segments.

101165. *CROCUS CARTWRIGHTIANUS* Herb.

An autumn-flowering crocus with 1 to 4 violet flowers and narrow slightly ciliate leaves. It is very close to *C. hadriaticus* and is native to arid hills near the sea in Greece.

101166. *CROCUS* sp.

101167. *ORNITHOGALUM ARABICUM* L. Liliaceae. Star-of-Bethlehem.

Bulbs of a herbaceous perennial, native to the Mediterranean region. The thick ovoid bulb

² It should be understood that the names of horticultural varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Division of Foreign Plant Introduction, and, further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identifications therefore must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this division, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

101164 to 101168—Continued

produces 5 to 8 glaucous green leaves 12 to 18 inches long and a scape 1 to 2 feet high, bearing a 6- to 12-flowered raceme of fragrant white flowers. The pistil is black and adds to the attractiveness of the flowers. This species is very popular for pot culture.

101168. *TULIPA HAGERI* Heldr. Liliaceae. Tulip.

Bulbs of a tulip with a flowering stem about a foot high which bears a single flower up to 2 inches long. The perianth segments are brownish on the outside and intensely scarlet within. The 3 or 4 leaves are narrow and grooved. Native to the mountains of Greece.

101169. *TRAGOPOGON* sp. Cichoriaceae.

From Turkistan. Seeds presented by the Tuggourt Botanic Garden. Received October 7, 1932.

101170. *CROCUS SIEBERI* J. Gay. Iridaceae.

From Greece. Seeds presented by Prof. P. Th. Anagnostopoulos, École Supérieure d'Agriculture, Athens. Received October 8, 1932.

A bulbous perennial, native to Greece, with 4 to 6 linear-lanceolate leaves, glaucous beneath, and lilac flowers with a yellow glabrous throat. The orange anthers are twice as long as the filaments, and the orange-red style branches are nearly entire.

101171. *ALLIUM CEPA* L. Liliaceae. Onion.

From India. Seeds presented by the director of agriculture, Imperial Institute of Agricultural Research, Pusa. Received October 8, 1932.

Introduced for breeding studies of Department and experiment-station workers.

101172. *ACER SIEBOLDIANUM MICROPHYLLUM* Maxim. Aceraceae. Maple.

From Amherst, Mass. Seeds from trees growing on the campus of the Massachusetts Agricultural College, presented by Prof. L. L. Blundell. Received October 8, 1932.

A shrub or small tree, native to Japan, with 7- to 9-lobed leaves only 2 inches broad. The small yellowish flowers are borne on nodding peduncles and the winged fruits, less than an inch long, spread at an obtuse angle.

101173 to 101175.

From France. Plants purchased from V. Lemoine & Sons, Nancy. Received October 11, 1932.

101173. *THAMNOCALAMUS* sp. (*Bambusa gracilis* Hort.). Poaceae. Bamboo.

A somewhat tender bamboo of the Himalayas, very similar to *Thamnocalamus falcata*. The thin leaves are linear-lanceolate, and the ligules of the sheaths are rather prominent. The slight purple coloring of the sheath extends around the finely serrulate margin of the blade. The blade is very slightly cross-veined. The genus *Thamnocalamus* is closely allied to *Arundinaria* and is often considered as only a section of the latter.

101174. *SASA DISTICHA* (Mitf.) E. G. Camus (*Bambusa nana* Hort.). Poaceae. Bamboo.

A dwarf bamboo of running habit growing 3 to 5 feet high, with rather narrow leaves 2 to 4 inches long, in pronouncedly distichous arrangement.

101175. *SHIBATAEA KUMASASA* (Zoll.) Makino (*Bambusa viminalis* Hort.). Poaceae. Bamboo.

This odd little bamboo, which in the past has carried several different botanical names and which looks but little like a bamboo, grows 2 to 6 feet in height. The branches, usually five in

101173 to 101175—Continued

number, are diminutive, and each bears a single, terminal, ovate-lanceolate, dark-green leaf 2 to 3 inches long and nearly an inch wide. The foliage is more or less injured at temperatures of 5° to 10° F.

101176 to 101179.

From Africa. Seeds presented by Charles S. Dole, Bahamas Plantations Co., Ltd., Nassau, New Providence Island, Bahamas, British West Indies. Received October 7, 1932.

A collection of seeds from the National Botanical Gardens at Kirstenbosch, Cape Colony, Union of South Africa.

101176 to 101178. *ALOE* spp. Liliaceae.

101176. *ALOE KRAPOHLIANA* Marloth.

A small aloe with a basal rosette of 20 to 30 leaves each about 4 inches long and armed with very numerous small white teeth. The brick-red flowers are on a scape 18 inches high.

101177. *ALOE LONGISTYLIA* Baker.

A stemless southern African perennial with a dense rosette of about 30 lanceolate green leaves 6 inches long tapering to a horny point and having a pale-brown prickly margin. The bright-red tubular flowers are borne in a dense raceme 3 to 5 inches long.

101178. *ALOE SCHLECHTERI* Schoenl.

An aloe with olive-green leaves about 8 inches long, armed on the margin with brown horny deltoid prickles. The light-yellow flowers, on short pedicels, are in dense racemes about 6 inches long.

For previous introduction see 98010.

101179. *THRYALLIS GRACILIS* (Bartl.) Kuntze. Malpighiaceae.

A shrub, native to Central America and naturalized in the West Indies. The narrowly elliptical leaves are 1 to 2 inches long, and the yellow flowers, 1 inch across, are borne in ample panicles.

101180. *CITRUS* sp. Rutaceae.

From French Indo-China. Seeds presented by M. Poilane, Arboretum de Erang Bôm, Province de Bienhoa, Cochinchina. Received October 12, 1932.

101181 to 101184. *AVENA SATIVA* L. Poaceae. Oats.

From Scotland. Seeds presented by William Robb, director of research, Scottish Society for Research in Plant-Breeding, Craigs House, Corstorphine, Edinburgh. Received October 12, 1932.

101181. *Bell.* 101183. *Potato.*

101182. *Elder.* 101184. *Tam Finlay.*

101185 and 101186.

From Australia. Seeds presented by the Botanic Gardens, Darwin, Northern Territory. Received October 12, 1932.

101185. *ALYSICARPUS VAGINALIS* (L.) DC. Fabaceae.

An annual legume from 3 to 6 feet high. Under favorable circumstances it may be cut 2 or 3 times a season.

101186. *STYLOSANTHES MUCRONATA* Willd. Fabaceae.

A much-branched undershrub, 1 to 2 feet high, native to southern Asia and tropical Africa. The rigidly coriaceous trifoliate leaves have oblong leaflets about one half inch long, and the inconspicuous flowers are in small dense heads. Of possible value as a forage crop.

101187. SESAMUM ORIENTALE L. Pe-
daliaceae. Sesame.

From Africa. Seeds presented by D. C. Edwards, Scott Agricultural Laboratories, Nairobi, Kenya. Received October 13, 1932.

Black Sim-Sim. Collected in the coast region of Kenya, and introduced for the use of Department specialists working with drug plants.

101188. (Undetermined.)

From Peru. Seeds collected by H. G. MacMillan and C. O. Erlanson, Bureau of Plant Industry. Received July 12, 1932. Numbered in October 1932.

No. 198. Collected April 16, 1932, at Rio Colorado, near Merced, Peru, at 2,800 feet altitude. A leguminous shrub up to 4 feet high, with flowers which vary from white to light violet.

101189. DIOSCOREA ALATA L. Dios-
coreaceae. Winged yam.

From Australia. Tubers presented by J. A. Hamilton, Carbesen via Cairns, North Queensland. Received October 17, 1932.

Tubers generally cylindrical, with reddish inner skin and white flesh partly colored with red-purple. It is a good table variety, very prolific, and has proved well adapted to the dry conditions of Queensland, where there is a short wet season from about Christmas to the beginning of March, and the remainder of the year has very little rain.

101190 to 101193.

From Manchuria. Seeds purchased from L. Ptitin, Harbin. Received October 13, 1932.

101190. *CRATAEGUS* sp. Malaceae. Hawthorn.

101191. *RIBES* sp. Grossulariaceae. Gooseberry.

101192. *RUBUS* sp. Rosaceae. Raspberry.

101193. *SOJA MAX* (L.) Piper. Fabaceae. Soybean.

Wild soybeans.

101194. PUYA CHILENSIS Molina. Bro-
meliaceae. Puya.

Seeds presented by William Hertrich, superintendent, Huntington Botanic Garden, San Marino, Calif., from plants growing in the garden. Received October 13, 1932.

Titanca in Peru and *cardon* in Chile. A shrub 4 to 5 feet high with a yuccalike mass of foliage. The narrow, often recurved leaves, 2 to 4 feet long, are armed along the margins with strong glaucous recurved spines or thorns. The compound spike of large yellow flowers, each 2 inches across and sessile or nearly so, terminates a perfectly straight flower stalk 3 to 5 feet tall.

101195 to 101204.

From Australia. Seeds presented by Edwin Ashby, Wittunga, Blackwood, South Australia. Received October 13, 1932.

101195 to 101199. *CALLISTEMON* spp. Myrtaceae.

101195. *CALLISTEMON ACUMINATUS* × ?

A hybrid of *C. acuminatus* having flowers which vary from pink to deep crimson.

101196. *CALLISTEMON LILACINUS* E. Cheel.

A shrub about 8 feet high with alternate, linear-lanceolate, mucronate leaves. The flowers, in dense cylindrical spikes, are characterized by long conspicuous purple-lilac filaments. It is native to New Zealand and Western Australia.

101197. *CALLISTEMON PALUDOSUS* × ?

A hybrid of *C. paludosus* with pink flowers.

101195 to 101204—Continued

101198. *CALLISTEMON RUGULOSUS* DC.

A shrub up to 12 feet high with narrowly lanceolate leaves 1 to 3 inches long and clusters of flowers having crimson filaments and yellow anthers.

101199. *CALLISTEMON SALIGNUS* (J. E. Smith) Sweet.

A tall shrub or small tree up to 40 feet high with distinctly penni-nerved, lanceolate leaves 1 to 3 inches long and small flowers, in spikes 1 to 2 inches long, which have bright-yellow stamens usually not more than half an inch in length.

For previous introduction see 99403.

101200 to 101204. *CALOTHAMNUS* spp. Myrtaceae.

Native Western Australian shrubs very much like the *Callistemons* but with a much longer flowering period.

101200. *CALOTHAMNUS ASPER* Turcz.

A hairy evergreen shrub with crowded linear flat leaves and short dense clusters of flowers which have crimson stamens.

101201. *CALOTHAMNUS HOMALOPHYLLUS* F. Muell.

An erect shrub 4 to 6 feet high with thick flat oblanceolate to linear leaves 1 to 2 inches long; the small flowers in 1-sided spikes have rich-crimson stamens more than an inch long.

101202. *CALOTHAMNUS LONGISSIMUS* F. Muell.

A low shrub with softly pubescent, corky branchlets. The terete leaves are 6 to 12 inches long, and the small flowers, immersed in the swollen corky stem, have several bundles of stamens nearly an inch long.

101203. *CALOTHAMNUS QUADRIFIDUS* Ait.

An erect evergreen bush 7 feet high with crowded linear leaves about 1 inch long, somewhat like those of *Hakea*, and dense spikes of flowers which are conspicuous because of the long rich-crimson stamens.

For previous introduction see 93834.

101204. *CALOTHAMNUS SANGUINEUS* Labill.

A tall evergreen shrub 6 to 12 feet high with subulate terete leaves about an inch long and flowers with blood-red stamens as long as the leaves.

101205. SESAMUM ORIENTALE L. Pe-
daliaceae. Sesame.

From Africa. Seeds presented by D. C. Edwards, Scott Agricultural Laboratories, Department of Agriculture, Nairobi, Kenya. Received October 17, 1932.

Sim-Sim. From the native market at Bukura; grown at 4,800 feet altitude where the annual rainfall is 52 inches. Introduced for the use of Department specialists.

101206 to 101211.

From Huancayo, Peru. Bulbs and seeds presented by Paul G. Ledig, Huancayo Magnetic Observatory, Carnegie Institution of Washington, D. C. Received October 19, 1932.

101206. (Undetermined.)

A lily with large red or green-yellow flowers.

101207. *URCEOLINA MINIATA* (Herb.) Benth. and Hook. Amaryllidaceae.

A bulbous perennial native to the Andes of Peru and Bolivia. The solid scape, 1 foot high, bears 2 to 6 pendent urn-shaped scarlet flowers 2 inches long, after which appear the narrowly ovate leaves 1 foot long.

For previous introduction see 93770.

101206 to 101211—Continued

101208. *LUPINUS MUTABILIS* Sweet. Fabaceae.
South American lupine.

Tallhue or *ullush*. A handsome half-woody shrub about 6 feet high which is usually broad and bushy in habit. Above the attractive foliage rise numerous spikes of varicolored pea-shaped flowers. The predominant colors are blue, lilac, white, and yellow.

For previous introduction see 99821.

101209 to 101211. *OXALIS* spp. Oxalidaceae.

101209. *OXALIS* sp.

A form with yellow flowers, found on well-drained cliff sides.

101210. *OXALIS* sp.

A form with yellow flowers, found in rocky well-drained situations above 13,000 feet altitude.

101211. *OXALIS* sp.

A form with white flowers, found in clay soil near the observatory.

101212 to 101215.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received October 17, 1932.

101212. *HETEROSPATHE ELATA* Scheff. Phoeniceaceae. Palm.

A tall unarmed palm with a straight slender stem and long pinnate leaves, growing in protected situations and where the rainfall is evenly distributed. It is one of the most attractive and graceful palms and will make a good plant for the conservatory and possibly a good house plant.

For previous introduction see 94191.

101213. *ONCoba ECHINATA* Oliver. Flacourtiaceae.

A smooth shrub with thin leathery oval leaves, small inconspicuous flowers, and round prickly fruits about 1 inch in diameter. It is native to eastern tropical Africa. The seeds contain 46.6 percent of fat, and an analysis of this fat has shown that it contains 87.5 percent of chaulmoogric acid, which is used in the treatment of leprosy.

101214. *PALURUS RAMOSISSIMUS* (Lour.) Lam. Rhamnaceae.

A shrub, native to China and Japan, resembling the Christ-thorn, *P. spina-christi*, but having both spines straight and larger pubescent leaves.

101215. *TABERNAEMONTANA AMBYLOCARPA* Urban. Apocynaceae.

A tropical tree, native to Cuba, with elliptic or oblong leaves up to 5 inches long and small inconspicuous flowers in terminal clusters.

101216 to 101223.

From Costa Rica. Seeds collected by Prof. H. E. Stork, Carleton College, Northfield, Minn. Received October 17, 1932.

101216. *BOMAREA CALDASHI* (H. B. K.) Herb. Amaryllidaceae.

No. 2873. Collected at 11,000 feet altitude on the Irazu volcano, Costa Rica. A twining ornamental plant, native to the Andes as far south as Peru. The thin spreading leaves are 3 to 6 inches long, and the orange-red to red flowers, about an inch long, are borne in many-flowered pendulous clusters.

101217 to 101221. *RUBUS* spp. Rosaceae.

101217. *RUBUS ALPINUS* Macfad.

Alpine bramble.

No. 3315. Collected July 29, 1932, at 9,000 feet altitude on the Poas volcano. A climbing or trailing shrub with strong canes. The

101216 to 101223—Continued

trifoliolate leaves have elliptical serrate leaflets 2 to 4 inches long, and the purple-tinged white flowers, in narrow pubescent panicles, are followed by small blue-black fruits, reported to be the sweetest flavored of any wild fruit in Costa Rica.

101218. *RUBUS GLAUCUS* Benth.

Andes raspberry.

No. 3033. From Cerro de la Muerta, June 27, 1932, at 10,000 feet altitude. A red-fruited raspberry with canes 6 feet high.

101219 and 101220. *RUBUS IRASUENSIS* Liebm.

From Tierra Blanco, July 23, 1932. A tropical American thorny vine with 5-foliolate leaves consisting of ovate-acuminate, serrulate, dark-green leaflets, 1 to 2 inches long, and small hairy fruits, not known to be edible.

101219. No. 3257. Plants with pinkish flowers and sour fruits, found at 7,000 feet altitude, growing along fence rows.

101220. No. 3258. Large plants, 10 to 12 feet high with rather sour reddish fruits, found at 6,700 feet altitude.

101221. *RUBUS URTICAEFOLIUS* Poir. (*R. trichomallus* Schlecht.).

No. 2860. From Sanjon, south of Fajar, June 10, 1932, at 4,850 feet altitude. Strong-growing canes, 12 feet high and rather thorny. Flowers and fruits in all stages occur on the same plant. The ripe fruits were slightly acid, but with no characteristic flavor.

101222. *TRIMEZA* sp. Iridaceae.

An ornamental plant collected at 10,000 feet altitude.

101223. *VAGNERA PANICULATA* (Mart. and Gal.) Standl. Convallariaceae.

Collected on the Irazu volcano at 11,000 feet altitude. A perennial herb with ovate-lanceolate, long-acuminate leaves 5 to 6 inches long and panicles of snow-white flowers 2 inches long.

101224. *ALLIUM CEPA* L. Liliaceae.

Onion.

From India. Seeds presented by the Punjab Department of Agriculture, Lyalpur, Punjab. Received October 19, 1932.

A mixture of several locally grown varieties.

101225 to 101238. *RHODODENDRON* spp. Ericaceae.

From Jamaica Plain, Mass. Plants presented by William H. Judd, Arnold Arboretum. Received October 24, 1932.

101225. *RHODODENDRON OLDHAMII* Maxim.

A much-branched, partly deciduous red-hairy shrub, 3 to 18 feet high, with thin leathery oblong lanceolate dark-green leaves and red flowers 2 inches wide in terminal umbels. Native to Taiwan.

101226. *RHODODENDRON FULCHRUM CALYGINUM* X *SCABRUM*.

101227. *RHODODENDRON AURICULATUM* Hemsl.

A shrub or small tree up to 20 feet high, native to Hupeh, China. The oblong to oblanceolate auricled leaves, 6 to 12 inches long, are dark green above and clad beneath with flexuous threadlike tomentum. The funnel-shaped flowers, in clusters of 7 to 15, are 2 to 4 inches long and are white or rose pink, splashed with green at the base inside.

101228. *RHODODENDRON FAURIAE* Franch.

A shrub 5 to 10 feet high, native to Japan, the branchlets being clothed with thin loose white floccose tomentum. The oblong elliptic to oblanceolate leaves are 3 to 6 inches long, and the funnel-

101225 to 101238—Continued

campanulate flowers, 1 inch long, borne in racemes of 12 to 15, are white or cream with a pink flush on the median lines of the petals and spotted inside with numerous green spots.

101229. *RHODODENDRON GRIERSONIANUM* Balf. and Forr.

A shrub 5 to 10 feet high, native to western Yunnan. The narrowly lanceolate leaves, 4 to 8 inches long, are green above and covered beneath with a loose whitish to buff woolly tomentum. The funnel-campanulate flowers, in clusters of 5 to 12, are 2 to 3 inches long and are bright geranium-scarlet dappled inside with darker spots.

For previous introduction see 100892.

101230. *RHODODENDRON HYPERYTHRUM* Hayata.

A shrub with stout glabrous branches, native to Taiwan. The oblong to lanceolate leathery leaves, 3 to 5 inches long, are smooth above and dotted beneath with reddish punctulations. The funnel-campanulate flowers, 1 to 2 inches long, are purple spotted and are borne in racemose umbels of about 10.

101231. *RHODODENDRON PULCHRUM MAXWELLI* × *PULCHRUM CALYCINUM*.

101232. *RHODODENDRON MICROPHYTON* Franch.

An upright much-branched shrub, 1 to 6 feet high, the branchlets densely clothed with appressed flattened red-brown hairs. The crowded elliptic to lanceolate leaves, about 1 inch long, are dark green above and pale beneath, with scattered red-brown hairs. The funnel-form flowers, nearly 1 inch across, are rose color to white, flushed pink, with carmine or crimson dots on the three upper lobes. It is native to Yunnan, China.

101233. *RHODODENDRON MICROPHYTON* × *OLDHAMII*.

101234. *RHODODENDRON SCABRUM* × *PULCHRUM CALYCINUM*.

101235. *RHODODENDRON* sp.

This plant is a hybrid between a hybrid resulting from *R. scabrum* and the variety Snowflake of *R. obtusum japonicum*, crossed with *R. oldhamii*.

101236. *RHODODENDRON* sp.

A hybrid between *R. scabrum* and the variety Scarlet Prince of *R. obtusum japonicum*.

101237. *RHODODENDRON* sp.

A hybrid between *R. scabrum* and the variety Snowflake of *R. obtusum japonicum*.

101238. *RHODODENDRON PULCHRUM TEBOTAN* (Komatsu) Rehd.

A form with double rose-red flowers having small green leaves in the center.

101239. *DEGUELIA ELLIPTICA* (Roxb.) Taub. (*Derris elliptica* Benth.). Fabaceae.

From Straits Settlements. Seeds presented by the director of the Botanic Gardens, Singapore. Received October 19, 1932.

A large handsome climbing vine native to southeastern Asia. The compound leaves, 1 foot long, are made up of 9 to 12 thin leathery obovate leaflets 4 to 6 inches long, and the bright-red pea-shaped flowers, 1 inch long, are borne in lax racemes a foot in length. It yields the commercial tuba root used in the manufacture of insecticides. The plant is extensively cultivated in the Malay Archipelago.

For previous introduction see 98918.

101240. *CINCHONA CALISAYA* Wedd. Rubiaceae.

From the Netherland East Indies. Seeds presented by the director of the Government Cinchona Plantations, Tjinjroean. Received October 24, 1932.

A tropical shrub with opposite oblong or oblong-lanceolate shining green leaves and terminal panicles of small white and pink flowers. One of the sources of quinine. Native to Bolivia.

For previous introduction see 101064.

101241. *SCLERACHNE PUNCTATA* R. Br. Poaceae. Grass.

From Java. Seeds presented by the director of the Botanical Garden, Buitenzorg. Received October 24, 1932.

A tropical grass about 2 feet high with a fibrous root and numerous branched stems. The narrow linear-lanceolate leaves vary from 3 to 18 inches in length. Native to Java.

101242. *CALANDRINIA BALONENSIS* Lindl. Portulacaceae. Parakeelya.

From Australia. Seeds presented by Dr. Darnell-Smith, director of the Botanic Gardens, Sydney, through J. B. Cleland, the University, Adelaide, South Australia. Received October 27, 1932.

A perennial herb about a foot high, native to Queensland, Australia. The thick fleshy oblong-spatulate leaves are less than 1 inch long at the base of the plant while the upper ones are 2 inches long and linear-lanceolate. The large purple flowers, 1 to 2 inches across, are borne in loose terminal racemes.

101243 to 101252.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received October 21, 1932.

101243. *ANTIDESMA MONTANUM* Blume. Euphorbiaceae.

A tree up to 40 feet high with softly tomentose branchlets, native to the Malay Peninsula. The oblong to elliptic-lanceolate leaves are 4 to 6 inches long, and the inconspicuous flowers are followed by subglobose red fruits, one tenth of an inch long, borne in spikes 3 inches long.

101244. *ANTIDESMA PLATYPHYLLUM* H. Mann. Euphorbiaceae.

A tree 20 to 30 feet high, native to the Hawaiian Islands. The subcoriaceous, ovate to obovate leaves are 3 to 5 inches long, and the small flowers are followed by compressed suboblique red fruits about one half inch long.

101245. *CITHAREXYLUM CAUDATUM* L. Verbenaceae.

For previous introduction and description see 101159.

101246. *EXSTEMMA LONGIFLORUM* (Lamb.) Roem. and Schult. Rubiaceae.

A small tropical tree, native to northeastern South America, with smooth linear-lanceolate leaves over 2 inches long and fragrant white and pink flowers on stems 4 to 5 inches long.

101247. *EXOTHEA PANICULATA* (Juss.) Radlk. Sapindaceae.

A tree up to 50 feet high, native to the West Indies. The abruptly pinnate leaves have two oblong leaflets 4 inches long, and the small flowers

101243 to 101252—Continued

are followed by globose purple fruits one half inch long.

101243. *HELICTERES SEMITRILOBA* Bert. Sterculiaceae.

A shrub 8 to 12 feet high, native to the West Indies, with cordate, sinuate-toothed or sometimes 3-lobed leaves, 1 to 3 inches long, and small flowers in axillary clusters.

101249. *MOMORDICA COCHINCHINENSIS* (Lour.) Spreng. Cucurbitaceae.

A very vigorous, tall climber, native to the Philippine Islands, producing large round green-yellow, attractive fruits which should make it popular as an ornamental vine. The immature fruits are boiled and eaten by the Filipinos. The numerous large round flat seeds appear to be very rich in oil.

101250. *PICRAMNIA FENTANDRA* Swartz. Simaroubaceae.

A small tree with compound leaves made up of 5 to 9 oblong-obovate, shining leaflets 2 to 3 inches long, and pendulous racemes of small white flowers followed by ovoid red to dark-blue, berrylike fruits. Native to the West Indies.

101251. *SERJANIA GLABRATA* H. B. K. Sapindaceae.

A climbing shrub with alternate biternate leaves; the leaflets are elliptic-oblong and coarsely serrate-crenate. The white flowers are in axillary spikelike racemes. Native to the temperate regions in Peru.

101252. *THRINAX* sp. Phoenicaceae. Palm.

101253 to 101255. *AVENA SATIVA* L. Poaceae. Oats.

From England. Seeds presented by Gartons, Ltd., Warrington. Received October 29, 1932.

101253. *Bountiful*, a black oat.

101254. *Hardy Prolific Black Winter* oat.

101255. *Unique*, a white winter oat.

101256. *ANNONA DIVERSIFOLIA* Safford. Annonaceae. *Ilama*.

From Guatemala. Seeds presented by Don Jorge Garcia Salas, Director General de Agricultura. Received October 27, 1932.

A small tree, native to Mexico and tropical America, with brown-gray aromatic bark. The thin membranous leaves, 5 inches long, are broadly elliptical to oblanceolate. The broadly ovoid fruit, about 6 inches long, is clothed in dense grayish felt-like tomentum and, when mature, is usually covered with stout thick protuberances. The hard smooth golden-brown nutlike seeds are embedded in the edible cream-colored or rose-tinted flesh.

For previous introduction see 98340.

101257. *CALYPTROGYNE OCCIDENTALIS* (Swartz) G. Maza. Phoenicaceae. *Manaca palm*.

From Cuba. Plants presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos. Received October 31, 1932.

A beautiful and rare palm with a straight smooth stem sometimes reaching a height of 50 feet. The pinnate leaves are from 8 to 12 feet long.

For previous introduction see 98165.

101258 and 101259. *LACTUCA SATIVA* L. Cichoriaceae. *Garden lettuce*.

From the Union of Soviet Socialist Republics. Seeds presented by Prof. N. I. Vavilov, through the Department of New Culture and Introduction, Leningrad. Received November 1, 1932.

Ussun, Chinese stem lettuce. A peculiar vegetable of which the thick inner stalk is eaten; this stalk is about 2½ feet long and 2 inches in diameter, and it is cut into slices and boiled. The leaves are discarded, as they are bitter. The original seed was collected by an expedition to central China in 1929.

101258. No. 5.

101259. No. 17.

101260 to 101265.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos. Received October 26, 1932.

101260. *ARTOCARPUS INTEGRA* (Thunb.) L. Moraceae. *Jackfruit*.

A very large tree native to southern India and the Malay Archipelago, valued chiefly for its enormous fruits, a single one of which may weigh over 100 pounds. These fruits, which are borne on the trunk and older branches, are usually irregularly oblong and are always green, with the rind consisting of somewhat hexagonal knobs. When ripe the fruits have a powerful odor, and the stronger the latter the better the quality of the fruit. With the exception of the rind and core, the entire fruit is eaten, the white or cream-colored, soft flaky pulp being used either raw or boiled and fried. The large seeds are roasted and used in curries.

For previous introduction see 98799.

101261. *CITHAREXYLUM TRISTACHYUM* Turcz. Verbenaceae.

A spiny tropical shrub with opposite, ovate-lanceolate entire leaves and small white flowers in spikelike racemes. Native to Cuba.

101262. *IXORA FRASERI* Hort. Rubiaceae.

Said to be a hybrid closely resembling *I. chinensis* and having flowers with a scarlet tube and a brilliant salmon limb.

101263. *LIVISTONA HOOGENDORPHI* Andre. Phoenicaceae. *Palm*.

A tall Javanese palm with fan-shaped leaves 4 to 6 feet wide on spiny petioles 3 to 5 feet long, red brown at the base and becoming olive green near the blade. The blades are made up of 10 to 12 plicate pendulous segments with 5 to 7 acute lobes at the apex.

For previous introduction see 98496.

101264. *STROPHANTHUS SARMENTOSUS* DC. Apocynaceae.

An ornamental tropical woody climber with white and purple flowers. The seeds contain a poisonous alkaloid which is used as a heart stimulant.

101265. *VITEX PARVIFLORA* Juss. Verbenaceae. *Chaste-tree*.

Molave. A timber tree native to the Philippine Islands which, under favorable conditions becomes 100 feet high and 20 feet in diameter, although it is usually smaller. The pale-yellow wood is hard and heavy but easy to work and is a good substitute for teak. It is considered one of

101260 to 101265—Continued

the best construction timbers of the islands, as it resists well the action of fungi and sea water, teredo, and white ants.

101266 to 101270. *ORYZA SATIVA* L.
Poaceae. Rice.

From Madagascar. Seeds obtained by Percy G. Kemp, American vice consul, Tananarive. Received October 25, 1932.

A collection of the principal rice varieties grown in Madagascar, introduced for comparison with the varieties now being grown in this country.

101268. *Be.*

101267. *Botry.*

101268. *Mena.*

101269. *Lava*, white, long and thin.

101270. *Vato*, a mixed sample of chalky reddish rice.

101271 to 101291.

From New Zealand. Seeds purchased from A. Wilkinson, Tauranga. Received July 25, 1932. Numbered in November 1932.

101271. *ACIPHYLLA COLENSOI* Hook. f. Apiaceae.

A stout erect perennial herb 2 to 5 feet high, native to New Zealand. The numerous radical leaves form a circle of bayonetlike spikes around the base of the stem, each 1 to 3 feet long, pinnate or bipinnate at the base with few secondary, narrowly linear leaflets 5 to 15 inches long, terminated by a long stout spine. The small white flowers are in a cylindrical panicle made up of numerous umbels.

101272. *ARISTOTELIA FRUTICOSA* Hook. f. Elaeocarpaceae.

An erect or decumbent much-branched shrub, 3 to 8 feet high, native to New Zealand. The coriaceous leaves vary from linear to obovate and are entire, crenate, serrate, or lobed. The small flowers are solitary or in small racemes and are followed by small yellowish berries.

101273. *ARISTOTELIA SERRATA* (Forst.) Oliver. Elaeocarpaceae.

A small tree 6 to 30 feet high with red bark, native to New Zealand. The thin, membranous, cordate leaves, 2 to 5 inches long, are deeply irregularly serrate and are red beneath. The small rose-colored flowers, borne in axillary panicles, are followed by dark-red or almost black berries about the size of a pea.

101274. *ASTELIA NERVOSA* Banks and Soland. Liliaceae.

A stout densely tufted New Zealand perennial often forming extensive masses on swampy grounds in forests. The spreading lanceolate leaves are 2 to 8 feet long with the midrib and several other nerves colored red. The fragrant flowers, borne in large panicles on scapes 1 to 2 feet high, are greenish black and are followed by bright orange-yellow berries.

101275 to 101278. *CLEMATIS* spp. Ranunculaceae.

101275. *CLEMATIS AFOLIATA* J. Buch.

A perennial with wiry leafless stems, native to New Zealand. The flowers are greenish white, nearly an inch across, and are borne in axillary fascicles of 2 to 5. On young plants the leaves are occasionally developed and consist of a persistent petiole and three minute long-stalked ovate to triangular leaflets.

101276. *CLEMATIS FOETIDA* Raoul.

A stout woody vine, often covering small trees native to New Zealand. The slightly coria-

101271 to 101291—Continued

ceous trifoliolate leaves have ovate to cordate leaflets 1 to 2 inches long, and the small yellow flowers, in large panicles, are strongly odorous but are said not to be fetid.

101277. *CLEMATIS HEXASEPALA* DC.

A smaller and more slender vine than *C. indivisa*, with pale-green, coriaceous, trifoliolate leaves having ovate-oblong to ovate-cordate toothed leaflets 1 to 3 inches long. The numerous flowers, 1 to 2 inches across, have 6 to 8 white sepals.

101278. *CLEMATIS INDIVISA* Willd.
New Zealand clematis.

A large woody climber with stout stems often 2 to 3 inches in diameter, native to New Zealand. The coriaceous trifoliolate leaves have cordate to linear-oblong leaflets 1 to 4 inches long, usually entire, and the white flowers are 2 to 4 inches across.

101279. *DIANELLA INTERMEDIA* Endl. Liliaceae.

A perennial herb, native to New Zealand, with numerous sword-shaped leaves, 3 feet long, crowded at the base of a scape 2 feet high. The spreading panicle of small purplish flowers with bright-orange anthers is followed by broadly oblong blue berries nearly an inch in length.

101280. *DODONAEA VISCOSA* (L.) Jacq. Sapindaceae.
Hopbush.

A native New Zealand small tree or large bush with linear-oblong leaves 1 to 3 inches long. The green flowers, in small terminal panicles, are followed by flat dark-brown winged fruits. The plant is used as a hedge, and the hard wood is valued for making mauls, as it does not split.

101281. *DRACOPHYLLUM STRICTUM* Hook. f. Epacridaceae.

A freely-branching New Zealand shrub with erect coriaceous leaves, from a shea hinge base, which taper to a rigid point, and small terminal panicles of numerous white flowers.

101282. *LEPTOPTERIS SUPERBA* (Col.) Presl. Osmundaceae.
Fern.

A fern with a stout rhizome forming an erect caudex 1 to 3 feet high, native to New Zealand. The tripinnatifid fronds, 2 to 4 feet long, are broadly lanceolate, and the closely overlapping linear-oblong pinnules, one half inch long, are pinnatifid almost to the base.

101283. *LEUCOGENES GRANDICEPS* (Hook. f.) Beauverd. Asteraceae.

A densely tufted perennial herb, 2 to 3 inches high, native to New Zealand. The densely imbricated spreading or recurved leaves, one fourth to one third inch long, are obovate-spatulate, flat or concave, and clothed on both surfaces with appressed silvery tomentum. The small flowers are congested into a densely bracteate head.

101284. *MYOSOTIDIUM HORTENSIA* (Decaisne) Basil (*M. nobile* Hook.). Boraginaceae.

A stout succulent perennial herb, 1 to 3 feet high, native to the Chatham Islands. The thick fleshy radical leaves, 6 to 12 inches long, are broadly cordate or reniform, and the blue flowers, one half inch across, are borne in dense corymbose cymes.

101285. *NERTEA DEPRESSA* Banks and Soland. Rubiaceae.
Beadplant.

A creeping perennial herb native to the Andes from the Tropics to Cape Horn and to New Zealand. The broadly ovate leathery leaves are one-sixth inch long, and the small greenish axillary flowers are followed by orange berries the size of a pea, which nearly cover the mat of foliage.

For previous introduction see 98040.

101271 to 101291—Continued

101286. *NOTHOPANAX COLENSOI* (Hook. f.) Seem.
Araliaceae.

A glabrous shrub or small tree up to 15 feet high, native to New Zealand. The palmately compound coriaceous leaves are made up of 3 to 5 obovate, coarsely serrate leaflets 2 to 6 inches long, and the small flowers, borne in large compound umbels, are followed by globular purple-black fruits one-fifth inch in diameter.

101287. *OLEARIA CHEESEMANII* Cockayne and Allen. Asteraceae.

A much-branched shrub 3 to 12 feet high, native to New Zealand. The membranous linear-lanceolate to oblong-lanceolate leaves, 2 to 4 inches long, have sinuate margins, and the small heads of white flowers are borne in large rounded corymbs.

101288. *PACHYSTEGIA INSIGNIS* (Hook. f.) Cheesem. Asteraceae.

A robust spreading New Zealand shrub, 6 to 9 feet high, with stout densely tomentose branches, thick leathery oblong entire leaves, 3 to 7 inches long, white tomentose beneath, and large hemispherical heads, 3 inches in diameter, of white flowers on peduncles a foot long.

101289. *PARSONSIA HETEROPHYLLA* A. Cunn. Apocynaceae.

A tall, slender, branching vine, woody at the base, with coriaceous leaves varying from linear to obovate, 2 to 4 inches long. The terminal and axillary, many-flowered cymes of small, fragrant, white flowers are followed by cylindrical pods 6 inches long. Native to New Zealand.

101290. *PITOSPORUM BUCHANANI* Hook. f. Pittosporaceae.

A shrub or small tree up to 20 feet high, native to New Zealand. The oblong to lanceolate membranous leaves, 2 to 5 inches long, are silky pubescent, and the small, dark-purple flowers are borne in axillary clusters.

101291. *PRATIA ANGULATA* (Forst. f.) Hook. f. Campanulaceae.

A slender, creeping, herbaceous perennial forming broad matted patches. The stems are 2 to 7 inches long, the rather fleshy ovate to orbicular leaves, less than one-half inch long, are sinuate dentate, and the axillary flowers, less than 1 inch long, are white with purple streaks. It is native to New Zealand.

For previous introduction see 91294.

101292 to 101295.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos. Received October 31, 1932.

101292. *POLYGALA OBLONGATA* (Britton) Blake (*Badiera oblongata* Britton). Polygalaceae.

A tropical evergreen shrub, native to Cuba and the Bahama Islands, with oblong-obovate leathery leaves about 1 inch long and small flowers in very short racemes.

101293. *BELAIRIA MUCRONATA* Griseb. Fabaceae.

A thorny shrub with shining-green leaves composed of 3 to 9 linear-oblong mucronate leaflets; the flowers are followed by small membranous pods. It is native to Cuba.

101294. *SOLANUM MACRANTHUM* Dunal. Solanaceae.

A very rapid-growing tree with large, dark-green, spiny leaves and a great profusion of large, blue-violet flowers which change color from day to day, becoming a pale blue and later fading to white.

For previous introduction see 97852.

101292 to 101295—Continued

101295. *ZAMIA INTEGRIFOLIA* Ait. Cycadaceae.

A cycad, native to the West Indies, with a trunk 12 to 18 inches high and a crown of pinnately compound leaves somewhat resembling a palm. The alternate leaflets, in 7 to 16 pairs, are oblong to lanceolate and are sometimes dentate at the apex.

101296 and 101297. *ALLIUM SATIVUM* L. Liliaceae. Garlic.

From China. Bulbs presented by W. M. Hayes, Tenghsien, Shantung. Received November 9, 1932.

Locally grown varieties, introduced for the use of Department specialists.

101298 and 101299.

From Australia. Seeds presented by Arthur F. Street, R. W. Cameron & Co., Inc., Sydney, through Monson Morris, Hollyberry Farm, Aiken, S.C. Received November 4, 1932.

101298. *CALANDRINIA BALONENSIS* Lindl. Portulacaceae. Parakeelya.

For previous introduction and description see 101242.

101299. *CALANDRINIA REMOTA* J. M. Black. Portulacaceae. Parakeelya.

A low procumbent annual, or possibly perennial, 4 to 12 inches high, native to South Australia. The succulent, linear-spatulate leaves are less than an inch long, and the rather large purple to white flowers are 1 to 2 inches across. It is of possible value as a forage plant.

101300. *PHOENIX RECLINATA* Jacq. Phoenicaceae. Senegal date palm.

From Africa. Seeds presented by the director of agriculture, Western Provinces, Zaria, Nigeria. Received November 4, 1932.

A tropical and South African date palm 20 to 30 feet high with green reclinate pinnate leaves 6 to 9 feet long composed of rigid leaflets and yellowish fruits half an inch long with a sweetish pulp.

For previous introduction see 101144.

101301 and 101302.

From India. Seeds presented by W. Head, deputy director of gardens, Saharanpur, United Provinces. Received November 3, 1932.

101301. *AMYGDALUS PERSICA* L. Amygdalaceae. Peach.

A good type. Introduced for the use of Department specialists.

101302. *PRUNUS* sp. Amygdalaceae. Plum.

Ladakh.

101303 to 101306.

From Malta. Seeds presented by J. Borg, superintendent, Department of Agriculture, Valletta. Received November 3, 1932.

101303. *AMYGDALUS PERSICA NECTARINA* Ait. Amygdalaceae. Nectarine.

A white nectarine.

101304. *PRUNUS ARMENIACA* L. Amygdalaceae. Apricot.

Alexandrine.

101305. *PRUNUS ARMENIACA* L. Amygdalaceae. Apricot.

101306. *PRUNUS DOMESTICA* L. Amygdalaceae. Common plum.

St. John's.

101307. GOSYPIUM STOCKSII Masters.
Malvaceae. Cotton.

From India. Seeds presented by M. Afzal, Cotton Research Laboratory, Lyallpur, through T. H. Kearney, Bureau of Plant Industry. Received November 10, 1932.

A shrubby tropical Indian cotton, with small yellow flowers, which is native to the Sind district; it is of the 13-haploid-chromosome group and therefore will not cross with the American types. The seed is difficult to germinate. It is sown in India about June, and before sowing the coat is carefully split with a knife or the seed is rubbed upon a piece of fine sandpaper which allows access of water and helps germination.

101308. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. Common wheat.

From China. Seeds presented by Albert N. Steward, College of Agriculture, University of Nanking. Received November 11, 1932.

Nanking no. 716.

Introduced for the use of Department specialists.

101309 to 101343. FICUS spp. Moraceae. Fig.

From France. Scions presented by Prof. D. Bois, Muséum National d'Histoire Naturelle, Paris. Received November 11, 1932.

101309. FICUS AGGREGATA Vahl.

An East Indian woody climber with oval, obtuse, glabrous leaves 3 inches long, punctate above, and clusters of sessile globose fruits.

101310. FICUS BARONI Baker.

A tree, native to central Madagascar, with glossy brown bark and alternate closely set leaves resembling those of *Laurocerasus officinalis* in size and appearance. The sessile roundish fruits are one-half inch in diameter.

101311. FICUS BENGHALENSIS L. Banyan tree.

A large tree 75 to 100 feet high, rooting from the branches. The branchlets are softly pubescent, the broadly ovate coriaceous leaves are 4 to 8 inches long, and the globose red fruits, borne in pairs, are about the size of small cherries. The tree is native to India and northern Africa.

For previous introduction see 98394.

101312. FICUS CANNONII (Bull) N. E. Brown.

A tropical tree with pinnatifid hairy leaves which become entire and ovate-oblong when older. The upper surface of the leaves is dark bronze red on bronzy green with the lower surface vinous purple. The subglobose yellowish fruits are one-half inch in diameter. Native to the Society Islands.

101313. FICUS DIVERSIFOLIA Blume. Mistletoe fig.

A smooth shrub or small tree, native to India. The broadly obovate leaves, 1 to 3 inches long, and the small solitary, dull-red or yellow fruits resemble the mistletoe.

101314. FICUS DUSENII Warb.

A tree up to 40 feet high, native to tropical Africa. The entire obovate to elliptic leaves are 2 to 9 inches long, and the globose or ovoid fruits are borne in sessile axillary pairs. Possibly a form of *F. thollingii*.

101315. FICUS GLABELLA Blume.

A small glabrous tree native to the Malay Peninsula. The thin not very leathery leaves, 2 to 4 inches long, are oblong-ovate and entire, and the sessile fruits, less than one-half inch in diameter, are purple, sometimes with yellow dots.

101309 to 101343—Continued**101316. FICUS GLABERRIMA Blume.**

An East Indian tree with oblong acuminate leaves 3 to 6 inches long and small pea-shaped fruits.

101317. FICUS HETEROPHYLLA L. f.

A creeping shrub, native to tropical India and Ceylon. The leaves, 1 to 3 inches long, vary from lanceolate and entire to broadly cordate with repand, toothed, or deeply lobed margins, and the solitary axillary fruits vary from globose to long pyriform.

101318. FICUS HISPIDA L. f.

A shrub or small tree native to tropical Asia and Australia. The opposite rough-hairy leaves are entire or toothed, and the hispid yellow fruits are borne in clusters on the old wood.

101319. FICUS LUCESCENS Blume (*F. infectoria* Roxb.). Dotted fig.

A low deciduous tree, native to India. The membranous oblong-ovate leaves, 3 to 5 inches long, are slightly subcordate, and the globose fruits, one-fourth inch in diameter, are whitish flushed and dotted with red.

101320. FICUS KERSTINGII Warb.

A tree up to 20 feet high, native to tropical Africa. The rigid leathery leaves, 4 to 6 inches long and broad, are heart shaped and are dark green with red nerves. The obovoid fruits, one-half inch long, are in axillary fascicles at the tips of the shoots.

101321. FICUS LUTEA Vahl.

A tall spreading tree with whorled branches, native to tropical Africa. The ovate-oblong, leathery leaves, 4 to 8 inches long, are finely reticulate with the nerves whitish above and pale green below. The globose axillary yellow fruits, borne in pairs, are smaller than cherries and have a bifid umbo at the apex.

101322. FICUS LYRATA Warb.

A tree up to 40 feet high, native to tropical Africa. The rigid leathery lyre-shaped leaves are 6 to 12 inches long and 5 to 7 inches broad, and the globose fruits, about 2 inches in diameter, are borne in sessile axillary pairs.

101323. FICUS OVATA Vahl.

A large tree with a broad crown and ribbed purple branchlets, native to tropical Africa. The oblong-ovate to broadly cordate leaves are 7 to 10 inches long, and the axillary subglobose fruits, 1 to 2 inches in diameter, are surrounded while young with reddish coriaceous bracts.

101324. FICUS PANDURATA Hance. Fiddleleaf fig.

A low diffuse shrub with leaves 1 to 4 inches long, having rounded cordate bases and rounded-oblong upper portions. The red fruits, nearly as large as cherries, are borne singly in the axils of the leaves. It is native to China.

101325. FICUS PARIETALIS Blume.

An attractive tree, native to tropical Asia. The large oblong leaves are shining deep green above and dull green below, and the golden-yellow fruits are three-fourths of an inch in diameter.

101326. FICUS PIERREI Hort.

A name for which a place of publication and a description have not been found.

101327. FICUS PROLIXA Forst. f.

A tropical tree with oblong-lanceolate acuminate leaves, punctate beneath, and fruits borne in pairs. Native to the Society Islands.

101328. FICUS PUNCTIFERA Warb.

A tree with spreading branches and soft-gray, smooth bark, native to tropical Africa. The

101309 to 101343—Continued

elliptic to obovate parchmentlike leaves are 4 to 6 inches long, scabrous on both surfaces, and the roughly scabrous fruits, solitary or in axillary pairs, are obovoid to subglobose and about half an inch in diameter. This species is referred to *F. exasperata* by some authorities.

101329. *FICUS PYRIFORMIS* Hook. and Arn.

A shrub with pubescent branchlets, native to tropical India and China. The linear-lanceolate to oblong-lanceolate leaves are 2 to 4 inches long, and the solitary axillary pear-shaped fruits are less than an inch long.

101330. *FICUS QUERCIFOLIA* Roxb.

A creeping or decumbent shrub, native to tropical Asia. The coarsely sinuate-crenate, deeply lobed leaves are 2 to 5 inches long, and the red fruits, about half an inch in diameter, vary from egg shape to pea shape.

101331. *FICUS RACEMIGERA* Bur.

A small tree about 30 feet high, native to the forests of New Caledonia. The membranous elliptic entire leaves are 3 to 8 inches long, and the small orange fruits are in long racemes.

101332. *FICUS RETUSA* L.

A large tropical tree with aerial roots, leathery leaves 4 inches long, and red or yellow fruits one-third of an inch in diameter. Native to the East Indies.

101333. *FICUS RUBIGINOSA* Desf. **Rusty fig.**

A tree with wide spreading branches throwing out woody roots like the banyan tree. The elliptical coriaceous leaves, 3 to 4 inches long, are smooth above and covered with rusty tomentum beneath.

For previous introduction see 90711.

101334. *FICUS SCHLECHTERI* Warb.

An East Indian tree with smooth obovate to oblanceolate leaves about 3 inches long and pear-shaped fruits one-third inch in diameter, borne in pairs in the leaf-axils.

101335. *FICUS SUBTRIPLINERVA* Mart. **Gomero.**

A Brazilian forest tree with a dense crown of obtuse papery leaves, prominently three-veined at the base. The small axillary fruits are globular.

101338. *FICUS TELOUKAT* Batand. and Trab.

A large tree with smooth, leathery, entire, oblong-ovate, cordate leaves about 4 inches long and small, fleshy, globose, pinkish fruits scarcely half an inch in diameter. Teloukat is the Touareg name for this tree in northern Africa where it is native.

101337. *FICUS THOLONI* Hort.

A name for which a place of publication and a description have not been found.

101338. *FICUS TILIAEFOLIA* Baker.

A shrub with stout brown branchlets and cordate-triangular, green, entire leaves, scabrous above, 4 to 5 inches long. The leathery fruits are 1 inch in diameter. Native to Madagascar.

101339. *FICUS TRACHYPHYLLA* (Miquel) Fenzl.

A large spreading tree, native to tropical Africa. The broadly cordate leaves, 2 to 5 inches long, are obtusely serrate, and the pear-shaped axillary fruits, 1 to 2 inches long, are densely tomentose. This tree is said to yield a hard reddish rubber.

101340. *FICUS TRIANGULARIS* Warb.

A tropical African tree, closely related to *F. furcata*, with small, triangular, leathery leaves 2 inches long with revolute margins and small, green, brown-spotted fruits one-fourth inch in diameter.

101309 to 101343—Continued

101341. *FICUS TRIMENI* King.

A gigantic tree with very few aerial roots, native to tropical Asia. The elliptic, entire, leathery leaves are 3 to 5 inches long, and the warty, globose fruits, less than one-half inch in diameter, are borne in sessile axillary pairs.

101342. *FICUS UTILIS* Sim. **Zulu fig.**

A medium-sized tree native to eastern Africa from Zululand to Somaliland. It is almost evergreen, except in long droughts. The fruit is worthless, but the natives use the thick bark, when beaten out, for bags, clothing, etc.

101343. *FICUS VILLOSA* Blume.

A strong-climbing shrub, native to the Malay Archipelago, with the branchlets, underside of the leaves, and the fruits covered with red-brown tomentum. The leathery, cordate leaves are 5 to 10 inches long, and the orange-yellow fruits, one-third inch in diameter, are clustered in axillary tubercles.

101344. *RUBUS HAWAIENSIS* A. Gray. **Rosaceae. Akala.**

From Hawaii. Seeds presented by W. T. Pope, senior horticulturist, Agricultural Experiment Station, Honolulu. Received November 9, 1932.

A wild raspberry, native to Hawaii between 3,500 and 5,000 feet altitude, which grows over 15 feet high. The large fruits, 1½ inches long and about 1 inch in diameter, have a rather sharp, but pleasant acid flavor.

101345. *RUBUS IDAEUS* L. **Rosaceae. European raspberry.**

From the Union of Soviet Socialist Republics. Seeds presented by the Institute of Plant Industry, Leningrad. Received November 11, 1932.

Grown in the Leningrad district.

101346 to 101354.

From Australia. Seeds presented by Edwin Ashby, Wittunga, Blackwood, South Australia. Received November 10, 1932.

101346 to 101351. *CALLISTEMON* spp. **Myrtaceae.**101346. *CALLISTEMON PALLIDUS* (Bonpl.) DC.

Closely related to *C. salignus*, from which it is said to differ by the upright habit of growth. It is an erect shrub 6 to 8 feet high and is said to be restricted to Tasmania.

101347 and 101348. *CALLISTEMON PALUDOSUS* ?

For previous introduction see 101197.

101347. A hybrid with cream flowers.

101348. A hybrid with lovely pink flowers.

101349. *CALLISTEMON RIGIDUS* R. Br.

A tall shrub, sometimes 30 feet high, native to New South Wales. The narrowly linear leaves are 2 to 5 inches long, and the scarlet flowers, with dark-red stamens an inch long, are borne in large dense spikes.

101350. *CALLISTEMON RUGULOSUS* DC.

For previous introduction and description see 101198.

101351. *CALLISTEMON SALIGNUS* (J. E. Smith) Sweet.

For previous introduction and description see 101199.

101352. *CALLITRIS* sp. **Pinaceae.**101353. *LEPTOSPERMUM SCOPARIUM* Forst. **Manuka.**

Variety *persiciflora*, with pink flowers.

101346 to 101354—Continued

101354. *THRYPTOMENE* sp. Myrtaceae.Closely related to *T. strongylophylla*.101355. *ACACIA LEPTOCLADA* A. Cunn.
Mimosaceae.

From Australia. Seeds presented by Kate O. Sessions, Pacific Beach, Calif. Received November 9, 1932.

A glabrous shrub with compound leaves made up of oblong coriaceous leaflets one-twelfth of an inch long and yellow flowers in round racemes, larger than the leaves, produced at the ends of the branches. It is native to New South Wales, Australia.

101356 to 101374.

From France. Plants presented by Dr. H. Humbert, Muséum National d'Histoire Naturelle, Paris. Received November 11, 1932.

101356 to 101361. *BRYOPHYLLUM* spp. Crassulaceae.101356. *BRYOPHYLLUM ALICIAE* (R. Hamet) Berger (*Kalanchoe aliciae* R. Hamet).

A stout, erect, hairy succulent with opposite, roundish or oval, crenate leaves and rather large flowers in branched cymes. Native to central Madagascar.

101357. *BRYOPHYLLUM DAIGREMONTIANUM* (Ham. and Perr.) Berger (*Kalanchoe daigremontianum* Ham. and Perr.).

A brown-green succulent perennial, native to Madagascar, becoming about 2 feet high. The leaves are petiolate, sometimes peltate, green within, barred with brown, deeply crenate, budding from the angles. The small deep-pink flowers are in lax terminal panicles.

101358 and 101359. *BRYOPHYLLUM MINIATUM* (Hilsenb. and Boj.) Berger. (*Kalanchoe miniata* Hilsenb. and Boj.).

101358. An erect, slender, fleshy plant 1 to 2 feet high, native to Madagascar. The smooth, green, oval-obtuse leaves are up to 3 inches long, with shallow, crenate, sinuous margins and slightly pink petioles. The small flowers, bright red with brown spots, are in a lax terminal panicle.

101359. Received as *Kalanchoe miniata subpeltata*, a form said to have smaller leaves with a longer and more slender petiole, with the leaves in the center of the shoot always peltate.101360. *BRYOPHYLLUM SCANDENS* (Perrier) Berger.

A succulent climbing plant with a slender stem and sensile, linear-lanceolate, thick, dark-green leaves 2 to 3 inches long, bearing 5 or 6 bulbiferous teeth at their apex. The dark-violet flowers, one-third inch long, are in a lax, many-flowered inflorescence. Native to Madagascar.

101361. *BRYOPHYLLUM TUBIFLORUM* Harv.

An erect herb a foot high with terete fleshy leaves 1 to 2 inches long, tipped with three linear erect teeth and two broad reflexed teeth. The scarlet flowers are in terminal clusters. Native to Madagascar.

101362 to 101372. *KALANCHOE* spp. Crassulaceae.101362. *KALANCHOE AROMATICA* Perrier.

A succulent perennial, native to Madagascar, characterized by being covered throughout with viscous red glands and by having a strong aromatic odor. The leaves are triangular-lanceolate, and the small flowers, greenish yellow with red lines, are in terminal cymes.

101356 to 101374—Continued

101363. *KALANCHOE BEHARENSIS* Drake.

A shrubby succulent about 12 feet high with large, thick, fleshy, ovate leaves up to 8 inches long. These are rusty tomentose above and silvery below, both surfaces becoming dingy with age. The pale-yellow flowers are borne in ample terminal panicles. Native to Madagascar.

For previous introduction see 91525.

101364. *KALANCHOE FEDTSCHENKOI* Ham. and Perr.

A rather small succulent about 10 inches high with crenate, rounded-oval leaves 1½ inches long, bluish-green overcast with purple, and small purplish flowers in a loose cluster terminating the slender stem. Native to Madagascar.

101365. *KALANCHOE GLOBULIFERA* Perrier.

A succulent plant with a short, ascending, hairy stem and 6 to 8 crowded obovate-spatulate glabrous leaves about 1 inch long. The small yellow or bright-red flowers, half an inch long, are in a paniced cyme. Native to Madagascar.

101366. *KALANCHOE GLOBULIFERA COCCINEA* Perrier.

A stout, branched, succulent perennial up to a foot high with elongated, thick, irregularly toothed, obovate-spatulate leaves over 2 inches long and numerous bright-scarlet flowers in large terminal cymes. Native to Madagascar.

For previous introduction see 95552.

101367. *KALANCHOE GOMPHOPHYLLA* Baker.An erect perennial about a foot high with fleshy, obovate-cuneate, nearly entire leaves 1 inch long and yellow flowers in a dense corymbose panicle. Native to Madagascar and closely allied to *K. hildebrandtii*.101368. *KALANCHOE LAXIFLORA* Baker.

A somewhat woody succulent plant, native to Madagascar, which becomes 6 feet high, but requires bushes or other support to stand erect. The stem terminates in a large lax corymb of deep-rose flowers.

101369. *KALANCHOE ORGYALIS* Baker.

An erect succulent perennial with stems 6 to 7 feet long, oblong-spatulate leaves 3 to 5 inches long, and yellow flowers, one third inch long, in dense terminal cymes. Native to central Madagascar.

101370. *KALANCHOE SYNSEPALA* Baker.

An erect succulent perennial, native to central Madagascar, with the lower leaves opposite, sessile, oblong-spatulate, and green with a red margin. The small reddish flowers are in dense terminal cymes.

101371. *KALANCHOE TOMENTOSA* Baker.

A fleshy perennial, densely covered throughout with short brown hairs. The sessile elongated leaves are about 2 inches long, and the flowers are in a narrow panicle about 6 inches long. It is native to central Madagascar.

101372. *KALANCHOE WALDHEIMI* Ham. and Perr.

A slender fleshy plant with a rather slender stem up to a foot high and opposite, subsessile, flat, obovate, crenulate leaves over 2 inches long. The rose-colored flowers are in a lax terminal corymblike inflorescence. Native to Madagascar.

101373. *KITCHINGIA CAMPANULATA* Baker.

A stout-stemmed, fleshy plant with sessile, linear-oblong, obtuse, conspicuously crenate

101356 to 101374—Continued

leaves 2 to 3 inches long. The 12 to 20 bright-red flowers are in a lax globose compound terminal cyme. Native to Madagascar.

101374. *KITCHINGIA PELTATA* Baker.

A succulent herbaceous ornamental with leaves petiolate, almost peltate, crenate, 2 to 3 inches long, green with red margins, and pink petioles and stems.

101375 to 101378. *CHAYOTA EDULIS* Jacq. Cucurbitaceae. **Chayote.**

From Guatemala. Fruits purchased from Don Jorge Garcia Salas, Director General of Agriculture, Guatemala City. Received November 15, 1932.

Native name, *quisquil*.

101375. A small round, ivory-white variety.

101376. A small pear-shaped, dark-green variety.

101377. A short, broad, dark-green variety.

101378. A pear-shaped, light-green variety.

101379 and 101380.

From Canada. Scions presented by F. L. Skinner, Dropmore, Manitoba. Received November 16, 1932.

101379. *SYRINGA OBLATA DILATATA* × *VULGARIS*. Oleaceae. **Lilac.**

Excel.

101380. *SYRINGA VILLOSA* × *SWEGINZOWII*. Oleaceae. **Lilac.**

Hermaine.

101381 to 101383.

From Huancayo, Peru. Bulbs and roots presented by Paul G. Ledig, Magnetic Observatory of the Carnegie Institution, Washington, D.C. Received November 16, 1932.

101381. (Undetermined.)

From the Hacienda Acopalca at 13,000 feet altitude. A lily with red blossoms which come just out of the ground like a crocus, but the blossoms are more tubular.

101382. *OXALIS* sp. Oxalidaceae.

No. 2. From the Hacienda Acopalca at 13,000 feet altitude. Found between the stones in an old stone wall along the road fill over a low swampy ditch.

101383. *OXALIS* sp. Oxalidaceae.

No. 4. From the Hacienda Chamiseria at 11,600 feet altitude. An oxalis with a very much thickened leaf stem, apparently as a sort of water storage, as they grow on very precipitous cliffs which dry out completely during the dry season.

101384 and 101385.

From Alaska. Seeds purchased from Walter J. Eyerdam, Seattle, Wash. Received November 15, 1932.

101384. *PHYLLODOCE ALEUTICA* (Spreng.) Heller. Ericaceae.

A low deciduous shrub with imbricated linear serrulate leaves and terminal clusters of small bell-shaped flowers. Native to the Aleutian Islands.

101385. *SORBUS KAMTSCHATCENSIS* КОМОВОЙ. Malaceae. **Mountain-ash.**

A tree about 6 feet high with smooth, gray-brown bark, stout branches, and opaque, ovate-lanceolate, acuminate leaflets. The small pinkish fruits are in clusters 3 to 4 inches across. Native to the Kamchatka Peninsula.

101386. *CORYPHA UMBRACULIFERA* L. Phoenicaceae. **Talipot palm.**

From Ceylon. Seeds presented by T. H. Parsons, curator of the Royal Botanic Garden, Peradeniya. Received November 19, 1932.

A large fan palm up to 80 feet high. The leaves, 12 feet long and 16 feet broad, are made up of lobed segments, and the creamy white flowers are in terminal panicles 20 feet long. It is native to Ceylon.

For previous introduction see 93530.

101387 and 101388. *LUPINUS MUTABILIS* Sweet. Fabaceae. **South American lupine.**

From Huancayo, Peru. Seeds presented by Paul G. Ledig, Magnetic Observatory of the Carnegie Institution, Washington, D.C. Received November 16, 1932.

Tallhue, ullush. A handsome half-woody shrub about 6 feet high which is usually broad and bushy in habit. Above the attractive foliage rise numerous spikes of varicolored pea-shaped flowers. The predominant colors are blue, lilac, white, and yellow.

101387. Speckled seeds. 101388. White seeds.

101389 to 101393. *ALLIUM* spp. Liliaceae.

From China. Seeds presented by Albert N. Steward, College of Agriculture, University of Nanking. Received November 16, 1932.

101389. *ALLIUM CEPA* L. **Onion.**

Australian Brown. A variety introduced into China, probably from Australia.

101390. *ALLIUM FISTULOSUM* L. **Welsh onion.**

From the Sun Tomb. Originally from a foreign source.

101391 and 101392. *ALLIUM PORRUM* L. **Leek.**

Introduced seed which is now being cultivated in China.

101391. From the University Garden.

101392. From the Sun Tomb.

101393. *ALLIUM SATIVUM* L. **Garlic.**

A variety cultivated near the university nursery. The flowers are white, and both leaves and scapes are used as a vegetable.

101394. *BOURRERIA REVOLUTA* H. B. K. Boraginaceae.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received November 18, 1932.

A shrub or small tree native to the West Indies. The leathery ovate leaves are 1 to 2 inches long, and the rather large, white flowers are borne in terminal cymes. The slightly succulent red fruits are about one-third inch in diameter.

101395 to 101406.

From Manchuria. Seeds presented by B. V. Skvortzov, Botanical Department, 2-d High School, Chinese Eastern Railway, Harbin. Received November 18, 1932.

101395. *ACONITUM KUSNEZOFFII* Reichenb. Ranunculaceae. **Monkshood.**

An erect, hardy, herbaceous perennial, native to northeastern Asia, with terminal clusters of bluish flowers.

101395 to 101406—Continued

101396. *ACONITUM LYCOCTONUM* L. Ranunculaceae.
Yellow wolfsbane.

A slender perennial reaching a height of 6 feet, with yellow or whitish flowers. Native to Europe and Siberia.

101397. *CUCURBITA MOSCHATA* Duchesne. Cucurbitaceae.
Cushaw.

Variety *melanocformis*.

101398. *HETEROPAPPUS HISPIDUS* (Thunb.) Less. Asteraceae.

A perennial herb, native to eastern Asia, with rough stems and linear leaves having ciliate margins. The azure-blue, asterlike flower heads form broad corymbose clusters 8 to 10 inches across.

101399. *LATHYRUS DAVIDII* Hance. Fabaceae.

A white-flowered climber, 3 to 4 feet high, with membranous trifoliate leaves. Native to northern China.

For previous introduction see 90548.

101400. *AGASTACHE RUGOSA* (Fisch. and Mey.) Kuntze (*Lophanthus rugosus* Fisch. and Mey). Menthaceae.
Wrinkled giant-hyssop.

A summer-flowering perennial herb, 2 to 4 feet high, with cordate, serrate, rugose, scented leaves and attractive lavender flowers in reddish calyces crowded into dense oblong spikes. Native to China.

101401. *METAPLEXIS JAPONICA* (Thunb.) Makino (*M. stauntoni* Schult.). Asclepiadaceae.

A climbing shrubby milkweed, native to China and Japan, with opposite, cordate, undulate leaves and small, pale-rose to white flowers in axillary clusters.

101402. *PAPAVER NUDICAULE* L. Papaveraceae.
Iceland poppy.

Variety *amurense*, from the Hingan Mountains, with foliage rather coarser than the type and fairly uniform orange-yellow flowers.

101403. *SCUTELLARIA BAICALENSIS* Georgi. Menthaceae.
Baikal skullcap.

Locally known as mountain tea. A low shrubby perennial forming a spreading mass of stems, covered with lanceolate leaves from which ascending shoots 6 to 12 inches high are produced, each terminated in late summer by a head of large and brilliant blue-purple flowers.

101404. *SOJA MAX* (L.) Piper (*Glycine ussuriensis* Sieb. and Zucc.). Fabaceae.
Soybean.

A wild form.

101405. *VIOLA IRCUTIANA* Turcz. Violaceae.
Violet.

A perennial violet, native to dry hilly regions in the Kaja River, Siberia. It has oval-cordate leaves and rose-violet flowers and is similar to *Viola variegata*, but has smaller flowers.

101406. *VIOLA SEOULENSIS* Nakai. Violaceae.
Violet.

A perennial violet with oblong or ovate-oblong, long-stemmed leaves an inch in length and pale violet flowers. Native to Chosen.

101407 to 101409. *CHAYOTA EDULIS* Jacq. Cucurbitaceae. Chayote.

From Guatemala. Fruits presented by Don Jorge Garcia Salas, Director General of Agriculture, Guatemala City. Received November 26, 1932.

Native name, *guisquil*.

101407. Large, round, ivory-white variety.

101408. Small, pear-shaped, ivory-white variety.

101409. Small, ovoid, dark-green variety.

101410 and 101411.

From France. Seeds presented by R. Salgues, directeur de Station Botanique de Brignoles. Received November 29, 1932.

101410. *ASTRAGALUS ONOBYCHIS* L. Fabaceae.

A hairy, gray-green perennial with a thick, woody, branched rhizome and a decumbent stem up to 2 feet in length. The leaves have 8 to 10 pairs of lanceolate leaflets, and the rather large purplish flowers are in clusters of 10 to 12. Native to south-central Europe.

101411. *CALYCOTOME SPINOSA* (L.) Link. Fabaceae.

A low spiny shrub, about 5 feet high, with trifoliate leaves, hairy beneath, and yellow flowers about three fourths of an inch long. Native to the Mediterranean region.

101412. *MENZIESIA GLABELLA* A. Gray. Ericaceae.

From Canada. Seeds presented by Prof. John Davidson, University of British Columbia, Vancouver, British Columbia. Received November 26, 1932.

An erect shrub 6 to 10 feet high, native to north-western America. The elliptic to obovate leaves are 1 to 3 inches long, and the dull-colored, urn-shaped flowers, less than half an inch long, are borne in terminal clusters.

101413. *SESAMUM ORIENTALE* L. Pedaliaceae. Sesame.

From Palestine. Seeds presented by Dr. I. Elazari-Volcani, director of the experiment station at Tel-Aviv. Received November 25, 1932.

A strain of a common local variety, selected by the division of plant breeding because of the larger number of sections in the capsule. The capsules of this strain contain three or four sections instead of the usual two.

101414 to 101425. *GOSSYPIUM* spp. Malvaceae. Cotton.

From Africa. Seeds presented by Dr. Trevor Trought, Plant Breeding Section, Department of Agriculture and Forests, Shambat, Khartoum, Anglo-Egyptian Sudan. Received November 21, 1932.

101414. *GOSSYPIUM* sp.

C. B. 1010. Natural seed.

101415. *GOSSYPIUM* sp.

C. B. 1011. Selfbred seed.

101416. *GOSSYPIUM* sp.

C. B. 1012. Natural seed.

101417. *GOSSYPIUM* sp.

C. B. 1013. Selfbred seed.

101418. *GOSSYPIUM* sp.

C. B. 1014. Natural seed.

101419. *GOSSYPIUM* sp.

C. B. 1015. Selfbred seed.

101420. *GOSSYPIUM* sp.

C. B. 1016. Natural seed.

101421. *GOSSYPIUM* sp.

C. B. 1017. Selfbred seed.

101422. *GOSSYPIUM* sp.

C. B. 1018. Natural seed.

101423. *GOSSYPIUM* sp.

C. B. 1019. Selfbred seed.

101414 to 101425—Continued

101424. *GOSYPIUM* sp.
C. B. 1020. Selfbred seed.
101425. *GOSYPIUM* sp.
C. B. 1021. Selfbred seed.

101426 to 101432. *GOSYPIUM HERBACEUM* L. Malvaceae. Cotton.

From the Union of Soviet Socialist Republics. Seeds presented by N. A. Malinovsky, Central Agricultural Plant Breeding Station, Ganja Station, Azerbaijan, Transcaucasia. Received November 21, 1932.

101426. C. B. no. 1022. U. S. S. R. no. 101.
101427. C. B. no. 1023. U. S. S. R. no. 590 (?)
101428. C. B. no. 1024. U. S. S. R. no. 593.
101429. C. B. no. 1025. U. S. S. R. no. 606.
101430. C. B. no. 1026. U. S. S. R. no. 672.
101431. C. B. no. 1027. U. S. S. R. no. 703.
101432. C. B. no. 1028. U. S. S. R. no. 767.

101433. *LYCOPERSICON ESCULENTUM* Mill. Solanaceae. Tomato.

From Florida. Seeds presented by M. D. McNaughton, Coconut Grove. Received December 1, 1932.

A large medium-red tomato up to 4 inches in diameter. The meat is almost solid with very few seeds, and the flavor is very mild, almost no acid. The vine seems to be blight resistant, and the seeds are supposed to have come originally from Africa.

101434. *MELINIS MINUTIFLORA* Beauv. Poaceae. Molasses grass.

From Colombia. Seeds presented by Willis C. McGuire, Medellin, through Raymond Phalen, American vice consul, Medellin. Received November 30, 1932.

Introduced for the use of Department specialists.

101435 to 101437.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos. Received November 28, 1932.

101435. *CASSIA NODOSA* Buch.-Ham. Caesalpiniaceae.

A moderate-sized deciduous tree with long drooping branches and glossy leaves; in the spring it bears a profusion of beautiful pink, rose-scented flowers in dense clusters on long stalks. The leaves and flowers appear at the same time.

For previous introduction see 97868.

101436. *GLORIOSA SPECIOSA* (Hochst.) Engler (*G. abyssinica* A. Rich.). Melanthiaceae. Glorylily.

An erect bulbous perennial 1 to 2 feet high, native to tropical Africa. The lanceolate leaves, 5 to 6 inches long, are sometimes tendril-bearing at the tip, and the yellow flowers, 2 to 3 inches long, have reflexed segments and are borne on nodding pedicels 3 to 4 inches long.

101437. *VOLKAMERIA ACULEATA* L. Verbenaceae.

A spiny climbing shrub 10 to 15 feet high, native to the West Indies. The thin elliptic-ovate leaves are 1 to 2 inches long, and the salverform white flowers with purple stamens are borne in axillary cymes.

101438 to 101446. *HORDEUM DISTICHON* PALMELLA Harlan. Poaceae.

Two-rowed barley

From Hungary. Seeds presented by the Hungarian Commercial and Exchange Bank, Budapest. Received November 28, 1932.

- 101438 to 101442. Hungarian spring seed barley.
101438. No. 2327. 101441. No. 2485.
101439. No. 2439. 101442. No. 2486.
101440. No. 2440.
101443 to 101445. Czechoslovakian spring barley.
101443. No. 3030-A. 101445. No. 3159.
101444. No. 3158.
101446. Hungarian spring seed barley, no. 2305.

101447 to 101453.

From the Philippine Islands. Seeds presented by Arthur J. Fischer, director, Bureau of Forestry Manila. Received November 30, 1932.

101447. *ORMOSIA CALAVENTSIS* Azaola. Fabaceae.

Bahia. A large tropical tree with unequally pinnate leaves consisting of 7 or 9 ovate leaflets. The violet-colored flowers are followed by small woody pods containing 2 or 3 coral-pink seeds. Native to the Philippine Islands.

101448. *PINUS INSULARIS* Endl. Pinaceae.

Benguet pine.

A tall three-needle tropical pine which grows on the highlands in the Philippine Islands between 3,000 and 8,000 feet altitude. The flaccid slender leaves are 7 to 9 inches long, and the ovoid cones are about 3 inches long.

101449. *PTEROCARPUS VIDALIANUS* Rolfe. Fabaceae.

Prickly narra. A tree native to the island of Luzon, with alternate, unequally pinnate leaves composed of 5 to 13 ovate papery pellucid-punctate leaflets 2 to 4 inches long. The small yellow flowers are followed by circular winged pods over an inch in diameter.

101450. *SINDORA SUPA* Merr. Caesalpiniaceae.

Supa. A timber tree, native to the Philippine Islands.

101451. *VITEX PARVIFLORA* Juss. Verbenaceae. Chaste-tree.

For previous introduction and description see 101265.

101452. *WALLACEODENDRON CELEBICUM* Koord. Mimosaceae.

Banuyo. A tall tree, native to the Celebes, with red-brown bark and compound leaves. The flowers resemble those of *Mimosa*, and the large pods are similar to those of *Entada*.

101453. *XANTHOSTEMON VERDUGONIANUS* Naves. Myrtaceae.

Mancone or *palo de hierro*. A large evergreen tree with subopposite or subverticillate, obovate cuneate rounded leathery leaves 1 to 3 inches long, and small red-purple flowers in terminal cymes. Native to the island of Mindanao, Philippines.

101454. *EPHEDRA INTERMEDIA* Schrenk and Mey. Gnetaceae.

From India. Seeds presented by R. N. Parker, forest botanist, Forest Research Institute, Dehra Dun. Received November 28, 1932.

101454—Continued

A shrubby leafless plant with a creeping root-stalk and a short, woody stem, 3 to 4 inches high, simple or with a few branches. It is native to Sungaria.

101455 to 101459. RUBUS spp. Rosa-
ceae. Raspberry.

From the Union of Soviet Socialist Republics. Plants presented by Prof. P. M. Zhukovsky, Institute of Plant Industry, Leningrad. Received December 4, 1932.

101455. RUBUS sp.

Hollandische rote.

101456. RUBUS sp.

Sucr e de Metz.

101457. RUBUS sp.

Rote Riesen.

10.458. RUBUS sp.

*Surpasse Merreille rouge.*101459. RUBUS CRATAEGIFOLIUS Bunge.
Hawthorn raspberry.

An erect or spreading raspberry 3 to 5 feet high, native to China and Japan. The cordate serrate leaves are 3- to 5-lobed, and the white flowers, borne in terminal clusters, are followed by small orange-red fruits.

101460 and 101461. ALLIUM CEPA L.
Liliaceae. Onion.

From India. Seeds presented by P. G. Dani, office of the superintendent, Kirkee, Poona. Received December 5, 1932.

101460. Brown.

101461. White.

101462 to 101464.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received December 9, 1932.

101462. CASSIA EXCELSA Schrad. Caesalpiniaceae

Variety *angustifolia*: a narrow-leaved form of *C. excelsa* which is a rigid shrub over 6 feet high with stout spines half an inch long, leathery leaves less than an inch long, and small red flowers. Native to northern Argentina.

101463. CLUSIA MINOR L. Clusiaceae.

A tropical American tree 25 feet high, often starting as an epiphyte, with thick obovate leaves, 4 to 6 inches long, and axillary solitary showy pink flowers.

For previous introduction see 101133.

101464. SELENICEREUS GRANDIFLORUS (L.) Britton
and Rose. Cactaceae. Queen-of-the-night.

A creeping or clambering vine, native to Jamaica, with stout blue-green stems often 1 inch in diameter, armed with brown spines. The fragrant nocturnal flowers, 6 to 8 inches long, are pale pink with yellow stamens.

101465. COFFEA ARABICA L. Rubi-
aceae. Arabian coffee.

From Java. Seeds presented by A. J. Sitts, N. V. Java Sumatra Handelmaatschappij, at the request of Messrs. Hard and Rand, New York, N.Y. Received December 10, 1932.

Pakantan, a coffee grown in Mandehling district, Sumatra, which is considered, by some, to be the finest coffee-growing district in the world.

101466. POA sp. Poaceae. Grass.

From Canada. Seeds presented by Dr. G. P. McRostie, University of Manitoba, Winnipeg. Received December 14, 1932.

Introduced for the use of Department specialists.

101467. CASTANEA SATIVA Mill. Faga-
ceae. Spanish chestnut.

From Germany. Seeds presented by the Versuchsstation f r Pflanzenschutz, Halle (Saale). Received December 8, 1932.

Introduced for the use of Department specialists.

101468 to 101480. SACCHARUM OFFI-
CINARUM L. Poaceae. Sugarcane.

From the West Indies. Cuttings presented by Mr. McIntosh, Department of Agriculture, Barbados. Received December 7, 1932.

101468. B-3081. 101475. B-3226.

101469. B-3169. 101476. B-3238.

101470. B-3183. 101477. B-3257.

101471. B-3184. 101478. B-3266.

101472. B-3185. 101479. B-3270.

101473. B-3186. 101480. B-3271.

101474. B-3218.

101481 and 101482. ORYZA SATIVA L.
Poaceae. Rice.

From Siam. Seeds presented by J. R. Redfield, Phoenix, Ariz. Received December 2, 1932.

Hill rice, the chief rice of northern Siam, so called because it may be grown on hillsides, is dependent on the rain, and thus does not require that the roots be submerged in water.

101483 and 101484.

From Japan. Seeds presented by the Laboratory of Plant Pathology, Kyushu Imperial University, Fukuoka. Received December 4, 1932.

101483. LESPEDEZA BICOLOR Turcz. Fabaceae.
Shrub bushclover.

A bushy perennial which bears a profusion of rose-purple flowers during the early autumn, practically covering the drooping branches which sometimes become 6 feet in length.

For previous introduction see 93119.

101484. LESPEDEZA CYRTOBOTRYA Miquel. Fab-
aceae. Bushclover.

A shrub about 6 feet high, resembling *L. bicolor* in habit, with oval-oblong leaflets and dense clusters of purple flowers. Native to Japan.

For previous introduction see 90549.

101485. ALLIUM SATIVUM L. Lilia-
ceae. Garlic.

From India. Bulbs presented by the Imperial Agriculturist, Pusa, India, through A. McLean, deputy director of agriculture, East Central Circle, Pynmana, Burma. Received December 9, 1932.

A locally grown variety.

101486 to 101488. PRUNUS SERRULATA
Lindl. Amygdalaceae. Oriental cherry.

From England. Plants purchased from John Waterer Sons & Crisp, Ltd. Twyford, Berks. Received December 10, 1932.

101486 to 101488—Continued

101486. *Ko-fugen*. 101488. *Oshokun*.101487. *Oku-miyako*.

101489 to 101496.

From Egypt. Seeds presented by Alfred Bircher, Middle Egypt Botanic Station, El Saff. Received December 5, 1932.

101489. *ANNONA MACROCARPA* Barb.-Rodr. Annonaceae.

A Brazilian tree 10 to 12 feet high, with a thick trunk, oblong-elliptic leathery leaves about 4 inches long, and large ovoid-cordate fruits about 5 inches in diameter with white pulp. In Matto Grosso the natives call this "araticum grande da serra."

101490. *ARECASTRUM* sp. Phoenicaceae. Palm.101491. *CEREUS HEXAGONUS* (L.) Mill. Cactaceae.

A tall columnar cactus up to 45 feet high, branching at the base, the joints usually six-angled. The flowers are 8 to 10 inches long with the outer segments purple and the inner ones white. The ovoid edible fruits are 3 to 6 inches long and have white or pinkish pulp. It is native to the West Indies and to the northern part of South America.

For previous introduction see 90870.

101492. *NAGEIA ELATA* (R. Br.) F. Muell. (*Podocarpus elata* R. Br.). Taxaceae.

A tree 50 to 100 feet high, native to Australia. The oblong-linear to linear-lanceolate leaves are 2 to 6 inches long, straight or slightly falcate, with a prominent midrib. The inconspicuous flowers are followed by slightly succulent ovoid to globular brown fruits about one-fourth inch in diameter.

101493 to 101495. *PSIDIUM* spp. Myrtaceae. Guava.101493. *PSIDIUM ARACA* Raddi.

A tropical American shrub which bears small edible yellow fruits, said to contain few seeds.

101494. *PSIDIUM CORIACEUM* Mart.

A tropical shrub, 3 to 10 feet high, with leathery obovate leaves and dark-purple fleshy fruits the size of plums. It is native to Brazil.

101495. *PSIDIUM CUJAVILLUS* Burm. f. Dwarf guava.

A small shrub with small yellow fruits resembling those of *Psidium araca* in size and color, but with dry calyx segments. The fruit is very aromatic with much-accentuated strawberry flavor. The leaves resemble the common guava but are broader.

101496. *ZIZIPHUS JOAZEIRO* Mart. Rhamnaceae.

Jua. A tree, native to the eastern part of Brazil, which under favorable conditions forms a beautiful, dense, green, umbrageous head of foliage nearly 30 feet in diameter. The oval to ovate leaves, about 2 inches long, are somewhat hard and brittle in texture. The cream-yellow fruits are nearly an inch in diameter and almost round. The thick layer of mealy flesh is rather insipid and adheres very closely to the seed. Cattle and horses are very fond of both the leaves and fruits of this tree, and its principal value would seem to be as a source of stock food in the dry areas of the southwestern United States.

101497 and 101498. *SESAMUM ORIENTALE* L. Pedaliaceae. Sesame.

From Southern Rhodesia. Seeds presented by H. G. Mundy, chief, Division of Plant Industry,

101497 and 101498—Continued

Department of Agriculture, Salisbury. Received December 8, 1932.

101497. A variety with black seeds.

101498. A variety with white seeds.

101499. *ALLIUM CEPA* L. Liliaceae. Onion.

From India. Seeds presented by the superintendent of the Modi-Bag Agricultural College, Poona, through the horticulturist to the Government, Bombay Presidency, Poona. Received December 8, 1932.

A locally grown variety.

Introduced for the use of Department specialists

101500. *ELEOCHARIS TUBEROSA* (Roxb.) Schult. Cyperaceae.

Tubers presented by Albert P. Ding, Portland, Ore. Received December 14, 1932.

A Chinese vegetable which grows very much in the same manner as wet-land rice. The corms or tuberous rhizomes are mostly eaten raw but are also sliced or shredded in soups and in meat and rice dishes. The plants need a hot summer to mature and are grown on a muck or clay soil.

101501. *MUCUNA BENNETTI* F. Muell. Fabaceae.

From New Guinea. Seeds presented by Anne MacIvaine, through George Muir Smith, Urika, Port Moresby, Papua. Received December 12, 1932.

D'Albertis creeper. A tropical climber with leaves made up of three ovate-lanceolate glabrous leaflets, 3 to 5 inches long, and bearing short racemes of large showy scarlet flowers. It grows in New Guinea on the banks of rivers or in swampy places.

101502 and 101503.

Plants presented by C. E. Pleas, Chipley, Fla. Received December 16, 1932.

101502. *BAMBUSA MULTIPLEX* (LOUR.) Reusch. Poaceae. Hedge bamboo.

These plants represent a distichous or fern-leaved variety of the hedge bamboo which has slender culms with green stripes of various widths on a yellowish or pinkish ground color and is of dwarf habit, usually not more than 5 feet high. However, the variety shows a strong tendency to revert to the species type, in which the leaves are much longer and fewer on the branchlets, and culms up to 30 feet high are produced. The foliage then appears similar in form to that of the well-known varieties *Alphonse Karri* and *Argentea striata*. The new culms of this dwarf variety usually appear during June and extend their branches and leaves within a few weeks, differing in these respects from the type and from the large-growing varieties of the species.

For previous introduction see 99289.

101503. *BAMBUSA MULTIPLEX* (LOUR.) Reusch. Poaceae. Hedge bamboo.

An ordinary, large-growing, green form of the hedge bamboo, reverted from the dwarf variety under F.P.I. 101502.

101504 and 101505. *AVENA SATIVA* L. Poaceae. Oats.

From Wales. Seeds presented by Prof. E. T. Jones, Welsh Plant Breeding Station, Aberystwyth. Received December 16, 1932.

101504. *Aberystwyth white* no. 81, winter oats.101505. *Aberystwyth white* no. 82, winter oats.

101506 and 101507. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. Common wheat.

From England. Seeds presented by G. D. A. Bell, School of Agriculture, University of Cambridge. Received December 13, 1932.

101506. *Iron.* 101507. *Wilhelmina.*

101508 to 101521.

From Argentina. Seeds presented by the Botanic Garden, Buenos Aires. Received December 17, 1932.

101508. *ARECHAHALETAIA URUGUAYENSIS* Speg. Flacourtiaceae.

A large shrub 6 to 10 feet high with alternate, elliptic, entire, shining dark-green leaves 2 to 3 inches long, inconspicuous purplish flowers in spikes, and small pinkish berries. Native to Uruguay.

101509. *ASPIDOSPERMA PEROBA* Sald. Gama.

This tree, whose wood is used in naval construction, has a thin, clear, ash-colored bark, cracked longitudinally; the heartwood is of rare beauty, with a wavy pattern. The tree is distinguished by it spreading, obovate-oblong, undulate leaves.

101510. *BLEPHAROCALYX TWEEDIEI* (Hook. and Arn.) Berg. Myrtaceae.

A subtropical tree, native to Uruguay, with lanceolate acute leaves and axillary flowers in pairs.

For previous introduction see 94768.

101511. *CELTIS SELLOVIANA* Miquel. Ulmaceae. Hackberry.

A much-branched spiny shrub, native to southern Brazil, with narrow, membranous, light green, sharp-pointed leaves less than an inch long and inconspicuous flowers.

101512. *CNICOTHAMNUS LORENTZII* Griseb. Asteraceae.

A handsome shrub about 20 feet high with thick branches, oval leaves about 5 inches long, and purple flowers in large solitary heads. Native to Tucuman, Argentina.

101513. *DAUBENTONIA TRIPETH* Poit. Fabaceae.

A shrub or small tree, native to Argentina, with pinnately compound leaves which are dull green above and paler beneath. The rather large, orange-red flowers are borne in drooping racemes.

For previous introduction see 94773.

101514. *EUPATORIUM GUADALUPENSE* Spreng. Asteraceae.

A West Indian perennial composite with alternate rhomboid-oblong dentate leaves and corymbs of violet flowers.

101515. *GUETTARDA URUGUENSIS* Cham. and Schlecht. Rubiaceae.

A small tree up to 20 feet high with twisted branches. The membranous leaves, of varied forms ranging from ovate to lanceolate, are about 3 inches long and 1 inch across. The axillary, long, pedunculate cymes of white flowers have salver-shaped corollas and are followed by cylindrical ovoid drupes one-third inch in diameter.

101516. *ILEX PARAGUARIENSIS* St. Hil. Aquifoliaceae. *Yerba maté.*

A tender, evergreen, Paraguayan holly the leaves of which are dried and used to make a beverage called maté, or Paraguay tea.

For previous introduction see 94775.

101508 to 101521—Continued

101517. *JODINA RHOMBIFOLIA* Hook. and Arn. Santalaceae.

Quebrachillo. A low, bushy, slender-branched tree with three-pointed spiny leaves. The wood is white and smooth and the bark thick. It is native to Brazil.

101518. *PITHECOLLOBIUM ALBICANS* (Kunth) Benth. Mimosaceae.

A spiny tree up to 60 feet high, native to Mexico. The pinnately compound leaves are made up of 4 to 6 pairs of pinnae each bearing numerous small ovate leaflets, and the inconspicuous flowers are followed by flat pods said to contain about 18 percent of tannin and to yield a black dye.

101519. *RUPRECHTIA TRIFLORA* Griseb. Polygonaceae.

A shrub 6 feet or more in height, with reddish, rigid, ovate, acute leaves about 2 inches long and small dull-reddish flowers. Native to the Gran Chaco, Argentina.

101520. *SCHINUS TEREBINTHIFOLIUS* AROIERA (Vell.) L. Marchand. Anacardiaceae. **Peppertree.**

A shrub 3 to 10 feet high, or, sometimes, a small tree 20 feet high. The variable membranous leaves are unequally pinnate and are composed of 5 to 9 oblong to obovate-oblong leaflets 2 to 3 inches long. The small white flowers are followed by scarlet berries in panicles 2 to 4 inches in length.

For previous introduction see 94784.

101521. *TERMINALIA TRIFLORA* (Griseb.) Lillo, Combretaceae.

Palo amarillo. A tree 30 to 40 feet high, native to Argentina, with papery obovate-oblong leaves 2 inches long.

101522 to 101525. PHASEOLUS LUNATUS L. Fabaceae. Lima bean.

From Puerto Rico. Seeds presented by T. B. McClelland, director, Agricultural Experiment Station, Mayaguez. Received December 15, 1932.

A collection of lima beans from Barrio Cain Alto, of San German. Introduced for comparison with types now being grown on the Pacific coast.

101522. *Isabelina.*

101523. *Carita*, or little face.

101524. *Colorado*, or red.

101525. No. 4, unnamed.

101526 and 101527. GOSSYPIUM PUNCTATUM Schum. and Thonn. Malvaceae. **Cotton.**

From French Equatorial Africa. Seeds presented through T. H. Kearney, Bureau of Plant Industry. Received December 13, 1932.

101526. C. B. 1030. From Lion "Agent Agricole", Zangba.

101527. C. B. 1031. From Fouroumbalan.

101528 to 101532. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae. Common wheat.

From Australia. Seeds presented by H. Wenholtz, director of plant breeding, Department of Agriculture, Sydney, New South Wales. Received December 13, 1932.

101528. *Baroota wonder.*

101528 to 101532—Continued

101529. *Cadia*.
 101530. *Duri*.
 101531. *Petalz surprise*.
 101532. *Turvey*.

101533. *ALLIUM CEPA* L. Liliaceae.
Onion.

From Burma. Seeds presented by A. McLean, deputy director of agriculture, East Central Circle, Pynmana. Received December 16, 1932.

A hard compact red onion of medium size.

101534. *DIOSPYROS TUTCHERI* Dunn.
Diospyraceae. Persimmon.

From China. Seeds presented by G. Weidman Groff, Botanic Gardens, Hong Kong. Received December 19, 1932.

A small tree with rough bark, smooth, elliptic, acuminate leaves about 4 inches long, and globose fruits about an inch in diameter. Native to Hong Kong.

101535 to 101558. *LATHYRUS SATIVUS* L. Fabaceae. Bitter vetch.

From India. Seeds presented by F. K. Jackson, director, Institute of Plant Industry, Indore, Central India. Received December 9, 1932.

101535. From Allahabad, United Provinces.
 101536. From Behraich.
 101537. From Behraich.
 101538. From Ballia, United Provinces.
 101539. From Ballia bazar, Parbabgarh, United Provinces.
 101540. From Beraunda bazar, Girzapon.
 101541. From Barabauki, United Provinces.
 101542. From Benares, United Provinces.
 101543. From Benares, United Provinces.
 101544. From Benares bazar, United Provinces.
 101545. From Girzapur, United Provinces.
 101546. From Girzapur, United Provinces.
 101547. From Indore, Central India.
 101548. From Iyzabar.
 101549. From Nanpara.
 101550. From Parbabgarh, United Provinces.
 101551. From Ballia bazar, Parbabgarh, United Provinces.
 101552. From Patti bazar.
 101553. From Patti bazar.
 101554. From Patti bazar.
 101555. From Raebareli, United Provinces.
 101556. From Raebareli, United Provinces.
 101557. From Saltanpur.
 101558. From Tisui, Girzapur, United Provinces.

101559 to 101568.

From France. Seeds presented by A. Guillaumin, Muséum National d'Histoire Naturelle, Paris. Received December 21, 1932.

Seeds of cultivated plants, collected at Urumchi, Sinkiang, in September 1931.

101559. *AMYGDALUS PERSICA* L. Amygdalaceae.
Peach.

101559 to 101568—Continued

101560. *CITRULLUS VULGARIS* Schrad. Cucurbitaceae.
Watermelon.
 101561. *HELIANTHUS ANNUUS* L. Asteraceae.
Common sunflower.
 101562 and 101563. *HORDEUM VULGARE COELESTE* L. Poaceae.
Six-rowed barley.
 101564. *HORDEUM VULGARE NIGRUM* (Willd.) Beaven. Poaceae.
Six-rowed barley.
 101565. *PHASEOLUS VULGARIS* L. Fabaceae.
Common bean.
 101566. *SORGHUM VULGARE* Pers. Poaceae.
 101567. *TRITICUM AESTIVUM* L. (*T. vulgare* Vill.) Poaceae.
Common wheat.
 101568. *ZEA MAYS* L. Poaceae.
Corn.

101569. *CITRUS* sp. Rutaceae.

From French Indo-China. Seeds presented by M. Poilane, Institut des Recherches Agronomique de l'Indochine, Division de Botanique. Received December 21, 1932.

Wild shaddock.

101570 and 101571.

From Palestine. Seeds presented by the acting director of agriculture and forests, Jerusalem. Received December 21, 1932.

101570. *NEPETA CURVIFLORA* Boiss. Menthaceae.

A hairy perennial up to 3 feet high with oblong obtuse crenate leaves about 1 inch long and sky-blue flowers half an inch long in short, rather dense cymes. Native to Asia Minor.

101571. *THYMUS CAPITATUS* (L.) Hoffm. and Link. Menthaceae. Thyme.

A low woody perennial with stout rigid branches, very short, stiff, linear leaves, and rosy flowers in dense ovoid heads. Native to the Mediterranean region.

101572 and 101573.

From Cuba. Scions presented by Charles F. Fetter, Isla de Pinos. Received December 27, 1932.

101572. *FLACOURTIA INDICA* (Burm. f.) Merr. Flacourtiaceae. Ramontchi.

A spiny arborescent Philippine shrub 20 feet high with crenate leaves, small white flowers, and smooth dark-purple fruits containing a sweet juicy pulp.

101573. *VITIS VINIFERA* L. Vitaceae.
European grape.

An Italian wine grape.

101574. *PHOENIX SYLVESTRIS* (L.) Roxb. Phoenicaceae.
India date palm.

From England. Seeds presented by the director of the Royal Botanic Gardens, Kew. Received December 27, 1932.

A pinnate-leaved palm, 25 to 40 feet high, with leaves about 15 feet long and orange-yellow fruits. Native to India.

For previous introduction see 101145.

101575. *ALLIUM CEPA* L. Liliaceae.
Onion.

From India. Seeds presented by the agricultural officer, Northwest Frontier Province, Taru Jabba, Peshawar District. Received December 28, 1932.

A locally grown red onion.

101576 to 101584.

From India. Seeds presented by W. O'Brien, Corsley, Hyderabad, Deccan. Received December 28, 1932.

101576. *CICER ARIETINUM* L. Fabaceae. Chickpea.
Bengal grain.
101577. *CUCUMIS SATIVUS* L. Cucurbitaceae. Cucumber.
101578. *CUCURBITA MOSCHATA* Duchesne. Cucurbitaceae. Cushaw.
Local name, *pumpkin*.
101579. *DOLICHOS BIFLORUS* L. Fabaceae. Twinflower dolichos.
A brown variety.

101576 to 101584—Continued

101580. *DOLICHOS BIFLORUS* L. Fabaceae. Twinflower dolichos.
A dark-purple variety; south Indian horse grain.
101581. *PHASEOLUS MUNGO* L. Fabaceae. Urd.
Variety *radicatus*.
101582. *RAPHANUS SATIVUS* L. Brassicaceae. Radish.
101583. *TRICHOSANTHES ANGUINA* L. Cucurbitaceae. Snakegourd.
Long.
101584. *VIGNA SINENSIS* (Torner) Savi. Fabaceae. Cowpea.

Inventory.....	3
Index of common and scientific names.....	35

INTRODUCTORY STATEMENT

The present Inventory, no. 114, records plant material received by the Division of Plant Exploration and Introduction from January 1 to March 31, 1933 (nos. 101585-102377).

Among the important projects included in the program of this Division is the introduction of the deciduous fruit varieties now grown commercially in various parts of the world. As a step in the fulfillment of this program, several shipments of this type of material were received during the period covered by this inventory. Especially noteworthy are two lots of plants and scions from Morocco (101806-101875, 102002-102062); these include indigenous varieties of figs, olives, apricots, almonds, and grapes, all of which are destined for trial in the subtropical areas of our West and Southwest, where these fruits already form the basis of important industries.

In considering the needs of the colder fruit-growing areas, mention should be made of four lots of scions of apples and sour cherries from the Scandinavian countries (nos. 101881-101890, 102126-102153, and 102164-102180), and one lot of apple scions from Poland (102369-102372). A large number of these are local varieties that represent many years' work in careful selection. From eastern China, where the peach has been grown since the dawn of civilization, there is recorded a lot of 27 scions of peach varieties (101663-101689) collected in small towns and villages where, in many instances, a particular fruit variety is known only in a very limited area.

The nut-growing industry in the United States will be aided, eventually, by the introduction of three lots of filberts (101706-

101711, 101891-101902, and 102121-102125) from the Union of Soviet Socialist Republics, and by 13 types of walnuts (102084-102096) from the same country. Attention should also be called to the introduction of a collection of scions of what are said to be unusually cold-resistant varieties of the Spanish chestnut from Czechoslovakia (101610-101617). For the ultimate benefit of nut growers, but more immediately for use in chestnut-blight investigations, there are recorded four lots of seed of different species of *Castanea* (101587-101607, 101690-101692, 101982-101991, and 102106-102111) received from northeastern China. Most of these are *C. mollissima*, the Chinese hairy chestnut, whose natural resistance to chestnut blight has led to its wide use in hybridizing experiments.

Plants suitable for growing in the colder and drier areas of the western United States are constantly being sought by this division. It is of interest, therefore, to note two shipments of plant material received during this period from Manchuria. One of these, a collection of hardy forage grasses (101645-101660) from the prairie country near Harbin, Manchuria, introduced for Department specialists, should prove of definite value for the colder areas of our stock-raising States. Another lot of plant material (102289-102309), received also from Manchuria but including hardy trees and shrubs native to many different parts of northeastern Asia, such as maples and hollies from Chosen and northern Japan, will prove interesting additions to the introduced flora of our colder regions.

In the field of ornamentals, there are two large collections that deserve special mention. These come from England and Scotland, respectively (101736-101797 and 101923-101962), and consist largely of alpine perennials, including numerous species of such genera as *Anthemis*, *Aquilegia*, and *Dianthus*. These are all intended for testing at the plant introduction gardens of this Division.

The botanical determinations were made and the nomenclature determined by the late H. C. Skeels,¹ who had general supervision of this inventory.

B. Y. MORRISON,
Principal Horticulturist, in Charge.

DIVISION OF PLANT EXPLORATION AND INTRODUCTION,
Washington, D.C., March 30, 1934.

¹ Died Jan. 3, 1934.

INVENTORY²

101585. TRisetum FLAVESCENS (L.) Beauv. Poaceae. Grass.

From France. Seeds purchased from Vil-morin-Andrieux & Cie., Paris. Received January 4, 1933.

A grass resembling tall oatgrass, growing on open ground, in copses and meadows, which may prove valuable as a forage grass. Native to Europe and Asia.

101536. AVENA SATIVA L. Poaceae. Oats.

From Sweden. Seeds presented by Dr. A. Akerman, Swedish Agricultural Society, Svalöf. Received January 5, 1933.

Sirius.

101587 to 101607. CASTANEA spp. Fagaceae. Chestnut.

From China. Seeds collected by Peter Liu, Pe'iping. Received January 4, 1933.

101587. CASTANEA HENRYI (Skan) Rehd. and Wils.

Chu Lee or *Chun Lee*, pearl chestnut. An edible chestnut from Hsiao-feng, Chekiang. The tree becomes 25 to 30 feet high with oblong-lanceolate, long-acuminate leaves, green on both sides. The burs are either solitary or two in a bunch and contain usually but one seed.

For previous introduction see 100378.

101588 to 101606. CASTANEA MOLLISSIMA Blume. Hairy chestnut.

101588 and 101589. From Taian, Shantung.

101588. *Bright.*

101589. *Ts'ao Lee Tzu.* An early chestnut.

101587 to 101607—Continued.

101590 to 101595. From Hopeh.

101590 and 101591. *East Mountain* Late chestnuts from Pocheng, near Santunying.

101592. *Chiufen.* From Panshan.

101593. *Chiufen.* From Tsuik-chuang.

101594. An early chestnut from Fangshan.

101595. From Fuchow, Kiangsi.

101596. *Mao Lee Tzu.* From Taian, Shantung.

101597 and 101598. *Hanlu.* A late chestnut from Hopeh.

101597. From Fahuassu.

101598. From Tsuik-chuang.

101599. A large chestnut from Hsinteng, Chekiang.

101600 to 101606. From Hopeh.

101600. A large chestnut from Fahuassu.

101601. A late chestnut from Fangshan.

101602. *Pailu.* From Tsuik-chuang.

101603 to 101606. From Fahuassu, Hopeh.

101603. *Pailu.*

101604. *Second Ripening.*

101605. A short-flowered late chestnut.

101606. *Tiger paw.*

² It should be understood that the names of horticultural varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Division of Plant Exploration and Introduction, and, further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all, and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identifications therefore must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this Division, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

101587 to 101607—Continued.

101607. *CASTANEA SEGUINII* Dode.

A wild bush chestnut from Hangchow, native to east-central China. It is usually a bush or low tree, but occasionally a shapely tree 40 feet high, with deep-green leaves, paler beneath, and small nuts of sweet agreeable flavor.

101608. *CASUARINA TORULOSA* Ait.
Casuarinaceae.

From Australia. Seeds presented by Dr. Alexander McTaggart, Commonwealth Forestry Bureau, Council for Scientific and Industrial Research, Division of Plant Industry, Canberra. Received January 5, 1933.

From the Cooperbrook State Forest, New South Wales, November 14, 1932. A native Australian tree with wood which is close grained and very prettily marked. It is used for shingles and also as veneer for cabinetwork.

For previous introduction see 92486.

101609. *CITRUS* sp. Rutaceae.

From the Society Islands. Scions collected at Papeete, Tahiti, by Gerrit P. Wilder. Received January 10, 1933.

101610 to 101617. *CASTANEA SATIVA* Mill. Fagaceae. Spanish chestnut.

From Czechoslovakia. Scions presented by the Ministry of Agriculture, Bratislava, through Dr. Jan Skalicky, counselor, Czechoslovak Legation, Washington, D.C. Received January 10, 1933.

A collection of scions of very cold-resistant varieties.

101610. From Bratislava.

101611 to 101613. From Zablatie, in the Vah River Valley.

101614. From Drietoma, in the Vah River Valley.

101615. From Pruske, in the Vah River Valley.

101616. From Topolcianky.

101617. From Radosina.

101618. *ALLIUM SATIVUM* L. Liliaceae.
Garlic.

From Manchuria. Bulbs presented by Schinichi Terada, Agricultural Experiment Station of the South Manchurian Railway Co., Yagakujo. Received January 10, 1933.

Introduced for the use of Department specialists.

101619. *TULIPA BIEBERSTEINIANA* Schult. f. Liliaceae. Tulip.

From the Union of Soviet Socialist Republics. Seeds presented by the Nikita Botanic Garden through the chief of the Bureau of Introduction, Leningrad. Received January 9, 1933.

A rather low plant with 2 or 3 lanceolate or linear grooved acute leaves and a smooth stem bearing a single flower, yellow within and greenish-yellow on the outside. Native to southeastern Russia and closely related to *Tulipa celsiana*.

101620 to 101622. *AVENA* spp. Poaceae.

101620 to 101622—Continued.

From Australia. Seeds presented by the New England Experiment Farm, Glen Innes, New South Wales. Received January 12, 1933.

101620. *AVENA SATIVA* L.

Laggan.

101621. *Avena* sp. Burke.

101622. *Avena* sp. Lampton.

101623 to 101627.

From Spain. Scions presented by Ramon Sala, Balaguer, Lerida. Received January 14, 1933.

101623. *OLEA EUROPAEA* L. Oleaceae.
Common olive.

Grossal. A locally grown variety with fruit larger than the average, but the tree is a poor cropper.

101624 to 101627. *PRUNUS ARMENIACA* L. Amygdalaceae. Apricot.

101624. *Canino*. A fruit of rather poor quality, but an enormous yielder and a good shipper. Possibly the most widely grown variety in Spain.

101625. *Moniqui*. The best variety grown in Spain. The fruit is large with white flesh and is quite peculiar and different from the other apricots, but it is a poor yielder.

101626. *Perla*. A very good variety, which is planted quite extensively in Spain.

101627. *Rosa*. The earliest commercial variety of Spain. The fruit is earlier and larger than the *Early Newcastle*.

101628. *ZAMIA PORTORICENSIS* Urban. Cycadaceae.

From Puerto Rico. Tubers presented by T. B. McClelland, director of the Agricultural Experiment Station, Mayaguez. Received January 18, 1933.

A cycad with a short stem 12 to 14 inches high, native to Puerto Rico. The pinnately compound leaves, 2 to 3 feet long, are made up of 20 to 34 smooth shining narrowly linear leaflets, 2 to 8 inches long, which are usually entire but may have 1 or 2 small teeth near the tip. The oblong-cylindric fruiting cone, 10 inches long, is covered with gray tomentose scales.

For previous introduction see 98737.

101629. *HAMAMELIS JAPONICA* Sieb. and Zucc. Hamamelidaceae.

Japanese witch-hazel.

From Japan. Seeds purchased from the Chugai Shokubutsu Yen, nurserymen, Yamamoyo, Kawabegun, near Kobe. Received January 12, 1933.

A shrub or small tree up to 30 feet high, with broadly ovate or obovate leaves 2 to 4 inches long. The flowers, which appear in January and February, are an inch across with revolute sepals, purple inside, and bright yellow petals. Native to Japan.

101630 to 101644. *VITIS VINIFERA* L. Vitaceae. European grape.

From Italy. Cuttings presented by Prof. Giovanni Delmasso, Direttore della R.

101630 to 101644—Continued.

Stazione Sperimentale di Viticoltura e di Enologia, Conegliano, through the American consul general, Naples. Received January 14, 1933.

- 101630. *Aspensorgia* (di Sardegna).
- 101631. *Baresana*.
- 101632. *Carniola di Milazzo*.
- 101633. *Cortese*.
- 101634. *Dolcetto*.
- 101635. *Fogarina* (Reggiano) di Guatieri.
- 101636. *Garganega di Gambellara*.
- 101637. *Insoila* (Sicilia).
- 101638. *Italia* (Incrocio Pirovano 65).
- 101639. *Lambrusco di Sorbara* (Modena).
- 101640. *Lattinario nero*.
- 101641. *Moscato di Terracina*.
- 101642. *Moscato fior d'Arancio*.
- 101643. *Uva Regina*.
- 101644. *Zibibbo siciliano*.

101645 to 101660. Poaceae. Grass.

From Manchuria. Seeds purchased from L. Puitsin, Harbin. Received January 9, 1933.

A collection of forage grasses from the prairie region around Harbin, northern Manchuria.

101645. *AGROPYRON SEMICOSTATUM* Nees.

A perennial fibrous-rooted grass with erect stems and narrowly linear leaves. Native to Asia from Afghanistan to Manchuria.

For previous introduction see 90126.

101646. *AGROPYRON SIBIRICUM* (Willd.) Beauv.

An upright caespitose perennial grass, up to 16 inches high, with linear leaves. It is very drought resistant and is native from the Caucasus region in southern Europe to Manchuria.

For previous introduction see 98536.

101647. *BROMUS INERMIS* Leyss.
Common bromegrass.

101648. *CALAMAGROSTIS EPIGEJOS* (L.) Link.

A stout perennial grass, native to Manchuria, which grows on rather poor soil and is rather abundant.

For previous introduction see 94295.

101649. *CHAETOCCHLOA LUTESCENS* (Weigel) Stuntz (*Setaria glauca* Beauv.).

Found in damp meadows near Harbin.

101650. *CHAETOCCHLOA VIRIDIS* (L.) Scribn.

101651. *CHLORIS VIRGATA* Swartz.
Feather fingergrass.

101652. *CHAETOCCHLOA VIRIDIS* (L.) Scribn.

For previous introduction see 101650.

101653. *DIGITARIA ISCHAEMUM* (Schreb.) Muhl.

101654. *ECHINOCHLOA CRUGALLI* (L.) Beauv.

101645 to 101660—Continued.

101655. *ECHINOCHLOA CRUGALLI* MITIS (Pursh) Peterm.

101656. *ELYMUS DAHURICUS* Turcz.

101657. *ERAGROSTIS CILIANENSIS* (All.) Link.

101658. *ERAGROSTIS PILOSA* (L.) Beauv.

101659. *ERIOCHLOA VILLOSA* (Thunb.) Kunth.

101660. *KOELERIA CRISTATA* (L.) Pers.

101661. *CINCHONA SUCCIRUBRA* Pavon.
Rubiaceae.

From Jamaica. Seeds presented by M. S. Goodman, superintendent of Hope Gardens, Kingston. Received January 14, 1933.

The bark of this tree contains a large quantity of alkaloids, of which a relatively large percentage is cinchonidine, which retards the separation of the quinine as sulphate. The bark matures in the fourth or fifth year and does not increase in quinine content thereafter.

For previous introduction see 100988.

101662. *FERONIA LIMONIA* (L.) Swingle. Rutaceae. Wood-apple.

From French Indo-China. Seeds presented by M. Poilane, Institut des Recherches Agronomique de l'Indochine, Division de Botanique. Received January 17, 1933.

A small very graceful thorny tree, native to India, where it thrives in exhausted soil in which no other tree can grow. The round fruits, about 2 inches in diameter, contain rather dry sweetish aromatic pulp, suitable for making jelly.

For previous introduction see 95594.

101663 to 101694.

From China. Scions collected by Peter Liu, of Peiping, and sent through Owen L. Dawson, agricultural commissioner, Shanghai. Received January 16, 1933.

101663 to 101689. *AMYGDALUS* spp.
Amygdalaceae. Peach.

101663 to 101669. *AMYGDALUS PERSICA* L.

From the village of Shangchihtsun, west of Feicheng, Shantung.

101663 to 101666. *Ta Tao*, or Fel peach.

101663. No. 1. 101665. No. 3.

101664. No. 2. 101666. No. 4.

101667 to 101669. *Ta Tao*, or Fel peach. A large clingstone.

101667. No. 5. 101669. No. 7.

101668. No. 6.

101670 to 101673. *AMYGDALUS PERSICA* PLATYCARPA (Decaisne) Ricker.
Flat peach.

Pien Tzu, from the village of Sunchiachuang, south of Feicheng.

101670. No. 8. 101672. No. 10.

101671. No. 9. 101673. No. 11.

101674 to 101689. *AMYGDALUS PERSICA* L.

101663 to 101694—Continued.

101674 to 101676. *Ku Chu'a Hung*, meaning millet season red peach. Collected near Shangchihsun. A freestone which ripens in August.

101674. No. 12. 101676. No. 14.

101675. No. 13.

101677 to 101689. *Ta Tao*, or Fei peach. A large clingstone which ripens in early September.

101677 to 101686. From near the village of Sunchiachuang, south of Feicheng.

101677. No. 15. 101682. No. 20.

101678. No. 16. 101683. No. 21.

101679. No. 17. 101684. No. 22.

101680. No. 18. 101685. No. 23.

101681. No. 19. 101686. No. 24.

101687 to 101689. From the village of Tiaochiatun, south of Feicheng.

101687. No. 25. 101689. No. 27.

101688. No. 26.

101690 to 101692. *CASTANEA MOLLISSIMA* Blume. Fagaceae. Hairy chestnut.

Collected in an orchard near the village of Chunyangkou, northeast of Tai'an, Shangtung.

101690. *Tsao* or *Ts'ao*; early chestnut. Said to ripen the end of August or early in September.

101691. *Mao Lee Tzu*; hairy chestnut. Said to ripen the middle of September.

101692. *Ming* or *Min Lee Tzu*; late chestnut. A seedling which ripens the middle of September.

101693 and 101694. *DIOSPYROS KAKI* L. f. Diospyraceae. Kaki persimmon.

Secured through Chu Li Chi, a persimmon storage owner, at the village of Hsiangtang, north of Tangshan Hot Spring, Hopeh.

101693. *Ch'u Tou Shih Tzu*; lantern persimmon.

101694. *Tai Kai Shih*; large persimmon.

101695 to 101702.

From Mexico. Seeds presented by Dr. C. A. Purpus, Zacuapam, Huatusco, Vera Cruz. Received January 14, 1933.

101695. *ACROCOMIA MEXICANA* Karw. Palm. Phoeniceaceae.

Collected at 800 feet altitude and found in the cooler regions of Mexico up to 3,000 feet. A prickly palm about 20 feet high, with a brown, woolly trunk over a foot thick and terminal leaves from 6 to 8 feet in length. The sheathing bases of the leaves are armed with long black spines, and the spathe also is very spiny. The fragrant yellow flowers are followed by round fruits in very long clusters.

101696. *ATTALEA COHUNE* Mart. Phoeniceaceae. Cohune.

A magnificent feather-leaved palm native to the West Indies and Central America where it reaches a height of 40

101695 to 101702—Continued.

feet, with leaves 20 feet long produced abundantly at the top of the trunk. The yellowish flowers are borne very freely, and the ovoid fruit, 2 to 3 inches long, contains a seed or nut which yields a valuable oil of high quality, used for cooking purposes.

For previous introduction see 98545.

101697. *CERATOZAMIA MEXICANA* Brongn. Cycadaceae.

A handsome cycad from southeastern Mexico, with a short thick ovoid trunk crowned with a whorl of rich dark-green pinnate leaves several feet in length. An excellent decorative plant, best grown in sandy loam.

101698 to 101701. *CHAMAEDOREA* spp. Palm. Phoeniceaceae.

101698. *CHAMAEDOREA ELATIOR* Mart.

A low palm collected between 800 and 900 feet altitude at Zacuapam, Vera Cruz. It has a flexuous stem 10 to 15 feet high and pinnate leaves 6 to 8 feet long. Native to southern Mexico.

101699. *CHAMAEDOREA ELEGANS* Mart. Pacayito. Phoeniceaceae.

Collected between 800 and 900 feet altitude. A handsome dwarf palm, native to southern Mexico and Central America. It is an excellent ornamental house plant, as it will tolerate shade to a greater extent than many other plants, and often comes into flower when not over a foot high. The deep-green finely pinnate graceful leaves are very attractive.

101700. *CHAMAEDOREA SARTORII* Liebmann.

A palm, native to southern Mexico, with a trunk 8 to 15 feet high, covered with the bases of the leaf petioles. The pinnately compound leaves, 3 to 4 feet long, are made up of alternate falcate pinnae 12 inches long, and the oval black fruits are less than an inch long.

101701. *CHAMAEDOREA TEPEJILOTE* Liebmann.

A palm, native to southern Mexico, up to 10 feet high, with pinnate leaves about 4 feet long. The undeveloped inflorescence is eaten as a vegetable.

For previous introduction see 93281.

101702. *GOSSYPIUM* sp. Malvaceae. Cotton.

Collected in a garden at Rinconada, Vera Cruz.

101703. *ANTIGONON GUATIMALENSE* Meisn. Polygonaceae.

From Cuba. Tubers presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received January 19, 1933.

Throughout the American Tropics one of the most popular and conspicuous ornamental herbaceous climbers is the *Rosa de montana* (*Antigonon leptopus*), with its showy racemes of rose-pink flowers. The species, *A. guatimalense*, while much less common in cultivation, has more numerous flowers that are deeper pink and nearly twice as large.

101704 and 101705. *CASTANEA CRENATA*
Sieb. and Zucc. Fagaceae.
Japanese chestnut.

From Japan. Seeds purchased from the
Yokohama Nursery Co., through their
New York office. Received January 18,
1933.

101704. *Akita-ken*. Collected in Sen-
hoku-gun, Kakudate, Eirimoho, Japan.

101705. *Aomori-ken*. From Sanhohe-gun,
Nakui Mura, Nakuideake, Japan.

101706 to 101724.

From the Union of Soviet Socialist Repub-
lics. Plants and cuttings presented by
the Horticultural Experiment Station at
Sochi, Black Sea district. Received Janu-
ary 19, 1933.

101706 to 101711. *CORYLUS* spp. Betu-
laceae. Filbert.

101706. *CORYLUS AVELLANA* L.

Cherkessky. A locally grown vari-
ety.

101707 to 101709. *CORYLUS MAXIMA*
Mill. Giant filbert.

101707. *Kerasund*; a round variety.

101708. *Kerasund*; a long variety.

101709. *Kerasund*; "X", no. 141861.

101710. *CORYLUS* sp.

Kudravchik. No. 141862.

101711. *CORYLUS AVELLANA* L.

Trapezund. No. 141860.

101712 to 101724. *FICUS CARICA* L. Mo-
raceae. Common fig.

101712. *Arabuly*. No. 141874.

101713. *Borgezet*.

101714. *Dalmatsky*.

101715. *Dor*.

101716. *Eriphera*.

101717. *Golden Drop*. No. 141876.

101718. *Malepira*.

101719. *Neapolitan*.

101720. *Nikiitsky*. No. 1.

101721. *Smirnsky*.

101722. *Violet*.

101723. *Violet Delicate*.

101724. *Zakavkassky Pink*. No. 141864.

101725 to 101735.

From China. Seeds purchased through
Peter Liu, of Peiping, and sent through
Owen L. Dawson, agricultural commis-
sioner, Shanghai. Received January 16,
1933.

101725. *AMYGDALUS PERSICA* L. Amyg-
dalaceae. Peach.

Mao Tao, hairy peach. Collected in
the village of Shangchihstun, Shantung.
The Chinese use this peach as a rootstock.

101726. *PHASEOLUS AUREUS* Roxb. Fa-
baceae. Mung bean.

Ming Lu Tou, or bright-green bean.
Collected near Hsiaokankechuang, north-
east of Luanchow, Hopeh. A bean used
for making vermicelli and also used in
the rice porridge in summer.

101725 to 101735—Continued.

101727. *PRUNUS JAPONICA* Thunb. Amyg-
dalaceae. Chinese bush cherry.

Ouli. A wild cherry purchased in
Peiping, but probably grown in the Ming
Tomb region.

101728 to 101735 were collected Septem-
ber 28, 1932, in the village of Hsiaokan-
kechuang, northeast of Luanchow, Hopeh.

101728 to 101730. *SOJA MAX* (L.) Piper.
Fabaceae. Soybean.

101728. *Hei Chi Huang Tou*, black
and yellow bean. The best variety
in this locality for making bean
curd.

101729. *Hsiao Ching Tou*, small green
bean. A light-green bean which is
a prolific bearer.

101730. *Ta Ching Tou*, large green
bean. Used for making sprouts and
also as a green vegetable.

101731 to 101735. *VIGNA SINENSIS*
(Toner) Savi. Fabaceae. Cowpea.

These cowpeas are mixed with kaoliang
and made into porridge. They are also
used for making sweet bean paste to
be eaten with bread at the New Year
time.

101731. *Hsiao Pai Tou*. A small
white cowpea.

101732. *Hua Yao Chiang Tou*, mean-
ing color girdled bean.

101733. *Ma Chiang Tou*. A mottled
cowpea.

101734. *Ta Pai Tou*. A large white
cowpea.

101735. *Tu Ti Lien*, which means
"face of the God of the earth",
because it is a rather dull-colored
cowpea.

101736 to 101797.

From England. Seeds purchased from W.
E. Th. Ingwersen, Ltd., Birch Farm
Hardy Plant Nursery, Sharpthorne, East
Grinstead, Sussex. Received January 13,
1933.

101736. *TANACETUM ABROTANIFOLIUM*
(L.) Druce (*Achillea abrotanifolia*
(L.). Asteraceae. Tansy.

A perennial composite with an erect
stem about 2 feet high, hairy pinnatisect
leaves, and yellow flower heads in
corymbs. Native to southeastern Asia.

101737 to 101748. *ACHILLEA* spp. As-
teraceae. Yarrow.

101737. *ACHILLEA ALPINA* L.

An attractive much-branched, alpine
perennial, with smooth sessile pin-
natisect leaves and terminal corymbs
of golden-yellow flowers. It is very
similar to *A. ptarmica*. Native to
the Alps.

101738. *ACHILLEA CLAVENNAE* L.

A dwarf alpine perennial herb up
to 10 inches high, native to Europe.
The deeply divided leaves are dentate
at the tip, but the segments are ob-
tuse, and the white flower heads ap-
pear in the spring.

101739. *ACHILLEA DECOLORANS* Schrad.

A perennial with a much-branched
stem, linear-acute serrate leaves, and

101736 to 101797—Continued.

dense corymbs of pale yellow flowers. It is of garden origin.

101740. ACHILLEA HERBAROTA All.

A dwarf tufted aromatic alpine perennial herb, native to the Alps of Europe. The undivided leaves are serrate, and the white flowers appear in May and June.

101741. ACHILLEA KELLERERI C. F. Ball.

A hybrid (*A. clypeolata* × *pseudopectinata*), one of the best for the rock garden, with long silvery leaves and umbels of white flowers.

101742. ACHILLEA KOLBIANA Hort.

A name for which a place of publication and a description have not been found.

101743. ACHILLEA LEWISII S. Arnott.

A hybrid between *A. rupestris* and *A. tomentosa*; one of the choicest of the smaller hybrid yarrows. It has a neat habit and attractive small flat clusters of pale-yellow flower heads.

101744. ACHILLEA NEILREICHHI Kern.

A perennial with a creeping woody rhizome and a stiff upright woolly stem. The gray-green bipinnate leaves are hairy on both sides, and the yellow flowers are in small heads arranged in a flat raceme. Native to eastern Europe and closely related to *A. nobilis*.

101745. ACHILLEA PSEUDO-PECTINATA Janka.

An erect herb with sessile pectinate-pinnatifid leaves and yellow flowers in lax clusters. Native to sandy places in southeastern Europe.

101746. ACHILLEA RUPESTRIS Huter.

A laxly caespitose perennial with erect or ascending stems 3 to 9 inches tall, small gray-green, glandular, spatulate, usually entire leaves less than 1 inch long, and white flower heads in small umbels. Native to Italy.

101747. ACHILLEA SPECIOSA Henckel.

A perennial herb about 3 feet high, with lanceolate sessile serrate leaves and white flowers in terminal and axillary corymbs.

101748. ACHILLEA WILCZEKIANA Vacc.

A hybrid between *A. herbarota ambigua* and *A. nana*, with fine silvery gray, coarsely serrate leaves and long panicles of white flowers.

101749 to 101755. ALYSSUM spp. Brassicaceae.

101749. ALYSSUM DIFFUSUM Tenore.

An alpine plant, native to central Europe, with a widely branched, herbaceous stem, linear-lanceolate hairy leaves, and flowers in simple racemes.

101750. ALYSSUM HALIMIFOLIUM Willd.

A woody procumbent perennial with cuneate, lanceolate or linear, obtuse white-hairy leaves and white flowers. Native to dry places in southern Europe.

101736 to 101797—Continued.

101751. ALYSSUM ROCHELII Andrz.

A laxly procumbent plant with hairy lanceolate leaves and yellow flowers in short dense racemes. It is native to Germany and resembles *A. wulfenianum* in flowers and fruits.

101752. ALYSSUM SAKATILE L. Goldentuft.

Variety *citrinum*.

101753. ALYSSUM SERPYLLIFOLIUM Desf.

A woody perennial with numerous erect slender stems, spatulate rigid ash-colored leaves, and many small yellow flowers in terminal corymbs. Native to the Mediterranean region.

101754. ALYSSUM SPINOSUM L.

Roseum. A rosy flowered form of this European woody-stemmed dwarf perennial, which usually has many small white flowers on spiny branches and lanceolate silvery leaves.

101755. ALYSSUM WULFENIANUM Willd.

An alpine perennial, hairy throughout, with a short ascending stem, oblong-spatulate leaves, yellow flowers, and pods twice as long as *A. montanum*, which it resembles closely. Native to Germany.

101756 to 101761. ANTHEMIS spp. Asteraceae.

101756. ANTHEMIS CARPATICA (*A. styriaca* Vest.) Willd.

An alpine perennial from central Europe which forms a tuft of short leafy stems bearing solitary flower heads with white rays and yellow disks.

For previous introduction see 95465.

101757. ANTHEMIS CUPANIANA Hort.

A name for which a place of publication and a description have not been found.

101758. ANTHEMIS HAUSSKNECHTII Boiss. and Reut.

An annual daisylike plant with erect hairy stems 2 inches or more high, ovate-oblong tripinnatisect leaves, and flowers with white rays and violet centers. Native to Asia Minor.

For previous introduction see 95461.

101759. ANTHEMIS RUDOLPHIANA Adam.

A caespitose perennial with simple stems 3 to 5 inches high, silky pinnatifid leaves, and yellow flower heads. Similar to *A. montana* and native to southeastern Europe.

101760. ANTHEMIS SANCTI-JOHNANNIS Stoy., Steff., and Turfill.

An ornamental perennial herb 3 to 4 feet high, native to the mountain slopes of Bulgaria at 4,000 feet altitude. The few branched woolly stems have 2- to 3-times partly pinnate basal leaves 5 to 7 inches long, the tips of which are armed with hard white acuminate points. The stem leaves are similar but gradually smaller, leaving bare stems 3 to 7 inches below the flower heads, which are solitary and 1 to 2 inches broad. The ray flowers and

101736 to 101797—Continued.

disk are an intense orange, making a brilliant contrast to the woolly leaves.

For previous introduction see 95464.

101761. *ANTHEMIS CARPATICA* Willd. (*A. styriaca* Vest).

For previous introduction and description see 101756.

101762 to 101772. *AQUILEGIA* spp. Ranunculaceae. Columbine.

101762. *AQUILEGIA ALPINA* L. Alpine columbine.

An alpine perennial herb about 12 inches high, native to Switzerland. The biternate leaves have deeply lobed divisions 1 to 2 inches long, and the expanded flowers are 2 inches across with blue sepals and white petals; the incurved spurs are as long as the petals.

101763 and 101764. *AQUILEGIA BERNARDI* Gren. and Godr.

101763. A plant about 2 feet high with large biternate leaves with trifid leaflets and 3 to 7 large blue flowers. Native to France.

101764. Variety *alba*. A form with white flowers.

101765. *AQUILEGIA CLEMATIDIFLORA* Hort.

A name for which a place of publication and a description have not been found.

101766. *AQUILEGIA DISCOLOR* Lev. and Leresche.

An alpine plant, native to Spain, with a thick rhizome, smooth biternate leaves, and flowers with sky-blue petaloid sepals and white petals.

101767. *AQUILEGIA ESCALCARATA* Hort.

A name for which a description and a place of publication have not been found.

101768. *AQUILEGIA EINSELEANA* F. W. Schultz.

A columbine from the Alps of western Germany, with stiff, ternate, incised or crenate leaves and blue flowers, smaller than those of *A. alpina*.

101769. *AQUILEGIA BERTOLONII* Scott (*A. reuteri* Boiss.).

An alpine plant over a foot high, with long stemmed, biternate, incised-lobed basal leaves and pale-blue flowers. Native to the Alps.

101770. *AQUILEGIA STUARTI* Balf. f.

A garden hybrid between *A. glandulosa* and *A. vulgaris* variety *olympica*, with lilac-blue flowers of large size having short incurved spurs.

101771. *AQUILEGIA SUAVEOLENS* P. Bruhl.

A plant up to 2 feet high, with biternate membranous leaves and 5 to 12 purplish or violet flowers, sometimes white, 1 to 2 inches long. Native to northern India.

101772. *AQUILEGIA* sp.

101773. *ASTER FALCONERI* Hutchinson. Asteraceae.

101736 to 101797—Continued.

An aster from high altitudes in Kashmir, India, with a stem a foot or more high. The radical leaves, oblong-lanceolate, are gradually narrowed to a very short petiole. The disk flowers are yellow, the rays bluish or white, and the flower head is 3 inches across.

101774. *BERBERIS FARRERI* Hort. Berberidaceae. Barberry.

A name for which a place of publication and a description have not been found.

101775. *BUPHTHALMUM SALICIFOLIUM* L. Asteraceae. Willowleaf oxeye.

A perennial herb, native to northern Europe, with slightly serrate, willowlike leaves and solitary flower heads with long yellow rays.

For previous introduction see 95669.

101776. *CASSIOPE FASTIGIATA* (Wall.) D. Don. Ericaceae.

A beautiful free-flowering alpine shrub about 9 inches high, native to southwestern China, where it is found in shady situations in moist peaty well-drained soil between 12,000 and 13,000 feet altitude. The tiny leaves are imbricated in four rows, giving the stem a four-sided appearance, and they have white membranous ciliated margins. The solitary, white, bell-shaped flowers have the corolla segments recurved, showing the pink center and curious awned stamens like those of the arbutus.

For previous introduction see 100158.

101777. *CHRYSANTHEMUM MAWII* Hook. f. Asteraceae.

A short woody perennial, native to Morocco, forming bushes up to 2 feet high, like the marguerite, with small woolly gray triangular-oblong pinnatifid leaves. The long-stalked flowers are to 2 inches across and have red-purple disks and three-toothed white rays which are reddish on the back.

For previous introduction see 97600.

101778. *CHRYSANTHEMUM ZAWADSKII* Herbich. Asteraceae.

A tufted herbaceous perennial about a foot high, native to Galicia, with rosetted flowers which appear throughout the summer.

For previous introduction see 95482.

101779. *CREMANTHODIUM FARRERI* W. W. Smith. Asteraceae.

A stately plant with pendulous globular flower heads of pure white that deepen to dark dull claret as they fade. The stems are up to 20 inches high, and the basal leaves, ovate and papery, are 4 to 5 inches long. Native to Upper Burma.

For previous introduction see 95617.

101780. *DAPHNE MEZEREUM* L. Thymelaeaceae. February daphne.

Variety *album*. A form with white flowers.

101781. *HOSTA JAPONICA TARDIFLORA* (Leichtlin) Bailey. Liliaceae.

A form of the narrow-leaved plantainlily with dark-green, long-pointed leaves on short, margined petioles, and light-purple flowers appearing in autumn on

101736 to 101797—Continued.

branched racemes sometimes bearing as many as 50 flowers.

101782. IRIS KUMAONENSIS Wall. Iridaceae.

A dwarf iris 2 to 12 inches high, native to the western Himalayas from Kashmir to Kumaon between 8,000 and 12,000 feet altitude. The flaccid linear leaves are 12 to 14 inches long, and the solitary flowers have a perianth tube 2 to 3 inches long. The bright-lilac falls, 1 to 2 inches long, are blotched with darker lilac, and the claw has a beard of yellow-tipped hairs on a white crest. The erect oblong standards are one-half inch broad.

101783. IRIS NEPALENSIS D. Don. Iridaceae.

A dwarf iris with a slender stem 6 to 12 inches high, native to India and western Tibet between 5,000 and 10,000 feet altitude. The linear leaves, 6 inches long at flowering time, become 2 feet long and are streaked with purple lines and dots. The spathes bear 1 to 3 pale-lilac flowers, the falls having a yellow crest. The erect oblong petals are one third of an inch broad.

101784 to 101788. LILIUM spp. Liliaceae. Lily.

101784. LILIUM ALBANICUM Griseb.

An alpine lily with an erect stem a foot high, lanceolate acuminate leaves about 2 inches long, and solitary nodding yellow flowers an inch or more in length. Native to southeastern Europe.

101785. LILIUM CARNIOLICUM Bernh.

A lily with a stem 2 to 3 feet high, native to southern Europe. The 30 to 40 lanceolate erect leaves are 2 to 3 inches long, the 1 to 10 orange-red flowers, 2 inches across, are dotted with purple black, and the waxy reflexed segments are papillose inside. The odor is said to be rich and heavy but not unpleasant.

101786. LILIUM HELDREICHII Freyn.

A lily, native to Greece, with stems 2 to 3 feet high, bearing narrow scattered leaves and 1 to 4 orange-red flowers, tinged with yellow outside, which appear early in July.

For previous introduction see 95490.

101787. LILIUM MONADELPHUM Bieb. Great Caucasian lily.

Variety *szovitzianum*. A form which differs from the type in having larger yellow flowers more thickly dotted with purple.

101788. LILIUM sp.

101789. NARCISSUS JUNCIFOLIUS RUFICOLUS (Dufour) Baker. Amaryllidaceae.

A small slender bulbous perennial, native to Spain and Portugal. The narrow rushlike leaves are 6 inches long, the slender terete scape is 6 to 12 inches high, the 1 to 4 bright-orange flowers, less than an inch across, have very short pedicels, and the crown is six lobed.

101790 to 101792. PENTSTEMON spp. Scrophulariaceae.

101790. PENTSTEMON CENTRANTHIFOLIUS Benth. Scarlet-bugler.

101736 to 101797—Continued.

A glaucous perennial herb 1 to 3 feet high, native to California. The ovate to oblong-lanceolate leaves, 2 to 3 inches long, have a subcordate clasping base, and the tubular bright-vermilion flowers are 1 inch long.

101791. PENTSTEMON CYRANTHUS Hook.

A glaucous herbaceous perennial, 2 to 3 feet high, native to the Rocky Mountains. The lower leaves are oblong to spatulate and the upper are ovate to subcordate. The slightly bulging funnelliform flowers, an inch long, are bluish purple.

101792. PENTSTEMON FRUTICOSUS (Pursh) Greene.

A perennial herb, 6 to 16 inches high, with simple stems ascending from a branched woody base, native to northwestern America. The glabrous coriaceous leaves, 1 to 2 inches long, are lanceolate to ovate, and the tubular-funnelform, dull-purple flowers, 1 to 2 inches long, are borne in a racemose panicle.

101793. RANUNCULUS GRAMINEUS L. Ranunculaceae. Grassy buttercup.

A smooth herbaceous perennial with rosettes of linear to lanceolate leaves and bright-yellow flowers on stalks 6 to 12 inches high. It is native to Europe.

For previous introduction see 97620.

101794. SALVIA HIANIS Royle. Menthaceae. Sage.

A viscid-hairy perennial herb 2 to 3 feet high, native to the temperate Himalayas in India between 8,000 and 11,000 feet altitude. The cordate, toothed leaves, 4 to 7 inches long, have petioles often 10 inches long, and the blue flowers, 1 to 2 inches long, with very inflated throats, are borne in large spreading panicles.

101795. SALVIA MOORCROFTIANA Wall. Menthaceae. Sage.

A tall robust woolly perennial herb, native to the lower Himalayas in India. The cordate-oblong, doubly crenate leaves are 6 to 12 inches long, the upper ones being 1 inch in diameter and white or rose colored. The slender rose-colored flowers, 1 inch long, are borne in branched panicles.

101796. TRICYRTIS HIRTA Hook. Melanthiaceae. Hairy toadlily.

A perennial herb, 1 to 3 feet high, covered with soft whitish spreading hairs. The cordate-lanceolate leaves clasp the stem, and the white lilylike flowers are covered with purple spots. It is native to Japan.

For previous introduction see 95678.

101797. VIOLA DELPHINANTHA Boiss. Violaceae. Violet.

An alpine violet from the mountains of Greece, with a woody rhizome, an erect stem crowded with linear-lanceolate leaves, and blue flowers appearing in July and August.

101798. SESAMUM ORIENTALE L. Pedaliaceae. Sesame.

101798—Continued.

From Palestine. Seeds presented by the Director of Agriculture, Forests and Fisheries, Jerusalem. Received January 17, 1933.

Introduced for the use of Department specialists.

101799. *SALIX ALBA CAERULEA* (J. E. Smith) Koch. Salicaceae.

Cricketbat willow.

From England. Cuttings presented by Dr. Arthur W. Hill, Director, Royal Botanic Gardens, Kew, through Henry Dawes, secretary to the American Ambassador, London. Received November 4, 1926. Numbered in January 1933.

A form of the white willow with olive-green twigs and leaves with glaucous-blue undersurfaces.

101800 and 101801.

From Indo-China. Seeds collected in Cochinchina and presented by M. Poilane, Institut des Recherches Agronomiques de l'Indochine, Division de Botanique. Received January 17, 1933.

101800. *HIBISCUS* sp. Malvaceae.
Rosemallow.

101801. *SOLANUM MAMMOSUM* L. Solanaceae.

A strikingly ornamental, very spiny shrub covered with large globose orange-colored fruits over 2 inches in diameter.

For previous introduction see 97785.

101802 to 101805. *PHASEOLUS* spp. Fabaceae. Bean.

From Guatemala. Seeds presented by Don Jorge Garcia Salas, Guatemala City. Received January 19, 1933.

A collection of beans introduced for comparison studies with the types now being grown on the Pacific coast.

101802. *PHASEOLUS HIRSUTUS* Mart.

No. 3. Collected near Guatemala City at 4,880 feet altitude. A hairy vine with ovate-rhombic leaflets over 2 inches long, rather large flowers in long-stalked small racemes, followed by subterete pendulous pods nearly 3 inches long. Native to Brazil.

101803 and 101804. *PHASEOLUS LUNATUS* L. Lima bean.

101803. No. 1. *Ixtapacal*. A variety grown by the Indians, who consider it as of first quality. It is cultivated up to 6,000 feet altitude and is a prolific bearer.

101804. No. 2. A form collected in the wild that shows great variation in the color of the seeds. Collected at 3,600 feet altitude.

101805. *PHASEOLUS* sp.

No. 4. A wild species common in cultivated fields near Guatemala City.

101806 to 101875.

From Morocco. Plants presented by H. Brayard, directeur de la Ferme Experimentale, Marrakech. Received January 21, 1933.

Received under the following varietal names and numbers:

101806 to 101875—Continued.

101806 to 101819. *AMYGDALUS COMMUNIS* L. Amygdalaceae. Almond.

101806. H. 1, no. 11.

101807. H. 2, no. 14.

101808. H. 3, no. 13.

101809. H. 7, no. 12.

101810. H. 6, no. 10.

101811. H. 10, no. 4.

101812. H. 11, no. 2.

101813. H. 12, no. 3.

101814. H. 13, no. 1.

101815. H. 14, no. 5.

101816. H. 5, no. 6.

101817. H. 15, no. 7.

101818. H. 16, no. 9.

101819. H. 17, no. 8.

101820 to 101838. *AMYGDALUS PERSICA* L. Amygdalaceae. Peach.

101820. *Alberge Jaune*, no. 45.

101821. *Alberge Jaune d'Octobre*, no. 44.

101822. *Amarillo de Calenda*, no. 63.

101823. *Bienvenida*, no. 65.

101824. *Brugnon Adèle*, no. 52.

101825. *Charles Ingouf*, no. 43.

101826. *De Confentes*, no. 57.

101827. *De Reus*, no. 64.

101828. *Dymen*, no. 58.

101829. *Henri Adenot*, no. 67.

101830. *Infante Elisabeth*, no. 61.

101831. *Lima de Dolorès*, no. 62.

101832. *Madeleine Jaune de Brunel*, no. 53.

101833. *Madeleine Jaune Noble*, no. 54.

101834. *Pavis Rouge de la Madeleine*, no. 51.

101835. *Précoce d'Ampuis*, no. 56.

101836. *Peregrine*, no. 59.

101837. *Sélecto del Pring del Junio*, no. 60.

101838. *Suzanne Darmon*, no. 55.

101839. *MALUS SYLVESTRIS* Mill. Malaceae. Apple.

Craoisi de Gascogne, no. 70.

101840 to 101854. *PRUNUS ARMENIACA* L. Amygdalaceae. Apricot.

101840. *Angoumois*, no. 18.

101841. *Blanc rose à confire*, no. 50.

101842. *Bullida*, no. 23.

101843. *Canino*, no. 27.

101844. *Carmelos*, no. 20.

101845. *De Anton*, no. 25.

101846. *Defarge*, no. 24.

101847. *Giletan*, no. 15.

101848. *Gros Précoce*, no. 16.

101849. *H. Brayard*, no. 66.

101806 to 101875—Continued.

101850. *Kaisha*, no. 17.101851. *Précoce d'Alexandrie*, no. 19.101852. *Précoce Bruel*, no. 21.101853. *Primerizo*, no. 26.101854. *Real Fino*, no. 22.101855 to 101859. *PRUNUS DOMESTICA* L.
Amygdalaceae. Common plum.101855. *Akubotankio*, no. 40.101856. *Mirabelle de Metz*, no. 68.101857. *Monsieur Hâtif*, no. 42.101858. *Reine Claude de Juillet*, no. 41.101859. *Reine Claude de Quillins*, no.
69.101860 to 101863. *PYRUS COMMUNIS* L.
Malaceae. Common pear.101860. *Bergamote d'ete*, no. 48.101861. *Blanchet Claude*, no. 47.101862. *Précoce de Trevoux*, no. 46.101863. *Sucre vert*, no. 49.101864 to 101875. *VITIS VINIFERA* L.
Vitaceae. European grape.101864. *Elisabeth Krasznay*, no. 28.101865. *Honigber*, no. 33.101866. *Kossuth Lazos*, no. 38.101867. *Meezes*, no. 35.101868. *Millinaire hongrois*, no. 37.101869. *Milton*, no. 30.101870. *Muscat Ottonel*, no. 36.101871. *Muscat Szanter*, no. 34.101872. *Jean Mathiasz*, no. 39.101873. *Perle de Casserba*, no. 29.101874. *Rieshing* × *Sylvaner*, no. 32.101875. *Souvenir à la Reine Elisabeth*, no. 31.101876. *PHASEOLUS LUNATUS* L. Fabaceae.
Lima bean.

From Madagascar. Seeds purchased through Percy G. Kemp, American vice consul, Tananarive. Received January 20, 1933.

Introduced for comparison with types now grown on the Pacific coast.

101877 to 101879. *CITRUS* spp. Rutaceae.

From Morocco. Scions presented by G. Ducrocq, horticulteur, Casablanca. Received January 27, 1933.

Received under the following varietal names:

101877. *CITRUS MEDICA* L. Citron.
Cedrat Carowant.101878. *CITRUS NOBILIS DELICIOSA* (Ten.) Swingle. Mandarin orange.
Mandarine Commune.101879. *CITRUS SINENSIS* (L.) Osbeck. Orange.*Orange Sanguine ovale. Jouble fine.*101880. *PRUNUS PROSTRATA* Labill. Amygdalaceae. Mountain cherry.

From England. Plants presented by Capt. Collingwood Ingram, Benenden, Kent. Received January 28, 1933.

A low, wide-spreading, deciduous shrub 3 feet or less high, with sharply serrate, broadly ovate leaves, pubescent beneath and over an inch long. The rose-colored flowers are less than an inch across. Native to the Mediterranean region and to western Asia.

101881 to 101890.

From Norway. Scions presented by Dr. P. Stedje, director, Statens Foøgsstasjon for Fruktdyrkning, Njøs, Songnefjord. Received January 30, 1933.

101881 to 101889. *MALUS SYLVESTRIS* Mill. (*Pyrus malus* L.). Malaceae. Apple.

Received under the following varietal names:

101881. *Hardanger Rosenstrips*.101882. *Haugmann*. Origin, Norway. Skin, greenish yellow covered with carmine red stripes and spots on the exposed side. Good cooking and dessert apple. Season, October to Christmas.101883. *Kaupanger*. Origin, Norway. Skin, greenish yellow overlaid on the exposed side with stripes of dark crimson. A good dessert apple. Season, December to February.101884. *Oskaug*. A late red apple.101885. *Red Rosenstrips*. Distributed well over the Scandinavian Peninsula. A beautiful red dessert variety. Season, October to December.101886. *Reinar*.101887. *Rondesveit*.101888. *Torstein*. Grown on the west coast of Norway. Skin, greenish yellow, coloring to a strong carmine red, especially on the exposed side. A good dessert apple. Season, December to June.101889. *Stor Torstein*. Similar to the *Torstein* except that the fruits are larger.101890. *PRUNUS CERASUS* L. Amygdalaceae. Sour cherry.Received as *Skyggekirsebaer*.101891 to 101902. *CORYLUS* spp. Betulaceae. Filbert.

From the Union of Soviet Socialist Republics. Seeds presented by V. Lichagov, horticulturist, Sochi, Black Sea district. Received January 27, 1933.

Received under the following varietal names:

101891 to 101900. *CORYLUS AVELLANA* L. Betulaceae.101891. *Barcelona*, no. 141812.101892. *Barcelona eckige*, no. 141813.101893. *Cherkessky I*, no. 141816.101894. *Cherkessky II*, no. 141817.101895. *Imperatrice Eugene*, no. 141814.

101891 to 101902—Continued.

101896. *Kadetten Zeller nus s*, no. 141808.

101897. *Koodryevchik*, no. 141815.

101898. *Lombardsky red*, no. 141807.

101899. *Lombardsky white*, no. 141811.

101900. *Trapezund*, no. 141810.

101901 and 101902. *CORYLUS MAXIMA* Mill. Giant filbert.

Kerasund. Best of quality and an excellent keeper.

101901. No. 141818. A long variety.

101902. No. 101809. A round variety.

101903 to 101906. *DIOSPYROS KAKI* L. f. *Diospyraceae*. Kaki persimmon.

From China. Scions collected northeast of Taian, Shantung, by Peter Liu, Peiping. Received January 31, 1933.

101903. *Fang Shih*, or square persimmon. From an orchard near Mata village. This rather flat persimmon, about 1 inch high and 2 inches across, is used for making persimmon cakes or as dry persimmons.

101904. *Niu Hsin Shih Tzu*, or heart persimmon. From an orchard near Mata village. The fruit is about 2 inches high and 2 inches thick, and the pointed top makes it somewhat heart-shaped. It is one of the most common varieties of the region and ripens in October.

101905. *Ta Ho Shih*, or large-box persimmon. A large persimmon 2 inches high and sometimes 4 inches wide, collected near the village of Liuchia-chuang. This is a common variety in this region.

101906. *Yo Ho Fang Shih*, the seeded square persimmon. A rather rare variety collected near the village of Liuchia-chuang.

101907. *SACCHARUM OFFICINARUM* L. *Poaceae*. Sugarcane.

From Barbados, British West Indies. Cuttings presented by the Director of Agriculture. Received February 1, 1933.

101908. *SACCHARUM OFFICINARUM* L. *Poaceae*. Sugarcane.

From the Hawaiian Islands. Cuttings presented by the experiment station of the Hawaiian Sugar Planters' Association, Honolulu. Received February 1, 1933.

101909. *VIBURNUM SARGENTI* Koehne. *Caprifoliaceae*. Sargent cranberrybush.

From Japan. Seeds presented by the Director of the forest experiment station, Keijo, Chosen. Received January 30, 1933.

A strong-growing shrub 12 to 15 feet high, somewhat resembling *Viburnum opulus*, with broadly ovate two-lobed leaves and large clusters of bright-red fruits which are very attractive.

For previous introduction see 92071.

101910. *EREMOCITRUS GLAUCA* (Lindl.) Swingle (*Atalantia glauca* Benth.). *Rutaceae*.

Australian desert kumquat.

From Australia. Seeds presented by the Council for Scientific and Industrial Research, Canberra. Received February 2, 1933.

A shrub or small tree about 14 feet high, native to the deserts of northeastern Australia. The small, thick, leathery leaves are gray green, and the fruits are less than an inch in diameter. The acid juice of the fruit forms the basis of an agreeable beverage, and the peel has a sweetish flavor of the kumquat. It is the hardiest of all the evergreen citrus fruits and is of promise to plant breeders.

101911 to 101913. *PHLEUM PRATENSE* L. *Poaceae*. Timothy.

From Scotland. Seeds presented by McGill & Smith, Ltd., Agr. Received February 3, 1933.

101911. No. S 49.

101912. No. S 50.

101913. No. M/S 90.

101914. *PHASEOLUS VULGARIS* L. *Fabaceae*. Common bean.

From Mexico. Seeds presented by Dr. C. A. Purpus, Zacuapam, Huatusco, Vera Cruz. Received February 3, 1933.

An excellent string bean.

101915. *ELEUTHERINE PALMIFOLIA* (L.) Merr. *Iridaceae*.

From the Philippine Islands. Bulbs presented by Dr. W. Dwight Pierce. Received July 25, 1930. Numbered in February 1933.

A tropical irislike plant with white flowers an inch across, borne on a scape about 9 inches high. The 1 or 2 linear-lanceolate leaves are 12 to 18 inches long. Native to the American Tropics and naturalized in the Philippines.

101916 to 101921.

From the Union of Soviet Socialist Republics. Seeds presented by the All Union Institute of Forest Culture and Forest Melioration, Moscow. Received February 3, 1933.

101916. *BUXUS SEMPERVIRENS* L. *Buxaceae*. Common box.

An extra large form.

101917. *ELAEOAGNUS ANGUSTIFOLIA* L. *Elaeagnaceae*. Russian-olive.

101918. *LAUROCERASUS OFFICINALIS* Roemer. *Amygdalaceae*. English cherry-laurel.

From Sukhum, Caucasus. A form with very large fruits.

101919. *LILIUM MONADELPHUM* Bleb. *Liliaceae*. Great Caucasian lily.

Variety *szowitzianum*, from Bakourany, Caucasus.

For previous introduction and description see 101787.

101920. *VACCINIUM ARCTOSTAPHYLOS* L. *Vacciniaceae*.

101916 to 101921—Continued.

From Tiflis, Sachuramo, Caucasus. A deciduous shrub up to 10 feet high, native to the Caucasus region. The oblong-ovate finely toothed leaves are 2 to 4 inches long and turn purple-red in the autumn. The small bell-shaped flowers are borne in racemes 2 inches long and are white with a purple tinge. The globose purple berries are nearly one-half inch in diameter.

For previous introduction see 100278.

101921. *VICIA* sp. Fabaceae. Vetch.

From Bakouryany, Caucasus.

101922. *LOLIUM PERENNE* L. Poaceae.
Perennial ryegrass.

From New Zealand. Seeds presented by Wright, Stephenson & Co., Ltd., Wellington. Received February 7, 1933.

Introduced for the use of forage-crop specialists.

101923 to 101962.

From Scotland. Seeds presented by the Royal Botanic Garden, Edinburgh. Received February 8, 1933.

101923 to 101947. *DIANTHUS* spp. Silenaceae. Pink.

101923. *DIANTHUS ANATOLICUS* Boiss.

A somewhat woody, caespitose perennial with narrow-linear acute leaves and pale-rose flowers on rough stems a foot or more high. Native to Asia Minor.

101924. *DIANTHUS BREVICAULIS* Fenzl.

A low caespitose plant, with erect, glaucous, linear-grooved leaves and small red-purple flowers borne singly. Native to the Taurus Mountains of Asia Minor.

101925. *DIANTHUS CAESIUS* J. E. Smith. Cheddar pink.

A glaucous tufted perennial a foot high native to Europe. The simple or forked four-angled stems have linear-lanceolate leaves and bear 1 or 2 fragrant rose-colored flowers with irregularly dentate petals.

101926. *DIANTHUS CALOCEPHALUS* Boiss.

A perennial herb 2 to 3 feet high, with linear acute leaves 2 to 3 inches long and numerous fire-red flowers. Native to Asia Minor.

101927. *DIANTHUS CRINITUS* J. E. Smith.

A dwarf plant with very short linear leaves and a smooth stem bearing 2 to 4 erect purplish flowers. Native to Armenia.

101928. *DIANTHUS GALLICUS* Pers.

A perennial with a long woody rhizome from which arise several ascending stems 6 to 8 inches high, terminated by 1 or 2 white or pale-pink flowers. The leaves are linear, obtuse, and glaucous. Native to the coast of southwestern France.

101929. *DIANTHUS GRACILIS* Sibth. and Smith.

A more or less woody perennial over a foot high, with rigid linear acute

101923 to 101962—Continued.

leaves and rose-colored flowers in small clusters. Native to the Balkans.

101930. *DIANTHUS LUMNITZERI* Wiesb.

A caespitose perennial with blue-green stems about 8 inches high, narrow-linear blue-green leaves up to 2 inches long, and white flowers with fringed petals. Native to stony places in Austria.

101931. *DIANTHUS MONSPESSULANUS ALPETRIS* (Hoppe and Sternb.) F. N. Williams.

A perennial herb about a foot high, with long grasslike foliage and solitary rosy or white flowers. Native to Montpellier.

101932. *DIANTHUS PALLENS* Sibth. and Smith.

A gray-green plant with simple upright stems, linear almost flat leaves, and white night-blooming flowers with the undersides of the petals greenish purple. Native to Greece.

101933. *DIANTHUS PELVIFORMIS* Heuff.

A caespitose perennial with stems a foot high and linear leaves. The dark purplish flowers are in dense terminal heads. Native to Serbia.

101934. *DIANTHUS SPICULIFOLIUS* Schur (*D. petraeus spiculifolius* Hort.).

A caespitose perennial with numerous branched stems 6 to 12 inches high, green linear-subulate leaves, and white or rosy flowers. Native to Transylvania and Rumania.

101935. *DIANTHUS PUBESCENS* Sibth. and Smith.

A caespitose perennial with numerous decumbent simple stems 6 to 9 inches high, linear acute leaves, and purplish flowers. Native to Greece.

101936. *DIANTHUS PUNGENS* L.

A bushy perennial, native to southern Spain, with linear subulate leaves and flowers in small clusters.

101937. *DIANTHUS RUPICOLUS* Bivona.

A shrubby glabrous perennial about 1 foot high, with lanceolate or linear-lanceolate acute leaves and fragrant red flowers in corymbs. Native to Sicily.

101938. *DIANTHUS SQUARROSUS* Bieb.

A sand-loving perennial with ascending stems, crowded rigid sharp-pointed green leaves, and white flowers similar to those of *D. phumarius*. Native to the Caucasus.

101939. *DIANTHUS STRUMARIUS* Hort.

A name for which a place of publication and a description have not been found.

101940. *DIANTHUS SUBCAULIS* Vill.

A dwarf, somewhat woody, perennial with the habit of *Arenaria juniperina*. The short narrow leaves are glabrous, and the small flowers are purplish pink. Native to France.

101941. *DIANTHUS SUPERBUS* L.

A glabrous light-green perennial herb 10 to 20 inches high, native from

101923 to 101962—Continued.

Norway and Spain to Japan. The soft flat linear-lanceolate leaves are 3- to 5-nerved, and the fragrant lilac deeply lacinate flowers are borne in a lax forking panicle.

101942. *DIANTHUS TENER* Balbis.

A rather low pink with subulate-linear leaves and deep-rose flowers with fimbriate petals. Native to the mountains of Tende in France.

101943. *DIANTHUS TERGESTINUS* (Reichenb.) Kern.

A perennial herb about a foot high with narrow-linear gray-green leaves up to 4 inches long and bright-pink or carmine odorless flowers in pairs. Native to southern Europe in stony chalky situations.

101944. *DIANTHUS VELEBITICUS* Hort.

A name generally referred to *D. carthusianorum*, but without definite description.

101945. *DIANTHUS VELENOWSKYI* Borb.

A caespitose perennial with soft linear-acuminate leaves in a dense basal tuft. The rose or crimson flowers are in a paniculate cyme on stems 2 to 3 feet high. Native to the Balkan region.

101946. *DIANTHUS VIRGINEUS* L.

A perennial herb with upright or ascending stems about 1 foot high, linear three-angled leaves and fragrant red flowers. Native to southern France.

101947. *DIANTHUS WALDSTEINII* Sternberg.

A stout blue-green perennial with stems over a foot high, dichotomously branched above, stiff linear leaves, and purplish or rose-colored flowers in 5- to 13-flowered panicle cymes. Native to southern Europe.

101948 to 101952. *FUCHSIA* spp. Onagraceae.101948. *FUCHSIA BACILLARIS* Lindl.

A compact plant with short-jointed branches and very small, flaring-mouthed, rosy, drooping flowers. Native to Mexico.

For previous introduction see 97608.

101949. *FUCHSIA CODRINGTONII* Hort.

A shrubby hybrid fuchsia, about 18 inches high, with small, oval, pale-green, acute leaves less than an inch long and small, deep rose-red, trumpet-shaped, pendulous flowers borne freely in the summer.

101950 and 101951. *FUCHSIA CORYMBIFLORA* Ruiz and Pav.

For previous introduction see 97609.

101950. A handsome Peruvian fuchsia with large serrate, long-pointed leaves and deep-red flowers. The plant becomes tall but requires support in order to attain full height and is adapted for training on pillars or pergolas in the subtropical parts of the United States.

101951. Variety *alba*. A form with the calyx tube and lobes white.

101923 to 101962—Continued.

101952. *FUCHSIA PARVIFLORA* Lindl.

A shrubby fuchsia, very similar to *F. lycioides*. It has oblong or ovate leaves, sometimes serrate, and purple flowers with pale-pink calyxes. Native to Mexico.

101953. *JASMINUM PUBIGERUM* D. Don. Oleaceae. **Jasmine.**

A softly densely-villous, erect shrub native to India. The compound alternate leaves are made up of 3 to 7 suborbicular to oblong leaflets 2 inches long, and the salverform yellow flowers are borne in dense nearly sessile cymes of about 15 flowers.

101954. *RANUNCULUS GRAMINEUS* L. Ranunculaceae. **Grassy buttercup.**

For previous introduction and description see 101793.

101955 to 101962. *RHODODENDRON* spp. Ericaceae.101955. *RHODODENDRON ADENOGYNUM* Diels.

A shrub up to 9 feet high native to Yunnan, China. The leathery oblong to lanceolate leaves, 2 to 5 inches long, are dark green and rugulose above and covered beneath with a thick woolly olive-tawny indumentum. The fleshy funnel-campanulate flowers, 2 inches long, are white shaded rose at the base with many crimson spots and are borne in terminal umbels of about 12.

101956. *RHODODENDRON CALOSTROTUM* Balf. and Ward.

A low shrub about a foot high, native to northeastern Burma between 11,000 and 12,000 feet altitude. The obovate leaves, 1 inch long, are densely covered above with greenish scales, and the lower surface is pale red with numerous flaky scales. The widely funnel-shaped flowers, 1 inch long, are bright red-purple and are borne in pairs at the ends of the branchlets.

For previous introduction see 98458.

101957. *RHODODENDRON CAUCASICUM* Pall. **Caucasian rhododendron.**

A shrub seldom more than 3 feet high, native to the Caucasus region between 6,000 and 7,000 feet altitude. The ovate, obovate, or oblong leaves, 2 to 5 inches long, with more or less recurved margins, are dark green, glabrous at maturity and slightly rugulose on the upper surface, the undersurface being covered with a thin fawn to tawny or pale-rusty tomentum. The broadly campanulate flowers are yellowish or rose tinted and are borne on long erect stalks in candelabroid trusses.

For previous introduction see 98482.

101958. *RHODODENDRON CHARTOPHYLLUM* Franch.

A distinct species with the general characteristics of *R. yunnanense*, but the leaves are usually deciduous, more narrowly oblanceolate, and entirely wanting in bristles on the upper surface, which are typical of the true *R. yunnanense*. The form with leaves completely deciduous is called *R. char-*

101923 to 101962—Continued.

tophyllum praecox. No doubt the two species, both of which grow in Yunnan, hybridize freely, and this probably explains the confusion between them in gardens.

For previous introduction see 98461.

101959. RHODODENDRON GALACTINUM Balf. f.

A tree 15 to 20 feet high, native to Szechwan, China. The oblong to lanceolate leaves, 5 to 8 inches long, are glabrous and dark green above and covered beneath with buff-gray or pale-cinnamon indumentum. The bell-shaped flowers, over an inch long, are in clusters of about 15 and are pale rose with deep-crimson blotches inside.

For previous introduction see 97624.

101960. RHODODENDRON LONGISTYLUM Rehd. and Wils.

A shrub up to 7 feet high, native to western Szechwan, China. The narrowly oblanceolate coriaceous leaves, 1 to 2 inches long, are glabrous with markedly impressed veins above and are sparsely scaly beneath. The small pink, funnel-shaped flowers, less than an inch long, are borne in racemose umbels of 10 to 20.

101961. RHODODENDRON PENTAPHYLLUM Maxim. Fiveleaf azalea.

A deciduous shrub of the section *Rhodora*, up to 25 feet high, with usually five elliptic-lanceolate leaves at the ends of the branches. The rose-pink flowers, 1 to 2 inches across, are solitary or in twos, appearing before or with the leaves which turn orange or crimson in the autumn. Native to Japan.

For previous introduction see 97626.

101962. RHODODENDRON SMIRNOWII Trautv. Smirnow rhododendron.

A shrub or small tree about 20 feet high, with dark-green leaves, gray-hairy beneath, and compact heads of rose-red flowers each about 3 inches across. Native to the Caucasus region.

For previous introduction see 98476.

101963 and 101964.

From France. Seeds presented by A. Gerard, Loir et Cher. Received February 7, 1933.

101963. DAVIDIA INVOLUCRATA Baill. Cornaceae. Doves tree.

A handsome tree native to central and western China, where it reaches a height of 60 to 70 feet. In habit and foliage it resembles a linden. The bright-green oval leaves, 3 to 6 inches long, are sharply toothed and slender stalked, and the globular heads of small flowers, borne on slender nodding stalks about 2 inches long, are made unusually striking because of the 2 or 3 large white bracts of unequal length.

For previous introduction see 99159.

101964. KETELEERIA DAVIDIANA (Bertand) Beissn. Pinaceae.

A coniferous tree, native to western China, which is closely allied to the firs. It sometimes becomes 100 feet tall, in pyramidal habit, and has handsome green glossy firlike foliage. The tree is

101963 and 101964—Continued.

said to be somewhat tender to frost and, therefore, probably is adapted for growing only in the southern half of the United States.

For previous introduction see 100571.

101965 to 101967.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos. Received February 6, 1933.

101965. ERYTHROXYLON COCA Lam. Erythroxyloaceae. Cocaine-tree.

A tropical shrub, native to Peru, 5 to 6 feet high, with slender rust-brown branches bearing clusters of obovate leaves at their tips. The yellowish flowers are borne in clusters of 3 to 5 in the axils of small scales which line the branchlets. It is grown commercially on a large scale throughout South America, also in Java and Ceylon, for the production of cocaine which is extracted from the dried leaves.

For previous introduction see 99779.

101966. ERYTHROXYLON NOVOGRANATENSE (Morris) Hieron. Erythroxyloaceae.

A tropical shrub about 10 feet high with lanceolate-oblong deep-green mucronate membranous leaves about 2 inches long and small axillary solitary white flowers tinged with green. Native to Colombia.

101967. POEPPIGIA PROCERA Presl. Caesalpinaceae.

A large tropical tree with bipinnate leaves and small yellow flowers in terminal panicles. Native to rather dry woods in Cuba.

101968. ERYTHEA LORETENSIS M. E. Jones. Phoeniceae. Palm.

From California. Seeds collected by Marcus E. Jones, of Pomona College, and presented through Frank A. Thackeray, Indio. Received February 6, 1933.

A fan palm up to 25 feet high, native to Baja California, closely related to *E. edulis*. The edible black fruits have flesh one-fourth of an inch thick, and the shiny black single seed is lozenge-shaped.

101969 to 101975. TRITICUM spp. Poaceae.

From India. Seeds presented by the Office of Crop Botanist to the Government of Bombay, Karjat, Kolaba. Received February 9, 1933.

101969 to 101971. TRITICUM DICOCUM Schrank. Emmer.

101969. No. KK 568.

101970. No. 808.

101971. *Khapli* (ordinary).

101972 to 101975. TRITICUM DURUM Desf. Durum wheat.

101972. No. 168.

101974. No. 807.

101973. No. 806.

101975. No. 809.

101976 to 101980.

From the Union of Soviet Socialist Republics. Seeds presented by Kasiev, directeur de l'Institut de Nourriture des Animaux, Ashkhabad, Turkmen. Received February 8, 1933.

101976 to 101980—Continued.

101976. *AGRIOPHYLLUM LATIFOLIUM* Fisch. and Mey. Chenopodiaceae.

A much-branched annual with ovate or subcordate, long-cuspidate leaves and small inconspicuous flowers in globular axillary clusters. Native to sandy deserts in Turkistan.

For previous introduction see 92958.

101977. *AGROPYRON ORIENTALE* (L.) Roem. and Schult. Poaceae. Grass.

An annual, much-branched grass, prostrate-ascending in habit, native to sandy places in Asia Minor and Turkistan.

101978. *AMMODENDRON CONOLLYI* Bunge. Fabaceae.

An evergreen, silky-leaved, Siberian shrub, used as a sand binder.

For previous introduction see 98202.

101979. *ARISTIDA PENNATA* Trin. Poaceae. Grass.

A grass native to Turkistan and central Asia where it is found in dry sandy places.

101980. *SMIRNOWIA TURKESTANA* Bunge. Fabaceae.

A much-branched shrub with long, almost filiform branches, and leaves reduced to a single obovate leaflet. Native to the deserts of Turkistan.

For previous introduction see 94936.

101981. *ALLIUM SATIVUM* L. Liliaceae. Garlic.

From Burma. Bulbs presented by R. A. Beals, Deputy Director of Agriculture, Irrawaddy Circle, Myaungaya, Lower Burma, through W. Gregson, Deputy Director of Agriculture, Penasserin Circle, Moulmein. Received February 13, 1933. A locally grown variety.

101982 to 101994.

From China. Scions and seeds collected in Hopeh Province by Peter Liu, Peiping. Received February 14, 1933.

101982 to 101991. *CASTANEA MOLLISSIMA* Blume. Fagaceae. Hairy chestnut.

101982. *Ta Lee Tzu*, or large chestnut of Miyun.

101983. *Wan Lee Tzu*, or late chestnut of Miyun.

101984. *Chiufen*, a seedling from an orchard near the village of Lee Yuan, north of Fangshan.

Nos. 101985 to 101991 were collected in the valley of the Silver Mountain near the Fa Hua Ssu Temple, north of Peiping. Nos. 101985 to 101987 are seedlings.

101985. *Chiufen*; ripens the latter part of September.

101986. *Erh Lu*, or second ripening chestnut; ripens in the early part of September.

101987. *Han Lu*, or late chestnut; ripens early in October.

101988. *Hu Chao*, or tiger paw. A grafted chestnut which ripens the latter part of October.

101989. *Pai Lu*, or early chestnut. This variety is always grafted.

101982 to 101994—Continued.

101990. *Short flowered*, a late chestnut.

101991. *Ta Lee Tzu*, or large chestnut; ripens the last of September. This variety is not very common.

101992. *DIOSPYROS KAKI* L. f. Diospyraceae. Kaki persimmon.

Ta Kai Shih, or large persimmon, from an orchard near the Ming Tombs, north of Peiping.

101993 and 101994. *MALUS SYLVESTRIS* Mill. (*Pyrus malus* L.). Malaceae. Apple.

From the valley east of the Fa Hua Ssu Temple to the north of Peiping.

101993. *Hsiang Kuo*, or fragrant apple; about 2 inches in diameter each way; ripens the last of August.

101994. *Summer* apple; this apple is about 3 inches in diameter one way and 2½ inches the other and ripens early in September.

101995. *LILIUM MARTAGON* L. Liliaceae. Martagon lily.

From France. Seeds presented by Dr. A. Guillaumin, Sous-Directeur du Laboratoire de Culture, Museum National d'Histoire Naturelle, Paris. Received February 14, 1933.

The martagon lily grows wild from central and southern Europe to southwestern Siberia. The stem is 3 to 6 feet high, often purple spotted, with horizontal deep-green leaves 3 to 6 inches long. The dull claret-purple flowers spotted purplish black with red anthers appear in late June and July, and from 3 to 20 flowers blossom at one time.

For previous introduction see 91260.

101996 to 101999.

From Madagascar. Seeds presented by R. Decary, Fort Dauphin, through Dr. Leon Croizat, New York, N.Y. Received February 14, 1933.

101996. *ALLUAUDIA PROCERA* Drake. Didiereaceae.

A spiny tree, sometimes 45 feet high, with few cactuslike branches resembling a giant candelabra or "trompe d'elephants." The small fleshy leaves, from the axils of which arise the spines, are obovate and less than an inch long. The very small flowers are in cymes over an inch long. Native to Madagascar.

101997. *ALOE HELENAE* P. Danguy. Liliaceae.

An aloe with a simple erect stem 3 to 12 feet high, crowned by a rosettelike cluster of fleshy leaves 1 to 3 feet long, armed with deltoid marginal prickles. The numerous reddish flowers are on a scape about 10 inches high. Native to Madagascar.

101998. *ALOE* sp. Liliaceae.

101999. *CROTALARIA* sp. Fabaceae.

102000. *TRIFOLIUM GLOMERATUM* L. Fabaceae. Clover.

From Australia. Seeds presented by F. H. Bruning, Melbourne, Victoria. Received February 17, 1933.

102000—Continued.

A clover which is useful because it grows fairly well in sour soils low in phosphate content, when these soils first come under cultivation and before other clovers have established themselves.

For previous introduction see 87469.

102001. CUCURBITA MOSCHATA Duchesne. Cucurbitaceae. Cushaw.

From China. Seeds presented by the College of Agriculture, University of Nanking. Received February 16, 1933.

102002 to 102062.

From Morocco. Cuttings presented by H. Brayard, Directeur de la Station Experimentale, Marrakech. Received February 18, 1933.

Received under the following varietal names:

102002 to 102021. FICUS CARICA L. Moraceae. Common fig.

A collection of Lerida figs introduced for the use of Department specialists.

102002. No. 16, *Abique blanche*.

102003. No. 7, *Adam*.

102004. No. 4, *Asborn prolifc*.

102005. No. 17, *Belle dame blanche*.

102006. No. 20, *Blanche de Sid-Yquem*.

102007. No. 5, *Blanquette*.

102008. No. 9, *Celestine grise*.

102009. No. 1, *Col de Signora*.

102010. No. 3, *de Dalmatie*.

102011. No. 14, *de Saint-Jean*.

102012. No. 8, *Figue-fleur*.

102013. No. 15, *Goutte d'or*.

102014. No. 10, *Grosse grise*.

102015. No. 18, *Kemedu*.

102016. No. 6, *Maitre Brugere*.

102017. No. 13, *Marseillaise*.

102018. No. 19, *Pietri*.

102019. No. 12, *Precoce de Barcelone*.

102020. No. 11, *Rolandine*.

102021. No. 2, *Trifere*.

102022 to 102029. OLEA EUROPAEA L. Oleaceae. Common olive.

102022. No. 4, *Ascolano dura*.

102023. No. 5, *Castillano*.

102024. *Cornicabra*.

102025. No. 1, *Dulce del Morocco*.

102026. No. 2, *San Agostino*.

102027. No. 3, *San Francesco*.

102028. No. 6, *Santa Catarina*.

102029. *Verdale*.

102030 to 102062. PRUNUS ARMENIACA L. Amygdalaceae. Apricot.

102030. No. 21, *Cluster*.

102031. No. 15, *Defarge*.

102032. No. 19, *de Jouy*.

102033. No. 16, *de Mongami*.

102002 to 102062—Continued.

102034. No. 2, *de Toledo*.

102035. No. 6, *Dr. Muscle*.

102036. No. 31, *de Haut Sebou*.

102037. No. 24, *Dundonald*.

102038. No. 38, *Gros muscat roux*.

102039. No. 25, *Gros Valla*.

102040. No. 13, *Guiditta Longione*.

102041. No. 36, *Hatif de Donazzan*.

102042. No. 29, *Hatif du Sig*.

102043. No. 20, *Kossuth*.

102044. *Linzel*.

102045. No. 10, *Luizet*.

102046. No. 34, *Luizet special*.

102047. No. 37, *Muscat de Turquie*.

102048. No. 39, *Muscat hatif de Sar-daigne*.

102049. No. 41, *Muscat-peche*.

102050. No. 33, *Muscat Polonaise*.

102051. No. 26, *Orange*.

102052. No. 18, *Peche precocce*.

102053. No. 4, *Pepita dulce*.

102054. No. 23, *Precocce de Montplaisir*.

102055. No. 35, *Precocce de Roussillon*.

102056. No. 14, *Precocce Esperen*.

102057. No. 5, *Quiero piccoz*.

102058. No. 8, *Re Imberto*.

102059. No. 12, *Rouge du Roussillon*.

102060. No. 11, *Souvenir d'Amic*.

102061. No. 30, *Surprise de Mai*.

102062. No. 32, *Topa la Hoja*.

102063. TRIFOLIUM sp. Fabaceae. Clover.

From Africa. Seeds presented by the senior agricultural officer, Moshi, Department of Agriculture, Northeastern Circle, Tanganyika Territory. Received February 20, 1933.

A clover grown locally, introduced for the use of forage-crop specialists.

102064 and 102065.

From India. Seeds presented by W. O'Brien, Corsley, Hyderabad, Deccan. Received February 21, 1933.

102064. CAJANUS INDICUS Spreng. Fabaceae. Pigeonpea.

An edible variety.

102065. VIGNA SINENSIS (Torner) Savi. Fabaceae. Cowpea.

An edible variety.

102066. MEDICAGO SATIVA L. Fabaceae. Alfalfa.

From India. Seeds purchased in Neemuch, Central India, and presented by the editor of The Seed World. Received February 27, 1932.

Introduced for the use of Department specialists.

102067. CINCHONA sp. Rubiaceae.

From Peru. Seeds presented by Col. Victor E. Ruehl, Caldwell, N.J. Received February 28, 1933.

102068. PACHIRA sp. Bombacaceae.

From Cuba. Seeds presented by W. A. Mace, Madruga. Received February 28, 1933.

The pachiras are tropical American trees, allied to Bombax, with showy pinkish or yellowish flowers.

102069. RIBES SATIVUM Syme. Grossulariaceae. Garden currant.

From Norway. Cuttings purchased from Dr. P. Stedje, Director, Statens Forsøksstasjon for Fruktdyrkning, Njøs, Sognefjord. Received February 20, 1933.

Red Holland. Received as *Rød Hollandsk.*

102070. DUBOISIA HOPWOODII F. Muell. Solanaceae. Pituri.

From Australia. Seeds presented by the Director of Agriculture, Perth, Western Australia. Received February 17, 1933.

A shrub or small tree native to Australia. The thick linear leaves are 2 to 4 inches long, and the small inconspicuous flowers, borne in leafy pyramidal panicles, are followed by small black berries. The leaves are said to contain an alkaloid similar to nicotine.

102071 to 102076.

From China. Seeds presented by the Botanic Garden, Dr. Sun Yat Sen's Memorial Park, Nanking. Received February 17, 1933.

102071. ANDROSACE SAXIFRAGAEFOLIA Bunge. Primulaceae.

A biennial, related to *A. rotundifolia*, with rounded-cordate rigid dentate leaves and white flowers the size of those of *A. villosa*. Native to northeastern China.

102072. ANEMONE CERNUA Thunb. Ranunculaceae.

A perennial herb, native to Japan, with pinnately deeply divided hairy leaves and solitary nodding flowers, the color of dragon's blood, on pubescent scapes.

102073. EUONYMUS LONGIFOLIUS Champ. Celastraceae.

A subtropical shrub with opposite narrow-oblong green glossy leaves 4 to 6 inches long, small light-green flowers in small cymes, and reddish capsules. Native to Hong Kong.

102074. EUSCAPHIS JAPONICA (Thunb.) Dipp. Staphyleaceae.

A shrub up to 10 feet high, native to Japan and China. The compound leaves are made up of 7 to 11 ovate-lanceolate serrate leaflets 3 inches long, and the small white flowers, in upright panicles, are followed by brown-red fruits which open, exposing the steel-blue seeds.

102075. ILEX PURPUREA Hassk. Aquifoliaceae. Aquiholly.

An evergreen tree with crenate-serrulate, elliptic-lanceolate leaves, 2 to 3 inches long, and red berries, half an

102071 to 102076—Continued.

inch long, in clusters of 2 to 5. It is native to Japan and central China.

For previous introduction see 91254.

102076. LILIUM BROWNII Poit. Liliaceae. Brown's lily.

A Chinese lily with stems 2 to 3 feet high and lanceolate leaves 3 to 5 inches long. The flowers, usually solitary but sometimes 2 to 4 together, are 6 to 8 inches long and nearly as wide, and are delicately fragrant. The waxy segments are creamy white inside, fading to pure white and tinged with yellow at the base. Outside they are white with brown-purple midribs; the three outer ones are variably tinged with brownish purple.

102077. CUCUMIS MELO L. Cucurbitaceae. Melon.

From Morocco. Seeds presented by H. Brayard, Directeur de la Ferme Expérimentale, Marrakech. Received February 17, 1933.

Charentais. One of the best commercial strains of that region.

102078. CALANDRINIA BALONENSIS Lindl. Portulacaceae. Parakeelya.

From Australia. Seeds presented through Monson Morris, Smithtown, Long Island, N.Y. Received February 20, 1933.

A perennial herb about a foot high, native to Queensland, Australia. The thick fleshy oblong-spatulate leaves are less than 1 inch long at the base of the plant while the upper ones are 2 inches long and linear-lanceolate. The large purple flowers, 1 to 2 inches across, are borne in loose terminal racemes.

For previous introduction see 101298.

102079 and 102080.

From India. Seeds presented by Dr. W. Burns, economic botanist, Department of Agriculture, Poona, Bombay. Received February 21, 1933.

102079. CHRYSOPOGON MONTANUS Trin. Poaceae. Grass.

A handsome perennial grass which becomes from 3 to 5 feet high. In India it has an excellent reputation as a fodder grass, and the seeds are collected and used as food by the natives. This grass has succeeded well in Florida and at Biloxi, Miss., and for the Gulf States it possesses some promise as a pasture grass.

102080. CHIONACHNE KOENIGII (Spreng.) Thwaites (Polytoca barbata Stapf). Poaceae. Grass.

A stout grass 3 to 5 feet high, native to India, Ceylon, and Java. The thick-margined lanceolate leaves are 1 to 2 feet long, and the flowers are borne in spikes 1 to 2 inches long.

102081. RIBES SATIVUM Syme. Grossulariaceae. Garden currant.

From Norway. Cuttings purchased from Prof. Olav Moen, Norges Landbrukskole, Undervisingen i Grosmsakdyrking og Planteskolddrift. Received February 7, 1933.

Red Holland. Received as *Rød Hollandsk.*

For previous introduction see 102069.

102082. *ANDROPOGON AMBOINICUS* (L.) Merr. Poaceae. **Grass.**
From India. Seeds presented by D. Rhind, economic botanist, Mandalay, Burma. Received February 21, 1933.
A tall perennial East Indian grass about 4 feet high, with narrowly linear leaves up to 20 inches in length. It is of possible value as a forage grass.
For previous introduction see 101027.
- 102083 to 102098.
- From the Union of Soviet Socialist Republics. Material presented by Vale Lichagov, horticulturist, Sochi, Black Sea district. Received February 27, 1933.
102083. *CORYLUS AVELLANA* L. Betulaceae. **Filbert.**
Kerasund. Plants of one of the best of their varieties.
- 102084 to 102096. *JUGLANS REGIA* L. Juglandaceae. **Persian walnut.**
Seed of plants growing wild in the mountain zone of the Sochi region.

- 102106 to 102115—Continued.
- 102106 to 102111. *CASTANEA MOLLISSIMA* Blume. Fagaceae. **Hairy chestnut.**
- 102106 and 102107. *Chiufen*, or middle-opened chestnut. Said to ripen the latter part of September.
102106. From an orchard near the village of Lienhualing, east of Peiping.
102107. From an orchard near Tsuikhechuang, northwest of Luan-chow.
- 102108 and 102109. *Hanlu*, or late chestnut. Said to ripen the end of September.
102108. Collected near the village of Tsuikhechuang, northwest of Luanchow.
102109. Collected near the village of Lienhualing, east of Peiping.
- 102110 and 102111. *Pailu*, or early chestnut. Said to ripen early in September.
102110. Scions from a young tree in an orchard near the village of Tsuikhechuang, northwest of Luanchow.
102111. From an orchard near the village of Lienhualing, east of Peiping.
- 102112 to 102114. *DIOSPYROS KAKI* L. f. Diospyraceae. **Kaki persimmon.**
From an orchard near the village of Lienhualing, east of Peiping.
102112. *Hsi Yang Shih Tzu*, or western persimmon. A variety not very commonly grown in this region.
102113. *Hua Shih Tzu*, or fire persimmon. So-called from its deep-red color.
102114. *Ta Kai Shik*, or large persimmon.
102115. *PYRUS* sp. Malaceae. **Pear.**
Milee, or honey pear. Collected near the foot of the mountain of Panshan. This is the best pear grown in this region.
- 102116 to 102120. *SYRINGA VILLOSA* × *SWEGINZOWII*. Oleaceae. **Lilac.**
From Canada. Scions presented by F. L. Skinner, 'Dropmore, Manitoba. Received March 1, 1933.

- 102121 to 102125. *CORYLUS* spp. Betulaceae.
From the Union of Soviet Socialist Republics. Seeds presented by Vale Lichagov, horticulturist, Sochi, Black Sea district. Received February 27, 1933.
- A collection of seeds of native varieties from the middle mountain zone of Tuapse and Sochi regions of the Black Sea district, received under the following varietal names:

102121 to 102125—Continued.

102121 to 102123. *CORYLUS AVELLANA* L.
Filbert.

102121. *Cherkessian*.

102122. *Early Cherkessian*.

102123. *Trapesund*.

102124 and 102125. *CORYLUS MAXIMA*
Mill. Giant filbert.

102124. *Baden*.

102125. *Kerasund*.

102126 to 102130.

From Sweden. Scions presented by Director Gustaf Lind, Experimentalfätet, Stockholm. Received March 2, 1933.

Received under the following varietal names:

102126 and 102127. *MALUS SYLVESTRIS*
Mill. Malaceae. Apple.

102126. *Maglemer*. Origin, Denmark. Fruits, small to medium large size, variable. Skin light greenish yellow to yellowish white, coloring to a light red with red stripes distinct from the general red color on the exposed side. A dessert apple of good quality. Season, October to January.

102127. *Okna lok*.

102128 to 102130. *PRUNUS CERASUS* L.
Amygdalaceae. Sour cherry.

102128. *Allmand Sur* or *Brunkörsbär*.

102129. *Ostheimer*.

102130. *Skyggmørell*.

102131 to 102153. *MALUS SYLVESTRIS*
Mill. Malaceae. Apple.

From Sweden. Scions presented by Carl G. Dahl, Forestandare for Alnarps Tradgardsskola, Åkarp. Received March 2, 1933.

Received under the following varietal names:

102131. *Allington*. Commonly grown in Germany, but little known in Sweden. Skin greenish yellow, slightly overlaid with red. Used as a cooking apple. Season, October to Christmas.

102132. *Baumann's renett*. Origin, Belgium; now grown in Germany and southern Scandinavia. Skin light yellowish green overlaid with deep red. Good for cooking and dessert. Season, October to March.

102133. *Berner rosenapple*. Origin, Switzerland, later spreading over northern Europe to southern Sweden. Skin greenish yellow overlaid with dark carmine red, slightly striped. Good quality, attractive dessert apple. Season, October to February.

102134. *Blenheim reinette*. Origin, England, later introduced into northern Europe, and grown in Sweden since about 1800. Skin pale yellow, usually covered with bright red stripings and speckles on the exposed side. Flesh sour with little aroma, good for cooking. Season, late fall to following summer.

102135. *Brunnsäpple*. Origin, the Netherlands. Fruit medium to large, variable in size. Skin light green to

102131 to 102153—Continued.

yellow-green overlaid with a red blush on the exposed side. Used for cooking and dessert. Season, November to January.

102136. *Kasselrenett*. Origin, the Netherlands. Fruit small to medium. Skin green to greenish yellow, marbled and finely striped with red. Used for cooking. Season, October to February.

102137. *Cellini*. Grown over northern Europe. Skin light green, almost completely covered with red. Used mainly for cooking, but sometimes for dessert. Season, October to January.

102138. *Cox's Pomona*. Origin, England. Fruit large size. Skin white to yellow-white, almost completely covered with red striping. Flesh tender, good for cooking and dessert. Season, September to January.

102139. *Filippa*. Origin, Denmark. Fruit large size. Skin light greenish yellow, partly overspread with stripes and spots of red. Used as a dessert apple during December.

102140. *Gladstone*. Origin, England, later distributed over northern Europe. Skin yellowish green, overspread with clear dark red. Good quality dessert apple. Season, August to October.

102141. *Husmodor*. Grown over northern Europe. Skin yellowish green, largely overspread with a bright red. Good cooking and dessert apple. Season, October to February.

102142. *Ölands Kungsäpple*. Origin, southern Sweden. Skin yellow, overlaid with strong carmine red, on the exposed side, with darker stripes. Good quality dessert apple. Season, October to January.

102143. *Oranie*. Origin, Sweden. Fruit large size. Skin light green to yellowish green, orange-yellow on the exposed side. Used for dessert. Season, September to October.

102144. *Säfstaholm*. Origin, Sweden, later introduced and widely grown over northern Europe. Skin yellowish white to light red. Excellent dessert apple. Season, September.

102145. *Persikerott sommaräpple*. Said to have originated in France, now grown over northern Europe. Skin white, covered with a beautiful red blush. Good dessert apple. Season, late August; does not keep well.

102146. *Ringstad*. Origin, Sweden. Skin greenish yellow overspread with solid bright red. Season, September to October.

102147. *Rött Ananasäpple*. Widely grown in Denmark and Germany and hardy in Sweden. Skin yellowish white, covered with a bright carmine-red. An aromatic dessert apple of high quality and attractive appearance. Season, middle of September to November.

102148. *Rött järnäpple*. Grown in Germany and southern Sweden. Skin green to a bright red with small yellow dots. Used for cooking. Season, last of October to April.

102149. *Rött Maglemer*.

102150. *Skovfoged*. Grown in Sweden. Skin greenish to dirty yellow over-

102131 to 102153—Continued.

spread partially or entirely with red. Good for cooking or dessert. Season, September to November.

102151. *Stenkyrke*. Origin, Sweden. Skin light yellow overlaid with clear red on the exposed side. Good cooking or dessert apple. Season, October to March.

102152. *Scanetorp*. Origin, Sweden. Fruit small size. Skin light greenish yellow to white-yellow, overlaid with red marbling and striping. Dessert fruit. Season, October to January.

102153. *Wäldikes düvåpple*. Origin, Sweden. Fruit medium large size. Skin white to yellowish, overspread with bright red blush or striping on the exposed side. Dessert apple. Season, September to December.

102154 to 102158.

From Finland. Seeds grown at the experiment station "Tammisto", Helsingfors Parish, and presented by the Hakkija Society through John L. Bouchal, American consul, Helsingfors. Received February 27, 1933.

102154 and 102155. *AVENA SATIVA* L. Poaceae. Oats.

102154. *Esakaura, Viottokaura* × domestic variety. An oat with a moderately large white kernel, full and with thin husks, so that it is especially suitable for oatmeal production. It thrives best in light clay soil, but, on account of its strong stalk, it can also be grown successfully in swampy land.

102155. *Kytökaura, Kultasade* × domestic variety. An oat with a medium-sized yellow kernel. The short strong stalk suits swampy lands better than any other oat variety. It thrives well also on light clay soil. In spite of its maturing early, it is one of the most prolific varieties. Average time of growth, 99 days.

102156. *HORDEUM DISTICHON PALMELLA* Harlan. Poaceae. Two-rowed barley.

Halikonohra. A two-sided drooping variety of barley, with medium strong stalks and large full kernels which mature in about 85 days. It is a heavy yielder and does best in light soil.

102157. *HORDEUM VULGARE PALLIDUM* Seringe. Poaceae. Six-rowed barley.

Olinohra. A northern Finnish domestic barley, with very strong stalk and rather small kernel. It is a very early barley, maturing in about 72 days. In the south of Finland this barley is sown on fallow land and harvested before fall sowing. Due to its strong stalk it is suitable also in swampy lands and as a protective plant for hay.

102158. *TRITICUM AESTIVUM* L. (*T. vulgare* Vill.). Poaceae. Common wheat.

Varmavehna. A cross between the Swedish *Svea* wheat and a domestic wheat. The rather short, strong stalk bears medium long, thick woolly ears with large full kernels. This is a good winter variety which ripens early and gives a good yield.

102159 to 102162.

From England. Plants purchased from W. J. Marchant, Keeper's Hill Nursery, near Wimborne, Dorset. Received March 7, 1933.

102159. *ABELIA FLORIBUNDA* (Mart. and Gal.) Decaisne. Caprifoliaceae.

A shrub 6 to 10 feet high, with oblong to ovate, ciliate entire leaves 1 inch long and terminal cymes of tubular red-purple flowers nearly 2 inches long. It is native to Mexico.

For previous introduction see 90298.

102160. *ACER ARGUTUM* Maxim. Aceraceae. Maple.

A small deciduous tree with erect branches and doubly serrate leaves 2 to 4 inches long. The flowers, produced in April before the leaves, are greenish yellow, and the keys are borne in hanging racemes. This tree is a native to the mountain woods of Japan and makes an elegant appearance with its pale-green leaves during the summer and its purple-brown branches in the winter.

102161 and 102162. *RHODODENDRON OBTUSUM AMOENUM* (Lindl.) Rehd. Ericaceae. *Amoena azalea*.

A bushy evergreen shrub, at times 3 feet high, with elliptic or elliptic-obovate, dark-green leaves up to 1 inch long. Native to Japan.

102161. Variety *Caldwellii*. A form that is covered in May with pale-pink, hose-in-hose flowers.

102162. Variety *Rosea*. The hardiest of the *Amoena* section, with bright-pink, hose-in-hose flowers, freely produced in May.

102163. *NEOMOOREA WALLISII* (Reichb. f.) Schlechter. Orchidaceae. Orchid.

From Trinidad, British West Indies. Plants presented by R. O. Williams, curator, Department of Agriculture, Port-of-Spain. Received March 8, 1933.

An epiphytic orchid, native to Antioquia, Colombia. The two plicate leaves become 2 to 3 feet long and 8 inches wide. The red-brown flowers, about 2 inches in diameter, have a three-lobed, straw-yellow lip lined with dark purple, with the crest bright yellow. This orchid is closely allied to *Houlletia*.

102164 to 102170. *MALUS SYLVESTRIS* Mill. Malaceae. Apple.

From Norway. Scions presented by Prof. H. Misvaer, horticulturist, Landbruks-skolen, Aas. Received March 7, 1933.

Received under the following varietal names:

102164. *Hardanger Rosenstrips*.

For previous introduction and description see 101881.

102165. *Haugmann*.

For previous introduction and description see 101882.

102166. *Kaupanger*.

For previous introduction and description see 101883.

102167. *Oskaug*.

102164 to 102170—Continued.

For previous introduction and description see 101884.

102168. *Rød Rosenstrips*.

For previous introduction and description see 101885.

102169. *Stor Torstein*.

For previous introduction and description see 101889.

102170. *Torstein*.

For previous introduction and description see 101888.

102171 to 102180.

From Norway. Scions presented by Fylkegardner Mörk, Drammen, through Marguard H. Lund, commercial attaché, Legation of the United States of America, Oslo. Received March 8, 1933.

Received under the following varietal names:

102171 to 102177. *MALUS SYLVESTRIS* Mill. Malaceae. Apple.

102171. *Bogarudeple*.

102172. *Retvedteple*. A red apple from Eiker, Buskerud Fylke.

102173. *Rødteple*. A red apple from Alfstad, Østre Toten, Opland Fylke.

102174. A red apple from Lunnatoten, Opland Fylke.

102175. A red striped apple from Alfstad, Østre Toten, Opland Fylke.

102176. From Ål in Hallingdal, Buskerud Fylke.

102177. From Gol in Hallingdal, Buskerud Fylke.

102178 to 102180. *PRUNUS Cerasus* L. Amygdalaceae. Sour cherry.

A collection of cherries from Lier, Buskerud Fylke.

102178. *Rødt Rotekte*.

102179. *Skygekirsebaer*. A very late seedling cherry.

102180. *Sortrotekte*. [Genuine red.]

102181 and 102182. *SOJA MAX* (L.) Piper. Fabaceae. Soybean.

From France. Seeds presented by Prof. L. Rouest, Paris, through J. W. Pincus, New Brunswick, N.J. Received March 6, 1933.

Yakovlev. Two varieties of soybeans, originally from Russia, which Prof. L. Rouest has developed under French conditions.

102181. An olive-yellow bean with a smooth skin.

102182. Olive-yellow beans with wrinkled skins, many of which are split.

102183. *TRIFOLIUM REPENS* L. Fabaceae. White clover.

From England. Plants purchased from Sutton & Sons, Ltd., Reading. Received March 7, 1933.

Variety *pentaphyllum*. A form having five leaflets, often bronzy. Introduced for the use of forage-crop specialists.

102184. *PHASEOLUS LUNATUS* L. Fabaceae. Lima bean.

From Guatemala. Seeds presented by Don Jorge Garcia Salas, Guatemala City. Received February 27, 1933.

A wild bean collected near Guatemala City at 1,580 feet altitude. The small brown seeds have a black ring around the hilum. Introduced for comparison studies with varieties now being grown on the Pacific coast.

102185 and 102186.

From Peru. Seeds presented by Earl Hansen. Received March 1, 1933.

102185. *TECOMARIA* sp. Bignoniaceae.

Pingo Pingo. An erect shrub with pinnate leaves and red flowers in terminal clusters. Collected near Chachapoyas, Peru, between 9,000 and 12,000 feet altitude, in loose sandy soil.

102186. *CHUQUIRAGA SPINOSA* D. Don. Asteraceae.

Huamampinto. From Huancayo, Peru, between 13,500 and 14,000 feet altitude. An erect, densely-branched, spiny shrub 2 feet high, with alternate, sessile, ovate-lanceolate, leathery leaves half an inch long and yellowish flowers in small heads. Found in sheltered places with gravelly soil, usually old river bottoms.

102187. *GOSSYPIUM TOMENTOSUM* Nutt. Malvaceae. Cotton.

From Hawaii. Seeds presented by the horticultural division of the United States Experiment Station, Honolulu. Received March 2, 1933.

A softly pubescent plant with red-brown lint.

102188 to 102190.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received March 2, 1933.

102188. *ARECA GLANDIFORMIS* Lam. Phoenicaceae. Palm.

A slender, spineless, pinnate-leaved palm closely resembling *Linoma* (*Areca*) *alba*. It is native to the Molucca Islands.

102189. *ARECA* sp. Phoenicaceae. Palm.

102190. *PLUMERIA SERICIFOLIA* Wright. Apocynaceae.

A small tropical tree 8 to 14 feet high, with oblong, obtuse leaves, white-hairy beneath and about 5 inches long, and white flowers about 2 inches long in small cymes. Native to western Cuba.

102191 to 102213.

From England. Plants purchased from W. J. Marchant, Keeper's Hill Nursery, near Wimborne, Dorset. Received March 11, 1933.

102191 to 102193. *CASSIOPE* spp. Ericaceae.

102191. *CASSIOPE LYCOPODIODES* (Pall.) D. Don.

A low creeping plant with slender stems, scalelike crowded leaves, and nodding white, bell-shaped flowers borne singly on erect peduncles. Native to northeastern Siberia.

102191 to 102213—Continued.

102192. *CASSIOPE MERTENSIANA* (Bong.) Don.

A low evergreen heathlike shrub 12 to 18 inches high, native to northwestern America from Alaska south to California. The thick glabrous oblong leaves, one-fourth of an inch long, are not furrowed on the back, and the campanulate rose-white flowers, slightly longer than the leaves, are solitary and nodding on erect naked pedicels.

102193. *CASSIOPE TETRAGONA* (L.) D. Don.

An arctic evergreen shrub 1 to 2 feet high, similar to *C. mertensiana*, but the leaves are finely pubescent and ciliate and are deeply furrowed on the back.

102194 to 102213. *COTONEASTER* spp. Malaceae.102194. *COTONEASTER BUXIFOLIA* Wall.

An evergreen shrub eventually about 10 feet high, of spreading upright habit, with elliptic or obovate dark-green leaves almost half an inch long, tomentose on the undersurface, and white flowers, one-third of an inch across, in small corymbs. The globular or ellipsoid red berries are one-fourth inch in diameter. Native to the Nilghiri Hills in India.

102195. *COTONEASTER BUXIFOLIA VEL-LAEA* Franch.

A variety characterized by a procumbent habit, with slightly smaller leaves, conspicuously pubescent above while young. Native to western China.

102196. *COTONEASTER MICROPHYLLA GLACIALIS* Hook. (*C. congesta* Baker).

A variety differing in its low compact habit, with the leaves only sparingly pubescent beneath and the flowers slightly smaller and pinkish white. Native to the Himalayas.

102197. *COTONEASTER EXCELLENS* Hort.

A very small evergreen shrub with small gray leaves and masses of pink-red berries that are retained well into the winter.

102198. *COTONEASTER FARRERI* Hort.

A name for which a place of publication and a description have not been found.

102199. *COTONEASTER FRIGIDA* Wall. Himalayan cotoneaster.

Variety *Vicarii*. Said to be a handsome small tree bearing masses of large scarlet berries in clusters.

102200. *COTONEASTER GLABRATA* Rehd. and Wils.

An evergreen upright shrub ultimately about 15 feet high, with spreading branches, leathery oblong-lanceolate bright-green leaves up to 3 inches long, slightly rugose above, and white flowers in dense corymbs about an inch across. Native to western China and closely allied to *C. salicifolia*.

102201. *COTONEASTER HENRYANA* (C. Schneid.) Rehd. and Wils.

102191 to 102213—Continued.

A stout deciduous or half-evergreen shrub about 10 feet high, with pendulous branchlets, oblong or oblong-lanceolate dark-green leaves from 2 to over 4 inches long, covered beneath with grayish tomentum, and white flowers in loose pubescent corymbs 2 inches across. The ovoid red berries are one-fourth of an inch in diameter. Native to western China.

102202. *COTONEASTER HUPHENSIS* Rehd. and Wils. Hupeh cotoneaster.

A graceful deciduous shrub up to 7 feet high, with ovate or elliptic, obtuse or acute, mucronulate, deep-green leaves up to 1½ inches long, sparingly gray tomentose beneath, and bright-red, subglobose berries one-fifth of an inch in diameter, in numerous corymbs. It is closely related to *C. multiflora* and native to central China.

102203. *COTONEASTER MICROPHYLLA THYMIFOLIA* (Loud.) Koehne.

Thyme rockspray.

A variety that differs from the type in being generally smaller throughout with narrowly oblong-obovate leaves and berries one-fifth of an inch in diameter. Native to the Himalayas.

102204. *COTONEASTER NITENS* Rehd. and Wils.

A rather low rambling deciduous shrub up to 5 feet high, densely branched, with broadly oval, obtuse, dark-green leaves one-half inch long. The fruits, globose or nearly so, are purplish black and one-third of an inch in diameter. It is native to Szechwan, western China.

102205 and 102206. *COTONEASTER PANNOSA* Franch.

Silverleaf cotoneaster.

102205. An evergreen or half-evergreen shrub 3 to 10 feet high, with gracefully arching branches, elliptic or ovate-lanceolate dull-green leaves up to 1 inch long, white tomentose beneath, and dull-red roundish fruits one-fourth inch in diameter, in rather dense corymbs. Native to southwestern China.

102206. Said to be different from the type.

102207. *COTONEASTER RHYTIDOPHYLLA* Rehd. and Wils.

A stout half-evergreen shrub about 5 feet high, with leathery, oblong-elliptic or oblong-lanceolate, acuminate leaves up to 3 inches long, densely white or yellow tomentose beneath, and pear-shaped, orange-red berries one-fourth of an inch long, in small dense corymbs. Native to western China.

102208. *COTONEASTER ROTUNDFOLIA* Wall.

Roundleaf cotoneaster.

A deciduous or half-evergreen shrub 4 to 8 feet high, with stiff more or less two-ranked branches and roundish or broadly oval, dark-green, mucronate leaves less than an inch long, paler beneath. The broadly ovate scarlet berries, usually solitary, are one-half inch long. Native to southwestern China and the Himalayas.

102209. *COTONEASTER SALICIFOLIA* Franch.

Willowleaf cotoneaster.

102191 to 102213—Continued.

A half-evergreen or, in mild climates, evergreen shrub up to 15 feet high, with slender spreading branches, ovate-lanceolate or elliptic-oblong, acute, cuneate leaves up to over an inch long, white tomentose beneath, and bright-red roundish berries one-fifth of an inch in diameter, in densely woolly corymbs 1 to 2 inches across. Native to western China.

102210. COTONEASTER SALICIFOLIA FLOCCOSA Rehd. and Wils.

A variety with narrower leaves, floccose tomentose beneath, and berries of a brighter red.

102211. COTONEASTER SALICIFOLIA RUGOSA (E. Prits.) Rehd. and Wils.

A variety which differs from the type in having smaller, broader, duller green leaves, shaggy pubescent beneath, and larger fruits.

102212. COTONEASTER TOMENTOSA (Ait.) Lindl.

A bushy deciduous shrub 6 to 10 feet high, with elliptic to broadly oval, obtuse, dull-green leaves 1 to nearly 3 inches long, white or grayish tomentose beneath, and pinkish flowers in small nodding cymes with bright-red, subglobose fruits one-third of an inch in diameter. Native to southeastern Europe and western Asia.

102213. COTONEASTER WARDII W. W. Smith.

A deciduous shrub 5 to 8 feet high, with ovate, acute, mucronate leaves over an inch long, densely silvery tomentose beneath. The white flowers, in small corymbs, are followed by fruits of a bright sealing-wax red.

102214. AMERIMNON sp. Fabaceae.

From China. Seeds presented by Dr. H. H. Chung, Department of Biology, National Wu-Han University, Wuchang, Hupeh. Received March 11, 1933.

A good timber tree, becoming over 60 feet high, with a trunk diameter of 12 inches, which fruits abundantly in Hupeh.

102215 to 102238.

From France. Seeds presented by L. Pardé, directeur des Ecoles Forestières de Barres, Nogent-sur-Vernisson, Loiret. Received March 2, 1933.

102215 to 102217. BETULA spp. Betulaceae. Birch.

102215. BETULA ALNOIDES Buch-Ham.

A tree up to 60 feet high, native to northern India and southwestern China between 3,000 and 10,000 feet altitude. The oblong-ovate leaves, 3 to 6 inches long, have appressed teeth on the margins and are nearly glabrous. The slender pendulous fruiting spikes are 3 to 5 inches long and are borne in fascicles.

102216. BETULA JAPONICA SZECHUANICA C. Schneid. Japanese white birch.

A tree up to 60 feet high, native to western China. The rhombic-ovate leaves, 2 to 3 inches long, are unequally dentate-serrate and are densely glandular-punctate beneath. The dark dull-green color of the leaves persists until late autumn.

102215 to 102238—Continued.

102217. BETULA UTILIS D. Don (*B. bhoppattra* Wall.).

A tree 40 to 60 feet high, with red-brown trunk and branches and bark which peels off in papery flakes. It is native to the temperate regions of the Himalayas between 7,000 and 14,000 feet altitude. The oval coarsely toothed, sharp-pointed leaves, 3 inches long, are dark green above and paler beneath. In winter the orange-chocolate color of the twigs is very striking.

For previous introduction see 99654.

102218 to 102221. CLEMATIS spp. Ranunculaceae.

102218. CLEMATIS FUSCA Turcz.

A somewhat woody vine, 12 to 15 feet long, native to eastern Asia, with compound leaves made up of 5 to 7 oblong-ovate leaflets 2 to 3 inches long. The nodding urn-shaped flowers, an inch long, have thick sepals with recurved tips and are densely brownish pubescent outside and violet within. The achenes have brown plumose styles.

102219. CLEMATIS GLAUCA AKEBIODES (Maxim.) Rehd. and Wils.

A slender climber up to 10 feet high, native to western China. The pinnate to bipinnate leaves have 2- to 3-lobed ovate leaflets, and the flowers are bronze yellow.

102220. CLEMATIS KOREANA Komar.

A prostrate vine with trifoliolate leaves composed of coarsely dentate, sharp-pointed leaflets. These are 2 to 4 inches long and usually 3-lobed or 3-parted. The yellow to dull-violet, bell-shaped, nodding flowers are 1 to 2 inches long and are borne singly in the axils. Native to Chosen.

For previous introduction see 92774.

102221. CLEMATIS TANGUTICA OBTUSIUSCULA Rehd. and Wils.

A woody climber 8 to 12 feet long, native to northwestern China. The pinnate or bipinnate leaves have oblong-lanceolate serrate leaflets 1 to 4 inches long, and the bright-yellow flowers, 1 to 2 inches across, are followed by large heads of feathery fruits.

102222 to 102224. INDIGOFERA spp. Fabaceae. Indigo.

102222. INDIGOFERA MACROSTACHYA Vent.

A shrubby plant with hairy leaflets and pink flowers in dense racemes which are longer than the leaves.

For previous introduction see 99429.

102223. INDIGOFERA RETICULATA Franch.

A somewhat shrubby perennial 2 to 3 feet high, native to Yunnan, China. The compound leaves have 7 to 9 elliptic shining dark-green leaflets about 1 inch long, and the pea-shaped flowers, in axillary racemes, are pure white.

102224. INDIGOFERA SPLENDENS Ficalho and Hiern.

102215 to 102238—Continued.

A tropical African tree with pinnate leaves up to 3 inches long, consisting of 6 to 11 pairs of small oval leaflets. The large showy flowers are in axillary spiciform racemes.

102225 to 102229. *LIGUSTRUM* spp. Oleaceae. Privet.

102225. *LIGUSTRUM QUIHOUI* Carr. Quihou privet.

A spreading shrub 6 to 8 feet high, native to China. The somewhat leathery leaves, 1 to 2 inches long, are elliptic to oblong-ovate, and the small white flowers are in long spikes which are collected into panicles 4 to 8 inches long.

102226. *LIGUSTRUM SALICIFOLIUM* Carr.

A vigorous deciduous shrub with opposite decussate leaves up to 6 inches long and 1 inch wide, and numerous white flowers in long lax racemes with an aroma like that of orange flowers. It is often frozen back in the vicinity of Paris.

102227. *LIGUSTRUM* sp.

Originally from Yunnan, China.

102228. *LIGUSTRUM* sp.

No. 4114 MV.

102229. *LIGUSTRUM* sp.

No. 5984 MV.

102230 to 102233. *ROSA* spp. Rosaceae. Rose.

102230. *ROSA FILIPES* Rehd. and Wils. Threadstalk rose.

A shrub with slender prostrate stems up to 15 feet long, native to western China. The leaves have 5 to 7 lanceolate serrate leaflets 2 to 3 inches long, and the fragrant white flowers, 1 inch across, in large loose corymbs, are followed by globose scarlet fruits about one-half inch in diameter.

102231. *ROSA GLUTINOSA* Sibth. and Smith.

A dwarf prickly shrub native to southwestern Europe and western Asia. The densely glandular leaves have 5 to 7 elliptic to obovate leaflets about 1 inch long, and the small pink flowers are followed by small globose fruits.

102232. *ROSA KOCHIANA* Koehne.

A bushy rose about 3 feet high, possibly a hybrid of *R. humilis* × *spinosisima*. The leaves are composed of 9 to 11 glabrous simple lightly serrate leaflets, and the deep-pink flowers, over an inch in diameter, are in small clusters.

102233. *ROSA MOLLISSIMA* Willd.

A bushy rose about the size of *R. villosa*, with bipinnate leaves composed of oblong serrate, densely hairy leaflets. The solitary flowers are deep red [incarnata]. It is native to Asia Minor.

102234. *STAPHYLEA COLCHICA* COULOMBIERI (Andre) Zabel. Staphyleaceae. Bladdernut.

A vigorous form of *Staphylea colchica*, with larger acuminate leaflets.

102215 to 102238—Continued.

This is an upright shrub with five leaflets, 6-inch panicles of white flowers, and obovoid 2- and 3-lobed inflated fruits. Native to the Caucasus region.

102235 to 102238. *SYRINGA* spp. Oleaceae. Lilac.

102235. *SYRINGA JAPONICA* (Maxim.) Decaisne. Japanese tree lilac.

A tree up to 30 feet high, with a short trunk and a round or ovoid head, native to Japan. The broadly ovate leaves, 2 to 5 inches long, are bright green above and paler beneath, and the yellowish flowers are in large panicles a foot or more long.

102236. *SYRINGA LUMINIFERA* Hort.

A name for which a place of publication and a description have not been found.

102237. *SYRINGA REFLEXA* C. Schneid. Nodding lilac.

A shrub 12 to 15 feet high, with rough ovate leaves 3 to 6 inches long and nearly cylindrical drooping panicles crowded with small flowers which are deep carmine in bud, fading as the flowers open to pink outside and white within. The flowers appear in June. Native to central China.

102238. *SYRINGA* sp.

No. 3. de Max Sievers.

102239 and 102240. *CASTANEA MOLLISSIMA* Blume. Fagaceae.

Hairy chestnut.

From China. Scions collected by Peter Liu from an orchard near the village of Chaochuangtzu, northeast of Peiping. Received March 13, 1933.

102239. *Early-ripened* chestnut. Said to ripen the first week of September.

102240. *Late-ripened* chestnut. Said to ripen during the last week of September.

102241 and 102242.

From India. Seeds presented by V. N. Ranganatha Rao, senior botanist, Mysore State Department of Agriculture, Bangalore City, southern India. Received March 11, 1933.

102241. *GOSSYPIUM NANKING* Meyen. Malvaceae. Cotton.

A Chinese long-staple cotton.

For previous introduction see 92840.

102242. *GOSSYPIUM* sp. Malvaceae. Cotton.

A form which resembles *G. herbaceum*.

102243. *CINCHONA SUCCIRUBRA* Pavon. Rubiaceae.

From Guatemala. Seeds presented by Frederico Rodriguez Bonito, Finca Capetillo, near Antigua, through G. H. Donald, American consul general, Guatemala City, at the request of Col. Victor E. Ruehl, Caldwell, N.J. Received March 10, 1933.

For previous introduction and description see 101661.

102244 to 102264.

From England. Plants purchased from W. J. Marchant, Keeper's Hill Nursery, near Wimborne, Dorset. Received March 18, 1933.

102244. *CYBILLA RACEMIFLORA* L. *Cyrtolacae*.

102245. *CYTISUS MULTIFLORUS DURUS* Aschers. and Graebn. *Fabaceae*. **Broom.**

A form which is said to be more resistant to frost than the species.

102246. *CYTISUS MULTIFLORUS INCARNATUS* Sweet. *Fabaceae*. **Broom.**

A shrub up to 10 feet high, native to Spain and northern Africa, with upright slender branchlets bearing trifoliolate leaves below and simple ones above. The white flowers, in axillary clusters of 1 to 3, are produced very profusely.

102247. *DOCYNIA DELAVAYI* (Franch.) C. Schneid. *Malaceae*.

A spiny evergreen tree up to 30 feet high, native to southwestern China, with glossy ovate-lanceolate leaves 2 to 4 inches long and umbels of white flowers which appear in the spring and are followed by ovoid acid fruits about 1 inch long.

102248. *DOCYNIA DOCYNOIDES* (C. Schneid.) Rehd. *Malaceae*.

A half-evergreen tree native to southwestern China. The elliptic to oblong-lanceolate leaves, 2 to 4 inches long, are usually serrate near the apex and are lustrous green above and nearly smooth beneath. The white flowers, 1 inch across, are borne in umbels of 2 to 5.

102249. *GORDONIA AXILLARIS* (Roxb.) Diestr. (*G. anomala* Spreng.). *Theaceae*.

A large evergreen shrub or small tree up to 25 feet high, native to southern China. The oblanceolate leaves, 4 to 6 inches long, are dark green above, and the solitary creamy white flowers are 2 to 3 inches across.

102250 to 102252. *LONICERA PERICLYMENUM* L. *Caprifoliaceae*. **Woodbine.**

102250. A woody vine several feet long, native to southern Europe. The dark-green ovate leaves are 1 to 3 inches long, and the fragrant creamy flowers, purplish outside, are borne in dense heads.

102251. *Belgica*. Dutch woodbine. A form with the flowers pale purple outside.

102252. *Serotina*. Autumn woodbine. A form with the flowers dark purple outside, blooming late and profusely.

102253. *PEROVSKIA ATRIPLICIFOLIA* Benth. *Menthaeae*.

A handsome shrubby plant, allied to the sages (*Salvia* spp.), which is indigenous to the mountainous regions of Afghanistan. It is of erect habit, about 5 feet high, and emits an aromatic sage-like odor when bruised. Its chief ornamental value lies in the terminal panicles of blue flowers which appear in early autumn, forming a pleasing contrast with the silvery gray stems.

102244 to 102264—Continued.

102254. *PHILLYREA DECORA* Boiss. and Bal. *Oleaceae*. **Lanceleaf phillyrea.**

An evergreen shrub with upright spreading branches which become 10 feet high. The oblong-lanceolate nearly entire leaves are lustrous dark green above and yellowish green beneath. The small white flowers, in dense clusters, are followed by oblong-ovoid purple-black fruits about one-fourth of an inch long. It is native to western Asia.

102255 to 102259. *PHOTINIA* spp. *Malaceae*.

102255. *PHOTINIA BEAUVERDIANA* C. Schneid.

A deciduous shrub up to 10 feet high, native to central and western China. The oblong-obovate, densely serrulate leaves are 2 to 4 inches long, and the small white flowers, in corymbs 2 inches across, are followed by subglobose scarlet fruits one-fourth of an inch in diameter.

102256. *PHOTINIA BEAUVERDIANA NOTABILIS* (C. Schneid.) Rehd. and Wils.

A shrub similar to *P. beauverdiana*, but with thicker, more prominently veined leaves, longer corymbs of flowers, and slightly larger ovoid fruits.

102257. *STRANVAESIA BENTHAMIANA* (Hance) Merr. (*Photinia benthamiana* Hance).

A Chinese evergreen shrub with leathery, oblong, red-tipped leaves and dense panicles of white flowers, followed by orange or scarlet fruits.

102258. *PHOTINIA DAVIDSONIAE* Rehd. and Wils.

A handsome evergreen tree, 20 to 50 feet high, with dense foliage, native to Hupeh, western China. The leathery oblong or lanceolate leaves are up to 6 inches long, and the white flowers, nearly half an inch across, are in many-flowered terminal corymbs. The globose orange-red berries are about one-third of an inch in diameter.

102259. *PHOTINIA VILLOSA* (Thunb.) DC.

A deciduous shrub or small tree, native to China, Chosen, and Japan, with obovate or ovate-lanceolate leaves from 1 to 3 inches long. It is a variable plant, especially in the amount of down on its leaves, young shoots, and flower stalks. The white flowers, each about one-half inch in diameter, are in corymbs over an inch wide. The fruit is the size and shape of the common haw, and the leaves turn a beautiful red in autumn.

102260. *PIERS FORRESTII* Harrow. *Ericaceae*.

An upright evergreen shrub with pendent branches and red branchlets, native to southwestern China. The oblanceolate serrulate leaves are 2 to 5 inches long, and the small whitish urn-shaped flowers are in drooping panicles.

102261 to 102263. *STEWARTIA* spp. *Theaceae*.

102261. *STEWARTIA MONADELPHA* Sieb. and Zucc.

A tree up to 75 feet high, native to Japan. The bright-green ovate leaves are 2 to 4 inches long, and the fra-

102244 to 102264—Continued.

grant white cup-shaped flowers, 1 to 2 inches across, are solitary in the axils of the leaves.

102262. STEWARTIA PSEUDO-CAMELLIA Maxim. Japanese *stewartia*.

A handsome tree, native to Japan, 50 feet high, with erect branches and red bark. The thickish obovate-lanceolate leaves are bright green, and the large white flowers are borne in summer.

102263. STEWARTIA SINENSIS Rehd. and Wils.

A shrub or tree up to 30 feet high, native to central China. The oblong to obovate serrulate leaves are 2 to 4 inches long, and the cup-shaped white flowers are 2 inches across.

102264. TRIPETALEIA PANICULATA Sieb. and Zucc. *Ericaceae*.

A shrub 4 to 6 feet high with red-brown branchlets, native to Japan. The rhomboid-ovate leaves are 1 to 3 inches long, and the pink-tinged white flowers, with three distinct petals, are in terminal panicles 2 to 4 inches long.

102265. ERYTHRINA sp. *Fabaceae*.

From Trinidad. Seeds presented through David Fairchild. Received March 13, 1933.

102266 and 102267. CASTANEA SATIVA Mill. *Fagaceae*. Spanish chestnut.

From the Union of Soviet Socialist Republics. Seeds presented by the Institute of Plant Industry, Leningrad. Received March 16, 1933.

Wild forest chestnuts, collected in the Caucasus area.

102268 to 102273.

From the West Indies. Material collected by David Fairchild, with the 1933 Allison V. Armour expedition. Received March 20, 1933.

102268. HIPPEASTRUM sp. *Amaryl- lidaceae*.

No. 3023.

102269. MANGIFERA INDICA L. *Anacardiaceae*. **Mango.**

No. 3052. *Bombay*. From Hope Gardens, Kingston, Jamaica; presented by M. S. Goodman, March 12, 1933. This is the most prolific of all the East Indian mangoes that have been tested in Jamaica. It is a small, fiberless, sweet mango with a faint red blush, very much like the "Paii."

102270. PHILODENDRON sp. *Araceae*.

No. 3042. From near Bath, Jamaica, March 7, 1933. A handsome climber with sagittate leaves with incised margins.

102271. RHABDADENIA sp. *Apocynaceae*.

No. 3014. From the Bahama Islands, February 24, 1933. Tubers of a woody vine with opposite, thick, almost-succulent leaves and large flowers in small racemes. Found growing over stumps in a cornfield on Mariгуana Island.

102272. SOLANUM TUBEROSUM L. *Solanaceae*. **Potato.**

102268 to 102273—Continued.

No. 3029. Tubers purchased in the market at Port-au-Prince, Haiti, March 3, 1933. Small elongated potatoes with deep-set eyes.

102273. SYNGONIUM AURITUM (L.) Schott. *Araceae*.

No. 3043. Cuttings collected March 7, 1933, near Bath, Jamaica. A woody vine native to the West Indies and tropical America. The 3- to 5-parted leaves have the middle segment largest, up to 12 inches long, and the yellow-green spathe, spotted with purple, 6 to 10 inches long, is cylindrical with a closely sheathing base.

102274. BRASSICA OLERACEA CAPITATA L. *Brassicaceae*. **Cabbage.**

From Sweden. Seeds presented by Carl G. Dahl, director, Experimentalfältet, Akarp, Alnarp. Received March 20, 1933.

Jaatun.

102275. IPOMOEA BATATAS (L.) Poir. *Convolvulaceae*. **Sweetpotato.**

From the American Virgin Islands. Tubers presented by Claud Horn, horticulturist, Agricultural Experiment Station, Christiansted. Received March 23, 1933.

No. 795. A seedling produced at the station.

102276. CHAETOSPERMUM GLUTINOSUM (Blanco) Swingle. *Rutaceae*. **Tabog.**

From the Canal Zone. Seeds presented by J. E. Higgins, superintendent, Canal Zone Experiment Gardens, Summit. Received March 21, 1933.

A small spiny Philippine tree with trifoliate leaves, small clusters of rather large white flowers, and oblong hard-shelled fruits. This tree is being tested as a stock for the commercial citrus fruits.

102277 to 102287.

From the West Indies. Material collected by David Fairchild, with the 1933 Allison V. Armour expedition. Received March 24, 1933.

102277. AGAVE MORRISII Baker. *Amaryl- lidaceae*.

No. 3059. Plants collected in Jamaica, British West Indies, March 11, 1933. A stemless agave, native to Jamaica, with a rosette of 20 to 30 spatulate leaves 4 to 6 feet long. The end spine is an inch long, and the marginal prickles are dark brown. The inflorescence, 15 to 20 feet high, is made up of many branches which bear bright-yellow flowers 2 to 3 inches long.

102278. BLIGHIA SAPIDA Koen. *Sapinda- ceae*. **Akee.**

No. 3062. From Kingston, Jamaica, March 11, 1933. Seed of a tree, native to the Guinea Coast of Africa, which has become naturalized in the West Indies. The bright red fruits, containing shiny black seeds, are surrounded by a yellow aril. The fruit is said to be poisonous when immature or overripe, but the fleshy portion (aril) is eaten after being boiled or fried.

102277 to 102287—Continued.

102279. CRESCENTIA CUJETE L. Big-noniaceae. Calabash-tree.

No. 3066. Cuttings of a handsome tree, native to tropical America, with wide-spreading branches and the general habit of the Burbank plum. The glossy dark-green leaves, 4 to 6 inches long, are broadly lanceolate, and the solitary pendulous round fruits are 18 to 20 inches in diameter, but can be made to assume various shapes by skillful tying.

102280. DRACAENA sp. Liliaceae.

No. 3038. Seeds presented by E. S. Lawnes of Castleton Gardens, Jamaica, March 7, 1933. A tree 20 feet high and half as wide. The bright-orange fruits are in long pendent clusters.

102281. EUPHORBIA PULCHERRIMA Willd. Euphorbiaceae. Poinsettia.

No. 3063. From Kingston, Jamaica, March 10, 1933. Cuttings presented by M. Goodman, of the Hope Gardens. A "double" variety, with more numerous bracts than the common form.

102282. LIVISTONA HOOGENBORGHII Andre. Phoenicaceae. Palm.

No. 3040. Seeds collected in Castleton Gardens, Jamaica, March 7, 1933. A tall Javanese palm with fan-shaped leaves 4 to 6 feet wide on spiny petioles 3 to 5 feet long, red-brown at the base and becoming olive green near the blade. The blades are made up of 10 to 12 plicate pendulous segments with 5 to 7 acute lobes at the apex.

For previous introduction see 101263.

102283. PELARGONIUM INQUINANS (L.) Ait. Geraniaceae. Fish geranium.

No. 3046. Cuttings collected in the Hope Gardens, Jamaica, March 12, 1933. A thick-stemmed geranium with long-stemmed, roundish or kidney-shaped velvety leaves, and scarlet flowers. It succeeds well in the dry Tropics.

102284 and 102285. PERSEA AMERICANA Mill. Lauraceae. Avocado.

102284. No. 3075. From San Andrea Island, March 16, 1933. A West Indian avocado which ripens in late March or early April. It is an oblong fruit 4 inches long and of a bright-green color. The seed, however, is relatively very large.

102285. No. 3333. Fruit purchased in a market in Hispaniola.

102286. PHILODENDRON sp. Araceae.

No. 3044. Cuttings collected in the Hope Gardens, Jamaica, March 9, 1933. An unusually attractive vine with rather small leaves, 6 inches across, of an intense dark green.

102287. ROYSTONEA sp. Phoenicaceae. Royal palm.

No. 3035. Seeds collected at Kingston, Jamaica, March 7, 1933. The West Indian Royal palm is a more stately tree than the Cuban or Florida Royal palm.

102288. SORGHUM PLUMOSUM (R. Br.) Beauv. Poaceae. Grass.

From Australia. Seeds presented by the Department of Agriculture, Sydney, New South Wales, through G. D. Ross, under-secretary. Received March 15, 1933.

102288—Continued.

An Australian grass over 2 feet high, with slender stems and long narrow leaves. It is not popular with sheep herders, but is considered a very good grass for cattle. The seed shatters freely.

102289 to 102309.

From Manchuria. Seeds purchased from the Manshu Nosan Shokai, Inc., Dairen. Received March 15, 1933.

102289 to 102293. ACER spp. Aceraceae. Maple.

102289. ACER DIABOLICUM Blume. Devil maple.

A tree up to 30 feet high with 5-lobed leaves 4 to 8 inches across, the broadly ovate lobes being coarsely and remotely dentate. The racemes of small yellow flowers are followed by keys with bristly nutlets. It is native to Japan and closely resembles *A. francheti* of central China.

For previous introduction see 97499.

102290. ACER MICRANTHUM Sieb. and Zucc.

A graceful shrubby tree, native to Japan. The cordate, doubly serrate leaves are 5- to 7-lobed; the small green-white flowers are in slender racemes, and the wings of the keys spread almost at right angles.

102291. ACER RUBRIPES Hort.

A name for which a description and a place of publication have not been found.

102292. ACER RUFINERVE Sieb. and Zucc.

A small deciduous Japanese maple with blue-white young shoots and dark-green irregularly serrate 3-lobed or obscurely 5-lobed leaves. The flowers are in erect racemes about 3 inches long, and the keys are up to three-fourths of an inch long. Occasionally the young foliage, the leafstalks, and the midribs are red.

For previous introduction see 97493.

102293. ACER sp.

102294. BERBERIS QUELPAERTENSIS Nakai. Berberidaceae. Barberry.

A much-branched shrub with stout trifid spines, oblanceolate sessile serrulate leaves up to an inch long, and oblong red berries. Native to Quelpaert Island. Chosen.

102295. CARPINUS TSCHONOSKII Maxim. Betulaceae. Hornbeam.

A graceful shrubby tree up to 45 feet high, native to northeastern Asia, with the young branchlets and leaves softly pubescent. The elliptic to oblong leaves are 2 to 4 inches long and have irregularly finely serrate margins.

102296. CASSIOPE LYCOPODIODES (Pall.) D. Don. Ericaceae.

For previous introduction and description see 102191.

102297. CORNUS CONTROVERSA Hemsl. Cornaceae. Giant dogwood.

This Chinese dogwood is one of the most striking of the genus; in its native home it sometimes becomes a tree 60 feet high with a trunk 7 feet in girth.

102289 to 102309—Continued.

The numerous long branches extend at right angles to the trunk, with the lowest sometimes touching the ground. The white or slightly yellow flowers are in flat clusters 6 or 7 inches in diameter, appearing from late May to early June. The black shining fruits which follow are eaten by birds as fast as they ripen.

For previous introduction see 99849.

102298. (Undetermined.)

Received as *Gaultheria pyroloides*, but the seeds and plants do not agree with that species.

102299 to 102301. ILEX spp. Aquifoliaceae.

102299. ILEX PEDUNCULOSA Miquel.
Longstalk holly.

An evergreen shrub or small tree up to 30 feet high, native to Japan. The ovate entire leaves, 1 to 3 inches long, are lustrous green above, and the small flowers, in slender-stemmed cymes, are followed by bright-red fruits one-fourth of an inch in diameter, on slender pedicels 1 inch long.

102300. ILEX ROTUNDA Thunb.

A large evergreen tree, sometimes 40 feet or more high, with glossy green entire elliptic or oblong leaves 2 to 4 inches long, and small globose scarlet berries. Native to Japan and Chosen.

102301. ILEX SUGEROKI Maxim.

A dense evergreen shrub 6 feet high, with pubescent branchlets, elliptic acute leaves 1 to 2 inches long, serrate above the middle, and solitary red fruits about one-third of an inch in diameter on pedicels 1 inch long. It is native to Japan.

For previous introduction see 91255.

102302. PHYLLODOCE CAERULEA (L.) Bab. Ericaceae.

A dwarf evergreen shrub about 6 inches high, native to arctic and alpine regions. The linear serrulate leaves are one-fourth of an inch long, and the small urn-shaped purple flowers are in 2- to 6-flowered umbels on slender nodding pedicels.

102303. PHYLLODOCE NIPPONICA Makino. Ericaceae.

A small evergreen bush up to 1 foot high, with numerous linear, obtuse, spinose-serrulate, rigid, glossy green leaves half an inch long and pink flowers up to 1 inch long, borne near the ends of the branches. Native to Japan.

102304 to 102307. SHORTIA spp. Diapensiaceae.

102304. SHORTIA ALPINA Hort.

A name for which a place of publication and a description have not been found.

102305. SHORTIA GRANDIFLORA Hort.

A name for which a place of publication and a description have not been found.

102306. SHORTIA SOLDANELLOIDES (Sieb. and Zucc.) Makino.

A low alpine plant with long-stemmed orbicular coarsely dentate glossy green leaves about an inch across, and rosy or white flowers, less

102289 to 102309—Continued.

than an inch in diameter, in small clusters on scapes 2 to 3 inches long. Native to the mountains of Japan.

102307. SHORTIA UNIFLORA Maxim.
Nippon-bells.

A perennial herb, native to Japan, closely resembling the native American *Shortia galacifolia*. The cordate leaves are broader than long and deeply sinuate toothed, and the white bell-shaped flowers, an inch across, are borne on slender peduncles 3 to 8 inches tall.

102308. STACHYURUS PRAEcox Sieb. and Zucc. Stachyuraceae.

A shrub 12 to 15 feet high, with slender spreading branches, native to Japan. The elliptic to lanceolate serrate leaves are 3 to 6 inches long, and the small campanulate yellow flowers, borne in racemes 2 to 3 inches long, are followed by globose fruits about one-third of an inch in diameter, greenish yellow with a red cheek.

102309. TRIPETALIA PANICULATA Sieb. and Zucc. Ericaceae.

For previous introduction and description see 102264.

102310 to 102332.

From India. Seeds collected in the neighborhood of Darjeeling and presented by G. Ghose & Co., Town-end, Darjeeling. Received March 24, 1933.

102310. ANEMONE RIVULARIS Buch.-Ham. Ranunculaceae.

A silky pubescent ornamental from 1 to 3 feet high, with three-parted basal leaves up to 6 inches in diameter and white or bluish flowers, over 1 inch long, in compound cymes. It is found in the Himalayan region at 5,000 feet altitude.

For previous introduction see 99717.

102311. BOENINGHAUSENIA ALBIFLORA (Hook.) Reichenb. Rutaceae.

A slender erect perennial herb, 1 to 2 feet high, native to northern India, at altitudes of 4,000 to 8,000 feet. The bipinnate leaves have membranous orbiculate entire leaflets about 1 inch long, and the slightly nodding pure-white flowers, less than an inch across, are borne in compound terminal leafy cymes.

102312. CATHARTIA VILLOSA Hook. f. Papaveraceae.

A hardy annual or biennial found at altitudes of 10,000 to 12,000 feet in the Sikkim Himalayas. The abundance of long shaggy fulvous hairs and the bright-yellow glabrous flowers give it a handsome appearance. The cordate radical leaves are long petioled and palmately five-lobed; the stem leaves are sessile and the uppermost ones pinnatifid. The large nodding flowers have golden anthers and a green fleshy stigma.

For previous introduction see 99655.

102313. DAPHNE SUREIL Smith and Cave. Thymelaeaceae.

An erect evergreen shrub 3 to 10 feet high, with alternate lanceolate or linear-lanceolate leathery leaves about 4 inches long and small whitish flowers half an inch long. Native to the eastern temperate Himalayas.

102310 to 102332—Continued.

102314. ERANTHEMUM INDICUM Hort.
Acanthaceae.

A name for which a place of publication and a description have not been found.

102315. GENTIANA SIKKIMENSIS C. B. Clarke. Gentianaceae. **Gentian.**

A decumbent perennial herb native to the Sikkim Himalayas at altitudes between 10,000 and 14,000 feet. The radical leaves are orbicular, and those of the stem are elliptic to oblong and 1 inch long. The tubular funnel-shaped blue flowers, about 1 inch long, are in head-like clusters.

102316. GENTIANA STYLOPHORA C. B. Clarke. Gentianaceae. **Gentian.**

A stout herbaceous perennial native to the Himalayas in Sikkim between 11,000 to 14,000 feet altitude. The simple stems are 3 to 6 feet high, the lower leaves are elliptic and 12 inches long, and the upper leaves are sessile, about 5 inches long. The widely funnel-shaped solitary flowers are borne on axillary peduncles up to 8 inches long.

For previous introduction see 99868.

102317. LILIUM GIGANTEUM Wall. Liliaceae. **Giant lily.**

A lily, native to the Himalayas, at altitudes of 5,000 to 10,000 feet, with bulbs which grow close to the surface. The hollow stems are 6 to 9 feet high, and the handsome cordate leaves are shining dark green above and paler beneath. The large fragrant white flowers, often 12 in a raceme, are slightly greenish without, and the inner surface of the segments is tinged with deep purple.

For previous introduction see 99893.

102318 to 102320. MECONOPSIS spp. Papaveraceae.

102318. MECONOPSIS DISCIGERA Prain.

An alpine perennial about 1 foot high, with a basal rosette of spatulate, coarsely dentate, or somewhat lobed leaves about 3 inches long, and flowers in racemes. Native to western Sikkim.

102319. MECONOPSIS NAPAULENSIS DC.

A stout perennial herb, 3 to 5 feet high, with the young parts clothed in softly villous golden hairs; native to the temperate slopes of the Sikkim Himalayas. The sinuate-lobed or pinnatifid leaves are 10 to 16 inches long, and the golden yellow flowers, 2 to 4 inches across, are in elongated racemes.

For previous introduction see 99669.

102320. MECONOPSIS SIMPLICIFOLIA (Don) Hook. f. and Thoms.

A stemless annual or biennial herb, native to temperate regions of northern India. The ovate-lanceolate toothed or entire leaves, 2 to 3 inches long, are in a tufted rosette from which rise the deflexed hairy scapes, 12 to 18 inches high, bearing solitary poppylike clear-blue flowers 3 inches across.

102321. PIPTANTHUS NEPALENSIS (Hook.) Sweet. Fabaceae.

A shrub, 6 to 10 feet high, native to Nepal, India, at altitudes of 7,000 to 9,000 feet. The palmately trifoliate

102310 to 102332—Continued.

leaves have lanceolate leaflets 2 to 4 inches long; and the yellow pea-shaped flowers, 1 inch long, are borne in dense racemes resembling bunches of grapes.

102322. POTENTILLA PEDUNCULARIS D. Don. Rosaceae. **Cinquefoil.**

A perennial herb 12 to 18 inches high, native to the alpine slopes of the Himalayas in India at altitudes of 12,000 to 14,000 feet. The pinnate leaves, 6 to 18 inches long, have oblong deeply serrate leaflets 1 to 3 inches long, clothed beneath with soft appressed silky hairs. The yellow flowers, nearly an inch across, are borne in few-flowered corymbs.

102323. POTERIUM DIANDRUM Hook. f. Rosaceae. **Burnet.**

A glabrous erect perennial herb 2 to 3 feet high, native to the temperate slopes of the Himalayas at altitudes of 10,000 to 13,000 feet. The pinnately compound leaves, 6 to 10 inches long, are made up of crenate cordate leaflets 1 inch long, and the small dark-purple flowers, in heads an inch in diameter, are followed by pendulous four-winged fruits one-fourth of an inch long.

102324. PRIMULA KINGII Watt. Primulaceae. **Primrose.**

A glabrous perennial herb native to the Sikkim Himalayas. The elliptic-lanceolate crenulate leaves, 2 to 3 inches long, are in a crowded rosette, and the slender scapes, 6 to 10 inches high, bear 4 to 5 claret-colored funnel-shaped flowers nearly an inch across.

102325. PRIMULA STUARTII Wall. Primulaceae. **Primrose.**

A mealy or quite glabrous perennial herb native throughout the alpine and subalpine Himalayas of India and Tibet at altitudes of 12,000 to 16,000 feet. The coriaceous oblanceolate leaves with entire or crenulate margins are 4 to 10 inches long, and the scapes, 12 to 18 inches high, bear loose umbels of light-yellow drooping flowers.

102326. SAXIFRAGA PURPURASCENS Hook. f. and Thoms. Saxifragaceae. **Saxifrage.**

A beautiful herbaceous rock plant native to the temperate regions of the Sikkim Himalayas between 10,000 and 14,000 feet altitude. The bright glossy green leaves are elegantly margined with red, and the scape and inflorescence are bright vinous-red purple.

For previous introduction see 99752.

102327 to 102329. SENECIO spp. Asteraceae. **Groundsel.**

102327. SENECIO KINGIANUS W. W. Smith.

A stout alpine perennial 2 to 3 feet high, with large orbicular basal leaves 8 inches wide and broadly reniform stem leaves about 6 inches across. The flower heads are in numerous wide-branching corymbs. Native to Sikkim.

102328. SENECIO PACHYCARPUS C. B. Clarke. Asteraceae.

A stout erect perennial herb native to the Sikkim Himalayas between 10,000 and 14,000 feet altitude. The ovate-cordate leaves are toothed and

102310 to 102332—Continued.

the radical leaves have alate-dentate petioles. The nodding yellow flower heads, an inch across, are borne in corymbose racemes.

102329. *SENECIO RETUSUS* (DC.) Wall.

A perennial herb 12 to 18 inches high and 8 inches across, native to the slopes of the Himalayas in Nepal and Sikkim at altitudes of 12,000 to 15,000 feet. The toothed leaves vary from reniform at the base to oblong-lanceolate at the top of the plant. The yellow flower heads, 1 to 2 inches across, are solitary or 2 to 8 in a simple terminal raceme.

102330. *SWERTIA HOOKERI* C. B. Clarke. Gentianaceae.

A perennial herb with a thick hollow stem 2 to 4 feet high, native to the Sikkim Himalayas between 12,000 and 13,000 feet altitude. The elliptic long-petioled radical leaves are 4 inches long, and the stem leaves are lanceolate. The nodding purple flowers, with blue nerves, on pedicels 2 inches long, are borne in dense axillary cymes.

102331. *THALICTRUM CHELIDONI* DC. Ranunculaceae. Meadowrue.

A handsome ornamental plant, 15 inches high, with lovely pale-green foliage, pubescent beneath. The delicate silvery lavender flowers, over an inch across, are borne in graceful sprays. Native to the temperate Himalayas at altitudes of 8,000 to 12,000 feet.

For previous introduction see 95601.

102332. *THALICTRUM FOLIOLOSUM* DC. Ranunculaceae. Meadowrue.

A stiff erect perennial herb, 4 to 8 feet high, native to the temperate slopes of the Himalayas at altitudes of 5,000 to 8,000 feet. The pinnately compound leaves are made up of orbicular leaflets less than an inch across, and the white, pale-green or dull-purple flowers are in much-branched panicles.

102333. *CASTANEA SATIVA* Mill. Fagaceae. Spanish chestnut.

From Germany. Scions presented by the Versuchsstation für Pflanzenschutz, Halle (Saale). Received March 24, 1933.

Introduced for the use of Department specialists.

102334. *ALLIUM CEPA* L. Liliaceae. Onion.

From Manchuria. Seeds purchased from L. Pfitsin, Harbin. Received March 22, 1933.

Sample no. 16, collected in northern Manchuria.

102335 to 102338.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received March 20, 1933.

102335. *AMYRIS ELEMIFERA* L. Rutaceae.

A large shrub or small tree up to 50 feet high, native to the West Indies and Central America. The compound leaves are made up of 3 to 5 lanceolate to rhombic-ovate leathery leaflets 1 to 3 inches long, and the small white flowers,

102335 to 102338—Continued.

borne in panicles, are followed by globose black fruits one-fourth of an inch in diameter.

102336. *SAVIA SESSILIFLORA* (Swartz.) Willd. Euphorbiaceae.

A shrub or small tree up to 25 feet high, native to the West Indies, with slender pubescent branchlets, gray-brown bark, and inconspicuous flowers. The ovate to ovate-lanceolate leaves, 1 to 2 inches long, are pale green and reticulate veined.

102337. *PAULLINIA BARBADENSIS* Jacq. Sapindaceae.

A tropical woody vine which climbs by axillary tendrils. The biternate leaves have cuneate thin leathery leaflets 2 to 5 inches long with winged petioles, and the small flowers, in axillary racemes, are followed by red or yellow three-winged leathery fruits, one-half of an inch long, which open and disclose the black seeds with their creamy aruncles. Native to the West Indies.

102338. *TOURNEFORTIA SCABRA* Lam. Boraginaceae.

A low vinelike shrub up to 6 feet high, native to the West Indies. The rigid, leathery, oblong to lanceolate leaves are 1 to 3 inches long, and the small white or yellow salverform flowers, borne in forked cymes, are followed by ovoid white fruits one-eighth of an inch long.

102339. *ELEOCHARIS TUBEROSA* (ROXB.) Schult. Cyperaceae.

Tubers presented by Albert P. Ding, Portland, Ore. Received March 27, 1933.

A Chinese vegetable which grows very much in the same manner as wet-land rice. The corms or tuberous rhizomes are mostly eaten raw, but are also sliced or shredded in soups and in meat and rice dishes. The plants need a hot summer to mature and are grown on muck or clay soils.

For previous introduction see 101500.

102340 and 102341. *IPOMOEA BATATAS* (L.) Poir. Convolvulaceae.

Sweetpotato.

From the Union of Soviet Socialist Republics. Tubers presented by V. P. Alekseev, chief of foreign-plant introduction, Institute of Plant Industry, of the Lenin Academy of Agricultural Sciences, Leningrad. Received March 4, 1933.

102340. No. 135733. A yellow-skinned, orange-fleshed yam of excellent quality, with a honey sweetness and aroma. A heavy yielder, but the shape of the roots is not standard.

102341. No. 135737. A cream-white, moist, yellow-fleshed variety of excellent quality which produces a heavy yield of large smooth regular-shaped tubers.

102342 to 102354.

From the West Indies. Seeds collected by David Fairchild, with the 1933 Allison V. Armour expedition. Received March 20, 1933.

102342. *AGAVE BREVISPIÑA* Trelease. Amaryllidaceae.

No. 3022. *Galatas* or *Croix des bouquets*. Point Decouverte, above Kenscoff,

102342 to 102354—Continued.

Haiti, March 2, 1933. A stemless but not caespitose agave with dull dark-green broadly lanceolate leaves 3 feet or more long, with small dull-brown spines and narrowly triangular prickles. The golden-yellow flowers are in a dense cluster on a scape 12 feet high. Native to Hispaniola.

102343. ANNESLIA HAEMATOSTOMA (Bertero) Britton. Mimosaceae.

No. 3009. From Watlings Island, January 19, 1933. *Red anneslia*. A handsome shrub of attractive habit. Its spreading branches are covered with small coriaceous pinnate leaves, and its flowers, with long brilliant red stamens, appear in the spring in clusters resembling pincushions.

102344. BEGONIA sp. Begoniaceae.

No. 3024. From near Kenscoff, Haiti, at 6,000 feet altitude. A wild form of scraggly habit, with very small scanty foliage and large, very attractive white flowers tinged with pink.

102345. CAESALPINIA SEPIARIA Roxb. Caesalpinaceae. Mysore thorn.

No. 3027. From near Kenscoff, Haiti, at 6,000 feet altitude, March 3, 1933. A scrambling spiny pubescent shrub, native to India. The compound leaves are made up of 12 to 20 pairs of pinnae, each bearing 16 to 24 oblong leaflets an inch long. The bright-yellow flowers, an inch across, are in simple racemes a foot long.

For previous introduction see 99694.

102346. CAESALPINIA VESICARIA L. Caesalpinaceae.

No. 3020. From Great Inagua, Bahama Islands, February 27, 1933. A small, handsome, loosely branching tree with shining, dark-green compound leaves which have yellow midribs, petioles, and petiolules, giving the foliage a very striking appearance. The attractive red and yellow flowers are in simple racemes.

102347. CARICA PAPAYA L. Papayaceae. Papaya.

No. 3003. From Nassau, April 12, 1933. Small, oblong fruits of excellent flavor, each of which contains a small, embryonic fruit.

102348. CEPHALOCEREUS BAHAMENSIS Britton. Cactaceae.

No. 3011. *Dildo*. From the north side of Crooked Island, Bahama Islands, February 20, 1933. A large handsome columnar cactus with spreading branches, found on solid coral rock. The cream-white flowers, which smell like garlic, are followed by small round reddish fruits with black seeds.

102349. CEPHALOCEREUS MILLSPAUGHII Britton. Cactaceae.

No. 3015. From Mariguana, Bahama Islands, February 24, 1933. A large cactus with branching stems, 6 to 20 feet high, sometimes 8 inches thick at the base of the trunk. It has 8 to 13 ribs, and a score of acicular brown-yellow spines about 2 inches long rise from each gray-brown areole. The rather stiff, greenish flowers, white within and less than an inch long, are succeeded by small reddish globose fruits. Native to the Bahama Islands.

102342 to 102354—Continued.

102350. CLERODENDRUM SPECIOSUM Telism. and Blinn. Verbenaceae.

No. 3034. From Hope Gardens, Kingston, Jamaica, March 7, 1933. An ornamental vine with a profusion of dull-red flowers borne continuously during the summer months. The slender, woody stems are slightly angled, and the dark-green, oblong-cordate or elliptic leaves are 4 to 6 inches long. Said to be a hybrid between *C. thompsonae* and *C. splendens*.

102351 and 102352. LUCUMA DOMINGENSIS Gaertn. f. Sapotaceae.

102351. No. 3021. From the American Legation compound, Port-au-Prince, Haiti, March 1, 1933. The *Juane d'oeuf*, with small round fruits over an inch in diameter, which closely resembles the *Canistel* in texture and flavor of its fruit.

102352. No. 3031. Presented by a student in the School of Agriculture at Damien, Haiti, March 3, 1933. A variety with oblong or pear-shaped fruits with a different skin texture, slightly pointed seed, and rather stickier flesh than no. 3021 [102351]. This may indicate a variability in the seedlings of this species.

102353. PASSIFLORA RUBRA L. Passifloraceae.

No. 3001. A softly pubescent vine with crescent-shaped cordate leaves 2 to 4 inches broad, green-white flowers 2 inches across, and red fruits 2 inches long. It is native to the West Indies.

For previous introduction see 97966.

102354. THRINAX sp. Phoenicaceae. Palm.

No. 3041. From Bath, Jamaica.

102355. CARICA PAPAYA L. Papayaceae. Papaya.

From Guatemala. Seeds presented by Manuel Pacheco H., Director General of Agriculture, Guatemala City. Received March 27, 1933.

A locally grown red variety.

102356 to 102362.

From the Union of Soviet Socialist Republics. Seeds presented by the Institute of Forest Culture, Moscow, through A. Albensky, chief, Acclimatization Department. Received March 28, 1933.

102356. ASPARAGUS sp. Convallariaceae.

A wild form from Alazan Kachetia, Caucasus.

102357. CARAGANA ARBORESCENS CUNEIFOLIA (Dipp.) C. Schneid. (*C. amurensis* Hort.). Fabaceae.

A dwarf form of the well-known Siberian pea-tree with the leaflets quite uniformly wedge-shaped and the flowers on shorter stalks. This form was originally described from Dahuria and Mongolia.

102358. CRATAEGUS DOLICHOCARPA Hort. Malaceae. Hawthorn.

A name for which a place of publication and a description have not been found.

102356 to 102362—Continued.

102359. CRATAEGUS sp. Malaceae.

From Zakataly, Caucasus. Hawthorn.

102360. PRUNUS CERASIFERA DIVARICATA (Ledeb.) C. Schneid. Amygdalaceae.

From Poti, Caucasus. Plum.

102361. PYRACANTHA sp. Malaceae.

From Zanataby, Caucasus. Firethorn.

102362. TILIA sp. Tiliaceae. Linden.

From Khabarovsk.

102363 to 102365.

From Egypt. Seeds presented by the Director, horticultural section, Ministry of Agriculture, Giza. Received March 30, 1933.

102363. ANTIDESMA BUNIUS (L.) Spreng. Euphorbiaceae. Banauac.

An attractive small evergreen tree, attaining a height of 30 feet, with dark-green thick-pointed leaves and small, dark-red, subacid, well-flavored fruits borne in racemes like the currant. These may be eaten raw or made into jelly. The tree is widely distributed throughout the Tropics at low and medium altitudes under varying climatic conditions. Native to the Malay Peninsula.

102364. CHAMAEROPS HUMILIS L. Phoenicaceae. Hair palm.

A low palm with a stem only 1 to 2 feet high, said to be the only palm native to Europe, found in the Mediterranean region. The nearly orbicular leaves are deeply lacinate into narrow bifid lobes, and the margins of the petioles are armed with stout spines. The small yellow flowers are followed by globose or ovoid yellow-brown fruits.

102365. HYPHAENE THEBAICA (L.) Mart. Phoenicaceae. Doum palm.

A palm about 30 feet high, which is noted as one of the few branching palms. It grows in alkaline, sandy soils and is native from upper Egypt to central Africa. The stems of old trees sometimes fork 3 or 4 times. The beautiful yellow-brown fruits are borne in clusters of 100 to 200 pounds. In upper Egypt the poor people eat the fibrous husk, which tastes like gingerbread but is rather hard. The hard tough wood is used for domestic utensils.

For previous introduction see 98494.

102366. CITRUS LIMETTA RISSO. Rutaceae. Sweet lime.

From Palestine. Seeds presented by M. Lifshitz, manager, Palestine Plantations, Ltd., Tel-Mond, Kfar-Saba, at the request of Robert W. Hodgson, associate professor of subtropical horticulture, Berkeley, Calif. Received March 30, 1933.

The pale-green fruit, about the size of a lemon, has skin less than a quarter of an inch thick, and the juice is cloying and sweet. As a stock this sweet lime requires less water and produces trees yielding earlier fruit than the bitter orange.

102367. PHOENIX DACTYLIFERA L. Phoenicaceae. Date palm.

From India. Seeds presented by the fruit specialist, Government of Punjab, Lyallpur, through W. T. Swingle. Received March 25, 1933.

102368. PHOENIX RECLINATA Jacq. Phoenicaceae. Senegal date palm.

From Africa. Seeds collected at Akure, Ondo Province, in southern Nigeria, and presented by the director of the Department of Agriculture, Ibadan, Nigeria. Received March 25, 1933.

A date palm 20 to 30 feet high, native to the tropical and subtropical parts of Africa. The reclinate pinnate leaves are 6 to 9 feet long and have rigid green leaflets. The yellowish fruits, with edible sweetish pulp, are half an inch long.

102369 to 102372. MALUS SYLVESTRIS Mill. (Pyrus malus L.). Malaceae. Apple.

From Poland. Scions presented by Dr. W. Filewicz, Sinoleka. Received March 31, 1933.

Presented under the following varietal names:

102369. *Glogierbwdk.*102370. *Kosztela.*102371. *Malinowce Oberludzkie.*102372. *Reneta Landakergska.*

102373. CYCAS SIAMENSIS Miquel. Cycadaceae.

From Siam. Seeds presented by A. Kerr, director, Botanic Garden, Bangkok. Received March 28, 1933.

A cycad, native to Siam, with a smooth white stem up to 15 feet high and 6 inches in diameter above the abruptly swollen base. The light-green, pinnately-compound leaves, 3 feet long, have about 70 pairs of narrowly linear, leathery leaflets 3 to 4 inches long, and the ovoid fruits, about 9 inches long, are covered with orange wool.

102374. ALLIUM CEPA L. Liliaceae. Onion.

From Manchuria. Seeds purchased from L. Pittsin, Harbin. Received March 28, 1933.

Sample no. 17, collected in northern Manchuria in January 1933.

102375. GOSSYPIUM PERUVIANUM Cav. Malvaceae. Cotton.

From South America. Seeds presented by the American consul at Guayaquil, Ecuador. Received March 30, 1933.

Red Peruvian.

102376 and 102377. CITRULLUS VULGARIS Schrad. Cucurbitaceae. Watermelon.

From Yugoslavia. Seeds presented by L. G. Michael, agricultural attaché, American Legation, Belgrade, through L. A. Wheeler, Bureau of Agricultural Economics. Received March 30, 1933.

102376. Variety 1.

102377. Variety 2.

INDEX OF COMMON AND SCIENTIFIC NAMES

- Abelia floribunda*, 102159.
Acer sp., 102293.
 argutum, 102160.
 diabolicum, 102289.
 micranthum, 102290.
 rubripes, 102291.
 rufinerve, 102292.

Introductory statement.....	1
Inventory.....	3
Index of common and scientific names.....	47

INTRODUCTORY STATEMENT

In this Inventory, no. 115, is recorded the plant material introduced by the Division of Plant Exploration and Introduction between April 1 and June 30, 1933, totaling 1,129 numbers (102378-103406).

The introduction of plants and scions of more than one hundred named varieties of apples, peaches, apricots, and pears from Italy is in continuation of the plan of the Division to bring into this country, for testing by Government specialists, as many as possible of the commercial deciduous-fruit varieties of Europe. Mention should be made also of a collection of grape scions presented by the Biologische Reichsanstalt at Naumburg, Germany (nos. 102491-102512); these will be tested in the far West and Southwest.

During March 1933, David Fairchild made a tour of several of the islands of the West Indies, stopping also for a brief visit to the Canal Zone. This trip was made possible through the continuing generosity of Allison V. Armour, whose yacht, the *Utowana*, carried the expedition. Dr. Fairchild's collections included cuttings and seeds of various tropical and subtropical fruits, seeds of a number of rare palms, and seeds or cuttings of numerous little-known ornamentals. Also worthy of mention is a special collection of palms (nos. 103155-103173) from Ceylon, presented by the Royal Botanic Garden at Peradeniya.

Joseph Rock, for several years an agricultural explorer for this Division, was traveling during this period through southwestern China for the University of California Botanic Garden. Through the courtesy of that institution, this Division received over 200 lots of seeds collected by Dr. Rock. These included several apparently new species of *Berberis*, *Cassiope*, *Cotoneaster*, *Iris*, *Lilium*, *Nomocharis*, *Prunus*, and *Rosa*.

Through the kindness of the Union of Soviet Socialist Republics, a special collection of tubers of South American species of *Solanum* (nos. 103028-103038) was received that will be of great value to pathologists working with potato diseases. By this same cooperation the Botanic Garden at Leningrad sent in 44 lots of seeds of little-known hardy perennials and bulbous plants adapted for growing in the colder parts of the United States.

The north-central Plains region of the United States should benefit from a shipment of seeds of very hardy vegetables grown between 40° and 45° north latitude in central Asia (nos. 102699-102727). Included in this lot of seed are onions, carrots, tomatoes, eggplants, and redpeppers.

The botanical determinations were made and the nomenclature determined by the late H. C. Skeels,¹ who had general supervision of this inventory.

B. Y. MORRISON,
Principal Horticulturist, in Charge.

DIVISION OF PLANT EXPLORATION AND INTRODUCTION,
Washington, D. C., February 15, 1935.

¹ Died Jan. 3, 1934.

INVENTORY²

102378. PHOENIX RECLINATA Jacq.
Phoenicaceae. Senegal date palm.

From Africa. Seeds collected at Zana, Algeria, and presented by the Royal Botanic Gardens, Kew, England. Received April 6, 1933.

Introduced for the use of Department specialists. Hausa name, *Kajinjira* or *Dabino bivi*. A date palm 20 to 30 feet high, native to tropical and subtropical parts of Africa. The reclinate, pinnate leaves are 6 to 9 feet long and have rigid green leaflets. The yellowish fruits, with edible sweetish pulp, are half an inch long.

For previous introduction see 102368.

102379 and 102380. SOLANUM TUBEROSUM L. Solanaceae. Potato.

From Brazil. Tubers presented by the Instituto Agronomico de Estado de São Paulo, Campinas. Received April 12, 1933.

102379. No. 21. *Ouro* (gold). Seeds from Clone no. 173. A variety introduced from Portugal many years ago.

102380. No. 16. Variety *Richter's Jubel*. Introduced from Germany in 1929; almost immune from common scab.

102381. SOLANUM TUBEROSUM L. Solanaceae. Potato.

From St. John's, Newfoundland. Tubers presented by H. A. Butler, secretary of agriculture, Department of Agriculture and Mines. Received April 14, 1933.

Arran Victory; a wart-resistant variety.

102382. SYAGRUS FLEXUOSA (Mart.) Becc. (*Cocos flexuosa* Mart.). Phoenicaceae. Palm.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos. Received April 10, 1933.

102382—Continued.

A low Brazilian palm, 9 to 12 feet high, with lax terminal pinnate leaves, 3 to 6 feet long, having 70 to 90 pairs of rigid leaflets.

For previous introduction see 91875.

102383 to 102385. DANTHONIA spp. Poaceae. Grass.

From Australia. Seeds presented by A. B. Cashmore, Waite Agricultural Research Institute, University of Adelaide, Glen Osmond, South Australia. Received April 5, 1933.

A collection of selected strains that give the best results under South Australian conditions.

102383. DANTHONIA DUTTONIANA Cashmore.

Ga 65. A perennial grass, native to Australia, with stems about 2 feet high, bearing broad leaves 6 to 9 inches long and open panicles 3 to 6 inches long. Said to be valuable both for hay and as a pasture grass.

102384. DANTHONIA RICHARDSONII Cashmore.

Ga 63. A perennial grass, native to Australia, with stems 2 to 3 feet high, lanceolate leaves about 1 foot long, and dense panicles 4 to 6 inches long. Said to be of value as a pasture grass.

102385. DANTHONIA SEMIANNULARIS (Labil.) R. Br. Wallaby grass.

Ga 60. A perennial fine-leaved tussocky grass, 1 to 2 feet high, which provides feed for the greater part of the year. It is said to be a good winter grass, will stand a great amount of grazing, and its palatability, both for cattle and sheep, is well known.

For previous introduction see 100671.

² It should be understood that the names of horticultural varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Division of Plant Exploration and Introduction, and further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus of related genera. The responsibility for the identifications, therefore, must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this Division, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

102386 to 102389.

From Mikicci, Lithuania. Scions presented by Frank Kokaska. Received April 12, 1933.

Received under the following varietal names.

102386. *MALUS SYLVESTRIS* Mill. (*Pyrus malus* L.). Malaceae. **Apple.**

No. 2. *Red Lomp*. A winter apple.

102387 to 102389. *PYRUS* spp. Malaceae. **Pear.**

102387. *PYRUS* sp.

Late Bartlett.

102388. *PYRUS* sp.

Late Sweet.

102389. *PYRUS* sp.

Red Check.

102390 to 102392. *VITIS VINIFERA* L. Vitaceae. **European grape.**

From the Netherlands. Scions presented by J. M. Riemans, Naaldwijk, through Prof. F. T. Bioletti, University of California, Berkeley, Calif. Received April 13, 1933.

Received under the following varietal names.

102390. *Early van der Laan.*

102391. *Emile Royal.*

102392. *Frankenthaler.*

102393 and 102394.

From Angola, Africa. Seeds presented by Dr. Leon Croizat, New York City, N. Y. Received April 12, 1933.

102393. *ELAEOPHORBIA DRUPIFERA* (Thonn.) Stapf. Euphorbiaceae.

A deciduous tree 40 to 50 feet high, with milky juice that may be a source of rubber. The young branches are fleshy and angled, becoming round and woody with age. The thick fleshy obovate leaves are 3 to 8 inches long, with stipular spines; the flowers are similar to those of the euphorbias, and the fleshy fruits vary in size from that of a cherry to a walnut. Native to tropical Africa.

102394. *EUPHORBIA DIDIEROIDES* M. Denis. Euphorbiaceae.

A low spiny succulent shrub, leafless below, with a terminal rosette of lanceolate-ovate leaves about 2 inches long. The spines are borne in threes, with the central one much longer than the rest. The small yellowish flowers are in dense terminal cymes. Native to Madagascar.

102395. *IPOMOEA BATATAS* (L.) Poir. Convolvulaceae. **Sweetpotato.**

From Japan. Tubers presented by the Agricultural Experiment Station, Nishigahara, Tokyo. Received April 17, 1933.

Shijunichi-Imo, or 40-day sweetpotato.

Introduced for the use of Department specialists.

102396 to 102398.

From Cuba. Seeds presented by Robert M. Gray, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received April 13, 1933.

102396 to 102398—Continued.

102396. *CASEARIA ACULEATA* Jacq. Flacourtiaceae.

A spiny shrub or small tree native to the West Indies. The elliptic to obovate leaves, 1 to 3 inches long, are glabrous above and usually pubescent, with rather long stiff hairs beneath, and the inconspicuous flowers, in small umbels, are followed by globose capsules about one-fourth of an inch in diameter.

102397. *ELSOTA DIVERSIFOLIA* (L.) Blake (*Securiduca diversifolia* (L.) Blake). Polygalaceae.

A trailing or climbing shrub with thick shining oblong to ovate leaves 2 to 6 inches long and racemes of rose-colored flowers. It is native to Central America and the West Indies.

For previous introduction see 99633.

102398. *TABEUIA LEPIDOTA* (H. B. K.) Britton. Bignoniaceae.

A tropical tree, native to Cuba, with opposite compound leaves composed of five small oblong-lanceolate leathery leaflets, lepidote beneath, and axillary pink flowers about 2 inches long.

102399. *AGROPYRON CRISTATUM* (L.) Gaertn. Poaceae. **Wheatgrass.**

From Canada. Seeds presented by L. E. Kirk, Dominion agronomist, Division of Forage Plants, Central Experimental Farm, Ottawa, Ontario. Received April 15, 1933.

Fairway. A strain of crested wheatgrass which has proved very satisfactory for lawns under dry-land conditions. It is also a good pasture strain. Practically all of the plants spread more or less by underground stems and some are decidedly creeping.

102400. *PISTACIA VERA* L. Anacardiaceae. **Pistache.**

From Turkey. Scions presented by H. T. Pence, American Mission, Gaziantep. Received April 3, 1933.

102401 to 102453.

From Italy. Plants purchased from Martino Bianchi, Pistoia. Received April 4, 1933.

Received under the following varietal names.

102401 to 102406. *AMYGDALUS* sp. Amygdalaceae.

102401 to 102405. *AMYGDALUS PERSICA* L. **Peach.**

102401. *D'Italia grossissima.*

102402. *Gialla di Breganze.*

102403. *Grossa Montagna.*

102404. *MoscateLLa gialla spicca.*

102405. *Tondona Presidente.*

102406. *AMYGDALUS PERSICA* NECTARINA Ait. **Nectarine.**

Cardinale.

102407 to 102429. *MALUS SYLVESTRIS* Mill. (*Pyrus malus* L.). Malaceae. **Apple.**

102407. *Annurca.*

102408. *Borda.*

102409. *CalvillA bianca d'inverno.*

102401 to 102453—Continued.

102410. *Calvilla di S. Salvatore*.
 102411. *Calvilla rossa d'estate*.
 102412. *Calvilla rossa d'inverno*.
 102413. *Carla*.
 102414. *Campiano*.
 102415. *Decio*.
 102416. *Durello*.
 102417. *Francesca*.
 102418. *Gelata*.
 102419. *Hohenzollern*.
 102420. *Isabella Luizet*.
 102421. *Jeanne Hardy*.
 102422. *Korobowka*.
 102423. *La Pair*.
 102424. *Lazzeruola*.
 102425. *Mantovano*.
 102426. *Renetta grigia Tirolese*.
 102427. *Rosa Gentile*.
 102428. *Rosmarina Bianca*.
 102429. *S. Giovanni*.
 102430 to 102438. PRUNUS ARMENIACA L.
 Amygdalaceae. **Apricot**.
 102430. *Aome ou Sense*.
 102431. *Bella di S. giuliano*.
 102432. *Fertile di Chatanay*.
 102433. *Golden Dust*.
 102434. *Luizet*.
 102435. *Precoce di Montplaisir*.
 102436. *Precoce di Toscana*.
 102437. *Precoce di Tunisi*.
 102438. *Souvenir d'Amic*.
 102439 to 102453. PYRUS spp. Malaceae.
Pear.
 102439. *Andre Desporters*.
 102440. *Arthur Chevreau*.
 102441. *Buoneristiana d'inverno*.
 102442. *Butirra d'Angleterre*.
 102443. *Butirra senza seni*.
 102444. *Centodoppia (Del Duca)*.
 102445. *Decan d'Alencon*.
 102446. *Duca di Pistoia*.
 102447. *La Madermassa*.
 102448. *Precoce di Cassano*.
 102449. *Re Carlo di Wurtemberg*.
 102450. *Rene Vaucel*.
 102451. *Santa Clause*.
 102452. *S. Germano d'inverno*.
 102453. *Spina*.

102454. ABELIA FLORIBUNDA (Mart. and Gal.) Decaisne. Caprifoliaceae.
Mexican abelia.

From England. Plants presented by Stevenson R. Clarke, Borde Hill, Haywards Heath, Sussex. Received April 5, 1933.

102455. GARCINIA MESTONI F. M. Bailey. Clusiaceae.

From Australia. Seeds presented by J. M. Newman, at the request of C. T. White, Government botanist, Queensland. Received April 4, 1933.

An erect slender graceful tree 20 feet or more in height, with drooping branches and glossy dark-green leaves. The roundish fruits, 2 to 3 inches in diameter, are of a bright olive green, with very juicy pulp of a pleasant acid flavor. The tree grows wild in the Bellenden Ker Hills at about 2,000 feet altitude.

102456 and 102457. MANGIFERA INDICA L. Anacardiaceae. **Mango**.

From the West Indies. Budwood and plants collected by David Fairchild, with the 1933 Allison V. Armour expedition. Received April 8, 1933.

102456. *Bombay mango*. No. 3052. From Kingston, Jamaica, March 11, 1933. This is the most prolific of all the East Indian mangoes that have been tested in Jamaica. It is a small fiberless sweet mango with a faint red flush, very much like the *Pairi*.

For previous introduction see 102269.

102457. *Sugar mango*. No. 3064. From Old Providence Island, March 14, 1933. This is an interesting form with very small sweet fruits of which the great majority are seedless or at least with very thin rudiments of seeds. The fruits are borne in clusters of 10 to 12, like grapes. Curiously enough, once in a while this variety produces a viable seed and this reproduces the variety.

102458 and 102459. AMYGDALUS COMMUNIS L. Amygdalaceae. **Almond**.

From Italy. Seeds presented by Dr. F. Silvestri, director of the R. Laboratorio di Entomologia, Agrario R. Istituto Superiore Agrario, Portici. Received April 8, 1933.

Received under the following varietal names.

102458. *Nocellara*.

102459. *Tricala*.

102460 to 102469.

From the West Indies and the Canal Zone. Material collected by David Fairchild, with the 1933 Allison V. Armour expedition. Received April 4, 1933.

102460. CITRUS GRANDIS (L.) Osbeck. (*C. decumana* Murr.). Rutaceae. **Grapefruit**.

No. 3037. From the market at Port-au-Prince, Haiti, March 3, 1933. A pear-shaped fruit of good quality, with juicy, rather dark-colored aromatic flesh.

Nos. 102461 to 102468 were collected in the Canal Zone.

102461. KAEMPFERIA ROTUNDA L. Ziniberaceae.

No. 3088. *Resurrection lily*. Root-stalks presented by Mr. Hunter, Ancon, February 3, 1933. A stemless tuberous plant allied to the ginger (*Zinziber officinale*). In the Canal Zone the showy violet-purple flowers, in general appearance resembling the crocus, appear in March. Later the very decorative green

102460 to 102469—Continued.

and purple leaves appear. These are about a foot long and 3 to 4 inches wide.

102462. *PASSIFLORA VITIFOLIA* H. B. K. Passifloraceae.

No. 3087. Cuttings collected near Fort Sherman, March 25, 1933. A strong-growing woody climber with deeply three-lobed heart-shaped leaves and large scarlet flowers about 5 inches across. The vine is reported to be immune from insects and nematodes.

102463 to 102467. *PHILODENDRON* spp. Araceae.102463. *PHILODENDRON* sp.

No. 3079. From Ancon, March 23, 1933. Cuttings of a handsome species, with dark-green elliptical leaves and a graceful habit of growth.

102464. *PHILODENDRON* sp.

No. 3080. From Barro Colorado Island, March 23, 1933. Cuttings of a rank climbing species of loose growth, with small very dark-green leaves that have broad petioles.

102465. *PHILODENDRON* sp.

No. 3081. From the Armour trail on Barro Colorado Island, March 23, 1933. A species with handsome immense dark-green leaves on long petioles.

102466. *PHILODENDRON* sp.

No. 3102. Cuttings collected in the Experiment Garden, Summit, March 23, 1933. A very pretty species with beautiful light-green, finely parted leaves.

102467. *PHILODENDRON* sp.

No. 3105. From the Experiment Garden, Summit, March 23, 1933. Cuttings of an epiphytic species with large dark-green cordate leaves. It is native to the Canal Zone.

102468. (Undetermined.)

No. 4. Cuttings of an aroid collected on Barro Colorado Island, March 23, 1933.

102469. *IPOMOEA HEPTAPHYLLA* (Rottl. and Willd.) Voight. Convolvulaceae.

No. 3013. From Crooked Island, Bahamas, February 2, 1933. Roots of a very handsome, free flowering, twining perennial, with fleshy, deep-pink flowers.

102470 to 102490.

From France. Seeds presented by Vilmorin-Andrieux & Cie., Verrieres-le-Buisson (Seine et Oise). Received April 5, 1933.

102470. *BETULA MEDWEDIEWII* Regel. Betulaceae. Birch.

A tall tree native to southeastern Europe. The ovate to obovate, doubly serrate leaves, 3 to 6 inches long and nearly as broad, are dark green above and light green beneath, with the 8 to 11 pairs of veins impressed on the upper surface.

102471. *BETULA TRISTIS* Wormsk. Betulaceae. Birch.

A shrub 3 to 12 feet high, with broadly ovate or elliptic acuminate leaves about 2 inches long. Native to northeastern Asia.

102470 to 102490—Continued.

102472. *CALLICARPA* sp. Verbenaceae. No. 2301.102473. *CALLICARPA* sp. Verbenaceae. No. 5511.102474 to 102490. *COTONEASTER* spp. Malaceae.102474. *COTONEASTER RUGOSA LATIFOLIA* Hort.

A name for which a place of publication and a description have not been found.

102475. *COTONEASTER MELANOCARPALAXIFLORA* (Jacq.) C. Schneid.

A form with leaves larger than the type and pendulous clusters of pink flowers and black fruits.

102476. *COTONEASTER MICROPHYLLA THYMIFOLIA* (Loud.) Koehne. Thyme rockspray.

A variety that differs from the type in being generally smaller throughout, with narrowly oblong-obovate leaves and berries one-fifth of an inch in diameter. Native to the Himalayas.

For previous introduction see 102203.

102477. *COTONEASTER MULTIFLORA* Bunge. Malaceae.

A deciduous shrub about 6 feet high, with slender arching purple branches, native to western China. The broadly ovate leaves are 1 to 2 inches long, and the many-flowered clusters of small white flowers are followed by subglobose to ovoid red fruits one-third of an inch in diameter.

102478. *COTONEASTER MYRTIFOLIA* Hort.

A name for which a place of publication and a description have not been found.

102479. *COTONEASTER UNIFLORA* Bunge.

A dwarf deciduous shrub, closely related to *C. integerrima*, 2 to 3 feet high and native to Siberia. The thin, broadly oval to obovate leaves, less than 1 inch long, are smooth above and downy beneath when young. The single, usually solitary, white flowers are followed by globose red fruits.

102480. *COTONEASTER WHEELERI* Hort.

A name for which a place of publication and a description have not been found.

102481. *COTONEASTER* sp.

Farrer no. 404.

102482. *COTONEASTER* sp.

C. Schneider no. 719.

102483. *COTONEASTER* sp.

No. 2005.

102484. *COTONEASTER* sp.

No. 2007.

102485. *COTONEASTER* sp.

No. 2061.

102486. *COTONEASTER* sp.

No. 2119.

102470 to 102490—Continued.

102487. COTONEASTER sp.
No. 3737.
102488. COTONEASTER sp.
M. V. no. 4414.
102489. COTONEASTER sp.
M. V. no. 4694.
102490. COTONEASTER sp.
No. 7087.

102491 to 102512. VITIS spp. Vitaceae.
Grape.

From Germany. Cuttings presented by Dr. C. Börner, Biologische Reichsanstalt, Zweigstelle, Naumburg, Saale. Received April 7, 1933.

A collection of grape cuttings introduced for the use of Department specialists.

102513 to 102585.

From Italy. Plants and scions purchased from G. Giannini, Stabilimento d'Orticultura, Pistoia. Received April 8, 1933.

Received under the following varietal names.

- 102513 to 102535. AMYGDALUS PERSICA L. Amygdalaceae. Peach.
102513. *Bella di Pistoia*.
102514. *Bella di Roma*.
102515. *Bella di Vitry*.
102516. *Bonouvrier*.
102517. *Bonvicini*.
102518. *Buco incavato*.
102519. *Burrone di Rosano*.
102520. *Della China*.
102521. *Giallona di Papigno*.
102522. *Globe*.
102523. *Grosse Mignonne*.
102524. *Isonzo*.
102525. *Lavarone*.
102526. *Morellona di Firenze*.
102527. *Poppa di Venere*.
102528. *Principe di Piemonte*.
102529. *Ricordo Tug Giannani*.
102530. *Sant' Anna*.
102531. *Spagnola*.
102532. *Tardiva di Brunel*.

102513 to 102585—Continued.

102533. *Tardiva di Massalombarda*.
102534. *Topazio*.
102535. *Vittorio Emanuele III*.
102536 to 102561. MALUS SYLVESTRIS Mill. (*Pyrus malus* L.). Malaceae. Apple.
102536. *Api rose*.
102537. *Bella di Pontoise*.
102538. *Calvilla Granduca Federico di Baden*.
102539. *Calvilla Saint Sauveur*.
102540. *Carla*.
102541. *Carla di Finale*.
102542. *Carpandola grigia*.
102543. *Chelmsford Wonder*.
102544. *Drappo dorato*.
102545. *Ferro*.
102546. *Finocchina*.
102547. *Flabewy*.
102548. *Grugno di cane*.
102549. *Lord Suffield*.
102550. *Mora*.
102551. *Principe Alberto*.
102552. *Renetta d'Inghilterra*.
102553. *Renetta grigia*.
102554. *Renetta reale*.
102555. *Rosa Romana*.
102556. *Rosa tirolese*.
102557. *Rosmarina bianca*.
102558. *Rossa nobile*.
102559. *Rotella*.
102560. *Sugar Loaf Pippin*.
102561. *Transparente de Croncels*.
102562. PRUNUS ARMENIACA L. Amygdalaceae. Apricot.
Commune.
102563 to 102585. PYRUS spp. Malaceae. Pear.
102563. *Abate Fetel*.
102564. *Blanquet*.
102565. *Buena Luigia d'Avranches*.
102566. *Butirra d'Amanlis*.
102567. *Coscia*.
102568. *Curato*.
102569. *Decana d'Alençon*.
102570. *Decana di Luglio*.
102571. *Decana d'Inverno*.
102572. *Dottor Giulio Guyot*.
102573. *La Francia*.
102574. *Gentile bianca*.
102575. *Giardina*.
102576. *Imperatore Alessandro*.
102577. *Lardona*.
102578. *Margherita Marillat*.

102513 to 102585—Continued.

102579. *Martin Soc.*
 102580. *Monsallard.*
 102581. *Moscattello Piccolo.*
 102582. *Nobile.*
 102583. *Spadona d'Estate.*
 102584. *Succaramana.*
 102585. *Trionfo di Vienna.*

102586 to 102619.

From the West Indies and Central America. Seeds collected by David Fairchild, with the 1933 Allison V. Armour expedition. Received April 4, 1933.

102586. *AGAVE BREVISPIA* Trelease.
Amaryllidaceae.

No. 3022. *Galatas* or *Croix des bouquets*. Point Decouverte, above Kenscoff, Haiti, March 2, 1933. A stemless but not caespitose agave, with dull dark-green, broadly lanceolate leaves 3 feet or more long having small dull-brown spines and narrowly triangular prickles. The golden-yellow flowers are in a dense cluster on a scape 12 feet high. Native to Hispaniola.

For previous introduction see 102342.

102587. *AGAVE INDAGATORUM* Trelease.
Amaryllidaceae.

No. 3004. From near the sea, east of Cockburn, on Watlings, or San Salvador Island. A stemless agave with grayish lanceolate acute leaves about 7 feet long, terminated by a chestnut-brown spine half an inch long and flowers borne in a panicle on a scape about 25 feet high. Native to Watlings Island, Bahamas.

102588. *A N A N A S SATIVUS* Schult. f.
Bromeliaceae. Pineapple.

No. 3083. Purchased in the market at Colon, Panama, March 27, 1933. A large, almost spherical fruit, with delicious aromatic flesh.

102589. *A N A N A S SATIVUS* Schult. f.
Bromeliaceae. Pineapple.

No. 3089, March 28, 1933. *Ripley*. From Kingston, Jamaica. A pineapple with a delicious flavor.

102590 and 102591. *ARECA ALICAE* F. Muell.
Phoenicaceae. Palm.

Seeds presented by J. E. Higgins, director, Canal Zone Experiment Gardens, Summit, March 23, 1933.

For previous introduction see 92192.

102590. No. 3085. An Australian cluster palm with graceful spineless trunks 9 feet or more in height and pinnate shining-green leaves 3 to 6 feet long. The handsome, scarlet oblong fruits, three-fourths of an inch long, make this one of the most attractive of all dooryard palms.

102591. No. 3090. A single-stemmed variety.

102592 and 102593. *ARRABIDAFA PACHYCALYX* Sprague.
Bignoniaceae.

A large woody vine, native to Panama, with 2 or 3 entire leaflets covered beneath with dense minute white tomentum. The pink or purple flowers, in large terminal or axillary panicles, are followed by long linear pods.

102586 to 102619—Continued.

102592. No. 3095. Collected on the Armour trail, Barro Colorado Island, Panama, March 23, 1933.

102593. No. 3103. Presented by J. E. Higgins, director, Canal Zone Experiment Gardens, Summit, March 23, 1933.

102594 to 102596. *CAJANUS INDICUS* Spreng.
Fabaceae. Pigeonpea.

102594. No. 3055. *No eye* pigeonpea.

102595. Collected March 14, 1933, on O'd Providence Island. Probably a Jamaican variety.

102596. No. 3056. Purchased in the market at Kingston, Jamaica, March 11, 1933. A variety with extra large pods.

102597. *CHRYSOPHYLLUM PANAMENSE* Pittier.
Sapotaceae.

No. 3091. From Barro Colorado Island, Panama, March 23, 1933. A medium-sized tropical tree with a rounded crown, smooth gray bark, and brown pubescent branchlets. The elliptic-acuminate leaves, 6 to 8 inches long, are smooth and dark green above and gray and slightly pubescent beneath. The small yellow-green flowers, in axillary clusters, are followed by 1-seeded fruits about an inch long. Native to Panama.

102598. *COCCOLOBA MANZINELLENSIS* Beurl.
Polygonaceae.

No. 3078. From Ancon, Panama, March 18, 1933. A handsome shade tree with dark-green leaves resembling oak leaves. The tree is inclined to form suckers and become a large bush.

102599 to 102601. *COCCOTHRINAX* spp.
Phoenicaceae. Palm.102599. *COCCOTHRINAX* sp.

No. 3065. From Old Providence Island, March 14, 1933. A short graceful palm, 10 to 15 feet high, with large handsome leaves, silvery beneath, and having the characters of *Coccolithrinax argentea*. Found in a rocky situation about 20 feet above the sea where it was exposed to the salt spray.

102600. *COCCOTHRINAX* sp.

No. 3108. From Georgetown, Grand Cayman Island.

102601. *COCCOTHRINAX* sp.

No. 3068. From Old Providence Island, March 14, 1933. Although this tree resembles no. 3065 [102599], it may be distinct, as the seeds are much smaller.

102602 and 102603. *CROTALARIA RETUSA* L.
Fabaceae.

From New Providence Island, March 13 and 14, 1933.

For previous introduction see 98842.

102602. No. 3069.

102603. No. 3072.

102604. *DRACAENA* sp. Liliaceae.

No. 3038. Seeds presented by E. S. Downes, of Castleton Gardens, Jamaica, March 7, 1933. A tree 20 feet high and half as wide. The bright-orange fruits are in long pendent clusters.

For previous introduction see 102280.

102586 to 102619—Continued.

102605. *ERAGROSTIS PROLIFERA* (Swartz)
Steud. Poaceae.

No. 3076. From New Providence Island, March 15, 1933. A robust grass with stems 3 to 5 feet high in large clumps, native to tropical America on sandy beaches and in brackish marshes.

102606. *ERYTHRINA POEPPIGIANA* (Walp.)
O. F. Cook (*E. micropteryx* Poepp.).
Fabaceae. Bucare.

No. 3071. *Mountain immortelle*. Presented March 10, 1933, by Mr. Goodman, of the Hope Gardens, Kingston, Jamaica. A handsome tender leguminous tree with red flowers. Native to Peru.

For previous introduction see 101011.

102607. *GOSSYPIUM JAMAICENSE* Macf.
Malvaceae. Cotton.

From Great Inagua, Bahamas, February 27, 1933. A tropical shrub 4 to 5 feet high with hairy branches, heart-shaped, three-lobed hairy leaves, pale-yellow flowers, and a four-valved capsule containing white cotton. It is native to Jamaica.

102608. *INODES* sp. Phoenicaceae. Palm.

No. 3073. From the Castleton Gardens, Jamaica, March 9, 1933.

102609. *LECYTHIS TUYRANA* Pittier.
Lecythidaceae.

No. 3107. From Ancon, Canal Zone, March 23, 1933. A tall straight tree 75 to 100 feet high, native to Panama. The elliptic-lanceolate coriaceous leaves, 8 to 12 inches long, are glossy above and paler and dull beneath, and the sulphur-yellow flowers are borne in dense terminal racemes 1 to 2 feet long.

102610. *MISANTECA TRIANDRA* (Swartz)
Mez. Lauraceae.

No. 3067. From Old Providence Island, March 14, 1933. A West Indian tree up to 70 feet high, with alternate oblong shining dark-green leaves 4 inches long and panicles of white flowers which turn purple with age. The purple fruits with their red cups have the appearance of acorns and are very attractive.

102611. *ODONTADENIA SPECIOSA* Benth.
Apocynaceae.

No. 3092. From Barro Colorado Island, Canal Zone, March 23, 1933. A large woody tropical American vine with opposite elliptic leaves 5 to 10 inches long and large cymes of yellow flowers.

102612. *PASSIFLORA LIGULARIS* JUSS. Passifloraceae. Sweet granadilla.

No. 3061. From the market at Kingston, Jamaica, March 11, 1933. The light-yellow or green-yellow fruit is egg-shaped and has a rather thin rind. The seed is surrounded by an edible translucent arillus which is very refreshing.

102613. *PASSIFLORA VITIFOLIA* H. B. K. Passifloraceae.

No. 3086. From the Armour trail, Barro Colorado Island, Canal Zone, March 23, 1933.

For previous introduction and description see 102462.

102614. *PAULLINIA* sp. Sapindaceae.

No. 3098. From the Armour trail, Barro Colorado Island, Canal Zone,

102586 to 102619—Continued.

March 23, 1933. A strong growing vine with three-sided capsules containing shining black seeds, each with a brilliant white arillus.

102615. *PINUS OCCIDENTALIS* Swartz.
Pinaceae. Pine.

No. 3026. *Bois Chaudelle*, or *candlewood* tree. Collected at 6,000 feet altitude in Haiti, March 2, 1933. A native pine which resembles *Pinus caribaea*, but generally has five leaves in the fascicle instead of two. Formerly this pine covered the island above 2,500 feet altitude but is now found only in small patches. The tree is a rapid grower and is now being planted on the mountain sides to prevent soil erosion.

102616. *SOLANUM* sp. Solanaceae.

No. 3077. *Vankee*. From Great Inagua, Bahama Islands, February 26, 1933. A shrub with attractive foliage and small reddish fruits. Found in deep sandy land in a coconut plantation. The seeds have a bitter flavor and may contain an alkaloid.

102617. *SPATHODEA NILOTICA* Seem.
Bignoniaceae.

No. 3093. From the Experiment Gardens, Summit, Canal Zone, March 25, 1933. A shrubby tree up to 20 feet high, native to the northern part of tropical Africa. The leaves, which are opposite and composed of 9 to 15 leathery leaflets, are covered beneath with dense short hairs, and the scarlet flowers are in short terminal clusters. Both the leaves and flowers resemble those of *Spathodea campanulata*.

102618. *TILMIA CARYOTAEPOLIA* (H. B. K.)
O. F. Cook (*Martinezia caryotaepolia*
H. B. K.). Phoenicaceae. Palm.

No. 3101. A beautiful slender straight-stemmed spiny-trunked palm up to 30 feet high with graceful pinnate leaves and bright orange-scarlet fruits borne in drooping racemes.

For previous introduction see 91784.

102619. *TRIPHLARIS SURINAMENSIS* Cham.
Polygonaceae.

No. 3070. Presented March 10, 1933, by Mr. Goodman, curator, Hope Gardens, Kingston, Jamaica. A small tropical tree with ovate acuminate alternate leaves and small cream-white flowers in pilose spikes. The young stems are hollow and are usually occupied by ants. Native to Surinam.

102620. *ELEOCHARIS TUBEROSA* (Roxb.)
Schult. Cyperaceae. Waternut.

Tubers presented by Albert P. Ding, of Portland, Oreg. Received April 17, 1933.

A Chinese vegetable which grows very much in the same manner as wet-land rice. The corms or tuberous rhizomes are mostly eaten raw but are also sliced or shredded in soups and in meat and rice dishes. The plants, which are grown on muck or clay soil, need a hot summer to mature.

For previous introduction see 102339.

102621 to 102636.

From the West Indies and the Canal Zone. Material collected by David Fairchild, with the 1933 Allison V. Armour expedition. Received April 15, 1933.

102621 to 102636—Continued.

102621. AGAVE INDAGATORUM Trelease.
Amaryllidaceae.

No. 3004. Cuttings collected near the seacoast, at Cockburn, on Watlings, or San Salvador, Island.

For previous introduction of seeds and description see 102587.

Nos. 102622 to 102628 were presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, Cuba, April 2, 1933.

102622. ANNONA BULLATA A. Rich. Annonaceae.

No. 3114. Budwood of a native Cuban tree which is related to the sugar-apple and appears to be unusually well adapted to dry soils. The aromatic leaves are used to season stews, and the small scaly ovoid-cordiform, scarcely edible fruits which mature in July are eaten by pigs.

102623. ANNONA RETICULATA L. Annonaceae.
Custard-apple.

No. 3126. Budwood of an unusually large and attractive smooth custard-apple, with a reddish tinge and almost no bloom. It came originally from Santo Domingo.

102624. JOANNESIA PRINCEPS Vell. Euphorbiaceae.

No. 3116. Cuttings of a large tropical American tree with handsome 3- to 7-foliolate leaves about 4 inches long and coconutlike fruits about 5 inches in diameter, with four large oily seeds. It is related to the tung-oil tree (*Aleurites fordii*).

102625. ARISTOLOCHIA ARGYRONEURA Hort. Aristolochiaceae.

No. 3117. A plant of an interesting species with small wine-red flowers of an unusual shape, but with the fetid odor of the genus.

102626. CACTUS HARLOWII Britton and Rose. Cactaceae.

No. 3124. A cylindrical cactus which becomes about a foot high, with 12 narrow ribs, reddish spines less than half an inch long, and deep rose-red flowers embedded in the rather small cephalium. The deep-red fruits are one-half inch long. Native to Cuba.

102627. CASIMIROA EDULIS Llave. Rutaceae.
White-sapote.

No. 3120. Cuttings from a seedling tree which bears unusually long, almost pointed fruits of good quality, with no suggestion of bitter flavor.

102628. GARCINIA TINCTORIA (DC.) W. F. Wight (*G. xanthochymus* Hook. f.). Clusiaceae.

No. 3121. Seeds of a tree of fairly rapid growth, with large opposite elliptic or oblong coriaceous leaves 6 to 10 inches long. The orange-yellow fruits, borne singly or in clusters of 3 to 5 in the axils of the leaves on mature wood, are round or tapering to an acute apex and are often over 2 inches in diameter. They are made up of 3 to 5 segments, each usually containing a large oblong seed. The ripe fruit has a distinctive, subacid flavor.

102621 to 102636—Continued.

102629. LIVISTONA HOOGENDORPHI Andre. Palm.
Phoenicaceae.

No. 3040. Seeds presented by Mr. Downes, Castleton Gardens, Jamaica, March 7, 1933. A handsome fan palm 60 feet high, with large coarse leaves which, when they fall, leave prominent leaf scars. The fruit is spherical and a deep blue.

102630. LUCUMA SERPENTARIA H. B. K. Sapotaceae.

No. 3141. Presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, Cuba, April 2, 1933. A medium-sized tree, 30 to 40 feet high, which is a Cuban relative to the canistel (*Lucuma nervosa*). The yellow oblate fruit, about 3 inches in diameter, is very similar both in taste and texture to that of the canistel.

102631 to 102633. MANIHOT ESCULENTA Crantz (*M. utilisissima* Pohl.). Euphorbiaceae.
Cassava.

Cuttings collected on the island of Grand Cayman, British West Indies, March 29, 1933.

102631. No. 3143. *Silver Leaf*. This variety is preferred for cooking because of its unusually tender flesh.

102632. No. 3144. *White sweet*. One of the standard varieties of cassava on Grand Cayman where the soil and climatic conditions are much like they are in Florida.

102633. No. 3145. *Tampa*. A variety, originally from Florida, which on the island of Grand Cayman is said to be a tremendous yielder, but not of such tender quality as the others.

102634. PHILODENDRON WARSZEWICZII Koch and Bouche. Araceae.

No. 3104. From Summit, Canal Zone, March 24, 1933. An aroid with large, much-divided leaves which somewhat resemble those of *Monstera* except that these leaves have no holes in them. It was found growing wild in the rain forests of Panama.

Nos. 102635 and 102636 were presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, Cuba, April 2, 1933.

102635. SALIX CHILENSIS Molina (*S. humboldtiana* Willd.). Salicaceae.
Willow.

No. 3119. A graceful evergreen species of attractive appearance, the common willow of the Andean cordillera.

102636. SYNGONIUM AURITUM (L.) Schott. Araceae.

No. 3125. Cuttings of a handsome climbing aroid of loose growth, resembling *Syngonium polyphyllum*, but with smaller, darker green foliage.

102637 and 102638. PHOENIX RECLINATA Jacq. Phoenicaceae.
Senegal date palm.

From Nigeria. Seeds collected by J. R. V. Smyth, Superintendent of Agriculture, and presented by O. T. Faulkner, Director, Department of Agriculture, Idadan, Nigeria. Received April 17, 1933.

102637 and 102638—Continued.

Native name, *Okunkun* or *Okun*. Introduced for the use of Department specialists.

For previous introduction and description see 102378.

102637. Collected in a clump of palms 6½ miles from the Oyo rest house on the Oyo-Iseyin Road.

102638. Collected on a farm near the Oyo rest house.

102639 to 102642.

From the Union of Soviet Socialist Republics. Scions and trees presented by V. P. Alekseev, chief, foreign plant introduction, Institute of Plant Industry of the Lenin Academy of Agricultural Sciences, Leningrad. Received April 20, 1933.

102639. *MALUS SYLVESTRIS* Mill. (*Pyrus malus* L.). Malaceae. **Apple.**

Received as the *Circassian* apple. A semiwild variety of exceptional vigor and productivity, which should be of interest for fruit breeding work in the southern part of the United States.

102640 to 102642. *AMYGDALUS COMMUNIS* L. (*Prunus amygdalus* Stokes). Amygdalaceae. **Almond.**

102640. No. 62. 102642. No. 162.

102641. No. 96.

102643. *ZINNIA MULTIFLORA* L. Asteraceae.

From Argentina. Seeds collected by Walter Fischer, United States Tariff Commission, at Oncativo, Province of Cordoba. Received April 24, 1933.

A wild zinnia, found along fence rows and roadsides in the Province of Cordoba. The small flower heads are a light brick red.

102644 to 102687.

From the West Indies and the Canal Zone. Plants and seeds collected by David Fairchild, with the 1933 Allison V. Armour expedition. Received April 15, 1933.

102644. *ADENIUM OBESUM* (Forsk.) Roem. and Schult. Apocynaceae.

No. 3033. Presented by Mr. Goodman, curator, Hope Gardens, Kingston, Jamaica. A slow-growing shrub, not over 3 feet high, native to the dry regions of Africa and named after the desert port of Aden. The gorgeous deep-pink or white flowers are 3 inches across and remind one of enormous oleander blossoms.

Nos. 102645 and 102646 were collected on Grand Cayman, British West Indies, March 29, 1933.

102645. *AECHMEA* sp. Bromeliaceae.

No. 3127. A species with very large leaves over 2 feet long and 4 to 5 inches wide. The light-green fruits are in large clusters.

102646. *AERANTHES* sp. Orchidaceae. **Orchid.**

No. 3149. An epiphytic orchid that forms strandlike roots and covers the bark of trees with its interesting growth. Its delicate white flowers, 1 to 2 inches across, are fragrant in the evening.

102647 to 102649. *AGAVE* spp. Amaryllidaceae.

102644 to 102687—Continued.

102647. *AGAVE ACKLINICOLA* Trelease.

No. 3012. From near Moss Harbor, Crooked Island, Bahamas, February 20, 1933. A stemless but not caespitose agave with dull-grayish, narrowly lanceolate leaves 6 to 7 feet long, terminated by a smooth glossy red-brown spine an inch long, graying with age. The inflorescence is unknown, but this agave is closely related to *Agave bahamana*. Native to the Bahamas.

102648. *AGAVE BREVISPIINA* Trelease.

No. 3022. *Galatas*, or *Croix des bouquets*. From Point Decouverte, above Kenscoff, Haiti, March 2, 1933.

For previous introduction and description see 102586.

102649. *AGAVE MORRISII* Baker.

No. 3059. From Jamaica, British West Indies, March 11, 1933. A stemless agave, native to Jamaica, with a rosette of 20 to 30 spatulate leaves, 4 to 6 feet long. The end spine is an inch long, and the marginal prickles are dark brown. The much-branched inflorescence, 15 to 20 feet high, bears bright-yellow flowers 2 to 3 inches long.

For previous introduction see 102277.

102650. *ANANAS SATIVUS* Schult. f. Bromeliaceae. **Pineapple.**

No. 3074. Plants presented by Mr. Goodman, of the Hope Gardens, Kingston, Jamaica, March 10, 1933. In Jamaica this pineapple is known as the *Ripley*. It is a small to medium-sized, sugar-loaf pineapple with deep-yellow, very sweet flesh of fine texture. The eyes are rather deep, necessitating a good deal of waste in preparing the fruit for the table.

102651. *ASTROCARYUM STANDLEYANUM* Bailey. Phoenicaceae.

No. 3115. From Barro Colorado Island, Canal Zone, March 23, 1933. A tall slender handsome spiny palm with pinnate leaves, found in the dense rain forest. The orange-yellow fruits, 1¾ inches by 1½ inches, are rugose and mucronate and are covered with a thin fleshy fibrous juicy sweetish pulp. They are borne in long pendent clusters.

102652 to 102654. *BRASSAVOLA* spp. Orchidaceae. **Orchid.**

From San Andres Island, Colombia.

102652. *BRASSAVOLA NODOSA* (L.) Lindl.

An epiphytic orchid 8 to 12 inches high, native to tropical America. The thick fleshy half-cylindrical linear leaf is 6 to 8 inches long, and the large pale-green flowers with a white lip are 2 to 3 inches across and are borne in a raceme 1 foot long.

102653. *BRASSAVOLA* sp.

A form with large white fragrant flowers.

102654. *BRASSAVOLA* sp.

[Received without notes.]

Nos. 102655 and 102656 were collected near Salt Pond, Great Inagua, Bahama Islands, March 26, 1933.

102644 to 102687—Continued.

102655. *NEOMAMILLARIA* sp. Cactaceae.
No. 3017.

102656. *CEPHALOCEREUS MILLSPAUGHII*
Britton. Cactaceae.

No. 3018. A large cactus with branching stems, 6 to 20 feet high, sometimes 8 inches thick at the base of the trunk. It has 8 to 13 ribs, and a score of acicular brown-yellow spines, about 2 inches long, rise from each gray-brown areole. The rather stiff greenish flowers, white within and less than an inch long, are succeeded by small reddish globose fruits. Native to the Bahama Islands.

For previous introduction see 102349.

Nos. 102657 and 102658 were presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, Cuba.

102657. *CITRUS GRANDIS* (L.) Osbeck (*C. decumana* Murr.). Rutaceae.
Grapefruit.

No. 3113. *Harvard No. 1*. An extremely juicy, very sweet, medium-sized grapefruit with deep-yellow flesh, little rag, and tender follicles. A cross between the orange and the grapefruit.

102658. *CLERODENDRUM ANAENSE* Britton and P. Wils. Verbenaceae.

No. 3137. A Cuban tree 30 feet high, with obovate coriaceous leaves 2 to 4 inches long and clusters of white flowers an inch long followed by brilliant blue fruits.

102659. *CRINUM* sp. Amaryllidaceae.

No. 3150. From Grand Cayman, Bahama Islands, March 29, 1933. Bulbs found in deep sandy soil; this may be a local variety.

102660. *CYTOSPERMA SENEGALENSE* (Schott) Engler. Araceae.

No. 3122. Presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, Cuba, April 2, 1933. The giant aroid of the Cameroons, grown from seed sent by the Allison V. Armour expedition to West Africa in 1927. It sends up its square, 16-inch-long spathe on a spiny stem 10 feet high. The plant requires wet sandy soil and warm moist atmosphere.

For previous introduction see 99319.

102661. *DENDROBIUM PIERARDI* Roxb. Orchidaceae. Orchid.

No. 3047. Presented by Mr. Goodman, curator, Hope Gardens, Kingston, Jamaica. An epiphytic herb with slender pendulous pseudobulbs 2 to 3 feet long, native to India. The rose-mauve flowers, 2 inches across and borne usually in pairs, have a pale primrose-yellow lip streaked with purple at the base.

102662. *DIOSCOREA BULBIFERA* L. Dioscoreaceae. **Airpotato.**

No. 3032. From Port-au-Prince, Haiti. A tall climbing vine with cordate-ovate leaves, native to tropical Asia. The axillary tubers are often bitter, but in this variety they are bland in flavor and are used for food.

102644 to 102687—Continued.

102663. *DIOSCOREA TRIFIDA* L. f. Dioscoreaceae. **Yampie.**

No. 3045. From the market at Kingston, Jamaica. The yampie, a high-quality species of yam, exists in several varieties, of which this one from Jamaica is one of the best known. The species is grown only with difficulty outside the Tropics.

Nos. 102664 and 102665 were presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, Cuba, April 2, 1933.

102664. *DRYMARIA CORDATA* (L.) Willd. Silenaceae.

No. 3123. A small creeping annual which may prove a valuable cover crop for shady areas. It has flat round leaves an inch or less wide and small white flowers in cymes. Native to the West Indies.

102665. *ESPADAEA AMOENA* A. Rich. Solanaceae.

No. 3129. A tree, native to Cuba, very common along the seacoast. The black and yellow wood is very hard and durable, and the small fruits are bright yellow.

For previous introduction see 101025.

102666. *FLACOURTIA INERMIS* Roxb. Flacourtiaceae.

No. 3084. Fruits collected in the Experiment Garden, Summit, Canal Zone, from a tree which grew from seed collected by David Fairchild in Ceylon in 1926. The lovi-lovi tree of Ceylon has brilliant-red fruits, the size of small cherries, produced in immense quantities. They are very sour and are said to make excellent jelly or preserves.

102667. *HIPPEASTRUM* sp. Amaryllidaceae.

No. 3023. Wild plants collected in Haiti.

102668. *IPOMOEA HEPTAPHYLLA* (Rottl. and Willd.) Voigt. Convolvulaceae.

No. 3019. Tubers collected along a roadside in Great Inagua, Bahama Islands, February 26, 1933.

For previous introduction and description see 102469.

102669. *KOPSIA FRUTICOSA* (Ker) A. DC. Apocynaceae.

No. 3138. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, Cuba, April 2, 1933. A large evergreen shrub, native to Burma, with elliptic leaves 4 to 8 inches long. The flowers, over an inch long and 2 inches across and borne in cymes, have pink corolla tubes with red mouths. The pyriform fruits, 1 inch long, are greenish purple.

For previous introduction see 101134.

102670. *MABA CRASSINERVIS* Urb. Diospyraceae.

No. 3005. From Watlings Island (San Salvador), January 1, 1933. A tropical American shrub 4 to 11 feet high, occasionally a small tree, with leathery obovate or broadly ovate leaves about 2 inches long and inconspicuous flowers in small racemes.

102644 to 102687—Continued.

102671. *PASSIFLORA PEDATA* L. Passifloraceae.

No. 3128. Presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, Cuba, April 2, 1933. A species with particularly attractive foliage and fruits that are dark green when ripe.

102672. *PHASEOLUS CALCARATUS* Roxb. Fabaceae. Rice bean.

No. 3028. A deep-brown bean purchased in the market at Port-au-Prince, Haiti, March 3, 1933.

102673. *PORTLANDIA GRANDIFLORA* L. Rubiaceae.

No. 3133. Presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, Cuba, April 2, 1933. A tropical shrub up to 15 feet high, native to the West Indies, with opposite elliptical leathery leaves and axillary funnel-shaped flowers 4 inches long marked with purple-red calyx stripes, but with a very beautiful cream-colored corolla.

For previous introduction see 97577.

102674. *PTEROCARPUS OFFICINALIS* Jacq. Fabaceae.

No. 3051. Collected in the Bath Botanic Garden, Jamaica, March 9, 1933. A glabrous tree up to 30 feet high, native to tropical America. The compound leaves are made up of 5 to 9 elliptical-lanceolate shining leaflets 4 to 8 inches long, and the small yellow flowers, in lax panicles, are followed by flat, very oblique veiny pods nearly 2 inches across.

102675 to 102677. *SCHOMBURGKIA* spp. Orchidaceae. Orchid.

102675. *SCHOMBURGKIA THOMSONIANA* Reichenb. f.

No. 3057. Originally from Grand Cayman Island and presented by Edward J. Downes, of the Hope Gardens, Jamaica, March 10, 1933. A handsome West Indian orchid closely related to *Schomburgkia tibicinis*. The panicle has 15 flowers, the sepals are very pale yellow with a pale-mauve disk, and the light sulphur-yellow petals are lined and streaked with dark purple.

102676 and 102677. From Old Providence Island, March 14, 1933.

102676. *SCHOMBURGKIA* sp.

102677. *SCHOMBURGKIA* sp.

Nos. 102678 to 102681 were presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, Cuba, April 2, 1933.

102678. *SOLANUM PIERREANUM* Pail. and Bois. Solanaceae.

No. 3135. A small sweet pepper with bright scarlet fruits which are ornamental as well as edible.

102679 to 102681. *STIGMAPHYLLON* spp. Malpighiaceae.

102679. *STIGMAPHYLLON LEDIFOLIUM* (H. B. K.) Small.

No. 3140. A woody vine native to Cuba. The linear to suborbicular leathery leaves, 1 to 4 inches long, are lustrous above, and the axillary clus-

102644 to 102687—Continued.

ters of bright-yellow flowers are followed by 1 to 3 maplelike winged fruits nearly an inch long.

102680. *STIGMAPHYLLON SAGRAEANUM* Juss.

No. 3131. A woody vine, native to the West Indies, with rigid leathery linear to ovate leaves, coarsely reticulated beneath. The bright-yellow flowers are in axillary clusters, and the maplelike fruits are oblong with straight edges.

102681. *STIGMAPHYLLON PUBERUM* (Rich.) Juss.

No. 3134. A woody vine, native to the West Indies, with the branchlets covered with appressed brown hairs. The ovate-acuminate leaves, 2 inches long, are nearly glabrous above and appressed pubescent beneath. The petals of the bright-yellow flowers, an inch across, are fringed on the margin, and the maplelike fruits are more than an inch long.

102682. *STROPHANTHUS* sp. Apocynaceae.

No. 3058. From the Hope Gardens, Kingston, Jamaica, March 11, 1933. A strong climber with coarse leaves and large pink and white flowers with short acute petals.

102683. *SYNADENIUM GRANTII* Hook. f. Euphorbiaceae. African milk-bush.

No. 3130. Presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, Cuba, April 2, 1933. A stout shrub 8 to 10 feet high with pale-gray bark, native to tropical Africa. The slightly fleshy, oblanceolate to obovate leaves are 3 to 7 inches long, and the small dark-red flowers are borne in axillary cymes.

102684. *TILLANDSIA* sp. Bromeliaceae.

No. 3148. Collected near Georgetown, Grand Cayman, British West Indies, March 29, 1933. A small epiphytic tillandsia with attractive transverse markings. Found in dense brush.

102685. *TRIOPTERIS JAMAICENSIS* L. Malpighiaceae.

No. 3132. Presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, Cuba, April 2, 1933. A low-growing twining glabrous woody vine, native to the West Indies, with small violet to purple flowers.

102686. (Undetermined.)

No. 3142. From Old Providence Island, March 13, 1933. A fern found growing on the rocks in a very dry situation where it was exposed to the most intense sunlight. It had formed a perfect network of creeping rhizomes from which rose decorative leaves that were strikingly like the leaves of the *Picus repens* (when old).

102687. (Undetermined.)

No. 3109. *Bull Rush* palm. From Grand Cayman, British West Indies, March 29, 1933. A beautiful fan palm with very dark-green leaves on long petioles and a tendency for the base of the leaflets to cross over at the suture. It is an ornamental palm which can stand long periods of drought.

102688 to 102690. ORYZA SATIVA L. Poaceae. Rice.

From Surinam. Seeds presented by the Department of Agriculture, Paramaribo. Received April 17, 1933.

A collection of locally grown varieties introduced for the use of Department specialists.

102688. *Bruin Missi*.

102689. *Kretek*.

102690. *Witte Wanica*.

102691. ONOBRYCHIS VULGARIS Hill (O. viciaefolia Scop.). Fabaceae. Sanfoin.

From Hungary. Seeds presented by Rudolf Fleisc' mann, director of plant breeding, Kompolf. Received April 18, 1933.

Persica. A newly developed local variety introduced for the use of Department specialists.

102692 to 102694. CARICA PAPAYA L. Papayaceae. Papaya.

From the West Indies and Central America. Seeds collected by David Fairchild, with the 1933 Allison V. Armour expedition. Received April 15, 1933.

102692. No. 3100. From the Experiment Garden, Summit, Canal Zone. A small oblong papaya, about 6 inches long and 3 inches through, with deep golden-yellow flesh with the flavor of the *Solo* variety.

102693. No. 3146. Purchased in the market at Panama, Panama, March 29, 1933. An obovate medium-sized papaya with deep-red, almost salmon-colored flesh of superb quality.

102694. No. 3147. From Old Providence Island, March 21, 1933. A distinct strain, perhaps originated by isolation on the island. Its texture is mealy with a very sweet agreeable flavor, and although dead ripe, the surface of the fruit, when cut, exudes drops of papain which is not usual with ripe papayas.

102695. PISTACIA KHINJUK Stocks. Anacardaceae.

From India. Seeds presented by the forest officer in Quetta, Baluchistan. Received April 21, 1933.

A smooth-barked shrub with unequally pinnate, velvety pubescent leaves consisting of 1 or 2 pairs of oblique broadly ovate or oblong leaflets, and small obovate-compressed nuts. Native to arid regions in southern and eastern Persia.

102696 and 102697. SOJA MAX (L.) Piper. Fabaceae. Soybean.

From the Union of Soviet Socialist Republics. Seeds presented by the Bureau of Introduction, Institute of Plant Industry, Leningrad, at the request of J. W. Pincus, New Brunswick, N. J. Received April 20, 1933.

Wild soybeans, from Tisnikhi, Far Eastern Republic.

102696. Catalog no. 1018; no. 115.

102697. Catalog no. 971; no. 116. Collected along the roadside.

102698. CUPANIA CUBENSIS Maza and Molinet. Sapindaceae.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received April 18, 1933.

Guara común. An attractive shrub or small tree common in calcareous soil throughout Cuba. It has alternate compound leaves with pale-green leaflets and terminal panicles of small whitish flowers.

102699 to 102727.

From the Union of Soviet Socialist Republics. Seeds purchased through Dr. K. J. Pangalo, Bureau of Introduction, Institute of Plant Industry, Leningrad. Received April 25, 1933.

A collection of seeds grown between 40° and 45° latitude in Turkistan and the Caucasian regions. Introduced for testing in the north-central Plains region of the United States.

102699 to 102703. ALLIUM CEPA L. Liliaceae. Onion.

102699. No. 122/2, from Turkmenistan.

102700. No. 123/1, from Samarkand.

102701. No. 124/1, from Tashkent.

102702. No. 124/3, from Samarkand.

102703. No. 124/5, from Ferghana.

102704 to 102706. AMYGDALUS PERSICA L. Amygdalaceae. Peach.

102704. No. 492. A peach with a sweet kernel; from the Ferghana Valley.

102705. No. 501. A peach with a striped kernel; from Khodjent Kostoks.

102706. No. 510. Variety *ferganensis*; a seedling peach from Mamangan, central Asia.

102707 to 102711. CAPSICUM ANNUUM L. Solanaceae. Common redpepper.

102707. No. 503. *Kalamtyr*, from Samarkand.

102708. No. 565. *Purgh*, from Asia Minor and Turkistan.

102709. No. 569. *Mestnyz*, from Asia Minor and Turkistan. A locally grown variety.

102710. No. 571. *Mestnyz*, from Asia Minor and Turkistan. A locally grown variety.

102711. No. 607. *Ghorkey*, a bitter variety from Tashkent.

102712. DAUCUS CAROTA L. Apiaceae. Carrot.

No. 257. A violet carrot from Kanda-guar.

102713 to 102725. LYCOPERSICON ESCULENTUM Mill. Solanaceae. Tomato.

102713. No. 923. *Tshudorynka*, from Nikolaevsk, a village near Tashkent.

102714. No. 924. From Yanghabad, near Tashkent.

102715. No. 926. From the village of Nikolsk, near Tashkent.

102716. No. 927. From an Uzbek kitchen-garden near Tashkent.

102699 to 102727—Continued.

102717. No. 930. From an Uzbek kitchen-garden near Tashkent.
102718. No. 931. From the market in Ferghana.
102719. No. 932. From Yunus-Abad, near Tashkent.
102720. No. 942. From Andiksan.
102721. No. 975. From the market at Makhatsch-Kala, Daghestan.
102722. No. 976. From Makhatsch-Kala, Daghestan.
102723. No. 977. From Bujnask, Daghestan.
102724. No. 978. From the market at Makhatsch-Kala, Daghestan.
102725. No. 979. From Bujnask, Daghestan.
- 102726 and 102727. SOLANUM MELONGENA L. Solanaceae. Eggplant.
102726. No. 105. From Tashkent.
102727. No. 202. From central Asia.

102728 and 102729. CITRUS SINENSIS (L.) Osbeck. Rutaceae. Orange.

From Cuba. Scions presented by Thomas R. Towns, Holguin. Received April 27, 1933.

102728. Cuban navel orange.

102729. Harvard No. 2. A new navel orange introduced by the Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos.

102730 and 102731.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received April 25, 1933.

102730. ASPARAGUS OFFICINALIS L. Convallariaceae. Garden asparagus.

Introduced for the use of Department specialists.

102731. TRIPLARIS CUMINGIANA Fisch. Polygonaceae.

An ornamental tropical tree about 20 feet high, generally of pyramidal habit, which prefers moist situations along the borders of lakes and streams. From February until the middle of April it is ablaze with red, produced by the bracts surrounding the capsules, and forms an exceedingly striking object in the landscape. The tree is native to Panama.

102732 to 102736. CLEMATIS spp. Ranunculaceae.

From New Zealand. Seeds presented by J. E. Spingarn, Amenia, N. Y. Received April 27, 1933.

102732. CLEMATIS AFOLIATA J. Buch.

A perennial with wiry leafless stems, native to New Zealand. The flowers are greenish white, nearly an inch across, and are borne in axillary fascicles of 2 to 5. On young plants the leaves are occasionally developed and consist of a persistent petiole and three minute long-stalked ovate to triangular leaflets. It

102732 to 102736—Continued.

is curious and distinct rather than beautiful.

For previous introduction see 101275.

102733. CLEMATIS AUSTRALIS × HEXASEPALA.

A natural hybrid between two white-flowered species, both of which have trifoliolate leaves and are native to New Zealand. In *C. australis* the leaflets are pinnate or pinnately lobed, while those of *C. hexasepala* are nearly entire.

102734. CLEMATIS FOETIDA Raoul.

A stout woody vine, often covering small trees, native to New Zealand. The slightly coriaceous trifoliolate leaves have ovate to cordate leaflets 1 to 2 inches long, and the small yellow flowers in large panicles are strongly odorous but are said not to be fetid.

For previous introduction see 101276.

102735. CLEMATIS HEXASEPALA DC.

A smaller and more slender vine than *C. indivisa*, with pale-green coriaceous trifoliolate leaves having ovate-oblong to ovate-cordate toothed leaflets 1 to 3 inches long. The numerous flowers, 1 to 2 inches across, have 6 to 8 white sepals. It is native to New Zealand.

For previous introduction see 101277.

102736. CLEMATIS HILARII Spreng.

A tropical climbing shrub with ternate or nearly ternate leaves 2 to 4 inches wide and blue-white fragrant flowers. It is native to southeastern Brazil.

102737. AMARANTHUS GANGETICUS L. Amaranthaceae. Ganges amaranth.

From California. Seeds presented by Ernest L. Lutz, Summit. Received April 28, 1933.

Hung Hua Tsai, or Red Sala. Seed of plants grown from seed brought from China by Mr. Lutz. An annual vegetable whose stems and leaves are prepared in the same manner as spinach and used for food in China.

102738 to 102741.

From Manchuria. Seeds purchased from Manshu Nosan Shokai, Inc., Dairen. Received April 19, 1933.

102738. ACER ARGUTUM Maxim. Aceraceae. Maple.

A small deciduous tree with erect branches and doubly serrate leaves 2 to 4 inches long. The flowers, produced in April before the leaves, are greenish yellow, and the keys are borne in hanging racemes. This tree is native to the mountain woods of Japan and makes an elegant appearance with its pale-green leaves during the summer and its purple-brown branches in the winter.

For previous introduction see 102160.

102739. ACER CISSIFOLIUM (Sieb. et Zucc.) Koch. Aceraceae. Maple.

A Japanese maple of compact rounded habit becoming 30 feet or more high, with leaves composed of three leaflets up to 4 inches long. The minute flowers are produced in May with the leaves, and the keys, about 1 inch long, occur in long

102738 to 102741—Continued.

racemes. In autumn the foliage turns red and yellow.

For previous introduction see 97497.

102740. BETULA JAPONICA MANDSHURICA (Regel) Winkl. Betulaceae. Birch.

A white-barked birch up to 80 feet high, with the leaves often broadly wedge-shaped at the base. Native to Hopeh Province, China.

For previous introduction see 93112.

102741. RHODODENDRON WEYRICHII Maxim. Ericaceae.

A deciduous shrub up to 15 feet high, native to Japan and China. The broadly ovate to rhombic leaves, 1 to 3 inches long, are in clusters of 2 or 3 at the tips of the branchlets and turn vinous purple in autumn. The rotate funnel-form red flowers, 1 to 3 inches across, appear before or with the leaves.

For previous introduction see 98479.

102742 to 102745.

From Brazil. Seeds presented by P. H. Rolfs, São Paulo. Received April 28, 1933.

102742. ACANTHOSTACHYS ANANASSOIDES Baker. Bromeliaceae.

A plant, native to Brazil, very much like the pineapple, with rigid linear leaves over 3 feet long and less than 1 inch broad above the dilated base. The flower head is borne on a stem 1 to 2 feet high, but the individual flowers are surrounded by separate bracts instead of being united as in the pineapple.

102743 to 102745. ANANAS spp. Bromeliaceae.

102743. ANANAS DUCKEI Hort.

A name for which a place of publication and a description have not been found.

102744. ANANAS MICROCEPHALUS Linden.

Thiava, the Guarany name for fiber. A dwarf pineapple, with small globose unpalatable fruits, which is considered to represent the original wild form. The quality of the fiber is unusually good, being very strong, lustrous, and fine, and the percentage of fiber in the leaves is very high.

102745. ANANAS sp.

102746 to 102748. AMYGDALUS spp. Amygdalaceae.

From Australia. Trees purchased from G. F. Althofer, Dripstone, New South Wales. Received May 3, 1933.

102746. AMYGDALUS PERSICA L. Peach.

Ruby red. Medium to large-sized clingstone; one of Australia's best shipping peaches. Originated in Victoria, Australia, probably coming from the old Shanghai peach, but it is earlier, more highly colored, and a better shipper.

102747. AMYGDALUS PERSICA NECTARINA Ait. Nectarine.

Lee's Seedling.

102748. AMYGDALUS PERSICA NECTARINA Ait. Nectarine.

W. C. Fripp. A new nectarine of Australian origin; very large size;

102746 to 102748—Continued.

highly colored; flavor excellent; quality very good; heavy and regular bearer; season late.

102749 and 102750. HUMULUS LUPULUS L. Moraceae. Common hop.

From Austria. Roots presented by Josef Binder & Co., Neufelden, Austria. Received May 3, 1933.

102749. Auschaer Rote.

102750. Muhltretler grüne.

102751. GOSSYPIUM HIRSUTUM L. Malvaceae. Upland cotton.

From the Union of Soviet Socialist Republics. Seeds presented by Dr. N. A. Malinovsky, Transcaucasian Cotton Research Institute, Ganja Station, Azerbaijan, Transcaucasia. Received May 1, 1933.

Selved seeds from one plant.

102752 to 102787.

From India. Seeds presented by the curator of the Lloyd Botanic Garden, Darjeeling. Received May 3, 1933.

102752. ARDISIA MACROCARPA Wall. Myrsinaceae.

A shrub up to 4 feet high with narrowly ovate leaves, with crisped-crenate margins, bearing conspicuous glands in the crenations. The umbels of inconspicuous flowers are followed by dotted, bright-red berries one-half to one-third of an inch in diameter. Native to Sikkim and Nepal between 3,000 to 7,000 feet altitude.

For previous introduction see 93186.

102753. ARISAEMA GRIFFITHII Schott. Araceae.

A tuberous herb native to the temperate Himalayas in India from 7,000 to 12,000 feet altitude. The two leaves are divided into three rhombic-orbicular crenate lobes 6 to 10 inches long with faint yellow margins. The tube of the spathe, 2 to 3 inches long, is purple, ribbed with white, and the incurved limb, 5 to 8 inches broad, is divided into two dull-purple lobes reticulated green and having purple tails 3 inches long. The stout spadix has a tortuous linear purple tail 1 to 3 feet long.

102754. ARISAEMA TORTUOSUM (Wall.) Schott. Araceae.

A tuberous herb native to the subtropical and temperate Himalayas up to 8,000 feet altitude. The 2 or 3 leaves, on petioles 1 to 3 feet long, have 5 to 20 linear to ovate tailed leaflets 12 to 18 inches long. The flower stalk, 2 to 4 feet high, bears a pale-green or purple spathe 4 to 6 inches long with an incurved boat-shaped limb, and the spadix, which resembles a rattail, is first erect, then recurved, and again erect.

102755. CLEMATIS CONNATA DC. Ranunculaceae.

A large woody climbing vine native to the temperate Himalayas at altitudes between 4,000 and 10,000 feet. The leaves are made up of 3 to 7 broadly cordate leaflets 2 to 4 inches long, with coarsely serrate or three-lobed margins, and the

102752 to 102787—Continued.

small creamy tubular flowers are borne in large panicles.

102756. CLEMATIS ZEYLANICA (L.) Poir.
Ranunculaceae.

A climbing shrub, native to India and Ceylon, with trifoliolate leaves having the terminal leaflet changed into a tendril. The solitary axillary flowers, about 1 inch across, have narrow green-white petals and yellow stamens.

For previous introduction see 93218.

102757. ELSHOLTZIA POLYSTACHYA Benth.
Menthaceae.

A bushy annual 3 to 4 feet high, native to India. The serrate lanceolate leaves are 3 to 6 inches long, and the small white tubular flowers are borne in fasciated spikes 4 to 10 inches long.

102758. ERIOBOTRYA PETIOLATA Hook. f.
Malaceae.

A stout tree with leathery leaves 6 to 9 inches long and white flowers, one-half inch in diameter, appearing in panicles 3 to 6 inches long and broad. It is native to Sikkim, India, between 5,000 and 9,000 feet altitude.

102759. EUPHORBIA SIKKIMENSIS Boiss.
Euphorbiaceae.

A stout perennial 3 to 4 feet high, native to the Sikkim Himalayas at altitudes of 8,000 to 10,000 feet. The linear-lanceolate glabrous leaves are 2 to 4 inches long, and the small inconspicuous flowers are surrounded by broad ovate yellow bracts.

102760. FLEMINGIA CONGESTA Roxb.
Fabaceae.

An erect shrub 4 to 6 feet high, with angular silky branchlets, native to south-eastern Asia. The trifoliolate leaves have broadly lanceolate leaflets 4 to 6 inches long, and the small flowers, covered by the shining pale-brown silky calyx, are in dense oblong racemes 2 inches long.

102761. GAULTHERIA GRIFFITHIANA Wight.
Ericaceae.

A stout shrub native to northern India up to an altitude of 9,000 feet. The leathery oblong long-pointed leaves are about 5 inches in length, and the broadly tubular yellow-green flowers, in racemes 2 to 3 inches long, are followed by brown, hairy fruits covered by the deep-blue enlarged calyx one-fifth of an inch in diameter.

102762. GAULTHERIA NUMMULARIOIDES
Don. Ericaceae.

A procumbent shrub covering banks with much-branched densely leafy stems, native to the Himalayas up to an altitude of 9,000 feet. The leathery ovate leaves are one-half inch long, and the reddish or nearly white tubular flowers, one-fifth of an inch long, are on densely bracted pedicels. The small fleshy blue-black fruits are one-sixth of an inch in diameter.

102763. GERANIUM REFRACTUM Edgew.
and Hook. f. Geraniaceae.

A glandular-hairy perennial herb 2 to 4 feet high, native to the Himalayas between 12,000 and 13,000 feet altitude. The palmately compound pubescent leaves, 3 inches wide, have 5 to 7 obtuse deeply lobed segments, and the white

102752 to 102787—Continued.

flowers, nearly 2 inches across, have reflexed petals and are borne in pairs on axillary or terminal peduncles.

102764. GLOBBIA RACEMOSA J. E. Smith.
Ziniberaceae.

A tropical herbaceous perennial with erect stems 2 feet high from a creeping rhizome. The oblong-lanceolate leaves are 6 to 9 inches long, and the bright-yellow tubular flowers, 1 inch long, are borne in a narrow panicle a foot long. Native to India.

102765. HYDRANGEA VESTITA Wall. Hydrangeaceae.

A tall shrub up to 15 feet high, native to the temperate Himalayas from 8,000 to 10,000 feet. The branchlets are hairy, and the oblong to ovate serrate leaves, 4 to 9 inches long, are densely white tomentose beneath.

102766. HYPERICUM HOOKERIANUM Wight
and Arn. Hypericaceae.

St. Johnswort.

A compact shrub up to 6 feet high, with bright red-brown branches, evergreen leaves 1 to 4 inches long, and many-flowered corymbs of large golden-yellow flowers, each about 2 inches across. Native to the Himalayas.

102767. HYPERICUM OBLONGIFOLIUM
Choisy. Hypericaceae. St. Johnswort.

A shrub 3 to 6 feet high, native to the temperate slopes of the Himalayas at altitudes of 5,000 to 7,000 feet. The sessile ovate-lanceolate leaves are 1 to 3 inches long, and the nodding flowers, 2 inches across, are white on opening, turning light yellow with age.

For previous introduction see 99732.

102768. NAGEIA NERIIFOLIA (Don) Kuntze
(*Podocarpus nerifolia* Don). Taxaceae.

A glabrous evergreen tree, native to southeastern Asia. The straight or falcate leathery leaves are 4 to 8 inches long, and the solitary globose seeds, one-fourth of an inch in diameter, grow on fleshy oblong peduncles.

102769. OSTODES PANICULATA Blume. Euphorbiaceae.

A tree, native to India and Java, with pubescent branchlets and stout white-barked branches. The leathery long-pointed serrate ovate leaves are 8 to 12 inches long, and the inconspicuous flowers, in glabrous panicles a foot long, are followed by rough three-lobed woody capsules an inch long.

102770. PELIOSANTHES MACROPHYLLA
Wall. Liliaceae.

A perennial herb with horizontal rootstocks, native to India at an altitude of 600 feet or less. The elliptic-lanceolate leaves, 12 to 18 inches long, are in a rosette from which rise the erect bracted scapes bearing racemes of purple-green broadly campanulate flowers.

102771. PINUS ROXBURGHII Sargent (*P. longifolia* Roxb.). Pinaceae. Pine.

A tree, native to the lower Himalayas at altitudes of 1,500 to 7,500 feet, often over 100 feet high, with a round symmetrical head, but sometimes stunted and gnarled. The light-green pendulous leaves, in clusters of three, are 9 to 12

102752 to 102787—Continued.

inches long and persist for 3 or 4 years. The ovoid-conical cones, 4 to 7 inches long, have greatly thickened 4- to 6-lobed scales with a beak in the center. As a young plant, this pine is attractive for its long drooping pale-green foliage.

102772. POLYGALA ARILLATA Buch.-Ham.
Polygalaceae.

An erect shrub 4 to 8 feet high, native to south-eastern Asia. The lanceolate to ovate leaves are 4 to 6 inches long, and the irregular flowers, one-half inch long, in drooping panicles, have red-purple sepals and yellow petals. The broadly reniform fleshy capsules are nearly an inch across.

102773. PRUNUS NAPAULENSIS (Seringe)
Steud. Amygdalaceae.

A small tree, native to the temperate Himalayas up to 10,000 feet altitude. The lanceolate to oblong-lanceolate, crenate-serrate leaves, 4 to 6 inches long, are glaucous beneath, and the white flowers, in dense racemes, are followed by globose-ovoid blue fruits nearly 1 inch long.

102774. PUERARIA PEDUNCULARIS (Benth.)
R. Gray. Fabaceae.

A vigorous shrub with slender twining branches clothed with short deflexed deciduous hairs. The membranous green leaflets are gray with a thick down. The reddish pea-shaped flowers, with a deep-purple-tipped keel, are in moderately close racemes 6 to 12 inches long. Native to the temperate regions of the Himalayas.

102775. PUERARIA PHASEOLOIDES (Roxb.)
Benth. Fabaceae.

A twining, semishrubby plant densely covered with brown hairs. The leaflets are green above and densely matted beneath with gray hairs, and the reddish flowers are borne in long-stemmed racemes. Native to tropical regions of the Himalayas.

102776. PYRULARIA EDULIS (Wall.) DC.
Santalaceae.

A medium-sized thorny tree native to the southern slopes of the Himalayas up to an altitude of 5,000 feet. The leaves are 3 to 7 inches long, rather fleshy, oblong with entire margins. The staminate flowers are in racemes, and the pistillate flowers are solitary, producing edible pear-shaped drupes 2 inches long.

For previous introduction see 94079.

102777 to 102780. RHODODENDRON spp.
Ericaceae.

102777. RHODODENDRON CAMELLIAEFLO-
RUM Hook. f.

An often epiphytic evergreen shrub 2 to 6 feet high with densely scaly branchlets, native to the Himalayas between 9,000 and 11,000 feet altitude. The narrowly oblong, obtusely mucronate leaves, 2 to 4 inches long, are glabrous and reticulate above and densely scaly beneath. The pink-tinged white flowers, an inch across, are fleshy, with a short broad tube and a wide-spreading limb.

102778. RHODODENDRON DALHOUSIAE
Hook. f.

A large epiphytic evergreen shrub native to the Sikkim Himalayas at

102752 to 102787—Continued.

altitudes of 6,000 to 8,000 feet. The oblanceolate to obovate, obtuse leaves, 2 to 6 inches long, are scaly and papillose beneath. The funnel-shaped fragrant white flowers, tinged with rose outside, are 3 to 4 inches long with five broad lobes.

102779. RHODODENDRON GRANDE Wight.

A tree up to 30 feet high, native to the Sikkim Himalayas between 8,000 and 10,000 feet altitude. The elliptic to oblanceolate leaves, 6 to 12 inches long, are shining deep green above and silvery white beneath. The mortar-shaped flowers, 2 to 3 inches long, are pale rose in the bud, opening creamy white with basal purple blotches, and are borne in large rounded clusters of 20 to 25.

102780. RHODODENDRON VACCINOIDES
Hook. f.

A low shrub 1 to 3 feet high, with densely warty glandular branchlets, native to the Sikkim Himalayas between 6,000 and 12,000 feet altitude. The scattered spatulate emarginate leaves are less than 1 inch long, and the lilac-pink or pink-tinged white campanulate flowers are one-third of an inch long.

102781. ROSA MACROPHYLLA Lindl. Rosa-
ceae. **Bigleaf rose.**

A large, nearly thornless shrub, native to the temperate Himalayas up to 10,000 feet altitude. The compound leaves have 9 to 11 oblong to ovate leaflets 1 to 2 inches long, pubescent beneath, and the red flowers, 2 inches across, in clusters of 1 to 3, are followed by oblong-ovoid red fruits which are sometimes 2 inches long.

102782. TETRSTIGMA SERRULATUM
(Roxb.) Planch. (*Vitis capreolata*
Don.). Vitaceae.

A glabrous woody vine with slender wiry stems, native to India. The palmately compound leaves have 3 to 5 lanceolate to obovate bristly serrate leaflets 1 to 3 inches long, and the axillary or terminal cymes of small green flowers are followed by globose black fruits about one-fourth of an inch in diameter.

102783 to 102785. VACCINIUM spp. Vac-
ciniaceae.

102783. VACCINIUM DUNALIANUM Wight.

A large erect shrub with angular branchlets, native to India up to an altitude of 8,000 feet. The leathery oblong-lanceolate long-pointed leaves, 4 inches long, have entire recurved margins, and the small ovoid-conic flowers, in axillary racemes 3 inches long, are followed by globose berries one-sixth of an inch in diameter.

102784. VACCINIUM GLAUCO-ALBUM
Hook. f.

A shrub native to the Sikkim Himalayas between 9,000 and 10,000 feet altitude. The leathery oblong-ovate leaves, 2 to 3 inches long, are mucronate-serrate and are white beneath. The small pink-tinged white flowers, in racemes 3 inches long, are subtended by large white bracts which persist until the fruits are ripe.

102752 to 102787—Continued.

102785. *VACCINIUM NUMMULARIA* Hook. f. and Thoms.

A small rigid epiphytic shrub with densely hirsute pendent branches, native to the Himalayas at altitudes between 8,000 and 10,000 feet. The leathery glabrous broadly elliptic leaves, one-half inch long, have recurved margins, and the small tubular rosy flowers are borne in clustered racemes.

102786. *ZANTHOXYLUM ACANTHOPODIUM* DC. Rutaceae. Prickly-ash.

A shrub or small tree with vertically flattened prickles on the trunk and branches and dense foliage with a pungent aromatic odor. The small pale-red fruits are in loose panicles. Native to the warm valleys in the subtropical Himalayas at altitudes between 4,000 and 7,000 feet.

102787. *ZANTHOXYLUM ALATUM* Roxb. Rutaceae. Prickly-ash.

A shrub or small tree native to the subtropical Himalayas ascending to 6,000 feet. The compound leaves are made up of 5 to 11 lanceolate to ovate finely serrulate leaflets 1 to 5 inches long on a winged prickly rachis, and yellow-green flowers in small panicles are followed by warty red fruits which open and show the lustrous black seeds.

102788. *ZEA MAYS* L. Poaceae. Corn.

From Huancayo, Peru. Seeds presented by Paul G. Ledig, Huancayo Magnetic Observatory, Carnegie Institution of Washington, D. C. Received May 1, 1933.

Morada. A form with purple seeds.

102789 to 102814.

From the Union of South Africa. Seeds presented by Dr. R. H. Compton, director, National Botanic Gardens, Kirstenbosch, Newlands, Capetown. Received May 6, 1933.

102789. *ALOE HEREROENSIS* Engler. Liliaceae.

A nearly stemless perennial, native to southern Africa, with fleshy ovate-lanceolate leaves, 10 to 14 inches long, whitish green with purple tips and spiny margins. The tubular red flowers, an inch long, are borne in a dense corymb on pendulous pedicels, at the top of a purple scape about 3 feet high. The variety *orpeniae*, the name under which these seeds were received, is said to be a more slender form.

102790. *GLORIOSA SIMPLEX* L. Melanthiaceae. Glorylily.

A vinelike perennial, native to Africa, which supports itself by the tendril-bearing tips of the oblong-lanceolate leaves, 3 to 6 inches long. The yellow and red flowers, 1 to 3 inches across and borne in a lax terminal corymb, are on recurved pedicels, and the segments are reflexed and slightly undulate.

102791 to 102793. *INDIGOFERA* spp. Fabaceae.

102791. *INDIGOFERA CYLINDRICA* DC.

A bushy perennial with slender angular stems, native to southern Africa. The compound leaves are made up of 4 to 5 pairs of obovate emarginate leaflets one-half inch long, and the small

102789 to 102814—Continued.

pink-purple flowers are borne in dense many-flowered racemes.

102792. *INDIGOFERA FILIFOLIA* Thunb.

A bushy perennial with stems 3 to 6 feet high, native to southern Africa. Only young plants bear ordinary compound leaves, those on mature plants being reduced to filiform petioles 3 to 5 inches long. The purple flowers are borne in racemes longer than the petioles.

102793. *INDIGOFERA LANGEBERGENSIS* Bolus.

A small shrub, closely allied to *Indigofera frutescens*, and perhaps only a stunted form of that species. It is about 10 inches high, with leathery oval-obovate leaflets and lax many-flowered racemes of purple flowers. Native to Cape Province.

102794. *JASMINUM TORTUOSUM* Willd. Oleaceae. Jasmine.

A woody vine with angular twigs, native to southern Africa. The trifoliolate leaves have glabrous lanceolate leaflets, and the salver-shaped white flowers, 1 inch long, are borne in terminal clusters of 3 to 5.

102795 to 102813. *PROTEA* spp. Proteaceae.

Introduced for the use of Department specialists.

102795. *PROTEA MELLIFERA* Thunb.

102796. *PROTEA ACEROSA* R. Br.

102797. *PROTEA AMPLEXICAULIS* (Salisb.) R. Br.

102798. *PROTEA CEDROMONTANA* Schlechter.

102799. *PROTEA COMPACTA* R. Br.

102800. *PROTEA CYNAROIDES* L.

102801. *PROTEA GRANDICEPS* Tratt.

102802. *PROTEA HUMIFLORA* Andrews.

102803. *PROTEA LATIFOLIA* R. Br.

102804. *PROTEA LONGIFLORA* Lam.

102805. *PROTEA LONGIFOLIA* Andrews.

102806. *PROTEA MARGINATA* Thunb.

102807. *PROTEA MUNDI* Klotzsch.

102808. *PROTEA NERIIFOLIA* R. Br.

102809. *PROTEA OBTUSIFOLIA* Buek.

102810. *PROTEA PULCHELLA* Andrews.

102811. *PROTEA ROUPELLIAE* Meisn.

102812. *PROTEA SCOLYMOCEPHALA* (L.) Reichard.

102813. *PROTEA SUSANNAE* Phillips.

102814. *SESAMUM CAPENSE* Burm. f. Pedaliaceae.

An erect simple or branched herbaceous plant up to 6 feet high, native to southern Africa. The leaves are palmately divided into 3 to 5 ovate to linear leaflets 1 to 3 inches long, and the tubular violet flowers are 1 inch long with spreading lobes about 1 inch wide. The plant can thrive in very dry situations where the annual rainfall is only 4 inches.

102815. ROLLINIA ORTHOPETALA A. DC.
Annonaceae.

From Para, Brazil. Seeds collected by G. Schultz, Miami, Fla., and presented through David Fairchild. Received May 3, 1933.

A shrub or small tree native to tropical America. The fleshy fruits resemble those of *Annona*; the seeds are enveloped in a large amount of pulp which is of custard-like consistency and of a very agreeable acidulous taste. The plant thrives in localities which are often flooded for some time during the rainy season.

102816 to 102818.

From India. Seeds from the Lloyd Botanic Garden, Darjeeling, presented through George L. Slate, New York State Agricultural Experiment Station, Geneva, N. Y. Received May 3, 1933.

102816. ABIES SPECTABILIS Lambert (A. webbiana Lindl.). Pinaceae.
Himalayan fir.

A tree sometimes 150 feet high, native to the Himalayas at altitudes between 7,000 and 13,000 feet. The dark-green leaves are arranged in two opposite series so as to leave a V-shaped opening along the top; the individual leaves are 1 to 2 inches long. The cones, about 5 inches long, are violet purple at first, later becoming brown.

For previous introduction see 99707.

102817. MUCUNA IMBRICATA DC. Fabaceae.

A woody climber, native to the eastern Himalayas up to 4,000 feet altitude. The membranous trifoliate leaves have oblong pointed leaflets 6 inches long, and the dull-purple flowers, 2 inches long, are in lax racemes 6 to 12 inches long. The oblong pods, 4 to 6 inches long, are clothed with deciduous irritating bristles.

102818. MUCUNA MACROCARPA Wall. Fabaceae.

A woody climber, native to Nepal and Sikkim at altitudes up to 6,000 feet. It has stiffish trifoliate leaves, purple flowers, and the torulose pods are over a foot long.

For previous introduction see 93215.

102819. SOPHORA GRIFFITHII Stocks. Fabaceae.

From Afghanistan. Seeds presented by J. E. Spingarn, Amenia, N. Y. Received May 3, 1933.

An attractive shrub with silvery compound leaves composed of 20 to 40 oval, silky-hairy leaflets, and terminal and lateral racemes of golden-yellow flowers that appear in the spring. It is native to Baluchistan.

102820 to 102827. CUCUMIS MELO L. Cucurbitaceae. **Melon.**

From Sinkiang, China. Seeds presented by R. C. Schomberg, through E. A. Foley, agricultural attache, American Embassy, London. Received May 5, 1933.

A collection of cantaloup seeds from central Asia. The melons of that region are noted both for their size and their excellent flavor.

102828 to 102848.

From southwestern China and Tibet. Seeds collected by Dr. J. F. Rock, agricultural explorer, for the University of California Botanical Garden expedition. Received May 4, 1933.

102828 to 102838. LILIUM spp. Liliaceae.
Lily.

Nos. 102828 to 102836 were collected in Tsarung Province, southeastern Tibet.

102828. LILIUM GIGANTEUM Wall.
Giant lily.

No. 23566. Collected at 11,000 feet altitude in the forests on Mount Motung, east of Atuntze. A lily, native to the Himalayas between 5,000 and 10,000 feet altitude, with bulbs that grow close to the surface. The hollow stems are 6 to 9 feet high, and the handsome cordate leaves are shining dark green above and paler beneath. The large fragrant white flowers, often 12 in a raceme, are slightly greenish without, and the inner surface of the segments is tinged with deep purple.

For previous introduction see 102317.

102829. LILIUM sp.

No. 21933. Collected on Mount Kenichunpo, Salwin-Irrawaddy Divide, at 12,000 feet altitude. A plant 3 feet high with white flowers.

102830. LILIUM sp.

No. 21937. Collected on Mount Kenichunpo, Salwin-Irrawaddy Divide, in alpine meadows. The flowers are purplish red.

102831. LILIUM sp.

No. 22152. Collected on Mount Kenichunpo, north of Sikitung, on the Upper Salwin River, in alpine meadows at 13,000 feet. The flowers are red.

102832. LILIUM TALIENSE Franch.

No. 22264. Collected in the forests of Solola, in alpine meadows at 12,000 feet altitude. A martagon lily with stout gray-green stems, 3 to 5 feet high, clothed with dense white scabrid pubescence, and linear to lanceolate leaves 2 to 4 inches long. The fragrant nodding flowers, 2 inches long, are in subverticillate clusters of 2 to 12 and vary in color from purple-spotted white to pink.

For previous introduction see 99902.

102833. LILIUM GIGANTEUM Wall.
Giant lily.

No. 22542. From the northern slopes of Mount Kenichunpo, at 12,500 feet altitude.

For previous introduction and description see 102828.

Nos. 102834 to 102836 were collected on Mount Kaakerbo.

102834. LILIUM WILLMOTTIAE Wilson.

No. 23475. Collected in pine forest at 10,000 feet altitude. Flowers orange-red, spotted with black.

For previous introduction see 69927.

102835. LILIUM TALIENSE Franch.

No. 23537. Collected on dry slopes in pine forest at 9,500 feet altitude.

For previous introduction and description see 102832.

102828 to 102848—Continued.

102836. *LILIUM TALIANSE* Franch.

No. 23613. From the western slopes, in alpine meadows at 12,000 feet altitude.

For previous introduction and description see 102832.

Nos. 102837 and 102838 were collected on Mount Kintzu, Labako, northwestern Yunnan, China.

102837. *LILIUM HYACINTHINUM* Wilson.

No. 25457. Collected at 10,000 feet altitude in fir forests. An alpine lily, native to western China between 10,000 and 12,000 feet altitude. The stout erect shining-green stems are 3 to 4 feet tall, the scattered oblong-lanceolate leaves are 6 to 8 inches long, and the slightly fragrant, funnel-shaped flowers, 1 to 2 inches long, are borne in racemes of 12 to 24 and vary in color from lavender-pink to rose-lilac.

For previous introduction see 99896.

102838. *NOMOCHARIS LOPHOPHORA* (Bur. and Franch.) Balf. f.

No. 25460. Found in alpine meadows at 13,000 feet altitude. A lily 6 to 12 inches high, with alternate ovate or lanceolate leaves 2 to 3 inches long and solitary yellow flowers about 2 inches long.

102839. *MAGNOLIA* sp. Magnoliaceae.

No. 22607. From the northern slopes of Mount Kenichunpo, north of Sikitung, on the Upper Salwin River, Tsarung Province, southeastern Tibet. A magnolia with immense leaves.

102840 to 102847. *NOMOCHARIS* spp. Liliaceae.

Nos. 102840 to 102843 were collected in Tsarung Province, southeastern Tibet.

102840. *NOMOCHARIS* sp.

No. 22176. From the northern slopes of Mount Kenichunpo, in alpine meadows at 12,500 feet altitude at the headwaters of the Eastern Irrawaddy. The white flowers are spotted with purple.

Nos. 102841 to 102843 were collected on Mount Tjonatong, Upper Salwin Divide.

102841. *NOMOCHARIS* sp.

No. 22309.

102842. *NOMOCHARIS* sp.

No. 22310.

102843. *NOMOCHARIS* sp.

No. 22311.

102844. *NOMOCHARIS* sp.

No. 23256. From Mount Fuchuan, west of the Mekong-Salwin Divide, northwestern Yunnan, China, at 13,000 feet altitude, in alpine meadows. The white flowers are spotted with purple.

Nos. 102845 and 102846 were collected in Tsarung, southeastern Tibet.

102845. *NOMOCHARIS* sp.

No. 23576. Collected on Mount Kaakerbo in alpine meadows at 12,500 feet altitude. Flowers, lavender pink.

102828 to 102848—Continued.

102846. *NOMOCHARIS* sp.

No. 23670. From west of Mount Kaakerbo in alpine meadows. The white flowers are speckled.

102847. *NOMOCHARIS* sp.

No. 25456. Collected on Mount Kintzu, Labako, northwestern Yunnan, China, near fir forests at 12,500 feet altitude. The flowers are pink.

102848. (Undetermined.)

No. 23584. Collected on Mount Kaakerbo, Tsarung, southeastern Tibet, at 12,500 feet altitude. The flowers are dark reddish purple.

102849 to 102858. *HUMULUS LUPULUS* L. Moraceae. Common hop.

From France. Roots presented by Prof. Etienne Foex, directeur de la Station Centrale de Pathologie Végétale, Versailles. Received May 8, 1933.

A collection of wilt-resistant French varieties, introduced for the use of specialists working on hop breeding.

102849. *Alsace* (Urbann).102850. *Burgunder* (Simon).102851. *Landopfen* (Simon).102852. *Sämling* (Salmon).102853. *Sämling* (Urbann).102854. *Spalt* (Urbann).102855. *Spalter* (Rohmer).102856. *Spalter* (Simon).102857. *Tige Blanche* (Jagger).102858. *Tige Verte* (Jagger).102859 to 102877. *GOSSYPIMUM* spp. Malvaceae. Cotton.

From Haiti. Seeds obtained by O. F. Cook. Received April 8, 1933.

Introduced for the use of Department specialists.

102859. Cotton-breeding no. 1035. A lintless variation from Port-au-Prince.

Nos. 102860 to 102877 are Cotton-breeding no. 1036.

102860. No. 16. 102869. No. 37.

102861. No. 18. 102870. No. 41.

102862. No. 19. 102871. No. 44.

102868. No. 35. 102877. No. 96.

102878. *CARICA CAULIFLORA* Jacq. Papayaceae.

From the Canal Zone. Seeds presented by J. E. Higgins, director, Experiment Garden, Summit. Received May 9, 1933.

Introduced for the use of Department specialists.

102879 to 102891.

From China. Seeds purchased through Peter Liu, Peiping. Received May 8, 1933.

From Hopch Province, north of Peiping; introduced for the use of Department specialists.

102879. ALLIUM CEPA L. Liliaceae. Onion.

No. 9. *Ta Tsung.*

102880. BRASSICA sp. Brassicaceae.

No. 13.

102881 to 102883. CAPSICUM ANNUUM L. Solanaceae. Common redpepper.

102881. No. 4. Large persimmon pepper.

102882. No. 5. Chinese.

102883. No. 6. A Chinese pepper.

102884 to 102886. LYCOPERSICON ESCULENTUM Mill. Solanaceae. Tomato.

102884. No. 10.

102885. No. 11.

102886. No. 12.

102888. No. 8.

102889 to 102891. SOLANUM MELONGENA L. Solanaceae. Eggplant.

102889. No. 1.

102890. No. 2.

102891. No. 3.

102892. PISTACIA MUTICA Fisch. and Mey. Anacardiaceae. Terebinth.

From Palestine. Seeds collected in Aiir Balat, Safed District, Metulla region, and presented by A. Khazanoff, Haifa. Received May 8, 1933.

A deciduous tree up to 35 feet high with pinnate foliage. It is sometimes used as a stock for *Pistacia vera*. Native to the Mediterranean region.

For previous introduction see 99351.

102893 and 102894. GOSSYPIUM ARBOREUM L. Malvaceae. Cotton.

From India. Seeds presented by V. N. Ranganatha Rao, senior assistant botanist, Krishnalaya, Ulsoor Gate, Bangalore City, southern India, through T. H. Kearney, Bureau of Plant Industry. Received May 5, 1933.

102893. A form which resembles *Gossypium herbaceum*.

102894. A form which resembles the *Nahda* variety.

102895. CITRUS MEDICA L. Rutaceae. Citron.

From Italy. Plants purchased from Onofrio Bottaro & Figli, by Dr. Forzano, of the Diamond Citron Co., Los Angeles, Calif., and sent through Coert de Bois, American consul general, Naples. Received April 13, 1933.

Diamante citron, from Diamante, Province of Cosenza. A fine variety introduced for the use of Department specialists.

102896. CITRUS sp. Rutaceae.

From French Indo-China. Plants collected at the Station Agricole de Blao de Haut Donoi, Annam, and presented by M. Poillane, Institut des Recherches Agronomiques de l'Indochine, Division de Botanique. Received May 13, 1933.

A cultivated lemon with aromatic fruits, collected at 2,300 feet altitude.

102897. HUMULUS LUPULUS L. Moraceae. Common hop.

From Czechoslovakia. Roots presented by Dr. Ing. Ctibor Blatny, Institute of Phytopathology, Statni vyzkumne ustavy zemedelske Prague-Devce, Sadova. Received May 16, 1933.

Early green hop from Duba.

102898 to 102901.

From Mexico. Seeds presented by Peter H. Heinz, Brownsville, Tex. Received May 13, 1933.

A collection of seeds purchased in a Mexican market.

102898 to 102900. CAPSICUM ANNUUM L. Solanaceae. Common redpepper.

102898. Ancho. A large aromatic mild pepper of good color; used to color chili.

102899. Mulato. A medium-sized pepper, mild but with a bitter flavor; used to flavor chili.

102900. Pasilla. A pepper 4 inches long with a mild flavor; used in chili.

102901. SESAMUM ORIENTALE L. Pedalaceae. Sesame.

Ajonjoli. Used in the manufacture of chili powder.

102902 to 102911.

From India. Seeds presented by the curator, Lloyd Botanic Garden, Darjeeling, through Ralph A. Fenton, Portland, Oreg. Received May 11, 1933.

102902. ARDISIA sp. Myrsinaceae.

The *Ardisia* are tropical or subtropical trees or shrubs, with thick evergreen leaves, cymes of white or rose-colored flowers, and, usually, red fruits the size of a pea.

102903. DAPHNE PAPHRACEA Wall. Thymelaeaceae.

A shrub up to 8 feet high, native to the temperate slopes of the Himalayas in India. The thinly coriaceous oblanceolate leaves are 2 to 4 inches long, and the fragrant cream-colored flowers, half an inch long, are in terminal heads.

For previous introduction see 94075.

102904. DAPHNE SUREIL Smith and Cave. Thymelaeaceae.

An erect evergreen shrub 3 to 10 feet high, with alternate lanceolate or linear-lanceolate leathery leaves about 4 inches long and small whitish flowers half an inch long. Native to the eastern temperate Himalayas.

For previous introduction see 102313.

102905. ILEX HOOKERI King. Aquifoliaceae. Holly.

A small deciduous tree, with leathery narrow oblong or lanceolate leaves 3 to 5 inches long and small globular berries

102902 to 102911—Continued.

one-sixth of an inch in diameter. Native to the Sikkim Himalayas.

102906. *ILEX INSIGNIS* Hook. f. Aquifoliaceae. **Holly.**

An attractive holly, native to the Sikkim Himalayas, where it grows at 7,000 feet altitude. It forms a small tree or shrub with thick, grooved branches which are purplish when young. The dark-green leathery leaves are pinnately lobed, with the lobes spine tipped and alternately raised and depressed, so that there appears to be a double row of spiny lobes on each side. This holly has proved hardy in Ireland and may be suited for growing in the Gulf States and southern California.

102907. *KAEMPFERIA SIKKIMENSIS* King. Zinziberaceae.

A low herbaceous plant native to India, with slender leafy stems 2 to 4 inches long. The sessile lanceolate leaves are 2 to 3 inches long, and the solitary tubular flower, 1 inch long, has linear-oblong, dark-lilac segments; the suborbicular lip of the staminode is white and entire.

102908. *OSBECKIA CRINITA* Benth. Melastomaceae.

A much-branched shrub 4 to 8 feet high, with small narrow bristly leaves and large purple or pure-white flowers borne in terminal clusters. The plant is abundant at altitudes between 4,000 and 8,500 feet in the mountains of Sikkim and Bhutan, India.

102909. *OSBECKIA STELLATA* Don. Melastomaceae.

An ornamental shrub 2 to 7 feet high, with reddish bractelets and membranous leaves 2 to 6 inches long. The delicately beautiful lilac-rose flowers have four ovate ciliate petals over an inch across. The conspicuous stamens are incurved, and the calyx tube is pale green with green-stalked stellate hairs, each bearing reddish rays.

102910. *POUPARTIA AXILLARIS* (Roxb.) King and Prain. Anacardiaceae.

A tree native to the low valleys of western China, where it becomes 50 to 80 feet high, with a trunk often 3 feet in diameter near the base. It has gray bark, massive branches, deciduous leaves, and inconspicuous flowers. The oval yellow fruits, about an inch long, are eaten by the Chinese.

102911. *SYMPLOCOS RAMOSISSIMA* Wall. Symplocaceae.

A shrub or tree up to 40 feet high, native to India. The oblong-lanceolate membranous leaves are 4 inches long, and the small white flowers are in axillary 1- to 6-flowered racemes.

102912 and 102913.

From Australia. Seeds presented by H. Wenholz, director of plant breeding, Department of Agriculture, Sydney, New South Wales, through J. B. Cleland. Received May 10, 1933.

102912. *CALANDRINIA BALONENSIS* Lindl. Portulacaceae. **Parakeelya.**

A perennial herb about a foot high, native to Queensland, Australia. The thick fleshy oblong-spatulate leaves are less than an inch long at the base of the plant,

102912 and 102913—Continued.

while the upper ones are 2 inches long and linear-lanceolate. The large purple flowers, 1 to 2 inches across, are borne in loose terminal racemes.

For previous introduction see 102078.

102913. *CALANDRINIA REMOTA* J. M. Black. Portulacaceae. **Parakeelya.**

A low procumbent annual, or possibly perennial, 4 to 12 inches high, native to South Australia. The succulent, linear-spatulate leaves are less than an inch long, and the rather large purple to white flowers are 1 to 2 inches across.

For previous introduction see 101299.

102914. *CROTALARIA BURKEANA* Benth. Fabaceae.

From Africa. Seeds presented by I. B. Pole-Evans, chief, Division of Plant Industry, Department of Agriculture, Pretoria, Union of South Africa, through E. Percy Phillips, principal botanist. Received May 11, 1933.

An erect slightly shrubby perennial 1 to 2 feet high, native to southern Africa, with the branches, petioles, and racemes densely hispid with long rusty hairs. The 3 to 5 linear-lanceolate leaflets are 1 to 2 inches long, and the yellow flowers, less than an inch long, are in terminal racemes.

102915 to 102975.

From China. Seeds collected in Lushan, Kiangsi Province, and presented by A. N. Steward, University of Nanking, Nanking. Received May 10, 1933.

102915. *ACER* sp. Aceraceae. **Maple.**
No. 10. From Chihsiensze.

102916. *ADINA* sp. Rubiaceae.

No. 36. From Kuanyinchiao. This is a rubiaceae genus of trees and shrubs closely resembling the American button-bush (*Cephalanthus occidentalis*). The simple leaves are opposite or whorled, and the inconspicuous flowers are in dense heads.

102917. *ALBIZZIA* sp. Mimosaceae.
No. 1. From Huangyenzse.

102918. *ARALIA* sp. Araliaceae.
No. 6. From Huangyenzse.

102919 to 102921. *BENZOIN* spp. Lauraceae.

The benzoin is aromatic shrubs or trees related to the American spicebush (*Benzoin aestivale*). The yellow flowers appear in sessile clusters before the leaves, and the fruits are highly colored in autumn.

102919. *BENZOIN* sp.

No. 2. From Huangyenzse.

102920. *BENZOIN* sp.

No. 25. From Suifungzse.

102921. *BENZOIN* sp.

No. 39. From Kuanyinchiao.

102922. *CALLICARPA* sp. Verbenaceae.

No. 27. From Kuanyinchiao.

102923. *CASTANEA SEGUINII* Dode. Fagaceae.

102915 to 102975—Continued.

No. 74. From Haihweisze. A wild bush chestnut native to east-central China. It is usually a bush or low tree, but occasionally a shapely tree 40 feet high, with deep-green leaves, paler beneath, and small nuts of sweet agreeable flavor.

For previous introduction see 101607.

102924. CELASTRUS sp. Celastraceae.

No. 7. From Huangyenzse.

102925. CELTIS sp. Ulmaceae. **Hackberry.**

No. 12. From Kuanyinchiao.

102926. CEPHALOTAXUS sp. Taxaceae.

No. 54. From Huangyenzse.

102927. CITRUS sp. Rutaceae.

No. 72. From Haihweisze.

102928. CLERODENDRUM sp. Verbenaceae.

No. 4. From Huangyenzse.

102929. CRATAEGUS sp. Malaceae. **Hawthorn.**

No. 37. From Kuanyinchiao.

102930. DEUTZIA sp. Hydrangeaceae.

No. 45. From Haihweisze.

102931. DIOSPYROS sp. Diospyraceae. **Persimmon.**

No. 24. From Haihweisze.

102932. ELAEOCARPUS DECIPIENS Hemsl. Elaeocarpaceae.

No. 52. From Kuanyinchiao. A subtropical tree with smooth narrowly ovate leaves about 5 inches long, numerous small white flowers in racemes, and small oval-oblong fleshy fruits scarcely three-fourths of an inch long. Native to southeastern China.

102933 to 102935. EUONYMUS spp. Celastraceae.

102933. EUONYMUS sp.

No. 29. From Yunchungszse.

102934. EUONYMUS sp.

No. 55. From Kuanyinchiao.

102935. EUONYMUS sp.

No. 64. From Haihweisze.

102936 and 102937. EURYA spp. Theaceae.

The euryas are shrubs with simple evergreen leaves and small flowers, usually in axillary clusters, followed by berrylike fruits. They are native to southern Asia.

102936. No. 49. From Dayahtsun.

102937. No. 50. From Kuanyinchiao.

102938. EUSCAPHIS JAPONICA (Thunb.) Dipp. Staphyleaceae.

No. 11. From Kuanyinchiao. A shrub up to 10 feet high, native to China and Japan. The compound leaves are made up of 7 to 11 ovate-lanceolate serrate leaflets 3 inches long; and the small white flowers, in upright panicles, are followed by brown-red fruits which open, exposing the steel-blue seeds.

102915 to 102975—Continued.

102939 and 102940. EVODIA spp. Rutaceae.

The evodias are deciduous or evergreen trees or shrubs with opposite simple or pinnate leaves, inconspicuous flowers, and small fruits which open and expose the black seeds. They are related to the American prickly-ash (*Zanthoxylum americanum*).

102939. No. 15. From Kuanyinchiao.

102940. No. 17. From Huangyenzse.

102941. GARDENIA sp. Rubiaceae.

No. 42. From Huangyenzse.

102942. GREWIA sp. Tiliaceae.

No. 34. From Kuanyinchiao.

102943. HYDRANGEA sp. Hydrangeaceae.

No. 22. From Huangyenzse.

102944 to 102946. ILEX spp. Aquifoliaceae. **Holly.**

102944. ILEX sp.

No. 5. From Huangyenzse.

102945. ILEX sp.

No. 53. From Kuanyinchiao.

102946. ILEX sp.

No. 68. From Pailohtung.

102947. JUNIPERUS sp. Pinaceae. **Juniper.**

No. 66. From Kuanyinchiao.

102948. LAGERSTROEMIA sp. Lythraceae. **Crapemyrtle.**

No. 71. From Suifungszse.

102949. LOROPETALUM CHINENSE (R. Br.) Oliver. Hamamelidaceae.

No. 18. From Kuanyinchiao. A handsome but somewhat tender Chinese evergreen bushy shrub, about 5 feet high, with wiry hairy branches, oval unsymmetrical leaves, and curious white witch-hazellike flowers during the early spring.

102950. MAGNOLIA sp. Magnoliaceae.

No. 62. From Chihsiensze.

102951. PAULOWNIA sp. Scrophulariaceae.

No. 38. From Kuanyinchiao.

102952. PISTACIA sp. Anacardiaceae.

No. 69. From Kuanyinchiao.

102953. PITTOSPORUM sp. Pittosporaceae.

No. 59. From Kuanyinchiao.

102954. PLATYCARYA STROBILIFERA Sieb. and Zucc. Juglandaceae.

No. 13. From Kuanyinchiao. A bush or small tree, or rarely a tree over 60 feet high, with thick dark deeply furrowed bark. The moderately thick branches form a rounded or flattened crown. The leaves, 12 inches long, are composed of 9 to 17 sessile, doubly serrate leaflets, and the brown, oval, conelike fruits are over an inch long.

102955. PYRUS sp. Malaceae. **Pear.**

No. 28. From Kuanyinchiao.

102956. RHAMNUS sp. Rhamnaceae. **Buckthorn.**

No. 35. From Kuanyinchiao.

102915 to 102975—Continued.

102957. RHODODENDRON sp. Ericaceae.

No. 41. From Huangyenzse.

102958. RHUS sp. Anacardiaceae. Sumach.

No. 33. From Huangyenzse.

102959 to 102961. ROSA spp. Rosaceae. Rose.

From Kuanyinchiao.

102959. No. 44. 102961. No. 61.

102960. No. 60.

102962. RUBUS sp. Rosaceae.

No. 3. From Huangyenzse.

102963. SPIRAEA sp. Rosaceae. Spirea.

No. 21. From Huangyenzse.

102964. STYRAX sp. Styracaceae. Snowbell.

No. 19. From Huangyenzse.

102965. SYMLOCOS sp. Symplocaceae. Sweetleaf.

No. 65. From Haihweizse.

102966 to 102968. THEA spp. Theaceae.

102966. No. 9. From Huangyenzse.

102967. No. 31. From Huangyenzse.

102968. No. 43. From Pailohtung.

102969. VANIERIA sp. Moraceae.

No. 46. From Pailohtung. The vanierias are woody plants, native to south-eastern Asia, closely related to the curranias. The inconspicuous flowers are followed by fleshy subglobose fruits that resemble mulberries.

102970. VIBURNUM sp. Caprifoliaceae.

No. 26. From Haihweizse.

102971. ZANTHOXYLUM sp. Rutaceae. Prickly-ash.

No. 14. From Kuanyinchiao.

102972. ZANTHOXYLUM sp. Rutaceae. Prickly-ash.

No. 16. From Kuanyinchiao.

102973. (Undetermined.)

No. 8. From Huangyenzse.

102974. (Undetermined.)

No. 20. From Huangyenzse.

102975. (Undetermined.)

No. 63. From Haihweizse.

102976. MANGIFERA INDICA L. Anacardiaceae. Mango.

From Surinam. Seeds presented by the director of the agricultural experiment station at Paramaribo, through David Fairchild. Received May 16, 1933.

Mangga golek.

102977. ALLIUM sp. Liliaceae.

From India. Seeds presented by E. A. Beale, deputy director of agriculture, Irrawaddy Circle, Myaungaya, Lower Burma, through W. E. Gregson, deputy director of agriculture, Tenasserim Circle, Moulmein. Received May 15, 1933.

Introduced for the use of Department specialists.

102978 to 102984.

From the Union of Soviet Socialist Republics. Seeds presented by V. P. Aleksseev, chief, Bureau of Introduction, Institute of Plant Industry, Leningrad. Received May 17, 1933.

102978 to 102982. ALLIUM CEPA L. Liliaceae. Onion.

Originally collected in Asia Minor by the expedition of Professor Zhukovsky.

102978. No. 119/1. From Bitlis.

102979. No. 119/6. From Bitlis.

102980. No. 119/16.

102981. No. 119/21.

102982. No. 119/37. From Trebizond.

102983 and 102984. ALLIUM PORRUM L. Liliaceae. Leek.

Originally from western Persia, collected by the Tcherniakovsky expedition.

102983. No. 31/1.

102984. No. 31/3.

102985. EUGENIA LIGUSTRINA (Swartz) Willd. Myrtaceae.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received May 17, 1933.

A low tropical American shrub with papery lanceolate leaves, shining above and pale beneath, solitary white flowers half an inch across, and globose smooth berries one-fourth of an inch in diameter.

102986. AMARANTHUS GANGETICUS L. Amaranthaceae. Ganges amaranth.

From California. Seeds presented by Ernest L. Lutz, Summit. Received May 19, 1933.

Beh Han Tsai, or *white Han Tsai*. Seed of plants grown from seed brought from China by Mr. Lutz. An annual herb whose stems and leaves are prepared in much the same manner as spinach and used for food in China.

For introduction of a red form see 102737.

102987 to 103000. AGAVE spp. Amaranthaceae.

From Mexico. Plants purchased from Howard E. Gates, Anaheim, Calif. Received May 22, 1933.

Native plants, collected in Baja California by Howard E. Gates.

102987. AGAVE AUREA Brandegee.

A stemless plant with a rosette of about 50 gray-green, narrow-lanceolate leaves about 3 feet long, armed with unequally triangular, often upcurved prickles and ending in a chestnut-colored spine an inch long. The numerous golden-yellow flowers are borne on a scape about 5 feet high.

102988. AGAVE AFFINIS Trelease.

An agave with rough, gray-green, triangular-oblong leaves about 20 inches long, terminating in an ashen or nearly white spine over an inch long. The flowers are borne in a short branched panicle.

102987 to 103000—Continued.

102989. AGAVE ORCUTTIANA Trelease.

An agave, resembling *Agave shawii*, with a reclinate trunk sometimes 10 feet long. The smooth green narrow leaves, 6 inches to a foot long, end in a dull gray spine an inch long. The flowers, 3 inches long, are in a panicle.

102990. AGAVE CONNOCHAETODON Trelease.

A stemless agave with dull pale-green oblanceolate leaves about 10 inches long, ending in a dull-red or ashen spine about 2 inches long. The flowers are borne on a scape sometimes 10 feet high.

102991. AGAVE GOLDMANIANA Trelease.

With the general aspect of *Agave shawii*, this plant has a short trunk and ovate-lanceolate, stiffly erect-spreading leaves about 20 inches long, ending in a dull dark-gray spine over an inch long. The deeply funneliform flowers are on a scape 15 to 20 feet high.

102992. AGAVE SOBRIA T. S. Brandegee.

A stout plant with lanceolate leaves, curved outward, ending in a stout spine about 1 inch long. The campanulate orange-yellow flowers are on an erect scape 6 to 12 feet high, the flower panicle occupying more than half its length.

102993. AGAVE NELSONI Trelease.

A stemless cespitose plant with stiffly erect spreading glaucous oblong-ovate openly concave leaves about 1 foot long, armed with fragile, easily detached marginal prickles and a blackish terminal spine sometimes an inch long. The light yellow flowers are borne in a panicle on a slender scape 12 to 25 feet high.

102994. AGAVE MARGARITAE T. S. Brandegee.

An agave with a rosette of 40 to 50 leaves 4 to 6 inches long, all concave, ending in a terminal spine an inch long. The light-yellow flowers are borne on a scape 8 to 12 feet high.

102995. AGAVE VEXANS Trelease.

An agave with smooth, gray-green, linear-triangular leaves a foot long, very gradually acute, ending in a dull gray-brown spine about an inch long. The greenish flowers are on a slender scape 4 to 6 feet high.

102996. AGAVE SEBASTIANA Greene.

A stemless agave with ascending glaucous ovate-lanceolate leaves a foot long, tapering into a stout spine 2 inches long, and yellow flowers on a stout scape 6 to 10 feet high.

102997. AGAVE BRANDEGEEI Trelease.

An agave with grayish, yellow-green, lanceolate, gradually acute leaves about 2 feet long, ending in a glossy red-brown recurving spine less than an inch long. The yellow flowers are nearly 2 inches long.

102998. AGAVE ROSEANA Trelease.

A somewhat caespitose succulent with stiffly spreading glaucous, gray-green, broadly lanceolate leaves 6 to 20 inches long, terminating in a purple-chestnut tortuous spine 2 to 3 inches long. The slender scape is 6 to 12 feet high.

102999. AGAVE sp.

Gates no. 231.

102997 to 103000—Continued.

103000. AGAVE DATYLIO Web.

A low stemless plant growing in clumps. The rigid straight narrow leaves, 1 to 1½ feet long, terminate in a black spine about half an inch long, and the whitish flowers are on a scape about 12 feet high.

103001. PASSIFLORA EDULIS Sims.
Passifloraceae. Purple granadilla.

From Hawaii. Seeds presented by W. T. Pope, Agricultural Experiment Station, Honolulu. Received May 17, 1933.

Variety *flavicarpa*. A yellow-fruited passion fruit of large size, with golden yellow juice of exceptionally fine flavor.

103002. PHOENICOPHORUM BORSIGIANUM
(Koch) Stuntz (*Stevensonia grandifolia* Duncan). Phoenicaceae. Palm.

From Cuba. Plants presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received May 22, 1933.

Seedling plants grown in the Hope Gardens, Jamaica. This noble palm, famous for its beauty, is indigenous to the Seychelles Islands. The mature palm is wholly destitute of spines, whereas in the young state the deep orange-red petioles are clothed with black needlelike spines 1 to 3 inches long. The young leaves are orange beneath and mottled with orange spots above. The difference between the young and the mature plants is so great that the uninitiated would consider them different species. The flower spike is from 3 to 6 feet long, divided into numerous slender branches, swollen at the base and densely covered above with yellow flowers each about one-fourth of an inch in diameter.

For previous introduction see 94092.

103003 to 103014.

From New Zealand. Seeds presented by A. Wilkinson, Tauranga. Received May 13, 1933.

103003. ACIPHYLLA COLENSOI Hook. f.
Apiaceae.

A stout perennial herb 2 to 5 feet high, native to New Zealand. The numerous radical leaves form a circle of bayonetlike spikes around the base of the stem, each 1 to 3 feet long, pinnate or bipinnate at the base, with few secondary narrowly linear leaflets 5 to 15 inches long, terminated by a long stout spine. The small white flowers are in a cylindrical panicle made up of numerous umbels.

For previous introduction see 101271.

103004. CELMISIA SPECTABILIS Hook. f.
Asteraceae.

A herbaceous perennial with short stout stems and numerous linear-oblong thick leaves, 6 inches long, covered with silvery hairs above and densely matted pubescent wool beneath. The several stout cottony scapes are longer than the leaves and bear white flower heads 1 to 2 inches broad. Native to New Zealand, where it often grows in extensive stands.

103003 to 103014—Continued.

103005. DAHLIA MERCKII Lehm. Astera-
ceae. Bedding dahlia.

A single-flowered dahlia, 2 to 3 feet high, with bipinnate leaves and flowers typically lilac in color. This dahlia comes true from seed.

103006. ENTELEA ARBORESCENS R. Br. Tiliaceae.

A New Zealand shrub or small tree 20 feet high, with the growing parts covered with soft stellate hairs. The alternate cordate leaves, nearly a foot across, are on petioles 8 inches long, the white flowers, an inch in diameter, are in erect cymes, and the globose pods are covered with long rigid bristles.

103007. GERANIUM TRAVERSII Hook. f. Geraniaceae. Cranesbill.

A perennial herb with decumbent or prostrate stems 1 to 2 feet long, native to New Zealand. All parts of the plant are covered with silvery hairs. The nearly orbicular leaves, 1 to 3 inches across, have 5 to 7 lobes, and the radical leaves have petioles up to 9 inches long. The white or pink flowers, 1 inch wide, are borne on slender peduncles 1 to 4 inches long, with two acuminate bracts at the middle.

103008. HEBE FORMOSA (R. Br.) Cock-
ayne (*Veronica formosa* R. Br.).
Scrophulariaceae.

A glabrous evergreen shrub 2 to 4 feet high, native to Tasmania. The thick lanceolate entire leaves are about 1 inch long, and the pale-lilac flowers are borne in short racemes in the axils of the upper leaves.

103009. HEBE VENUSTULA (Colenso)
Cockayne (*Veronica venustula* Co-
lenso). Scrophulariaceae.

A small compact shrub 6 to 9 inches high, native to New Zealand. The oblong-ovate leathery leaves, less than 1 inch long, are close-set on the branches, and the small white flowers are in terminal much-branched racemes.

103010. LEUCOGENES LEONTOPODIUM
(Hook. f.) Beauvard. Asteraceae.

A much-branched dwarf perennial, woody at the base, 2 to 8 inches high. The linear-lanceolate, densely imbricated leaves are three-fourths of an inch long, and the small densely woolly flower heads are borne in compact clusters of 8 to 15. The plant has the same aspect as the edelweiss of the European Alps.

103011. MYOSOTIDIMUM HORTENSIA (De-
caisne) Baill. (*M. nobile* Hook.).
Boraginaceae.

A stout succulent perennial herb, 1 to 3 feet high, native to the Chatham Islands. The thick fleshy radical leaves, 6 to 12 inches long, are broadly cordate or reniform, and the blue flowers, one-half inch across, are borne in dense corymbose cymes.

For previous introduction see 101284.

103012. OLEARIA sp. Asteraceae. Daisytree.

A mixture of species native to Tasmania. The olearias are evergreen trees or shrubs of the Australian region with flowers like the asters, to which they are closely related.

103003 to 103014—Continued.

103013. PETROPHILA BILOBA R. Br. Pro-
teaceae.

A shrub with slender villous branchlets, native to Western Australia. The leathery leaves are pinnately divided into four rhomboid sharp-pointed lobes about one-half inch long, and the small flowers are borne in ovoid conelike spikes about one-fourth of an inch long, crowded along the branchlets.

103014. (Undetermined.)

103015. EPIDENDRUM VITELLINUM Lindl. Orchidaceae.

From Baja California, Mexico. Plants presented by Waldo S. Schmidt, United States National Museum, Washington, D. C. Received May 24, 1933.

An orchid, native to Mexico, with ovoid pseudobulbs 2 inches long, each bearing 1 to 3 leaves 6 to 9 inches long. The cinnamon-red flowers with orange lips are borne in 10- to 15-flowered racemes on peduncles 1 to 2 feet long.

103016. PASSIFLORA EDULIS Sims. Pas-
sifloraceae. Purple granadilla.

From Brazil. Seeds presented by P. H. Rolfs, Rio de Janeiro. Received May 19, 1933.

Seed from fruits over an inch in diameter, purchased in a confectionery store at Curatyba, Parana, Brazil, April 22, 1933.

103017 and 103018.

From the Galápagos Islands. Seeds presented by Waldo S. Schmitt, United States National Museum, Washington, D. C. Received May 25, 1933.

103017. CASSIA sp. Caesalpiniaceae.

103018. VIGUIERA sp. Asteraceae.

From Duncan Island. The viguieras are tropical shrubs, or subshrubs, related to the sunflowers, with the rather small flower heads in ample corymbs.

103019. (Undetermined.)

From the Union of South Africa. Seeds presented by a Mr. Breslin, of Victoria. Received May 25, 1933.

Introduced for testing by Department specialists as a possible source of rubber.

103020. ARECA sp. Phoenicaceae.

Palm.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received May 26, 1933.

The arecas are graceful spineless palms with attractive pinnate leaves.

103021. CINCHONA sp. Rubiaceae.

From the British West Indies. Seeds presented by F. T. Landale, Jamaica, through Col. Victor E. Ruehl, Caldwell, N. J. Received May 24, 1933.

103022. CINCHONA sp. Rubiaceae.

From Guatemala. Seeds presented by the American consul general, Guatemala City, through Col. Victor E. Ruehl, Caldwell, N. J. Received May 25, 1933.

103022—Continued.

From Finca Chejel, Tucuru, Alta Vera Paz.

103023. *EUPHORBIA ABYSSINICA* Gmel.
Euphorbiaceae. Spurge.

From Africa. Seeds presented by the Government Agricultural Station, Asmara, Eritrea, through L. Croizat, New York, N. Y. Received May 31, 1933.

A plant which attains a height of 30 to 40 feet in poor dry soil and yields a large quantity of latex containing about 5 percent of first-class rubber.

103024 and 103025.

From Wonosobo, Java. Seeds originally from Russia, presented by A. M. Cramer, of Cramer & Zoon. Received May 29, 1933.

103024. *BUTIA CAPITATA* × *ERIOSPATHA*.
Phoenicaceae. Palm.

A natural hybrid combining characters of both parents. The fruits closely resemble in flavor the best Japanese loquats, and the tree will probably thrive wherever the Satsuma orange is grown commercially.

For previous introduction see 100275.

103025. *PRUNUS* sp. Amygdalaceae.

A plum introduced for testing by Department specialists.

103026 and 103027.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received May 26, 1933.

103026. *ALBIZZIA ADINOCEPHALA* (Donn-Smith) Britton and Rose. Mimrosaceae.

A small unarmed tree, with rather small compound leaves composed of 1 or 2 pairs of lanceolate leathery leaflets 1 or 2 inches long and flower heads in terminal panicles about 4 inches long. Native to Costa Rica.

103027. *CAESALPINIA PAUCIFLORA* (Griseb.) C. Wright. Caesalpinaceae.

A slender shrub 5 to 8 feet high, native to the West Indies. The compound leaves have 8 to 12 pinnae, each bearing a few oblong to obovate leaflets one-half inch long; the yellow flowers with crisped petals are borne in racemes.

103028 to 103038. *SOLANUM* spp. Solanaceae.

From the Union of Soviet Socialist Republics. Tubers presented by the Institute of Plant Industry, Leningrad. Received June 3, 1933.

A collection of South American species of *Solanum* of the section *Tuberarium*; introduced for the use of Department specialists.

103028. *SOLANUM AJANHUIRI* Juz. and Buk.

No. 8018. A species from high altitudes in Bolivia; it forms the best tubers of all the frost-resistant species.

103029. *SOLANUM CHAUCHA* Juz. and Buk.

No. 8100. A tropophytic species from Peru and Bolivia which rarely forms berries.

103028 to 103038—Continued.

103030. *SOLANUM CHOCLO* Juz. and Buk.

No. 8143. A mountain species from southern Peru and Bolivia.

103031. *SOLANUM CURTILOBUM* Juz. and Buk.

No. 8008. From the mountains of southern Peru and Bolivia.

103032. *SOLANUM GONIOCALYX* Juz. and Buk.

No. 8027. A polymorphous mountain species of central Peru with small yellow tubers.

103033. *SOLANUM MAMILLIFERUM* Juz. and Buk.

No. 8136. From the mountains of southern Peru and Bolivia.

103034. *SOLANUM PHUREJA* Juz. and Buk.

No. 8070. A species from the mountain valleys of Bolivia which produces medium-sized tubers of very low starch content.

103035. *SOLANUM RYBINII* Juz. and Buk.

No. 8023. From the mountains of Colombia. A species which rarely forms berries and is tender to frost.

103036. *SOLANUM STENOTOMUM* Juz. and Buk.

No. 8042. A hydrophytic species from southern Peru and Bolivia which is not frost hardy.

103037. *SOLANUM ANDIGENUM TARMENSE* Juz. and Buk.

No. 8113. A form with the leaf segments small; found in the vicinity of Tarma, Peru.

103038. *SOLANUM TENUFILAMENTUM* Juz. and Buk.

No. 8105. A tender species from the mountains of southern Peru and Bolivia.

103039. *CITRUS SINENSIS* (L.) Osbeck.
Rutaceae. Orange.

From Southern Rhodesia. Scions presented by W. J. Hall, director, Citrus Experiment Station, Mazoe, through A. A. Morris. Received June 3, 1933.

Premier orange, a new variety which is said to be a very early sort and to give a good yield.

103040 to 103068.

From China. Seeds purchased in Peiping by Peter Liu. Received May 29, 1933.

103040. *APIUM GRAVEOLENS* L. Apiaceae.
Celery.

No. 13. *Chin Tsai*.

103041. *BENINCASA HISPIDA* (Thunb.) Cogn. Cucurbitaceae. Waxgourd.

No. 21. *Chia Tung Kua*, a winter gourd.

103042. *BETA VULGARIS* L. Chenopodiaceae.
Beet.

No. 17. *Ken Ta Tsai*.

103043 to 103047. *BRASSICA* spp. Brassicaceae.103043. *BRASSICA OLERACEA CAULO-RAPA* DC. Kohlrabi.

No. 18. *Pei Lan*.

103040 to 103068—Continued.

103044. BRASSICA SP.
No. 5. *Hsioa Yu Tsai*, small oil cabbage.
103045. BRASSICA SP.
No. 6. *Hsien Hao Pai*, white stork cabbage.
103046. BRASSICA SP.
No. 7. *Hsiao Pai Kou Pai Tsai*, short white cabbage.
103047. BRASSICA SP.
No. 8. *Ch'ing Kou Pai Tsai*, green top cabbage.
103048. CAPSICUM ANNUUM L. Solanaceae.
Common redpepper.
- No. 9. *Ta Shih Tse*, large persimmon pepper.
103049. CUCUMIS SATIVUS L. Cucurbitaceae.
Cucumber.
- No. 12. *Kuai Huang Kua*, early cucumber.
103050. CUCURBITA MAXIMA Duchesne. Cucurbitaceae.
Squash.
- No. 20. *Pai Nan Kua*, white pumpkin.
103051. CUCURBITA MOSCHATA Duchesne Cucurbitaceae.
Cushaw.
- No. 19. *Pa Leng Wo Kua*, eight-cornered pumpkin.
103052. DOLICHOS LABLAB L. Fabaceae.
Hyacinth-bean.
- No. 28. *Chia Pien Tou*, framed flat bean.
103053. LACTUCA SATIVA L. Cichoriaceae.
Garden lettuce.
- No. 15. *Tuan Yieh Sheng Tsai*, round-leaved lettuce.
103054. LACTUCA SATIVA L. Cichoriaceae.
Garden lettuce.
- No. 16. *Shang Yieh Sheng Tsai*, long-leaved lettuce.
103055. LYCOPERSICON ESCULENTUM Mill. Solanaceae.
Tomato.
- No. 4. *Ta Hsi Hung Shih*, large red tomato.
103056. MEDICAGO SATIVA L. Fabaceae.
Alfalfa.
- No. 26. *Mu Hsu*, alfalfa.
103057. PHASEOLUS VULGARIS L. Fabaceae.
Common bean.
- No. 27. *Hung Yun Tou*, red garden bean.
103058. PISUM SATIVUM L. Fabaceae.
Pea.
- No. 10. *Pai Wan Tou*, white pea.
103059. RAPHANUS SATIVUS L. Brassicaceae.
Radish.
- No. 3. *Hsiao Hung Shui Lo Pu*, small red water radish.
103060. RAPHANUS SATIVUS L. Brassicaceae.
Radish.
- No. 14. *Hsiang Ya Pai Lo Pu*, elephant tusk radish.
103061. SOLANUM MELONGENA L. Solanaceae.
Eggplant.
- No. 1. *Ta Hai Chieh Tze*, large eggplant.

103040 to 103068—Continued.

103062. SOLANUM MELONGENA L. Solanaceae.
Eggplant.
- No. 2. *Kuai Chieh Tze*, early eggplant.
103063. SPINACIA OLERACEA L. Chenopodiaceae.
Common spinach.
- No. 11. *Po Tsai*.
103064. VICIA FABA L. Fabaceae.
Broadbean.
- No. 29. *Tsan Tou*, silkworm bean.
- 103065 to 103068. VIGNA SESQUIPEDALIS (L.) Fruwirth. Fabaceae.
Asparagus-bean.
103065. No. 22. *Hsien Chiang Tou*, thread cowpea.
103066. No. 23. *Shih Pa Tou*, 18-seed cowpea.
103067. No. 24. *Huang Hua Ch'ing Chiang Tou*, yellow-flowered cowpea.
103068. No. 25. *Ssu Kua Ch'ing Chiang Tou*, the green-thread gourd cowpea.
- 103069 to 103074. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae.
Common wheat.
- From Australia. Seeds presented by Dr. A. McTaggart, Council for Scientific and Industrial Research, Division of Plant Industry, Department of Agriculture, Canberra. Received June 1, 1933.
- A collection of Australian varieties, supplied by the plant genetics section, Federal Capital Territory, Canberra, from the 1931 crop. Introduced for the use of Department specialists.
103069. *Dindiloa*, 103072. *Pilot*, W. W. 293a. 737a.
103070. *Firwhill*, 103073. *S. H. J.*, W. W. 364a. 875a.
103071. *Genoa*, W. 103074. *Zealand*, 394a. W. 1063a.
- 103075 to 103078.
- From China. Seeds collected by Peter Liu, in the vicinity of Peiping. Received June 1, 1933.
103075. CUCURBITA MOSCHATA Duchesne. Cucurbitaceae.
Cushaw.
Erh Ch'iu Tze Wo Kua, early pumpkin.
103076. CUCURBITA MOSCHATA Duchesne. Cucurbitaceae.
Cushaw.
Kuai Wo Kua, autumn pumpkin.
103077. SOLANUM MELONGENA L. Solanaceae.
Eggplant.
Tieh Pa Hei Chieh Tze, black-stem eggplant.
103078. VIGNA SESQUIPEDALIS (L.) Fruwirth. Fabaceae.
Asparagus-bean.
Ssu Kua Ch'ing Chiang Tou, green-thread gourd cowpea.
- 103079 to 103098. SOJA MAX (L.) Piper. Fabaceae.
Soybean.
- From China. Seeds presented by Dr. Chin Tu, Honan University, Kaifeng, Honan. Received June 7, 1933.

103079 to 103098—Continued.

A collection of soybeans from Honan and the neighboring Provinces, introduced for the use of Department specialists.

103079. No. 48. *Shang Tsai*.
 103080. No. 52. *White* soybean.
 103081. No. 53. *Yellow* soybean.
 103082. No. 61. *Lu Yi*.
 103083. No. 69. *Wen Hsuan*.
 103084. No. 70. *Ling Pao*.
 103085. No. 71. *Shi Hua*.
 103086. No. 73. *Wen Hsiang*.
 103087. No. 74. *Tung Hsu*.
 103088. No. 78. *Ming Chuan*.
 103089. No. 80. *Yunan*.
 103090. No. 81. *Suiping*.
 103091. No. 89. *Wu An*.
 103092. No. 93. *Kaifeng*.
 103093. No. 101. *Wai Chuan*.
 103094. No. 103. *Lukou*.
 103095. No. 106. *Ming Chuan*.
 103096. No. 108. *Kaifeng*.
 103097. No. 109. *Hsin Cheng*.
 103098. No. 111. *Cheng Hsuan*.

103099 to 103106.

From the Union of South Africa. Seeds, native to southern Africa, presented by the McGregor Museum, Kimberley. Received June 8, 1933.

103099 to 103102. *ALOE* spp. Liliaceae.103099. *ALOE BROOMII* Schoenland.

An erect or ascending plant with a short trunk bearing a dense rosette of ovate-lanceolate unspotted glaucous or reddish leaves up to 5 inches long. The yellow flowers are in a dense raceme on a short thick scape.

103100. *ALOE HEREROENSIS* Engler.

Variety *orpeniae*.

For previous introduction and description see 102789.

103101. *ALOE PRETORIENSIS* Pole Evans.

An aloe with dense rosettes of tapering leaves, usually withered at the red tips, with a stoutish stem 4 to 5 inches in diameter. The dark-brown to black stem is extremely rough and is clothed throughout its entire length by the remains of withered leafstalks. The most distinctive feature of the plant is its tall branched inflorescence with dense racemes of bright-scarlet flowers.

103102. *ALOE WICKENSII* Pole Evans. Liliaceae.

A handsome stemless succulent with a dense rosette of narrow sword-shaped pale-green leaves about 2 feet long and yellow flowers in a dense raceme.

103103. *ARTHEROSOLEN POLYCEPHALUS* (E. Mey.) Meyer. Thymelaeaceae.

A much-branched shrub 1 to 2 feet high. The linear-lanceolate leaves are 6 inches long, and the rich-yellow flowers, in small terminal heads, are surrounded by colored bracts.

103099 to 103106—Continued.

103104. *CERATOTHECA TRILOBA* E. Mey. Pedaliaceae.

An erect annual plant up to 6 feet high. The obtusely quadrangular stems are hairy, and the coarsely crenate leaves, 1 to 6 inches long, vary from broadly cordate and three-lobed near the base to lanceolate and sparingly crenate at the top of the plant. The solitary axillary flowers, 2 to 3 inches long, are lilac streaked with purple, and the loosely pubescent capsules, an inch long, have two horns at the tip.

103105. *RHIGOZUM BREVISPINOSUM* Kuntze. Bignoniaceae.

An erect spiny shrub 4 to 10 feet high. The oblong to oblanceolate leaves, 1 to 2 inches long, are tomentose and clustered at the tips of the branchlets, and the campanulate funnel-shaped yellow or white flowers are less than an inch long and are axillary or fascicled in the leaf clusters.

103106. *SESAMUM CAPENSE* Burm. f. Pedaliaceae.

For previous introduction and description see 102814.

103107. *BALSAMOCITRUS PANICULATA* (Schum.) Swingle. Rutaceae.

From Africa. Seeds presented by J. Voelcker, agricultural botanist, Moor plantation, Hadan, Nigeria. Received June 13, 1933.

Sanga fruit. A spiny shrub, native to western tropical Africa, with membranous trifoliate leaves consisting of oblong-ovate leaflets 1 to 3 inches long, small white flowers, and globose woody fruits.

For previous introduction see 100912.

103108 and 103109.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received June 12, 1933.

103108. *PHOEBE ELONGATA* Nees. Lauraceae.

A tree up to 60 feet high, native to tropical America. The elliptic to ovate leaves, 2 to 8 inches long, are glabrous above and slightly pilose beneath, and the small white flowers are borne in axillary clusters.

103109. *TABEBUIA HETEROPHYLLA* (DC.) Britton (*T. triphylla* DC.). Bignoniaceae.

A shrub or small tree up to 30 feet high, native to the West Indies. The densely lepidote compound leaves are made up of 1 to 5 oblong to obovate leathery leaflets 1 to 3 inches long, and the pink-and-white funneiform flowers, 2 to 3 inches long, are borne in clusters of 1 to 20.

103110. *PHOENIX PUSILLA* Gaertn. Phoenicaceae. **Date palm.**

From India. Seeds collected by the systematic botanist of the Madras Presidency through the principal of the Agricultural College of Coimbatore, and presented through the Royal Botanic Gardens, Kew, England. Received June 13, 1933.

103110—Continued.

A dwarf palm about 4 feet high, with pinnate leaves having spiny petioles, dark-green, sword-shaped leaflets, and black fruits. The stem is said to contain a farinaceous pith. It is native to Ceylon and is introduced for the use of Department specialists.

For previous introduction see 94097.

103111 to 103150.

From China. Seeds obtained by native collectors and presented by Henry McLaren, Bodnant Gardens, North Wales. Received June 12, 1933.

The numbers correspond to those of the herbarium specimens at the Royal Botanic Gardens, Edinburgh, Scotland.

103111. ABIES DELAVAYI Franch. Pinaceae. Fir.

C. 195. A tall tree, often 100 feet high, native to western China. The slightly grooved branchlets are lustrous red brown, and the emarginate linear leaves, about 1 inch long, are revolute on the margin, dark green above and with two white bands beneath. The violet-black, cylindrical to ovoid cones are 2 to 4 inches long.

For previous introduction see 100501.

103112. ACER DAVIDI Franch. Aceraceae. Maple.

C. 285. A native Chinese maple, 50 to 60 feet high, with large oval heart-shaped coarsely toothed leaves and long pendent clusters of samaras.

For previous introduction see 100850.

103113. ACER FAXII Franch. Aceraceae. Maple.

C. 300. An evergreen maple from the mountain forests of southwestern China, with stiff leathery obovate or 3-lobed leaves 2 inches long.

103114. ASTILBE RIVULARIS Buch.-Ham. Saxifragaceae.

B. 79. A perennial herb, native to Nepal and western China, with stems 3 to 5 feet high covered with tawny hairs. The biternate leaves have dentate ovate leaflets 1 to 3 inches long, and the cream-white flowers with pure-white stamens are borne in large paniced spikes at the top of the stems.

For previous introduction see 99721.

103115. BUDDLEIA TALIENSIS W. W. Smith. Loganiaceae.

C. 201. A shrub 6 to 9 feet high much like *Buddleia Forrestii*. The lanceolate papery leaves, about 4 inches long, are densely hairy, and the deep maroon-crimson flowers are in a dense thyrsoid cyme. Native to Yunnan.

103116. CAESALPINIA SEPIARIA Roxb. Caesalpiniaceae. Mysore thorn.

C. 99. A scrambling spiny pubescent shrub native to India. The compound leaves are made up of 12 to 20 pairs of pinnae each bearing 16 to 24 oblong leaflets an inch long. The bright-yellow flowers, an inch across, are in simple racemes a foot long.

For previous introduction see 102345.

103111 to 103150—Continued.

103117. CAPPARIS BODINIERI Leveille (*C. subtenera* Craib and Smith). Caparidaceae.

C. 164. A semiscandent spiny shrub 10 to 20 feet high, with ovate-oblong or lanceolate leaves 2 to 4 inches long and translucent purple-gray flowers in small clusters in the upper leaf axils. Native to southwestern China.

103118. CARAGANA FRANCHETIANA Komarov. Fabaceae.

C. 248. A stout shrub with long branches, sometimes spiny, small compound leaves consisting of about two pairs of narrow obovate leaflets one-third of an inch long, and yellow flowers about 1 inch long. Native to southwestern China.

103119. CAUTLEYA LUTEA Royle. Ziniberaceae.

B. 144. A slender herbaceous plant, native to temperate regions of the Himalayas, 12 to 18 inches high, with narrow sessile leaves and loose spikes of yellow flowers in calyces. The globose capsules are bright red.

103120. CHIONANTHUS RETUSA Lindl. Oleaceae. Chinese fringetree.

C. 98. A handsome deciduous hardy ornamental tree bearing, during the spring, a multitude of small white delicately fragrant flowers, with very narrow petals, followed in the fall by masses of blue berries resembling wild grapes. This species is considered by some to be superior to the Virginia fringetree (*Chionanthus virginica*), because of the whiteness and fragrance of its flowers and its more graceful habits.

103121. COLQUHOUNIA COCCINEA Wall. Menthaceae.

B. 249. A climbing shrubby mint, closely related to *Stachys*, native to the temperate Himalayas at altitudes between 7,000 and 9,000 feet in India. The tomentose branches, 8 to 10 feet long, bear ovate to cordate leaves 2 to 5 inches long, and the dull-red tubular flowers, in axillary clusters, have orange or yellow corolla lobes.

103122. CORNUS CAPITATA Wall. Cornaceae. Evergreen dogwood.

C. 221. A small evergreen tree native to the lower slopes of the Himalayas between 4,000 and 7,000 feet altitude in India. The leathery oblong-lanceolate leaves, 2 to 4 inches long, are densely white pubescent beneath. The involucre bracts, 1 to 2 inches long, are creamy white, and the scarlet fruit-head, shaped like a strawberry, is 1 to 2 inches in diameter and is edible.

103123. CORYLUS TIBETICA Batal. Betulaceae. Hazelnut.

C. 269. A shrubby tree up to 30 feet high, native to central and western China. The broadly ovate to cordate sharply serrate leaves are 2 to 6 inches long, and the small globose nuts are borne in glabrous spiny involucre, resembling a chestnut bur, 2 inches in diameter.

103124. COTONEASTER SEROTINA Hutchison. Malaceae.

C. 157. A small Chinese tree with elliptic papery leaves, small white flowers

103111 to 103150—Continued.

borne in many-flowered corymblike clusters, and attractive bright-red berries which persist throughout most of the winter.

103125. DECAISNEA FARGESII Franch.
Lardizabalaceae.

C. 259. A handsome deciduous shrub up to 15 feet high, with large drooping pinnate leaves 3 feet long, greenish flowers in pendulous racemes a foot or more long, and deep-blue fruits 3 to 4 inches long. Native to western China.

For previous introduction see 100871.

103126. INDIGOFERA NIGRESCENS Kurz.
Fabaceae. Indigo.

C. 298. An annual legume with pink flowers and abundant seed. It becomes 1 to 4 feet high, but the odorous herbage is not eaten by cattle. It is of value as a green manure.

103127. JUNIPERUS FORMOSANA Hayata.
Pinaceae. Formosa juniper.

C. 283. A tree 30 to 40 feet high, with several trunks arising from near the base; native to Taiwan. The spreading or ascending branches have pendulous branchlets, the linear sharp-pointed leaves, 1 inch long, have two broad white bands above, and the red or orange-brown globose fruits are one-third of an inch in diameter.

103128. JURINEA EDULIS Franch. Asteraceae.

B. 194. A leafy herb, 4 to 10 inches high, with membranous, deeply lobed, oblong-obovate, long-stemmed leaves and violet-blue flower heads over 2 inches in diameter. Native to southwestern China.

103129. LEYCESTERIA FORMOSA STENOSEPALA Rehd. Caprifoliaceae.

C. 149. A shrub 6 to 8 feet high, native to western Szechwan, China. The broadly ovate leaves are 5 to 7 inches long. The white or pale-purple flowers are in axillary spikes and are followed by bright-red fruits.

103130. PHILADELPHUS HENRYI Koehne.
Hydrangeaceae.

C. 138. A shrub about 4 feet high, with chestnut-brown bark, narrow-ovate slightly hairy papery leaves 1 to 2 inches long, and white flowers about 1 inch across, in racemes of 3 to 13 flowers. Native to Yunnan.

103131. PIPTANTHUS FORRESTII Craib.
Fabaceae.

C. 15. A shrub 9 to 13 feet high, with alternate trifoliate leaves composed of lanceolate light-yellow leaflets over an inch long and half an inch across. Native to alpine meadows in southwestern China.

103132. PISTACIA CHINENSIS Bunge.
Anacardiaceae. Chinese pistache.

C. 241. A large deciduous tree, sometimes reaching a height of 80 feet, native to central and western China. The pinnate leaves, about 9 inches long, consist of 10 to 12 narrow-oval leaflets. Because of its glossy green foliage, which becomes brilliant crimson in the autumn, and its rather rapid growth, this is a valuable shade tree for mild-wintered regions.

103111 to 103150—Continued.

103133. PITTOSPORUM HETEROPHYLLUM Franch. Pittosporaceae.
Rock pittosporum.

C. 295. A spreading shrub, 3 to 6 feet high, native to Szechwan and Yunnan, where it grows on cliffs and in rocky places in the arid valleys. The ovate leaves are medium sized, and the light-yellow flowers are borne near the tips of the new branchlets.

For previous introduction see 99451.

103134. PRIMULA FORRESTII Balf. f.
Primulaceae. Primrose.

B. 1. A handsome perennial primrose, native to northwestern Yunnan between 9,000 and 11,000 feet altitude, in dry sunny situations. The woody rootstock is said to live over 50 years, the large basal leaves are covered with glandular hairs, and the rich orange-yellow flowers are produced in large umbels.

For previous introduction see 100013.

103135. PRIMULA MALVACEA Franch. Primulaceae. Primrose.

B. 158. A primrose from the mountains of Yunnan, densely covered with short hairs; the bright-green leaves are about 3 inches long, and the thick scapes bear 2 or 3 umbels of reddish flowers.

For previous introduction see 100027.

103136. PRUNUS sp. Amygdalaceae.

C. 58. Judging from the seeds, this species is a cherry, closely related to *Prunus majestica*, which is a large handsome white-flowered tree.

103137. to 103139. RHODODENDRON spp.
Ericaceae.

103137. RHODODENDRON BULLATUM Franch.

C. 33. A loosely branched shrub up to 8 feet high, native to Yunnan. The branchlets are densely and softly woolly, the elliptic-ovate leaves, 2 to 4 inches long, are puckered above and loosely woolly pubescent beneath, and the broadly tubular pink-tinged white flowers, 2 to 3 inches long, are borne in terminal clusters.

For previous introduction see 100889.

103138. RHODODENDRON FASTIGIATUM Franch.

C. 190. A low erect shrub with scaly branchlets, native to Yunnan. The elliptic-oblong leaves, one-third inch long, are densely scaly on both surfaces, and the light-purple flowers, one-half inch long, are borne in terminal clusters of 4 or 5.

For previous introduction see 98463.

103139. RHODODENDRON MADDENI Hook. f.

C. 91. A shrub 6 to 8 feet high, with red-stemmed, dark-green leaves. The large delicately fragrant flowers, tinged with rose, are produced in threes at the ends of the branches. Native to the Himalayas.

For previous introduction see 97397.

103140. ROSA SERTATA Roife. Rosaceae.
Garland rose.

C. 207. A low shrub, native to western China, with glaucous stems 5 feet high,

103111 to 103150—Continued.

armed with straight slender prickles, and leaves composed of 7 to 11 narrowly oblong leaflets. The solitary purple flowers, 2 to 3 inches across, are followed by deep-red, obovoid fruits.

103141. SOLANUM VERBASCIFOLIUM L. Solanaceae. **Nightshade.**

C. 130. A shrub or small tree up to 30 feet high, with ovate to lanceolate velvety tomentose leaves 6 to 10 inches long and small white flowers followed by yellowish fruits half an inch in diameter. Native to Mexico and established generally in the Tropics.

103142. SOPHORA sp. Fabaceae.

C. 172.

103143. THALICTRUM DELAVAYI Franch. Ranunculaceae. **Meadowruie.**

B. 127. A slender Chinese plant 2 to 3 feet high, with nodding purple flowers half an inch across.

For previous introduction see 95602.

103144. TROLLIUS PATULUS Salisb. Ranunculaceae.

B. 166. A low perennial herb, less than 1 foot high, native to southern Asia. The palmately dissected radical leaves are incised-dentate, and the large golden-yellow flowers are borne on one-flowered scapes.

103145. TSUGA YUNNANENSIS (Franch.) Masters. Pinaceae. **Yunnan hemlock.**

C. 196. A forest tree up to 150 feet high, with trunks 6 to 7 feet in diameter. The branchlets are covered with a rufous-gray pubescence, and the leaves, up to an inch long, are rounded at the apex and have white lines beneath. The small dull cones, 1 inch long, have fewer scales than those of *Tsuga chinensis*. Native to western China at 11,000 feet altitude.

For previous introduction see 100613.

103146. VACCINIUM DELAVAYI Franch. Vacciniaceae. **Blueberry.**

C. 35. A bushy shrub with grayish bark, leathery shining-green obovate leaves half an inch long, very small white flowers in small racemes, and small globose capsules. Native to Yunnan.

For previous introduction see 100615.

103147. (Undetermined.)

C. 76.

103148. (Undetermined.)

C. 93.

103149. (Undetermined.)

C. 129.

103150. (Undetermined.)

C. 258.

103151 to 103154. GOSSYPIUM HERBACEUM L. Malvaceae. **Cotton.**

From the Union of Soviet Socialist Republics. Seeds presented by A. Popov, head of the Department of New Cultures and Introduction, through Dr. N. I. Vavilov, director, Institute of Plant Industry, Leningrad. Received June 12, 1933.

From the Turkistan Plant Breeding Station; introduced for the use of Department specialists.

103151 to 103154—Continued.

103151. No. 107. **103153. No. 347.**

103152. No. 260. **103154. No. 534.**

103155 to 103173. Phoenicaceae.

Palm.

From Ceylon. Seeds presented by T. H. Parsons, curator, Royal Botanic Garden, Peradeniya. Received June 13, 1933.

103155. ARECA CONCINNA Thwaites.

A pinnate-leaved palm, 8 to 12 feet high, native to Ceylon. The subglabrous leaves, 3 to 4 feet long, are made up of lanceolate leaflets 2 feet long, and the orange-yellow spindle-shaped fruits are 1 to 2 inches long.

103156. ARECA TRIANDRA Roxb.

A graceful spineless palm, ultimately about 25 feet high, usually with several trunks which bear crowns of pinnate leaves 4 to 6 feet in length. The fruits, about the size of an olive, are orange-scarlet. Native to India.

For previous introduction see 98485.

103157. ARENGA ENGLERI Beccari.

A cluster palm with no trunk, which suckers from the ground and forms clumps 10 feet across. The pinnae are 16 inches long and over an inch wide and are fish-tail shaped. The red fruits are less than an inch in diameter.

For previous introduction see 99515.

103158. CALYPTROCALYX SPICATUS (Lam.) Blume.

A graceful palm, 30 to 40 feet high, with pinnate leaves and slender spikes of red fruits.

For previous introduction see 93401.

103159. CARYOTA MITIS Lour. (C. soboljera Mart.).

A palm, native to the Malay Peninsula, 15 to 20 feet high, which sends up suckers from the base. The pinnate leaves, 6 to 9 feet long, are divided into wedge-shaped segments, and the globular purple fruits are about the size of a cherry.

For previous introduction see 93402.

103160. CARYOTA URENS L. Toddy palm.

A palm up to 80 feet high and 18 inches in diameter, with twice palmately divided leaves 20 feet long by 12 feet wide, and the segments are curved and drooping. It is native to the Malay Archipelago.

For previous introduction see 99725.

103161. CHRYSALIDOCARPUS MADAGASCARENENSIS Beccari.

A graceful palm, native to Madagascar, about 15 feet high, with pinnate leaves 10 feet long, having the segments arranged in fascicles and appearing to be in threes, giving a triangular effect.

For previous introduction see 93408.

103162. PTYCHOSPERMA sp.

Palms of this genus have smooth, ringed trunks, crowned at the summit by a dense cluster of pinnate leaves.

103163. LINOMA ALBA (Bory) O. F. Cook (Dictyosperma alba Wendl.).

A small palm up to 30 feet high, native to tropical Africa. The pinnate

103155 to 103173—Continued.

leaves, which become 4 to 8 feet long, have whitish petioles and greenish white veins when the plants are young.

For previous introduction see 96484.

103164. *LINOMA ALBA* (Bory) O. F. Cook (*Dictyosperma alba* Wendl.).

Variety *aurea*. A form which differs from the type in having yellow or orange petioles on the young plants.

103165. *LIVISTONA DECIPIENS* Beccari.

A fan palm of medium height and a trunk diameter of about 16 inches. The leaves are made up of about 50 segments which are very weak at the tips, hanging as though wilted. It is native to South Australia.

103166. *LIVISTONA SUBGLOBOSA* (Hassk.) Mart.

A medium-sized palm, native to Java, with palmately divided leaves having segments 10 to 12 inches long, which are two-parted nearly to the base into linear pendulous lobes. The deep-violet fruits, one-half inch in diameter, are borne in a panicle on a spadix about a foot long.

For previous introduction see 93414.

103167. *LOROMA CUNNINGHAMIANA* (Wendl.) O. F. Cook (*Archontophoenia cunninghamiana* Wendl. and Drude).

A palm 70 to 80 feet high, native to Australia. The pinnately divided leaves, green on both sides, are several feet long, and the segments are acuminate and entire.

103168. *MARTINEZIA TRUNCATA* Brongn.

A palm, native to Bolivia, with a trunk up to 20 feet high, covered with brown-black spines. The pinnately divided spreading leaves, 4 to 5 feet long, are dark green with prominent veins.

103169. *ONCOSPERMA FILAMENTOSUM* Blume.

The *Nibung* is a cluster palm of great beauty which rises to a height of 50 feet and waves its pinnate leaves in the slightest breeze. Like its relative, *Oncosperma fasciculatum*, it is a spiny palm and therefore not suited to small gardens. Great clumps of this palm are wonderfully effective, however, in a proper setting. Native to the Malay Archipelago.

For previous introduction see 94091.

103170. *PINANGA KUHLII* Blume.

A stout rapid-growing palm native to the lower altitudes of western Java, becoming 16 to 25 feet high, with annulate stems 2 inches in diameter, reddish when young, and beautiful terminal fronds with pinnate blades 4 feet long and half as wide. This is one of the hardest species of *Pinanga* known.

For previous introduction see 97287.

103171. *PTYCHOCOCCUS PARADOXUS* (Scheff.) Beccari.

A slender palm, native to New Guinea, with a trunk 9 to 12 feet high, covered with dense white tomentum. The regularly pinnately divided leaves have 6 to 15 broadly lanceolate segments with obliquely truncate tips.

103155 to 103173—Continued.

103172. *TILMIA CARYOTAEOFOLIA* (H. B. K.) O. F. Cook (*Martinezia caryotaefolia* H. B. K.).

A beautiful slender straight-stemmed spiny-trunked palm up to 30 feet high, with graceful pinnate leaves and bright orange-scarlet fruits borne in drooping racemes.

For previous introduction see 102618.

103173. *VEITCHIA JOANNIS* Wendl.

A palm with pinnate leaves, native to the Fiji Islands. The leaf segments have a wide shallow notch at the apex, the sheath, petiole, and rachis are dull red, and the ellipsoid fruits, 2 to 3 inches long, are orange with a red base.

103174 to 103357.

From southwestern China and Tibet. Seeds collected by Dr. J. F. Rock, agricultural explorer, for the University of California Botanical Garden expedition, and presented through Dr. T. H. Goodspeed, Department of Botany, University of California, Berkeley, Calif. Received June 26, 1933.

103174. *ANDROMEDA* sp. Ericaceae.

No. 22335. From the Tjonatong Mountains, Upper Salwin River, Tsarung Province, southeastern Tibet, at 14,500 feet altitude. A shrub a foot high, found among rocks.

103175. *ANEMONE NARCISSIFOLIA* L. Ranunculaceae.

No. 23551. From Mount Moting, east of Atuntze, Yunnan, in alpine meadows at 11,500 feet altitude. A stout herbaceous perennial with stalky, 3- to 5-parted, deeply cut basal leaves, sessile involucre leaves, and an umbel of several white flowers an inch across, with yellow anthers. It is native to Europe and Asia.

For previous introduction see 100151.

103176 and 103177. *AQUILEGIA OXYSEPALA* Trautv. and Mey. Ranunculaceae. Columbine.

A hardy herbaceous perennial having more or less square flowers with four points; the flowers vary from purplish red to blue, yellow, and white.

For previous introduction see 68407.

103176. No. 23610. From Tsarong in the Kaakerbo Mountains, west of Dikerla and Yundshi, southeastern Tibet, in alpine meadows at 11,000 feet altitude.

103177. No. 24428. Collected north of Kulu in the Yetsi Mountains in Muli Territory, Szechwan, in a valley at 10,000 feet altitude. The flowers are purplish red.

103178. *ARTEMISIA* sp. Asteraceae.

No. 23541. From grassy slopes in the Mekong Valley in the Moting Mountains, east of Atuntze, Yunnan, at 9,000 feet altitude. An herb with yellow flowers.

103179. *ASPARAGUS* sp. Convallariaceae.

No. 24571. Collected between Muli and Kulu, Szechwan, at 9,000 feet altitude. A prostrate spreading shrub 2 feet high with pinkish flowers.

103174 to 103357—Continued.

103180 to 103186. *BERBERIS* spp. Berberidaceae. **Barberry.**

Nos. 103180 and 103181 are from alpine meadows in the Moting Mountains, east of Atuntze, Yunnan.

103180. *BERBERIS* sp.

No. 23339. A shrub 3 feet high, found at 12,000 feet altitude.

103181. *BERBERIS* sp.

No. 23340. A shrub 4 to 5 feet high, found at 13,000 feet altitude.

103182. *BERBERIS* sp.

No. 24276. From Miturong, Muli Territory, southwestern Szechwan, east of the Yalung River on the Mutikonka Mountains (a hitherto unknown snow range), at 11,500 feet altitude. A shrub up to 5 feet high, found in spruce forests.

103183. *BERBERIS* sp.

No. 24392. From Mount Siga, west of the Yalung River and north of Karadi, at 11,000 feet altitude. A shrub 1 foot high, found in open scrub.

103184. *BERBERIS* sp.

No. 24416. From the Yetsi Mountains, north of Kulu, in Muli Territory, Szechwan, at 11,000 feet altitude. A shrub 3 to 4 feet high, found in pine forests.

103185. *BERBERIS* sp.

No. 24513. From alpine regions on the western slopes of Mount Mitzuga, Muli Territory, in southwestern Szechwan, at 13,500 feet altitude. A shrub 2 to 3 feet high, found among rocks.

103186. *BERBERIS* sp.

No. 25310. From Mount Haba, north of the Yangtze loop, the third peak of the Likiang Snow Range, Bårdär, at 12,000 feet altitude. A shrub 5 to 6 feet high, found in open rocky regions.

103187. *ADENOPHORA COELESTRIS* Diels. Campanulaceae.

No. 24594. From Mount Gibboth, southwestern Szechwan, near the Yunnan border, in alpine meadows between 11,500 and 12,000 feet altitude.

103188 to 103191. *CASSIOPE* spp. Ericaceae.

103188. *CASSIOPE SELAGINOIDES* Hook. f. and Thoms.

No. 21935. A shrub with white flowers found in alpine regions among scrub at 15,000 feet altitude on Mount Kenichunpo, Tsarung Province, southeastern Tibet.

103189. *CASSIOPE* sp.

No. 22173. From alpine regions at the upper headwaters of the Eastern Irrawaddy River in southeastern Tibet at 14,000 feet altitude. A shrub with white flowers found on mossy banks among rhododendron scrub.

103190. *CASSIOPE* sp.

No. 22687. From the Solola, Tsarung Province, southeastern Tibet, at 14,500 feet altitude. A shrub with white flowers found on rocks and among shrubs.

103191. *CASSIOPE* sp.

No. 23554. From Mount Moting, east of Atuntze, Yunnan, at 14,500 feet

103174 to 103357—Continued.

altitude. A shrub with white flowers found on alpine ridges under rhododendron scrub.

103192. *CEPHALOTAXUS* sp. Taxaceae.

No. 23289. From Mount Fuchuan, west of the Mekong-Salwin Divide, west of Weihsü, Szechwan, between 9,500 and 10,000 feet altitude. A tree 30 to 40 feet high.

103193. *CEPHALOTAXUS* sp. Taxaceae.

No. 25420. From Mount Laochun, southwest of Shiku and the Yangtze. A tree 60 to 80 feet high, found in open forest at 10,500 feet altitude.

103194 to 103196. *CLEMATIS* spp. Ranunculaceae.

103194 and 103195. *CLEMATIS MONTANA* Buch.-Ham. **Anemone clematis.**

An ornamental vigorous climber, 30 feet or more in length, with solitary, pure-white flowers. It is native to the Himalayan region.

103194. No. 22284. From the Solola, Tsarung Province, southeastern Tibet; found along water-courses in forests at 11,500 feet altitude.

103195. No. 23552. From Mount Moting, east of Atuntze, Yunnan, in fir forests at 12,000 feet altitude.

103196. *CLEMATIS* sp.

No. 23623. Collected in the Kaakerbo Mountains, southeastern Tibet, at Tsarung, west of Dikerla and Yundshi. A shrub 1 to 2 feet high with white flowers, found along streams at 9,000 feet altitude.

103197 to 103199. *CODONOPSIS* spp. Campanulaceae.

Nos. 103197 and 103198 were collected on Mount Moting, east of Atuntze, Yunnan, in alpine meadows.

103197. *CODONOPSIS BULLEYANA* Forrest.

No. 23442. A malodorous perennial about a foot high with an ascending stem, hairy heart-shaped leaves 4 to 6 inches long, and pale lavender-blue flowers nearly half an inch long, found at 14,000 feet altitude. Native to southwestern China.

For previous introduction see 100163.

103198. *CODONOPSIS* sp.

No. 23443. A malodorous perennial with pale-blue flowers found at 12,500 feet altitude.

103199. *CODONOPSIS* sp.

No. 24596. From Mount Gibboth, southwestern Szechwan, near the Yunnan border, at 13,000 feet altitude. An herb with purple flowers, found in meadows.

103200 to 103210. *COTONEASTER* spp. Malvaceae.

103200. *COTONEASTER DIVARICATA* Rehd. and Wils.

No. 22336. From the Tjonatong Mountains on the Upper Salwin River, Tsarung Province, southeastern Tibet, at 14,000 feet altitude. A shrub up to

103174 to 103357—Continued.

6 feet high, with gracefully reflexed branches, shining green leaves, paler beneath, and small rose-colored flowers. The red fruits are ovoid. Native to southwestern China.

For previous introduction see 53675.

103201. COTONEASTER SALICIFOLIA
Franch. Willowleaf cotoneaster.

No. 22554. From the northern slopes of Mount Kenichunpo, west of the Salwin River in the Siktung Mountains, Tsarung Province, southeastern Tibet, at 11,000 feet altitude, in open scrub. A half-evergreen, or in mild climates, evergreen shrub up to 15 feet high, with slender spreading branches, ovate-lanceolate or elliptic-oblong acute cuneate leaves up to over an inch long, white tomentose beneath; small white flowers, and bright-red roundish berries one-fifth of an inch in diameter. Native to western China.

For previous introduction see 102209.

103202. COTONEASTER sp.

No. 22631. From the Solola, Tsarung Province, southeastern Tibet. A shrub 4 feet high, found among boulders at 13,500 feet altitude.

103203. COTONEASTER ADPRESSA Bois.

No. 23377. From Mount Moting, east of Atuntze, Yunnan, at 14,000 feet altitude. A spreading shrub, usually less than a foot high, which forms a clump several feet in diameter with the stems rooting easily where they touch the ground. The solitary flowers, with pink-tipped petals, are followed by bright-red fruits.

For previous introduction see 55080.

103204. COTONEASTER DIVARICATA Rehd. and Wils.

No. 24308. From Miturong, Muli Territory, east of the Yalung River on the Mutikonka Mountains (a hitherto unknown snow range) in southwestern Szechwan; in open places at 11,000 feet altitude.

For previous introduction and description see 103200.

103205. COTONEASTER sp.

No. 24367. From south of Dzempe Sheren in the Sagi Valley, Szechwan, in open forests at 12,000 feet altitude. A shrub 4 to 5 feet high with pinkish flowers.

Nos. 103206 and 103207 were collected on Mount Siga, west of the Yalung River and north of Karadi.

103206. COTONEASTER sp.

No. 24386. A shrub 3 to 4 feet high with pinkish flowers found on a forested slope at 11,000 feet altitude.

103207. COTONEASTER sp.

No. 24389. A spreading shrub with pinkish flowers found among rocks and boulders at 12,500 feet altitude.

103208. COTONEASTER HORIZONTALIS
PERPUSILLA C. Schneid.

No. 24554. Found at 14,500 feet altitude on the western slopes of Mount Mitzuga, Muli Territory, Szechwan. An ornamental prostrate shrub well adapted for rockeries. It has a low

103174 to 103357—Continued.

growth and develops an abundance of almost horizontal branches. The leaves are rounded oval, glabrous, and less than one-third of an inch long. The flowers are pinkish, and the abundant bright-red ovoid fruits are one of the most attractive features of the plant.

For previous introduction see 45706.

103209. COTONEASTER RACEMIFLORA
SOONGARICA C. Schneid.

No. 24560. Between Muli and Kulu, Szechwan, on open mountain slopes at 10,000 feet altitude. An erect shrub up to 4 feet high, but sometimes prostrate. The leaves are oval and usually somewhat obtuse, and the small white flowers are followed by red fruits.

For previous introduction see 44083.

103210. COTONEASTER sp.

No. 25353. From the lower slopes of Mount Yulung, Likiang Snow Range, Yunnan, at 9,500 feet altitude. A shrub 5 to 6 feet high with white flowers.

103211. DAPHNE TANGUTICA Maxim. Thymelaeaceae.

No. 24488. From Mount Kanshu, on the trail to the Leirong Mountains, southwestern Szechwan, in fir forests at 12,500 feet altitude. A low densely branched evergreen shrub of compact sturdy habit; the young shoots are hairy, and the leathery oval to obovate leaves, 1 to 2 inches long, are densely arranged toward the end of the twigs. The flowers, white with a violet tinge, are borne in a crowded cluster on a short conspicuously brown-felted stalk. The berries are bright red.

103212. AQUILEGIA OXYSEPALA Trautv. and Mey. Ranunculaceae.

No. 22253. From the Solola, Tsarung Province, southeastern Tibet, in alpine meadows at 14,000 feet altitude. A very early flowering herbaceous perennial 2 to 3 feet high, with large blue, yellow, and white flowers. The spurs are short and are bent inward.

For previous introduction see 92045.

103213 to 103217. DELPHINIUM spp. Ranunculaceae. Larkspur.

103213. DELPHINIUM sp.

No. 22373. From Mount Wulila, a high mountain east of the Salwin River and north of Alulaka, southeastern Tibet, at 13,000 feet altitude. Blue flowers; found in alpine meadows.

Nos. 103214 to 103217 were collected on Mount Moting, east of Atuntze, Yunnan.

103214. DELPHINIUM YUNNANENSIS
Franch.

No. 23421. A perennial alpine with a simple or branched stem and pale-green, finely pubescent leaves that are divided to the middle into five obovate incised segments. The calyx is intensely blue while the petals are bluish violet, the entire flower being four-fifths of an inch long.

103215. DELPHINIUM sp.

No. 23444. Pale-lavender flowers; from 13,500 feet altitude.

103174 to 103357—Continued.

103216. DELPHINIUM LIKIANGENSE Franch.

No. 23457. One of the finest larkspurs; the dark-green, glossy leaves are in cushionlike rosettes; the large rich-blue flowers are an inch across, and there are several spikes on a plant at one time. Found in alpine meadows at 13,000 feet altitude.

For previous introduction see 100184.

103217. DELPHINIUM sp.

No. 23583. Blue flowers collected at 11,000 feet altitude.

103218. DIPELTA YUNNANENSIS Franch. Caprifoliaceae.

No. 24576. Collected between Muli and Kulu, Szechwan, at 9,000 feet altitude. A shrub from 5 to 15 feet high, with opposite entire lanceolate leaves 3 to 6 inches long and leafy racemes of two-lipped tubular-campanulate pinkish to purple flowers having shieldlike floral bracts.

For previous introduction see 97601.

103219. GAULTHERIA sp. Ericaceae.

No. 22057. From Mount Kenichunpo, west of Champutong, at 12,000 feet altitude. A shrub 6 to 8 feet high with pink flowers.

103220. HEMEROCALLIS sp. Liliaceae. Daylily.

No. 24558. Collected between Muli and Kulu, Szechwan, in alpine forest at 11,000 feet altitude. A daylily with orange-yellow flowers.

103221. ILEX PERNYI Franch. Aquifoliaceae. Holly.

No. 24556. Collected between Muli and Kulu, Szechwan, in valleys debouching into the Litang River, at 9,000 feet altitude. A dense-growing evergreen holly of very dwarf and compact habit, with small dark-green spiny leaves, squarish at the base, and red berries. It is probably allied to *Ilex cornuta* and was first discovered by Père Paul Perny in western China.

For previous introduction see 92776.

103222 to 103233. IRIS spp. Iridaceae.

103222. IRIS sp.

No. 22254. From the Solola, Tsarung Province, southeastern Tibet. An iris with deep purple-blue flowers, found in alpine meadows at 12,500 feet altitude.

Nos. 103223 and 103224 were collected on Mount Moting, east of Atuntze, Yunnan, in alpine meadows.

103223. IRIS sp.

No. 23361. An iris with blue flowers, found between 12,500 and 13,000 feet altitude.

103224. IRIS sp.

No. 23374. An iris with bluish-purple flowers, found at 11,500 feet altitude.

Nos. 103225 and 103226 were collected at Miturong, Muli Territory, east of the Yalung River, on the Mutikonka

103174 to 103357—Continued.

Mountains (a hitherto unknown snow range) in southwestern Szechwan, at 14,000 feet altitude, in alpine meadows.

103225. IRIS sp.

No. 24303. An iris with deep-blue flowers.

103226. IRIS sp.

No. 24318. An iris with purple-spotted yellow flowers.

Nos. 103227 to 103229 were collected in Muli Territory, at Dzempe Sheren, west of Wuata Gomba, Szechwan, between 12,000 and 13,500 feet altitude, in alpine meadows.

103227. IRIS sp.

No. 24324. An iris with deep purple-blue flowers; found in wet meadows.

103228. IRIS sp.

No. 24331. An iris with pale-blue flowers.

103229. IRIS sp.

No. 24335. An iris with dark-purple flowers.

Nos. 103230 and 103231 were collected in alpine meadows at 13,000 feet altitude, south of Dzempe Sheren, in the Sagi Valley, Szechwan.

103230. IRIS sp.

No. 24355. An iris with dark purple-blue flowers.

103231. IRIS sp.

No. 24375. An iris with dark-blue flowers.

103232. IRIS sp.

No. 24451. From the Yetsi Mountains, north of Kulu, Muli Territory, Szechwan, in alpine meadows at 14,500 feet altitude; an iris with pale-blue flowers.

103233. IRIS sp.

No. 25279. From meadows at Chungtien, west of the Hsiao Chungtien Mountains between 11,500 and 12,000 feet altitude. An iris with dark-blue flowers.

103234. JUNIPERUS sp. Pinaceae. Juniper.

No. 22300. From the Solola, Tsarung Province, southeastern Tibet. A shrub spreading from the base, 4 to 5 feet tall.

103235. LARIX POTANINI Batal. Pinaceae. Chinese larch.

No. 25270. From the mountains west of Hsiao Chungtien, Yunnan, at 15,000 feet altitude. A deciduous tree 75 to 100 feet high, native to western China. The pendulous branchlets are orange or red brown, the slender compressed gray-green leaves are about 1 inch long, and the ovoid-oblong cones, 2 inches long, are violet purple, changing to brown.

103236. LARIX sp. Pinaceae. Larch.

No. 23404. From Mount Moting, east of Atuntze, Yunnan; a tree 30 to 40 feet high found in alpine regions at 15,000 feet altitude.

103174 to 103357—Continued.

103237. *LIGUSTRUM* sp. Oleaceae. Privet.

No. 24405. From Mount Siga, west of the Yalung River, north of Karadi, Szechwan. A shrub 4 to 5 feet high with white flowers, found on forested slopes at 14,000 feet altitude.

103238 to 103250. *LILIUM* spp. Liliaceae. Lily.

Nos. 103238 and 103239 were collected on grassy slopes at 12,000 feet altitude on Mount Kenichunpo.

103238. *LILIUM* sp.

No. 21933. A lily 3 feet tall with white flowers.

103239. *LILIUM* sp.

No. 21937. A lily with purplish-red flowers.

103240. *LILIUM* sp.

No. 22152. From the northern slopes of Mount Kenichunpo, north of Sikitung on the Upper Salwin River, Tsarung Province, southeastern Tibet. A lily with red flowers, found in alpine meadows at 13,000 feet altitude.

103241. *LILIUM TALIENSE* Franch.

No. 22264. From alpine meadows at 12,000 feet altitude in the Solola, Tsarung Province, southeastern Tibet. A martagon lily with stout gray-green stems, 3 to 5 feet high, that are clothed with dense white scabrid pubescence. The linear to lanceolate leaves are 2 to 4 inches long, and the fragrant nodding purple-spotted white flowers, 2 inches long, are in subverticillate clusters of 2 to 12.

For previous introduction see 99902.

103242. *LILIUM* sp.

No. 22542-I.

103243. *LILIUM* sp.

No. 22542-II.

103244. *LILIUM WILLMOTTIAE* Wilson.

No. 23475. From Mount Moting, east of Atuntze, Yunnan. A lily with orange-red flowers, spotted with black, found in pine forests at 10,000 feet altitude.

103245 and 103246. *LILIUM TALIENSE* Franch.

For previous introduction and description see 103241.

103245. No. 23537. From Mount Moting, east of Atuntze, Yunnan, on dry slopes in pine forests at 9,500 feet altitude. A form with pink flowers.

103246. No. 23613. From the Kaakerbo Mountains in southeastern Tibet, west of Dikerla and Yundishi, in alpine meadows at 12,000 feet altitude. A form with pinkish flowers.

103247. *LILIUM HYACINTHINUM* Wilson.

No. 24316. From Miturong, Muli Territory, east of the Yalung River on the Mutikonka Mountains (a hitherto unknown snow range), in southwestern Szechwan at 12,000 feet altitude, among scrub. A lily with stout erect shining-green stems 3 to 4 feet tall and

103174 to 103357—Continued.

scattered oblong-lanceolate leaves 6 to 8 inches long; the slightly fragrant, purple-lavender, funnel-shaped flowers, 1 to 2 inches long, are borne in racemes of 12 to 24.

For previous introduction see 99896.

103248. *NOMOCHARIS LOPHOPHORA* (Bur. and Franch.) Balf. f.

No. 24377. From alpine meadows at 12,000 feet altitude on Mount Siga, west of the Yalung River and north of Karadi, Szechwan.

For previous introduction and description see 102838.

Nos. 103249 and 103250 were collected on Mount Kintzu, Dahoyunulu, Labako, west of Shiku, at 13,000 feet altitude.

103249. *LILIUM HYACINTHINUM* Wilson.

No. 25457. Collected in fir forests.

For previous introduction and description see 103247.

103250. *NOMOCHARIS LOPHOPHORA* (Bur. and Franch.) Balf. f.

No. 25460. Collected in alpine meadows.

For previous introduction and description see 103248.

103251 to 103258. *NOMOCHARIS* spp. Liliaceae.103251. *NOMOCHARIS* sp.

No. 22176. From the northern slopes of Mount Kenichunpo in alpine regions at the headwaters of the Eastern Irawaddy, southeastern Tibet, at 12,500 feet altitude.

For previous introduction and description see 102840.

Nos. 103252 to 103254 were collected in the Tjonatong Mountains on the Upper Salwin River, Tsarung Province, southeastern Tibet.

103252. *NOMOCHARIS* sp.

No. 22309. For previous introduction see 102841.

103253. *NOMOCHARIS* sp.

No. 22310. For previous introduction see 102842.

103254. *NOMOCHARIS* sp.

No. 22311. For previous introduction see 102843.

103255. *NOMOCHARIS* sp.

No. 23256. For previous introduction and description see 102844.

Nos. 103256 and 103257 were collected on Mount Kaakerbo in alpine meadows at 12,500 feet altitude.

103256. *NOMOCHARIS* sp.

No. 23756. For previous introduction and description see 102845.

103257. *NOMOCHARIS* sp.

No. 23670. For previous introduction and description see 102846.

103258. *NOMOCHARIS* sp.

No. 25456. Collected on Mount Kintzu, Labako, northwestern Yun-

103174 to 103357—Continued.

nan, China, near fir forests at 12,500 feet altitude.

For previous introduction and description see 102847.

103259. *PAEONIA DELAVAYI* Franch. Ranunculaceae. Peony.

No. 25312. From Mount Haba, north of the Yangtze loop, third peak of the Likiang Snow Range, Bårdär, in meadows and outskirts of spruce forests at 11,000 feet altitude. A very attractive vigorous shrub 4 feet high with deep-crimson flowers 3 inches in diameter.

For previous introduction see 100576.

103260. *PICEA* sp. Pinaceae. Spruce.

No. 25333. From the eastern slopes of Maboang Vatzé, Likiang Snow Range, at 12,000 feet altitude. A tree between 60 and 80 feet high.

103261 to 103263. *PIERIS* spp. Ericaceae.103261. *PIERIS* sp.

No. 22036. From scrub forest on the northern slopes of Mount Kenichunpo, north of Sikitung, Upper Salwin River, Tsarung Province, in southeastern Tibet, at 11,500 feet altitude. A shrub with large leaves and white flowers.

103262 and 103263. *PIERIS DOYONENSIS* Hand.-Mezz.

An upright shrub 4 to 5 feet high, with stout branches and rounded elliptic leaves 1 to 4 inches long. The white tubular-campanulate flowers, one-half inch long, are in small terminal racemes. Native to Yunnan, China.

103262. No. 24279. From Miturong, Mull Territory, east of the Yalung River on the Mutikonka Mountains, in southwestern Szechwan, at 11,500 feet altitude.

103263. No. 24400. From Mount Siga, west of the Yalung River, north of Karadi, Szechwan, at 12,500 feet altitude.

103264 to 103275. *POTENTILLA* spp. Rosaceae. Cinquefoil.103264. *POTENTILLA MICROPHYLLA* DEPRESSA Wall.

No. 21971. From the northern slopes of Mount Kenichunpo, north of S'kitung, Upper Salwin River, Tsarung Province, southeastern Tibet, at 14,000 feet altitude, among crags. A densely caespitose variety with shorter stems and yellow flowers.

103265. *POTENTILLA CURVISECTA* Hook. f.

No. 22274. From the Solola, Tsarung Province, southeastern Tibet, among scree at 14,000 feet altitude. An alpine perennial with trifoliate leaves 2 to 3 inches long, the leaflets hairy, leathery, and dentate. The small, inconspicuous flowers are on slender wiry flowering stems 2 to 3 inches long. Native to the Himalayan region from 12,000 to 14,500 feet altitude.

Nos. 103266 and 103267 were collected in the Tjonatong Mountains, on the Upper Salwin River, Tsarung Province, southeastern Tibet, among boulders at 14,000 feet altitude.

103174 to 103357—Continued.

103266. *POTENTILLA KRYLOVIANA* Wolf.

No. 22320. A caespitose alpine perennial 3 to 6 inches high with small compound leaves of 2 or 3 pairs of obovate serrate leaflets, and long-stemmed yellow flowers half an inch across. Native to the Altai Mountains.

103267. *POTENTILLA STENOPHYLLA* (Franch.) Diels.

No. 22321. An alpine perennial 3 to 4 inches high, with a thick rhizome, pinnate leaves 2 to 3 inches long, and orange-yellow flowers on scapes 4 inches high.

For previous introduction see 100218.

Nos. 103268 and 103269 were collected on Mount Wulila, a high mountain east of the Salwin River and north of Alulaka, southeastern Tibet.

103268. *POTENTILLA ERIOCARPOIDES* Krause.

No. 22358. A low bushy perennial, 2 to 3 inches high, with hairy ternate leaves, the divisions being obovate-cuneate and coarsely incised. The yellow flowers are over half an inch across. Found on crags at 15,000 feet altitude. Native to eastern Tibet.

103269. *POTENTILLA CORIANDRIFOLIA* D. Don.

No. 23266. From swampy alpine meadows at 14,500 feet altitude. A tufted herb 4 inches in diameter with white flowers which have dark-red centers. Native to the Himalayan region.

For previous introduction see 100215.

Nos. 103270 to 103272 were collected west of Weihsí, west of the Mekong-Salwin Divide on Mount Fuchuan.

103270 and 103271. *POTENTILLA FRUTICOSA* DAURICA (Nestl.) Seringe.

A dwarf compact shrub from 2 to 3 feet high, with small leaves having lustrous brown stipules tipped with a tuft of conspicuous hairs. The solitary flowers are about an inch across. Found in meadows between 12,500 and 13,000 feet altitude.

For previous introduction see 97997.

103270. No. 23271. Pale cream-colored flowers.

103271. No. 23272. Yellow flowers.

103272. *POTENTILLA STENOPHYLLA* (Franch.) Diels.

No. 23281. For previous introduction and description see 103267.

Nos. 103273 to 103276 were collected on Mount Moting, east of Atuntze, Yunnan.

103273. *POTENTILLA ERIOCARPOIDES* Krause.

No. 23354. Collected at 13,000 feet altitude.

For previous introduction and description see 103268.

103274. *POTENTILLA SIBBALDI* Haller f.

No. 23393. From alpine meadows at 14,000 feet altitude. A low herbaceous perennial which forms a dense spreading tuft, with trifoliate leaves, cuneate to dentate leaflets, and small yellow flowers.

103174 to 103357—Continued.

103275. *POTENTILLA CURVISECTA* Hook.
f.

No. 23429. Found among boulders at 14,500 feet altitude.

For previous introduction and description see 103265.

103276. *SAXIFRAGA HIRCULUS ALPINA* Engl. Saxifragaceae.

No. 23446. A Chinese variety with yellow flowers and broader petals, collected at 14,000 feet altitude. The typical form is an alpine perennial, 6 inches high with yellow flowers, native to the mountains of central and northern Europe.

Nos. 103277 and 103278 are from Mount Kanshu, on the trail to the Leirong Mountains, Muli Territory, Szechwan, in meadows between 13,000 and 13,500 feet altitude.

103277. *COLORIA ELEGANS IMBRICATA* Cardot. Rosaceae.

No. 24482. An alpine perennial with a basal rosette of pinnate leaves 3 to 4 inches long, with the leaflets much crowded and imbricate. The yellow flowers, nearly an inch across, are on stems up to 8 inches high. Native to eastern Tibet.

103278. *POTENTILLA CURVISECTA* Hook, f. Rosaceae. Cinquefoil.

No. 24500. For previous introduction and description see 103265.

103279 to 103287. *PRUNUS* spp. Amygdalaceae.

103279. *PRUNUS* sp.

No. 22124. From the northern slopes of Mount Kenichunpo, north of Sikitung, Upper Salwin River, Tsarung Province, southeastern Tibet, at 12,500 feet altitude. A tree 15 to 20 feet high with white flowers.

103280. *PRUNUS* sp.

No. 22241. From the Solola, Tsarung Province, southeastern Tibet, at 14,500 feet altitude. A shrub 3 to 4 feet high with pink flowers; found among crags.

103281. *PRUNUS* sp.

No. 22396. From Wulila, a high mountain east of the Salwin River and north of Alulaka, southeastern Tibet, at 14,000 feet altitude. A wild cherry 3 to 5 feet high; flowers not seen.

103282. *PRUNUS* sp.

No. 23154.

103283. *PRUNUS* sp.

No. 23352. From Mount Moting, east of Atuntze, Yunnan, at 13,000 feet altitude. A shrub 6 to 10 feet high; flowers not seen.

103284. *PRUNUS* sp.

No. 24419. From the Yetsi Mountains, north of Kulu, Muli Territory, Szechwan, at 13,000 feet altitude. A shrub or small tree 6 to 10 feet high with pink flowers, found in alpine meadows.

103285. *PRUNUS* sp.

No. 24448. From the Kulu Mountains in Muli Territory, Szechwan, in

103174 to 103357—Continued.

fir forests at 13,000 feet altitude. A shrub 8 to 10 feet high with white flowers.

103286. *PRUNUS* sp.

No. 25266. From the mountains west of Hsiao Chungtien, northwestern Yunnan, in a spruce forest at 11,500 feet altitude. A shrub or tree 25 feet high with pinkish flowers.

103287. *PRUNUS SALICINA* Lindl. Japanese plum.

No. 25363. From Mount Yulung, in the Likiang Snow Range, between 10,500 and 11,000 feet altitude, growing among pines and rhododendrons. A tree 10 to 15 feet high with white flowers.

103288 to 103290. *MALUS BACCATA HIMALAICA* (Maxim.) C. Schneid. Malaceae. Pear.

A variety with broadly elliptic, coarsely serrate leaves, pubescent beneath.

103288. No. 24427. From the Yetsi Valley, north of Kulu, in Muli Territory, Szechwan, at 10,000 feet altitude. A tree 15 to 20 feet high with white flowers.

103289. No. 25284. From the Chungtien Plain, west of Hsiao Chungtien, northwestern Yunnan, along streams at 11,500 feet altitude. A tree 30 feet high with white flowers.

103290. No. 25366. From the meadows of Gobo, on Mount Yulung, Likiang Snow Range, east of Likiang, at 9,500 feet altitude. A tree 25 to 30 feet high.

103291 to 103300. *RIBES* spp. Grossulariaceae.

Nos. 103291 and 103292 were collected in fir forests on Mount Kenichunpo between 12,000 and 12,500 feet altitude.

103291. *RIBES* sp.

No. 21998. A shrub 6 to 8 feet high with red flowers.

103292. *RIBES* sp.

No. 22008. A shrub 5 to 10 feet high with red flowers.

103293. *RIBES* sp.

No. 24450. From the Yetsi Mountains, north of Kulu, Muli Territory, Szechwan, at 13,000 feet altitude. A shrub 5 to 6 feet high with reddish flowers.

103294. *RIBES* sp.

No. 24520. From the western slopes of Mount Mitzuga, Muli Territory, southwestern Szechwan, at 12,500 feet altitude. A shrub 2 to 4 feet high with reddish flowers.

103295. *RIBES* sp.

No. 24585. From Mount Gibboth, southwestern Szechwan, near the Yunnan border, in spruce forests at 11,000 feet altitude. A shrub 4 to 5 feet high with purple flowers.

103296. *RIBES* sp.

No. 25286. From Mount Haba, north of the Yangtze loop, the third peak of the Likiang Snow Range, Bär-

103174 to 103357—Continued.

där, in fir forests at 13,000 altitude. A shrub 10 to 15 feet high with red flowers.

Nos. 103297 to 103299 were collected on Mount Yulung, on the eastern slopes of the Likiang Snow Range, northwestern Yunnan, in fir forests between 12,000 and 12,500 feet altitude.

103297. *RIBES* sp.

No. 25336. A shrub 6 to 7 feet high with reddish flowers.

103298. *RIBES* sp.

No. 25347. A shrub 6 feet high with yellow flowers, collected at Sabaloko.

103299. *RIBES* sp.

No. 25358. A shrub 6 to 8 feet high with red flowers.

103300. *RIBES* sp.

No. 25385. From the outskirts of spruce forests on Mount Yulung, Likiang Snow Range, northwestern Yunnan, between 10,500 and 11,000 feet altitude. A shrub 5 to 6 feet high with black fruits.

103301 to 103317. *ROSA* spp. Rosaceae.
Rose.

103301. *ROSA ROXBURGHII* Tratt.
Roxburgh rose.

No. 22240. From the Solola, in Tsarung Province, southeastern Tibet, in a spruce forest at 12,000 feet altitude. A shrub 6 to 12 feet high with pale-pink flowers, followed by edible yellow-brown fruits.

For previous introduction see 99214.

103302. *ROSA* sp.

No. 22439. From the forests of Tjonatong, at 10,000 feet altitude, on Mount Wulila, east of the Salwin River and north of Alulaka, southeastern Tibet. A shrub 5 to 6 feet high; flowers not seen.

Nos. 103303 and 103304 were collected on Mount Moting, east of Atuntze, Yunnan.

103303. *ROSA* sp.

No. 23355. A shrub 6 to 10 feet high; flowers not seen; collected at 13,000 feet altitude.

103304. (Undetermined.)

No. 23519. From lateral water-courses on the banks of the Mekong River at 7,800 feet altitude.

Nos. 103305 and 103306 were collected in the Kaakerbo Mountains, west of Dikerla and Yundshi, Tsarung Province, southeastern Tibet, in open regions at 13,000 feet altitude.

103305. *ROSA* sp.

No. 23616. A shrub with white flowers.

103306. *ROSA MOYESII* Hemsl. and Wils.

No. 23659. A strikingly handsome shrub from 4 to 5 feet high with scattered, short straight prickles on the branches. The flowers vary from dark blood red to pink and are followed by orange-red, narrowly ovoid fruits 2

103174 to 103357—Continued.

inches or more in length. It is native to western China.

For previous introduction see 63369.

103307. *ROSA WILLMOTTIAE* Hemsl.
Willmot rose.

No. 24292. From Miturong, Muli Territory, east of the Yalung River on the Mutikonka Mountains, in southwestern Szechwan, in a spruce forest at 11,000 feet altitude. A shrub 3 to 4 feet high with small pink flowers.

For previous introduction see 93082.

Nos. 103308 and 103309 were collected in forests south of Dzempe Sheren, in the Sagi Valley.

103308. *ROSA GRACILIFLORA* Rehd. and Wils.

No. 24376. A slender-branched shrub 6 to 12 feet high, with membranous leaves composed of 9 to 11 oval or elliptic light-green leaflets up to 1 inch long and red to pink flowers over an inch across, solitary at the ends of the branchlets. Collected at 13,000 feet altitude. Native to western Szechwan, China.

103309. *ROSA* sp.

No. 24391. A shrub 6 to 8 feet high with white flowers, found at 11,000 feet altitude.

103310. *ROSA* sp.

No. 24449. A shrub 5 feet high with white flowers, found at 13,000 feet altitude in a fir forest in the Yetal Mountains, north of Kulu, Muli Territory, Szechwan.

103311. *ROSA GRACILIFLORA* Rehd. and Wils.

No. 24508. From Mount Kanshu, on the trail to the Leirong Mountains, Muli Territory, Szechwan, in a fir forest at 12,000 feet altitude.

For previous introduction and description see 103308.

Nos. 103312 and 103313 were collected between Muli and Kulu, Szechwan.

103312. *ROSA* sp.

No. 24557. A shrub 6 to 8 feet high with white flowers, found along streams at 9,800 feet altitude.

103313. *ROSA* sp.

No. 24561. A spreading shrub with white flowers, found at 9,000 feet altitude.

103314. *ROSA* sp.

No. 24600. From Mount Gibboth, southwestern Szechwan, near the Yunnan border, in a pine forest at 10,000 feet altitude. A shrub 2 to 3 feet high with white flowers.

Nos. 103315 and 103316 were collected on Mount Haba, north of the Yangtze loop, third peak of the Likiang Snow Range, Bårdär, in a fir forest at 12,000 feet altitude.

103315. *ROSA* sp.

No. 25285. A shrub 6 to 8 feet high with white flowers.

103174 to 103357—Continued.

103316. *ROSA GRACILIFLORA* Rehd. and Wils.

No. 25318. For previous introduction and description see 103311.

103317. *ROSA* sp.

No. 25397. From Mount Yunlu, southeast of Likang, Yangtze-Mekong watershed, in fir forests at 12,500 feet altitude. A shrub 6 feet high with white flowers.

103318 to 103322. *RUBUS* spp. Rosaceae.

103318. *RUBUS* sp.

No. 22630. From the Solola, in Tsarung Province, southeastern Tibet, in a larch and fir forest at 12,500 feet altitude. A shrub with yellow fruits.

103319. *RUBUS STEPHANANDRA* Lev.

No. 23275. Variety *chinensis*. From Mount Fuchuan, west of the Mekong-Salwin Divide, west of Weihsü, Szechwan, on the outskirts of forests at 11,500 feet altitude. A shrub 4 to 5 feet high, armed with slender reflexed thorns. The trifoliolate pubescent leaves have small ovate doubly dentate leaflets, and the small white flowers are solitary. Native to Szechwan.

103320. *RUBUS* sp.

No. 24429. From alpine meadows at 13,000 feet altitude in the Yetsi Mountains, north of Kulu, Muli Territory, Szechwan. A shrub 2 feet high with white flowers.

103321. *RUBUS* sp.

No. 25322. From a valley at 10,000 feet altitude on Mount Yulung, Likang Snow Range. A woody climber with fragrant yellow flowers.

103322. *RUBUS* sp.

No. 25413. From Mount Laochun, southwest of Shiku, and the Yangtze, in canebrake at 12,000 feet altitude. A shrub 2½ feet high with pink flowers.

103323 to 103326. *SALVIA* spp. Menthaceae. Sage.

103323. *SALVIA HIANS* Royle.

No. 22378. From alpine meadows at 14,500 feet altitude on Mount Wulila, east of the Salwin River and north of Alulaka, southeastern Tibet. A viscid-hairy perennial herb 2 to 3 feet high, with cordate toothed leaves, 4 to 7 inches long, on petioles often 10 inches long. The blue flowers, 1 to 2 inches long, with very inflated throats, are borne in large spreading panicles.

For previous introduction see 101794.

103324. *SALVIA* sp.

No. 23273. From alpine meadows at 13,000 feet altitude on Mount Fuchuan, west of the Mekong-Salwin Divide, west of Weihsü, Szechwan. A perennial herb with purplish-pink flowers.

103325. *SALVIA* sp.

No. 23609. From alpine meadows between 13,500 and 14,000 feet in the Kaakerbo Mountains in southeastern Tibet, west of Dikerla and Yundshi. A perennial herb with purple flowers.

103174 to 103357—Continued.

103326. *SALVIA HIANS* Royle.

No. 25316. From Mount Haba, north of the Yangtze loop, third peak of the Likang Snow Range, Bårdär, at 13,500 feet altitude, in a fir forest.

For previous introduction and description see 103323.

103327 to 103331. *SILENE* spp. Silenaceae. Catchfly.

Nos. 103327 and 103328 were collected on Mount Moting, east of Atunze, Yunnan.

103327. *SILENE* sp.

No. 23423. An herb with purple flowers found in meadows at 14,000 feet altitude.

103328. *SILENE AFRICA* Turcz.

No. 23486. An herb found in pine forests of Tsechung, on the Mekong River, at 7,000 feet altitude.

Nos. 103329 and 103330 were collected in alpine meadows on Mount Kanshu, on the trail to the Leirong Mountains, southwestern Muli, Szechwan.

103329. *SILENE* sp.

No. 24468. An herb with purple flowers, collected at 11,000 feet altitude.

103330. *SILENE* sp.

No. 24478. An herb with purple flowers collected at 12,500 feet altitude.

103331. *SILENE* sp.

No. 24593. From Mount Gibboch, southwestern Szechwan, near the Yunnan border. An herb with lavender flowers, found in meadows at 11,000 feet altitude.

103332 to 103346. *SORBUS* spp. Malaceae. Mountain-ash.

103332. *SORBUS VILMORINI* C. Schneid.

No. 22048. From Mount Kenichunpo in the mountains of Champung at 11,000 feet altitude. A shrub or tree 10 to 15 feet high, with feathery compound leaves and white to red flowers succeeded by bright translucent rose-red fruits.

For previous introduction see 61992.

103333. *SORBUS SETSCHWANENSIS* (C. Schneid.) Koehne.

No. 22286. From forests on the Solola, Tsarung Province, southeastern Tibet. A shrub or small tree 10 to 12 feet high. The compound leaves, 2 to 4 inches long, are composed of 12 to 17 pairs of narrow-oblong leaflets, and the white to red flowers are in clusters 1 to 2 inches across. This has the smallest leaves of any of the mountain-ashes, and is native to Szechwan.

103334. *SORBUS* sp.

No. 22346.

103335. *SORBUS VILMORINI* C. Schneid.

No. 23299. From Mount Fuchuan, west of the Mekong-Salwin Divide, west of Weihsü, Szechwan.

For previous introduction and description see 103332.

103174 to 103357—Continued.

Nos. 103336 to 103341 were collected on Mount Moting, east of Atuntze, Yunnan.

103336. *SORBUS* sp.

No. 23362. A tree 12 to 15 feet high, with white flowers, found in a spruce forest at 12,500 feet altitude.

103337. *SORBUS* sp.

No. 23390. A shrub or tree 10 to 20 feet high, found in mixed forests at 11,500 feet altitude.

103338. *SORBUS* sp.

No. 23468. A tree 20 feet high, found in forests at 12,000 feet altitude.

103339. *SORBUS* sp.

No. 23500. A tree from 10 to 15 feet high, with pinkish flowers, found in forests between 11,000 and 12,000 feet altitude.

103340. *SORBUS* sp.

No. 23543. A shrub or small tree 6 to 15 feet high, with pink flowers, collected in a fir forest at 12,000 feet altitude.

103341. *SORBUS* sp.

No. 23547. A small tree 10 to 15 feet high, with white flowers, collected in a fir forest at 12,000 feet altitude.

Nos. 103342 and 103343 were collected at Tsarong, west of Dikerla and Yundshi, in the Kaakerbo Mountains, in southeastern Tibet, in a fir forest at 12,000 feet altitude.

103342. *SORBUS* sp.

No. 23644. A tree 10 feet high with red flowers.

103343. *SORBUS* sp.

No. 23657. A shrub 6 to 8 feet tall with white flowers.

103344. *SORBUS VILMORINI* C. Schneid.

No. 24275. From Miturong, Muli Territory, east of the Yalung River on the Mutikonka Mountains (a hitherto unknown snow range), southwestern Szechwan, in a spruce forest at 12,000 feet altitude.

For previous introduction and description see 103332.

103345. *SORBUS* sp.

No. 24553. From forests at 11,000 feet altitude, on the western slopes of Mount Mitzuga, Muli Territory, Szechwan. A shrub 10 to 15 feet high with pink flowers.

103346. *SORBUS* sp.

No. 25250. From a fir forest at 12,500 feet altitude, in the mountains west of Hsiao Chungtien, northwestern Yunnan. A shrub 10 to 15 feet high with white flowers.

103347. *SPIRAEA ARCUATA* Hook. f. *Rosaceae*. *Spirea*.

No. 24426. Among trees at 11,000 feet altitude, in the Yetsi Mountains, north of Kulu, Muli Territory, Szechwan. A bushy shrub 6 to 8 feet high with shining dark-brown branches and small obovate, coarsely toothed or lobed leaves;

103174 to 103357—Continued.

leaves one-half inch long. The small flowers, which vary from red to white, are in dense corymbs. Native to the Himalayan region between 11,000 and 14,000 feet altitude.

103343. *STYRAX SCHWELIENSIS* W. W. Smith. *Styracaceae*. *Snowbell*.

No. 24572. Between Muli and Kulu, Szechwan, in valleys at 8,000 feet altitude. A deciduous shrub from 3 to 9 feet high with broadly elliptic, shortly acuminate papery leaves 2 inches long and small dull creamy-white flowers in terminal and axillary racemes. Native to southwestern China.

103349. *SYMPLOCOS* sp. *Symplocaceae*. *Sweetleaf*.

No. 22061. From Mount Kenichunpo at 10,000 feet altitude; a tree 15 to 20 feet high with cream-colored flowers.

103350. *SYRINGA YUNNANENSIS* Franch. *Oleaceae*. *Lilac*.

No. 24349. From Dzempe Sherpo, west of Wuato Gomba, in Muli Territory, Szechwan, in spruce forests at 12,000 feet altitude. A shrub from 3 to 8 feet high with fragrant pink flowers.

For previous introduction see 100905.

103351 and 103352. *TUMION FARGESII* (Franch.) Skeels (*Torreya fargesii* Franch.). *Taxaceae*.

An evergreen tree sometimes over 100 feet tall, with a trunk over 4 feet in diameter, and huge descending branches, which is found occasionally in the deciduous and semideciduous forests of the Mekong-Yangtze Divide, and also more commonly on the Mekong-Salwin Divide at an altitude of 10,000 feet. The fruits are the size of small walnuts. The tree prefers rich black soil and considerable rainfall.

For previous introduction see 58600.

103351. No. 22656. From the Solola, Tsarung Province, southeastern Tibet. A shrub or small tree 10 to 15 feet high, found in open scrub forest land at 10,000 feet altitude.

103352. No. 23291. From Mount Fuchuan, west of the Mekong-Salwin Divide, west of Weihsi, Szechwan, at 10,000 feet altitude. A tree 50 to 60 feet high.

103353 to 103356. *VACCINIUM* spp. *Vacciniaceae*. *Blueberry*.103353. *VACCINIUM* sp.

No. 22340. From the Tjonatong Mountains, Upper Salwin River, Tsarung Province, southeastern Tibet, at 14,500 feet altitude. A shrub 1 foot high with pink flowers, found among rocks.

103354. *VACCINIUM* sp.

No. 22407. From Mount Wulila, east of the Salwin River and north of Alulaka, southeastern Tibet, at 13,500 feet altitude. A shrub up to 6 inches high, found among rocks and boulders.

103355. *VACCINIUM FRAGILE* Franch.

No. 22653. From the Solola, Tsarung Province, southeastern Tibet, at 12,000 feet altitude. A shrub 1 foot high with red fruits, found among rocks.

103174 to 103357—Continued.

103356. *VACCINIUM DELAVAYI* Franch.

No. 23522. From Mount Moting, east of Atuntze, Yunnan, at 12,000 feet altitude. A shrub with pink flowers, found among rocks.

103357. *VITIS PENTAGONA* Diels and Gilg. Vitaceae. Grape.

No. 24574. Between Muli and Kulu, Szechwan, at 9,000 feet altitude. A woody vine, native to China, with the stems and leaves reddish-gray tomentose. The long-petioled, papery ovate leaves are usually five-angled, and the flowers are greenish.

For previous introduction see 93969.

103358. *PHOENIX ABYSSINICA* Drude. Phoenicaceae. Date palm.

From Africa. Seeds presented by the director of the Ufficio Agrario, Asmara, Eritrea, through the Royal Botanic Gardens, Kew, England. Received June 23, 1933.

A palm, native to Ethiopia, closely resembling the common date palm. The lower leaflets are reduced to spines, while the upper ones, lanceolate and 10 inches long, are in separated groups. The dry cylindrical fruits are about 1 inch long, with no flesh. Introduced for the use of Department specialists.

103359 to 103402.

From the Union of Soviet Socialist Republics. Seeds presented by A. P. Iljinski, chief botanist in charge of the Botanic Garden, Leningrad. Received June 21, 1933.

103359. *ACER CAUDATUM UKURUNDUENSE* (Trautv. and Meyer) Rehd. Aceraceae. Maple.

A small Manchurian tree with coarsely toothed 5- or 7-lobed leaves.

For previous introduction see 91244.

103360 to 103375. *AQUILEGIA* spp. Ranunculaceae. Columbine.103360 and 103361. *AQUILEGIA ALPINA* L. Alpine columbine.

103360. An alpine columbine about 12 inches high, native to Switzerland. The biternate leaves have deeply lobed divisions 1 to 2 inches long, and the expanded flowers are 2 inches across with blue sepals and white petals, the incurved spurs being as long as the petals.

103361. Variety *superba*.103362. *AQUILEGIA ATRATA* Koch.

A perennial columbine closely resembling *Aquilegia vulgaris*, but differing in its more deeply lobed leaves and smaller flowers, which are blackish violet with long protruding stamens. Native to central Europe.

103363. *AQUILEGIA BERTOLONII* Schott.

An alpine plant over a foot high, with long-stemmed biternate, incised-lobed basal leaves and pale-blue flowers. It is native to the Alps.

For previous introduction see 101769.

103359 to 103402—Continued.

103364. *AQUILEGIA BREVI-STYLA* Hook.

A pubescent or glandular perennial native to northwestern America. The basal leaves are biternate with three-lobed and coarsely serrate leaflets, the stem leaves are ternate or simple and three-lobed. The blue and white flowers are less than an inch long, and the spurs are about one-third of an inch long.

103365. *AQUILEGIA BUERGERIANA* Sieb. and Zucc.

A perennial herb, native to Japan, with biternate leaves and yellow flowers tinted with purple. The erect nearly straight spurs are as long as the petals.

103366. *AQUILEGIA CARMASINA* Hort.

A name for which a place of publication and a description have not been found.

103367. *AQUILEGIA CAUCASICA* (Ledeb.) Rupr.

An upright herbaceous perennial, native to the Caucasus, with biternate, finely pubescent leaves and rather large attractive flowers, the sepals being pink or sky blue and the petals yellow.

103368. *AQUILEGIA EINSELEANA* Schultz.

A columbine from the Alps of western Germany, with stiff, ternate, incised or crenate leaves and blue flowers, smaller than those of *Aquilegia alpina*.

For previous introduction see 101768.

103369. *AQUILEGIA FRAGRANS* Benth.

A perennial herb, possibly a form of *Aquilegia vulgaris*, native to the Himalayas at altitudes between 10,000 and 14,000 feet in India and Tibet. The stems and leaves are softly pubescent or glandular and often glaucous, and the white fragrant flowers have long slender straight or hooked spurs.

103370. *AQUILEGIA HELENÆ* Hort. Helen columbine.

Considered to be a hybrid between *Aquilegia caerulea* and *A. chrysantha*. The plants are robust with numerous blue and white flowers.

103371. *AQUILEGIA MONSTROSA* Hort.

A name for which a place of publication and a description have not been found.

103372. *AQUILEGIA SIBIRICA* Lam. Siberian columbine.

A nearly glabrous perennial herb, 1 to 2 feet high, native to Siberia. The biternate leaves are made up of shallow-lobed leaflets 1 to 2 inches broad, and the many lilac-blue and white flowers have stout incurved or even coiled spurs one-half inch long.

103373 to 103375. *AQUILEGIA VULGARIS* L. European columbine.

103373. Variety *nivea grandiflora*; large white flowers produced in great profusion.

103359 to 103402—Continued.

103374. Variety *olympica*; large light-lilac or bright-purple and white flowers.

103375. Variety *stellata*.

103376. *COTONEASTER MELANOCARPA* Lodd. Malaceae.

A spreading shrub 6 to 8 feet high, native to Europe and Asia. The broadly ovate leaves, 1 to 2 inches long, are dull dark green above and whitish tomentose beneath, and the nodding pinkish flowers, in clusters of 3 to 8, are followed by subglobose black fruits.

103377. *IRIS BUNGEI* Maxim. Iridaceae.

A Mongolian iris of the Apogon section, with linear basal leaves and pale-blue flowers, violet within.

103378. *IRIS* sp. Iridaceae.

103379 to 103383. *LILIUM* spp. Liliaceae.
Lily.

103379. *LILIUM BULBIFERUM* L.

A bulbous perennial, native to Europe, with a furrowed stem 2 to 4 feet high, the upper part covered with white down and bearing bulblets in the leaf-axils. The lanceolate leaves are 3 to 4 inches long, and the 1 to 4 bright orange-red flowers, 3 to 4 inches across, are spotted with purple and tinged in the center with yellow.

103380 and 103381. *LILIUM MARTAGON* L. Martagon Lily.

The martagon lily grows wild from central and southern Europe to southwestern Siberia. The stem is 3 to 6 feet high, often purple spotted, with horizontal deep-green leaves 3 to 6 inches long. The dull claret-purple flowers, spotted purplish black, with red anthers, appear in late June and July and from 3 to 20 flowers blossom at one time.

For previous introduction see 101995.

103380. The typical form.

103381. A fasciated form.

103382. *LILIUM MONADELPHUM* Bieb. Great Caucasian Lily.

A lily with canary-yellow flowers thickly dotted with purple.

For previous introduction see 101919.

103383. *LILIUM TIGRINUM* Ker. Tiger Lily.

A lily native to southwestern China where it is found along watercourses at 9,000 feet altitude. The large orange and purple black-spotted flowers are very attractive.

103384 to 103386. *NEPETA* spp. Mentha-
ceae.

103384. *NEPETA BARBATA* Regel and Winkl.

An erect or ascending herb over a foot high, with ovate acute short-stemmed leaves about 1 foot long and small flowers in lax cymelike racemes. Native to eastern Turkistan.

103385. *NEPETA CYANEA* Stev.

A perennial mint, native to the eastern Caucasus, with hairy ovate cuneate leaves and showy blue flowers in small cymes.

103359 to 103402—Continued.

103386. *NEPETA GRANDIFLORA* Bieb.

A green nearly glabrous perennial 1 to 2 feet high, native to the Caucasus region. The heart-shaped leaves are crenate, and the two-lipped flowers are violet and blue.

103387 to 103391. *PAEONIA* spp. Ranun-
culaceae. Peony.

103387. *PAEONIA ALBIFLORA* Pall. Chinese peony.

A perennial herb 2 to 3 feet high, native to eastern Asia. The biternate leaves are made up of oblong-lanceolate leaflets, 3 to 4 inches long, often red veined. The 2 to 5 flowers have eight or more white or pink petals, the stamens are golden yellow, and the 3 to 5 ovoid follicles are recurved-spreading.

103388. *PAEONIA ANOMALA* L.

A perennial herb, native to Europe and Asia, with one-flowered stems 2 to 3 feet high. The biternate leaves are cut into numerous lanceolate long-pointed segments, and the large bright-crimson flowers are borne in June and July.

103389. *PAEONIA BERESOWSKII* Kom.

A herbaceous perennial about 3 feet high, native to western China. The light-green leaves are 3- to 8-foliolate, and the white or pale-rose flowers are 2 to 3 inches across.

103390. *PAEONIA PEREGRINA* Mill.

A perennial herb, native to Europe, with stems 1 to 2 feet high, bearing 1 to 5 biternately divided deep-green leaves and dark-crimson flowers.

103391. *PAEONIA VEITCHII* Lynch.

A herbaceous peony, native to western China, about 2 feet high, with shining light-green leaves and purple-crimson flowers about 4 inches across.

103392. *RHODODENDRON CAUCASICUM* Pall. Ericaceae. Caucasian rhododendron.

A shrub seldom more than 3 feet high, native to the Caucasus region between 6,000 and 7,000 feet altitude. The ovate, obovate or oblong leaves, 2 to 5 inches long, with more or less recurved margins, are dark green, glabrous at maturity, and slightly rugulose on the upper surface, the under surface being covered with a thin fawn to tawny or pale rusty tomentum. The broadly campanulate flowers are yellowish or rose tinted and are borne on long erect stalks in candelabroid trusses.

For previous introduction see 101957.

103393 to 103398. *SALVIA* spp. Menta-
ceae. Sage.

103393. *SALVIA AUSTRIACA* Jacq.

A perennial herb 2 to 3 feet high, native to southern Europe, with broadly ovate leaves, and the two-lipped yellow flowers have the upper lip spotted with red.

103394. *SALVIA AXILLARIS* Moc. and Sesse.

A low bushy herb with small linear-oblong acute entire leaves and small axillary bluish flowers. Native to Mexico.

103359 to 103402—Continued.

103395. *SALVIA BERTOLONII* Vis.

A perennial herb, hairy throughout, with an erect or ascending stem, cordate-ovate crenate leaves, and branched racemes of flowers which are reddish violet or, rarely, white. Native to Dalmatia.

103396 to 103398. *SALVIA VERTICILLATA* L. Lilac sage.

A pilose herbaceous perennial 2 to 3 feet high, native to the Caucasus region. The lyre-shaped basal leaves are cordate sinuate-crenate and hispid on both surfaces, while the floral leaves are deflexed and bractlike. The small tubular lilac-blue flowers are in remote whorls of 20 to 40 arranged in branched racemes often over a foot long.

103399. *THYMUS MARSCHALLIANUS* Willd. Thyme.

A creeping subshrub, native to the Caucasus region, closely related to *Thymus serpyllum*. The stems are hirsute or villous, and the linear-oblong leaves are ciliate on both surfaces.

103400 to 103402. *TULIPA* spp. Liliaceae. Tulip.103400. *TULIPA ALTAICA* Pall.

A tulip from the Altai Mountains, with oblong-lanceolate undulate leaves slightly exceeding the flowers. The scarlet and yellow flower segments are alternately lanceolate and spatulate-oblong.

For previous introduction see 100643.

103401. *TULIPA BIEBERSTEINIANA* Schult. f.

A rather low plant with 2 or 3 lanceolate or linear grooved acute leaves and a smooth stem bearing a single flower, yellow within and greenish yellow on the outside. Native to southeastern Russia and closely related to *Tulipa celsiana*.

For previous introduction see 101619.

103402. *TULIPA* sp.103403. *GOSSYPIUM PERUVIANUM* Cav. Malvaceae. Cotton.

103403—Continued.

From Peru. Seeds presented by Alejandro Correa Elias, San Vicente, Canete, through T. H. Kearney, Bureau of Plant Industry. Received June 6, 1933.

Tanguis cotton. Introduced for the use of Department specialists.

103404. *ALLIUM SATIVUM* L. Liliaceae. Garlic.

From India. Bulbs purchased from V. H. Kulkarni, superintendent, Modibag Agricultural College, Poona, through M. K. Patel, assistant professor of mycology. Received June 30, 1933.

Introduced for the use of Department specialists.

103405. *CALONCOBA BREVIPES* (Stapf) Gilg. Flacourtiaceae.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos. Received June 27, 1933.

From a tree grown from seed received from Doctor Fairchild, June 5, 1927, collected on the West African trip with Allison V. Armour. An attractive tropical tree 20 feet high, which bears fragrant pure-white flowers 3 inches in diameter. These appear during the winter when the tree is leafless. The dry yellow fruits, about the size of a lime, contain numerous seeds from which the natives express the oil to treat skin diseases.

103406. *EHRETIA ELLIPTICA* DC. Boraginaceae.

From Texas. Seeds presented by Peter H. Heinz, Brownsville. Received June 28, 1933.

Mexican names, *Anaqua* and *manzanillo*. A shrub or tree up to 50 feet high, native to western Texas and northern Mexico. The thick oblong scabrous leaves are 1 to 4 inches long. The small, white fragrant flowers are borne profusely and are followed by sweet edible yellow fruits about one-fourth inch in diameter. The wood is used for tool handles and wheel spokes. In southern Texas young trees are used as ornamentals for planting on lawns.

Introductory statement.....	1
Inventory.....	3
Index of common and scientific names.....	19

INTRODUCTORY STATEMENT

This Inventory, no. 116, is a record of plant material received by the Division of Plant Exploration and Introduction from July 1 to September 30, 1933 (103407-103776).

The introductions listed may be grouped roughly according to the nature of the material and the purpose for which it has been received.

Citrus growers in the West and Southwest will, it is hoped, benefit through the introduction of scions of lemons, mandarins, and oranges from Morocco (103554-103579). These varieties have been developed at the experiment station at Marrakech. Plants of two unusual forms of grapefruit (*Citrus grandis*, 103603, 103604) are recorded from the Society Islands. Included in a shipment of plant material from northern India are seven lots of seeds of citrus fruits (103493-103499); these were collected in little-known villages and may be useful in breeding work.

In the field of deciduous fruits, mention should be made of an introduction of trees of apples, almonds, and peaches from Natal, South Africa (103750-103765). These will be tested in the mild-wintered sections of the United States.

Plant pathologists working with wheat rust will be interested in a collection of wheat varieties (*Triticum* spp., 103527-103553) that have shown a certain degree of resistance to rust under Australian conditions. These were presented by the Department of Agriculture, Sydney, New South Wales. From this same general locality were received also 23 named varieties of oats (*Avena* spp., 103665-103687), through the courtesy of the Wagga Experiment Farm, Bomen, New South Wales.

The mountainous region of southwestern China has proved for many years a rich source of new or rare plants, chiefly valued as ornamentals. Through the kindness of the University of California,

under whose auspices Dr. J. F. Rock was once more exploring in that part of China, this Division received seeds of a large number of trees, shrubs, and herbaceous plants. Of similar nature is a lot of seeds of trees and shrubs (103421-103439) collected in western China and presented by the Bodnant Gardens of North Wales.

The botanical determinations of these introductions were made and the nomenclature determined by the late H. C. Skeels,¹ who had general supervision of this inventory.

B. Y. MORRISON,
Principal Horticulturist, in Charge.

DIVISION OF PLANT EXPLORATION AND INTRODUCTION,
Washington, D. C., May 6, 1935.

¹ Died Jan 3, 1934.

INVENTORY²

103407 and 103408. *ERIOBOTRYA JAPONICA* (Thunb.) Lindl. Malaceae.

Loquat.

From Algiers, Algeria. Bud sticks presented by Dr. René Maire, University of Algiers. Received July 8, 1933.

Introduced for the use of Department specialists.

Japanese medlar varieties, originally from Dr. Tanaka, collected in the botanic station at Maison Carrée.

103407. No. 846. *Dr. L. Trabut.*

103408. No. 107. *Madame Perronne.*

103409 and 103410.

From New Zealand. Seeds presented by Brian M. Jeffery, Roxburgh, Otago. Received July 6, 1933

103409. *ASTELIA NERVOSA* Banks and Soland. Liliaceae.

A stout, densely tufted New Zealand perennial often forming extensive masses on swampy grounds in forests. The spreading lanceolate leaves are 2 to 8 feet long, with the midribs and other prominent nerves colored red. The fragrant flowers, borne in large panicles on scapes 1 to 2 feet high, are greenish black and are followed by bright orange-yellow berries.

For previous introduction see 101274.

103410. *CORYNOCARPUS LAEVIGATA* Forst. **Corynocarpaceae.** **Karaka.**

An ornamental New Zealand tree with a round crown and oblong evergreen leaves up to 7 inches long. The small white flowers, in erect panicles about 4 inches high, are followed by oblong orange fruits an inch long. The flesh of the fruit is extremely poisonous, but the kernel has long been one of the staple articles of diet of the Maoris, the original inhabitants of New Zealand.

For previous introduction see 77997.

103411. *CALOCARPUM MAMMOSUM* (L.)

Pierre (*Lucuma mammosa* Gaertn. f.). Sapotaceae. **Sapote.**

From Puerto Rico. Seeds presented by T. B. McClelland, director, Agricultural Experiment Station, Mayaguez. Received July 5, 1933.

A large erect tree over 30 feet high, native to Mexico and Central America. The obovate to oblanceolate leaves, 4 to 10 inches long and up to 4 inches wide, are light green above and paler or brownish beneath. The subsessile white flowers are followed by russet-brown elliptic fruits the size of a small muskmelon. The rough outer covering contains soft, melting, salmon-colored sweet flesh of rich flavor and a single large, elliptic, glossy brown seed. The fruit is eaten fresh, made into jam, or frozen to form a sherbet.

103412 and 103413. *PETREA VOLUBILIS* L. Verbenaceae.

From Trinidad. Seeds presented by R. O. Williams, director, Department of Agriculture, Port-of-Spain, through A. Joseph, manager of the St. Augustine Nursery. Received July 1, 1933.

A woody climber native to tropical South America and the West Indies. The flowers are borne in loose pendent sprays which hang gracefully from the slender arching branches. These combined with the rigid green leaves produce a striking effect.

103412. The typical blue-flowered form.

103413. A variety with white flowers.

103414 to 103420. *SOJA MAX* (L.) Piper. Fabaceae. **Soybean.**

From Manchuria. Seeds purchased from L. Puitsin, Harbin. Received July 6, 1933.

A collection of soybeans introduced for the use of Department specialists.

Nos. 103414 and 103415 were collected at Sansing station, on the Sungari River.

103414. No. 1. A medium-small subglobose straw-yellow bean with brown hilum.

103415. No. 2. A medium-sized nearly round straw-yellow bean with brown hilum.

Nos. 103416 to 103420 were collected at Imienpo station, on the eastern line of the Chinese Eastern Railway.

103416. No. 1-a. A medium-sized nearly round straw-yellow bean with a large black hilum.

103417. No. 2-a. A medium-sized subglobose straw-yellow bean with pale hilum.

103418. No. 3-a. A medium-sized nearly round straw-yellow bean with light-brown hilum.

103419. No. 4-a. A medium-sized elliptical straw-yellow bean with light-brown hilum.

103420. No. 5-a. A large subglobose black bean with yellow germ and pale hilum.

103421 to 103439.

From China. Seeds obtained by native collectors and presented by Henry McLaren, Bodnant Gardens, North Wales. Received July 3, 1933.

The numbers correspond to those of the herbarium specimens at the Royal Botanic Gardens, Edinburgh, Scotland.

² It should be understood that the names of varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Division of Foreign Plant Introduction, and, further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identification, therefore, must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this Division, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

103421 to 103439—Continued.

103421. *ACER CAESIUM* Wall. Aceraceae. Maple.

No. D-99. A tree up to 75 feet high, native to the slopes of the Himalayas between 7,000 and 10,000 feet altitude. The palmately five-lobed leaves, pale beneath, are cordate with serrate margins and are 6 to 8 inches long and broad. The flowers appear after the leaves in large pyramidal panicles and are followed by smooth fruits with the wings spreading at nearly right angles.

For previous introduction see 98306.

103422. *CLETHRA DELAVAYI* Franch. Clethraceae.

No. D-130. A Chinese shrub or small tree with red branchlets and oblanceolate leaves which are pubescent beneath. The fragrant white flowers differ from those of the American sweet pepperbush (*Clethra alnifolia*) in having red calyxes and in being in solitary axillary racemes, while the sweet pepperbush usually has the racemes grouped together to form a panicle.

For previous introduction see 100862.

103423. *DIPelta YUNNANENSIS* Franch. Caprifoliaceae.

No. D-38. A shrub 10 to 15 feet high, native to western China, with opposite entire lanceolate leaves 3 to 6 inches long and leafy racemes of 2-lipped tubular-campanulate pinkish to purple flowers having shieldlike floral bracts.

For previous introduction see 97601.

103424. *ENKIANTHUS DEFLEXUS* (Griffith) C. Schneid. Ericaceae.

No. D-33. The whorled branches of this Himalayan shrub are characteristic of the entire genus and give the plant a peculiar appearance. The branchlets are red, and the margins and petioles of the obovate leaves, 1 to 3 inches long, are red when the leaves are young. The flowers, produced in dense drooping racemes, have yellow corollas, striped dark red, with darker lobes.

For previous introduction see 100541.

103425. *EUPTHELA PLEIOSPERMA* Hook. f. and Thoms. Trochodendraceae.

No. D-285. A tree 30 to 40 feet high, native to Tibet, with ovate-crenate leaves which are glaucous beneath and have very long acuminate tips. The slender-stalked red flowers, in axillary fascicles, appear before the leaves.

For previous introduction see 100875.

103426. *HYDRANGEA HETEROMALLA* D. Don. Hydrangeaceae.

No. D-95. A Himalayan hydrangea, about 10 feet high, with red stems, oval sharp-pointed leaves white hairy beneath, and white flowers borne in clusters about 6 inches wide.

For previous introduction see 59660.

103427. *ILEX CORALLINA* Franch. Aquifoliaceae. Coral holly.

No. D-335. A bushy smooth graceful shrub up to 10 feet high, which has not the rigid appearance of other hollies. The ovate-lanceolate leaves are thin, tough, fully-fringed, and from 4 to 6 inches long, brilliant green on top and pale green underneath. The numerous fruits are small and coral red.

For previous introduction see 93898.

103428. *LIGUSTRUM COMPACTUM* Hook. f. and Thoms. Oleaceae. Privet.

No. A-105. A shrub or small tree sometimes 30 feet high, native to the Himalayan region of southwestern China. The half-evergreen leaves are 3 to 6 inches long, and the small white flowers in large panicles are followed by blue-black fruits.

For previous introduction see 76256.

103421 to 103439—Continued.

103429. *PIPTANTHUS FORRESTII* Craib. Fabaceae.

No. D-290. A shrub 9 to 13 feet high, with alternate trifoliate leaves composed of lanceolate light-yellow leaflets over 1½ inches wide. Native to alpine meadows in southwestern China.

For previous introduction see 103131.

103430 to 103435. *RHODODENDRON* spp. Ericaceae.103430. *RHODODENDRON BEESIANUM* Diels.

No. D-105. A shrub 15 to 20 feet high, with leathery, purple-green, narrowly lanceolate leaves about 6 inches long and deep rich-rose flowers up to 2 inches across. Allied to *R. delavayi*, and native to Yunnan.

For previous introduction see 100329.

103431. *RHODODENDRON BREVISTYLUM* Franch.

No. D-148. A shrub up to 10 feet high with scaly purple branchlets, native to Yunnan, China, between 12,000 and 13,000 feet altitude. The elliptic-lanceolate leaves, 4 inches long, are laxly scaly above and below, and the widely funnel-shaped flowers, 1 to 2 inches long, are pale to deep rose with crimson markings and are borne in 1- to 5-flowered terminal clusters.

103432. *RHODODENDRON CHAETOMALLUM* Balf. and Forr.

No. A-1. A shrub 4 to 5 feet high, with thin twiggy branches densely clothed with branched bristly hairs. The oblong-obovate leathery leaves are about 4 inches long, dark olive green above, and covered beneath with tawny wool. The deep-crimson, tubular-campanulate flowers, 2 inches long, are borne in 4- to 6-flowered terminal umbels. It is native to Tibet and Yunnan between 11,000 and 13,000 feet altitude.

For previous introduction see 100336.

103433. *RHODODENDRON CLEMENTINAE* Forrest.

No. D-201. A shrub 4 to 10 feet high, native to southwestern China at an altitude of 11,000 feet. The oblong-oval leaves, 2 to 6 inches long, are dark green above and covered beneath with a white or pale-fawn felted indumentum. The campanulate flowers, 2 inches long, are creamy white flushed rose with crimson markings and are borne in racemose umbels of 10 to 15 flowers.

103434. *RHODODENDRON CORIACEUM* Franch.

No. D-302. A shrub or small tree 10 to 25 feet high, with gray-white branchlets, native to southwestern China and Tibet between 10,000 and 13,000 feet altitude. The narrowly lanceolate leaves, 4 to 8 inches long, are smooth and light green above and clothed beneath with a light-gray pitted indumentum. The funnel-campanulate flowers, 1 to 2 inches long, are white or light rose with crimson blotches and are borne in lax corymbose racemes of 15 to 20 flowers.

103435. *RHODODENDRON* sp.

No. D-231. Related to *R. wardii* in the *Thompsonii* series.

103436. *ROSA LONGICUSPIS* Bertol. Rosaceae. Rose.

No. A-107. A rambling bush about 20 feet high, native to western China, with sparse short prickles, large dark-green leaves, and white flowers 2 inches wide in very large lax corymbs.

For previous introduction see 100594.

103437. *SOPHORA* sp. Fabaceae.

No. A-172. Closely related to *S. glauca*.

103421 to 103439—Continued.

103439. TETRACENTRON SINENSE Oliver. Magnoliaceae.

No. D-322. A tree up to 100 feet high, native to western and central China. The elliptic-ovate leaves, 3 to 5 inches long, are subcordate with closely serrulate margins, and the minute yellowish flowers are in racemes 4 to 8 inches long.

For previous introduction see 100097.

103439. THERMOPSIS ALPINA YUNNANENSIS Franch. Fabaceae.

No. D-280. A herbaceous perennial 6 to 12 inches high, with three broadly oblong hairy leaflets and bright-yellow flowers in terminal racemes. Native to Yunnan, southwestern China.

103440. CARYOPHYLLUS MALACCENSIS (L.) Stokes (*Eugenia malaccensis* L.). Myrtaceae. Ohia.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received July 7, 1933.

A tree with large glossy handsome leaves and masses of flowers an inch or more across, filled with hundreds of beautiful deep-rose or pink stamens. The crimson pear-shaped fruits of characteristic flavor are much esteemed in the West Indies for preserves.

For previous introduction see 99534.

103441. CINCHONA LEDGERIANA MOENS. Rubiaceae.

From India. Seeds purchased from R. B. & D. S. Pradham, The Chandra Nursery, Sikkim, Bengal. Received July 8, 1933.

A tree, native to the Andes, yielding a bark remarkably rich in quinine which crystallizes readily as quinine sulphate. The percentage of the other alkaloids present is relatively small. The bark of this species matures in the fifth or sixth year and does not increase its quinine content after that age.

For previous introduction see 100986.

103442 to 103444. MALUS SYLVESTRIS Mill. (*Pyrus malus* L.). Malaceae. Apple.

From the Union of Soviet Socialist Republics. Scions presented by the Institute for Northern Fruit and Berry Growing, Koslov, through V. P. Alekseev, chief in charge of Foreign Plant Introduction, Leningrad. Received June 2, 1933. Numbered in July 1933.

Received under the following varietal names:

103442. No. 137714. *Antonovka*.

103443. No. 137717. *Bel Monastirskaja*.

103444. No. 137709. *Reinette Kolhasney*.

103445 to 103475.

From southwestern China and Tibet. Seeds collected by Dr. Joseph F. Rock, agricultural explorer for the University of California Botanical Garden Expedition, and presented through Dr. T. H. Goodspeed, Department of Botany, University of California, Berkeley, Calif. Received July 6, 1933.

103445. AJUGA sp. Menthaceae. Bugle.

No. 24362. Collected south of Dzampe Sheren in the Sagi Valley at 14,500 feet altitude. Flowers pale lavender to white, found growing in scree.

103446. AJUGA sp. Menthaceae. Bugle.

No. 24499. From the trail to Leirong, southwestern Muli Territory, Szechwan, on Mount Kanshu. White flowers found in alpine meadows at 14,000 feet altitude.

103445 to 103475—Continued.

103447. ILEX sp. Aquifoliaceae.

No. 24323. From Mutirong, Muli Territory, on the Mutikonka snow range, Szechwan, at 11,000 feet altitude. A plant between 3 and 4 feet high.

103448. ASTRAGALUS sp. Fabaceae. Milkvetch.

No. 24354. From the Sagi Valley, south of Dzampe Sheren, at 13,000 feet altitude. Purplish-blue flowers found in alpine meadows.

103449. CASSIOPE sp. Ericaceae.

No. 20934. A plant with white flowers found in alpine regions at 15,000 feet altitude.

103450 to 103452. CLINTONIA spp. Convolvulariaceae.

103450. CLINTONIA sp.

No. 21960. Blue flowers, collected in a canebrake between 11,000 and 12,000 feet altitude on Mount Kenichunpo.

103451. CLINTONIA sp.

No. 21962. Large single, deep-purple flowers found in alpine regions at 15,000 feet altitude on Mount Kenichunpo.

103452. CLINTONIA sp.

No. 24484. From the trail to Leirong, southwestern Muli, Szechwan, on Mount Kanshu; found in moss in a fir forest.

103453 to 103455. DIPLARCHE spp. Ericaceae.

103453. DIPLARCHE sp.

No. 21930. A shrub several inches high with pink flowers; found on grassy slopes at 14,000 feet altitude.

103454 and 103455. DIPLARCHE MULTIFLORA Hook. and Thoms.

A low alpine shrub, native to the Himalayan region between 11,000 and 14,000 feet altitude. The crowded leathery linear-oblong leaves are less than one-fourth inch long, and the small tubular white or pink flowers are borne in dense clusters of 8 to 20 at the ends of the branches.

For previous introduction see 99861.

103454. No. 22243. From Solola, Tsarung Province, Tibet; a shrub 1 inch high with white flowers; found in alpine regions at 14,000 feet altitude.

103455. No. 23274. From Mount Fuchuan, west of the Mekong-Salwin Divide. A shrub 2 to 6 inches high with white flowers, found on cliffs and crags.

103456. DISPORUM sp. Convallariaceae. Fairybells.

No. 21947. From Mount Kenichunpo. A shrub up to 3 feet high with white flowers; found in spruce forest at 12,000 feet altitude.

103457. HEDYSARUM sp. Fabaceae.

No. 22249. From Solola, Tsarung Province, Tibet; an herb with yellow flowers, found at 10,000 feet altitude.

103458. HEDYSARUM sp. Fabaceae.

No. 23450. From Mount Moting, west of Atuntze, Yunnan; an herb with pale-yellow flowers, found in alpine scree at 13,000 feet altitude.

103459. ILEX sp. Aquifoliaceae. Holly.

No. 22299. From Solola, Tsarung Province, Tibet; a shrub 5 feet high with red flowers; found in fir forest at 12,500 feet altitude.

103445 to 103475—Continued.

103480. *ILEX* sp. Aquifoliaceae. Holly.

No. 23654. From the mountains of Kaakerbo in southeastern Tibet, Tsarung, west of Dikerla and Yundshi; shrubs 4 to 6 feet high found in valleys at 10,000 feet altitude.

103461. *ERIOPHYTON WALLICHIANUM* Benth. Menthaceae.

No. 24532. From the western slopes of Mount Mitzuga, Muli Territory, southwestern Szechwan, at 15,000 feet altitude; a dwarf herbaceous perennial only 6 inches high, with the stems, leaves, and inflorescence densely covered with soft white wool a quarter of an inch long. The round toothed leaves, 1 to 2 inches across, are very closely set on the stem, and the large two-lipped yellow or pale-pink flowers, 1 to 2 inches long, are borne in axillary whorls. It is native to the Himalayan region.

For previous introduction see 93890.

103482. *NOTOCHAETE* sp. Menthaceae.

No. 24485. From Mount Kanshu on the Leirong trail in Muli Territory, southwestern Szechwan, at 13,000 feet altitude, in alpine meadows an herb whose leaves form large rosettes and whose flowers are lavender blue.

103468. *PHLOMIS ROTATA* Benth. Menthaceae. Jerusalem-sage.

No. 23363. From Mount Moting, west of Atuntze, Yunnan, in alpine meadows at 12,500 feet altitude; a stemless plant with a rosette of thick coriaceous, orbicular, crenate leaves 3 to 6 inches across, densely tomentose beneath, suddenly contracted into tomentose petioles half an inch broad. The small bluish-purple flowers, covered with white hairs, are in whorls on short peduncles, forming dense heads 1 to 2 inches in diameter in the center of the rosette of leaves. It is native to the alpine regions of the Himalayas.

For previous introduction see 93920.

103464. *PIPTANTHUS NEPALENSIS* (Hook.) Sweet. Fabaceae.

No. 24575. Collected between Muli and Kulu at 11,500 feet altitude; a shrub 2 to 11 feet high with palmately trifoliolate leaves made up of lanceolate leaflets 2 to 4 inches long; the yellow pea-shaped flowers, 1 inch long, are borne in dense racemes resembling bunches of grapes.

103465. *SALVIA* sp. Menthaceae. Sage.

No. 24479. From Mount Kanshu, on the trail to Leirong, southwestern Muli, Szechwan, at 10,000 feet altitude; an herb with purple flowers.

103466 to 103483. *SATUREJA* spp. Menthaceae. Savory.103466. *SATUREJA* sp.

No. 23433. Collected in alpine meadows at 12,000 feet altitude on Mount Moting, east of Atuntze, Yunnan; an herb with yellow flowers.

103467. *SATUREJA* sp.

No. 24480. Collected on the trail to Leirong, southwestern Muli Territory, Szechwan, on Mount Kanshu at 11,000 feet altitude; flowers not seen.

103463. *SATUREJA* sp.

No. 24514. Collected among rocks in meadows at 11,000 feet altitude on the western slopes of Mount Mitzuga, Muli Territory, southwestern Szechwan; an herb with purplish-pink flowers.

103445 to 103475—Continued.

103469. *SOPHORA DAVIDII* (Franch.) Komarov. Fabaceae.

No. 24549. Collected in scrub forest at 11,000 feet altitude on the western slopes of Mount Mitzuga, Muli Territory, southwestern Szechwan; a spiny shrub up to 6 feet high with slender spreading pubescent branchlets, native to central and western China. The pinnately compound leaves, 1 to 2 inches long, have 11 to 15 small elliptic leaflets, and the violet to white pea-shaped flowers, one-half inch long, are in racemes of 6 to 12 on short terminal branchlets.

For previous introduction see 99462.

103470. *THERMOPSIS INFLATA* Cambess. Fabaceae.

No. 23336. Found in scree on Mount Moting, east of Atuntze, Yunnan, at 15,000 feet altitude; a bushy perennial about 6 inches high with a widely creeping woody rootstock and small finely pubescent trifoliolate fleshy leaves. The yellow flowers, less than an inch long, are in small dense racemes. Native to the Himalayas between 15,000 and 17,000 feet altitude.

103471. *THERMOPSIS* sp. Fabaceae.

No. 24397. From Mount Siga, west of and overlooking the Yalung River, north of Karadi, at 13,500 feet altitude, in alpine meadows; an herb with red flowers.

103472 to 103474. *VACCINIUM* spp. Vacciniaceae. Blueberry.103472. *VACCINIUM* sp.

No. 22175. From alpine regions near the upper headwaters of the Eastern Irrawaddy, at 14,000 feet altitude; an herb 3 inches high with red flowers.

103473. *VACCINIUM* sp.

No. 22397. Collected at 13,500 feet altitude on Mount Wulila, east of Salwin and north of Alulaka, in southeastern Tibet; a shrub up to 6 feet high; flowers not seen.

103474. *VACCINIUM* sp.

No. 23479. From Mount Moting, west of Atuntze, Yunnan, at 14,500 feet altitude; a shrub over a foot high with red flowers.

103475. (Undetermined.)

No. 22020. From Mount Kenichunpo at Champutong near the Salwin River at 7,000 feet altitude; a handsome tree between 70 and 80 feet high with white flowers.

103476. *COLVILLEA RACEMOSA* Boj. Caesalpiniaceae.

From Tulear, Madagascar. Seeds presented by H. Henri Perrier de la Bathie, Academie Malgache, Tananarive. Received July 8, 1933.

A tree 30 to 40 feet high with pinnate leaves 3 feet long and brilliant orange-scarlet, curiously shaped flowers with 10 protruding stamens, borne in drooping racemes more than a foot long. The tree was discovered in Madagascar in 1824 and named for the Governor of Mauritius, Sir Charles Colville. In all probability it will stand no more frost than the *Poinciana*.

Like other leguminous trees, it is readily propagated from seeds.

For previous introduction see 98549.

103477. CAPSICUM ANNUUM L. Solanaceae. Common redpepper.

From China. Seeds presented by Rev. David C. Graham, through the Smithsonian Institution, Washington, D. C. Received July 11, 1933.

From Ningyuen Fu, Szechwan, at 6,000 feet altitude. A very large mild-flavored redpepper.

103478. PAROCHETUS COMMUNIS Buch-Ham. Fabaceae. Shamrock-pea.

From Ceylon. Seeds presented by the acting curator, Botanic Gardens, Hakgala, through the director of the Botanic Gardens, Paradeniya. Received July 11, 1933.

A half-hardy perennial trailing vine with shamrocklike leaves, each leaflet marked at the base with a brown crescent. The pea-shaped flowers, nearly an inch across, have cobalt-blue standards and pink wings. It is native to tropical Asia.

For previous introduction see 91295.

103479. COLPOTHRINAX WRIGHTII Griseb. and Wendl. Phoenicaceae. Palm.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received July 12, 1933.

A Cuban fan palm 40 feet high with a trunk swollen at the base.

For previous introduction see 90873.

103480 to 103485.

From Chile. Seeds and bulbs collected by Paul G. Ledig, Department of Research in Terrestrial Magnetism, Carnegie Institution of Washington, D. C. Received July 13, 1933.

103480. BERBERIS BUXIFOLIA Lam. Berberidaceae. Magellan barberry.

Calafati. From Magallanes. An erect bushy partially evergreen barberry 6 to 8 feet high, with hard leathery oblong-obovate leaves up to an inch long, small solitary amber-yellow flowers, and globular dark-purple fruits. Native to southern Chile, where it is cultivated for its edible fruits.

For previous introduction see 98032.

103481. DIGITALIS PURPUREA L. Scrophulariaceae. Common foxglove.

From Puerto Montt. A wild plant with flowers which vary from dark purple, lavender, pink to white.

103482. (Undetermined.)

Bulbs, collected at Puerto Montt, of a wild plant which resembles a gladiolus. The flowers are orange colored.

103483. LOTUS sp. Fabaceae.

From Puerto Montt. A yellow-flowered variety.

103484. LUPINUS sp. Fabaceae. Lupine.

From Ensenada, on Lake Llanquihue. A bushy perennial about 3 feet high, found on poor soil. The flowers are yellow.

103485. SISYRINCHIUM sp. Iridaceae. Blued-eyed-grass.

Collected at the Magallanes racetrack.

103486. ALLIUM SATIVUM L. Liliaceae. Garlic.

From India. Bulbs presented by P. G. Dani, superintendent, Ganeshkhind Botanical Gardens, Kirkee, Bombay Presidency. Received July 15, 1933.

103486—Continued.

A variety commonly cultivated in India. introduced for the use of Department specialists.

103487 to 103515.

From India. Seeds collected and presented by Walter Koelz, University of Michigan, Ann Arbor, Mich. Received July 8, 1933.

Nos. 103487 to 103489 were collected in Bhadwar, Kangra, Punjab, between 2,000 and 3,000 feet altitude.

103487. PHLOGACANTHUS THYRSIFLORUS (Roxb.) Nees. Acanthaceae.

No. 36. *Paskaka marpo.* A scraggly shrub, 8 feet high, with attractive leaves and spikes of lovely rose-madder flowers; found in deep glens along streams, but not in heavy shade. The Tibetans use this plant medicinally.

103488. BARLERIA sp. Acanthaceae.

No. 37. A shrub 5 feet high found in well-watered shady situations. The numerous flowers are royal blue.

103489. BAUHINIA VAHLII Wight and Arn. Caesalpiniaceae. Malu-creeper.

No. 31. A shrubby vine 40 feet high, with large velvety leaves a foot long and white flowers.

For previous introduction see 98803.

103490. BAUHINIA sp. Caesalpiniaceae.

No. 16. From Bajnath, Kangra, Punjab, at 3,000 feet altitude. A shrubby vine 30 feet high, flowers not seen.

Nos. 103491 and 103492 were collected in Bhadwar, Kangra, Punjab, between 2,000 and 3,000 feet altitude.

103491. CARISSA SPINAEUM L. Apocynaceae.

No. 30. A spiny suberect evergreen shrub 6 feet high, native to the lower slopes of the Himalayas in India. The elliptic-ovate leathery leaves are 1 to 2 inches long, and the white tubular fragrant flowers, one-half inch long, are abundantly borne in terminal cymes. The subglobose black fruits are one-fourth inch in diameter and are said to be edible. It is used for forage; it is also trimmed and used for hedges or specimen plants as ornamentals.

103492. CITRULLUS sp. Cucurbitaceae.

No. 7. *Seri perbu.* A Tibetan medicinal plant.

103493 to 103499. CITRUS spp. Rutaceae.

Nos. 103493 and 103494 were collected in Mandi State at 4,000 feet altitude.

103493. CITRUS AURANTIUM L. Seville orange.

No. 4. A sour orange, 3 inches in diameter, too sour for eating out of hand.

103494. CITRUS GRANDIS (L.) Osbeck. Grapefruit.

No. 5. A grapefruit, 6 inches in diameter, of good flavor, but with many seeds.

103495 and 103496. CITRUS NOBILIS DELICIOSA (Ten.) Swingle. Mandarin orange.

Collected in Bhadwar, Kangra, Punjab, at 2,000 feet altitude.

103495. No. 8. Sun apple. A yellow tangerine, not so acid as a lemon, and 3 inches in diameter.

103496. No. 9. Gomiri. A yellow tangerine, 2 inches in diameter, of acid flavor but still edible.

103497. CITRUS sp.

No. 6. From Mandi State at 4,000 feet altitude. Character of fruit unknown.

Nos. 103498 to 103501 were collected in Bhadwar, Kangra, Punjab, at 2,000 feet altitude.

103487 to 103515—Continued.

103498. CITRUS sp.

No. 10. *Kimbu*. A yellow to orange thin-skinned fruit, 3 inches in diameter.

103499. CITRUS sp.

No. 12. *Taranj*. A very acid, warty, thick-skinned citrus up to 4 inches in diameter.

103500. *EVOLVULUS ALSINOIDES* L. Convolvulaceae.

No. 32. A hairy perennial herb with wiry, often prostrate branches, native to southeastern Asia. The small entire leaves, 1 to 2 inches long, are very variable in shape, and the royal blue or white funnel-shaped flowers, up to one-half inch long, are borne abundantly for 6 to 8 weeks.

103501. *INDIGOFERA LINIFOLIA* (L. f.) Retz. Fabaceae. Indigo.

No. 38. A legume with fine stems 6 to 8 inches high, numerous small leaves, and beautiful salmon-pink flowers. It is considered one of the best pasture plants in the Ganges Valley.

For previous introduction see 97818.

103502. *KALANCHOE SPATHULATA* DC. Crassulaceae.

No. 1. From dry open slopes in Mandi State at 5,000 feet altitude. A succulent perennial up to 4 feet high, with the lower leaves spatulate crenate, 3 to 10 inches long, and the upper leaves, 3 to 4 inches long, very narrow and sometimes trifoliate. The clear yellow flowers are in flattish corymbs. It is native to tropical Asia and is said to be poisonous to cattle.

For previous introduction see 93093.

Nos. 103503 to 103505 were collected at Bhadwar, Kangra, Punjab, at 2,000 feet altitude.

103503. *MALLOTUS* sp. Euphorbiaceae.

No. 35. A shrub or small tree 20 feet high, found on semiarid slopes, with attractive foliage and edible red fruits that remain on the shrub for a long time.

103504. *FICUS* sp. Moraceae.

No. 17. A large attractive tree with late-ripening yellow fruits up to 3 inches long, rather insipid, with few seeds and the odor of peaches.

103505. *MORUS* sp. Moraceae. Mulberry.

No. 24. A large well-formed tree with red fruits, larger and later than the common mulberry.

103506. *PRUNUS* sp. Amygdalaceae.

No. 26. From Bajnath, Kangra, Punjab, at 3,000 feet altitude. A cherry tree up to 20 feet high found in open or semishaded situations; the large pink blossoms are followed by inedible fruits.

103507. *TRICHOSANTHES BRACTEATA* (Lam.) Voigt. Cucurbitaceae.

No. 2. From Banjar, Kulu, Punjab, at 5,000 feet altitude. An annual ornamental vine climbing to 30 feet, with broadly oval leaves, scabrous above, and deeply lobed; the globose fruits are red streaked with orange. Native to India.

For previous introduction see 66977.

Nos. 103508 to 103511 were collected at Bhadwar, Kangra, Punjab, at 2,000 feet altitude.

103508. *VALLARIS HEYNEI* Spreng. Apocynaceae. Burma vallaris.

No. 21. A climbing shrub with fragrant white flowers three-fourths of an inch wide, often cultivated as an ornamental in India where it is native. The milky juice is used medicinally for skin diseases and is also a possible source of rubber.

For previous introduction see 74225.

103487 to 103515—Continued.

103509. *WOODFORDIA FRUTICOSA* (L.) Kurz. Lythraceae.

No. 34. An attractive shrub up to 8 feet high, with long spreading branches, found on open abrupt slopes in sunny situations. During the wet season for 6 to 8 weeks it is covered with brilliant-red flowers about one-half inch long. The opposite leaves are lanceolate and 2 to 4 inches long, usually gray-hairy beneath.

103510. (Undetermined.)

No. 33. An orchid 18 inches high, found along streams.

103511. *OUGEINIA DALBERGOIDES* Benth. Fabaceae.

No. 29. An erect tree 20 to 40 feet high, with rather leathery, trifoliate leaves and small but copious pale-pink flowers in short racemes. Native to northern India.

103512. *LANTANA CAMARA* L. Verbenaceae.

No. 28. From Bajnath, Kangra, Punjab, at 3,000 feet altitude. A herbaceous plant 6 feet tall.

Nos. 103513 to 103515 were collected at Bhadwar, Kangra, Punjab, at 2,000 feet altitude.

103513. (Undetermined.)

No. 13. An exceedingly attractive shrub 7 feet high, found in half shade in forests or in open watered situations. The leaves are dark shining green, and the white to cream-colored flowers have a strangely pleasant fragrance.

103514. (Undetermined.)

No. 18. A shrubby vine up to 30 feet high, found in the open or in semishade. The leaves are attractive, and the showy white flowers have an exquisite fragrance.

103515. *DODONAEA VISCOSA* (L.) Jacq.

No. 19. A shrub 6 feet high, found on dry slopes.

103516. *ARTOCARPUS INTEGR* (Thunb.) L. Moraceae. Jackfruit.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received July 17, 1933.

Introduced for the use of Department specialists.

103517. *TRIFOLIUM PANORMITANUM* Presl. Fabaceae. Clover.

From Algeria. Seeds presented by Dr. R. Maire, Government General de l'Algerie Service Botanique, Algiers. Received July 17, 1933.

A clover, native to Algeria, which is said to be valuable for forage. Introduced for the use of Department specialists.

103518. *CALOTROPIS GIGANTEA* (L.) R. Br. Asclepiadaceae. Giant milkweed.

From India. Seeds presented by W. O'Brien, Hyderabad, Deccan. Received July 20, 1933.

An erect shrubby milkweed, 8 to 15 feet high, native to the Himalayas in India where it ascends to 3,000 feet. The obovate to wedge-shaped leaves are woolly beneath, and the rose-purple flowers are borne in umbels. Some parts of the plant are said to be of value as an insecticide.

103519 and 103520.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received July 24, 1933.

103519 and 103520—Continued.

103519. *ANNONA BULLATA* A. Rich. Annonaceae.

A tree, native to Cuba, which is related to the sugar-apple and appears to be unusually well adapted to dry soils. The aromatic leaves are used to season stews, and the small, scaly, ovoid-cordiform, scarcely edible fruits, which mature in July, are eaten by pigs.

For previous introduction see 102622.

103520. *MIMUSOPS ROXBURGEIANA* Wight. Sapotaceae.

A large tree, native to India, with broadly elliptic leathery leaves 3 to 4 inches long. The small white axillary flowers are followed by subglobose shining yellow fruits less than an inch in diameter.

103521. PONCIRUS TRIFOLIATA (L.) Raf. Rutaceae. Hardy orange.

From China. Seeds collected in Lushan, Kiangsi Province, and presented by A. N. Steward, University of Nanking. Received May 10, 1933.

Introduced for the use of Department specialists.

103522. HYPARRHENIA HIRTA PUBESCENS (Vis.) Simps. Poaceae.

From Algeria. Seeds presented by Dr. R. Maire, Government General de l'Algerie Service Botanique, Algiers. Received July 24, 1933.

Hemar. A coarse perennial caespitose grass, native to tropical and northern Africa, with fibrous roots and branching culms about 3 feet high. Introduced for the use of Department specialists.

103523 to 103526. NOTHOFAGUS spp. Fagaceae.

From New Zealand. Seeds presented by the director of forestry, State Forest Service, Wellington. Received July 25, 1933.

Seeds of trees native to New Zealand, collected at Whangamoia, Nelson, between 600 and 1,200 feet altitude.

103523. *NOTHOFAGUS FUSCA* (Hook. f.) Oerst.

An evergreen tree over 100 feet high, with zig-zag branchlets, broadly ovate, coarsely dentate leaves 1 to 2 inches long, and clusters of small nutlets resembling bechnuts.

For previous introduction see 77460.

103524. *NOTHOFAGUS MENZIESII* (Hook. f.) Oerst.

An evergreen tree which becomes 80 feet high and 5 feet in diameter, with white, silvery bark, roundish, doubly crenate, leathery leaves less than an inch long, and small fruits resembling bechnuts.

For previous introduction see 77461.

103525. *NOTHOFAGUS SOLANDRI* (Hook. f.) Oerst. Solander's beech.

A forest tree up to 100 feet high, with small leaves less than an inch long and fruits resembling small bechnuts. This is the most abundant of the New Zealand beeches, forming immense forests on the drier mountain slopes.

103526. *NOTHOFAGUS TRUNCATA* Hort.

Clinker beech. Said to be closely related to *Nothofagus fusca*.

103527 to 103553. TRITICUM spp. Poaceae. Wheat.

From Australia. Seeds presented by H. Wenzholz, director of plant breeding, Department of Agriculture, Sydney, New South Wales. Received July 25, 1933.

103527 to 103553—Continued.

A collection of wheats which have proved to have some resistance to leaf rust under Australian conditions. Introduced for the use of Department specialists.

103527 to 103551. *TRITICUM AESTIVUM* L. (*T. vulgare* Vill.). Common wheat.

103527. *Artigas.* C. 6193.

103528. *Bladette de Besplas.* C. 6148.

103529. *Bordeaux.* C. 6140.

103530. *Cedric.* C. 3909.

103531. *Currimp.* C. 4429.

103532. *Dindiloa.* C. 4990.

103533. *Dookie Gamma.* C. 6409.

103534. *Halif Inversible.* C. 4206.

103535. *Heine's Kolben.* C. 5137.

103536. *Hornblende.* C. 24.

103537. *Janetzki's.* C. 5138.

103538. *John Brown.* C. 12.

103539. *Kenya crossbred.* C. 6040.

103540. *Kenya crossbred.* C. 6042.

103541. *Kenya Governor.* C. 4989.

103542. *Pair.* C. 6147.

103543. *Potenziani.* C. 6136.

103544. *Preparateur Etienne.* C. 6141.

103546. *Roussillon.* C. 6143.

103547. *Russian (062).* C. 5247.

103548. *Saisette.* C. 6149.

103549. *S. H. J.* C. 3157.

103550. *Varonne.* C. 6146.

103551. *Warchief.* C. 3910.

103552 and 103553. *TRITICUM DURUM* Desf. Durum wheat.

103552. *Durity.* C. 6406.

103553. *Durity.* C. 6408.

103554 to 103579. CITRUS spp. Rutaceae.

From Morocco. Scions presented by H. Brayard, Directeur de la Station Experimentale, Marrakech. Received July 29, 1933.

Introduced for the use of Department specialists.

103554 to 103558. *CITRUS LIMONIA* Osbeck. Lemon.

103554. No. 15. *Bernia.*

103555. No. 16. *Corregia.*

103556. No. 17. *De Ba Ahmed.*

103557. No. 13. *Des 4 saisons.*

103558. No. 14. *Panache.*

103559 to 103563. *CITRUS NOBILIS DELICIOSA* (Ten.) Swingle. Mandarin orange.

103559. No. 2. *Commune.*

103560. No. 1. *De Ba Ahmed.*

103561. No. 3. *De Valence.*

103562. No. 5. *Naranjo mandarine.*

103563. No. 4. *Sanguine.*

103554 to 103579—Continued.

- 103564 to 103579. CITRUS SINENSIS (L.) Osbeck. Orange.
103564. No. 7. *Bernia*.
103565. No. 8. *Bresilienne*.
103566. No. 21. *Cadena punchosa*.
103567. No. 6. *Del Rio*.
103568. No. 24. *De Tetouan*.
103569. No. 23. *Fuya Monuda*.
103570. No. 11. *Indigene Gale-Gzel*.

103572. No. 22. *Magnum*.
103573. No. 12. *Ovale de Sangre*.
103574. No. 19. *Pajarito*.
103575. No. 20. *Precocede valence*.
103576. No. 26. *Royal*.
103577. No. 10. *Sanguine grosse ronde*.
103578. No. 25. *Torregrassa*.
103579. No. 18. *Viciedo*.

103580 to 103586.

From Arabia. Seeds presented by Mary C. Van Pelt, American mission, Kuwait. Received July 31, 1933.

Desert plants collected near Kuwait.

103580. ALIUM sp. Liliaceae.
103581. ASTRAGALUS sp. Fabaceae. Milkvetch.
103582. ASTRAGALUS sp. Fabaceae. Milkvetch.
103583. RESEDA sp. Resedaceae.
103584. SCABIOSA sp. Dipsacaceae.
103585. (Undetermined.)
103586. (Undetermined.)

103587 and 103588. PHASEOLUS LUNATUS L. Fabaceae. Lima bean.

From Java. Seeds presented by the chief of the Agricultural Institute, Buitenzorg, through K. A. Patton, American consul general, Batavia. Received July 28, 1933.

Kratok beans. Locally grown varieties introduced for the use of Department specialists.

103587. A form with red or pinkish seeds.
103588. A form with white seeds.

103589 and 103590.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received August 1, 1933.

103589. BANISTERIA LAURIFOLIA L. Malpighiaceae.
- A shrubby vine 15 to 20 feet long, native to tropical America. The oblong to obovate reticulate leaves are 2 to 6 inches long, and the small yellow flowers, borne in panicles, are followed by red-brown maplelike fruits.
103590. SOLANUM TUCUMANENSE Griseb. Solanaceae.

A subtropical shrub about 3 feet high, with stout hairy branches, oval-lanceolate leaves, and small white flowers in few-flowered cymes. Native to Tucumán, Argentina.

For previous introduction see 88259.

103591. MUSA PARADISIACA SAPIENTUM (L.) Kuntze. Musaceae. Banana.

From Palestine. Suckers presented by Aaron Khazanoff, Palestine Jewish Colonization Society Haifa. Received August 3, 1933.

Cavendish banana. A commercial variety, considered one of the best in Palestine. Introduced for the use of Department specialists.

103592 to 103597.

From Guatemala. Seeds presented by M. Pacheco, Director General of Agriculture. Received August 1, 1933.

A collection of locally grown seed.

103592. BARYXYLUM BRASILIENSE (L.) Pierre. Caesalpiniaceae.

A tree up to 80 feet high, with bipinnate leaves of small leaflets and axillary or terminal racemes of small yellow flowers. The orange-colored wood is elastic, tough, and durable and takes on a fine polish. The tree is native to Central America.

For previous introduction see 93579.

103593. ERYTHRINA sp. Fabaceae. Coraltree.
103594. RANDIA sp. Rubiaceae.

103595. SIDEROXYLON TEMPISQUE Pittier. Sapotaceae.

A large tree, glabrous throughout, native to El Salvador and Guatemala. The coriaceous elliptical leaves are 2 to 4 inches long on long petioles, and the small green-yellow flowers are in dense clusters on the old wood and are followed by ovoid 1-seeded fruits 1 to 2 inches long.

For previous introduction see 80702.

103596. TABEBUIA sp. Bignoniaceae.

103597. XIMENIA AMERICANA L. Olacaceae. False sandalwood.

A widely distributed tropical tree with clustered oblong-obtuse leaves, small yellow flowers, and yellow plumlike acid fruits enclosing a white nut.

For previous introduction see 80499.

103598. PRUNUS LAUROCERASUS L. Amygdalaceae. English cherry-laurel.

Collected in the Capitol Grounds, Washington, D. C., by Paul Russell, of the Bureau of Plant Industry. Received August 5, 1933.

Variety *schipkaensis*. A shrubby form with nearly entire leaves 2 to 5 inches long.

103599 to 103602.

From southern Madagascar. Seeds presented by Henri Perrier de la Bathie, Academie Malgache, Tananarive. Received August 2, 1933.

Nos. 103599 to 103601 were collected at Tulear.

103599. ALOE ANTANDROI (Decary) Perrier. Liliaceae.

An aloe from Madagascar, with 4 or 5 simple or sometimes branched stems up to 3 feet long, each bearing a rosette of 15 to 25 ascending recurved leaves 3 to 5 inches long. The reddish flowers, about 1 inch long, are in small spikes on scapes 2 to 4 feet high.

For previous introduction see 88869.

103600. CAPPARIS GRANDIDIERI Baill. Cappariaceae.

A tree 20 to 30 feet high, with linear-oblong leathery acuminate leaves 2 inches long and rather large rosy flowers. Native to Madagascar.

103599 to 103602—Continued.

103601. *KALANCHOE GRANDIDIERI* Baill. Crassulaceae.

An arborescent succulent plant, native to Madagascar, with a smooth stem 3 to 6 feet high and entire flat leaves 4 to 6 inches long. At the top of the stem a flower stalk, about 20 inches high, bears a panicle-like cluster of pendulous violet flowers.

For previous introduction see 77908.

103602. *POINCIANA ADANSONIODES* Hort. Caesalpiniaceae.

Collected in dry limestone soil at Manompetsa.

A name for which a place of publication and a description have not been found.

103603 to 103605.

From the Society Islands. Budsticks and plants presented by Harrison H. Smith, Papeari, Tahiti. Received August 8, 1933.

103603. *CITRUS GRANDIS* (L.) Osbeck. Rutaceae. **Grapefruit.**

A variety with green flesh.

103604. *CITRUS GRANDIS* (L.) Osbeck. Rutaceae. **Grapefruit.**

A variety with pink flesh of excellent quality, originally from Sarawak.

103605. *GARDENIA TAITENSIS* DC. Rubiaceae.

Tiare Tahiti. A spineless tropical shrub with opposite obovate leaves and fragrant white flowers, borne singly in the uppermost leaf axils. It is native to the Society Islands, where it grows to perfection on the low atoll islands.

103606 to 103623.

From Tonkin, Indo-China. Seeds grown at the Agricultural Station de Phu-Ho, and presented through the director of the Institut National d'Agronomie Coloniale, Nogent-sur-Marne, France. Received August 3, 1933.

103606 to 103609. *CASSIA* spp. Caesalpiniaceae.

103606. *CASSIA ABSUS* L.

An erect annual tropical legume, about 2 feet high, with small red-yellow flowers. It is native to India and Egypt.

For previous introduction see 93765.

103607. *CASSIA HIRSUTA* L.

An erect annual herb covered with long hairs. The compound leaves are made up of 3 to 5 pairs of ovate leaflets 2 to 3 inches long, and the yellow flowers are borne in axillary racemes. It is native to Brazil.

For previous introduction see 90535.

103608. *CASSIA MIMOSOIDES* L.

A sensitive plant, with pea-shaped flowers, which does well in poor dry soil.

For previous introduction see 90546.

103609. *CASSIA PATELLARIA* DC.

A subshrubby perennial with densely pubescent stems 2 to 3 feet high, native to tropical America. The small oblong-linear leaflets are borne in 10 to 25 pairs, and the inconspicuous flowers are in peduncled axillary clusters.

103610. *CROTALARIA CHINENSIS* L. Fabaceae.

A perennial herb 1 to 2 feet high, native to southeastern Asia. The ascending branches are clothed with long brown silky hairs; the simple linear to oblanceolate leaves are 1 to 2 inches long; and the inconspicuous flowers are in densely capitate terminal clusters of 3 to 6.

103606 to 103623—Continued.

103611. *CROTALARIA UNCINELLA* Lam. Fabaceae.

A much-branched shrub over a foot high, with slender branches and terminate leaves composed of oval-obtuse leaflets. The small flowers, in terminal and axillary racemes, are succeeded by small round pea-shaped pods. Native to the island of Bourbon.

103612. *FLEMINGIA CONGESTA* Roxb. Fabaceae.

An erect shrub 4 to 6 feet high, with angular silky trifoliate, native to southeastern Asia. The trifoliate leaves have broadly lanceolate leaflets 4 to 6 inches long, and the small flowers, covered by the shining pale-brown silky calyx, are in dense oblong racemes 2 inches long.

For previous introduction see 102760.

103613 to 103622. *MEIBOMIA* spp. Fabaceae.

103613. *MEIBOMIA CAPITATA* (Burm.) Kuntze (*Desmodium capitatum* DC.).

A subshrubby shrub native to southeastern Asia. The somewhat leathery trifoliate leaves have obovate-cuneate leaflets 1 to 2 inches long, green above and covered beneath with silky white hairs. The inconspicuous flowers are borne in dense headlike racemes 1 to 2 inches long.

103614. *MEIBOMIA CEPHALOTES* (Roxb.) Kuntze (*Desmodium cephalotes* Wall.).

A tall shrub with densely silky, acutely angled, zigzag branches and compact umbels of deep-red flowers. It is native to the tropical zone of the eastern Himalayas. Cattle and goats are said to be fond of the leaves.

For previous introduction see 86682.

103615. *MEIBOMIA ELEGANS* (Lour.) Kuntze.

A low shrub or herbaceous perennial with villose stems and compound leaves consisting of three ovate-obtuse leaflets, silky hairy beneath, and 2 to 4 inches long. The small flowers, in dense heads or umbels, are followed by flat three-jointed pods with rounded joints. It is native to Hong Kong.

103616. *MEIBOMIA GANGETICA* (L.) Kuntze (*Desmodium gangeticum* DC.).

A woody herbaceous plant, more or less erect, and 3 to 4 feet high, with oblong leaflets 3 to 6 inches long and copious lateral and terminal flower clusters. Native to the Himalayas up to 5,000 feet, and distributed throughout the East Indies and tropical Africa.

For previous introduction see 65587.

103617. *MEIBOMIA HETEROCARPA* (L.) Kuntze (*Desmodium polycarpum* DC.).

An erect or suberect undershrub found throughout the Himalayas and Burma at altitudes up to 5,000 feet. All of the shrubby species of this genus are said to contain good fibers, used in some cases for papermaking.

For previous introduction see 99742.

103618. *MEIBOMIA LASTOCARPA* (Beauv.) Kuntze (*Desmodium latifolium* DC.).

An erect undershrub 3 to 6 feet high, native to southeastern Asia. The branches are densely clothed with short brown pubescence; the single leathery leaflet, 3 to 6 inches long, is ovate with obscurely undulate margins; and the dense spike-like racemes of small flowers are 2 to 6 inches long.

103619. *MEIBOMIA MAURITIANA* (Willd.) Kuntze (*Desmodium mauritianum* DC.).

A much-branched perennial herb 1 to 3 feet high, native to the island of Mauritius. The trifoliate leaves have firm obovate leaflets 1 inch long, and the small red flowers are in racemes 2 to 3 inches long.

103606 to 103623—Continued.

103620. *MEIBOMIA PULCHELLA* (L.) Kuntze
(*Desmodium pulchellum* Benth.).

An erect hairy shrub with trifoliolate leaves and spikelike clusters of red flowers. It is native to southeastern Asia.

103621. *MEIBOMIA RETICULATA* (Champ.) Kuntze (*Desmodium reticulatum* Champ.).

A tall shrub with compound leaves composed of oval, bright-green leaflets an inch long and small reddish flowers in terminal racemes 6 inches long. Native to Hong Kong and allied to *Meibomia concinna*.

103622. *MEIBOMIA TRIQUETRA* (L.) Kuntze (*Desmodium triquetrum* DC.).

A handsome shrub with triangular branches, stiff leathery leaflets, and long axillary and terminal racemes of red flowers. It is found in most places in eastern and southern India, and also in China and the Philippines.

103623. *URARIA CRINITA* (L.) Desv. Fabaceae.

An erect somewhat shrubby perennial 3 to 6 feet high, native to southeastern Asia. The compound leaves are made up of 3 to 7 leathery oblong leaflets 4 to 6 inches long, and the small purple flowers are borne in dense cylindrical racemes 12 to 15 inches long and nearly 2 inches in diameter.

103624. *CARPOTROCHE BRASILIENSIS* (Raddi) Endl. Flacourtiaceae.
Sapucainha.

From Pernambuco, Brazil. Seeds collected by Rev. Bento Pickel, and presented by Father Hugh O'Neill, of the Catholic University, Washington, D. C. Received August 8, 1933.

A tropical tree 30 to 50 feet high, with oblong leaves about 4 inches long and few-flowered racemes of small white flowers. The fruits are about 4 inches in diameter. A sirup said to cure leprosy and an ointment used for skin affections are prepared from the seeds.

For previous introduction see 95500.

103625. *GOSSYPIUM BARBADENSE* L.
Malvaceae. **Sea-island cotton.**

From the South Sea Islands. Seeds presented by Earl F. Wallace. Received August 5, 1933.

Introduced for the use of Department specialists.

103626. *LICUALA* sp. Phoenicaceae.
Palm.

From Annam, Indo-China. Seeds presented by M. Poilane, Institut des Recherches Agronomiques de l'Indochine, Division de Botanique Forestiere, Saigon. Received August 12, 1933.

The licalas are rather low palms, sometimes almost stemless, with terminal fan-shaped leaves.

103627. *ALLIUM SATIVUM* L. Liliaceae.
Garlic.

From China. Bulblets presented by T. Y. Wang, head of the horticultural department of the Sun Yat Sen Tomb and Memorial Park Commission. Received August 15, 1933.

Introduced for the use of Department specialists.

103628 and 103629.

From Arabia. Seeds presented by K. S. Twitchell, New York City, through William A. Taylor, Chief, Bureau of Plant Industry. Received August 15, 1933.

103628 and 103629—Continued.

103628. *CASSIA ATRICULATA* L. Caesalpiniaceae.

A tall shrub native to southeastern Asia. The compound leaves, 3 to 4 inches long, are made up of 16 to 24 rigid leathery ovate-oblong leaflets about 1 inch long, covered beneath with fine gray down. The bright-yellow flowers, 1 inch long, are borne in large racemes.

103629. *CRACCA VILLOSA PURPUREA* (L.) Kuntze.

A purple-flowered, herbaceous perennial of low spreading habit which is native to tropical Africa. The plant is useful as a cover crop and also as a green manure.

For previous introduction see 97871.

103630. *URGINEA INDICA* (Roxb.) Kunth. Liliaceae.

From India. Seeds presented by the forest botanist, Forest Research Institute, Dehra Dun. Received August 16, 1933.

A bulbous perennial 12 to 18 inches high, native to India and tropical America. The flower scape, appearing before the linear leaves, bears a raceme 6 to 12 inches long of drooping campanulate flowers an inch long, greenish white with green nerves.

103631 to 103645. *ALLIUM* spp. Liliaceae.

From Manchuria. Seeds purchased from L. Ptitin, Harbin. Received August 16, 1933.

A collection of locally grown alliums, introduced for the use of Department specialists.

103631 to 103642. *ALLIUM CEPA* L. **Onion.**

103643 and 103644. *ALLIUM PORRUM* L. **Leek.**

103645. *ALLIUM SCHOENOPRASUM* L. **Chives.**

103646 to 103650. *IPOMOEA BATATAS* (L.) Poir. Convolvulaceae.

Sweetpotato.

From Australia. Tubers presented by Dr. H. Wenzel, Department of Agriculture, Sydney, New South Wales. Received August 19, 1933.

A collection of varieties introduced for the use of Department specialists.

103646. *Ashburn.*

103647. *Director.*

103648. *Farmer's Special.*

103649. *Rosella.*

103650. *Wannop.*

103651. *VIGNA SINENSIS* (Torner) Savi.
Fabaceae. **Cowpea.**

From Australia. Seeds presented by Dr. Alexander McTaggart, senior plant introduction officer, Division of Plant Industry, Canberra. Received August 18, 1933.

Giant. A commercial variety from the Cairns district, Queensland.

103652 and 103653. *JUGLANS REGIA* L.
Juglandaceae. **Persian walnut.**

From Australia. Trees presented by L. J. Hicks, Highbury East, South Australia. Received August 21, 1933.

Australian varieties, introduced for the use of Department specialists.

103652. *Freshford Gem.*

103653. *Kelvin.*

103654. EUCALYPTUS GOMPHOCEPHALA DC. Myrtaceae. Tooart.

From Australia. Seeds purchased from Stinton & Son, Geelong, Victoria. Received August 19, 1933.

A tree, native to Australia, of fairly rapid growth, which reaches a height of 100 feet. The very heavy, tough and strong wood is used for shipbuilding, bridges, and docks. This species will endure but little frost and prefers limestone soils.

For previous introduction see 48989.

103655. CANAVALIA RUSIOSPERMA Urban. Fabaceae.

From Haiti. Seeds presented by H. D. Barker, Service National de la Production Agricole et de l'Enseignement Rural, Port-au-Prince. Received August 15, 1933.

Quary A high-climbing herbaceous perennial, sometimes 4 inches in diameter at the base, native to the West Indies. The trifoliolate leaves have ovate leaflets 4 inches long; the red flowers, an inch across, are borne in racemes 10 inches long; and the beanlike pods, 10 inches long, enclose bright crimson suborbicular seeds nearly an inch in diameter.

103656. AVENA BYZANTINA Koch. Poaceae. Oats.

From Argentina. Seeds presented by the División de Estaciones Experimentales Dirección de Agricultura, Ministerio de Agricultura, Buenos Aires. Received August 24, 1933.

A local variety introduced for the use of Department specialists.

103657 to 103664. AVENA SATIVA L. Poaceae. Oats.

From France. Seeds presented by Florimond Despres, Capelle par Templeuve (Nord). Received August 24, 1933.

A collection of oat varieties introduced for the use of Department specialists.

103657. *Grugonnaise*.

103658. *Grise de Beauce*.

103659. *Ligowo*.

103660. *Logowo Bril*.

103661. *Pluie d'Or*.

103662. *Pluie d'Or II*.

103663. *S. F.*

103664. *Von Lockow*.

103665 to 103687. AVENA spp. Poaceae.

From Australia. Seeds presented by the manager of the Wagga Experiment Farm, Bomen, New South Wales. Received August 24, 1933.

A collection of named varieties, introduced for the use of Department specialists.

103665 to 103670. *AVENA BYZANTINA Koch.*

103665. *Amarilla I.* W 812.

103666. *Amarilla II.* W 813.

103667. *Argolis.* W 1038.

103668. *Baldwin.* W 917.

103669. *Cyprus White.* W 985.

103670. *Romano 6.* W 974.

103671 to 103683. *AVENA SATIVA L.*

103671. *Adonis.* W 1146.

103672. *Advocate.* W 1046.

103665 to 103687—Continued.

103673. *Barwon.* W 1224.

103674. *Binda.* W 1035.

103675. *Bradley.* W 884.

103676. *Burruga.*

103677. *Floresti.* W 803.

103678. *Hiver III.* W 918.

103679. *Hjarn.* W 1635.

103680. *Stark's Hooiemaker.* W 896.

103681. *Westdale.* W 1138.

103682. *Weston.* W 1012.

103683. *Weston.* W 1531.

103684 to 103687. *AVENA spp.*

103684. *Bharia.* W 802.

103685. *Imbros Island.* W 1655.

103686. *Saisine.* W 1651.

103687. *Winton.* W 900.

103688 to 103694. TRIFOLIUM RESUPINATUM L. Fabaceae.

Persian clover.

From the Union of Soviet Socialist Republics. Seeds presented by Dr. A. I. Belov, Central Plant Breeding Station, Tashkent, Turkistan. Received August 21, 1933.

A collection of widely varying strains, introduced for the use of Department specialists.

Native name *Shabdar*.

103688. No. 2320. From Gijduran, near Bokhara, Turkistan.

103689. No. 3172. From the District of Saman, northern Persia.

103690. No. 3173. From the District of Damghan, northern Persia.

103691. No. 3175. From the District of Tsafahan, central Persia.

103692. No. 3176. From Qum, central Persia.

103693. No. 3187. From Shahrud, District of Damghan, northern Persia.

103694. No. 2743. From northern Afghanistan.

103695 and 103696. ALLIUM SATIVUM L. Liliaceae. Garlic.

From Burma, India. Bulbs presented by A. McLean, deputy director of agriculture, East Central Circle, Pynmana. Received August 24, 1933.

103695. "Indian type", a garlic with smooth bulbs, presented by D. Rind, economic botanist, Agricultural College, Mandalay, at the request of Mr. McLean.

103696. *Shan garlic*.

103697. GLADIOLUS sp. Iridaceae.

From Portugal. Seeds presented by John Gossweiler, Loanda, Angola, Africa. Received August 25, 1933.

103698. ILEX PARAGUARIENSIS St. Hil. Aquifoliaceae. Yerba maté.

From Paraguay. Seeds presented by Dr. C. Fiebrig, director, Botanical Garden, Asuncion. Received August 23, 1933.

A tender evergreen Paraguayan holly, the leaves of which are dried and used to make a beverage called maté, or Paraguay tea.

For previous introduction see 101516.

103699. UVARIA RUFA (Dunal) Blume.
Annonaceae.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received August 23, 1933.

A much-branched shrub, native to Java, with a stem 4 to 6 inches in diameter and alternate, elliptic-oblong, acute or obtuse leaves 2 to 5 inches long. The solitary flowers are purplish red and about 1 inch wide. The oblong kidney-shaped fruits, about 2 inches long, are in bunches of 18 to 20 with scant whitish flesh which is juicy, aromatic, and subacid without a trace of sugar; they contain many seeds.

For previous introduction see 90938.

103700 to 103714.

From India. Seeds presented by D. N. Mahta, economic botanist, Nagpur, Central Provinces. Received August 24, 1933.

A collection of locally grown vegetables introduced for the use of Department specialists.

103700. ALLIUM CEPA L. Liliaceae. **Onion.**

103701. ALLIUM SATIVUM L. Liliaceae. **Garlic.**

103702. CUCUMIS SATIVUS L. Cucurbitaceae.
Cucumber.

A long green variety.

103703. CUCUMIS SATIVUS L. Cucurbitaceae.
Cucumber.

A long white variety.

103704. CUCURBITA MOSCHATA Duchesne. Cucurbitaceae.
Cushaw.

103705. LAGENARIA LEUCANTHA (Duchesne) Rusby (*L. vulgaris* Seringe). Cucurbitaceae.
Calabash gourd.

103706. LUFFA ACUTANGULA (L.) Roxb. Cucurbitaceae.
Singkwa towelgourd.

Bottle gourd.

103707. LUFFA CYLINDRICA (L.) Roemer. Cucurbitaceae.
Suakwa towelgourd.

Sponge gourd.

103708. MOMORDICA CHARANTIA L. Cucurbitaceae.
Balsam-pear.

Bitter gourd.

103709 and 103710. PISUM SATIVUM L. Fabaceae.
Pea.

103711. SOLANUM MELONGENA L. Solanaceae.
Eggplant.

A purple-fruited variety.

103712. SOLANUM MELONGENA L. Solanaceae.
Eggplant.

A white-fruited variety.

103713. SPINACIA OLERACEA L. Chenopodiaceae.
Common spinach.

103714. TRICHOSANTHES ANGUINA L. Cucurbitaceae.
Snakegourd.

103715 to 103721. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

From the Philippine Islands. Cuttings presented by the Philippine Sugar Association, Manila. Received September 2, 1933.

Introduced for the use of Department specialists.

103715. PSA 15. **103719. PSA 35.**

103716. PSA 18. **103720. PSA 36.**

103717. PSA 19. **103721. PSA 37.**

103718. PSA 24.

103722. PHYSALIS PERUVIANA L. Solanaceae. **Peruvian groundcherry.**

From Mexico. Seeds presented by A. C. Baker, principal entomologist, United States Department of Agriculture, Bureau of Entomology, Mexico City. Received August 31, 1933.

Cape gooseberry or *husk tomato*. A shrub native to tropical and temperate America, but widely naturalized in many countries of the warmer zones. It reaches a height of about 4 feet, the fruits are oval or nearly round, up to an inch in length, and deep yellow when fully ripe. They are used for preserving, but are too acid to be eaten out of hand.

For previous introduction see 91043.

103723. PRUNUS sp. Amygdalaceae.

From the Union of Soviet Socialist Republics. Seeds presented by Vale Lichagov, horticulturist, Sochi, Caucasus. Received September 2, 1933.

A strong and rapid-growing wild cherry, collected in the middle mountain zone of Sochi District. It is well adapted for growing in heavy soil in a humid climate.

103724 to 103732. Phoenicaceae. Palm.

From Ceylon. Seeds presented by T. H. Parsons, curator, Royal Botanic Garden, Peradeniya. Received August 31, 1933.

103724. ARCHONTOPHOENIX ALEXANDRAE (F. Muell.) Wendl. and Drude.

A pinnate-leaved palm 70 to 80 feet high, with leaves several feet long and lanceolate, usually entire, leaflets 1 to 2 feet long and whitish beneath. The yellow-green flowers are borne in a cluster about 1 foot long and are followed by small round dry fruits. It is native to Queensland, Australia.

For previous introduction see 98484.

103725. BACTRIS PALLIDISPINA Mart.

A slender palm, 10 to 20 feet high, with the stems in clusters, native to Brazil. The pinnately divided leaves, made up of linear-lanceolate segments 8 to 12 inches long, are 5 to 9 feet long, and the petioles are thickly covered with black-tipped yellow spines 1 to 3 inches long. The yellow-green flowers are followed by green ovoid fruits 1 to 2 inches in diameter.

103726. CALYPTROGYNE OCCIDENTALIS (Swartz) G. Maza. (*C. swartzii* Becc.).

A beautiful and rare palm with a straight smooth stem, sometimes reaching a height of 50 feet. The pinnate leaves are from 8 to 12 feet long.

For previous introduction see 101257.

103727. CARYOTA MITIS Lour.

A palm, native to the Malay Peninsula, 15 to 20 feet high, which sends up suckers from the base. The pinnate leaves, 6 to 9 feet long, are divided into wedge-shaped segments, and the globular purple fruits are about the size of a cherry.

For previous introduction see 103159.

103728. DIDYMSPERMA PORPHYROCARPON (Mart.) Wendl. and Drude.

A reedlike palm 3 to 6 feet high, native to Java. The pinnately divided leaves, 5 to 8 feet long, are glaucous beneath and are made up of narrowly oblong segments 6 inches long, often 2- or 3-lobed at the tip. The oblong purple fruits are about 1 inch long.

103729. LOXOCOCCUS RUPICOLA (Thwaites) Wendl. and Drude.

A pinnate-leaved palm 20 to 40 feet high, native to Ceylon, where it grows between 1,000 to 5,000 feet altitude. The leaves are 5 to 6 feet long, and the blood-red flowers are followed by globular fruits about 1 inch in diameter.

For previous introduction see 30743.

103724 to 103732—Continued.

103730. *ONGOSPERMA FASCICULATUM* Thwaites.

The *Katu-kitul* palm of Indo-Malaya is one of the graceful cluster palms which make magnificent groups 40 to 60 feet high in the Peradeniya Gardens. The stems are spiny, making it unsuitable for small gardens, but it is useful for large parks.

For previous introduction see 94090.

103731. *PHOENICOPHORUM BORSIGIANUM* (Koch) Stuntz.

This noble palm, famous for its beauty, is native to the Seychelles Islands. The mature palm is wholly destitute of spines, whereas in the young state the deep orange-red petioles are clothed with black needlelike spines 1 to 3 inches long. The young leaves are orange beneath and mottled with orange spots above. The difference between the young and the mature plants is so great that the uninitiated would consider them different species. The flower spike is from 3 to 6 feet long, divided into numerous slender branches, swollen at the base and densely covered above with yellow flowers, each about one-fourth of an inch in diameter.

For previous introduction see 103002.

103732. *PHOENIX ZEYLANICA* (Trimen.) Ceylon date palm.

A pinnate-leaved palm, native to Ceylon, with a stem 8 to 20 feet high and a crown of rather short leaves made up of numerous linear-lanceolate, light-green leaflets 7 to 10 inches long. The obovoid-oblong, violet-blue, edible fruits are one-half inch long.

For previous introduction see 93325.

103733. *EUPHORBIA* sp. *Euphorbia-ceae.* Spurge.

From India. Seeds collected on the northern slopes of the Wyndhian Mountains, Jhansi Division, United Provinces, and presented by Dr. Leon Croizat, New York, N. Y. Received September 5, 1933.

Tuhahr. Of possible value as a rubber plant.

103734. *CARYOTA CUMINGII* Lodd. *Palm.* *Phoenicaceae.*

From Cuba. Seedlings presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received September 5, 1933.

A palm, native to the Philippine Islands, with a tall, stout, spineless ringed trunk about 20 feet high and a few spreading bipinnate leaves and small globose fruits.

For previous introduction see 72950.

103735 to 103738. *MACADAMIA TERNI-FOLIA* F. Muell. *Proteaceae.* *Queensland-nut.*

From Australia. Seeds presented by S. M. Greer, Murwillumbah, Tweed Rio, New South Wales. Received September 5, 1933.

An evergreen tree up to 50 feet high, native to shady jungles in the eastern part of Australia where the soil is rich and the annual rainfall is over 60 inches. It is cultivated for its edible nuts, which have sweet white flesh with the flavor of chestnuts, incased in a shell that is typically very hard.

103735. A variety with a thin shell.

103736. An everbearing variety.

103737. *Mammoth.*

103738. A variety with a medium hard shell and large nuts.

103739. *GUILIELMA UTILIS* Oerst. *Phoenicaceae.* *Pejibaye.*

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received September 5, 1933.

A pinnate-leaved palm, native to tropical regions of the Western Hemisphere. Its straight slender stem, about 6 inches in diameter, becomes 60 feet high and is armed from the ground upward with stiff, very sharp, black spines about 2 inches long. The racemes, 18 to 24 inches long, of small sessile yellow-white flowers are produced from the trunk of the palm immediately below or among the lower leaves and are protected by erect spathes. When the fruit is mature the raceme weighs over 25 pounds, and often 5 or 6 such racemes are produced in a single crop. The individual fruits are conical or ovoid, vary from 1 to 2 inches in length, and have dry mealy flesh of a pale-orange or yellow color. It is one of the important food plants of the Tropics.

For previous introduction see 65054.

103740 and 103741.

From Arizona. Seeds presented by the Boyce Thompson Southwestern Arboretum, Superior, through F. J. Crider. Received April 9, 1932. Numbered in September 1934.

103740. *FEROCACTUS WISLIZENI* (Englm.) Britt. and Rose. *Cactaceae.*

A large cactus, at first globular, but becoming cylindrical and finally reaching a height of over 5 feet when old. The numerous ribs, often 25 or more, are 1¼ inches high, beset with brown-felted areoles from which arise subulate, strongly hooked red or white spines about 2 inches long. The yellow or sometimes red flowers are over 2 inches long, and the oblong yellow fruits are nearly as long as the flowers. Native to northern Mexico and the southwestern United States.

103741. *NEOMAMMILLARIA MACDOUGALII* (Rose) Britt. and Rose. *Cactaceae.*

A flattened globular cactus 3 to 4 inches in diameter, with a carrot-shaped root. The axils of the flattened, somewhat-angled tubercles often bear long white wool, and from the tops of the tubercles appear 10 to 12 radial spines, white or yellowish, and about one-half inch long. The cream-colored flowers are an inch or more long and are followed by club-shaped red fruits. Native to southeastern Arizona.

103742. *BLIGHIA SAPIDA* Koen. *Sapin-daceae.* *Akee.*

From Trinidad. Seeds presented by H. Bruins-Lich, Department of Agriculture. Received September 11, 1933.

A tree, native to the Guinea Coast of Africa, which has become naturalized in the West Indies. The triangular bright-red capsule contains shiny black seeds, each partly surrounded by a yellow fleshy aril. The fruit is said to be poisonous when immature or overripe, but the fleshy portion (aril) is eaten after being boiled or fried.

For previous introduction see 102278.

103743. *COLUTEA ORIENTALIS* Mill. *Fabaceae.* *Oriental bladder-senna.*

From the Union of Soviet Socialist Republics. Seeds presented by the director of the Tiflis Botanic Garden, Tiflis, Georgia. Received January 7, 1932. Numbered in September 1933.

A shrub 6 to 8 feet high, with pubescent branchlets, native to the Caucasus region. The compound leaves are made up of 7 to 11 broadly ovate leaflets 4 to 6 inches long. The pea-shaped, red-brown flowers, in racemes of 2 to 5, are followed by bladdery pods 1 to 2 inches long, usually suffused with violet purple.

103744 to 103746. PRUNUS spp. Amygdalaceae.

From Palestine. Seeds presented by Asaph Grasovsky, Department of Agriculture and Forests, American colony, Jerusalem. Received September 13, 1933.

Locally developed varieties, introduced for the use of Department specialists.

103744. PRUNUS ARMENIACA L. Apricot.

Clabisee. From the horticultural station at Jerusalem.

103745. PRUNUS sp.

Karasia. A plum grown in the village of Wallageh.

103746. PRUNUS sp.

Sweedah. A plum from the village of Artess.

103747 and 103748.

From Straits Settlements. Seeds presented by the assistant curator, Botanic Gardens, Singapore. Received September 13, 1933.

103747. LIVISTONA SUBGLOBOSA (Hassk.) Mart. Palm.

A medium-sized palm, native to Java, with palmately divided leaves having segments 10 to 12 inches long which are two-parted nearly to the base into linear pendulous lobes. The small, very dark violet fruits, one-half inch in diameter, are borne in a panicle on a spadix about a foot long.

For previous introduction see 103166.

103748. PALAQUIUM GUTTA (Hook.) Burck. Sapotaceae. Gutta-percha tree.

A tree up to 100 feet high, native to the Malay Peninsula, and a source of gutta-percha. The oblanceolate coriaceous leaves, 3 to 5 inches long, are dark green above and golden-coppery beneath. The small white flowers, in clusters of 3 to 5 in the axils or on the bare parts of the branches, are an inch long.

103749 GARCINIA CORNEA L. Clusiaceae.

From the Canal Zone. Seeds presented by J. E. Higgins, director, Canal Zone Experiment Gardens, Summit. Received September 18, 1933.

A small erect tree native to the Malay Archipelago. The oblong or oblong-lanceolate leathery shining leaves are 4 to 6 inches long, and the roundish, dull rusty yellow fruits are the size of a small orange.

103750 to 103765.

From the Union of South Africa. Trees purchased from H. F. Kothe, Edendale, Natal. Received September 19, 1933.

Introduced under the following varietal names for the use of Department specialists.

103750 to 103753. AMYGDALUS COMMUNIS L. Amygdalaceae. Almond.

103750. Britz.

103751. Harriott Seedling.

103752. Mission Princess.

103753. Rosens Lewelling.

103754 to 103759. AMYGDALUS PERSICA L. Amygdalaceae. Peach.

103754. Alexander Jewell.

103755. Bells November.

103756. Hertzog.

103750 to 103765—Continued.

103757. Killiekrankie.

103758. Schoongezicht.

103759. Van Rensburg Late.

103760 to 103764. MALUS SYLVESTRIS Mill. Malaceae. Apple.

103760. Beyers.

103761. Eccleville Pippin.

103762. Rokewood.

103763. Statesman.

103764. Tulus.

103765. PRUNUS ARMENIACA L. Amygdalaceae. Apricot.

Alpha.

103766. THALICTRUM sp. Ranunculaceae. Meadowrue.

From Sitkalidag Island, Alaska. Seeds purchased from Walter J. Eyerdam, Seattle, Wash. Received December 5, 1931. Numbered in 1933.

103767. BUMELIA sp. Sapotaceae.

From British Guiana. Seeds presented by J. G. Myers, Rupununi Savannas, through David Fairchild. Received September 15, 1933.

Wichabai tree. A small tropical tree with edible black berries nearly as large as a cherry and green delicious pulp resembling that of a plum. The latex is sticky.

103768. EUONYMUS ALATUS (Thunb.) Rupr. Celastraceae.

Winged euonymus.

From Zenkoku, Chosen. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received December 9, 1929. Numbered in September 1933.

A spreading shrub up to 5 feet high, with corky branches, sharply toothed elliptic leaves about 2 inches long, and clusters of yellow flowers followed by small two-seeded bright-red fruits.

103769. GORDONIA LASIANTHUS Ellis. Theaceae. Loblolly-bay.

From England. Plants purchased from V. E. Gauntlett & Co., Chiddingfold, Surrey. Received September 23, 1933.

An evergreen tree up to 60 feet high, but usually shrubby in cultivation. The obovate-lanceolate leaves, 4 to 6 inches long, have crenate margins, and the large white flowers, appearing in July and August, are 2 to 3 inches across. Native to the southeastern United States.

103770. (Undetermined.)

From Annam, Indo-China. Seeds presented by M. Poilane, Institut des Recherches Agronomiques de l'Indochine, Division de Botanique Forestiere, Saigon. Received August 12, 1933.

A shrub that may have value as a stock plant for *Coffea arabica*.

103771. STRYCHNOS SPINOSA Lam. Loganiaceae. Kaffir-orange.

From Madagascar. Seeds presented by Henri Perrier de la Bathie, Academie Malgache, Tananarive. Received September 25, 1933.

Piriformis. A variety of the Kaffir orange with pear-shaped fruits. This is a low spiny tree, native to tropical Madagascar. The slightly leathery ovate to suborbicular leaves are 2 to 3 inches long, and the small greenish flowers, borne in dense terminal cymes, are followed by orange-red fruits, usually globular, with edible flesh.

103772 to 103776.

From China and Japan. Seeds collected by P. H. Dorsett and W. J. Morse, agricultural explorers, Bureau of Plant Industry. Received in 1929 and 1930. Numbered in September 1933.

103772. *CELASTRUS ARTICULATUS* Thunb. Celastraceae. Oriental bittersweet.

No. 7228. Collected in the Yung Lo Ming Tomb, Nankow, China, September 19, 1930. A vine which climbs to about 20 feet. The yellow husks of the fruit persist but open, showing the red fruit.

For previous introduction see 90658.

103773. *EUONYMUS HAMILTONIANUS* Wall. Celastraceae.

No. 7248. From Chinglungchiao, China, September 21, 1930. A large Himalayan shrub which under favorable circumstances becomes a moderate-sized tree, 30 to 35 feet high, with a short straight trunk 4 to 5 feet in circumference. The clusters of greenish-white flowers are followed by yellow capsules, the seeds of which are entirely surrounded by a scarlet aril. The fruit begins to ripen in August, and the leaves are brilliantly colored in the autumn.

For previous introduction see 90660.

103772 to 103776—Continued.

103774. *QUERCUS SERRATA* Thunb. Fagaceae. Oak.

No. 1480. Collected near Kawazoe, Japan, October 12, 1929. A white oak up to 70 feet high, native to Japan, Chosen, and China. The oblong ovate leaves are lustrous bright green and hold their color until late in the autumn. It is usually shrubby under cultivation.

For previous introduction see 90795.

103775. *EUONYMUS MAACKII* Rupr. Celastraceae.

No. 1563. From Keijo, Chosen, October 27, 1929. A large shrub or small tree with narrowly ovate leaves about 3 inches long and small clusters of pink, four-lobed fruits which have orange-red arils. Native to northeastern Asia.

For previous introduction see 92050.

103776. *EUONYMUS JAPONICUS* L. f. Celastraceae. Evergreen burningbush.

No. 3156. From Tokyo, Japan, December 13, 1929. An upright shrub 6 to 8 feet high, native to Japan. The thick evergreen obovate leaves are 1 to 3 inches long, and the small greenish-white flowers are followed by depressed-globose pink capsules.

Index of common and scientific names.....	13

INTRODUCTORY STATEMENT

Inventory no. 117 is a record of the plant material received by the Division of Plant Exploration and Introduction from October 1 to December 31, 1933 (nos. 103777-103988).

Although the total number of plants introduced during this period is unusually low, there are, nevertheless, certain introductions that deserve to be pointed out.

From the Department of Agriculture, Manila, P. I., there was received a collection of rice varieties (nos. 103854-103859) reported to be resistant to stem rot, and a special collection of rye selections (nos. 103953-103969) was presented by the Institute of Plant Industry at Leningrad. Twenty-two varieties of wheat, representing selections that have proved very resistant to leaf rust (nos. 103805-103826) were received from the experiment farm at Glen Innes, New South Wales, Australia.

In the field of deciduous fruits there should be mentioned a collection of locally grown varieties of peaches, apricots, and plums (nos. 103797-103803) presented by the agricultural officer of the Northwest Frontier Province, India. In this temperate mountainous region, the most northerly Province of British India, deciduous fruits have been grown for centuries.

Interest in rock gardening in the United States continues very strong, and for that reason a collection of 40 species of native Japa-

nese alpine plants (nos. 103861-103900) is noteworthy. This lot includes little-known species of *Anemone*, *Potentilla*, *Primula*, *Viola*, etc.

The botanical determinations were made and the nomenclature determined by the late H. C. Skeels,¹ who had general supervision of this inventory.

B. Y. MORRISON,
Principal Horticulturist, in Charge.

DIVISION OF PLANT EXPLORATION AND INTRODUCTION,
Washington, D. C., July 10, 1935.

¹ Died Jan. 3, 1934.

INVENTORY²

103777. BRASSICA sp. Brassicaceae.

From southwestern China. Seeds collected by Dr. J. F. Rock, agricultural explorer for the University of California Botanical Garden expedition. Received October 2, 1933.

Ko Mgyu A. (Tibetan name). *Matsing* (Chinese name). Rape turnip. The leaves are edible when young, and the root is boiled and eaten. The root is also cut up and used as fodder for cows, horses, and pigs, and is said to be very fattening.

103778. PHLEUM PHLEOIDES (L.) Karst. Poaceae. Timothy.

From Sweden. Seeds presented by Prof. Hearnfrid Witte, director, Swedish State Seed Testing Institute, Stockholm. Received October 5, 1933.

A variety, native to Sweden, introduced for the use of Department specialists.

103779. ANEMOPAEGMA CHAMBERLAYNII (Sims) Bur. and K. Schum. Bigoniaceae.

From Venezuela. Seeds presented by C. A. Davila, commercial attaché to the Legation of Venezuela, Washington, D. C. Received October 10, 1933.

From the mountains near Carácas. A perennial vine which climbs by means of clawlike tendrils. The trumpet-shaped flowers are clear bright yellow.

For previous introduction see 9662.

103780. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae.

Common wheat.

From Denmark. Seeds presented through Prof. H. C. Rafter, Michigan State College of Agriculture and Applied Science, East Lansing, Mich. Received October 18, 1933.

Danish-grown wheat, introduced for the use of Department specialists.

103781 to 103785. Phoenicaceae.

Palm.

From the Philippine Islands. Seeds presented by the director of forestry, Manila. Received October 2, 1933.

103781 to 103785—Continued.

103781. CORYPHEA ELATA Roxb.

A tall palm up to 60 feet high, with spiny stems and fan-shaped leaves. It is native to the Philippine Islands.

For previous introduction see 74425.

103782. HETEROSPATHE ELATA Scheff.

A tall unarmed palm with a straight slender stem and long pinnate leaves, growing in protected situations where the rainfall is evenly distributed. It is one of the most attractive and graceful palms and will make a good plant for the conservatory and, possibly, a good house plant.

For previous introduction see 101212.

103783. LIVISTONA ROTUNDIFOLIA LUZONENSIS Becc.

A Philippine palm up to 35 feet high, with a straight terete trunk 6 to 10 inches thick. The fan-shaped leaves, 3 to 5 feet in diameter, are used for thatching. Native to the island of Luzon, Philippine Islands.

103784. ORANIA PALINDAN (Blanco) Merr.

Banga. A tall unarmed ornamental palm, native to the interior of Bukidnon, Mindanao, found between 900 and 1,500 feet altitude. The trunk is straight and remarkably uniform in diameter, rarely exceeding 6 inches. The leaves are pinnate and silvery beneath. The natives use the straight-grained durable wood for floors, fences, etc.

For previous introduction see 94197.

103785. PINANGA INSIGNIS Beccari.

A rather small palm with a slender smooth trunk about 6 inches in diameter, very graceful feathery leaves, and oval fruits 2 inches in length. The seeds are used by the natives as a substitute for the betel nut in preparing "buayo", a mixture of leaves of *Piper betle*, lime, and betel nuts which, when chewed, colors the saliva a characteristic red and is held to be a tonic and general stimulant.

For previous introduction see 54986.

² It should be understood that the names of varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Division of Plant Exploration and Introduction, and, further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identifications therefore must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this Division, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

103786. COCCOLOBA LATIFOLIA L a m.
Polygonaceae.

From Paramaribo, Surinam. Seeds presented by the director of the Agricultural Experiment Station, through David Fairchild. Received October 3, 1933.

A tree with dark-green leaves from 1 to 2 feet in diameter, found on poor lands of the coastal plain in Surinam. While not a striking tree in some respects, the large size of the leaves makes it attractive for dooryard and park purposes.

For previous introduction see 99539.

103787. PAPAVER SCHINZEANUM Fedde.
Papaveraceae.

From Scotland. Seeds presented by the Royal Botanic Garden, Edinburgh. Received February 8, 1933. Numbered in October 1933.

A perennial herb, about a foot high, more or less caespitose in habit and gray hairy throughout. The leaves are narrowly obovate or oblong lanceolate, irregularly pinnately lobed, and 4 to 6 inches long. The flowers, borne singly on erect scapes, vary from orange to apricot in color. This poppy was first discovered in the Botanical Garden, Zurich, Switzerland.

103788 and 103789.

From Cuba. Seeds presented through Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received October 9, 1933.

103788. OPUNTIA ROBUSTA W e n d l.
Cactaceae.

Presented by A. Bircher, Middle Egypt Botanic Station, El Saft, Egypt. A stout erect cactus, sometimes as much as 15 feet high, with many branches. The round or oblong joints, 8 to 10 inches long, are very thick and bluish green, with 8 to 12 stout brownish spines 1 or 2 inches long. The yellow flowers, 2 inches across, are succeeded by deep-red fruits about 3 inches long. Native to central Mexico.

103789. ANGELONIA CUBENSIS Robins.
Scrophulariaceae.

A tropical perennial herb about a foot high, with erect simple stems and narrowly oblong leaves about 2 inches in length. The small purplish blue flowers three-fourths of an inch long are in simple racemes. Native to Cuba.

103790 to 103793.

From Argentina. Seeds presented by G. H. Childs, Hollywood, Calif., who collected them near Lago San Martin, Territory of Santa Cruz. Received October 6, 1933.

103790 to 103792. BERBERIS spp. Ber-
beridaceae. **Barberry.**

Calefate.

103790. BERBERIS sp.

A large mountain variety with very seedy fruits.

103791. BERBERIS sp.

Collected in rather sandy soil near a lake.

103792. BERBERIS sp.

A large variety.

103790 to 103793—Continued.

103793. EMBOTHRUM COCCINEUM Forst.

A handsome evergreen tree, with dark, glossy-green, somewhat leathery, ovate-lanceolate leaves 2 to 4 inches long and brilliant scarlet flowers about 1 inch long in dense axillary and terminal short racemes. It is native to Chile and becomes 40 feet high under favorable conditions.

103794 to 103796. AVENA spp. Poaceae.
Oats.

From Australia. Seeds presented by the manager of the New England Experiment Farm, Glen Innes, New South Wales. Received October 12, 1933.

Introduced for the use of Department specialists.

103794. AVENA BYZANTINA Koch.

Creme.

103795. AVENA sp.

Estramadura Grey.

103796. AVENA BYZANTINA Koch.

Vrome.

103797 to 103803.

From India. Seeds presented by the agricultural officer, Northwest Frontier Province, Taru Jabba, Peshawar. Received October 16, 1933.

A collection of locally grown varieties introduced for the use of Department specialists.

103797. AMYGDALUS PERSICA L. **Amyg-
dalaceae. Peach.**

A variety with white fruit.

103798. AMYGDALUS PERSICA L. **Amyg-
dalaceae. Peach.**

A variety with yellow fruit.

103799 to 103803. PRUNUS spp. **Amyg-
dalaceae.**

103799 to 103801. PRUNUS ARMENIACA
L. **Apricot.**

103799. Buvi. 103801. Sufaida.

103800. Jab.

103802. PRUNUS CERASIFERA DIVARICATA
(Ledeb.) C. Schneid. **Cherry plum.**

Dinga.

103803. PRUNUS CERASIFERA DIVARICATA
(Ledeb.) C. Schneid. **Cherry plum.**

Dug.

103804. ACHRAS ZAPOTA L. Sapotaceae.
Sapodilla.

From the Philippine Islands. Scions presented by the Economic Garden, Bureau of Plant Industry, Los Banos, Laguna, through Manuel Rozas, director of plant industry, Manila. Received October 23, 1933.

Ponderosa, a variety characterized by being 4 or 5 times larger than the wild type, with a superior quality and flavor. Some fruits are said to weigh 12 ounces, while the native fruit weighs about 3 ounces. The flesh of this variety is vinous, very sweet, and very juicy.

103805 to 103826. TRITICUM spp. Poaceae. Wheat.

From Australia. Seeds presented by S. L. Macindoe, plant breeder at the New England Experiment Farm, Glen Innes, New South Wales. Received October 17, 1933.

A collection of triticums which have proved very resistant to leaf rust under the conditions at the experiment farm in New South Wales. Introduced for the use of Department specialists. Received under the following varietal names:

103805 to 103825. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Common wheat.103805. No. C 5347. *Baladi 26*.103806. No. C 5351. *Baladi 31*.103807. *Clarendon*.103808. No. C 5988. *H 44* × *Marquis 609*.103809. No. C 5985. *H 44* × *Marquis 592*.103810. No. C 5990. *H 44* × *Marquis 615*.103811. No. C 5983. *H 44* × *Marquis 586*.103812. No. C 6041. *Kenya* (crossbred).103813. No. C 5986. *Marquis 594* × *H 44*.103814. No. C 4610. *Marquis* × *Emmer*.103815. No. C 5090. *Marquis* × *Emmer 20*.103816. No. C 6284. *Marquis* × *Emmer*.103817. No. C 5085. *Marquis* × *Vernal Emmer 14*.103818. No. C 5976. *Pentad* × *Marquis 724*.103819. No. C 5978. *Pentad* × *Marquis 726*.103820. No. C 5979. *Pentad* × *Marquis 727*.103821. No. C 5981. *Pentad* × *Marquis 729*.103822. *Persian Black*.103823. No. C 8793. *Reward* × *H 44*.103824. *Thevo*.103825. No. C 5084. *Vernal Emmer* × *Marquis 138*.

103826. TRITICUM DURUM Desf. Durum wheat.

Hodei form.

103827. AMYGDALUS PERSICA L. Amygdalaceae. Peach.

From the island of Malta. Seeds presented by J. Borg, superintendent, Office of Agriculture, Valletta. Received October 23, 1933.

A locally grown variety which has yellow flesh; introduced for the use of Department specialists.

103828 to 103830. PHOENIX spp. Phoenicaceae. Palm.

From Africa. Seeds presented by C. B. Taylor, botanist, Department of Agriculture, Zaria, Nigeria. Received October 27, 1933.

103828 to 103830—Continued.

103828. PHOENIX DACTYLIFERA L.

Date palm.

Dabino. A cultivated palm over 30 feet high, with leaves 15 feet long. The inflorescence has a broad flattened spathe, and the edible fruits are 2 inches long.

103829. PHOENIX sp.

Kajinjiri fadama or *dabodin biri*. A wild palm found in the swamps around Zaria. The smooth stem, without any adhering old leaf bases, is 18 feet high, and the leaves are 7 feet long. The small edible fruits are less than an inch long, but the tree begins to fruit when only 6 years old and is said to live to be 100 unless damaged by wind or disease. The leaves are extensively used in mat weaving, and the stems are split and used for building purposes.

103830. PHOENIX sp.

Kajinjiri tudu or *kajinjiri daji*. A small wild palm found on the hills around Zaria, with a stem 6 feet high, covered with persistent old leaf bases. The leaves are about 4 feet long, and the small edible fruits are less than an inch in length. The tree begins fruiting when only 5 years old and is said to live over 100 years unless damaged by wind or disease. The leaves are extensively used for mat weaving, and the stem of the tree is split and used for building purposes.

103831 to 103833. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae.

Common wheat.

From Brazil. Seeds presented through Reginald S. Castleman, American consul, Porto Alegre. Received October 30, 1933.

A collection of wheats, said to be immune from rust, developed at the Wheat Experiment Station at Bagé, which is maintained by the State Government of Rio Grande do Sul.

103831. M 12-32.

103832. *Trigo fronteira*.103833. *Trigo surpresa*.

103834 and 103835.

From India. Seeds grown in the Victoria Botanic Garden, Bombay, and presented through Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, Cuba, by F. G. Walsingham. Received October 30, 1933.

103834. BAUHINIA BRACHYCARPA Wall. Caesalpinaceae.

An erect tropical shrub with slender branches and heart-shaped roundish nine-ribbed leaves, cleft a third down into two obtuse lobes. The flowers are in short dense racemes, and the pod is over an inch long. Native to India.

103835. CASSIA RENIGERA Wall. Caesalpinaceae.

A tropical tree from the mountains of Burma, with compound leaves a foot long. The 30 to 40 obtuse oblong leaflets, 1½ inches long, are leathery and finely hairy below. The cylindrical pod is a foot in length.

103336. *STYLOSANTHES MUCRONATA*
Willd. Fabaceae.

From Australia. Seeds presented by J. Michelmore & Co. Pty. Ltd., Mackay, Queensland. Received November 2, 1933.

A much-branched undershrub, 1 to 2 feet high, native to southern Asia and tropical Africa. The rigidly coriaceous trifoliolate leaves have oblong leaflets about one-half inch long, and the inconspicuous flowers are in small dense heads. Of possible value as a forage crop.

For previous introduction see 101186.

103337 to 103349. *TRITICUM AESTIVUM*
L. (*T. vulgare* Vill.). Poaceae.
Common wheat.

From Australia. Seeds presented by H. Wenzholz, director of plant breeding, Department of Agriculture, Sydney, New South Wales. Received November 2, 1933.

A collection of Australian-grown wheats introduced for the use of Department specialists.

103337. *Baringa*.

103338. *Bolin*.

103339. *Bomen*.

103340. *Dindiloa*.

103341. *Firchill*.

103342. *Florence*.

103343. *Genoa*.

103344. *Nabawa*.

103345. *Pilot*.

103346. *Queen Fan*.

103347. *S. H. J.*

103348. *Thew*.

103349. *Wardfir*.

103350. *PAROCHETUS COMMUNIS* Buch-
Ham. Fabaceae. Shamrock-pea.

From India. Seeds presented by F. H. Butcher, curator, Government Botanic Garden, Ootacamud. Received November 6, 1933.

A half-hardy perennial trailing vine with shamrocklike leaves, each leaflet marked at the base with a brown crescent. The pea-shaped flowers, nearly an inch across, have cobalt-blue standards and pink wings. It is native to tropical Asia.

For previous introduction see 103478.

103351. *CASTANOPSIS PHILIPENSIS*
(Blanco) Vidal. Fagaceae.

From the Philippine Islands. Seeds presented by Arthur F. Fischer, director of forestry, Department of Agriculture and Commerce, Manila. Received November 11, 1933.

A tall tropical evergreen tree up to 75 feet high, with lanceolate entire acuminate leaves 3 to 4 inches long. The edible nuts are about an inch long and resemble the European chestnut in flavor.

103352 and 103353.

From Africa. Seeds presented by Dr. Leon Croizat, New York, N. Y. Received November 9, 1933.

103352. *CANAVALIA ENSIFORMIS* (L.) DC.
Fabaceae. Jackbean.

From French Sudan.

103353. *EUPHORBIA* sp. Euphorbiaceae.

From Dodoma, Tanganyika Territory.

103354 to 103359. *ORYZA SATIVA* L.
Poaceae. Rice.

From the Philippine Islands. Seeds presented by Manuel L. Roxas, director of plant industry, Department of Agriculture, Manila. Received November 8, 1933.

A collection of rice varieties said to be resistant to stem rot under Philippine conditions. Introduced for the use of Department specialists.

103354. *Elonelon*.

103355. *Guinangang Str. 1*.

103356. *Macan Binan*.

103357. *Manticanon*.

103358. *Mancasar Str. 3*.

103359. *Ramay*.

103360. *ONOSERIS* sp. Asteraceae.

From Ecuador. Seeds collected by Elsie Brown, Pan American Union. Received November 16, 1933.

Collected on a mountain slope north of Quito. A daisylike plant with slender grayish-green leaves that form a thick low mat. The solitary, fragrant, pink flowers are borne on a leafless stem 10 to 12 inches long.

103361 to 103390.

From Japan. Seeds purchased from Tanaka Boekibu, Osaka. Received November 14, 1933.

A collection of native Japanese alpine plants.

103361. *ADENOPHORA NIKOENSIS* Franch.
Campanulaceae.

A low perennial, less than a foot high, closely allied to the campanulas, with sessile, lanceolate, finely toothed leaves about 1 inch long and small nodding spikes of sky-blue flowers three-fourths of an inch across.

103362. *ALSINE ARCTICA* (Stev.) Fenzl.
Silenaceae.

A herbaceous perennial that forms clumps a few inches high, with linear leaves half an inch long. The small white flowers are borne singly on short peduncles. Native to the arctic regions of northeastern Asia and North America.

103363 to 103365. *ANEMONE* spp. Ranunculaceae.

103363. *ANEMONE FLACCIDA* Fr. Schmidt.

An erect herbaceous perennial with stems 4 to 8 inches high and three-parted, incised-dentate basal leaves. The 1 or 2 long-stalked flowers are white appearing in midsummer in southeastern Siberia where the plant is also a native.

103364. *ANEMONE NIKOENSIS* Maxim.

An anemone with long-stemmed, triternate, incised basal leaves and solitary white flowers. Native to the highest mountains of central Japan.

103861 to 103900—Continued.

103865. ANEMONE PATENS INTERMEDIA Mak.

A herbaceous perennial with silky hairy stems and leaves about 5 inches high. The lower leaves are petioled, the upper ones sessile, all much divided into narrow linear acute lobes. The yellowish-white flower is about 1 inch across.

103866. ARNICA UNALASCHENSIS Less. Asteraceae.

A low perennial, about 6 inches high, with a simple stem and hairy, decussate, membranous, somewhat spatulate leaves less than an inch long. The small solitary flower heads are sulphur yellow. Native also to northern Alaska.

103867. CAMPANULA DASYANTHA Bieb. Campanulaceae.

A hardy perennial campanula, with the lower leaves spatulate, the upper linear-lanceolate, and all crenate and pubescent. The flowers are sky blue, with the calyx and petal margins very hairy.

103868. CASSIOPE LYCOPODIODES (Pall.) D. Don, Ericaceae.

A low creeping plant with slender stems, scalelike crowded leaves, and nodding, white, bell-shaped flowers borne singly on erect peduncles. Native to northeastern Asia.

For previous introduction see 102296.

103869. CHRYSANTHEMUM WEYRICHII (Max.) Miyabe.

A hardy perennial about 8 inches high, with fleshy pinnately parted leaves about 2 inches long and flower heads $1\frac{1}{2}$ inches across, with lilac ray flowers and yellow disks. Native to Sakhalin Island.

103870. CORYDALIS REMOTA Fisch. Papaveraceae.

A perennial herb with a tuberous rootstock and variously incised biternate leaves, often red margined. The exterior petals of the violet flowers are two-lobed and minutely toothed. Native to southeastern Asia.

103871. CRAWFURDIA TRINERVIS (Blume) Hassk. Gentianaceae.

Creeping gentian. A low-growing vine with pale gentianlike flowers followed by large oblong deep-red fruits, white inside, with many seeds.

For previous introduction see 67762.

103872. DIANTHUS SUPERBUS MONTICOLA Makino and Nemoto. Silenaceae.

A dwarf variety of the lilac pink with larger flowers that vary in color from rose pink to purplish pink.

103873. DIAPENSIA OBOVATA Nakai. Diapensiaceae.

A small compact evergreen, more or less woody perennial that forms a cushionlike tuft 1 to 2 inches high, with small white flowers on stems 1 to 2 inches high. The small entire leaves are flat and obovate-cuneate. Native to northeastern Asia.

103861 to 103900—Continued.

103874. DICENTRA PUSILLA Sieb. and Zucc. Papaveraceae.

A charming hardy perennial with the leaves finely divided into linear segments and with large clear-pink flowers.

103875. EPIGAEA ASIATICA Maxim. Ericaceae.

An Asiatic trailing arbutus, very similar to the American species but differing chiefly by being stouter throughout. The racemes usually consist of 6 to 12 flowers.

103876. ERANTHIS PINNATIFIDA Maxim. Ranunculaceae.

A dainty herbaceous perennial, allied to the anemone, with long-stemmed, pinnatifid leaves about 2 inches across and white flowers about an inch wide.

103877. GEUM PENTAPETALUM (L.) Mak. Rosaceae.

A low creeping shrubby perennial with pinnate, roselike foliage and solitary rather large white flowers about 1 inch across, with 8 to 10 petals borne in April on a slender stem. Native also to Kamchatka.

103878. JEFFERSONIA DUBIA (Max.) Benth. and Hook. Berberidaceae.

A stemless alpine perennial native to northeastern Asia, with a slender rhizome and numerous long-stemmed, cordate-reniform leaves about 3 inches long and wide. The large blue flowers are on a scape 6 inches high.

103879. LEONTOPODIUM FAURIEI Hand.-Mazz. Asteraceae.

An alpine perennial, white, hairy throughout, with a slender stem up to 8 inches high and a rosette of erect, spreading narrowly spatulate, acute leaves up to $2\frac{1}{2}$ inches long. The small whitish flower heads are in a small dense cluster.

103880. LEONTOPODIUM JAPONICUM Miq. Asteraceae.

An alpine plant related to the edelweiss, with an erect stem less than a foot high and lanceolate dark-green leaves over an inch long having densely woolly lower surfaces. The grayish flower heads, in terminal corymbs, are also densely woolly.

103881 to 103883. POTENTILLA spp. Rosaceae.

103881. POTENTILLA DICKINSII Franch. and Sav.

A perennial herb with a stoloniferous rhizome and slender, erect little-branched stems. The basal leaves are pinnate with 2 or 3 rhomboid leaflets, while the stem leaves are ternate with the lower stem leaves long-stemmed. The light-yellow flowers are in lax corymbs.

103882. POTENTILLA MEGALANTHA Takeda.

A stout perennial with a fleshy rootstock from which arise numerous heavy stems often more than a foot high. The thick radical leaves, often long-stemmed, are cordate, ternate, and up to 3 inches across, while the stem leaves are simple, sessile, and much smaller. The large yellow flowers are over 1 inch across.

103861 to 103900—Continued.

103883. POTENTILLA NIVEA L.

An alpine perennial with a stout rootstock, densely white-tomentose throughout. The leathery leaves are 1 to 2 inches long, with 3 to 5 obovate serrate leaflets. The yellow flowers, half an inch across, are on short stout peduncles. Native to northeastern Asia.

103884 to 103886. PRIMULA spp. Primulaceae. Primrose.

103884. PRIMULA FAURIAE Franch.

An alpine primrose with a long fibrous rhizome and rhombic or broadly ovate, lightly crenate, long-stemmed leaves, yellow mealy beneath and about one-half inch across. The small pink flowers are in umbels of 6 to 8.

103885 and 103886. PRIMULA REINHII Franch. and Sav.

A primula of the Fallaces section with roundish, deeply cordate, incised-crenate leaves densely covered with long hairs, and 4 to 6 inches in diameter. The scape, scarcely longer than the leaves, bears 2 to 6 pale-violet flowers.

103885. Collected on Mount Hakone.

103886. Collected on Mount Yatsugatake.

103867. RANZANIA JAPONICA T. Ito. Berberidaceae.

A hardy perennial closely allied to the mayapple of North America. The three lobes of the heart-shaped leaves are orbicular, and the solitary white flower is scarcely an inch across. Native to Mount Togakushe, Japan.

103888. RHODODENDRON BRACHYCARPUM D. Don. Ericaceae. Fujiyama rhododendron.

A shrub 10 to 15 feet high with elliptic to oblanceolate leaves 3 to 9 inches long, cuneate to auriculate at the base, dark green above, and gray tomentose beneath. The broadly funnel-form flowers, about 2 inches across, are white or yellow, striped and flushed pink, and spotted greenish brown.

For previous introduction see 95629.

103889. SAXIFRAGA BRONCHIALIS L. Saxifragaceae.

A low compact perennial 4 to 8 inches high, with ascending stems densely leafy at the base. The leaves are stiff, gray green, shiny, and linear-lanceolate, and the small yellowish-white flowers are dotted with orange-red. Native to northeastern Asia and Alaska.

103890. SAXIFRAGA CORTUSAEFOLIA ALPINA Matsum. and Nakai. Saxifragaceae.

A rather low perennial saxifrage, not stoloniferous. The dark-green basal leaves are rather fleshy and seven lobed, with the lower part reddish. The white flowers are in a lax panicle with long, very slender pedicels. Native to Mount Shirouma, Shinano Province, Japan.

103861 to 103900—Continued.

103891. SHORTIA UNIFLORA Maxim. Diapensiaceae.

Variety *grandiflora*. A large-flowered form of a perennial herb native to Japan, closely resembling the native American *Shortia galacifolia*. The cordate leaves are broader than long and deeply sinuate toothed, and the white bell-shaped flowers, an inch across, are borne on slender peduncles 3 to 8 inches tall.

103892. TRAUTVETERIA PALMATA Fisch. and Mey. Ranunculaceae.

A perennial herb 2 to 3 feet high, with alternate, large leaves divided into 5 to 11 incised lobes. The white flowers are in terminal cymes. Native to northeastern Asia and northern North America.

103893. TRICYRTIS AFFINIS Makino. Melanthiaceae.

An erect perennial 1 to 4 feet high, with oblong-lanceolate or ovate-oblong, nearly sessile, thinly hairy, pale-green leaves 2 to 4 inches long. The purple-spotted white flowers, an inch across, are borne in terminal clusters.

103894. TRICYRTIS HIRTA Hook. Melanthiaceae. Hairy toadlily.

A perennial herb, 1 to 3 feet high, covered with soft whitish spreading hairs. The cordate-lanceolate leaves clasp the stem, and the white lilylike flowers are covered with purple spots.

For previous introduction see 101796.

103895. TULIPA LATIFOLIA Makino. Liliaceae.

A Japanese tulip, very similar to *T. edulis*, but with shorter and broader leaves, and small white flowers on a stem 6 to 8 inches high.

103896. VERATRUM JAPONICUM (Baker) Loes. Melanthiaceae.

A hardy perennial 2 to 4 feet high, with slender stems. The oblong, plicate leaves are a foot long, and the very dark purple flowers are in lax racemes. It is closely related to *Veratrum nigrum*, of which it may be considered a geographic variety, with slightly larger flowers and a more slender habit.

103897 to 103900. VIOLA spp. Violaceae. Violet.

103897. VIOLA CHAEROPHYLLOIDES (Regel) Makino.

A hardy violet about 6 inches high, with broad, finely divided leaves and rather large white flowers produced in April. Native to Chosen and said to be adapted for growing in partial shade.

103898. VIOLA PATRINII Ging.

A low stemless perennial, native to northeastern Asia, with a stout rootstock, ovate-oblong leaves, and lilac flowers about one-half inch in diameter.

103899. VIOLA VERECUNDA A. Gray.

A Japanese violet closely related to *V. canadensis*. The 3 or 4 kidney-shaped leaves are slender and erect, and the flowers are white with purple veins.

103861 to 103900—Continued.

103900. VIOLA VIOLACEA Wiesb.

A stemless violet with long stolons and triangular cordate obtuse leaves. The fragrant flowers are violet, with the spur paler violet. It is also native to Austria.

103901 and 103902.

From Australia. Seeds presented by W. E. Schevill, of Harvard University, with the Ellis expedition for the Museum of Comparative Zoology, Cambridge. Received November 17, 1933.

Collected 40 miles west of Barrow Creek, Northern Territory, in September 1932.

103901. ELAEOCARPUS sp. Elaeocarpaceae.

A plumlike fruit.

103902. SOLANUM sp. Solanaceae.

Quinine-plum. A very bitter plumlike fruit.

103903 to 103906. TRITICUM AESTIVUM L. (*T. vulgare* Vill.). Poaceae.

Common wheat.

From Australia. Seeds presented by H. Wenzholz, director of plant breeding, Department of Agriculture, Sydney, New South Wales. Received November 17, 1933.

A collection of locally grown Australian wheat, introduced for the use of Department specialists.

103903. *Cleveland*. 103905. *Queen Fan*.103904. *Ford*. 103906. *Rymer*.

103907. TAMUS COMMUNIS L. Dioscoreaceae.

From Italy. Seeds received through David Lumsden, Bureau of Entomology and Plant Quarantine, United States Department of Agriculture, November 20, 1933.

A twining herbaceous vine with a tuberous root, ovate-cordate, obscurely lobed leaves about 3 inches long, and loose clusters of small yellowish-green flowers followed by bright-red berries. Native to the Mediterranean countries.

For previous introduction see 76768.

103908 to 103927.

From Africa. Seeds and bulbs presented by Rev. Kenneth H. Prior, Missão de Dondi, Bela Vista, Angola. Received November 17, 1933.

103908. ALBIZZIA sp. Mimosaceae.

Okapilangau. A useful timber tree. The hard wood has a pungent odor when planed; it resists decay.

103909. ALBIZZIA sp. Mimosaceae.

Omako. A close-grained, hard wood timber tree with greenish-brown bark. The wood resists decay.

103910 and 103911. BRACHYSTEGIA spp. Caesalpinaceae.

The brachystegias are unarmed trees, native to tropical Africa, with pinnate leaves and small inconspicuous flowers in dense racemes.

103908 to 103927—Continued.

103910. *Omanda*. A useful timber tree whose wood is used for agricultural implements; the bark of saplings is made into rope by the natives of Angola.

103911. *Usamba*. A good shade tree with an umbrella top. The timber is not used.

103912. CHRYSOPHYLLUM sp. Sapotaceae.

Onjali. An erect tropical tree with milky juice, leathery short-stemmed leaves, and dense clusters of small whitish flowers, followed by pods resembling those of the honeylocust. The pods are eaten by antelopes. The timber of the tree is not used.

103913. FICUS sp. Moraceae.

Ukuyu. A wild fig with very soft, light, coarse-grained wood. The tree grows rapidly from seed or cuttings and fruits abundantly.

103914 and 103915. GLADIOLUS spp. Iridaceae.

Red-flowered species.

103914. Seeds. 103915. Bulbs.

103916. LUFFA CYLINDRICA (L.) Roemer. Cucurbitaceae. Suakwa towelgourd.

Introduced for the use of Department specialists.

103917 and 103918. MORAEA spp. Iridaceae.

A blue-flowered species.

103917. Bulbs. 103918. Seeds.

103919. PARINARI MOBOLA Oliver. Rosaceae.

Usia. A handsome forest tree with dense evergreen foliage. The leaves are deep green above and white beneath, and the fruit, much like an olive in appearance, has an edible kernel in a very hard shell. The hard wood is used for furniture and building purposes.

For previous introduction see 87474.

103920. SECURIDACA LONGIPEDUNCULATA Fres. Polygalaceae.

Rhodesia violet-tree.

Utata. A much-branched divaricate shrub, sometimes 10 feet high, native to Upper Guinea, Ethiopia, and Mozambique. The coriaceous leaves are revolute-margined when dry, and the flowers, in terminal spreading racemes, are rose, shades of purple or violet, or variegated with white.

For previous introduction see 81982.

103921. TOUNATEA MADAGASCARIENSIS (Desv.) Kuntze. Caesalpinaceae.

Onganha. A tropical leguminous tree, without spines, that grows 20 to 30 feet high in central and south-central Africa. The compound leaves are about 6 inches long, with 9 to 11 leathery green oblong leaflets. The roundish yellow flowers, almost an inch across, are solitary or in small racemes. Native to south-central Africa and Madagascar.

103922. (Undetermined.)

Olohengo. A native wild plum; used for jelly and preserves.

103908 to 103927—Continued.

103923. (Undetermined.)

Onjilasonde. A timber tree whose pretty dark-brown wood is used for cabinetwork.

103924. (Undetermined.)

Bulbs.

103925. (Undetermined.)

Large bulbs.

103926. (Undetermined.)

Bulbs.

103927. (Undetermined.)

Osui. A small tree with hard close-grained wood which resists decay.

103928 to 103937.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received November 20, 1933.

103928. *ARISTOLOCHIA BRASILIENSIS* Mart. and Zucc. Aristolochiaceae.

A tropical vine, sometimes growing to a length of 15 feet, with long-stemmed, reniform, heart-shaped leaves 6 to 8 inches wide. The large, dingy-yellow flower, with purplish marks, is strongly two-lipped, with the upper lip 4 inches long and purple within, and the lower lip the same length but 5 to 7 inches wide. Native to Brazil.

103929. *CORDIA NITIDA* Vahl. Boraginaceae. Glossy cordia.

Red manjack or *West Indian cherry*. A shrubby tree with harsh glossy foliage, white flowers, and red viscid berries which are eaten by the wild doves.

For previous introduction see 98832.

Nos. 103930 to 103932 were collected in Mexico by Prof. Juan Balme, botanical explorer.

103930. *CRESCENTIA ALATA* H. B. K. Bignoniaceae. Calabash-tree.

A small ornamental tree closely allied to *C. cujete*; it is 10 to 20 feet high, with fasciated trifoliate leaves. The brownish, rank-scented flowers, borne singly on the trunk, are followed by hard globose fruits about 2 inches in diameter. The tree is occasionally cultivated in the Philippines where it was introduced from Mexico at an early date.

103931. *FEROCACTUS LATISPINUS* (Haworth) Britt. and Rose. Cactaceae.

A stout globular cactus about a foot high, with 10 to 15 white to pink spines arising from each areole. Of these spines the 4 or 5 central ones are much stouter, with one much flattened and hooked. The campanulate flowers, about 1 inch long, are rose to purple. Native to Mexico.

103932. *IPOMOEA ARBORESCENS* Don. Convolvulaceae.

An erect woody treelike plant that may reach a height of 15 feet or more. The twigs and oval cordate leaves are fine velvety pubescent, and the white flowers are over 2 inches in diameter. It is native to Mexico and thrives best in cool dry air.

103933. *THUNBERGIA ERECTA* (Benth.) T. Anders. Acanthaceae.

103928 to 103937—Continued.

An evergreen climbing shrub, 6 to 8 feet high, with ovate leaves about 2 inches long and solitary blue flowers with orange throats, over an inch long, with stalks about the same length. Native to western tropical Africa.

Nos. 103934 and 103935 were collected in Mexico by Prof. Juan Balme, botanical explorer.

103934. *OPUNTIA STREPTACANTHA* Lem. Cactaceae. Pricklypear.

A much-branched cactus, sometimes 15 feet high, with a trunk 18 inches in diameter. The dark-green, obovate to orbicular joints, about a foot long, are covered with numerous white spines. The orange-yellow flowers, 3 inches across, are followed by dull-red, globular fruits about 2 inches in diameter. Native to central Mexico.

103935. *PACHIRA INSIGNIS* (Swartz) Sav. Bombacaceae.

Variety *Rosea*. A beautiful tropical tree, native to the West Indies and northern South America, which becomes about 30 feet tall, with a trunk up to a foot in diameter. The beautiful fragrant flowers, rose-colored in this form and about 7 inches long, are followed by large woody capsules containing numerous edible seeds which look and taste very much like chestnuts.

For previous introduction see 58582.

103936. *PINUS INSULARIS* Endl. Pinaceae. Pine.

A tall three-needle tropical pine which grows on the highlands in the Philippine Islands between 3,000 and 8,000 feet altitude. The flaccid slender leaves are 7 to 9 inches long, and the ovoid cones are about 3 inches in length. This lot of seed came originally from the Bureau of Forestry, Manila.

For previous introduction see 101448.

103937. *TABEBUIA GUAYACAN* (Seem.) Hemsl. Bignoniaceae.

Collected in Mexico by Prof. Juan Balme, botanical explorer. A tall tropical tree becoming nearly 100 feet high, with smooth pale-gray bark and opposite long-stemmed digitately compound leaves with five very large leaflets. The handsome yellow flowers are 3 inches long. The olive-brown wood is very dense and hard and is used for tool handles, boats, etc. Native from Panama to Guatemala.

103938. *PHYLLOSTACHYS* sp. Poaceae. Bamboo.

From Glenn Dale, Md. Plants presented by P. H. Dorsett; propagated from material collected in China by the late Frank N. Meyer. Received December 11, 1933.

A hardy bamboo of rapid-spreading habit, 12 feet high, with a conspicuous glaucous band beneath each node and the upper half of the internode at first often glaucous. The lower culm sheaths have irregular, ill-defined, brownish-black blotches. The lanceolate leaves, of which there are 3 or 4 on a branchlet, have usually 5 pairs of secondary veins; the leaves do not curl so quickly when the branches are cut as do those of most bamboos.

103939 and 103940.

From Africa. Seeds presented by J. E. Spingarn, Amenia, N. Y. Received November 21, 1933.

103939 and 103940—Continued.

103939. *CLEMATIS SIMENSIS* Fresn. Ranunculaceae.

From Kisantu, Bas-Congo, Belgian Congo. A tropical climber with pinnately cut leaves; the membranous leaflets, usually 3 or 5, are ovate-lanceolate and crenate. The flowers, three-fourths of an inch across, are in axillary clusters. Native to Ethiopia.

103940. *CLEMATIS STANLEYI* Hook. Ranunculaceae.

From the Transvaal, Union of South Africa. An erect shrubby clematis with very variable foliage and flowers. In the native state the flower stems are 2 to 3 inches long, while in cultivation they reach a length of 8 to 10 inches. The flowers vary in size from 1 to 3 inches in diameter and in color from white to pinkish purple.

For previous introduction see 48307.

103941. *CASIMIROA TETRAMERIA* Millsp. Rutaceae. Matasano.

From Honduras. Seeds presented by R. Austin Acly, American consul, Tegucigalpa. Received November 22, 1933.

A Central American tree about 30 feet in height, with pale warty branches, digitate leaves about 8 inches long, and axillary panicles of greenish flowers. The edible fruit, approximately the size of an orange, has a green skin and spiny protuberances sparsely scattered over the surface; the white or yellow flesh is sweet or slightly sour and encloses 2 or 3 large black seeds.

For previous introduction see 55445.

103942 to 103948. *ANANAS SATIVUS* Schult. f. Bromeliaceae. Pineapple.

From Hawaii. Plants presented by J. L. Collins, geneticist, Experiment Station of the Association of Hawaiian Pineapple Cannery, Honolulu. Received November 27, 1933.

103942. *Bermuda*. A variety of unknown origin.

103943. *Hilo Cayenne*. A variety very similar to the *Cayenne* in general appearance; however, the plants do not produce slips, or only a very few, as contrasted with the 3 or 4 slips produced annually by the *Cayenne*.

103944. *Pernambuco*. A variety from South America.

103945. *Ruby*. A variety obtained from Singapore a number of years ago; we have more recently obtained what appears to be the same thing under the name *Mauritius*.

103946. *Sarawak*. A variety much like the *Cayenne*, secured from Singapore a number of years ago.

103947. *Wild Brazil*. A self-seeding type obtained in Brazil.

103948. *Wild Kailua*. A variety growing wild in the Kailua region of the island of Hawaii; origin not known.

103949 to 103951. *AVENA BYZANTINA* Koch. Poaceae. Oats.

From India. Seeds presented by Beni Pashad, fodder specialist, Agricultural College, Lyallpur. Received December 1, 1933.

Introduced for the use of Department specialists.

103949 to 103951—Continued.

103949. *Algerian Red* oat no. 35.

103950. *Algerian Red* oat no. 61.

103951. Local Fo. S. 1/29.

103952. *LIVISTONA ROTUNDIFOLIA* (Lam.) Mart. Phoenicaceae.

Java fan palm.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received December 4, 1933.

A fan-leaved palm closely related to the Chinese fan palm (*Livistona chinensis*). The erect, brownish-black trunk is 40 to 50 feet high, and the roundish leaves are 3 to 5 feet across with spiny petioles up to 6 feet in length. Native to Java.

103953 to 103969. *SECALE CEREALE* L. Poaceae. Rye.

From the Union of Soviet Socialist Republics. Seeds presented by Dr. N. I. Vavilov, director, Institute of Plant Industry, Leningrad. Received December 7, 1933.

A collection of ryes grown in the Soviet Socialist Republics, introduced for the use of Department specialists.

103953. No. 1. 103962. No. 10.

103954. No. 2. 103963. No. 11.

103955. No. 3. 103964. No. 12.

103956. No. 4. 103965. No. 13.

103957. No. 5. 103966. No. 14.

103958. No. 6. 103967. No. 15.

103959. No. 7. 103968. No. 16.

103960. No. 8. 103969. No. 17.

103961. No. 9.

103970 to 103972.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received December 6, 1933.

103970. *ADENANTHERA MICROSPERMA* Teijsm. and Binn. Mimosaceae.

Seeds from the Botanic Garden, Buitenzorg, Java. A handsome tropical tree closely related to the mimosas, with attractive, clean-cut foliage and twisted pods bearing bright-red beans. It is native to the East Indies and is considered a valuable timber tree because of its strong dark-brown wood, which is very hard in spite of the rapid growth of the tree.

For previous introduction see 63758.

103971. *HETEROSPATHE ELATA* Scheff. Phoenicaceae. Palm.

For previous introduction and description see 103782.

103972. *ZAMIA KICKXII* Miq. Cycadaceae.

A tropical palmlike plant with a very short thick stem and gracefully arching, pale-green pinnate leaves about a foot in length, composed of about 12 pairs of lanceolate pinnae 1 or 2 inches long. It is native to Cuba.

103973 and 103974. PHOENIX DACTYLIFERA L. Phoenicaceae. Date palm.

From Africa. Seeds presented by the Department of Agriculture, Nigeria. Received December 9, 1933.

Date palms, said to be growing wild in Nigeria; introduced for the use of Department specialists.

103975. CASTANEA SATIVA Mill. Fagaceae. Spanish chestnut.

From the Union of Soviet Socialist Republics. Seeds presented by Prof. A. Popov, Department of New Cultures and Introduction, Leningrad. Received December 9, 1933.

Chestnuts collected in the northern Caucasus region; introduced for the use of Department specialists.

103976. ADONIDIA MERRILLII Beccari. Phoenicaceae. Palm.

From the Philippine Islands. Seeds presented by Mount Mahiling Agricultural College, Laguna, through the director of forestry, Manila. Received December 19, 1933.

Bonga de China or *bonga de Jolo*. A medium-sized palm with graceful, somewhat curved pinnate leaves, resembling the common betel-nut palm, but not so tall. The crimson fruits, less than an inch long, are borne just below the leaves. In Manila this palm is grown as an ornamental.

For previous introduction see 94177.

103977. VICIA PANNONICA Crantz. Fabaceae. Vetch.

From lower Austria. Seeds purchased from Gustav & Wilhelm Löw, Angern. Received December 19, 1933.

Hungarian vetch. An annual vetch, native to Europe and Asia. It makes a less viny growth than common vetch (*Vicia sativa*) or hairy vetch (*V. villosa*), but is a vigorous grower attaining a full stem length of from 2½ to 3 feet. It is more winter-hardy than common vetch and will seldom winter-kill as far north as Washington, D. C. This species is especially adapted to poorly drained areas and is the best of the vetches in this regard.

For previous introduction see 52274.

103978 to 103980. AVENA spp. Poaceae. Oats.

From India. Seeds presented by the Imperial Institute of Agricultural Research, Pusa, at the request of the Indian Trade Commissioner, London, England. Received December 20, 1933.

A collection of hybrid oats, developed in India. Introduced for the use of Department specialists.

103978. B. S. 2. 103980. Hybrid J.

103979. Hybrid C.

103981. FICUS CARICA L. Moraceae. Common fig.

From Spain. Cuttings presented by Ramon Sala Roqueta, Balaguer. Received February 6, 1926. Numbered in December 1934.

Variety *Fraga*; fruits thick, white with thin skin and rosy flesh; very suitable for drying.

103982. PYRACANTHA CRENULATA (Don) Roemer. Malaceae.

Nepal freethorn.

From California. Seeds presented by the California Nursery Co., Niles. Received December 22, 1933.

This appears to be the typical form of the Nepal freethorn, with stiff, narrow-elliptic, crenulate, shining dark-green leaves with a short bristle at the tip. The showy red berries, one-fourth to five-eighths of an inch in diameter, are in loose corymbs.

103983. AMYGDALUS PERSICA L. Amygdalaceae. Peach.

From the Union of Soviet Socialist Republics. Scions presented by A. Popov, Department of New Cultures and Introduction, Leningrad. Received December 26, 1933.

Variety *ferganensis*.

For previous introduction see 102706.

103984 to 103987.

From Cuba. Seeds presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received December 26, 1933.

103984. ABROMA AUGUSTA L. f. Sterculiaceae.

A quick-growing shrub, native to the East Indies, with large angular leaves and dull, deep, dark-red flowers. The fiber is used for ropes and cordage in the Orient.

For previous introduction see 98795.

103985. ARISTOLOCHIA TAGALA Cham. Aristolochiaceae.

From the Botanic Garden, Straits Settlements. A tropical climber with ovate-acuminate and deeply cordate-auriculate leaves about 4 inches long. The greenish-purple flowers, with the limb extended into a tongue-shaped lip, are in small racemes. Native to Luzon, Philippine Islands, and allied to *Aristolochia indica* L.

103986. JATROPHA PODAGRICA Hook. Euphorbiaceae.

A handsome Central American shrub 1 to 2 feet high, with petlate, 3- to 5-lobed leaves 4 to 8 inches wide and orange flowers with scarlet petals.

For previous introduction see 73246.

103987. PYNOSTACHYS URTICIFOLIA Hook. Menthaeae.

A much-branched herbaceous perennial 5 to 7 feet high, native to tropical and southern Africa. The densely pubescent ovate leaves, 3 to 4 inches long, are deeply cut into rounded lobes, and the small bright-blue flowers are in dense spikes 2 to 3 inches long.

For previous introduction see 99458.

103988. ZEA MAYS L. Poaceae. Corn.

From Australia. Seeds presented by the Grafton Experiment Farm, through H. Wenholz, director of plant breeding, Department of Agriculture, Sydney, New South Wales. Received December 20, 1933.

Fitzroy. Introduced for the use of Department specialists.

UNITED STATES DEPARTMENT OF AGRICULTURE

INVENTORY No. 118

Washington, D. C.

Issued June 1936

PLANT MATERIAL INTRODUCED BY THE DIVISION OF PLANT EXPLORATION AND INTRODUCTION, BUREAU OF PLANT INDUSTRY, JANUARY 1 TO MARCH 31, 1934 (Nos. 103989-105035)

CONTENTS

	Page
Introductory statement.....	1
Inventory.....	3
Index of common and scientific names.....	38

INTRODUCTORY STATEMENT

Inventory 118 lists the introductions (nos. 103989-105035) received by the Division of Plant Exploration and Introduction during the period from January 1 to March 31, 1934. Nearly all types of economic plants are represented, but certain introductions are worthy of special mention as continuations of projects now in progress within the Bureau.

Two lots of chestnut scions (nos. 104000-104009, 104057-104064) from northern China, representing three native Chinese species of *Castanea*, and a shipment of Japanese chestnut seeds (*Castanea crenata*, nos. 104014-104021) will be used by Department specialists in breeding experiments incidental to the chestnut-blight investigations.

Noteworthy also are several rather large introductions of scions and young plants of deciduous-fruit varieties. These include two lots of apples, pears, apricots, and peaches from Italy (nos. 104022-104056, 104483-104555), one of grapes, plums, and cherries (nos. 104281-104314) from Morocco, and one of apples, pears, and cherries (nos. 104776-104836) from Sweden. These are destined to be grown by Department specialists for comparison with varieties now growing in the United States.

Seeds of three lots of hardy shrubs and perennials (nos. 104345-104378, 104837-104851, and 104852-104864), mostly from eastern Asia, were presented respectively by the botanic gardens at Edinburgh, Kew, and Cambridge. These will be tested in the colder parts of the country. Among them are included some species that may be of particular interest in the planting problems of our more arid sections.

The interests of specialists working with lespedezas in a botanical review of the genus are recorded by the following numbers from Chosen, Japan, and Austria (nos. 104065-104067, 104068 and 104069, also 104669-104672). A collection of legumes from the Belgian Congo (nos. 104070-104102) was presented by the Director of the experiment station at Kisozi, Ruanda-Urundi Territory, as of possible use in the extreme South.

The interests of plant breeders are shown by the numerous importations of delphiniums (nos. 104351-104369, 104570-104573, 104847-104851, 104890-104895, 104939-104943, and 104950-104953), of antirrhinums (nos. 104557, 104924, 104925, 104948, and 104949), and of althaeas (nos. 104636, 104837-104839, and 104921-104923) for breeding experiments with rust-resistant strains, of digitalis (nos. 104574-104576, 104896-104898, and 104954-104960) for botanical review, and of salvias (nos. 104581-104592 and 104651-104658) for horticultural examination and testing.

Many palm species (nos. 104213-104216, 104331-104336, 104338-104343, 104679-104704) have been presented by the botanic gardens of Peradeniya, Trinidad, Georgetown, etc., to assist in the building up of the palm collection at the Coconut Grove Garden, where a valuable collection is already established.

The botanical determinations have been made and the nomenclature determined by Paul Russell, who has had general supervision of this inventory.

B. Y. MORRISON,
Principal Horticulturist, in Charge.

DIVISION OF PLANT EXPLORATION AND INTRODUCTION,
Washington, D. C., November 30, 1935.

INVENTORY¹

103989. TSUGA FORMOSANA Hayata.
Pinaceae.

From Japan. Seeds presented by F. Seki, Director, Department of Forestry, Government Research Institute, Taihoku, Taiwan. Received January 17, 1934.

A handsome hemlock, native of Taiwan, closely allied to *Tsuga diversifolia*, from which it differs chiefly in the shape of the seed wings and in having glabrous branchlets. It develops into a large tree with slender spreading branches and glossy dark-green foliage.

103990. DAVIDIA INVOLUCRATA Baill.
Cornaceae. Dovetree.

From France. Seeds presented by A. Gerard, La Fosse, par Montroire sur Loir, Loir-et-Cher. Received January 9, 1934.

A handsome tree native to central and western China, where it reaches a height of 60 to 70 feet. In habit and foliage it resembles a linden. The bright-green oval leaves, 3 to 6 inches long, are sharply toothed and slender stalked, and the globular heads of small flowers, borne on slender nodding stalks about 2 inches long, are made unusually striking because of two or three large white bracts of unequal length.

For previous introduction see 101963.

103991. GENTIANA sp. Gentianaceae.

From Japan. Seeds presented by T. Tanaka, Osaka. Received January 6, 1934.

Kirishima Rinde. An alpine gentian of the Scabra section. The stem is prostrate, and the large deep-blue flowers are freely borne on the branchlets in autumn. Native to Mount Kirishima, Japan.

103992 to 103999. VITIS VINIFERA L.
Vitaceae. European grape.

From Hungary. Cuttings purchased from M. Kir Mathiasz, through the Royal Hungarian Plant Breeding Institute, Katona-telep. Received January 5, 1934.

A collection of grape varieties introduced for the use of Department specialists.

103992 to 103999—Continued.

103992. *Gustav Szauter* (muscat).

103993. *Mathiasz y-ne* no. 40.

103994. *Mathiasz j diandala* no. 14.

103995. *Nicolas Horthy* no. 39.

103996. *Scolokertek hiralymoje* no. 26 (muscat).

103997. *Tallian* (muscat).

103998. *Thaloczy* (muscat).

103999. *Vorosmarthy* (muscat).

104000 to 104009. CASTANEA spp. Fa-
gaceae. Chestnut.

From China. Scions collected by Peter Liu and sent through Owen L. Dawson, agricultural commissioner, Shanghai. Received January 3, 1934.

104000. CASTANEA SEGUINII Dode.

Ya Lee Tzu, or wild chestnut. Collected on the mountain of Lao Hu Shan, near Hooghchow, and native to east-central China. It is usually a bush or low tree, but occasionally a shapely tree 40 feet high, with deep-green leaves, paler beneath, and small nuts of sweet agreeable flavor.

For previous introduction see 102923.

104001 to 104009. CASTANEA MOLLISSIMA
Blume. Hairy chestnut.

104001. No. 2. *Hsiao Chia Lee*, or small home chestnut. Collected in the foothills near the village of Tamiao, east of Nanking. A locally grown, rather small variety, said to be somewhat reddish, and used for roasting or with meat dishes.

104002. No. 3. *Ta Chia Lee*, or large home chestnut. Collected in the foothills of Sun Chia Tzu Lang, east of Nanking. A locally grown variety bearing nuts a little larger than those of *Hsiao Chia Lee* (no. 2, 104001). The marketing season is about 6 weeks long.

¹It should be understood that the names of varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Division of Plant Exploration and Introduction, and, further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identifications therefore must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this Division, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

104000 to 104009—Continued.

104003. No. 4. *La Yu Lee*, or large oil chestnut. Collected in the foothills south of Sun Chia Tzu Lang, east of Nanking. A very large, dark-brown chestnut, rarely grown in this region.

104004. No. 5. *Pai Mao Lee*, or white-hairy chestnut. Collected in the foothills near the village of Tiehling-kiang, northeast of Yuhong. A locally grown chestnut, rather small but with a very sweet kernel. The dark-brown hull is covered with white hairs on the lower end, and because of this it is called white-hairy chestnut.

104005. No. 6. *Mao Hsiang Lee*, or hairy fragrant chestnut. Collected near the foot of Pao Shih Shan, near Hongchow. A little-grown variety.

104006. No. 7. *Kuei Hua Lee Tzu*, or cassia-flower chestnut. This chestnut is so named because it has a cassia-like fragrance when young.

104007. No. 8. *Kuei Lee*, or large chestnut. Collected at the foot of Pao Shih Shan, near Hongchow. A very common chestnut of this region, used in cooking. The flavor is not as good as that of the North China chestnuts.

104008. No. 9. *Kuei Lee*, or large chestnut. Collected in the foothills of Ssu Yen Ching, at the south mountain of Hongchow.

104009. No. 10. *Kuei Lee*, or large chestnut. Collected in the foothills of Ssu Yen Ching, at the south mountain of Hongchow. Nuts from a different tree than no. 9 (104008).

104010 to 104012.

From China. Seeds presented by G. Weidman Groff, Lingnan University, Canton. Received January 4, 1934.

104010. CITRUS GRANDIS (L.) Osbeck.
Rutaceae. Grapefruit.

Kao Phuang, or white tassel. Grown near Bangkok, Siam, and considered one of the best pomelos of the Far East.

104011. DIOSPYROS KAKI L. f. Diospyraceae.
Kaki persimmon.

Tsai Tsz. A large oblong persimmon from Canton and a good edible variety.

104012. DIOSPYROS KAKI L. f. Diospyraceae.
Kaki persimmon.

Kaai Sam Tsz. Chicken-heart persimmon. An interesting and vigorous small Canton persimmon which is especially good for stock.

104013. AMYGDALUS COMMUNIS L.
Amygdalaceae. Almond.

From Italy. Plants purchased from Dr. Mario Calvino, Stazione Sperimentale di Floricoltura, San Remo. Received January 8, 1934.

Pollardii. An ornamental bushy almond that originated as a seedling in the garden of Mr. Pollard at Ballarat, Victoria, Australia, in 1904.

104014 to 104021. CASTANEA CRENATA Sieb. and Zucc. Fagaceae.
Japanese chestnut.

104014 to 104021—Continued.

From Japan. Seeds purchased from the Yokohama Nursery Co., New York, N. Y. Received January 3, 1934.

104014. From the Temple Forest, Koyasan, Wakayama-ken.

104015. From Nobeoka Eirinsho, Yokogomura, Higashi, Usuki-gun, Miyasaki-ken.

104016. From Numakunai Eirinsho, Ippomura, Iwate-gun, Iwate-ken.

104017. From Masuda-gun, Shimoharamura, Gifu-ken (Hidadaki).

104018. From Sendai Eirinsho, Kawasakimura, Shibata-gun, Miyagi-ken.

104019. From Kakudate Eirinsho, Komaniuchi National Forest, Senhokugun, Akita-ken.

104020. From Mizusawa Eirinsho, Ezashigun, Yanagawa-mura, Iwate-ken.

104021. From Oshima Province, Kametangun, Yunokawa-mura, Hokkaido.

104022 to 104056.

From Italy. Plants purchased from Martino Bianchi, Pistoia. Received January 8, 1934.

Received under the following varietal names, for the use of Department specialists.

104022 to 104026. AMYGDALUS spp. Amygdalaceae.

104022 to 104024. AMYGDALUS PERSICA L.
Peach.

104022. *Grossa gialla di Verona*.

104023. *Maddalena precoce*.

104024. *Poppa di Venere Settembrina*.

104025 and 104026. AMYGDALUS PERSICA NECTARINA Ait. Nectarine.

104025. *Noce pesca gialla*.

104026. *Violet Musquè*.

104027 to 104036. MALUS SYLVESTRIS Mill. Malaceae. Apple.

104027. *Carpindola Reale*.

104028. *Cellini*.

104029. *Dal Ferro*.

104030. *Golden Noble*.

104031. *Jakob Lebel*.

104032. *Morgenduft*.

104033. *Renetta di Mans*.

104034. *Renetta dorata*.

104035. *Renetta grigia di Brownlen*.

104036. *Rosa di Berna*.

104037 to 104056. PYRUS COMMUNIS L. Malaceae. Common pear.

104037. *Abbe Fetel*.

104038. *Ananassa*.

104039. *Belle di Pistoia*.

104040. *Blickling*.

104041. *Bonne de Beugny*.

104042. *Bonne d'Esze*.

104043. *Butirra Bedford*.

104022 to 104056—Continued.

- 104044. *Butirra Bachelier*.
- 104045. *Butirra d'Amanlis*.
- 104046. *Butirra d'Aprile*.
- 104047. *Charles Cognec*.
- 104048. *Directeur Varenne*.
- 104049. *Docteur Jules Guyot*.
- 104050. *Duchessa Berard*.
- 104051. *La Coscia Precoce*.
- 104052. *La Coscia Tardiva*.
- 104053. *Lardona*.
- 104054. *Moscattello Piccolo*.
- 104055. *Fico*.
- 104056. *Souvenir d'Emile Coue*.

104057 to 104064. *CASTANEA* spp. **Fagaceae. Chestnut.**

From China. Seeds collected by Peter Liu and sent through Owen L. Dawson, agricultural commissioner, Shanghai. Received January 3, 1934.

104057. *CASTANEA HENRYI* (Skan.) Rehder and Wilson.

From Hsiaofeng.

104058. *CASTANEA HENRYI* (Skan.) Rehder and Wilson.

From Hsiaohsing, Anhwei Province.

104059 to 104063. *CASTANEA MOLLISSIMA* Blume. **Hairy chestnut.**

104059. From Fengchiao, Chekiang Province. A large chestnut.

104060. *Chia Lee*, or home chestnut, from Nanking.

104061. *Lai An*. A locally grown chestnut from Chekiang Province.

104062. *Tsai Lee*, or vegetable chestnut, from Shucheng, Anhwei Province.

104063. *Kuei Lee*, or large chestnut, from Hsinteng, Chekiang Province.

104064. *CASTANEA SEGUINII* Dode.

A wild chestnut from Hongchow.

104065 to 104067. *LESPEDEZA* spp. **Fabaceae. Bushclover.**

From Chosen. Seeds presented by Dr. T. Kaburaki, Director, Forest Experiment Station, Keijo. Received January 8, 1934.

104065. *LESPEDEZA BICOLOR* Turcz. **Shrub bushclover.**

A bushy perennial which bears a profusion of rose-purple flowers during the early autumn, practically covering the drooping branches which sometimes become 6 feet in length. Native to eastern Asia.

For previous introduction see 101483.

104066. *LESPEDEZA CYRTOBOTRYA* Miquel.

A shrub about 6 feet high, resembling *L. bicolor* in habit, with oval-oblong leaflets and dense clusters of purple flowers. It is native to Japan.

For previous introduction see 101484.

104065 to 104067—Continued.

104067. *LESPEDEZA JAPONICA INTERMEDIA* Nakai.

A bushy shrub 6 to 12 feet high, with large elliptic or oblong, obtuse or emarginate hairy green leaflets, paler beneath; and rose-purple flowers half an inch long, in axillary and terminal racemes. The oblong reticulate pod is covered with long hairs and is one-fourth to one-third of an inch long. Native to Chosen.

104068 and 104069.

From Japan. Seeds presented by T. Nakai, Botanic Gardens, Science College, Imperial University, Tokyo. Received January 12, 1934.

104068. *LESPEDEZA HOMOLOBA* Nakai. **Fabaceae. Bushclover.**

A small shrub with trifoliolate leaves, the leaflets being elliptic or ovate oblong and up to 2 inches long. The pale-purple flowers, half an inch long are in small axillary racemes. Closely allied to *Lespedeza bicolor*, but differing in its more shining leaflets and longer sepals. Native to Japan.

104069. *LESPEDEZA SENDAICA* Nakai. **Fabaceae. Bushclover.**

A bushclover with elongated branches and ternate leaves, the leaf divisions being ovate oblong and about 1 inch long. The flowers, in small axillary racemes, are purplish with pink standards. Native to northern Japan.

104070 to 104102.

From Africa. Seeds presented by J. B. H. Lejeune, Director, Government Experimental Station, Kisozi, Ruanda-Urundi Territory, Belgian Congo. Received January 10, 1934.

104070. *ACACIA PODALYRIAEOFOLIA* A. Cunn. **Mimosaceae.**

A gray pubescent shrub 4 to 6 feet high, with ovate phyllodes and numerous yellow flowers in long racemes at the ends of the branches. The wood is pinkish in color and nicely marked. Native to Queensland.

For previous introduction see 48057.

104071 to 104073. *CAJANUS INDICUS* Spreng. **Fabaceae. Pigeonpea.**

104071. A variety with brownish-pink seeds.

104072. A variety with light-tan seeds marbled with brownish pink.

104073. A variety with straw-colored seeds.

104074 to 104076. *CROTALARIA* spp. **Fabaceae.**

104074. *CROTALARIA FULVA* Roxb.

Collected in Urundi Territory at 6,000 feet altitude. A stiffly erect leguminous shrub 3 to 6 feet high, with numerous paniculate branches. The silky narrow leaves are about 4 inches long, and the flowers, in panicles, are about an inch long.

For previous introduction see 65699.

104075. *CROTALARIA* sp.

Collected in Buhnama, Kasanga.

104076. *CROTALARIA INCANA* L.

104070 to 104102—Continued.

Collected in Urundi Territory. A tropical American plant about 3 feet high, erect, branched, somewhat shrubby, and softly pubescent. The yellow flowers are crowded in 12- to 20-flowered elongated racemes, 2 to 8 inches long. The plant occurs in waste places throughout the Tropics and is in flower all the year.

For previous introduction see 64059.

104077. *CYTISUS PROLIFERUS* L. f. Fabaceae. Tagasaste.

A stout leguminous shrub up to 12 feet high, of rather lax habit, with long slender branches and green trifoliolate leaves with silky pubescent lower surfaces. The white flowers are in axillary clusters among the branches. It is native to the Canary Islands where it is considered an excellent drought-resistant forage plant.

For previous introduction see 90725.

104078. *ELEUSINE CORACANA* (L.) Gaertn. Poaceae. African millet.

Collected in Urundi.

104079. *ERIOSEMA MONTANUM* Baker. Fabaceae.

An erect perennial leguminous plant with trifoliolate leaves; the ovate-oblong, acute leaflets are about 2 inches long. The small yellow flowers are in axillary racemes. Native to eastern and north-eastern Africa.

104080. *INDIGOFERA* sp. Fabaceae. Indigo.

104081. *LUPINUS* sp. Fabaceae.

Collected at Kevin.

104082. *LUPINUS* sp. Fabaceae.

Collected at Kidega.

104083 to 104092. *PHASEOLUS* spp. Fabaceae.

104083 to 104085. *PHASEOLUS LUNATUS*. Lima bean.

104083. A small brown bean with blackish areas.

104084. A small gray bean with deep-brown blotches.

104085. A small white bean.

104086 to 104092. *PHASEOLUS VULGARIS* L. Common bean.

104086. A large, deep reddish-brown bean.

104087. A rose-brown bean with deeper brown marbling.

104088. A brownish-yellow bean with brown marbling.

104089. A black bean.

104090. A reddish-brown bean.

104091. A light-gray bean with black marbling.

104092. A greenish-yellow bean.

104093. *PISUM SATIVUM* L. Fabaceae. Pea.

104094. *SESBANIA* sp. Fabaceae.

104095. *SESBANIA* sp. Fabaceae.

104096. *SMITHIA AESCHYNOMENOIDES* Welw. Fabaceae.

104070 to 104102—Continued.

Collected at 6,000 feet altitude. An erect shrub about 2 feet high, with numerous slender bristly branches, pinnate leaves about 1 inch long with sensitive leaflets, and racemes of small yellow, purple-veined flowers. Native to Angola, Africa.

104097. *SORGHUM VULGARE* Pers. Poaceae. Sorghum.

A red variety.

104098. *SORGHUM VULGARE* Pers. Poaceae. Sorghum.

104099 to 104101. *ZEA MAYS* L. Poaceae. Corn.

104102. *SESAMUM ANGOLENSE* Welw. Pedaliaceae.

An erect herb, often 6 feet high, native to tropical Africa. The square stems are clothed with numerous oblong to ovate, wavy-margined leaves 2 to 4 inches long. The solitary axillary flowers have brilliant violet-purple, obliquely campanulate corollas 2 to 3 inches long.

For previous introduction see 61681.

104103 to 104124.

From Argentina. Seeds presented by the Director, Botanic Gardens, Buenos Aires. Received January 12, 1934.

104103. *ACACIA BONARIENSIS* Gillies. Mimosaceae.

An almost glabrous tree, with angular branches sparsely covered with short recurved spines. The long bipinnate leaves and branches are glabrous; the youngest leaflets and the peduncles are silky hairy, as are also the short panicle flower spikes.

For previous introduction see 88198.

104104. *ACACIA MONILIFORMIS* Griseb. Mimosaceae.

A shrub with fragrant yellow flowers, common in the subtropical forests of Tucumán, Argentina, bearing dusty four-angled branches and petioles and glabrous bipinnate leaves. The flat linear leathery pods when young are used as cattle feed.

For previous introduction see 48954.

104105. *ACNISTUS PARVIFLORUS* Griseb. Solanaceae.

A small shrub with elliptic, acute, long-cuneate papery leaves about 3 inches long and small, fragrant, funnel-shaped white flowers one-third inch long, in small clusters. It is native to Argentina.

104106. *ANNESLIA TWEEDII* (Benth.) Linden (*Calliandra tweedii* Benth.). Mimosaceae.

A low tropical tree, with bipinnate leaves made up of 3 to 4 pairs of very small hairy linear-oblong leaflets and globose flower heads with rather showy purplish stamens. Native to British Guiana.

For previous introduction see 94769.

104107. *CHOMELIA BRASILIANA* A. Rich. Rubiaceae.

A small spiny shrub, pubescent throughout, with opposite elliptic leaves and silky white flowers in small graceful axillary clusters. Native to Brazil.

104103 to 104124—Continued.

104108. *CHORISIA SPECIOSA* St. Hil.
Bombacaceae. Floss-silk-tree.

A handsome tree 20 feet high, abundant in Argentina and the river provinces of Paraguay. The boll is nearly 5 inches long. The yellow fiber, called Samahu or Samuy, and similar to the best Javan kapok, is used to a limited extent for stuffing pillows and can be used commercially for life preservers, jackets, water wings, mattresses, etc. The tree has resisted 3° C. without injury to its flowers, although the bolls require hot sun.

For previous introduction see 88221.

104109. *CISSUS* sp. Vitaceae.

Received as *Cissus rutilans*, a name for which a place of publication has not been found. Said to be popular in Buenos Aires as a cover for trellises and for growing over walls in patios.

104110. *CNICOTHAMNUS LORENTZII* Griseb.
Asteraceae.

A handsome shrub about 20 feet high, with thick branches, oval leaves about 5 inches long, and purple flowers in large solitary heads. Native to Tucumán, Argentina.

For previous introduction see 101512.

104111. *COMBRETUM FRUTICOSUM* (Loefl.)
Stuntz. Combretaceae.

An ornamental climbing shrub with opposite, elliptic leaves and spikes of orange and green flowers. It is native in temperate regions from Argentina to Brazil.

For previous introduction see 42326.

104112. *CROTON URUCURANA* Baill. Euphorbiaceae.

A Brazilian shrub with heart-shaped acuminate leaves about 3 inches long, resembling those of the poplars. The small inconspicuous flowers are in terminal cymes.

104113. *DAUBENTONIA TRIPETII* Poit.
Fabaceae.

An ornamental leguminous shrub or small tree, native to Argentina, with pinnately compound leaves which are dull green above and paler beneath. The rather large, orange-red flowers are borne in drooping racemes.

For previous introduction see 101513.

104114. *ERYTHRINA FALCATA* Benth.
Fabaceae.

A tropical tree allied to *Erythrina crista-galli*. The oval-oblong leaflets are 4 to 6 inches long, becoming leathery with age. The scarlet flowers, a little smaller than those of *E. crista-galli*, are in small racemes in the upper leaf axils. Native to Brazil.

104115. *GLEDITSIA AMORPHOIDES* (Griseb.)
Taub. Caesalpinziaceae. Honeylocust.

A spiny tree, native to Bolivia, which sometimes attains a height of 50 feet with a trunk diameter of over 2 feet. The bark is used in place of soap for removing spots from woolen and cotton goods; hence the name "quillay." The leaves, young twigs, and roots have astringent properties. The wood is used in turning, for furniture, and for wooden soles and pegs.

104103 to 104124—Continued.

For previous introduction see 48673.

104116. *PSYCHOTRIA* sp. Rubiaceae.

The psychotrias are small tropical trees with opposite leaves and small flowers in axillary or terminal cymes.

104117. *IODINA RHOMBIFOLIA* Hook. and Arn. Santalaceae.

Quebrachillo. A low bushy slender-branched tree with three-pointed spiny leaves. The wood is white and smooth and the bark is thick. It is native to Brazil.

For previous introduction see 101517.

104118 to 104120. *MIMOSA* spp. Mimosaceae.

104118. *MIMOSA ACULEATICARPA* Ortega.

A shrub over 6 feet high, covered all over with stout spines, forming an impenetrable hedge which thrives on the very driest poor soils. The small flower heads are pink or white. Native to central and southern Mexico.

For previous introduction see 62095.

104119. *MIMOSA CARINATA* Griseb.

A subtropical spiny tree, with bipinnate leaves consisting of 1 or 2 pairs of pinnae and 12 to 24 pairs of minute pinnules. The purple and green plaid flowers are in small heads. Native to Argentina.

For previous introduction see 94778.

104120. *MIMOSA SEPIARIA* Benth.

A shrub or small tree, with bipinnate leaves made up of 4 to 8 pinnae each bearing 20 to 40 linear pinnules one-fourth of an inch long. The small white flowers are borne in large lax panicles. It is native to Brazil.

For previous introduction see 91786.

104121. *PIPTADENIA MACROCARPA* Benth.
Mimosaceae.

An important timber tree, native to Brazil, with compound leaves 6 inches long composed of pinnae each with 10 to 25 pairs of pinnules. The small white flowers occur in globose heads in the axils of the leaves, sometimes at the ends of the branchlets. The pods are 4 to 10 inches long and 1 inch wide, with thickened margins.

For previous introduction see 88244.

104122. *PIPTADENIA RIGIDA* Benth. Mimosaceae.

An unarmed tree or shrub from subtropical South America, with axillary heads of small white flowers and small stiff linear, shining-green leaflets. The long slender stiff-winged pods are rich in tannin; the wood is used in shipbuilding.

For previous introduction see 48075.

104123. *PORLIERIA LORENTZII* Engl. and Prantl. Zygophyllaceae.

An evergreen shrub or small tree, with stout crooked branches and pinnate leaves with small narrow leaflets. The small fragrant bluish flowers are in small clusters or solitary. Native to Argentina.

104103 to 104124—Continued.

104124. *QUILLAJA BRASILIENSIS* (St. Hil. and Tul.) Mart. Rosaceae.

A Brazilian tree up to 25 feet high, with alternate oblong-lanceolate leaves and corymbs of white flowers. The symmetrical habit and very leafy crown of the tree make it a striking ornamental when in flower. The bark and the wood contain saponin.

For previous introduction see 48686.

104125 to 104127. *ERYTHRINA* SPP. Fabaceae.

From Cuba. Seeds presented by Percy Wilson, associate curator, New York Botanical Garden, Bronx Park, New York, N. Y. Received January 19, 1934.

104125. *ERYTHRINA GRISEBACHII* Urb.

No. 3 (753425). *Piñon botijo* or *piñon real*. From Punta Podre, Oriente, Cuba. A large tree with trifoliolate leaves; these are roundish, about 4 inches long, and membranous. The scarlet flowers, about 2 inches long, are produced in small racemes. Native to Cuba.

104126. *ERYTHRINA VARIEGATA* Stickm. (*E. indica* Lam.).

No. 2 (753424). From Soledad, Cienfuegos. A deciduous tree, native throughout India, with clusters of large bright-red flowers that appear before the leaves. The pods, 4 to 8 inches long, contain several dark-carmine seeds.

For previous introduction see 98846.

104127. *ERYTHRINA* sp.

No. 1 (753423). From Estación Experimental Agronómica, Santiago de las Vegas, Cuba.

104128 and 104129.

From Jamaica Plain, Mass. Cuttings presented by the Arnold Arboretum. Received January 20, 1934.

104128. *VIBURNUM SETIGERUM* Hance (*V. theiferum* Rehd.). Caprifoliaceae.

An upright deciduous shrub about 12 feet high, with dark-green, oval-oblong leaves about 4 inches long and ovoid bright-red fruits. Native to central China.

For previous introduction see 77851.

104129. *VIBURNUM SETIGERUM* Hance (*V. theiferum* Rehd.). Caprifoliaceae.

Variety *aurantiacum*. A yellow-fruited form.

104130 to 104140. *TRITICUM AESTIVUM* L. (*T. vulgare* Vill.). Poaceae.

Common wheat.

From Argentina. Seeds presented by Raul Famella, Fitotecnia, Ministerio de Agricultura, Buenos Aires. Received January 20, 1934.

104130. *Alto de sierra*. From Guatrache. Developed at the Federal Department of Agriculture, Buenos Aires.

104131. *Excelsior*. Developed at La Prevision, private seed farm.

104132. *General Urquiza*. SF. no. 12771. Developed at Solo Experiment Station, private seed farm.

104130 to 104140—Continued.

104133. *Guatrache*. SF. no. 12723. Developed at the Federal Department of Agriculture, Buenos Aires.

104134. *La Prevision 25*. SF. no. 12728. Developed at La Prevision, private seed farm.

Nos. 104135 and 104136 were developed at the Federal Department of Agriculture, Buenos Aires.

104135. *Lin Catal*. SF. no. 13568.

104136. *Rafaeta 6, M. A.* SF. no. 12751.

Nos. 104137 to 104139 were developed by E. Klein, private seed farm.

104137. *San Martin*. SF. no. 12706.

104138. *Triunfo*. SF. no. 12709.

104139. *Vencedor*. SF. no. 12708.

104140. *38 M. A.* SF. no. 12713. Developed at the Federal Department of Agriculture, Buenos Aires.

104141 to 104144.

From Chosen. Seeds presented by Dr. T. Kaburaki, Director, Forest Experiment Station, Keijo. Received January 19, 1934.

104141. *ABIES NEPHROLEPIS* (Trautv.) Maxim. Pinaceae. Fir.

A Siberian conifer up to 100 feet high, resembling the Siberian fir, *Abies sibirica*, but with rough bark, pubescent branchlets, shorter leaves, and smaller cones.

For previous introduction see 90784.

104142. *BETULA DAURICA* Pall. Betulaceae.

A tree up to 60 feet high, with wide-spreading branches and purplish-brown flaky bark. The broadly wedge-shaped leaves, 2 to 4 inches long, are dark green above and have serrate margins.

For previous introduction see 82474.

104143. *FORSYTHIA VIRIDISSIMA KOREANA* Rehd. Oleaceae.

This variety differs from the typical and well-known *F. viridissima* in being more spreading in habit and in having broader leaves and larger and brighter flowers. It is cultivated in Keijo, Chosen.

For previous introduction see 82477.

104144. *THUJA KORAIENSIS* Nakai. Pinaceae.

A small evergreen tree native to the mountains of Chosen at 6,000 feet altitude. While commonly prostrate, it sometimes becomes 12 feet high; the lower branches are usually elongated, and the foliage is intensely green.

104145. *VITIS VINIFERA* L. Vitaceae. European grape.

From Tripoli, Africa. Cuttings presented by Ernestine Fenzl. Received January 26, 1934.

The common grape of Tarhuna, Tripoli.

104146 to 104149. *PISTACIA VERA* L. Anacardiaceae. Pistache.

From the Union of Soviet Socialist Republics. Seeds presented by the Department of New Cultures and Introduction, Leningrad. Received January 26, 1934.

104146 to 104149—Continued.

A collection of seeds originally from Turkmenistan, Russian Turkistan.

104146. No. 141591. 104148. No. 141805.

104147. No. 141715. 104149. No. 142059.

104150 to 104157. PRUNUS spp. Amygdalaceae.

From Manitoba, Canada. Scions presented by G. F. Chipman, Winnipeg. Received January 30, 1934.

104150 and 104151. PRUNUS ARMENIACA L.
Apricot.

Seedlings of a native apricot from the Harbin district, Manchuria. The trees have been growing near Winnipeg for 4 years and have shown no winterkilling on the wood, but the fruit buds have not been entirely hardy.

104150. No. 335.

104151. No. 336.

104152. PRUNUS sp.

Champa cherry. A hybrid between the North Dakota sand cherry (*Prunus besseyi*) and some unknown plum; originated by Dr. N. E. Hansen, Brookings, S. Dak.

104153. PRUNUS sp.

Sand cherry, selection no. 842. A seedling of the Sioux sand cherry, originated by Dr. N. E. Hansen. The fruit is over three-quarters of an inch in diameter, and, although the flesh is soft, the flavor is very good. The tree is winter-hardy at Winnipeg.

104154. PRUNUS sp.

Tom Thumb cherry. A hybrid between the North Dakota native sand cherry (*Prunus besseyi*) and some unknown plum; originated by Dr. N. E. Hansen, Brookings, S. Dak.

104155 to 104157. PRUNUS spp.

Hybrids originated by Dr. N. E. Hansen, at Brookings, S. Dak., between the Assiniboine, a pure Manitoba native plum, and three of Burbank's best California plums. At a temperature as low as 45° to 50° F. below zero they show only slight winter injury.

104155. PRUNUS sp.

Cree plum.

104156. PRUNUS sp.

Ojibwa plum.

104157. PRUNUS sp.

Pembina plum.

104158 to 104160. PRUNUS DOMESTICA L. Amygdalaceae. Common plum.

From Germany. Scions presented by Adolf Schrey, Ratzburg. Received January 30, 1934.

A collection of plum scions, received under the following varietal names, for the use of Department specialists.

104158. *Buhler*.

104159. *Erfinger Frühzwetsche*.

104160. *Lützeltsachsen*.

104161 to 104163.

From Cuba. Seeds presented by Robert M. Grey, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received February 5, 1934.

104161. GLEDITSIA AMORPHOIDES (Griseb.) Taub. Caesalpiniaceae. Honeylocust.

For previous introduction and description see 104115.

104162. PINUS EDULIS Engelm. Pinaceae.

A small tree, generally 10 to 20 feet high, sometimes as much as 40 feet high, with horizontal branches, developing a rounded head in old age. The rigid dark-green leaves are about 1 inch long, and the small greenish-yellow cones are over an inch long. Native to the southwestern United States.

104163. TOLUIFERA PEREIRAE (Klotzsch) Baill. Fabaceae. Balsam-of-Peru.

A handsome leguminous tree with glossy green, pinnate leaves and racemes of white flowers. The balsam-of-Peru of commerce is obtained from the lower part of the trunk.

For previous introduction see 97900.

104164 to 104172.

From Australia. Seeds presented by F. H. Baker, Richmond, Victoria. Received January 26, 1934.

104164. ACACIA sp. Mimosaceae.

Locally known as jam wood; the blossom has the fragrance of raspberry jam. Received as *Acacia acuminata*, but the seeds do not agree with that species.

104165 to 104172. EUCALYPTUS spp. Myrtaceae.

104165. EUCALYPTUS CALOPHYLLA Lindl.

Variety *rosea*. A medium-sized Australian tree with dense foliage and dark, corky, deeply furrowed bark. The thick firm leaves are ovate-lanceolate, and the large pink flowers appear in big clusters. It is an ornamental tree of slow growth, not enduring much frost or drought, and is used as a shade tree in California.

For previous introduction see 44959.

104166. EUCALYPTUS GOMPHOCEPHALA DC. **Toacart**.

A tree, native to Australia, of fairly rapid growth, which reaches a height of 100 feet. The very heavy, tough, and strong wood is used for general construction. This species will endure but little frost and prefers limestone soils.

For previous introduction see 103654.

104167. EUCALYPTUS LEHMANNI (Schauer) Preiss. **Lehmann gum**.

A large shrub or small tree with rough reddish bark, peeling off in irregular sheets. The greenish-yellow flowers open from July to September. Native to Western Australia.

For previous introduction see 95318.

104164 to 104172—Continued.

104168. EUCALYPTUS TORQUATA Luehm.

A tree with lanceolate, oblique, leathery, dull gray-green leaves 4 inches long and reddish-orange flowers in umbels of seven on stalks 1 inch long. Native to Western Australia.

104169. EUCALYPTUS MACROCARPA Hook.

A stout Australian shrub or small tree up to 15 feet high, with thick, rigid, cordate, glaucous leaves 6 inches long and large, solitary, brilliant orange or crimson flowers.

For previous introduction see 93838.

104170. EUCALYPTUS PATENS Benth.

An Australian tree up to 100 feet high, with falcate lanceolate leaves 6 inches long, short panicles of small flowers, and flat-topped globular fruits. The tough durable wood is used by wheelwrights.

For previous introduction see 77611.

104171. EUCALYPTUS PREISSIANA Schau.

A shrubby eucalyptus about 8 feet high, with rigid branchlets, shining-green, oblong-elliptic leaves nearly 4 inches long, and small yellowish flowers in axillary clusters. Native to southern Australia.

104172. EUCALYPTUS sp.

Received under the name "steedman-nii." It is said to have golden-yellow flowers and shining, reddish bark. Native to Western Australia.

104173 to 104190. VITIS VINIFERA L. Vitaceae. European grape.

From India. Plants purchased from the Government Botanical Gardens, Mohala, Sangyan, Saharanpur. Received February 1, 1934.

A collection of grape varieties introduced for the use of Department specialists.

104173. *Bedana*.104174. *Bedana Red Kishmish*.104175. *Bedana White*.104176. *Black Round*.104177. *Country*.104178. *Crystal*.104179. *General de la Marmora*.104180. *Haitha*.104181. *Hussaini*.104182. *James*.104183. *Japan*.104184. *Kadhari*.104185. *Large White*.104186. *Mothea*.104187. *Red Prince*.104188. *Sharbati*.104189. *Trebbina*.104190. *Vineyard*.

104191. GOSSYPIMUM sp. Malvaceae. Cotton.

From Hawaii. Seeds presented by J. M. Westgate, Director, Hawaii Agricultural Experiment Station, Honolulu. Received February 1, 1934.

Caravonica cotton. Introduced for the use of Department specialists interested in cotton breeding.

104192. ERYTHROXYLON COCA Lam. Erythroxylaceae. Cocaine-tree.

From Cuba. Seeds presented by Robert M. Grey, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received February 1, 1934.

A tropical shrub, native to Peru, 5 to 6 feet high with yellowish flowers borne in clusters of 3 to 5. It is grown commercially on a large scale throughout the warmer parts of South America, also in Java and Ceylon, for the sake of cocaine, which is extracted from the dried leaves.

For previous introduction see 78509.

104193 to 104195. ALLIUM CEPA L. Liliaceae. Onion.

From Italy. Seeds purchased through W. Roderick Dorsey, American consul general, Genoa. Received February 3, 1934.

104193. *Rossa della rocca*. Introduced as a red onion, but proved to be a fine large yellow-skinned, white-fleshed onion of exceptionally sweet taste.

104194. *Rossa Piatta di Bassano*.

104195. *Rossa Sanguigna di Genova*.

104196. SALIX TAXIFOLIA H. B. K. Salicaceae.

From Tucson, Ariz. Cuttings collected by S. B. Detwiler, Bureau of Plant Industry. Received February 6, 1934.

A shrub, or occasionally a tree 50 feet high, with silvery silky lanceolate or linear leaves about 1 inch long. Native to northern Mexico and the southwestern United States.

104197 to 104210.

From France. Plants purchased from the Grandes Roseraies du Val de la Loir, Orléans. Received February 6, 1934.

104197. CARRIEREA CALYCINA Franch. Flacourtiaceae.

A beautiful tree up to 50 feet high, very similar in foliage to *Idesia polycarpa*. The alternate leaves, 5 to 7 inches long, are ovate to ovate-oblong, smooth, dark green shaded to purple. The tubular white flowers, less than an inch long, are in few flowered terminal clusters. Native to the northeastern part of Szechwan, China, at 4,500 feet altitude.

For previous introduction see 29094.

104198. CERCIS RACEMOSA Oliver. Caesalpiniaceae. Redbud.

An ornamental Chinese tree about 15 feet high, with dark-green, heart-shaped leaves and small rosy flowers in pendulous racemes about 4 inches long. The tree commences to flower when 1 year old.

For previous introduction see 78118.

104197 to 104210—Continued.

104199. *CLETHRA BARBINERVIS* Sieb. and Zucc. Clethraceae. Tree clethra.

A shrub or tree from eastern Asia, up to 30 feet high, with oval-oblong, pointed, sharply serrate, hairy-veined leaves from 3 to 6 inches long and paniced racemes of white fragrant flowers which appear from July to September.

For previous introduction see 43834.

104200 to 104202. *CORYLOPSIS* spp. Hamamelidaceae.

104200. *CORYLOPSIS PAUCIFLORA* Sieb. and Zucc. Winterhazel.

A spreading shrub, usually about 4 feet high, with slender branches, bright-green, broadly oval acuminate leaves, heart-shaped at the base and up to 3 inches long. The primrose-yellow flowers, less than an inch across, are in pairs or threes on short spikes. Native to Japan and said to be less hardy than *Corylopsis spicata*, but more attractive because of its larger flowers.

104201. *CORYLOPSIS PLATYPETALA LEVIS* Rehd. and Wils.

A deciduous shrub 3 to 7 feet high, with slender branches, ovate cordate, dark-green leaves 2 to 4 inches long, and fragrant pale-yellow flowers in rather dense racemes. Native to western Szechwan, China.

104202. *CORYLOPSIS WILLMOTTIAE* Rehd. and Wils.

A deciduous shrub, up to 12 feet high, native to central China. The leaves, 1 to 3 inches long, are oval or somewhat heart-shaped with sinuate margins, and the yellow, fragrant flowers, which appear in early spring, are in racemes about 3 inches long.

For previous introduction see 73428.

104203. *DAPHNIPHYLLUM GLAUCESCENS* Blume. Euphorbiaceae.

An East Indian evergreen tree with entire oblong-lanceolate leaves, inconspicuous flowers, and black fleshy drupes. The tree is valued for the ornamental character of its laurellike foliage.

For previous introduction see 96521.

104204. *DIPELTA VENTRICOSA* Hems l. Caprifoliaceae.

A deciduous shrub, 6 to 15 feet high, with downy young shoots and oval to ovate-lanceolate leaves 2 to 6 inches long. The bell-shaped flowers, about 1 inch long, are borne on drooping pedicels at the end and in the leaf axils of short side shoots. The corolla is deep rose outside and paler within, except in the throat, which is orange colored. Native to western China.

For previous introduction see 81848.

104205. *DIPELTA YUNNANENSIS* Franch. Caprifoliaceae.

A shrub 10 to 15 feet high, native to western China, with opposite, entire, lanceolate leaves 3 to 6 inches long and leafy racemes of two-lipped, tubular-campanulate, pinkish to purple flowers having shieldlike floral bracts.

For previous introduction see 103423.

104197 to 104210—Continued.

104206. *LIRIODENDRON CHINENSE* (Hems l.) Sargent. Magnoliaceae. Chinese tuliptree.

An ornamental deciduous tree up to 50 feet high, native to central China. The leaves, 5 to 6 inches long, have four acute or acuminate lobes, rounded or slightly cordate at the base; the lilylike flower is almost 2 inches long. This variety is somewhat more tender than our native species, *Liriodendron tulipifera*.

For previous introduction see 99188.

104207. *LOROPETALUM CHINENSE* (R. Br.) Oliver. Hamamelidaceae.

A handsome but somewhat tender, bushy evergreen Chinese shrub, about 5 feet high, with wiry hairy branches, oval, unsymmetrical leaves, and curious white witch-hazellike flowers during the early spring.

For previous introduction see 102949.

104208. *STYRAX DASYANTHA* Perkins. Styracaceae. Snowbell.

An ornamental Chinese shrub or small tree up to 25 feet high, with oblong-elliptic leaves about 3 inches long and showy white flowers in slender racemes.

For previous introduction see 72966.

104209. *STYRAX PLANTINIFOLIA* Engelm. Styracaceae.

A large deciduous shrub about 15 feet high, with roundish, sinuate-serrate leaves 2 to 3 inches across, and showy pure-white flowers in racemes. Native to southern and central Texas.

104210. *HOLBOELLIA CORIACEA* Diels. Lardizabalaceae.

An evergreen climbing shrub with dark-green leathery compound digitate leaves of three to seven leaflets and small flowers in axillary racemes; the staminate flowers are white and the pistillate flowers violet. Native to China.

104211 and 104212.

From Cuba. Seeds presented by Robert M. Grey, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received in February 1934.

104211. *ANTIGONON GUATIMALENSE* Meisn. Polygonaceae.

Throughout the American Tropics one of the most popular and conspicuous ornamental herbaceous climbers is the *rosa de montana* (*Antigonon leptopus*), with its showy racemes of rose-pink flowers. The species *A. guatimalense*, while much less common in cultivation, has more numerous flowers that are deeper pink and nearly twice as large.

For previous introduction see 101703.

104212. *CASSIA TIMORIENSIS* DC. Caesalpiniaceae.

Originally from the Botanic Garden, Buitenzorg, Java. A rather low tree with slender downy branches, pale-green leaves up to 9 inches long, bright-yellow flowers, and thin, glossy, flexible pods sometimes 6 inches long. The tree is distributed throughout the Malay Archipelago and the Philippine Islands.

For previous introduction see 100682.

104213 to 104216.

From Ceylon. Seeds presented by T. H. Parsons, Curator, Royal Botanic Gardens, Peradeniya. Received February 1, 1934.

104213. *ACTINORHYZIS CALAPPARIA* Wendl. and Drude. Phoenicaceae. Palm.

A robust palm 40 feet high, with a smooth stem conspicuously ringed, pinnate leaves 9 feet long and 6 feet wide, and a large pendulous cluster of small flowers followed by ovoid, red fruits 3 inches long. Native to the East Indies.

For previous introduction see 94093.

104214. *ARECA* sp. Phoenicaceae. Palm.

104215. *EUTERPE EDULIS* Mart. Phoenicaceae. Para palm.

A palm, native to Brazil, which becomes 40 feet high, with a slender inclined trunk, pinnate leaves, and fruits the size of marbles. A nutritious beverage is made by the natives from the fibrous flesh surrounding the seeds.

For previous introduction see 97913.

104216. *MARTINEZIA EROSA* Linden. Phoenicaceae. Palm.

A small ornamental feather-leaved palm from tropical America, which is covered throughout with long needlelike spines. A related species (*Martinezia caryotaefolia*) is grown to some extent in lower Florida.

For previous introduction see 72600.

104217 to 104219.

From Africa. Seeds presented by H. G. Poynter, Department of Agriculture, Ibadan, Nigeria. Received February 3, 1934.

104217. *PHOENIX RECLINATA* Jacq. Phoenicaceae. Senegal date palm.

Okunkun or *Okun*. Collected about 5 miles from the town of Oyo, Nigeria. A date palm 20 to 30 feet high, native to tropical and subtropical parts of Africa. The reclinate pinnate leaves are 6 to 9 feet long and have rigid green leaflets. The yellowish fruits with sweet edible pulp are half an inch long.

For previous introduction see 102637.

104218. *STRYCHNOS* sp. Loganiaceae.

Sample A. Collected about 4 miles from the town of Oyo.

104219. *STRYCHNOS* sp. Loganiaceae.

Sample B. Collected about 5 miles from the town of Oyo.

104220 to 104225.

From Cuba. Seeds presented by Robert M. Grey, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received February 6, 1934.

104220 to 104224. *CINCHONA* spp. Rubiaceae.

Seeds received from the Government Cinchona Plantation, Musong Kalimpong, Bengal, India.

104220. *CINCHONA LEDGERIANA* Moens.

A tree, native to the Andes, yielding a bark remarkably rich in quinine

104220 to 104225—Continued.

which crystallizes readily as quinate sulphate. The percentage of the other alkaloids present is relatively small. The bark of this species matures in the fifth or sixth year and does not increase its quinine content after that age.

For previous introduction see 103441.

104221. *CINCHONA LEDGERIANA* × *OFFICINALIS*.

For previous introduction see 100115.

104222. *CINCHONA LEDGERIANA* × *SUCCIRUBRA*.

For previous introduction see 100116.

104223. *CINCHONA OFFICINALIS* L.

A small tree only 20 feet high, native to Peru and Ecuador in the high valleys of the Andes. It is now the most important species grown in the Nilgiri Hills in India.

For previous introduction see 100987.

104224. *CINCHONA SUCCIRUBRA* Pavon.

104225. *FLACOURTIA INERMIS* Roxb. Flacourtiaceae.

Collected at the Plant Introduction Garden, Summit, Canal Zone. The *Lovilovi* tree of Ceylon. The brilliant red fruits, the size of cherries, are produced in immense quantities. They are very sour and are said to make excellent jelly and preserves.

For previous introduction see 102666.

104226. *TSUGA FORMOSANA* Hayata. Pinaceae.

From Japan. Seeds presented by Motoo Ohsako, Forest Experiment Station, Maguro, Tokyo. Received February 8, 1934.

For previous introduction and description see 103989.

104227 and 104228.

From French Indo-China. Seeds presented by M. Po'ane, Institut des Recherches Agronomiques de l'Indochine, Division de Botanique. Received February 12, 1934.

104227. *CITRUS* sp. Rutaceae.

104228. *CITRUS* sp. Rutaceae.

104229. *ZEA MAYS* L. Poaceae. Corn.

From Brazil. Seeds presented by Dr. J. F. Assis. Received February 10, 1934.

Introduced for the use of Department specialists.

104230. *QUERCUS DENTATA* Thunb. Fagaceae. Daimyo oak.

From Japan. Seeds purchased from the Yokohama Nursery Co., Yokohama. Received February 15, 1934.

A large tree, native to Chosen, northern and western China, 75 to 80 feet high. The obovate, sinuate-lobed leaves, dark green above and grayish tomentose beneath, are 10 to 12 inches long and 9 inches wide, and the ovoid acorns, 1 inch wide, are about half covered by the cup which has lanceolate spreading scales. The leaves turn a gorgeous red in the autumn.

For previous introduction see 89697.

104231 to 104238. GOSYPIUM spp.
Malvaceae. Cotton.

From Africa. Seeds presented by the Director, Cotton Breeding Station, Barberton, Transvaal, Union of South Africa. Received February 8, 1934.

Introduced for the use of Department specialists interested in cotton breeding.

104231. GOSYPIUM sp.

U. 4. Original type.

104232. GOSYPIUM sp.

920. A rather late strain.

104233. GOSYPIUM sp.

921. A medium strain.

104234. GOSYPIUM sp.

955. A very early strain.

104235. GOSYPIUM sp.

0240. A medium strain.

104236. GOSYPIUM sp.

9264. A rather late strain.

104237. GOSYPIUM sp.

9363. A selection from Cambodia which is practically immune from Jassid in the Transvaal.

104238. GOSYPIUM sp.

4/4. An early strain.

104239 and 104240.

From Cuba. Seeds presented by Robert M. Grey, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received February 12, 1934.

104239. BUTIA ERIOSPATHA (Mart.) Becc.
Phoenicaceae. Apricot palm.

A handsome pinnate-leaved palm with violet-colored stems, creamy flowers, and edible yellow fruits the size of a small plum. It is native to Brazil.

For previous introduction see 91776.

104240. LIVISTONA COCHINCHINENSIS (Blume) Mart. Phoenicaceae. Palm.

A slender palm about 50 feet high, with a crown of large fan-shaped leaves. It is native to Malacca.

For previous introduction see 87434.

104241. OPERCULINA TUBEROSA (L.) Meisn. Convolvulaceae.

From Texas. Seeds presented by L. G. McLean, San Antonio Field Station. Received February 12, 1934.

A perennial, stout-stemmed, herbaceous vine with large compound leaves composed of seven oblong leaflets. The three to six yellow flowers are borne on a long peduncle. The fruit is a membranous globular capsule about 1 inch long, containing two to four large seeds which are covered with short black hairs. It is native to Brazil.

For previous introduction see 87516.

104242 to 104247. VITIS VINIFERA L.
Vitaceae. European grape.

From Morocco. Cuttings presented by H. Brayard, Directeur de la Station Experimentale, Marrakech, Morocco Department of Agriculture. Received February 16, 1934.

104242 to 104247—Continued.

A collection of grape cuttings introduced, under the following varietal names, for the use of Department specialists.

104242. Aïn Naja.

104243. Bernike.

104244. Besoul el Aouada.

104245. Feriala.

104246. Kalb el Tir.

104247. Sébaâ-Taiba

104248 to 104250.

From Arizona. Plants collected by S. B. Detwiler and F. J. Crider, Bureau of Plant Industry. Received February 12, 1934.

104248. COWANIA STANSBURIANA Torr.
Rosaceae.

A bushy shrub 6 to 12 feet high, with deeply lobed, oval leaves half an inch long, white-tomentose beneath, and sulphur-yellow solitary flowers three-fourths of an inch across. Native to the mountains of the southwestern United States.

104249. PARESELA GREGGII (A. Gray) A. A. Heller. Fabaceae.

A low shrub with silky hairy branches and densely hairy compound leaves with 5 to 11 obovate leaflets less than half an inch long. The pink flowers are in dense spikes about 1 inch long. Native to Mexico and Arizona.

104250. SENECEO sp. Asteraceae.

A bush about 3 feet high, with pinnately divided leaves at first whitish tomentose, and yellow flower heads about 1 inch across. Native to western Arizona.

104251. GOSYPIUM AFRICANUM Watt.
Malvaceae.

From Africa. Seeds collected by Aug. Chevalier in Damergou, French Nigeria. Received February 14, 1934.

A spreading bush about 4 feet high, with ovate-rounded, cordate, tomentose leaves 1½ inches across and large yellow flowers with purple blotches. Native to tropical Africa.

104252 to 104263.

From India. Seeds presented by Dr. Eileen W. Erlanson, Science College, Trivandrum, Travancore. Received February 14, 1934.

104252. ANTIGONON GUATIMALENSE Meisn.
Polygonaceae.

Collected January 6, 1934, at Trivandrum.

For previous introduction and description see 104211.

104253. CEDRELA ODORATA L. Meliaceae.
Cigarbox-cedar.

Collected January 1934 in the mountains of Travancore. This is the *West Indian* or *Spanish* cedar, the soft fragrant wood of which is easily worked and is in great demand for cigar boxes. It is also used as a shade tree in coffee plantations.

For previous introduction see 100377.

104254 to 104257. CLITORIA TERNATEA L.
Fabaceae.

An ornamental leguminous vine with pea-shaped flowers about 1 inch long. The green seed pods are used as a vegetable in India.

104252 to 104263—Continued.

104254. Deep blue single flowers.

104255. Dark blue double flowers.

104256. White single flowers.

104257. Pale mauve single flowers.

104258. *HELICTERES ISORA* L. Sterculiaceae.

A tomentose shrub or small tree with obliquely cordate, often lobed, serrate leaves, scabrous above, pubescent beneath, and about 3 inches long. The red flowers, about 1½ inches long, are in short cymes. Native to India and Ceylon.

104259. *PTEROCARPUS MARSUPIUM* Roxb. Fabaceae.

An erect tree with alternate leathery smooth green trifoliate leaves and small yellowish flowers one-half inch long, in copious racemes. Native to western India.

104260. *PTYCHOSPERMA* sp. Phoenicaceae. Palm.

Collected December 3, 1933, in the Botanic Garden at Trivandrum. A small, very ornamental palm.

104261. *QUASSIA AMARA* L. Simaroubaceae.

Indian cinchona. A lofty tree, native to Surniam, which resembles the ash, with large showy red flowers, followed by beautiful and decorative fruits arranged in fives around a fleshy peduncle. The wood of this tree is extremely bitter and is used as a remedy for certain fevers.

For previous introduction see 98878.

104262 and 104263. *SESAMUM ORIENTALE* L. Pedaliaceae. Sesame.

Yellu-chedi. Collected at 200 feet altitude in Shoranus, S. Malabar, India, December 19, 1933.

104264 to 104267.

From Central America. Seeds presented by Señor Julio E. Castañeda de Ranero, Huehuetenango, Huehuetenango, Guatemala, through J. L. Colom, chief, division of agricultural cooperation, Pan American Union, Washington, D. C. Received February 16, 1934.

104264. *BYRSONIMA COTINIFOLIA* H. B. K. Malpighiaceae.

Nance. An erect shrub or small tree, up to 30 feet high, with oblong-ovate leaves, 2 to 4 inches long, densely hairy beneath when young. The small reddish or yellowish flowers are succeeded by small yellow acid edible fruits one-half inch in diameter. Native to tropical America.

104265. *CROTALARIA GUATEMALENSIS* Benth. Fabaceae.

Chipilín. A small shrub with trifoliate leaves, the leaflets ovate-oblong or elliptic and short dense racemes of bright yellow flowers. Native to Guatemala.

104266. *DOLICHOS LABLAE* L. Fabaceae. Hyacinth-bean.

Morada.

104267. *PHASEOLUS CALCARATUS* Roxb. Fabaceae. Rice bean.

Choreque. A very productive pole bean of rapid growth. The seeds are small, about the size of a grain of rice, kidney-shaped, and dark red.

For previous introduction see 102672.

104268. *PRUNUS ARMENIACA* L. Amygdalaceae. Apricot.

From China. Scions presented by Carter D. Holton, Shunkwa, Kansu. Received February 21, 1934.

A freestone apricot received under the varietal name *Peach*, with the shape of an apricot but resembling a large peach in size. Flavor reported excellent either in the fresh or the canned state. Grafted on apricot rootstock.

104269. *CINCHONA LEDGERIANA* Moens. Rubiaceae.

From South America. Seeds presented by Col. Victor E. Ruehl, Caldwell, N. J. Received February 19, 1934.

For previous introduction and description see 104220.

104270 to 104273. *VITIS VINIFERA* L. Vitaceae. European grape.

From northern Africa. Cuttings presented by Ernestine Fenzi, Tripoli. Received February 23, 1934.

104270. A red grape resembling Flame Tokay, the vines of which make a vigorous growth. Collected at Bengasi, but said to have been introduced from the Sudan. Used as a table grape.

104271. A seedless table grape, ripening early in July, with the fruit in large loose bunches. Cultivated in vineyards in Tripoli.

104272. A white table grape from Tarhuna, said to have come originally from the Sudan.

104273. A grape from Tarhuna with round black fruits.

104274. *CISTUS CYPRIUS* Lam. Cistaceae.

From Oregon. Plants presented by Ralph A. Fenton, Portland. Received February 24, 1934.

An erect shrub up to 6 feet high, bearing large white flowers which are blotched with purple at the base. Native to southern Europe.

For previous introduction see 74515.

104275 to 104280. *PRUNUS ARMENIACA* L. Amygdalaceae. Apricot.

From northern Africa. Scions presented by J. B. Plessis, Jardin d'Essais, Sfax, Tunisia. Received February 24, 1934.

A collection of apricot scions received under the following varietal names for the use of Department specialists.

104275. *Amor Leuch*.

104276. *Chechi*.

104277. *Le plus précoce*.

104278. *Lenadgin*. An indigenous variety.

104279. *Luizeb-bouchoi*.

104280. *Musque*. An indigenous variety.

104281 to 104314.

From Morocco. Trees and cuttings presented by H. Brayard, Directeur de la Station Experimentale, Marrakech, Morocco Department of Agriculture. Received February 28, 1934.

104281 to 104314—Continued.

A collection of fruit trees and grape cuttings introduced under their varietal names for the use of Department specialists.

104281 to 104283. *AMYGDALUS PERSICA* L. Amygdalaceae. Peach.

104281. *Charles Foucauld.*

104282. *De Noël.*

104283. *Edouard André.*

104284. *PRUNUS DOMESTICA* L. Amygdalaceae. Common plum.

104285 to 104289. *AMYGDALUS PERSICA* L. Amygdalaceae. Peach.

104285. *Reine des Précoces.*

104286. *Senateur Cazenave.*

104287. *Soleil d'Octobre.*

104288. *Souvenir de St. Fortunat.*

104289. *Sr. du 20 Juillet.*

104290. *MALUS SYLVESTRIS* Mill. Malaceae. Apple.

Reinette Lyonnaise.

104291 and 194292. *PRUNUS ARMENIACA* L. Amygdalaceae. Apricot.

104291. *Lejeune.* An indigenous variety.

104292. *Précoce du Portugal.*

104293 to 104298. *PRUNUS AVIUM* L. Amygdalaceae. Sweet cherry.

104293. *Bigarreau de Bounanol.*

104294. *Bigarreau du Centenaire.*

104295. *Bigarreau Moreau.*

104296. *Cerisier hâtif de Bâle.*

104297. *Cerisier Précoce de la Marche.*

104298. *Hâtive de Berny.*

104299. *PYRUS COMMUNIS* L. Malaceae. Common pear.

104300 to 104303. *PRUNUS DOMESTICA* L. Amygdalaceae. Common plum.

104300. *Monsieur Hâtif.*

104301. *Reine-claude de Juillet.*

104302. *Royal.*

104303. *Saint-Jean.*

104304 to 104311. *PYRUS COMMUNIS* L. Malaceae. Common pear.

104304. *Beurre d'Étampes.*

104305. *Duchesse Beierd.*

104306. *Duchesse de Poitiers.*

104307. *Gardaia.*

104308. *Professeur Lemaire.*

104309. *Tardive de Toulouse.*

104310. *Triomphe de Vienne.*

104311. *Souvenir du Congrès.*

104312 to 104314. *VITIS VINIFERA* L. Vitaceae. European grape.

104312. *Abbo.*

104313. *Bou Sfer.*

104314. *Rackel Jmel.*

104315 to 104324.

From the Union of Soviet Socialist Republics. Seeds presented by the Institute of Plant Industry, Leningrad. Received February 20, 1934.

104315. *AMYGDALUS PERSICA* L. Amygdalaceae. Peach.

Collected at the northern limit of peach cultivation in the northern Caucasus region.

104316. *EPHEDRA ALATA* Decaisne. Gnetaeae.

Collected near Farab, Repetek Sand Desert Station, Turkmenistan, and presented by Dr. N. I. Vavilov. A tall freely branching shrub with rough green equisetumlike branches, small scalelike leaves, and inconspicuous flowers. Native to Arabia and northern Africa.

104317 to 104323. *MORUS ALBA* L. Moraceae. White mulberry.

104317. From the Soviet Silk Farm, no. 1, Stalinabad, Tadzhikistan, Russian Turkistan.

104318. From Uzbekistan, Russian Turkistan.

104319. From Utechkurgan Uzbekistan, Russian Turkistan.

104320. From Nijniy, Urgentch, Russian Turkistan.

104321. From Kerki, Turkmenistan, Russian Turkistan.

104322. From Amu, Darya River, Russian Turkistan.

104323. From Askeran, Azerbaijan, Transcaucasia.

104324. *PRUNUS CERASIFERA DIVARICATA* × *SPINOSA*. Amygdalaceae.

A natural hybrid, found in the forest in the northern Caucasian region.

104325 to 104330. *OLEA EUROPAEA* L. Oleaceae. Common olive.

From Tunisia, Africa. Cuttings presented by J. V. Amiable, inspector, chief of the service of La Gnaba, Direction Generale de l'Agriculture, Tunis. Received February 27, 1934.

A collection of olive varieties received under the following varietal names, for the use of Department specialists.

104325. *Barouni.*

104326. *Bidh-el-Haman.*

104327. *Marsaline.*

104328. *Meski.*

104329. *Nab Tamri.*

104330. *Satali.*

104331 to 104343.

From Trinidad. Seeds presented by M. Bruins-Lich, Curator, Royal Botanic Garden, St. Clair, Port-of-Spain. Received February 19, 1934.

104331 to 104336. *PHOENICACEAE*. Palm.

104331. *ARECA ALICAE* F. Muell.

An Australian cluster palm, with graceful shining-green leaves 3 to 6 feet long. The handsome scarlet oblong

104331 to 104343—Continued.

fruits, three-fourths of an inch long, make this one of the most attractive of all dooryard palms.

For previous introduction see 102590.

104332. *ASTROCARYUM AUREUM* Griseb. and Wendl.

A palm closely related to *Elaeis*, with a prickly trunk, pinnately divided leaves of linear-lanceolate segments, shining above and greenish golden beneath. It is native to Trinidad.

For previous introduction see 80762.

104333. *BACTRIS* sp.

These are low pinnate-leaved palms, usually with spiny trunks.

104334. *BENTINCKIA NICOBARICA* (Kurz.) Beccari.

An elegant little palm with a habit resembling that of a *Kentia*; its native home is the Nicobar Islands. The pinnate, irregularly divided fronds are large and spreading, and the branched spadix bears small purplish berries.

For previous introduction see 56530.

104335. *CHRYSALIDOCARPUS MADAGASCARIENSIS* Beccari.

A graceful palm, native to Madagascar, about 15 feet high, with pinnate leaves 10 feet long having the segments arranged in fascicles and appearing to be in threes, giving a triangular effect.

For previous introduction see 103161.

104336. *ELAËIS GUINEENSIS* Jacq. African oil palm.104337. *ERYTHROXYLON COCA* L. m. Erythroxylaceae. Cocaine-tree.

For previous introduction and description see 104192.

104338 to 104343. *Phoenicaceae*. Palm.104338. *MAXIMILIANA CARIBAEA* Griseb. and Wendl.

A tall, spineless, pinnate-leaved palm, in general habit resembling the coconut palm. The large pale-green leaves have segments about 3 inches long. Native to St. Kitts, British West Indies.

104339. *PHYTELEPHAS KARSTENI* O. F. Cook.

An ivory palm from the valley of the Magdalena River, Colombia, with no trunk. The numerous large pinnate leaves, with 80 to 100 pairs of pinnae, have no petioles.

104340. *PTYCHOSPERMA* sp.

The *ptychospermas* are pinnate-leaved palms, native to the tropical islands of the Pacific Ocean.

104341. *RHYZOCOCOS AMARA* (Jacq.) Beccari.

A tall slender perfectly straight feather palm 50 feet high, with leaves 15 feet long. The golden-yellow fruits, 2 inches long by over 1 inch wide, are covered with a pulp filled with long fibers. This pulp ferments easily and develops butyric acid. The seed is large and of the characteristic coconut shape.

For previous introduction see 99631.

104331 to 104343—Continued.

104342. *SEAFORTHIA ELEGANS* R. Br.

A palm up to 30 feet high, native to the southern coast of Australia and the neighboring islands. The dark-green, pinnate fronds are 15 feet long, and the small fruits are oval and very fibrous.

For previous introduction see 96490.

104343. *STYLOMA PACIFICA* (Seem. and Wendl.) O. F. Cook. Fiji fan palm.

Variety *longipedunculata*. A form with longer peduncles. A fan palm, native to the Fiji Islands with a smooth straight trunk up to 30 feet high and a foot in diameter. The nearly circular leaves, 4 feet long by 3 feet wide, are on petioles 3 to 4 feet long and, when young, are densely covered with whitish-brown tomentum, later becoming smooth and deep green.

For previous introduction see 80192.

104344. *MAGNOLIA SPLENDENS* Urban. Magnoliaceae.

From Puerto Rico. Seeds presented by Mrs. C. E. Horne, of Santurce, San Juan, through T. B. McClelland, Director, Insular Experiment Station, Mayaguez. Received February 26, 1934.

A Puerto Rican forest tree 45 to 90 feet high, with oval leathery leaves 3 to 7 inches long and white flowers about 3 inches across.

For previous introduction see 30912.

104345 to 104378.

From Scotland. Seeds presented by Sir William Wright Smith, Regius Keeper, Royal Botanic Garden, Edinburgh. Received February 24, 1934.

104345. *CARAGANA ARBORESCENS* Lam. Fabaceae. Siberian pea-tree.

A deciduous Siberian shrub of erect habit up to 20 feet in height which, by pruning, may be made to take the form of a small tree. The pinnate leaves are about 2 inches long, and the small yellow flowers are produced singly on slender stalks.

For previous introduction see 52691.

104346. *CARAGANA ARBORESCENS CUNEIFOLIA* (Dipp.) C. Schneid. Fabaceae.

A dwarf form of the well-known Siberian pea-tree with the leaflets quite uniformly wedge-shaped and the flowers on shorter stalks. This form was originally described from Dahuria and Mongolia.

For previous introduction see 102357.

104347. *CARMICHAELIA FLAGELLIFORMIS* Colenso. Fabaceae.

A New Zealand shrub about 4 feet high, with stiff slender shrub and short dense axillary fascicles of purplish flowers borne in great profusion.

For previous introduction see 78920.

104348. *CARMICHAELIA PETREI* T. Kirk. Fabaceae.

A stout leafless shrub, 1 to 6 feet high, with rigid branches and very small purplish flowers in lax racemes. Native to New Zealand.

104345 to 104378—Continued.

104349. *COTONEASTER AMOENA* Wilson.
Malaceae.

A branching shrub, 3 to 5 feet high, native to Yunnan, China. The oval leaves are glossy green above and thickly coated with gray wool underneath. The small cymes of white flowers are followed by bright-red fruits.

For previous introduction see 76230.

104350. *COTONEASTER* sp. Malaceae.

Received as *Cotoneaster denticulata*, a name now referred to *Amelanchier denticulata*. These seeds, however, are those of a *Cotoneaster*.

104351 to 104369. *DELPHINIUM* spp.
Ranunculaceae. Larkspur.

104351. *DELPHINIUM ALTISSIMUM* Wall.

A perennial larkspur from the mountains of Nepal where it becomes 3 to 5 feet high with only a few shining-green, palmately five-lobed leaves 2 or 3 inches across and purplish flowers in an erect raceme.

104352. *DELPHINIUM AMOENUM* Stev.

A hardy herbaceous perennial, glandular hairy throughout, with stems about 2 feet high and palmately divided leaves. The pale-blue flowers are in simple dense racemes. Native to central Asia.

104353. *DELPHINIUM AZUREUM* Michx.

A hardy herbaceous perennial 1 to 2 feet high, finely gray pubescent, with deeply three- to five-parted leaves and sky-blue flowers. Native to the southern United States.

104354. *DELPHINIUM BICOLOR* Nutt.

A perennial larkspur about 3 feet high, from the Rocky Mountains near the source of the Columbia River. The three or more leaves are divided into short linear segments. The showy flowers have large bright-blue sepals and yellow petals veined with blue.

104355. *DELPHINIUM BRUNONIANUM* Royle.

A perennial larkspur a foot or less high, with five-parted leaves, the lobes sharply cut or toothed. The blue and purple flowers are in corymbs. Native to western Tibet at 14,000 feet altitude.

104356. *DELPHINIUM BULLEYANUM* Forrest.

An alpine larkspur 2 to 4 feet high, native to Yunnan, China, between 11,000 and 12,000 feet altitude. The long-stemmed leaves are palmately divided and incised serrate, and the deep rich-blue flowers are in a paniculate raceme.

104357. *DELPHINIUM DECORUM* Fisch.

A laxly upright perennial about 1 foot high. The three-parted leaves with bifid segments are often thick and somewhat succulent, and the handsome deep-blue flowers are in dense racemes. Native to California.

104358. *DELPHINIUM DELAVAYI* Franch.

A herbaceous perennial 2 to 3 feet high, with incised five-lobed leaves and

104345 to 104378—Continued.

dense racemes of blue flowers. It is native to Yunnan, China.

For previous introduction see 93886.

104359. *DELPHINIUM DYCTIOCARPUM* Steud.

A hardy perennial from Siberia with three- to seven-lobed leaves and blue flowers in a lax-branched raceme.

104360. *DELPHINIUM DUMBERGII* Huth.

A perennial larkspur from southern Russia about 2 feet high, with five- to seven-parted leaves and pale-blue or white flowers in a narrow dense raceme.

104361. *DELPHINIUM FLEXUOSUM* Bieb.

A hardy perennial larkspur with violet flowers. Native to Armenia.

For previous introduction see 73973.

104362. *DELPHINIUM OCCIDENTALE* S. Wats.

An alpine larkspur, glandular pubescent throughout, with a stout stem 3 to 6 feet high and palmately lobed leaves. The purple or white flowers are in a loose terminal raceme. Native to the western United States.

104363. *DELPHINIUM PRZEWALSKII* Huth.

A Mongolian larkspur about 8 feet high, with three- to five-parted leaves, the divisions deeply lacinate, and sky-blue flowers that appear from July to September. Closely related to *Delphinium henryi*, which, however, blooms in March.

104364. *DELPHINIUM SCOPULORUM* STACHYDEUM Gray.

A form with narrow leaf lobes and an erect stem 3 to 7 feet high. The blue or purple flowers are in dense racemes. Native to the western United States.

104365. *DELPHINIUM SPECIOSUM GLABRATUM* Stapf.

A Himalayan variety about 3 feet high, with dark-blue flowers over an inch across, with a long spur.

104366. *DELPHINIUM TATSIENENSE* Franch.

A larkspur from western China, with slender stems and hairy leaves divided into three to five sections. The deep-blue flowers are in a large loose raceme.

104367. *DELPHINIUM TROLLIIFOLIUM* A. Gray.

A hardy herbaceous perennial with stout elongated roots, erect stems 3 to 6 feet high, and thin five- to seven-parted leaves, orbicular in outline. The dark-blue flowers are in loose many-flowered racemes. Native to Oregon.

104368. *DELPHINIUM VESTITUM* Wall.

An alpine perennial with a hispid stem 1 to 3 feet high, palmately five- to seven-lobed leaves, sometimes a foot across, on long stems, and blue flowers in long dense racemes. Native to the temperate Himalayas from 8,000 to 12,000 feet altitude.

104345 to 104378—Continued.

104369. *DELPHINIUM YUNNANENSE* Franch.

A perennial alpine with a simple or branched stem and pale-green, finely pubescent leaves that are divided to the middle into five obovate incised segments. The calyx is intensely blue while the petals are bluish violet, the entire flower being four-fifths of an inch long.

For previous introduction see 103214.

104370 to 104372. *DRACOCEPHALUM* spp. Dragonhead.

104370. *DRACOCEPHALUM RUPRECHTI* Regel.

A dwarf compact perennial 1 to 2 feet high, with ovate-lanceolate, incised and toothed leaves, and axillary clusters of rose purple to lilac, tubular two-lipped flowers 1 inch long. It is native to Turkistan.

For previous introduction see 97604.

104371. *DRACOCEPHALUM SPECIOSUM* Benth.

A robust herbaceous perennial 18 inches high, with radical leaves on petioles up to 1 foot long. The leaf-blades are orbicular-cordate, crenate, and 2 to 4 inches across; the tubular flowers, 1 inch long, are blue purple with black spots and are borne in dense heads. It is native to the Himalayas in India.

For previous introduction see 97606.

104372. *DRACOCEPHALUM STAMINEUM* Kar. and Kir.

A low bushy perennial with small orbicular-cordate, rugose leaves about two-thirds of an inch across and small dark-blue flowers in dense terminal heads. Native to Kashmir, India, between 11,000 and 16,000 feet altitude.

104373. *ESCALONIA RUBRA* (Ruiz and Pav.) Pers. Escalloniaceae.

A prostrate shrub, with foliage similar to that of *Escallonia macrantha* and large rose-red flowers.

For previous introduction see 78346.

104374. *OPHIPOGON INTERMEDIUS* D. Don. Liliaceae.

A hardy perennial indigenous to Ceylon, with grasslike leaves and white flowers. It reaches a height of 12 inches and is only suited to moist shady places.

For previous introduction see 99744.

104375 to 104377. *RHEUM* spp. Polygonaceae. Rhubarb.

104375. *RHEUM OFFICINALE* Baill.

104376. *RHEUM PALMATUM* L. Sorrel rhubarb.

A tall, leafy perennial about 5 feet high, with subcylindrical stems and broad, roundish leaves deeply palmately lobed. Native to northwestern Asia.

104377. *RHEUM RHAPONTICUM* L. Common rhubarb.

A rhubarb, native to Siberia, where it is hardy in a climate that drops to 45° F. below zero in midwinter.

For previous introduction see 76929.

104345 to 104378—Continued.

104378. *RODGERSIA AESCULIFOLIA* Batal. Saxifragaceae.

A vigorous plant with large rhizomes and slender petioles supporting six large umbellate, oval leaves, heavily veined and of a beautiful dark green, resembling those of the chestnut. The white flowers, in panicles 30 inches long, appear in June. The plant flourishes in cool, half-shaded, peaty soils.

For previous introduction see 42695.

104379. *SAGITTARIA SAGITTIFOLIA* L. Alismaceae. Old-world-arrowhead.

From China. Corms presented by the inspector for the Bureau of Plant Quarantine, Boston, Mass. Received March 2, 1934.

A Chinese vegetable grown on wet land, very much as dasheens and taros are grown in other parts of the world. The tubers are used like potatoes.

For previous introduction see 85692.

104380 and 104381. *ERIOBOTRYA JAPONICA* (Thunb.) Lindl. Malaceae. Loquat.

From Italy. Scions purchased from Giovanni Ruggiero, gardener, Hotel Schweitzerhof, Capri, through Col. Coert du Bois, American consul general, Naples. Received March 2, 1934.

Scions from exceptionally fine trees, growing in the grounds of the Schweitzerhof Hotel, Capri.

104382 to 104480. *PISTACIA VERA* L. Anacardiaceae. Pistache.

From the Union of Soviet Socialist Republics. Seeds presented by the Department of New Cultures and Introduction, Leningrad. Received March 2, 1934.

A collection of seeds, originally from Transcaucasia. The U. S. S. R. numbers follow the introduction numbers.

104481 and 104482.

From China. Seeds presented by the Manshu Nosan Shokai, Inc., Dairen, Manchuria. Received February 8, 1934.

104481. ACER CARPINIFOLIUM Sieb. and Zucc. Aceraceae. Hornbeam maple.

A tree up to 30 feet high, with oblong, sharp-pointed, doubly serrate leaves 3 to 5 inches long, short racemes of greenish flowers, and glabrous fruits about an inch long. The bright-green hornbeamlike leaves turn bright brownish yellow in autumn. Native to Japan.

For previous introduction see 97495.

104482. BETULA ERMANI Champ. Betulaceae. Birch.

A tree up to 100 feet in height, with peeling, creamy white bark and orange-brown branches. Native to northeastern China. It is said to be liable to injury by spring frosts, owing to its habit of starting early into growth.

For previous introduction see 73057.

104483 to 104555.

From Italy. Scions and plants purchased from Fratelli Ingegnoli, Milan. Received March 5, 1934.

104483 to 104496. AMYGDALUS spp. Amygdalaceae.

104556 to 104604.

From France. Seeds presented by the Muséum d'Histoire Naturelle, Paris. Received March 5, 1934.

104556. *MAURANDYA ANTIRRHINIFLORA* Willd. Scrophulariaceae.

A slender vine with thin, hastate-triangular leaves and solitary, axillary pale-blue flowers 1 inch or more long. Native to northern Mexico and the southwestern United States.

104557. *ANTIRRHINUM ORONTIUM* L. Scrophulariaceae. Snapdragon.

An erect slender annual, 6 to 12 inches high, with narrow-linear leaves and purple or white flowers. Native to temperate Europe and Asia.

104558. *APIUM GRAVEOLENS* L. Apiaceae. Celery.104559. *APIUM NODIFLORUM* Reichenb. f. Apiaceae.

A perennial, native to western Germany, with pinnately divided leaves and umbels of small white flowers. The stem of this species does not take root at the internodes.

For previous introduction see 97921.

104556 to 104604—Continued.

104560. *ASTRAGALUS GLYCYPHYLLOS* L.
Fabaceae. Milkvetch.

A prostrate spreading herbaceous perennial, native to Asia Minor.

For previous introduction see 78764.

104561 to 104563. *CHRYSANTHEMUM* spp.
Asteraceae.

104561. *CHRYSANTHEMUM ALPINUM* L.

An alpine tufted perennial 2 to 6 inches high, ascending or upright, with the lower part of the stem covered with pinnately divided leaves. The golden-yellow flower heads are about 1 inch across. Native to central Europe.

104562. *CHRYSANTHEMUM DEMNATENSE* Murbeck.

A perennial composite about 1 foot high, with ashy pubescent, finely cut foliage, and flower heads with white disk flowers and pale-rose ray flowers. Native to the Atlas Mountains in Morocco.

104563. *CHRYSANTHEMUM MAWII* Hook. f. Asteraceae.

A short woody perennial, native to Morocco, forming bushes up to 2 feet high, like the marguerite, with small woolly gray triangular-oblong pinnatifid leaves. The long-stalked flowers are 1 to 2 inches across and have red-purple disks and three-toothed white rays which are reddish on the back.

For previous introduction see 101777.

104564 to 104568. *CORONILLA* spp. Fabaceae.

104564. *CORONILLA CRETICA* L.

An annual or biennial with a slender rootstock and prostrate or ascending stems up to 2 feet long. The leaves consist of about five pairs of obovate leaflets one-third of an inch long, and the white flowers are in small clusters. Native to southern Europe.

104565. *CORONILLA GLAUCA* Jusl.
Honey coronilla.

Sea-green or *day-smelling coronilla*. A small round bush with beautiful glaucous green foliage and fragrant, pure-yellow flowers. Native to southern France.

104566. *CORONILLA JUNCEA* L.

A smooth gray-green shrub with rush-like branches, linear-oblong leaflets, and umbels of golden-yellow flowers. Native to southern France.

104567. *CORONILLA VARIA* L.
Crownvetch.

A prostrate or ascending leguminous perennial, up to about 4 feet high, with a thick rootstalk, compound leaves, and pinkish flowers in dense umbels. It is native to central Europe.

For previous introduction see 78776.

104568. *CORONILLA VIMINALIS* Salisb.

A trailing shrub, native to Algeria, with odd-pinnate leaves composed of 13 to 21 leaflets and pale-red or red-striped white flowers in small umbels.

104556 to 104604—Continued.

104569. *DAUCUS CAROTA* L. Apiaceae.
Carrot.

104570 to 104573. *DELPHINIUM* spp. Ranunculaceae.
Larkspur.

104570. *DELPHINIUM HALTERATUM* Sibth.

An annual larkspur about 1 foot high, with finely divided leaves and light-blue flowers that appear from June to August. Native to the Mediterranean region.

104571. *DELPHINIUM PUBESCENS* DC.

An annual larkspur, pubescent throughout, with finely cut foliage and pale-violet or rose-colored flowers. Native to southern Europe and northern Africa.

104572. *DELPHINIUM REQUIENI* DC.

A biennial larkspur about 4 feet high, with three- or five-parted leaves and sky-blue flowers in lax racemes. Native to the islands of Corsica and Majorca.

104573. *DELPHINIUM STAPHISAGRIA* L.

A stout-stemmed perennial or biennial, soft-hairy throughout, 1 to 3 feet high. The leaves are five- to seven-lobed, sometimes three-cleft. The light-blue flowers are in a dense simple or branched raceme. Native to the Mediterranean countries.

For previous introduction see 91453.

104574 to 104576. *DIGITALIS* spp. Scrophulariaceae.
Foxglove.

104574. *DIGITALIS FERRUGINEA* L.

A biennial or perennial, 4 to 6 feet high, densely leafy, with long dense racemes of rusty-red flowers. Native to southern Europe.

104575. *DIGITALIS LANATA* Ehrh.

A perennial or biennial foxglove 2 to 3 feet high, with oblong or lanceolate leaves and grayish or creamy-yellow flowers about 1 inch long, in dense racemes. Native to southern Europe.

104576. *DIGITALIS THAPSI* L.

A perennial foxglove about 3 feet high, native to Spain. The rugose, decurrent leaves are ovate-oblong, and the purple red-dotted flowers are in a lax raceme. Native to Spain.

104577 to 104579. *LACTUCA* spp. Cichoriaceae.

104577. *LACTUCA CHONDRILLAEFLORA* Bor.

A biennial 1 to 2 feet high, whitish hairy and much branched, with the lower leaves runcinate-pinnatifid with linear lobes. The flower heads are bright yellow.

104578. *LACTUCA SAGITTATA* Waldst.

A biennial, 3 to 4 feet high, with thin ovate-elongate or sagittate leaves up to 4 inches long and small yellow flower heads in a terminal corymb. Native to Hungary.

104579. *LACTUCA SIBIRICA* (L.) Benth.

A Siberian perennial about 2 feet high, with lanceolate denticulate leaves and corymbs of small blue flower heads.

104556 to 104604—Continued.

104580. *RANUNCULUS GRAMINEUS* L. Ranunculaceae. Grassy buttercup.

A smooth herbaceous perennial with rosettes of linear to lanceolate leaves and bright-yellow flowers on stalks 6 to 12 inches high. It is native to Europe.

For previous introduction see 101954.

104581 to 104592. *SALVIA* spp. Mentha-ceae. Sage.

104581. *SALVIA AEGYPTICA* L.

A low shrub, with numerous stiff branches and few linear-oblong, bullate-crenate leaves about one-half inch long. The very small whitish flowers are in small whorls. Native to Egypt.

104582. *SALVIA AETHIOPIS* L.

A perennial a foot or less high, with erect white-woolly stems, cordate-clasping, incised-dentate leaves, and white or slightly reddish flowers.

104583. *SALVIA ALBO-CAERULEA* Linden.

A shrubby salvia, about 3 feet high, with long-acuminate leaves 4 to 6 inches long and simple racemes of creamy-white and blue flowers. It is native to the pine forests of Michoacan, Mexico.

104584. *SALVIA ALGERIENSIS* Desf.

An erect hairy annual 2 to 3 feet high, with the lower leaves ovate-oblong, crenate, 1 to 2 inches wide, and 6 inches long. The sky-blue flowers are in small whorls. Native to Algeria.

104585. *SALVIA ARGENTEA* L.

An erect white-woolly biennial 2 to 4 feet high, with broadly ovate, sinuate-lobate leaves 4 to 8 inches long and showy rose-white, purplish, or yellowish flowers. Native to the Mediterranean region.

104586. *SALVIA CLEISTOGAMA* De Bary.

An erect perennial 1 to 2 feet high, covered with long hairs, with ovate-oblong irregularly pinnatifid leaves usually about 2 inches long and distant whorls half an inch long in distant whorls. Native to southern Africa.

104587. *SALVIA GLUTINOSA* L.

A perennial sage about 3 feet tall, glutinous hairy throughout, with ovate-oblong, dentate leaves up to 7 inches long and pale-yellow flowers an inch long in lax whorls. Native to Europe and Asia.

104588. *SALVIA HISPANICA* L.

A perennial herb with ovate serrate leaves and quadrangular spikes of blue flowers. The mucilaginous seeds are used in making the Mexican drink called "chia."

104589. *SALVIA JURISICI* Kosanjin.

A perennial sage, with a long, much-branched rootstock and erect stems about 2 feet high. The lower leaves are long-stalked, ovate-oblong, crenate or dentate, and rugose, while the upper leaves are pinnatisect and short-stalked. The small blue-violet flowers are in small whorls. Native to southern Yugoslavia.

104556 to 104604—Continued.

104590. *SALVIA LYRATA* L.

A hardy perennial with erect stems 8 to 24 inches high. The radical leaves are lyrate, erose-dentate, and the stem leaves are oblong lanceolate. The bluish-purple flowers are in lax whorls. Native to the western United States.

104591. *SALVIA COCCINEA PSEUDOCOC-CINEA* (Jacq.) A. Gray.

A perennial sage with flowers the same shade of intense red as that of the cardinal flower (*Lobelia cardinalis*). The plants have from two to five stems and vary in height from 15 to 30 inches. Found in little pockets of limestone soil in dry sunny places in Mexico and Central America.

For previous introduction see 64668.

104592. *SALVIA TILIAEFOLIA* Vahl.

A perennial sage, said to be native to Mexico, with cordate, rugose, crenate-serrate leaves 2 inches or more long and sky-blue flowers nearly 1 inch long.

104593 to 104598. *SOLANUM* spp. Solana-ceae.

104593. *SOLANUM AURICULATUM* Ait.

A shrubby perennial, 4 feet high, with large hairy, mulleinlike leaves 6 to 7 inches long and small violet flowers in dense corymbs. Native to Madagascar.

104594. *SOLANUM CALDASII* Humb. and Bonpl.

A white hairy perennial with unequally pinnatisect leaves 4 inches long and small flowers, one-half inch across, in long-stalked racemes. Native to Ecuador. This species is related to the potato (*Solanum tuberosum*).

104595. *SOLANUM CORNUTUM* Lam.

A spiny annual 1 to 4 feet high, with ovate pinnately lobed leaves and yellow flowers an inch across, in small terminal clusters. Native to Mexico.

104596. *SOLANUM DULCAMARA* L.

Bitter nightshade.

An ornamental vine with red berries.

For previous introduction see 95573.

104597. *SOLANUM PSEUDOCAPSICUM* L.

Jerusalem-cherry.

104598. *SOLANUM TRIFLORUM* Nutt.

Nightshade.

A low-growing annual, with oblong seven- to nine-lobed leaves, small white flowers, and greenish fruits. Native to the western United States.

104599 to 104604. *VIOLA* spp. Violaceae. Violet.

104599. *VIOLA DELPHINIFOLIA* Nutt.

A perennial violet with a short vertical rootstock and palmately multifid leaves up to 3 inches wide. The showy violet flowers are on scapes exceeding the leaves. Native to the prairie region of the central United States.

104600. *VIOLA HIRTA* L.

A hardy perennial violet, closely related to *Viola odorata*, from which it differs in being more hairy and in having narrower leaves and scentless dull-bluish flowers. The stems are about 6

104556 to 104604—Continued.

inches high, and the leaves are narrowly cordate. Native to England and northern Europe.

104601. *VIOLA MACROCERAS* Bunge.

A Siberian violet with cordate crenate-serrate leaves with stems 3 to 4 inches long and fragrant violet flowers.

104602. *VIOLA MIRABILIS* L.

A hardy violet, native to northern Europe, which becomes about 3 inches high, producing pale-blue flowers in midsummer.

For previous introduction see 72623.

104603. *VIOLA PATRINII* Ging.

A low stemless perennial, native to northeastern Asia, with a stout root-stalk, ovate-oblong leaves, and lilac flowers about one-half inch in diameter.

For previous introduction see 103898.

104604. *VIOLA SYLVESTRIS* Lam.

A violet native to France, with stems 3 to 4 inches long, heart-shaped leaves, and inodorous violet or nearly white flowers on stalks longer than the leaves.

104605 to 104612. *PRUNUS* spp. *Amygdalaceae*.

From Palestine. Trees and scions presented by Asaph Grasovsky, Department of Agriculture and Forests, Jerusalem, through the citrus fruit specialist and chief horticultural officer, Department of Agriculture and Forests, Jaffa. Received March 9, 1934.

A collection of apricot trees and plum scions received under their varietal names, for the use of Department specialists.

104605 to 104608. *PRUNUS ARMENIACA* L.
Apricot.

104605. *Alawi*. 104607. *Baladi*.

104606. *Artassi*. 104608. *Hamawi*.

104609. *PRUNUS DOMESTICA* L.
Common plum.

Swedah.

104610 to 104612. *PRUNUS ARMENIACA* L.
Apricot.

104610. *Lozi*.

104611. *Mawi*.

104612. *Mustakawi*.

104613 to 104624.

From Bristol, England. Scions and rooted cuttings presented by Prof. B. T. P. Barker, University of Bristol, through G. T. Spinks, Research Station. Received March 9, 1934.

A collection of fruit-tree scions and rooted cuttings of a blackberry, introduced under their varietal names for the use of Department specialists.

104613 to 104618. *MALUS SYLVESTRIS* Mill.
Apple.

104613. *Gloucester Cross*.

104614. *Hereford Cross*.

104615. *Newport Cross*.

104616. *Plymouth Cross*.

104617. *Taunton Cross*.

104613 to 104624—Continued.

104618. *Worcester Cross*.

104619 to 104622. *PRUNUS DOMESTICA* L.
Amygdalaceae. Common plum.

104619. *Avon Cross*.

104620. *Severn Cross*.

104621. *Teme Cross*.

104622. *Wye Cross*.

104623. *PYRUS COMMUNIS* L. *Malaceae*.
Common pear.

Bristol Cross.

104624. *RUBUS* sp. *Rosaceae*.

Ashton Cross, a blackberry.

104625 to 104661.

From Lithuania. Bulblets and seeds presented by Prof. Dr. C. Regel, Director, Hortus Botanicus Lituaniae, Kaunas. Received March 5, 1934.

104625 to 104635. *ALLIUM* spp. *Liliaceae*.
Onion.

104625. *ALLIUM CANADENSE* L.
Meadow garlic.

Bulblets.

104626. *ALLIUM CARINATUM* L.

Bulblets of a species with narrowly linear leaves and lilac-purple flowers, produced in a comparatively large head. It is found throughout southern Europe, especially in the Alps.

For previous introduction see 91984.

104627. *ALLIUM CAERULEUM* Pall.

A blue-flowered onion with slender grassy leaves and 14-inch stalks bearing close heads of small deep-blue flowers.

For previous introduction see 95354.

104628. *ALLIUM CYANEUM* Regel.

A rather dwarf plant, less than a foot high, with small heads of pendulous pale-blue flowers. Native to northern China.

For previous introduction see 95454.

104629. *ALLIUM DARWASICUM* Regel.

A rather low allium with flat lanceolate leaves 5 to 6 inches long and white flowers in a roundish head about 1 inch across. Native to Bokhara.

104630. *ALLIUM FISTULOSUM* L.
Welsh onion.

A hardy onion, about 2 feet high, with green and yellow flowers.

For previous introduction see 101390.

104631. *ALLIUM FISTULOSUM* L.

Variety *viviparum*.

A name for which a place of publication and a description have not been found.

104632. *ALLIUM FLAVUM* L.

A wild onion with an upright or ascending stem up to a foot high, narrowly linear leaves about as long as the stem, and small yellow bell-shaped flowers in a rather dense cluster. Native to dry rocky places, especially in chalky soil, in south-central Europe.

For previous introduction see 91988.

104625 to 104661—Continued.

104633. *ALLIUM FOMINIANUM* Mischenko.

A name for which a place of publication and a description have not been found.

For previous introduction see 90599.

104634. *ALLIUM PULCHELLUM* Don.

An onion with narrow-linear leaves about 1 foot long and a rather dense umbel of bell-shaped, violet flowers. Native to Asia Minor.

For previous introduction see 93153.

104635. *ALLIUM SATIVUM* L. Garlic.

A variety with white flowers. The Chinese use both the leaves and scapes as a vegetable.

For previous introduction see 103701.

104636. *ALTHAEA NUDIFLORA* Lindl. Malvaceae.

A biennial 6 feet high, with large, roundish cordate, 3-lobed, rough-hairy leaves and large white flowers. Native to the Altai Mountains, Siberia.

104637. *APIUM GRAVEOLENS* L. Apiaceae. Celery.

104638. *CAPSICUM ANNUM* L. Solanaceae. Common redpepper.

Variety *longum*.

104639. *CHRYSANTHEMUM* sp. Astera-ceae.

From Antakiya.

104640. *CHRYSANTHEMUM* sp. Astera-ceae.

From Asia Minor.

104641. *DAUCUS CAROTA* L. Apiaceae. Carrot.

104642. *DIGITALIS NERVOSA* Steud. and Hochst. Scrophulariaceae. Foxglove.

A perennial foxglove with entire oblong-lanceolate leaves and small yellowish flowers in long dense racemes. Native to the Caucasus.

104643 to 104647. *IRIS* spp. Iridaceae.

104643. *IRIS GERMANICA* L.

A collection of mixed varieties.

104644. *IRIS LURIDA* Ait.

An iris of the section *Pogoniris*, with slightly glaucous leaves 1 foot long and three or four flowers in a cluster. The outer segments are obovate cuneate, dead purple at the top, veined with dull purple on a yellowish ground below, while the inner segments are dull purple and narrower. Native to southeastern Europe.

104645. *IRIS SINTENISII* Janka.

A beardless iris of the same general type as *Iris graminea*, with tufted evergreen leaves about 12 inches long and flower stalks little higher than the leaves. The flowers are blue purple with red purple on the style branches and hafts. Native to southeastern Europe and Asia Minor.

For previous introduction see 91821.

104625 to 104661—Continued.

104646. *IRIS* sp.

Received under the name "thunbergii."

104647. *IRIS* sp.

104648. *RHEUM UNDULATUM* L. Polygonaceae. Rhubarb.

104649. *RUBUS COREANUS* Miquel. Rosaceae. Korean raspberry.

A deciduous shrub 8 to 10 feet high, native to China and Chosen, with erect or arching, stout biennial stems. The pinnate leaves, 6 to 10 inches long, are usually composed of seven ovate, dark lustrous-green, coarsely toothed leaflets. The small fruit, varying in color from red to nearly black, is edible but of poor flavor.

104650. *RUBUS LEUCODERMIS* Dougl. Rosaceae.

An erect shrub 3 to 6 feet high, found in open woods in the northwestern United States. The leaves are usually trifoliate, the small white flowers are in few-flowered corymbs, and the black hemispherical fruits are one-half inch in diameter.

104651 to 104653. *SALVIA* spp. Mentha-ceae. Sage.

104651. *SALVIA ALGERIENSIS* Desf.

For previous introduction and description see 104584.

104652. *SALVIA BULLEYANA* Diels.

A perennial 12 to 18 inches high, with cordate, triangular-ovate, or hastate leaves 2 to 3 inches long and purplish-blue flowers in racemes. Native to the mountains of Yunnan, China, between 6,200 and 7,000 feet altitude.

104653. *SALVIA CARDUACEA* Benth.

A perennial a foot or more high, with white-woolly stems and leaves. The pinnatifid leaves have spiny, acuminate teeth. The lilac flowers are in remote, dense whorls. Native to California.

104654. *SALVIA VERTICILLATA* L.

A stout perennial 3 feet high, with white-woolly basal leaves 6 inches or more long, usually entire, and white flowers in remote whorls. Native to Asia Minor.

104655. *SALVIA PRZEWALSKII* Maxim.

A white-hairy shrub, 2 feet or more high, with entire, ovate, acute leaves and blue flowers in 6- to 10-flowered whorls. Native to Asia Minor.

104656. *SALVIA JURISICI* Kosant.

For previous introduction and description see 104589.

104657. *SALVIA ROEMERIANA* Scheele.

A perennial sage 1 or 2 feet high, with leaves roundish or reniform cordate, coarsely toothed or incised. The deep-scarlet flowers, about 1 inch long, are in few-flowered whorls. Native to Texas and Mexico.

104658. *SALVIA TILIAEFOLIA* Vahl.

For previous introduction and description see 104592.

104625 to 104661—Continued.

104659 to 104661. *SPINACIA* spp. Chenopodiaceae. Spinach.

104659. *SPINACIA OLERACEA* L. Common spinach.

104660. *SPINACIA SPINOSA* Moench.

This is very closely allied to common spinach (*Spinacia oleracea*), but it differs in having spiny, nearly triangular fruits.

104661. *SPINACIA TETRANDRA* Stev.

A wild spinach which grows in heavy soil in central Asia.

For previous introduction see 73202.

104662 and 104663.

From Dehra Dun, India. Seeds presented by the Forest Botanist. Forest Research Institute, through Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, Cuba. Received March 7, 1934.

104662. *CUDRANIA JAVANENSIS* Trecul. Moraceae.

Cocklespur. A thorny trailing shrub which should prove useful in making an almost impenetrable hedge. The greenish fruit, which is edible and of pleasant flavor, is irregular in shape and 2 to 3 inches in diameter. Native to tropical Africa.

104663. *DEGUELIA TIMORIENSIS* (DC.) Taub. Fabaceae.

A woody climber with compound leaves 3 to 6 inches long, composed of 9 to 18 leaflets, leathery, oblong, and 1 to 2 inches in length. The pale-rose flowers are in dense axillary racemes. Native to the East Indies.

104664 and 104665.

From Cuba. Seeds presented by Robert M. Grey, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received March 7, 1934.

104664. *ENTADA SUDANICA* Schweinf. Mimosaceae.

A small tree, native to tropical Africa, with compound leaves a foot long and small white or yellowish flowers in dense cylindrical spikes 2 to 6 inches long. The straight brown pod, 8 to 15 inches long, is distinctly constricted between the seeds.

For previous introduction see 70842.

104665. *TRICHILIA HIRTA* L. Meliaceae.

A shrub or tree up to 60 feet high, with pinnately compound leaves of obliquely ovate, glabrous leaflets and 11 to 21 panicles, 9 inches long, of greenish flowers. It is native to Mexico and the West Indies.

For previous introduction see 90937.

104666 and 104667. *CITRUS SINENSIS* (L.) Osbeck. Rutaceae. Orange.

From Puerto Rico. Scions presented by Edmund H. Twilight, Department of Agriculture and Commerce, Rio Piedras. Received March 6, 1934.

104666. *Rico No. 1*. B. V. 2.

104667. *Rico No. 2*. B. V. 4.

48500—36—4

104668. *TRITICUM AESTIVUM* L. (*T. vulgare* Vill.). Poaceae.

Common wheat.

From Canada. Seeds presented by the cereal division of the Central Experimental Farm, Ottawa. Received February 14, 1934.

Ruby, Ottawa 623. Introduced for the use of Department specialists.

104669 and 104670.

From Japan. Seeds presented by Professor Nakai, Botanic Garden, Tokyo. Received March 9, 1934.

104669. *LESPEDEZA FORMOSA* (Vogel) Koehne. Fabaceae. Purple bushclover.

An erect semishrubby plant 6 to 12 feet high, with trifoliolate leaves of oblong leaflets and racemes of rose-purple flowers. It is native to Chosen.

For previous introduction see 100879.

104670. *LESPEDEZA MAXIMOWICZI* C. Schneid. Fabaceae. Bushclover.

A shrubby bushclover from Chosen, resembling *Lespedeza buergeri*, from which it differs in the structure of its calyx. The leaves are very thin, dull green above and bright green below, and the violet flowers are arranged in loose whorls.

For previous introduction see 82482.

104671 and 104672.

From Austria. Seeds presented by the Botanic Garden, Wien. Received February 24, 1934.

104671. *LESPEDEZA BICOLOR* Turcz. Fabaceae. Shrub bushclover.

A bushy perennial which bears a profusion of rose-purple flowers during the early autumn, practically covering the drooping branches which sometimes become 6 feet in length.

For previous introduction see 104065.

104672. *LESPEDEZA HIRTA* (L.) Hornem. Fabaceae.

An erect or ascending, hairy, rather stout plant, 2 to 4 feet high, with rounded or oval leaflets and yellowish-white or purple-spotted flowers in elongated terminal heads. Native to the eastern United States.

104673 to 104678.

From Poland. Seeds presented by Stowarzyzenie Lakarzy, Sarny-Zaklad Doswiadczalny. Received March 7, 1934.

A collection of grasses, introduced for the use of Department specialists working with forage crops.

104673. *BECKMANNIA ERUCAEFORMIS* (L.) Host. Poaceae. Sloughgrass.

A very good fodder plant for growing on moist soil.

For previous introduction see 60772.

104674. *DACTYLIS GLOMERATA* L. Poaceae. Orchard grass.

For previous introduction see 101103.

104673 to 104678—Continued.

104675. *FESTUCA ELATIO* L. Poaceae.
Meadow fescue.

A loosely tufted perennial European grass with short creeping rootstalks and erect stems up to 4 feet high.

For previous introduction see 99124.

104676. *HOMALOCENCHRUS ORYZOIDES* (L.) Poll. Poaceae.

A perennial grass with stout ascending culms arising from creeping rootstalks. The broadly linear leaves, about 1 foot long, are very rough.

104677. *POA PALUSTRIS* L. Poaceae.
Fowl meadowgrass.

For previous introduction see 64781.

104678. *POA PRATENSIS* L. Poaceae.
Kentucky bluegrass.

104679 to 104704. Phoenicaceae.
Palm.

From British Guiana. Seeds presented by the Director, Botanic Gardens, Georgetown. Received February 28, 1934.

104679. *ARCHONTOPHOENIX ALEXANDRAE* (F. Muell.) Wendl. and Drude.

A pinnate-leaved palm 70 to 80 feet high, with leaves several feet long, and lanceolate, usually entire leaflets, 1 to 2 feet long and whitish beneath. The yellow-green flowers are borne in a cluster about 1 foot long and are followed by small round dry fruits. It is native to Queensland, Australia.

For previous introduction see 103724.

104680. *ARECA ALICAE* F. Muell.

For previous introduction and description see 104331.

104681. *ARIKURYROBA SCHIZOPHYLLA* (Mart.) Bailey.

A slender, straight-stemmed palm with pinnate leaves.

For previous introduction see 101131.

104682. *ASTROCARYUM SEGREGATUM* Drude.

A rather low-growing Brazilian palm with a spiny trunk and large pinnate leaves armed with large stout black spines along the midribs. The oily smooth fragrant fruits are from 1 to 2 inches in diameter. Native to eastern Brazil.

For previous introduction see 98511.

104683. *ASTROCARYUM STANDLEYANUM* Bailey.

A tall slender handsome spiny palm with pinnate leaves, found in dense rain forests. The orange-yellow fruits, 1¾ by 1½ inches, are rugose and mucronate and are covered with a thin fleshy fibrous juicy sweetish pulp. They are borne in long pendent clusters.

For previous introduction see 102651.

104684. *BENTINCKIA NICOBARICA* (Kurz.) Beccari.

For previous introduction and description see 104334.

104685. *ARECASTRUM ROMANZOFFIANUM AUSTRALE* (Mart.) Becc.

104679 to 104704—Continued.

Pindo-poi. A very tall palm, with a habit like a slender reversed pyramid. In the forests of eastern Paraguay it frequently becomes over 60 feet high, equaling the tallest trees of the region. The mature specimens of this palm furnish a very hard and resistant wood.

104686. *COPERNICIA CERIFERA* Mart.
Carnauba palm.

The wax palm of Brazil becomes 25 feet high, with fan-shaped leaves. From the leaves is obtained carnauba wax, which is used in making phonograph records.

For previous introduction see 98491.

104687. *CORYPHA ELATA* Roxb.

A tall Philippine palm up to 60 feet high, with spiny stems and fan-shaped leaves.

For previous introduction see 74425.

104688. *ENGLEROPHOENIX REGIA* (Mart.) Kuntze.

Maripa. This is a massive ornate palm up to 50 feet high, with persistent leaf petioles and immense leaves, reminding one of the Cohune. The subacid fruits have thin fleshy pulp and are much appreciated by the natives of Surinam.

For previous introduction see 98499.

104689. *HYOPHOREE AMARICAULIS* Mart.
Bottle palm.

A showy pinnate-leaved palm from Mauritius, with a bottle-shaped trunk up to 60 feet tall and terminal leaves with 40 to 60 pairs of linear leaflets.

104690. *HYOPHOREE VERSCHAFFELTI* Wendl.
Spindle palm.

An unarmed palm, native to Mauritius, with a spindle-shaped trunk 25 to 30 feet high, pinnate leaves having a yellow band along the midrib, and orange-colored flowers.

For previous introduction see 81588.

104691. *INODES MEXICANA* (Mart.) Standl.

A tall palm up to 60 feet high, with palmate leaves divided into linear segments having numerous long threads on the margins. The inflorescence is short, dense, and recurved, and the flattened globose fruits are black. It is native to Oaxaca, Mexico.

For previous introduction see 80551.

104692. *LICUALA GRACILIS* Blume.

A fan palm 5 to 7 feet high, native to Java, with the stems growing in clusters. The orbicular, plicate leaves are deeply cut into cuneate segments, and the petioles are spiny along the edge.

For previous introduction see 93321.

104693. *LICUALA GRANDIS* (Bull.) Wendl.

A dwarf palm with the stem clothed with the dead leaf sheaths. The erect spreading fan-shaped leaves have closely plicate segments which are two-lobed at the end. Native to the island of New Pommern, Bismarck Archipelago.

For previous introduction see 98495.

104679 to 104704—Continued.

104694 and 104695. *LINOMA ALBA* (Bory) O. F. Cook.

A small palm up to 30 feet high, native to tropical Africa. The pinnate leaves, which become 4 to 8 feet long, have whitish petioles and greenish-white veins when the plants are young.

For previous introduction see 103163.

104696. *LIVISTONA ROTUNDIFOLIA* (Lam.) Mart. Java fan palm.

An erect pinnate-leaved palm, native to tropical Asia, about the same size as the coconut palm. The hard durable wood is used for general construction.

For previous introduction see 97548.

104697. *ORBIGNYA SPECIOSA* (Mart.) Barb.-Rodr. Babassu nut.

The *Uaussu* palm of Brazil and the Guianas is much like the Cohune palm, but its fruits, 3 to 4 inches long, are much larger. An edible oil is extracted from the seeds and is now being exported to the United States.

For previous introduction see 99608.

104698. *PAUONIS WRIGHTII* (Griseb. and Wendl.) Britton.

Guano priete. A tree often with several erect trunks 25 to 40 feet high, native to southern Florida and the West Indies. The half-orbicular, fan-shaped leaves, which spread in all directions, are yellow green above and blue green beneath, and the segments are linear lanceolate. The drooping spadix, 3 to 5 feet long, bears yellow-green flowers, followed by lustrous black fruits one-third inch in diameter.

For previous introduction see 95048.

104699. *PHOENIX ZEYLANICA* Trimen. Ceylon date palm.

A pinnate-leaved palm, native to Ceylon, with a stem 8 to 20 feet high and a crown of rather short leaves made up of numerous linear-lanceolate, light-green leaflets 7 to 10 inches long. The obovoid-oblong, violet-blue, edible fruits are half an inch long.

For previous introduction see 103732.

104700. *PTYCHOSPERMA MACARTHURI* Wendl.

A palm, native to Australia, which grows to a height of 30 feet, but is usually a dwarf in cultivation with suckers from the base, making a bushy plant. The smooth-ringed trunk is crowned by a dense cluster of pinnate leaves with arching leaflets 6 to 9 inches long.

For previous introduction see 97288.

104701. *ROYSTONEA REGIA* (H. B. K.) O. F. Cook. Cuban Royal Palm.

A Cuban palm, up to 80 feet high and 2 feet in diameter, with pinnately divided leaves 10 feet long.

For previous introduction see 93824.

104702. *SABAL GLABRA* (Mill.) Sarg. Bluestem palmetto.

An attractive palm 30 feet high. The smooth tapering trunk is marked at regular intervals with scars.

For previous introduction see 97298.

104679 to 104704—Continued.

104703. *SABAL MAURITIAEFORMIS* (Karst.) Griseb. and Wendl. Palmetto.

A handsome West Indian palm with a trunk 60 to 80 feet in height and over a foot in diameter, and large roundish leaves, multifold to the middle, up to 12 feet in diameter. The black fruits are about the size of peas.

For previous introduction see 62106.

104704. *THRINAX PARVIFLORA* Swartz. Jamaica thatch palm.

An unarmed fan palm with a ringed trunk up to 20 feet high, circular leaves 1 to 2 feet across, divided into bifid segments, and inconspicuous flowers and fruits. Native to Jamaica.

104705. *REHDERODENDRON MACROCARPUM* Hu. *Styracaceae*.

From China. Seeds presented by H. H. Hu, Director, Fan Memorial Institute of Biology, Peiping. Received March 10, 1934.

A tree about 30 feet high, native to Szechwan, China. The papery, reddish-green, oval-elliptic leaves are about 4 inches long, and the showy flowers are followed by ribbed woody oblong fruits 2 inches long.

104706 to 104713. *SOJA MAX* (L.) Piper. *Fabaceae*. Soybean.

From Poland. Seeds presented by the Director, Hortus Medicinalis, Wiño. Received March 14, 1934.

104706. *B. S.* 777.

104707. *Czarna jagoda*.

104708. *C. S.* S.

104709. *Dublańska*.

104710. *Granum*, 4041.

104711. *Putawska weresna*.

104712. *Szhotonitz*.

104713. *Wileńska*.

104714. *MANGIFERA INDICA* L. *Anacardiaceae*. Mango.

From Egypt. Plants presented by Dr. Monir Baghat, Director, Plant Quarantine Station, Alexandria. Received March 16, 1934.

A variety with very large fine fruits.

104715 to 104736. *MALUS SYLVESTRIS* Mill. *Malaceae*. Apple.

From England. Scions presented by R. G. Hatton, Director, East Malling Research Station, East Malling, Kent. Received March 17, 1934.

A collection of apple scions received under their varietal names for the use of Department specialists.

104715. *Allen's Everlasting*.

104716. *Anne Elizabeth*.

104717. *Barnack's Beauty*.

104718. *Beauty of Stoke*.

104719. *Claygate Pearmain*.

104720. *Crawley Beauty*.

104721. *Cutler Grieve*.

104715 to 104736—Continued.

104722. *Duchess Favorite*.
 104723. *Duke of Devonshire*.
 104724. *Dumelow's Seedling*.
 104725. *Edward VII*.
 104726. *Encore*.
 104727. *Irish Peach*.
 104728. *King's Acre Pippin*.
 104729. *James Grieve*.
 104730. *Lord Grosvenor*.
 104731. *Margil*.
 104732. *Mrs. Phillimore*.
 104733. *Orleans Reinette*.
 104734. *Rival*.
 104735. *Rosemary Russet*.
 104736. *Roundway Magnum Bonum*.

104737. *HEDERA HELIX POETICA* Weston.
Araliaceae. English ivy.

From Greece. Seeds presented by Prof. P. T. Anagnostopoulos, Department of Horticulture, Ecole Supérieure d'Agriculture, Athens. Received March 16, 1934.

A form with broadly ovate, shallowly lobed, cordate, bright or yellowish-green leaves and orange-yellow fruits. Native to southeastern Europe.

104738. *QUERCUS* sp. Fagaceae. Oak.

From France. Trees presented by M. Kai-kenger, Corrèze. Received March 19, 1934.

A species of oak which in France is a host to truffles.

104739 to 104771.

From Italy. Plants purchased from G. Giannini, Pistoia. Received March 20, 1934.

A collection of fruit trees, introduced for the use of Department specialists.

104739. *AMYGDALUS PERSICA* L. Amygdalaceae. Peach. *Blondeau*.
 104740 to 104742. *CORYLUS AVELLANA* L. Betulaceae. Filbert.
 104740. *Imperiale di Trebisonda*.
 104741. *Meraviglia Bollwiller*.
 104742. *Purpurea*.
 104743 to 104745. *MALUS SYLVESTRIS* Mill. Malaceae. Apple.
 104743. *Api rose*.
 104744. *Losa*.
 104745. *Regina della Renette*.
 104746 to 104771. *PYRUS COMMUNIS* L. Malaceae. Common pear.
 104746. *Alessandro III*.
 104747. *Alessandrine Douillard variegata*.
 104748. *Admiral Gervaise*.
 104749. *Belle Guerandaise*.
 104750. *Blanquet*.

104739 to 104771—Continued.

104751. *Borsani*.
 104752. *Butirra Bererd*.
 104753. *Butirra Ballet Père*.
 104754. *Butirra Sopraffina*.
 104755. *Butirra Sterckmans*.
 104756. *Carlo Ernesto*.
 104757. *Consigliere d'Appello*.
 104758. *Coscia d'Inverno*.
 104759. *Costant Lesueur*.
 104760. *Cremisine Rochette*.
 104761. *Decana del Comizio*.
 104762. *Eva Ballet*.
 104763. *General de Villebois-Mareuil*.
 104764. *Giovanna d'Arco*.
 104765. *Henry Martinet*.
 104766. *Luisa Invernale*.
 104767. *Madame Ernest Ballet*.
 104768. *Notaro Lepin*.
 104769. *Ricardo di M. Capecci*.
 104770. *Robitaille Père*.
 104771. *Suzette de Bayay*.

104772 to 104775. *VITIS VINIFERA* L. Vitaceae. European grape.

From France. Cuttings purchased from Richard Waller, Domaine de la Grande, Lauzade, Le Luc. Received March 21, 1934.

104772. *Couderc 62-66*.
 104773. *Coudero 161-49*.
 104774. *Couderc 261-50*.
 104775. *Melegue 106-8*.

104776 to 104836.

From Sweden. Scions presented by Dr. Carl G. Dahl, Director, Experimentalfältet, Åkarp, Alnarp. Received March 16, 1934.

- 104776 to 104818. *MALUS SYLVESTRIS* Mill. Malaceae. Apple.
 104776. *Åkerö*.
 104777. *Alnarps Rosmarin*.
 104778. *Antonovka*.
 104779. *Arreskov*.
 104780. *Arvidsäpple*.
 104781. *Bodil Neergaard*.
 104782. *Brunnsäpple*.
 104783. *Danzigsäpple*.
 104784. *Dronning Louise*.
 104785. *Eldrott Duväpple*.
 104786. *Flädie*.
 104787. *Fraas Kalvill*.
 104788. *Freiherr von Berlepsch*.
 104789. *Friedrich von Baden*.
 104790. *Frogmore*.
 104791. *Frösaker*.
 104792. *Granatäpple*.

104776 to 104836—Continued.

104793. *Gul Richard*.
 104794. *Gyllenkroks Astrakan*.
 104795. *Hampus*.
 104796. *Herbert's Reinette*.
 104797. *Hornsberg*.
 104798. *Kalmar Glasäpple*.
 104799. *Kavlds*.
 104800. *Kesäter*.
 104801. *Langeland*.
 104802. *Large transparente Astrakan*.
 104803. *Mank's Codlin*.
 104804. *Ökna lökåpple*.
 104805. *Ökna vita vintergytting*.
 104806. *Oranie*.
 104807. *Pederstrup*.
 104808. *Ringstad*.
 104809. *Risäter*.
 104810. *Rossvik*.
 104811. *Sävstaholm*.
 104812. *Sommarkryddäpple*.
 104813. *Sparreholm*.
 104814. *Stenbock*.
 104815. *Suislepper*.
 104816. *Tornpipping*.
 104817. *Vitgylling*.
 104818. *Zuccalmaglios Renett*.
 104819 to 104823. *PRUNUS CERASUS* L.
 Amygdalaceae. **Sour cherry**.
 104819. *Brysselska Brunkörsbär*.
 104820. *Imperatrice Eugenie*.
 104821. *Ostheimer*.
 104822. *Stora klarbär*.
 104823. *Triaux*.
 104824 to 104827. *PRUNUS DOMESTICA* L.
 Amygdalaceae. **Common plum**.
 104824. *Gulplommon*.
 104825. *Hagbyholms sviskon*.
 104826. *Lojo*.
 104827. *Rött äggplommon*.
 104828 to 104836. *PYRUS COMMUNIS* L.
 Malaceae. **Common pear**.
 104828. *Cecilia*.
 104829. *Esperens herrepäron*.
 104830. *Experimentalfattets Augustipäron*.
 104831. *Fursilicht taffelpäron*.
 104832. *Goteborg's Diamant*.
 104833. *Gröppäron*.
 104834. *Hostbergamott*.
 104835. *Johantorp*.
 104836. *Lybeckerbergamott*.

104837 to 104851.

- From England. Seeds presented by Sir Arthur W. Hill, Director, Royal Botanic Gardens, Kew, Surrey. Received March 16, 1934.
- 104837 to 104839. *ALTHAEA* spp. Malvaceae.
 104837. *ALTHAEA FICIFOLIA* Cav.
 Antwerp hollyhock.
 A biennial 3 to 6 feet high, with large 7-lobed leaves and large lemon-yellow or orange flowers in terminal spikes.
 104838. *ALTHAEA OFFICINALIS* L.
 Marshmallow.
 A downy perennial 3 to 4 feet high, with ovate, often heart-shaped leaves, and small pinkish flowers, 1 inch across. Native to Europe.
 104839. *ALTHAEA ROSEA* (L.) Cav.
 Hollyhock.
 A variety with dark-violet, almost black flowers; used as a dye in Siberia.
 104840. *CARAGANA AMBIGUA* Stocks. Fabaceae.
Shinaluk. A subshrubby, leguminous plant, with large conspicuous flowers that are said to be eaten by the natives of Baluchistan, where the plant is native. It is said to grow between 5,000 and 9,000 feet altitude.
 104841. *CARAGANA AURANTIACA* Koehne. Fabaceae.
 A deciduous shrub about 4 feet high, with graceful, ultimately pendulous, long slender leafy branches armed with triple spines. The short-stalked leaves consist of four narrow, linear leaflets up to one-half inch wide. The orange-yellow, bell-shaped flowers, less than an inch long, are produced in great profusion, the flowers hanging thickly from the under side of the branches, 3 or 4 to the inch. It is native to central China.
 104842. *CELTIS BUNGEANA* Blume. Ulmaceae. **Hackberry**.
 A tree, native to China, with small deep-green leaves and black fruits the size of small peas.
 For previous introduction see 62168.
 104843. *CELTIS GLABRATA* Stev. Ulmaceae. **Hackberry**.
 A shrubby hackberry, from the Caucasus region, with coarsely serrate, obliquely ovate, short-acuminate, deep-green leaves, pale yellowish green beneath, and 1 to 2½ inches long. The tree is leafless in the spring when the small greenish flowers appear.
 104844 to 104846. *COTONEASTER* spp. Malvaceae.
 104844. *COTONEASTER AMOENA* Wilson.
 For previous introduction and description see 104349.
 104845. *COTONEASTER* sp.
 Received as *Cotoneaster denticulata*, a name now referred to *Amelanchier denticulata*.
 104846. *COTONEASTER LUCIDA* Schlecht.
 A deciduous bushy shrub, 6 to 8 feet high, with bright-green leaves, whitish green beneath. The bright rose-colored flowers are followed by globose black fruits. Native to northern Asia.

104837 to 104851—Continued.

104847 to 104851. DELPHINIUM spp. Ranunculaceae. Larkspur.

104847. DELPHINIUM DUHMBERGII Huth.

For previous introduction and description see 104360.

104848. DELPHINIUM DICTIOCARPUM Steud.

For previous introduction and description see 104359.

104849. DELPHINIUM FLEXUOSUM Bieb.

For previous introduction and description see 104361.

104850. DELPHINIUM GAYANUM Wilmott.

An annual larkspur, 2 to 3 feet high, with trifid leaves and blue, rosy, or white flowers in numerous dense racemes. Native to central Europe.

104851. DELPHINIUM TATSIENSE Franch.

For previous introduction and description see 104366.

104852 to 104864.

From England. Seeds presented by the Botanic Garden, Cambridge. Received March 19, 1934.

104852. CELTIS GLABRATA Stev. Ulmaceae. Hackberry.

For previous introduction and description see 104843.

104853. IRIS MILESHI Baker. Iridaceae. Himalayan iris.

A semi-evergreen Himalayan iris related to *Iris tectorum*, with seven or eight leaves 2 to 3 feet long on the tall flower stem; the latter is branched and bears about four heads of flowers, rosy lilac and more or less spotted with darker magenta.

For previous introduction see 92318.

104854. LACTUCA SCARIOLA L. Cichoriaceae. Prickly lettuce.

An annual or biennial, sometimes 6 feet high, with a stiff stem, leaves 5 inches long and 1 to 2 inches wide, and inconspicuous yellow flowers. Native to Europe.

104855 and 104856. LYCOPERSICON ESCULENTUM Mill. Solanaceae. Tomato.

104857. LYCOPERSICON ESCULENTUM Mill. Solanaceae. Cherry tomato.

Variety *Cerasiforme*.

104858. PISUM JOMARDI Schrank. Fabaceae. Pea.

A hardy, white-flowered, annual pea about 3 feet high, native to Egypt.

For previous introduction see 66475.

104859. RHEUM RHAPONTICUM L. Polygonaceae. Common rhubarb.

104860 to 104862. RUBUS spp. Rosaceae.

104860. RUBUS BIFLORUS Buch.-Ham.

A rambling shrub with large leaves, woolly beneath, and subacid yellow berries about the size of a thimble. Native to the Himalayas.

For previous introduction see 66604.

104852 to 104864—Continued.

104861. RUBUS BIFLORUS QUINQUEFLORUS Focke.

This ornamental shrub, native to western Szechwan, China, between 5,800 and 6,800 feet altitude, produces its clusters of orange-yellow berries through so long a period as to be almost perpetual-fruiting. Because of its white wax-coated stems, it is one of the most striking plants in the garden in autumn and winter.

104862. RUBUS FRAXINIFOLIUS Poir.

A sturdy, upright, little-branched bramble, with a stiff stem up to 15 feet high and over half an inch in diameter under favorable conditions. The stems and branches are red, armed with short sharp recurved hooks. The white flowers are followed by attractive bright-red fruits, half an inch in diameter, borne in large clusters. They are fairly juicy and edible, but rather tasteless.

For previous introduction see 68359.

104863. SOLANUM ATROPURPUREUM Schrank. Solanaceae.

A spiny shrub, with purple stems and deeply pinnatifid leaves. The sulphur-yellow flowers are in small umbels. Native to Brazil.

104864. SOLANUM NODIFLORUM Jacq. Solanaceae.

A woody perennial about 2 feet high, with ovate entire leaves 2 to 5 inches long and very small white flowers in small umbels, followed by small black globose berries. Native to tropical America.

104865. COUMAROUNA PANAMENSIS Pittier. Fabaceae.

From the Canal Zone. Seeds presented by J. E. Higgins, Director, Plant Introduction Gardens, Summit. Received March 19, 1934.

A large tropical tree up to 150 feet high, with alternate compound leaves made up of five to eight obliquely elliptic leaflets 6 to 12 inches long, loosely branching terminal panicles of large pink flowers, and flattened, elliptic, chocolate-brown fruits 2 to 3 inches long. It is native to the Canal Zone.

For previous introduction see 88113.

104866. TINNEA AETHIOPICA Kotschy and Peyr. Menthaceae.

From Cuba. Seeds presented by Robert M. Grey, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received March 20, 1934.

An ornamental, much-branched shrub about 4 feet high, with short-stemmed, oblong leaves. The dark purplish-brown flowers are produced in axillary whorls and have an odor like violets. Native to tropical Africa.

For previous introduction see 90893.

104867 to 104879.

From China. Seeds presented by H. K. Fu, Director, Botanic Garden, Dr. Sun Yat-Sen's Memorial Park, Nanking. Received March 21, 1934.

104867 to 104879—Continued.

104867. ACANTHOPANAX EVODIAEFOLIUM Franch. Araliaceae.

An unarmed shrub 10 feet high, with trifoliolate leaves crowded at the ends of the branchlets. The small lanceolate acuminate leaflets are 3 to 4 inches long. Native to Yunnan, China.

For previous introduction see 93871.

104868. CARPINUS LAXIFLORA DAVIDII Franch. Betulaceae.

A Japanese tree up to 50 feet high, with ovate or elliptic, doubly serrate, long-acuminate, stiff leaves 2 to 3 inches long and inconspicuous flowers.

104869. CELASTRUS MONOSPERMA Roxb. Celastraceae.

A shrubby climber with glossy green, oblong-obovate leaves 3 to 5 inches long and numerous small pale greenish-yellow flowers followed by smooth, oblong capsules enclosing solitary seeds covered with an orange-colored ariel. Native to India.

104870. DIOSPYROS GLAUCIFOLIA Metcalf. Diospyraceae.

A tree up to 50 feet high, with ovate or broad-elliptic, dull-green leaves about 5 inches long and small globose smooth fruits. Native to southeastern China.

104871. ERYTHRINA ARBORESCENS Roxb. Fabaceae. Coraltree.

When covered with its bright scarlet flowers, this small tree is very attractive and is often planted as an ornamental. There are but few prickles on its branches, and the thin greenish leaves are often a foot in width. The strongly curved pods are about an inch wide and 6 to 9 inches long. The tree is native to the central and eastern Himalayas up to 7,000 feet altitude.

For previous introduction—see 63334.

104872. MAACKIA TENUIFOLIA (Hemsl.) Hand.-Mazz. Fabaceae.

A tender shrub with five-foliolate membranous leaves 6 to 8 inches long and white flowers, less than an inch long, in graceful racemes. Native to southeastern China.

104873. MANGLIETIA FORDIANA Oliv. Magnoliaceae.

A tender evergreen tree about 25 feet high, closely allied to the magnolias. The stiff, leathery, oblanceolate leaves are 4 to 6 inches long, and the solitary terminal white flowers are about 4 inches across. Native to Hong Kong.

104874. ORMOSIA sp. Fabaceae.

The ormosias are handsome subtropical trees with pinnately compound leaves, showy flowers in large racemes, and red or red and black seeds.

104875. SINOJACKIA XYLOCARPA Hu. Sty-
racaceae.

A small tree closely allied to the styraxes, from Kiangsu, China. The leaves are membranous, obovate, cuneate, about 3 inches long, and the showy white pendulous flowers, one-half inch long, are in numerous axillary cymes, covering the tree in late April.

104876. STYRAX sp. Styracaceae.

104877. VACCINIUM sp. Vacciniaceae.

104867 to 104879—Continued.

104878. (Undetermined.)

No. 20.

104879. (Undetermined.)

No. 21.

104880. CITRUS MEDICA L. Rutaceae.
Citron.

From New York. Seeds presented by Dr. A. Reich. Received March 26, 1934.

Pome citron. A lemonlike fruit native to Palestine and Syria. The essential oil from the skin has a very fine odor.

104881. SOJA MAX (L.) Piper. Fabaceae.
Soybean.

From China. Seeds presented by Dr. Sheo Wang, University of Nanking, Nanking, through W. J. Morse, Bureau of Plant Industry. Received March 27, 1934.

Nanksoy. A medium-sized, glossy, yellow bean with a brown hilum. It resembles quite closely in seed characters the Nanking. The variety was developed by Dr. Wang from a native Chinese variety in the vicinity of Nanking. In field tests it has excelled other varieties in seed yield by as much as 45 percent.

104882 to 104893.

From Czechoslovakia. Seeds presented by Prof. Adolf Kutfn, Horti Praefectus, Tabor. Received March 23, 1934.

104882 to 104887. ALLIUM spp. Lilia-
ceae.

104882. ALLIUM BAICALENSE Willd.

An allium with flat linear leaves and lilac flowers in semiglobose heads. Native to the Lake Baikal region, Siberia.

104883. ALLIUM FALLAX Schult. f.

An Austrian allium, 5 to 10 inches high, with linear leaves and lilac-purple flowers in a hemispherical head.

For previous introduction see 66427.

104884. ALLIUM KOCHII Lange.

An allium native to Denmark, with strap-shaped or almost terete leaves and kermisine-red flowers in a dense head, with very few bulbels in the inflorescence.

104885. ALLIUM LEDEBOURIANUM
Schult. f.

A stout-stemmed allium 1 to 2 feet high, native to the Altai region in Siberia. The linear leaves are terete, and the rosy-pink flowers are in dense hemispherical umbels about 1 inch in diameter.

104886. ALLIUM OPHIOSCORDON G. Don.

Bulbs of an allium very closely allied to *A. sativum*, with a strongly curved stem sometimes 3 feet high and having whitish or greenish flowers. The bulbels of the inflorescence are often nearly one-half inch in diameter.

104887. ALLIUM TULIPAEFOLIUM Ledeb.

A Siberian allium with oblong acute leaves 8 inches long and white or pinkish flowers in small hemispherical umbels.

104882 to 104898—Continued.

104888. *CORONILLA SCORPIOIDES* (L.) Koch. Fabaceae.

An erect yellow-flowered herbaceous perennial about 8 inches high, native to the Mediterranean countries.

For previous introduction see 78775.

104889. *CORONILLA VARIA* L. Fabaceae. Crownvetch.

For previous introduction and description see 104567.

104890 to 104895. *DELPHINIUM* spp. Ranunculaceae. Larkspur.

104890. *DELPHINIUM DECORUM* Fisch.

For previous introduction and description see 104357.

104891. *DELPHINIUM DISCOLOR* Fisch.

A name for which a description and a place of publication have not been found.

104892. *DELPHINIUM DICTIOCARPUM* Steud.

For previous introduction and description see 104848.

104893. *DELPHINIUM EXALTATUM* Ait.

A stout perennial larkspur 2 to 4 feet high, with flat leaves deeply cleft into three to seven wedge-shaped lobes. The blue flowers, marked with yellow on the upper petals, are in erect crowded racemes. Native to the United States from Alabama to Minnesota.

104894. *DELPHINIUM PRZEWALSKII* Huth.

For previous introduction and description see 104363.

104895. *DELPHINIUM TIROLENSE* Kern.

A perennial herb with pubescent stem and leaves, the leaves 3-parted. The blue flowers are in loose racemes. Native to central Europe.

104896 to 104898. *DIGITALIS* spp. Scrophulariaceae. Foxglove.

104896. *DIGITALIS ARGYROSTIGMA* Fisch.

A name for which a place of publication and a description have not been found.

104897. *DIGITALIS LAEVIGATA* Waldst.

A perennial foxglove 2 to 3 feet high, with linear-lanceolate leaves and scattered yellow flowers. Native to south-central Europe.

104898. *DIGITALIS NERVOSA* Steud.

For previous introduction and description see 104642.

104899 to 104920.

From France. Seeds presented by Vilmorin-Andrieux & Cie., Verrieres-le-Buisson. Received March 24, 1934.

104899 to 104908. *BETULA* spp. Betulaceae. Birch.

104899. *BETULA CORYLIIFOLIA* Regel and Maxim.

This is allied to the river birch (*Betula nigra*) of the eastern United States. The coarsely dentate leaves are broadly elliptic or obovate, $1\frac{3}{4}$ to $2\frac{1}{2}$ inches long, and silky hairy on the veins beneath. Native to Japan.

104899 to 104920—Continued.

104900. *BETULA ERMANI* Champ.

For previous introduction and description see 104482.

104901. *BETULA EXCELSA* Ait.

A large tree with yellowish-brown bark and broadly ovate, acute leaves over 2 inches long, pubescent beneath. Native to northern North America.

104902. *BETULA HUMILIS* Schrank.

A shrubby birch 2 to 6 feet high, with rounded or ovate, crenately serrate leaves from one-half to over an inch long. Native to northern Europe and Asia.

104903. *BETULA JAPONICA* SZECHUANICA C. Schneid. Japanese white birch.

A tree up to 60 feet high, native to western China. The rhombic-ovate leaves, 2 to 3 inches long, are unequally dentate-serrate and are deeply glandular-punctate beneath. The dark dull-green color of the leaves persists until late autumn.

For previous introduction see 102216.

104904. *BETULA PAPIRYFERA* OCCIDENTALIS Sarg.

This is one of the very finest of the birches, and it reaches sometimes a height of 120 feet. The bark is reddish brown to whitish, peeling, and the young shoots are warted, downy, and yellowish brown. The ovate leaves, with a rounded or heart-shaped base, are ordinarily 3 to 4 inches long, but on young trees they are often over 5 inches long, hairy along the midrib and veins on the under surface. This tree is closely allied to the paper birch (*Betula papyrifera*), but is distinguished by its downy fruiting scales, its brown bark, its larger size, and bigger leaves.

104905. *BETULA MAXIMOWICZIANA* Regel.

This is considered, by some, the most beautiful of all the birches, characterized by the rapidity of its growth, the luxuriance of its foliage, and the yellow color of its bark.

For previous introduction see 63342.

104906. *BETULA PUMILA* FASTIGIATA Rehd.

A shrubby variety with upright branches, narrow-pyramidal in habit. The leaves are roundish or broadly rhombic. The typical form is native to the northern United States.

104907. *BETULA TRISTIS* Wormsk.

A shrub 3 to 12 feet high, with broadly ovate or elliptic acuminate leaves about 2 inches long. Native to northeastern Asia.

For previous introduction see 102471.

104908. *BETULA ULMIFOLIA* Sieb. and Zucc.

A large handsome tree, up to 50 feet high, with yellowish-brown bark and ovate, irregularly doubly serrate, long-acuminate leaves 2 to $3\frac{1}{2}$ inches long. Native to Japan and Manchuria.

104899 to 104920—Continued.

104909 to 104915. *COTONEASTER* spp. Malvaceae.

104909. *COTONEASTER UNIFLORA* Bunge.

A dwarf deciduous shrub, 2 to 3 feet high, closely related to *C. integerrima*, and native to Siberia. The thin, broadly oval to obovate leaves, less than 1 inch long, are smooth above and downy beneath when young. The single, usually solitary, white flowers are followed by globose red fruits.

For previous introduction see 102479.

104910. *COTONEASTER* sp.

No. 2005. Hers.

104911. *COTONEASTER* sp.

No. 2007. Hers.

104912. *COTONEASTER* sp.

No. 2061. Hers.

104913. *COTONEASTER* sp.

No. 3737. M. V.

104914. *COTONEASTER* sp.

No. 7087. M. V.

104915. *COTONEASTER* sp.

No. A. 144. Forrest.

104916. *PHILADELPHUS INCANUS* Koehne. Hydrangeaceae. Gray mockorange.

A late-flowering species up to 6 feet high, with oval leaves, dull grayish beneath. The white flowers are produced 5 to 9 together on racemes about 2 inches long, at the end of short leafy shoots, and have an odor like that of hawthorn. The flowering season is from the middle to late July.

104917. *PHILADELPHUS SERICANTHUS* Koehne. Hydrangeaceae. Silk mockorange.

A white-flowered shrub, 10 feet high, native to thickets of western Szechwan, China, at 4,000 feet altitude.

104918. *STRANVAESIA* sp. Malaceae.

The *stranvaesias* are evergreen shrubs, or sometimes small trees, up to 20 feet high, with loose clusters of white or pinkish flowers followed by orange or scarlet fruits. They are native to high altitudes in eastern Asia.

104919. *STYRAX WILSONII* Rehder. Styracaceae. Chinese snowbell.

A handsome free-flowering western Chinese shrub which begins flowering when very small. It reaches a height of 12 feet and has ovate leaves, clusters of white flowers, and small grayish fruits.

For previous introduction see 76275.

104920. *TROCHODENDRON ARLIODES* Sieb. and Zucc. Trochodendraceae.

A hardy evergreen shrub 3 feet high, with greenish flowers. Native to Japan.

For previous introduction see 73285.

104921 to 104938.

From Ventimiglia, Italy. Seeds presented by S. W. McLeod Braggins, Superintendent, La Mortola Botanic Gardens. Received March 26, 1934.

104921 to 104923. *ALTHAEA* spp. Malvaceae.

104921 to 104938—Continued.

104921. *ALTHAEA FICIFOLIA* Cav. Antwerp hollyhock.

For previous introduction and description see 104837.

104922. *ALTHAEA NARBONENSIS* Jacq.

A white-hairy perennial with an erect stem 4 to 6 feet high, lanceolate serrate leaves, and rosy-purple flowers. Native to the Mediterranean region.

104923. *ALTHAEA ROSEA* (L.) Cav. Hollyhock.

104924. *ANTIRRHINUM LATIFOLIUM* Mill. Scrophulariaceae. Snapdragon.

A wild antirrhinum, native to Spain.

For previous introduction see 100958.

104925. *ANTIRRHINUM ORONTIUM* L. Scrophulariaceae. Snapdragon.

For previous introduction and description see 104557.

104926. *CLEMATIS ARMANDI* Franch. Ranunculaceae. Armand clematis.

A tender woody evergreen vine with lustrous coriaceous trifoliolate leaves with entire lanceolate leaflets, panicles of white flowers 2 inches across, and fruits with long plumose styles. Native to central and western China.

For previous introduction see 80105.

104927. *CORONILLA* spp. Fabaceae.

104927. *CORONILLA EMERUS* L. Scorpion-senna.

A dense, half-hardy, symmetrical shrub, native to southern Europe, 3 to 5 feet high, with glossy deep-green compound leaves and large showy flowers that are yellow tipped with red. In warm regions this species is evergreen.

104928. *CORONILLA GLAUCA* Jusl. Honey coronilla.

For previous introduction and description see 104565.

104929. *CORONILLA JUNCEA* L.

For previous introduction and description see 104566.

104930. *CORONILLA MINIMA* L.

A shrubby diffuse procumbent plant, 3 to 4 inches high, with leaves composed of 7 to 13 ovate leaflets and sweet-scented, golden-yellow flowers in small umbels. Native to dry sandy places in southern Europe.

104931. *CORONILLA SCORPIOIDES* (L.) Koch.

For previous introduction and description see 104888.

104932. *CORONILLA VALENTINA* L.

A herbaceous perennial about 2 feet high, with small compound leaves made up of 4 to 6 pairs of narrow leaflets, and yellow pendent flowers, fragrant at night, in 6- to 12-flowered racemes. Native to dry places in central Europe.

104933. *CORONILLA VARIA* L. Crownvetch.

For previous introduction and description see 104567.

104921 to 104938—Continued.

104934. *HYACINTHUS TRIFOLIATUS* Tenore.
Liliaceae.

An Italian hyacinth, 8 to 16 inches high, with usually three linear-lanceolate leaves and violet flowers in a loose head of 10 to 30 flowers.

104935 to 104938. *IRIS* spp. Iridaceae.

104935. *IRIS LUTESCENS* Lam.

A dwarf iris of the Pogoniris section, with leaves 6 to 9 inches long, the stem being about the same length as the leaves. The flowers are bright yellow with outer segments obovate-cuneate, over 2 inches long, and streaked with pale brown; the inner segments are broader and abruptly narrowed to a claw, which is streaked with purple. Native to the stony mountain slopes of southern France.

104936. *IRIS CHAMAEIRIS OLBIIENSIS* (Henon) Baker.

An iris of the Pogoniris section, with a stout rhizome, broadly ensiform, pale-green leaves, and dark-violet flowers on a stem about 6 inches high. Native to south-central Europe.

104937 and 104938. *IRIS UNGUICULARIS* Poir.
Algerian iris.

An iris with bright-green leaves 2 feet long, growing in tufts of about six; tube up to 6 inches long, filiform, exerted from the spathe; limb bright lilac, rarely white; outer segments 3 inches long, 1 inch broad, with a yellow keel streaked with lilac on a white ground at the throat; inner segments oblong. The fragrant flowers appear in January and February. Native to the Mediterranean countries.

104937. Typical form.

104938. Variety *alba*. A white-flowered form.

104939 to 104947.

From Germany. Seeds presented by Direktor des Botanischen Gartens, Berlin-Dahlem. Received March 27, 1934.

104939 to 104943. *DELPHINIUM* spp. Ranunculaceae.
Larkspur.

104939. *DELPHINIUM BULLEYANUM* Forrest.

For previous introduction and description see 104356.

104940. *DELPHINIUM DELAVAYI* Franch.

For previous introduction and description see 104358.

104941. *DELPHINIUM FISSUM* Waldst.

A perennial larkspur with a thickened rootstock, three- to five-parted hairy leaves, and blue flowers in dense elongated racemes. Native to south-eastern Europe.

104942. *DELPHINIUM SULPHUREUM* Boiss.

An annual larkspur not more than 8 inches high, with racemes of three to five sulphur-yellow flowers. Native to Syria.

104943. *DELPHINIUM TRISTE* Fisch.

A perennial larkspur with three- to five-parted leaves and lax racemes of dark reddish-tan flowers. Native to Siberia.

104939 to 104947—Continued.

104944 to 104947. *SYRINGA* spp. Oleaceae.
Lilac.

104944. *SYRINGA PINETORUM* W. W. Smith.

A shrub related to *S. microphylla*, about 10 feet high, with densely pilose branchlets, ovate to ovate-lanceolate leaves 2 to 4 inches long, and purplish flowers in panicles about 9 inches long. It is native to southwestern China.

For previous introduction see 97629.

104945. *SYRINGA TOMENTELLA* Bur. and Franch.
Feltly lilac.

A bushy shrub about 10 feet high, with elliptic leaves which are hairy beneath, and loose long-branched spikes of fine mauve-pink flowers, produced in late May and early June. It is native to western China.

For previous introduction see 97628.

104946. *SYRINGA WOLFFI* C. Schneid.

An ornamental shrub remarkable for its peculiar foliage; the elliptic oblong leaves are up to 6 inches long, cuneate, and grayish green beneath. The fragrant dark-lilac flowers are in much-branched panicles. Native to Manchuria and Chosen.

For previous introduction see 80717.

104947. *SYRINGA YUNNANENSIS* Franch.

A shrub from 3 to 8 feet high, with fragrant pink flowers. Native to southwestern China.

For previous introduction see 103350.

104948 to 104960.

From the Netherlands. Seeds presented by Prof. Dr. L. G. M. Baes Becking, Botanical Gardens, Leiden. Received March 26, 1934.

104948 and 104949. *ANTIRRHINUM MAJUS* L.
Scrophulariaceae.
Common snapdragon.

104950 to 104953. *DELPHINIUM* spp. Ranunculaceae.
Larkspur.

104950. *DELPHINIUM BRUNONIANUM* Royle.

For previous introduction and description see 104355.

104951. *DELPHINIUM CONSOLIDA* L.
Field larkspur.

An erect hairy annual over a foot high with blue or white flowers in loose panicles. It is native to Europe.

For previous introduction see 81884.

104952. *DELPHINIUM TRICOLOR* Bernh.

A name for which a description and a place of publication have not been found.

104953. *DELPHINIUM TRISTE* Fisch.

For previous introduction and description see 104943.

104954 to 104960. *DIGITALIS* spp. Scrophulariaceae.
Foxglove.

104954. *DIGITALIS FONTANESII* Steud.

A name for which a description and a place of publication have not been found.

104948 to 104960—Continued.

104955. *DIGITALIS LANATA* Ehrh.

For previous introduction and description see 104575.

104956. *DIGITALIS LUTEA* L.
Straw foxglove.

A glabrous perennial foxglove with oblong or lanceolate, denticulate leaves and many-flowered racemes of yellow or white flowers. Native to southern Europe.

104957. *DIGITALIS MINIANA* Sampaio.

A stout biennial foxglove, native to Portugal, with lanceolate, dentate, reticulate-veined leaves, and purplish flowers about one-half inch long in dense elongated racemes.

104958. *DIGITALIS NERVOSA* Steud. and Hochst.

For previous introduction and description see 104642.

104959. *DIGITALIS NEVADENSIS* Kuhnze.

A slender-stemmed perennial foxglove from the mountains of Spain, with large oblong leaves and lax secund racemes of showy purple flowers.

104960. *DIGITALIS PARVIFLORA* Jacq.

A perennial foxglove 2 or 3 feet high, with sessile, oblong acute leaves and a spike of rather small, rust-colored flowers. Cultivated in southern Europe.

104961 to 104987.

From England. Plants purchased from Maurice Pritchard & Sons, Ltd., Riverslea Nurseries, Christchurch, Hants. Received March 31, 1934.

104961 to 104967. *ERICA CARNEA* L. Ericaceae.
Spring heather.

104961. *King George*. A winter-flowering variety with bright rich-pink flowers.

104962. *Mrs. S. Doncaster*. Flowers light pink.

104963. *Praecox rubra*. A form which commences to bloom in January; the flowers are a rich shade of pink.

104964. *Queen of Spain*. Flowers rosy red.

104965. *Rubra*. Flowers deep ruby pink.

104966. *Vivellii*. A form with dark foliage and deep-rose flowers.

104967. *Winter beauty*. Flowers pink.

104968 to 104980. *KNIPHOFIA* spp. Liliaceae.
Torchlily.

104968. *C. M. Pritchard*. The largest of the yellow-flowered kniphofias.

104969. *Dr. Legate*. Flowers a good scarlet; bloom in July; plant becomes 4 to 5 feet high.

104970. *Erecta*. The good red flowers of this variety are held erect. Blooming season, September.

104971. *Greybeard*. Flowers red, aging to pale gray; blooming in July and August; plant becomes 4 to 5 feet high.

104972. *Lemon Queen*. The lemon-yellow flowers are borne from July to September; the plant is 3½ feet high.

104961 to 104987—Continued.

104973. *Leviathan*.

104974. *Lighthouse*. Massive scarlet heads of flowers, from July to the end of August.

104975. *Majestic*. Very rich red flowers, blooming in September.

104976. *Mrs. Samuel Smith*. Flowers light scarlet, fading to yellow, appearing in June and July. Plant becomes 5 to 6 feet high.

104977. *Preciosa*. Flowers scarlet with rosy sheen, appearing in August; plant becomes 4 to 5 feet high.

104978. *Searchlight*. Large red flowers with widened spikes, appearing in September. Plant becomes 6 feet tall.

104979. *Triumphans*. Flowers light scarlet; blooming in August and September; plant 3 to 4 feet high.

104980. *Vincent's Delight*. Flowers large, yellow-toned orange, each spike with tailed center; blooms in September; plant becomes 4 feet high.

104981. *PRIMULA* sp. Primulaceae.
Primrose.

Arthur Dumoulin. A *Juliae* hybrid with double violet-blue flowers.

104982. *PRIMULA* sp. Primulaceae.
Primrose.

Croussei. Flowers double, plum purple, with a fine white wire edge to the petals.

104983. *VERONICA ASTONI* Petrie. Scrophulariaceae.

A veronica that forms a low dense or rounded bush, with very small, four-angled, closely imbricated leaves and small white flowers. Native to New Zealand and similar to *Veronica tetragona*.

104984. *HEBE BUCHANANI* (Hook. f.) Cockayne and Allen (*Veronica buchanani* Hook. f.). Scrophulariaceae.

A small woody evergreen bush up to a foot high, with stout spreading branches, sometimes tortuous and decussate, closely imbricate, leathery, broadly oblong leaves about one-half inch in length. The small white flowers are in short spikes near the tips of the branches. Native to New Zealand.

For previous introduction see 98252.

104985. *VERONICA LYCOPODIODES* Hook. f. Scrophulariaceae.

A stout shrub 6 to 30 inches high, with acutely four-angled branches, densely imbricating, broadly oblong, acute leaves one-eighth inch long, and small white flowers in ovate terminal heads. Native to New Zealand.

104986. *VERONICA* sp. Scrophulariaceae.
Received under the name "pagei."

104987. *HEBE PROPINQUA* (Cheeseman) Cockayne and Allen (*Veronica propinqua* Cheeseman). Scrophulariaceae.

A low woody evergreen bush 1 to 3 feet high, with spreading, sometimes tortuous, branches and densely imbricated leaves in opposite pairs, connate for the greater part of their length, forming a closed sheath around the branch. The white flowers are in small terminal heads. Native to New Zealand.

For previous introduction see 89297

104988 and 104989.

From South Australia. Seeds presented by A. C. Trumble, agronomist, Waite Agricultural Research Institute, Glen Osmond, University of Adelaide. Received March 31, 1934.

104988. *PHALARIS TUBEROSA* L. Poaceae.
Grass.

Perennial canary grass. A forage grass which has proved particularly successful at the Waite Institute.

For previous introduction see 100113.

104989. *TRIFOLIUM SUBTERRANEUM* L. Fabaceae. Subterranean clover.

Originally from Dwalganup, Western Australia. An early subterranean clover which has proved particularly successful at the Waite Institute.

For previous introduction see 99489.

104990 to 104999. *MALUS SYLVESTRIS* Mill. Malaceae. Apple.

From South Dakota. Trees presented by N. E. Hansen, horticulturist, South Dakota State Agricultural College, Brookings. Received March 31, 1934.

A collection of Russian varieties from I. V. Mitchurin.

104990. *Antonofka*.

104991. *Bellefleur* (Red).

104992. *Bellefleur* × *Katayka*.

104993. *Bellefleur Rekord*.

104994. *Komsomolez*.

104995. *Pepping Shafran*.

104996. *Red Standard*.

104997. *Seedless of Mitchurin*.

104998. *Wisantowoye*.

104999. *Yakhontowoye*.

105000 to 105003. *VITIS VINIFERA* L. Vitaceae. European grape.

From France. Cuttings purchased from Rene Salomon, Maire à Thomery (Seine et Marne). Received March 31, 1934.

A collection of table grapes, introduced for the use of Department specialists.

105000. *Chasselas Coulard-Dismante* Traube.

105001. *Ezerjo*.

105002. *Grois Coulard*.

105003. *Marechal Gallieni*.

105004 to 105014. *CITRUS* spp. Rutaceae.

From Morocco. Budsticks presented by H. Brayard, Directeur de la Station Experimentale, Marrakech, Morocco Department of Agriculture. Received March 22, 1934.

A collection of citrus budsticks introduced for the use of Department specialists.

105004. *CITRUS MEDICA* L. Citron.
Sanguin panaché.

105005. *CITRUS MEDICA* L. Citron.
Inerne Illiput.

105004 to 105014—Continued.

105006. *CITRUS NOBILIS DELICIOSA* (Ten.) Swingle. Mandarin orange.
Sanguine.

105007. *CITRUS* sp.
De Tétouan.

105008. *CITRUS* sp.
Précoce de Valence.

105009. *CITRUS* sp.
Cadena punchosa.

105010. *CITRUS* sp.
Viciedo.

105011. *CITRUS* sp.
Gzezel (Gzel-Gzel).

105012. *CITRUS* sp.
Pajarito.

105013. *CITRUS* sp.
Taregrosso.

105014. *CITRUS* sp.
Sanguine grosse ronde.

105015. *PYRUS COMMUNIS* L. Malaceae. Common pear.

From Italy. Plant purchased from Fratelli Ingegnoli, Milan. Received March 5, 1934.
Risparmio.

105016. *DIANTHUS BALBISII* Ser. Silenaceae.

From France. Seeds presented by R. Salgues, Director, Botanic Garden, Brignoles. Received March 29, 1934.

105017 to 105034.

From China. Seeds presented by H. K. Fu, Director, Botanic Garden, Dr. Sun Yat-Sen's Memorial Park, Nanking. Received March 21, 1934.

105017. *CELASTRUS* sp. Celastraceae.

105018. *GORDONIA AXILLARIS* (Roxb.) Dietrich. Theaceae.

A large evergreen shrub or small tree up to 25 feet high, native to southern China. The oblanceolate leaves, 4 to 6 inches long, are dark green above, and the solitary, creamy-white flowers are 2 to 3 inches across.

For previous introduction see 102249.

105019. *ILLICIAM* sp. Magnoliaceae.

105020. *LUCULIA GRATISSIMA* (Wall.) Sweet. Rubiaceae.

A Himalayan shrub up to 15 feet high, growing at altitudes of 4,000 to 5,000 feet, with opposite ovate leaves 6 inches long and gorgeous rounded panicles of pink or rose flowers.

For previous introduction see 76903.

105021. *MUSSAENDA* sp. Rubiaceae.

105022. *ORMOSIA HENRYI* Prain. Fabaceae.

A small handsome tree, native to central China, with velvety branches, pale-green, compound leaves composed of 7 to 9 very stiff, narrow leaflets, yellowish-white flowers in axillary racemes, followed by small black pods.

105017 to 105034—Continued.

105023. *Oroxylon indicum* (L.) Vent.
Bignoniaceae.

East Indian trumpetflower.

A tropical ornamental tree up to 40 feet high, with glossy compound leaves 2 to 4 feet across and terminal panicles of white or purple flowers. The large flat pods, up to 3 feet in length, contain winged seeds. Native to southeastern Asia.

For previous introduction see 88104.

105024. *Pieris* sp. Ericaceae.

105025. *Pinus yunnanensis* Franch.
Pinaceae. Yunnan pine.

A large forest tree, native to Yunnan. The long slender drooping leaves are up to 10 inches long, and the cones, 2 to 4 inches long, have flat scales.

For previous introduction see 100586.

105026. *Pinus* sp. Pinaceae.

105027. *Pittosporum glabratum* Lindl.
Pittosporaceae.

A tree, native to central China, with evergreen foliage and orange fruits.

For previous introduction see 99196.

105028. *Polygala wattersi* Hance.
Polygalaceae.

A herbaceous perennial from central China with woody stems, membranous elliptic-lanceolate leaves over 2 inches long, and small yellow flowers in lax terminal racemes.

105029. *Porana racemosa* Roxb. Con-
volvulaceae. Snow creeper.

A vine, native to the Himalayan region of India. It occurs in dense masses,

105017 to 105034—Continued.

climbing over other plants in the jungle. The dazzling-white flowers resemble patches of snow.

For previous introduction see 61618.

105030. *Psychotria* sp. Rubiaceae.

For previous introduction see 104116.

105031. *Schima argentea* Pritz. Thea-
ceae.

An evergreen tree native to southwest-
ern China.

For previous introduction see 99220.

105032. *Tripterygium forrestii* Loesner.
Celastraceae.

A shrub about 3 feet high, with oval crenulate-serrate papery leaves 2 to 3 inches long, and terminal panicles of small green-brown flowers. Native to open situations on the Tali Range, Yunnan.

For previous introduction see 100610.

105033. *Wistaria* sp. Fabaceae.

105034. (Undetermined.)

Received as *Mallotus* sp., but the seeds are not of that genus.

105035. *Avena bromoides* Gouan. Poa-
ceae.

From France. Seeds presented by R. Sal-
gues, Director, Botanic Garden, Brig-
noles. Received March 20, 1934.

A slow-growing perennial grass up to 2 feet high, with thick, very tough, rough-
hairy leaves. It is confined almost entirely to the Mediterranean countries.

For previous introduction see 89816.

INDEX OF COMMON AND SCIENTIFIC NAMES

- Abies nephrolepis*, 104141.
Acacia sp., 104164.
 bonariensis, 104103.
 montiformis, 104104.
 podalyriifolia, 104070.

UNITED STATES DEPARTMENT OF AGRICULTURE

INVENTORY No. 119

Washington, D. C.

Issued October 1936

PLANT MATERIAL INTRODUCED BY THE DIVISION OF PLANT EXPLORATION AND INTRODUCTION, BUREAU OF PLANT INDUSTRY, APRIL 1 TO JUNE 30, 1934 (Nos. 105036-105932)

CONTENTS

	Page
Introductory statement.....	1
Inventory.....	3
Index of common and scientific names.....	35

INTRODUCTORY STATEMENT

The present inventory, no. 119, is a record of the plant introductions (nos. 105036-105932) received by the Division of Plant Exploration and Introduction during the period from April 1 to June 30, 1934.

Conspicuous among the introductions listed are several large shipments of scions and plants of deciduous fruit varieties, chiefly from Europe; these will be grown for comparison with our present commercial varieties, in continuation of a plan inaugurated by this Division a few years ago. The countries of origin are Norway, Lithuania, the Union of Soviet Socialist Republics, Italy, Spain, and Australia; and the kinds of fruit included are apples, pears, peaches, nectarines, cherries, apricots, grapes, figs, and olives.

Pathologists working with potato diseases will be interested in a lot of tubers of reputedly wart-immune potato varieties (nos. 105478-105482) presented by the Norwegian Agricultural High School at Aas, Norway. The introduction from Turkey of two lots of seeds of native vegetable varieties (nos. 105258-105268, 105442-105447) and another lot of similar nature from China (nos. 105332-105347) indicates a growing interest in the testing of locally developed foreign vegetable varieties in the United States. These three lots include onions, beets, celery, carrots, tomatoes, and peppers.

From central and western China there is recorded a shipment of seeds of hardy plants (nos. 105311-105331), including relatives of several of our well-known American trees and shrubs, such as hackberries, hollies, etc. These will be tested in the moderately cold sections of the country. Two shipments of somewhat similar nature

were received from the University of Nanking (nos. 105584-105645 and 105676-105706); these were collected in Kwangsi Province, southern China. Many types of woody plants are represented, including several wild species of *Ficus*, *Rubus*, and *Viburnum*.

Sixty lots of seeds from northern India (nos. 105873-105932), collected by Dr. Walter Koelz and presented through the University of Michigan, include many rare woody and herbaceous plants from high altitudes in the Himalayas, among them being several species of *Clematis*, *Cotoneaster*, *Rhododendron*, and *Rosa*.

The botanical determinations have been made and the nomenclature determined by Paul Russell, who has had general supervision of this inventory.

B. Y. MORRISON,
Principal Horticulturist, in Charge.

DIVISION OF PLANT EXPLORATION AND INTRODUCTION,
Washington, D. C., April 30, 1936.

INVENTORY¹

105036. ANANAS SATIVUS Schult. f.
Bromeliaceae. **Pineapple.**

From Hawaii. Plants presented by J. L. Collins, geneticist, experiment station, Association of Hawaiian Pineapple Canners, Honolulu. Received April 18, 1934.

Spiny Samoa. Originally from Samoa, and probably identical with the variety *Queen*.

105037 and 105038.

From India. Seeds presented by Durgd Dott, fruit specialist, Department of Agriculture, Lyallpur. Received April 11, 1934.

105037. PHOENIX DACTYLIFERA L. Phoenicaceae. **Date palm.**

105038. PHOENIX DACTYLIFERA L. Phoenicaceae. **Date palm.**

105039. XANTHOCERAS SORBIFOLIA
Bunge. Sapindaceae.

From Grand Junction, Colo. Seeds presented by Charles M. Jaquette, through G. P. Van Esetine, Agricultural Experiment Station, Geneva, N. Y. Received April 13, 1934.

A Chinese shrub or small tree with ash-like leaves and large drooping racemes of white flowers with yellow stamens. The kernels of the large fruits are eaten by the Chinese.

For previous introduction see 77022.

105040 to 105042. RHODODENDRON spp.
Ericaceae.

From the Philippine Islands. Seeds collected at Bangpio, Mountain Province, and presented through the Bureau of Forestry, Manila. Received April 5, 1934.

105040. RHODODENDRON SCHADENBERGII Warb.

A tropical shrub with leathery oblong acute leaves nearly 4 inches long. The flowers, about 1 inch across, are in terminal clusters. Native to Luzon, Philippine Islands.

105040 to 105042—Continued.

105041. RHODODENDRON SUBSESSILE Rendle.

A Philippine shrub with brown-hairy young twigs and small oval leaves 1 inch long, brown hairy beneath. The solitary pink flowers are less than 1 inch across.

105042. RHODODENDRON VIDALII Rolfe.

An evergreen shrub of rather stiff habit, with smooth branches and oblanceolate leaves 2 inches long, the lower surface marked with black glandular scales. The flowers, white or pink tinged, are about 1 inch across. Native to the Philippines.

105043 to 105049. SACCHARUM OFFICINARUM L. Poaceae. **Sugarcane.**

From the Philippine Islands. Cuttings presented by the Philippine Sugar Association, Manila. Received April 10, 1934.

105043. P. S. A. no. 48.

105044. P. S. A. no. 49.

105045. P. S. A. no. 50.

105046. P. S. A. no. 51.

105047. P. S. A. no. 52.

105048. P. S. A. no. 53.

105049. P. S. A. no. 54.

105050 to 105054. ASTER spp. Astera-ceae.

From England. Plants purchased from Ernest Ballard, Old Court, Colwell, near Malvern. Received April 12, 1934.

105050. Bab Ballard. A dwarf *Novi-belgii* aster, 6 to 9 inches high, with neat leathery foliage and large lavender-blue flowers.

105051. Little Boy Blue. Very dwarf, early. Neat upright little pyramids, completely smothered with semidouble, deep-blue flowers.

105052. Little Pink Lady. A very dwarf, bushy variety with large semidouble deep-pink flowers.

¹ It should be understood that the names of varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Division of Plant Exploration and Introduction, and further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identifications, therefore, must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this Division, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

105050 to 105054—Continued.

105053. *Purple Emperor*. An early blooming, dwarf variety with large numerous semidouble flowers of a beautiful rich purple. The buds are very dark and the stem is a black purple.

105054. *Snow Sprite*. A new type of the *Lovi-belgii* aster. It has a very dwarf, branching habit and flowers freely when only 1 foot high. The foliage is dark green, and the semidouble white flowers, produced in profusion down to the ground, appear in the midseason.

105055 to 105085.

From the Union of Soviet Socialist Republics. Seeds presented by the Institute of Plant Industry, Leningrad. Received April 6, 1934.

105055 to **105065.** *AMYGDALUS PERSICA* L. Amygdalaceae. Peach.

105055. U. S. S. R. no. 141589. A white peach from Turtkul, Middle Asia.

105056. U. S. S. R. no. 141590. From Turtkul, Middle Asia.

105057. U. S. S. R. no. 142058. From Faisabad, Tadjikistan, Middle Asia.

105058. U. S. S. R. no. 142886. *Krasny Zafrani*, a red peach from Georgia, Transcaucasia.

105059. U. S. S. R. no. 142887. *Gru-dinskiy Celiy*, a white peach from Georgia, Transcaucasia.

105060. U. S. S. R. no. 142888. *Elberta*, from Yalta, Crimea.

105061. U. S. S. R. no. 142890. *Eri-vanskiy*, a yellow peach from Erivan, Armenia, Transcaucasia.

105062. U. S. S. R. no. 142891. *Tchuguri*, a white peach from Erivan, Armenia, Transcaucasia.

105063. U. S. S. R. no. 142892. *Dage-sanskiy Celiy*, a white peach from Dagestan, Caucasus.

105064. U. S. S. R. no. 142893. *Yellow Zafrani*, from Transcaucasia.

105065. U. S. S. R. no. 142894. *Rartule*, from Georgia, Transcaucasia.

105066 to **105073.** *PRUNUS ARMENIACA* L. Amygdalaceae. Apricot.

105066. U. S. S. R. no. 141556. *Spi-tack*, from Erivan, Transcaucasia.

105067. U. S. S. R. no. 141557. *Pei-vast-zavrja*, from Ordubad, Azer-baidjan, Transcaucasia.

105068. U. S. S. R. no. 141560. *Sha-luck*, from Erivan, Transcaucasia.

105069. U. S. S. R. no. 141561. *Pei-vact*, from Ordubad, Azerbaidjan, Transcaucasia.

105070. U. S. S. R. no. 141562. *Sha-lack*, from Erivan, Transcaucasia.

105071. U. S. S. R. no. 141563. From near Erivan, Transcaucasia.

105072. U. S. S. R. no. 141566. *Tzum-Erick*, from near Yalta, Crimea.

105073. U. S. S. R. no. 143036. *Hos-rovshai*, from Erivan, Transcaucasia.

105055 to 105085—Continued.

105074 to **105085.** *VITIS VINIFERA* L. Vi-taceae. European grape.

105074. U. S. S. R. no. 150192. A black grape from the Katakalis district, Middle Asia.

105075. U. S. S. R. no. 150193. A black grape from Kurati, Middle Asia.

105076. U. S. S. R. no. 150194. A black grape from Kara-Kala, Middle Asia.

105077. U. S. S. R. no. 150195. *Kus-sayne*, from Kara-Kala, Middle Asia.

105078. U. S. S. R. no. 150197. *Kul-Dari*, from the Bakander district, Middle Asia.

105079. U. S. S. R. no. 150198. From Kara-Kala, Middle Asia.

105080. U. S. S. R. no. 150199. A white grape from Middle Asia.

105081. U. S. S. R. no. 150200. A white grape from Nuchur, Middle Asia.

105082. U. S. S. R. no. 150201. A black grape from Sumbar, Middle Asia.

105083. U. S. S. R. no. 150202. *Al-Shaytan*, from the Kayne-Kassira district, Middle Asia.

105084. U. S. S. R. no. 150203. *Kok-Uzum*, from the Karakalpak district, Middle Asia.

105085. U. S. S. R. no. 150204. From Kara-Kala, Middle Asia.

105086 to 105091.

From Denmark. Seeds presented by Prof. K. Jessen, Universitetets Botaniske Have, Copenhagen. Received April 9, 1934.

105086. *CANNA FLACCIDA* Rosc. Cannaceae.

A tall green-stemmed canna, 4 to 6 feet high, very leafy below, with ovate-lanceolate or narrowly elliptic, acute, green leaves. The sulphur-yellow, iris-like flowers are about 5 inches long. Native to the southeastern United States.

105087. *CANNA LUTEA* Mill. Cannaceae.

A tall slender canna, 3 to 4 feet high, with oblong acute leaves and pale yellowish-white flowers in a lax simple raceme. Native from Mexico to Brazil.

105088 to **105090.** *DELPHINIUM* spp. Ranunculaceae. Larkspur.

105088. *DELPHINIUM CILIATUM* Stev.

A stout upright perennial larkspur 1 to 3 feet high, with digitately five- to seven-parted leaves and blue flowers in simple or branched racemes. Native to the Caucasus region.

105089. *DELPHINIUM HALTERATUM* Sibth. and Sm.

An annual larkspur about 1 foot high, with finely divided leaves and light-blue flowers which appear from June to August. Native to the Mediterranean region.

For previous introduction see 104570.

105086 to 105091—Continued.

105090. DELPHINIUM REQUIENI DC.

A biennial larkspur about 4 feet high, with three- or five-parted leaves and sky-blue flowers in lax racemes. Native to the islands of Corsica and Majorca.

For previous introduction see 104572.

105091. ROMULEA COLUMNARIS Sebast. Iridaceae.

A crocuslike plant from the Mediterranean region, with linear leaves much longer than the scape that bears the solitary blue or violet or whitish flowers, each about 1 inch across.

105092 and 105093. SOLANUM TUBEROSUM L. Solanaceae. Potato.

From Canada. Tubers presented by J. W. Scannell, Department of Agriculture, Indian Head, Saskatchewan. Received April 14, 1934.

Introduced for the use of Department specialists.

105092. B. C. no. 32. 105093. B. C. no. 62.

105094 to 105099. TRITICUM AESTIVUM L. Poaceae. Common wheat.

From Finland. Seeds presented by Dr. Vilho A. Pesola, Chief, Central Experiment Station, Division of Plant Breeding, Jokioinen. Received April 11, 1934.

Introduced for the use of specialists working with cereals.

105094. *Hopea*, spring wheat.105095. *Pohjola*, autumn wheat.105096. *Sampo*, autumn wheat.105097. *Sopu*, spring wheat.105098. *Touko*, spring wheat.105099. *Varma*, autumn wheat.

105100 to 105106.

From England. Plants purchased from Maurice Pritchard & Sons, Ltd., Riverslea Nurseries, Christchurch, Hants. Received April 2, 1934.

105100. IRIS RUBRO-MARGINATA Baker. Iridaceae.

A dwarf iris of the Pogoniris section, not more than 4 inches high, with ensiform-falcate, red-edged leaves 2 to 3 inches long and stemless flowers, two to a root. The tube, 2 inches long, is green tinged with purple above; the limb is yellow or lilac and 2 inches long, and the segments are all oblong spatulate. Native to Asia Minor.

105101. THALICTRUM AQUILEGIFOLIUM L. Ranunculaceae. Columbine meadowrue.

Variety *Purple Cloud*.

For previous introduction see 95600.

105102 to 105106. TRADESCANTIA spp. Commelinaceae.

105102. *Blue Stone*.105103. *Lilac Time*.105104. *Pauline*.105105. *Purewell Giant*.105106. *Purple Dome*.

105107. ELEOCHARIS TUBEROSA (Roxb.) Schult. Cyperaceae. Waternut.

From China. Tubers presented by Albert P. Ding, Portland, Oreg. Received April 2, 1934.

A Chinese vegetable which grows very much in the same manner as wet-land rice. The corms or tuberous rhizomes are mostly eaten raw, but are also sliced or shredded in soups and in meat and rice dishes. The plants, which are grown on mulch or clay soil, need a hot summer to mature.

For previous introduction see 102620.

105108. CHRYSANTHEMUM CINERARIAEFOLIUM (Trevir.) Vis. Asteraceae.

From France. Seeds purchased from Vilmorin-Andrieux & Cie., Paris, by the United States Department of the Interior. Received April 3, 1934.

A slender unbranched glaucous perennial 12 to 15 inches high. The long-petioled leaves are silky beneath with distant segments. The plant, grown commercially in southern and western Europe, is used in making insect powder.

For previous introduction see 40631.

105109 to 105149.

From Italy. Plants purchased from Martino Bianchi, Pistoia. Received April 2, 1934.

Purchased under the following varietal names for the use of Department specialists.

105109 to 105122. AMYGDALUS PERSICA L. Amygdalaceae. Peach.

105109. *Alexis Lepère*.105110. *Arthur Chevreau*.105111. *Baltet*.105112. *Buco Incavato*.105113. *Cotogna del Poggio*.105114. *Cotogna di Rosano*.105115. *Cotogna gialla*.105116. *Cotogna Massima*.105117. *Morellone*.105118. *Poppa di Venere d'Ognissanti*.105119. *Principe di Piemonte*.105120. *Reine des Verges*.105121. *Sanguigna*.105122. *Senator Carlo Ridolfi*.

105123 to 105132. MALUS SYLVESTRIS Mill. Malaceae. Apple.

105123. *Abbondanza*.105124. *Calvilla di Danzica*.105125. *Calvilla Lesans*.105126. *Calvilla rosso d'autunno*.105127. *Del Commercio*.105128. *Grand Alexandre*.105129. *Renetta Ananassa*.105130. *Renetta grande di Cassel*.105131. *Rosa*.105132. *Signe Tillisch*.

105133 to 105135. PRUNUS ARMENIACA L. Amygdalaceae. Apricot.

105133. *Di Germania*.

105109 to 105149—Continued.

105134. *Tardivo di Bourbon*.105135. *Tardivo d'Orleans*.105136 to 105149. *PYRUS COMMUNIS* L.
Malvaceae. Common pear.105136. *Bergamotta de Pentecôte*.105137. *Bergamotta Esperen*.105138. *Butirra d'Areberg*.105139. *Butirra Diel*.105140. *Butirra Giffard*.105141. *Butirra bianca Toscana*.105142. *Butirra Hardy*.105143. *Butirra dell'Assunta*.105144. *Coscia*.105145. *Gentil Bianca*.105146. *Louis Buone d'Avranches*.105147. *Margherita Marillat*.105148. *Passa Crassarn*.105149. *Spadona d'Estate*.105150. *TRIFOLIUM PRATENSE* L. Fa-
baceae. Red clover.From Poland. Seeds purchased from Udycz,
Hodowla Nasion, Warszawa. Received
April 4, 1934.Variety *Gloria*.

105151 to 105154.

From Cuba. Seeds presented by Robert M.
Grey, Superintendent of the Atkins In-
stitution of the Arnold Arboretum, Sole-
dad, Cienfuegos, through F. G. Walsing-
ham. Received April 2, 1934.105151. *ASSONIA NATALENSIS* (Sond.)
Kuntze. Sterculiaceae.A shrub or small tree, native to south-
ern Africa, with cordate, angular, toothed
leaves and axillary 6- to 8-flowered um-
bels of large, pure-white, fragrant flow-
ers.

For previous introduction see 90876.

105152. *SAPINDUS TRIFOLIATA* L. Sapin-
daceae. Soapnut tree.A stout tree, native to India, with alter-
nate pinnate leaves and dull-white flowers.
The round fruits, the size of cherries, are
used in southern India as a substitute for
soap. An oil is also extracted from them.
The hard yellow wood is used in house
building.

For previous introduction see 23315.

105153. *STIGMAPHYLLON PUBERUM* (Rich.)
Juss. Malpighiaceae.A woody vine, native to the West Indies,
with the branchlets covered with ap-
pressed brown hairs. The ovate-acumi-
nate leaves, 2 inches long, are nearly
glabrous above and appressed pubescent
beneath. The petals of the bright-yellow
flowers, an inch across, are fringed on the
margin, and the maplelike fruits are more
than an inch long.

For previous introduction see 102681.

105151 to 105154—Continued.

105154. *STIGMAPHYLLON SAGRAEANUM*
Juss. Malpighiaceae.A woody vine, native to the West
Indies, with rigid, leathery, linear to ovate
leaves, coarsely reticulated beneath. The
bright-yellow flowers are in axillary clus-
ters, and the maplelike fruits are oblong
with straight edges.

For previous introduction see 102680.

105155 to 105157. *MALUS SYLVESTRIS*
Mill. Malaceae. Apple.From Michigan. Scions presented by Prof.
F. G. Bradford, Michigan State College,
East Lansing. Received April 9, 1934.105155. *Cilligos*. A Hungarian variety
with small fruits which do not color as
well in the North as they do farther
south.105156. *Daru*. A hardy, very late-flower-
ing apple which will stand 12° F. with-
out injury.105157. *Fenville*. A seedling, probably a
French crab, which sprang up as a root
sprout from a tree whose top had died.
Its sole merit is its very late blossom-
ing, as the fruit is small and inferior.

105158 to 105167.

From Sweden. Seeds presented by Prof. C.
Skottsberg, Botaniske Have, Göteborg.
Received April 7, 1934.105158. *ALTHAEA HELDBREICHII* Boiss. Mal-
vaceae.A slender hairy perennial, with rounded,
heart-shaped leaves and rosy-pink flowers
in small clusters. Native to southeastern
Europe.105159 to 105161. *RHEUM* spp. Polygona-
ceae. Rhubarb.105159. *RHEUM ALEXANDRAE* Batal.A stout herbaceous perennial, native
to China, with a rosette of elliptic-
ovate, dark glossy green leaves and
flower stems, 3 to 4 feet high, bearing
large pale-yellow overlapping leaflike
bracts.105160. *RHEUM FRANZENBACHII* Muen-
ter.A rapidly growing species of rhu-
barb, native to temperate Asia, which
is a striking ornamental, suitable for
borders and possibly useful for breed-
ing purposes.

For previous introduction see 69105.

105161. *RHEUM PALMATUM* L.
Sorrel rhubarb.A leafy perennial about 5 feet high,
with subcylindrical stems and broad
roundish leaves deeply palmately lobed.
Native to northwestern Asia.

For previous introduction see 104376.

105162. *RUBUS ARMENIACUS* Focke. Ro-
saceae.A stout thorny shrub with long branch-
es, coarsely serrate leaflets, white hairy
beneath, red flowers, and rather large,
black, juicy fruits of good flavor. Native
to Asia Minor.105163. *RUBUS HISPIDUS* L. Rosaceae.A prostrate shrub with more or less
prickly stems, firm, dark-green leaflets,
and small, sour, reddish-purple fruits.
Native to southeastern Canada.

105158 to 105167—Continued.

105164 to 105167. THYMUS spp. Mentha-
ceae.

105164. THYMUS BRITANNICUS Ronni-
ger.

An upright, much-branched perennial about 6 inches high, beset with long hairs throughout. The lowermost leaves are small and linear; the stem leaves are elliptic and about one-half inch long. The white flowers are on long stems. Native to the Balkans.

105165. THYMUS LANICAULIS Ronniger.

A small hairy perennial about 3 inches high, with small linear or elliptic leaves about one-half inch long and small heads of purplish flowers. Native to the Balkan region.

105166. THYMUS SERPYLLUM MONTANUS (Kit.) Benth.

A variety of the common creeping thyme with more erect branchlets and larger leaves. Native to central Europe.

105167. THYMUS SERPYLLUM VULGARIS Benth. Lemon thyme.

A perennial or subshrubby plant with wiry stems and small strongly veined, elliptic ovate leaves about one-fourth inch long. The minute rose-colored or lilac flowers are in sessile whorls. Native to Europe. Received as *T. sudeticus*, now considered to be identical with the above variety.

105168 to 105176.

From Lithuania. Scions presented by Frank Kokaska, Alytus. Received April 17, 1934.

105168 and 105169. MALUS SYLVESTRIS Mill. Malaceae. Apple.

Autumn varieties.

105168. No. 8. 105169. No. 9.

105170 to 105176. PYRUS COMMUNIS L. Malaceae. Common pear.

105170. Bartlett. A large pear.

105171. No. 2. 105174. No. 5.

105172. No. 3. 105175. No. 6.

105173. No. 4. 105176. No. 7.

105177 to 105179. DELPHINIUM spp. Ranunculaceae. Larkspur.

From the Union of Soviet Socialist Republics. Seeds presented by the Botanic Garden, Academy of Science, Leningrad. Received April 9, 1934.

105177. DELPHINIUM SIMPLEX Doug.

An erect hairy plant 3 feet or more high, with three-parted multifid leaves and intensely blue flowers in long narrow racemes. Native to the subalpine Rocky Mountains, northwestern United States.

105178. DELPHINIUM TIROLENSE Kern.

A pubescent perennial herb with three-parted leaves. The blue flowers are in loose racemes. Native to central Europe.

For previous introduction see 104895.

105177 to 105179—Continued.

105179. DELPHINIUM PRZEWALSKII Huth.

A Mongolian larkspur about 8 feet high, with three- to five-parted leaves, the divisions deeply lacinate, and sky-blue flowers that appear from July to September. Closely related to *D. henryi* which, however, blooms in March.

For previous introduction see 104894.

105180. LYCOPERSICON ESCULENTUM Mill. Solanaceae. Tomato.

From Australia. Seeds presented by Thomas Mansell, The Summit, southwestern Queensland. Received April 11, 1934.

Densonia. A variety which produces large, bushy, wilt-proof plants and is a heavy midseason bearer.

105181 to 105199.

From Norway. Scions presented by Prof. Olav Moen, Norges Landbrukshøiskole, Aas. Received April 18, 1934.

105181 to 105184. MALUS SYLVESTRIS Mill. Malaceae. Apple.

105181. *Silkeple* (Annie Elizabeth).

105182. *Flaskeple*.

105183. *Ribston*.

105184. *Signe Tillisch*.

105185 to 105190. PRUNUS sp. Amygdalaceae.

105185. *Früheste der Mark* (cherry).

105186. *Hedelønger kjempe* (cherry).

105187. *Kronberg* (cherry).

105188. *Lucien* (cherry).

105189. *Skyggekirsebaer* (cherry).

105190. *Werderske* (cherry).

105191 to 105198. PYRUS COMMUNIS L. Malaceae. Common pear.

105191. *Bergamotte Hildesheimer*.

105192. *Bergamotte Høst*.

105193. *Clara Frijs*.

105194. *Espersen herrepære*.

105195. *Fondante de Charneau*.

105196. *Gråpære*.

105197. *Grev. A. V. Moltke*.

105198. *Keiserindepære*.

105199. RUBUS sp. Rosaceae.

Askerbringebær raspberry.

105200 to 105218.

From the Union of Soviet Socialist Republics. Cuttings presented by the Mitchurin Horticultural Institute, Koslov, through the Institute of Plant Industry, Leningrad. Received April 18, 1934.

The Institute number follows the varietal name.

105200 to 105203. MALUS SYLVESTRIS Mill. Malaceae.

105200. *Anissovka*, 150622.

105201. *Krasnyi standard* (red), 150628.

105202. *Paradiska Mitchurina*, 150613.

105203. *Rebristoe*, 150623.

105200 to 105218—Continued.

105204 to 105217. PRUNUS spp. Amygdalaceae.

105204 to 105206. PRUNUS CERASUS L.
Sour cherry.

105204. *Polëvka*, 150624.

105205. *Yubileinaya*, 150617.

105206. *Zachariëvskaya* [number illegible].

105207. PRUNUS CERASUS × AVIUM.

Krassa Severa, 150630a.

105208. PRUNUS CERASUS × FRUTICOSA.

Monomach, 150621.

105209. PRUNUS DOMESTICA L.

Common plum.

Persikovaya, 150615.

105210. PRUNUS DOMESTICA × SPINOSA.

Renklod ternoviy, 150629.

105211. PRUNUS FRUTICOSA × MAACKII.

Cerapadus, 150627.

105212. PRUNUS FRUTICOSA × PENNSYLVANICA.

Ideal, 150611.

105213. PRUNUS FRUTICOSA × PENNSYLVANICA × MAACKII.

Cerapadus stadkiy, 150619.

105214. PRUNUS INSITITIA × DOMESTICA.

Tchernosliv Kozlovskiy, 150612.

105215. PRUNUS JAPONICA Thunb.
Cherry.

Yaponskaya, 150618.

105216. PRUNUS SPINOSA × DOMESTICA.

Tern stadkiy, 150610.

105217. PRUNUS sp.

Plodorodnaya, a cherry, 150616.

105218. PYRUS sp. Malaceae.

Dotch Blankovaya, 150625.

105219 and 105220.

From Canada. Plants presented by F. L. Skinner, Dropmore, Manitoba. Received April 21, 1934.

105219. CLEMATIS LIGUSTICIFOLIA × SERRATIFOLIA. Ranunculaceae.

A hybrid Clematis developed by F. L. Skinner.

105220. POPULUS TRISTIS Fisch. Salicaceae.

A rather small poplar from central Asia, with dark-brown branchlets and oblong-oval, crenate-serrate leaves about 4 inches long having whitish pubescent lower surfaces.

105221. (Undetermined.)

From Brazil. Bulbs presented by J. R. Swallen, Bureau of Plant Industry. Received April 26, 1934.

An unidentified terrestrial orchid, collected at Maranhão.

105222. ILEX PARAGUARIENSIS St. Hil.
Aquifoliaceae. Yerba maté.

From Argentina. Seeds presented by Ing. Raul Ramella, Director de La Estación Experimental Central, Pargamino, through J. L. Colom, Chief, Division of Agricultural Cooperation, Pan American Union, Washington, D. C. Received April 14, 1934.

A tender evergreen Paraguayan holly, the leaves of which are dried and used to make the beverage known as maté, or Paraguay tea.

For previous introduction see 103698.

105223. TRIPLARIS AMERICANA L. Polygonaceae.

From Cuba. Seeds presented by Robert M. Gray, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. C. Walsingham. Received April 16, 1934.

A small tropical evergreen tree, with ovate acuminate leaves and curious three-angled woody fruits. Native to Central America.

For previous introduction see 80709.

105224. MALUS SYLVESTRIS Mill. Malaceae. Apple.

From South Dakota. Scions presented by N. E. Hansen, South Dakota State College, Brookings. Received April 19, 1934.

Red Soviet.

105225. LYCOPERSICON ESCULENTUM Mill. Solanaceae. Tomato.

From Australia. Seeds presented by Mrs. A. Savage, Gloncurry, Queensland. Received April 2, 1934.

A small tomato used for jam and pickling.

105226. CITRUS NOBILIS UNSHIU Swingle. Rutaceae. Satsuma orange.

From the Union of Soviet Socialist Republics. Budwood presented by A. Zaretsky, citriculturist, Introduction Garden of Subtropical Cultures, Sukhum, Transcaucasia, through the All-Union Institute of Plant Industry, Leningrad. Received April 18, 1934.

A broad-leaved variety.

105227 to 105229.

From the West Indies. Bulbs and seeds collected by the Allison V. Armour expedition, through David Fairchild, Bureau of Plant Industry. Received April 24, 1934.

105227. BLETIA PATULA Hook. Orchidaceae.

Collected at Sawanar, on San Lorenzo Bay, Santo Domingo, by Mrs. Thomas Barbour. Large round bulbs with purple flowers.

105228. EPIDENDRUM sp. Orchidaceae.

Collected on Beata Island by Mrs. Thomas Barbour. Small flat green bulbs which produce large mauve flowers.

105229. PINUS OCCIDENTALIS Swartz. Pinaceae.

Collected in the mountains of Haiti by F. C. Baker. A native pine which resembles *Pinus caribaea*, but generally

105227 to 105229—Continued.

has five leaves in the fascicle instead of two. Formerly this pine covered the island above 2,500 feet altitude, but is now found only in small patches. The tree is a rapid grower and is now being planted on the mountain sides to prevent soil erosion.

For previous introduction see 102615.

105230 to 105239.

From the Union of Soviet Socialist Republics. Cuttings presented by A. Richter, division of pomology, Government Botanical Garden, Nikita, Yalta, Crimea. Received April 19, 1934.

105230 to 105233. *FICUS CARICA* L. Moraceae. Common fig.

105230. *Bijas injir* C.

105231. *Chara injir* N 2 Cr.

105232. *E. de Caucase noire* C.

105233. *Lob injir* Cr.

105234 to 105239. *OLEA EUROPAEA* L. Oleaceae. Common olive.

105234. *Gorvala*.

105235. *Nikitsky* N. 53.

105236. *O. de Crimée* N. 128.

105237. *O. de Crimée* N. 172.

105238. *Otour*.

105239. *Tassijakaja*.

105240 to 105243.

From French Indo-China. Seeds presented by M. Poilane, Institut des Recherches Agronomiques de Indochine, Division de Botanique. Received April 25, 1934.

105240. *BAUHINIA MALABARICA* Roxb. Caesalpiniaceae.

A small erect bushy tree, native to southeastern Asia, with thick, rigid, deeply bifid, somewhat heart-shaped leaves 2 to 3 inches long. The small white flowers are in dense sessile axillary clusters. The rather turgid, straight, firm, narrow pods fall at the end of the dry season, and cattle are very fond of them.

For previous introduction see 101091.

105241. *CROTALARIA* sp. Fabaceae.

From Blao, French Indo-China, at 2,500 feet altitude. A crotalaria of spreading habit, with a deep taproot.

105242. *MEIBOMIA GYROIDES* (DC.) Kuntze. Fabaceae.

Collected at Blao, French Indo-China, at 2,500 feet altitude. A shrubby leguminous plant 8 to 10 feet high, native to the warmer parts of the central and eastern Himalayas. It has pubescent leaves and terminal racemes of red-purple flowers. It is found growing in valleys, at times even on the borders of swamps, but doing equally well on good soil. It may prove of value as a forage plant.

105243. (Undetermined.)

A leguminous shrub of very rapid growth, with elongated branches that quickly afford a light shade.

71562—36—2

105244 to 105248. *SACCHARUM OFFICINARUM* L. Poaceae. Sugarcane.

From India. Cuttings presented by Rao Bahadur T. S. Venkatraman, Government sugarcane expert, Imperial Department of Agriculture, Coimbatore. Received April 24, 1934.

Cuttings introduced for the use of Department specialists interested in sugarcane.

105244. G-496 Coimbatore.

105245. G-297 Coimbatore.

105246. Co. 285.

105247. Co. 399.

105248. Co. 515.

105249 to 105251. *BRASSICA CAMPESTRIS* L. Brassicaceae. Rutabaga.

From Turkey. Seeds presented by Charles E. Allen, American consul, Istanbul, through the State Department, Washington, D. C. Received April 9, 1934.

105249. Red. 105251. White.

105250. Red.

105252. *RUBUS* sp. Rosaceae.

From Canada. Plants presented by Edward Lowden, Hamilton, Ontario. Received April 24, 1934.

Lowden blackberry. A large blackberry that has an extra strong root system.

105253 and 105254.

From Trinidad, British West Indies. Seeds presented by the Director of Agriculture, through the Director of the Royal Botanic Gardens, Port-of-Spain. Received April 12, 1934.

105253. *ASTROCARYUM AUREUM* Griseb. and Wendl. Phoenicaceae. Palm.

A palm closely related to *Elaeis*, with a prickly trunk and pinnately divided leaves of linear-lanceolate segments, shining above and greenish golden beneath. It is native to Trinidad, British West Indies.

For previous introduction see 104332.

105254. *ERYTHROXYLON COCA* Lam. Erythroxylaceae. Cocaine-tree.

A tropical shrub, native to Peru, 5 to 6 feet high, with slender rust-brown branches and clusters of yellowish flowers borne along the branchlets. It is grown commercially throughout South America and the East Indies for the production of cocaine, which is extracted from the dried leaves.

For previous introduction see 104337.

105255 and 105256.

From southern India. Seeds collected by Dr. E. W. Erlanson, Science College, Trivandrum, Travancore. Received April 13, 1934.

105255. *CROTON TIGLIUM* L. Euphorbiaceae. Croton-oil plant.

A small ornamental shrub or tree with ovate leaves varying in color from metallic green to bronze and orange. The powerful purgative, croton oil, is obtained from the seeds by crushing. It is used locally as a fish poison.

For previous introduction see 98369.

105255 and 105256—Continued.

105256. *RANDIA DUMETORUM* (Retz.) Lam.
Rubiaceae.

Collected at 3,000 feet altitude. A deciduous thorny shrub or small tree, found throughout India and distributed eastward to southern China. The bark and fruit are used medicinally.

For previous introduction see 49557.

105257. *BASSIA HYSSOPIFOLIA* (Pall.)
Volk. Chenopodiaceae.

From the Union of Soviet Socialist Republics. Seeds presented by Dr. N. I. Vavilov, Director, Institute of Plant Industry, Leningrad. Received April 21, 1934.

From Bakuriany, Transcaucasia. A gray-hairy annual 2 or 3 feet high, with somewhat flashy linear leaves and small inconspicuous axillary flowers. Native to sandy places in southwestern Europe, and of possible use in preventing soil erosion.

105258 to 105268.

From Turkey. Seeds grown in the Merzifon region and presented by Harold T. Pence, Gaziantep. Received April 21, 1934.

Introduced for the use of Department specialists.

105258. *ALLIUM CEPA* L. Liliaceae. Onion.

A light onion.

105259. *ALLIUM PORRUM* L. Liliaceae. Leek.

Prosa.

105260. *BETA VULGARIS CICLA* L. Chenopodiaceae. Leaf-beet.

Chard.

105261. *BRASSICA OLERACEA CAPITATA* L. Brassicaceae. Cabbage.

105262. *CAPSIUM ANNUUM* L. Solanaceae. Common redpepper.

A variety used for stuffing.

105263. *CUCUMIS SATIVUS* L. Cucurbitaceae. Cucumber.

105264. *CUCURBITA PEPO* L. Cucurbitaceae. Pumpkin.

105265. *DAUCUS CAROTA* L. Apiaceae. Carrot.

105266. *LYCOPERSICON ESCULENTUM* Mill. Solanaceae. Tomato.

105267. *LYCOPERSICON ESCULENTUM* Mill. Solanaceae. Tomato.

105268. *PETROSELINUM HORTENSE* Hoffm. Apiaceae. Parsley.

Mydanos.

105269 to 105275. *TRIFOLIUM HYBRIDUM*
L. Fabaceae. Alsike clover.

From Canada. Seeds presented by R. I. Hamilton, agrostologist, Central Experimental Farm, Ottawa, Ontario. Received April 23, 1934.

105269. From the Kenora district, Ontario.

105270. From Prince George, British Columbia.

105271. From the Joseph Laboratories, Belle Vallée, Ontario.

105269 to 105275—Continued.

105272. From Woodpecker, British Columbia.

105273. Sample no. 1. From Scarborough, York County, Ontario.

105274. Sample no. 2. From Akona, Ontario.

105275. Sample no. 3. From Hagersville, Ontario.

105276 and 105277.

From the Canal Zone. Seeds presented by J. E. Higgins, Experiment Station, Summit. Received in April 1934.

105276. *BELOTIA PANAMENSIS* Pittier. Tiliaceae.

Received April 24, 1934. A tropical tree up to 35 feet high, with gray bark, elliptic, long-acuminate leaves 3 to 7 inches long, and small purplish flowers in axillary cymes. Native to Panama.

105277. *TARAOTOGENOS KURZII* King. Flacourtiaceae.

Received April 23, 1934. A large tree, 40 to 50 feet high, native to India. The seeds yield the true chaulmoogra oil, used in the treatment of leprosy.

For previous introduction see 56633.

105278 and 105279. *MALUS SYLVESTRIS*
Mill. Malaceae. Apple.

From England. Scions presented by G. T. Spinks, University of Bristol Research Station, Long Ashton, Bristol. Received April 26, 1934.

105278. *Bulmer's Norman.*

105279. *White Alphonso.*

105280 to 105304.

From South Africa. Seeds and bulbs purchased from John Martley, Banhoek, Stellenbosch. Received April 26, 1934.

105280. *GALAXIA GRAMINEA* Thunb. Iridaceae.

The numerous leaves that compose the rosette of this galaxia are linear, convolute, dilated, membranous at the base, and 1 to 2 inches long. The small fugacious lilac or yellow flowers are an inch in diameter when expanded. Native to the coastal region of South Africa. (Bulbs.)

105281. *GALAXIA OVATA* Thunb. Iridaceae.

A bulbous plant with a dense rosette of firm, ribbed, ovate leaves nearly 2 inches long. The borders of the leaves are pale and cartilaginous. The bright-yellow, fugacious flowers, 1 inch long, are borne in sessile spathes. Native to the coastal region of South Africa. (Bulbs.)

105282. *GEISSORHIZA SPLENDISSIMA* Diels. Iridaceae.

A low irislike plant from South Africa, 4 to 6 inches high, with three linear leaves 2 to 5 inches long and small azure blue flowers in a three- to five-flowered lax spike. (Bulbs.)

105283. *GLADIOLUS* spp. Iridaceae.

105283. *GLADIOLUS ALATUS* L.

A very interesting plant with flowers of a delightful fragrance not unlike that of the sweetbrier. The three upper

105280 to 105304—Continued.

petals are bright orange scarlet and the three lower ones are yellowish tipped with orange scarlet. The bulbs are not larger than ordinary peas and cannot remain long out of the ground. Native to South Africa. (Bulbs.)

For previous introduction see 81292.

105284. *GLADIOLUS ALATUS* L.

A variety with rose-pink flowers. (Bulbs.)

105285. *GLADIOLUS BLANDUS* Ait. Iridaceae.

A South African plant with sword-shaped leaves somewhat shorter than the stem, which is from 6 inches to 2 feet in height and bears 3 to 10 white or reddish-tinged scentless flowers. (Bulbs.)

For previous introduction see 44724.

105286. *GLADIOLUS CALLISTUS* Bolus f.

A tall plant, 30 to 40 inches high, with four to seven narrow sword-shaped basal leaves 1 to 2 feet long and two stem leaves. The flowers, white suffused with pink and 9 to 12 in number, are produced on 1 to 3 branches. (Bulbs.)

For previous introduction see 77223.

105287. *GLADIOLUS CUSPIDATUS* Jacq.

An erect bulbous plant, 2 to 3 feet high, with sword-shaped leaves usually shorter than the stem and four to eight white or pinkish flowers in a lax open-sided spike. It is native to the Cape of Good Hope, where it flowers in May and June. (Bulbs.)

For previous introduction see 44725.

105288. *GLADIOLUS GRACILIS* Jacq.

A plant with about three rigid, subterete leaves a foot or less long, and very slender stems up to 2 feet high bearing two to six pale-lilac scentless flowers in a lax second spike. Native to South Africa. (Bulbs.)

105289. *GLADIOLUS GRANDIS* Thunb.

Closely related to *Gladiolus tristis*, this has three strongly subterete leaves 12 to 18 inches long and a slender stem up to 2 feet high. The purplish brown-tinged flowers are 2 to 3 inches long, in a lax second spike. Native to the southeastern part of the Cape of Good Hope. (Bulbs.)

105290. *GLADIOLUS HIRSUTUS* Jacq.

A species about a foot high, with bright-red, fragrant flowers, borne in a very lax, few-flowered spike, and sword-shaped, strongly ribbed leaves; found growing in sandy stretches which are moist only during the winter. Native to South Africa. (Bulbs.)

For previous introduction see 88680.

105291. *GLADIOLUS MARTLEYI* L. Bolus.

Seeds of an autumn-flowering species which becomes about a foot high, producing a single very narrow leaf and 1 to 11 flowers $1\frac{1}{2}$ inches long, white suffused with pink, in a second spike. Native to sandy places, Stellenbosch, South Africa.

105280 to 105304—Continued.

105292. *GLADIOLUS ODORATUS* L. Bolus.

A gladiolus about a foot high, with one spirally twisted leaf 8 inches long and a spike that sometimes bears 5 to 13 flowers; these flowers are a mixture of reddish purple, brown, and dull yellow, and have a sweet odor. Native to the Cape of Good Hope. (Bulbs.)

105293. *GLADIOLUS ORCHIDIFLORUS* Andr.

The three or four leaves of this gladiolus are linear, firm, crowded and 6 to 12 inches long, and the four to six greenish flowers are in a very lax spike on a stem the same height as the leaves. Native to South Africa. (Seeds.)

105294. *GLADIOLUS PAPPEI* Baker.

A gladiolus with three leaves up to 6 inches long, with linear, rigid tips. The pink flowers are in small lax spikes. Native to the summit of Table Mountain, Cape of Good Hope. (Bulbs.)

105295. *GLADIOLUS RECURVUS* L.

A slender-stemmed species, up to 2 feet high, native in boggy sandy places of South Africa. The two to six fragrant flowers, which appear in August, are borne in a very lax spike and vary in color from blue to flushed pink, with minute blackish-lilac spots. (Bulbs.)

For previous introduction see 64654.

105296. *GLADIOLUS TRICHONEMIFOLIUS* Ker.

A species with a very slender stem 6 to 18 inches high, and, generally, three rigid, slender, long-sheathing leaves, the lower one often overtopping the stem. The one to three erect flowers, an inch long, have a yellow perianth, with the three lower segments blotched with purple at the throat. Native to South Africa. (Bulbs.)

105297. *GLADIOLUS VILLOSUS* Ker.

The simple stems of this gladiolus are up to 2 feet long, and the sheaths are very hairy, the lowest without any leaf blade. The upper sheaths enclose thick, rigid, linear leaves up to 12 inches long. The bright-red or lilac flowers are in a lax second spike. Native to South Africa. (Bulbs.)

105298. *GLADIOLUS WATERMEYERI* L. Bolus.

A species with three or four leaves about 10 inches long, conspicuously two-nerved, and flowers $1\frac{1}{2}$ inches long. The upper segments are pale, flushed with pinkish purple, and the lower ones are yellowish green. Native to Cape Province, South Africa. (Seeds.)

105299. *HESPERANTHA* sp. Iridaceae.

Received under the name "buhrii", for which a place of publication has not been found. (Bulbs.)

105300 to 105302. *MORAEA* spp. Iridaceae.

Bulbs.

105300. *MORAEA PAPILIONACEA* Ker.

A dwarf moraea, 4 to 6 inches high, with red or lilac flowers, yellow on the claw. The stems, simple or forked

105280 to 105304—Continued.

lower down, bear one to six flower clusters, and the linear hairy leaves are 3 to 6 inches long. Native to South Africa.

105301. MORAEA TORTA L. Bolus.

A rather stiffly upright plant with sky-blue flowers about 1 inch long in small cymes. The two spirally twisted leaves are about 15 inches long. Native to the Cape of Good Hope.

105302. MORAEA PAVONIA VILLOSA (Ker.) Baker.

An irislike plant with one long, narrow, linear leaf and fugitive flowers 1 inch long borne on a slender stem up to 2 feet high. The flowers have bright purple falls with a blue-black spot and hairy claw. Native to the Cape of Good Hope.

105303. NERINE FILIFOLIA Baker. Amaryllidaceae.

A nerine with 6 to 20 slender, subulate, grass-green leaves 6 to 8 inches long and a centripetal umbel of 8 to 10 bright-red flowers with a deeply cut perianth about 1 inch long. Native to the Kalahari region, South Africa.

105304. NERINE HUMILIS (Jacq.) Herb. Amaryllidaceae.

The six linear, bright-green channeled leaves of this nerine are about 1 foot long and are contemporary with the bright-pink flowers. These are in a centrifugal umbel of 10 to 20 flowers with slender pedicels. Native to South Africa.

105305. OLEA EUROPAEA L. Oleaceae.
Common olive.

From Syria. Cuttings presented by Selim Challah, Damascus, through H. S. Goad, American consul general, Beirut. Received April 27, 1934.

Yulkutt or *Yalut* olive.

105306. LACTUCA SATIVA L. Cichoriaceae.
Garden lettuce.

From China. Seeds presented by Andrew Tse, Hong Kong. Received April 14, 1934. Introduced for Department specialists.

105307. SOLANUM TUBEROSUM L. Solanaceae.
Potato.

From Canada. Tubers presented by J. W. Scannell, Indian Head, Saskatchewan. Received April 27, 1934.

Snowflake.

105308. AMYGDALUS PERSICA L. Amygdalaceae.
Peach.

From Italy. Plants purchased from Fratelli Sgaravatti, Saonara, Padova. Received April 28, 1934.

Agostinella.

105309 and 105310.

From Cuba. Seeds and cuttings presented by Robert M. Grey, superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received April 26, 1934.

105309 and 105310—Continued.

105309. MYRCIARIA CAULIFLORA (Mart.) Berg. Myrtaceae. **Jaboticaba.**

A Brazilian tree up to 35 feet high, with narrowly elliptic sharp-pointed leaves, short-petioled flowers produced directly from the bark of the trunk and branches, and purplish violet globose fruits half an inch to 1½ inches in diameter.

For previous introduction see 51830.

105310. TABEUTIA SERRATIFOLIA (Vahl.) Nicholson. Bignoniaceae.

Cuttings of an evergreen tree, native to the West Indies, with digitately compound leaves made up of four or five oblong-ovate leaflets 3 to 5 inches long and terminal panicles of yellow funneliform flowers.

For previous introduction see 98095.

105311 to 105331.

From China. Seeds presented by the director, Botanic Garden, the Sun Yat-Sen Tomb and Memorial Park Commission, Nanking. Received April 16, 1934.

105311. CARPINUS TURCZANINOVII OVALIFOLIA Winkler. Betulaceae. **Hornbeam.**

A small graceful shrubby tree, 12 to 15 feet high, with ovate, serrate, dark-green leaves 1 to 2 inches long. Native to western China.

For previous introduction see 63346.

105312. CASTANOPSIS SCLEROPHYLLA (Lindl.) Schottky. Fagaceae. **Evergreen chinquapin.**

A hardy evergreen tree, up to 65 feet high, with edible nuts having a flavor like that of the chinquapin. Native to south-central China.

For previous introduction see 71037.

105313 to 105315. CELTIS spp. Ulmaceae.

105313. CELTIS BIONDII Pampan.

A stout-branched hackberry from western China, with rather stiff, broadly ovate, long-acuminate leaves 2 to 3 inches long and small black fruits.

105314. CELTIS BUNGEANA Blume. **Hackberry.**

A large tree up to 50 feet high, with light-gray bark, small deep-green leaves, and black fruits the size of small peas. Native to northeastern Asia.

For previous introduction see 104842.

105315. CELTIS sp.

105316. DAPHNIPHYLLUM MACROPODIUM Miquel. Euphorbiaceae.

An evergreen shrub with elliptic-oblong, dark-green, leathery leaves 5 to 8 inches long, inconspicuous flowers, and small ellipsoidal fruits in axillary racemes 3 inches long. Native to eastern Asia.

For previous introduction see 99238.

105317. DIANTHUS BREVICALIS Fenzl. Silenaceae. **Pink.**

A low caespitose plant, with erect glaucous linear leaves and small red-purple flowers borne singly. Native to the Taurus Mountains of Asia Minor.

For previous introduction see 101924.

105311 to 105331—Continued.

105318. HOLBOELLIA CORIACEA Diels.
Lardizabalaceae.

An evergreen climbing shrub with dark-green, leathery, compound, digitate leaves of three to seven leaflets and small flowers in axillary racemes; the staminate flowers are white and the pistillate flowers are violet. Native to China.

105319. HOVENIA DULCIS Thunberg.
Rhamnaceae.

An ornamental deciduous Japanese tree with leaves often 4 or 5 inches long and inconspicuous white or greenish-white flowers. After flowering the peduncles thicken and become edible, being red, pappy, and of sweetish taste.

For previous introduction see 45620.

105320 to 105323. ILEX spp. Aquifoliaceae.
Holly.

105320. ILEX PURPUREA Hassk.

An evergreen tree with crenate-serrulate, elliptic, lanceolate leaves 2 to 3 inches long and red berries half an inch long, in clusters of two to five. It is native to Japan and central China.

For previous introduction see 102075.

105321. ILEX ROTUNDA Thunb.

A large evergreen tree, sometimes over 40 feet high, with glossy, green, entire, elliptic, or oblong leaves 2 to 4 inches long and small, globose, scarlet berries. Native to Japan and Chosen.

For previous introduction see 102300.

105322. ILEX TRIFLORA VIRIDIS Loes.

A small tree, with stiff, small, ovate or oblong leaves 2 or 3 inches long and black globose fruits about one-fourth inch in diameter. Native to mountainous districts of eastern India.

105323. ILEX WILSONII Lees.

An ornamental evergreen Chinese shrub with broad, spiny, glistening green leaves.

For previous introduction see 78146.

105324. LILIUM BROWNII Poit. Liliaceae.

A Chinese lily with stems 2 to 3 feet high and lanceolate leaves 3 to 5 inches long. The flowers, usually solitary but sometimes two to four together, are 6 to 8 inches long and nearly as wide and are delicately fragrant. The waxy segments are creamy white inside, fading to pure white and tinged with yellow at the base. Outside they are white with brown-purple midribs, the three outer ones being variably tinged with brownish purple.

For previous introduction see 102076.

105325. LOROPETALUM CHINENSE (R. Br.)
Oliver. Hamamelidaceae.

A handsome but somewhat tender bushy evergreen Chinese shrub of loose open habit and about 5 feet high. It has oval unsymmetrical leaves and curious white witch-hazellike flowers during the early spring.

For previous introduction see 104207.

105326. PINUS ARMANDI Franch. Pinaceae.
Armand pine.

A tall 5-leaved pine 60 to 100 feet high, with a trunk often 6 feet in diameter, that grows in western China on

105311 to 105331—Continued.

well-drained, moist mountain slopes between 8,000 and 10,000 feet altitude. The slender, bright-green leaves are about 4 inches long. The edible seeds are sold in Chinese markets.

For previous introduction see 95373.

105327. PTEROCELTIS TATARINOWII Maxim.
Ulmaceae.

A tall deciduous tree, native to north-western and central China, closely resembling *Celtis* in foliage and habit. The ovate to ovate-oblong, acuminate leaves, irregularly and sharply serrate, are over 3 inches long. The slender-stalked fruits, unlike those of *Celtis*, have wings usually emarginate at the apex.

For previous introduction see 46433.

105328. STEWARTIA MONADELPHA Sieb.
and Zucc. Theaceae.

A tree up to 75 feet high, native to Japan. The bright-green ovate leaves are 2 to 4 inches long, and the fragrant, white, cup-shaped flowers, 1 to 2 inches across, are solitary in the axils of the leaves.

For previous introduction see 102261.

105329. STYRAX PHILADELPHOIDES Perkins.
Styracaceae.

A large shrub, 5 to 6 feet high, with thin, narrowly oblong, hairy leaves, 1 to 3 inches long, and white flowers, half an inch long, in small axillary and terminal racemes. Native to eastern China.

105330. TRIPTERYGIUM FORRESTII Loesner.
Celastraceae.

A shrub about 3 feet high, with oval, crenulate, serrate, papery leaves 2 to 3 inches long and terminal panicles of small green-brown flowers. Native to open situations on the Tali Range, Yunnan.

For previous introduction see 105032.

105331. ZELKOVA SERRATA (Thunb.)
Planch. Ulmaceae. Sawleaf zelkova.

A handsome tree, native to Japan, up to 90 feet high, with a short trunk dividing into many upright, spreading branches and forming a broad, round-topped head. The sharply serrate leaves are ovate and are usually 2 to 3 inches long, or, on the young shoots, up to 7 inches long.

For previous introduction see 98780.

105332 to 105347.

From China. Seeds collected west of Peiping by Peter Liu. Received April 25, 1934.

105332. ALLIUM CEPA L. Liliaceae.
Onion.

Ta Ts'ung. A large onion which is grown on ridges. The Chinese plant it any time from early spring to fall.

105333. APIUM GRAVEOLENS L. Apiaceae.
Celery

Ch'in Tsai. A Chinese celery with very small seeds.

105334. BENINCASA HISPIDA (Thunb.)
Cogn. Cucurbitaceae. Waxgourd.

Chia Tung Kwa. A winter gourd, used mostly in soups. The seed is planted in the middle of March in a coldframe, and transplanted when two or three leaves

105332 to 105347—Continued.

have developed. Only one gourd is allowed to grow on a vine, but each gourd weighs from 15 to 20 pounds.

105335. BETA VULGARIS L. Chenopodiaceae.
Common beet.

Tzu Lo Pu Tou. Purple beet root. Said to be an introduced variety.

105336. BRASSICA SP. Brassicaceae.

Pao Tou Pai Tsai. Folded-leaf cabbage. This is planted in the middle of July and transplanted when the seedlings are 6 to 7 inches high. In October the outside leaves are tied over the head, and it is harvested in November.

105337. BRASSICA SP. Brassicaceae.

Hsiao Ching Kou Pai Tsai. Small green cabbage. Cultivated in the same way as *Pao Tou Pai Tsai* [105336].

105338. CAPSICUM ANNUUM L. Solanaceae.
Common redpepper.

Ta Shih Tzu Chiao. Large persimmon pepper which grows 3 to 4 inches in diameter.

105339. CAPSICUM ANNUUM L. Solanaceae.
Common redpepper.

Hsiao Chin Chiao. A small pepper about 3 inches long which ripens in June.

105340. CUCUMIS SATIVUS L. Cucurbitaceae.
Cucumber.

Kuai Huang Kwa. An early-maturing cucumber which the Chinese plant in cold-frames in the middle of March.

105341. CUCUMIS SATIVUS L. Cucurbitaceae.
Cucumber.

Ch'iu Huang Kwa. An autumn cucumber, planted early in August.

105342. LYCOPERSICON ESCULENTUM Mill. Solanaceae.
Tomato.

Ta Hsi Hung Shih. A red tomato 3 inches in diameter. A tall plant which bears fruit until late in the fall.

105343 to 105345. RAPHANUS SATIVUS L. Brassicaceae.
Radish.

105343. *Hsiao Shui Lo Pu,* small water radish. These are planted 3 inches apart and require very little water. If overirrigated they produce tops at the expense of the root.

105344. *Ch'ing Tsui Lo Pu,* green fragile radish. A late radish always eaten raw. Planted in August and ripens early in November.

105345. *Hsiang Ya Pai Lo Pu,* elephant-tusk radish. Planted 4 inches apart and pickled or used for soup.

105346. SOLANUM MELONGENA L. Solanaceae.
Eggplant.

Lao Lai Hei Chieh Tzu. A black eggplant 6 to 7 inches in diameter. Plant begins to bear when it has nine leaves and continues to set fruit until late fall.

105347. SOLANUM MELONGENA L. Solanaceae.
Eggplant.

Liu Ke Yieh Chieh Tzu, an early eggplant from 4 to 5 inches in diameter, with a rather short bearing period.

105348. (Undetermined.)

From Brazil. Seeds presented by J. R. Swallen, Bureau of Plant Industry. Received April 30, 1934.

An unidentified orchid collected on the Chapada Mesa between Caxias and Carolina, Maranhão, Brazil.

105349 to 105355.

From the Philippine Islands. Seeds presented by Dr. Arthur F. Fischer, Director of Forestry, Manila. Received April 23, 1934.

105349. CORYPHA ELATA Roxb. Phoenicaceae.
Palm.

A tall palm up to 60 feet high, with a spirally ridged trunk and lunate, fan-shaped leaves 8 to 10 feet across, made up of 80 to 100 sword-shaped segments. Native to Burma and Bengal.

For previous introduction see 104678.

105350. HETEROSPATHE ELATA Scheff. Phoenicaceae.
Palm.

A tall unarmed palm with a straight slender trunk and a terminal cluster of pinnate leaves. It is an attractive and graceful palm, suitable for the conservatory. Native to the island of Ambuyna, Dutch East Indies.

For previous introduction see 103971.

105351. LIVISTONA RÖTUNDFOLIA LUZONENSIS Becc. Phoenicaceae.
Palm.

A Philippine palm up to 35 feet high, with a straight terete trunk 6 to 10 inches thick. The fan-shaped leaves, 3 to 5 feet in diameter, are used for thatching. Native to the island of Luzon.

For previous introduction see 103783.

105352. ONCOSPERMA TIGILLARIA (Jack) Ridley. Phoenicaceae.
Palm.

An elegant palm with a trunk 30 to 40 feet high, armed with long black spines. The drooping pinnate leaves are 10 to 12 feet in length, with coriaceous pinnae 2 feet long, scurfy beneath. The blue-black berries are half an inch in diameter. Native to Malaya.

For previous introduction see 51777.

105353. ORANIA PALINDAN (Blanco) Merr. Phoenicaceae.
Palm.

A tall unarmed ornamental palm, native to Mindanao, Philippine Islands, at about 1,000 feet altitude. The trunk is straight and remarkably uniform in diameter, rarely exceeding 6 inches. The leaves are pinnate and silvery beneath.

For previous introduction see 94197.

105354. PINANGA INSIGNIS Beccari. Phoenicaceae.
Palm.

A rather small Philippine palm with a slender smooth trunk about 6 inches in diameter, graceful feathery leaves, and oval reddish fruits 2 inches in length. The seeds are occasionally used as a substitute for betel nuts in preparing "buayo," the mixture of leaves of *Piper betle*, lime, and betel nuts, which, when chewed, colors the saliva a characteristic red and is held to be a tonic and general stimulant.

105355. ZIZIPHUS TALANAI (Blanco) Merrill. Rhamnaceae.

A large forest tree of the Philippines, with alternate, obliquely obovate-lanceolate leaves, small flowers, and globose fruits. The seeds are said to be roasted and eaten.

105356 to 105440.

From Italy. Plants purchased from Fratelli Sgaravatti, Saonara. Received March 20, 1934.

105356 to 105375. *AMYGDALUS PERSICA* L.
Amygdalaceae. Peach.

105356. *Ammirabile*.

105357. *Clara Mayer*.

105358. *Di S. Martino*.

105359. *Dreyfus*.

105360. *Edouard André*.

105361. *Fogato*.

105362. *Genovese*.

105363. *Grossa giallo di Verona*.

105364. *Incomparabile Guilloux*.

105365. *Jacques Rarrerip*.

105366. *La France*.

105367. *Lorenzina*.

105368. *Lugliatica*.

105369. *Ornamento del mercato*.

105370. *Pavia giallo*.

105371. *Perla di Zolia*.

105372. *Pescantina*.

105373. *Poppa di Venere tardiva*.

105374. *Re Umberto*.

105375. *Trionfo di Solferino*.

105376 to 105409. *MALUS SYLVESTRIS* Mill.
Malaceae. Apple.

105376. *Attalino*.

105377. *Belle Agathe*.

105378. *Borsdorfer aus Palmyra*.

105379. *Britzer Dauerapfel*.

105380. *Calamana*.

105381. *Calvilla bianca d'estate*.

105382. *Carpentola dolce*.

105383. *Cedrata della Brianza*.

105384. *Clara bianca*.

105385. *Grossa di Bohn*.

105386. *Imperatore Guglielmo*.

105387. *La Zingarella*.

105388. *Paradiso*.

105389. *Principe verde*.

105390. *Ranciata di Coæ*.

105391. *Regina Luigia di Danimarca*.

105392. *Renetta di Berk*.

105393. *Renetta dei Carmelitani*.

105394. *Renetta dorata Peter Eusgen*.

105395. *Renetta dorata Reder*.

105396. *Renetta Federico il Grande*.

105397. *Renetta di Gaesdonk*.

105398. *Renetta di Zuccalmaglio*.

105399. *Renetta Oberdick*.

105400. *Renetta Rambour dott. Lucas*.

105401. *Renetta sczeziata*.

105402. *Renetta vera*.

105356 to 105440—Continued.

105403. *Rheinischer Krummstiel*.

105404. *Riccardo giallo*.

105405. *Rosa della Virginia*.

105406. *Scodellini*.

105407. *Sergente*.

105408. *Taffetà d'Autunno*.

105409. *Trovatello di Bedfordshire*.

105410 to 105412. *PRUNUS ARMENIACA* L.
Amygdalaceae. Apricot.

105410. *Della Val Venosta*.

105411. *Peche*.

105412. *Precoce giallo*.

105413 to 105440. *PYRUS COMMUNIS* L.
Malaceae. Common pear.

105413. *Angelica di Saonara*.

105414. *Bella Angevina*.

105415. *Bella di Fiandra*.

105440. *Trovatello di Hohensaatz*.

105441. *DELPHINIUM ZALIL* Aitch. and
Hemsl. Ranunculaceae.

From Scotland. Seeds presented by Thompson & Morgan, Ipswich, through Sir William Wright Smith, Rezius Keeper, Royal Botanic Garden, Edinburgh. Received April 27, 1934.

An erect perennial, 1 to 2 feet high, with slender ternately divided or triternate leaves 3 to 4 inches across and yellow flowers about 1 inch in diameter in a lax raceme. Native to Khorasan, Asia.

105442 to 105447.

From Turkey. Seeds presented by Harold T. Pence, Gaziantap. Received April 26, 1934.

A collection of locally grown vegetable seeds, collected at Merzifon; introduced for the use of Department specialists working in the north-central part of the United States.

105442. *ABELMOSCHUS ESCULENTUS* (L.) Moench. Malvaceae. **Okra.**

Flowering okra.

105443. *ALLIUM CEPA* L. Liliaceae. **Onion.**

Kelle; a large onion.

105444. *CAPSICUM ANNUUM* L. Solanaceae. **Common redpepper.**

A mild pepper.

105445. *CITRULLUS VULGARIS* Schrad. Cucurbitaceae. **Watermelon.**

105446. *SOLANUM MELONGENA* L. Solanaceae. **Eggplant.**

105447. *SPINACIA OLERACEA* L. Chenopodiaceae. **Spinach.**

105448 to 105461.

From Jamaica, British West Indies. Material presented by Col. Robert H. Montgomery, Director, Coconut Grove arboretum and T. A. Fennell, Bureau of Plant Industry. Received April 30, 1934.

105448. *ADENIUM OBESUM* (Forsk.) Roem. and Schult. Apocynaceae.

Cuttings collected in Hope Garden, Kingston. A slow-growing shrub, not over 3 feet high, native to the dry regions of Arabia and named after the desert port of Aden. The gorgeous rose-pink to white flowers are 3 inches across and remind one of enormous oleander blossoms. The flowers are borne so abundantly that they cover the entire shrub.

For previous introduction see 102644.

105449. *AMHERSTIA NOBILIS* Wall. Caesalpiniaceae.

Plants collected in the Castleton Gardens, Kingston. This gorgeous red-flowered tree is considered by some to be the most beautiful of all the flowering trees. It is native to the Malay Peninsula, and was named after Lady Amherst.

105450. *ANANAS SATIVUS* Schult. f. Bromeliaceae. **Pineapple.**

Seeds collected in Kingston.

105451. *ANANAS SATIVUS* Schult. f. Bromeliaceae. **Pineapple.**

Sugarloaf pineapple; purchased in the market at Kingston.

105452. *ARTOCARPUS INTEGRALIS* (Thunb.) Skeels. Moraceae. **Jackfruit.**

Seeds bought in the public market at Kingston.

105453. *ASTROCARYUM VULGARE* Mart. Phoenicaceae.

Plants purchased in the Castleton Gardens, Kingston. A spiny pinnate-leaved palm, 20 to 40 feet high, native to northern Brazil. The 8 to 10 leaves are about 9 feet long, with lanceolate shining-green segments, silvery white beneath.

105448 to 105461—Continued.

105454. *BUGINVILLEA* sp. Nyctaginaceae.

Cuttings, collected in the Hope Gardens, of a hybrid buginvillea (a seedling of *B. spectabilis lateritia*) with large bracts of a soft rosy-orange color.

105455. (Undetermined.)

Cuttings, collected in the Hope Gardens, of a large erect cactus, said to be a native species and to produce large white nocturnal flowers.

105456. *CHRYSOPHYLLUM CAINITO* L. Sapotaceae. **Star-apple.**

Seeds from a very large fruit of the purple variety served in a hotel at Kingston. The star-apple is a handsome West Indian tree with striking dark-green leaves, copper-colored underneath. The smooth, round, dark-purple fruit is about 3 inches in diameter. When the fruit is ripe, the white jellylike substance surrounding the seed is sweet and agreeable.

For previous introduction see 73003.

105457. *DILLENIA BURBIDGEI* (Hook. f.) Gilg. Dilleniaceae.

Plants purchased in the Castleton Gardens, Kingston. A small ornamental tree, native to Borneo, with large leaves and very beautiful bright-yellow flowers 2 inches in diameter.

For previous introduction see 66213.

105458. *LICUALA ELEGANS* Blume. Phoenicaceae. **Palm.**

Plants purchased in the Castleton Gardens, Kingston. A fan palm, native to Sumatra, with a short thick trunk about 4 feet high, a crown of orbicular leaves on petioles 3 to 5 feet long, with linear-lanceolate lobes obliquely truncate at the end.

For previous introduction see 80764.

105459. *NAPOLEONA IMPERIALIS* Beauv. Lecythidaceae.

Plant purchased in the Castleton Gardens, Kingston. An interesting ornamental tree from west Africa with oblong leaves, sometimes 18 inches in length, and solitary, saucer-shaped axillary flowers, dominantly reddish and bluish, and about 2 inches across; these are borne on the trunk and larger branches.

For previous introduction see 60439.

105460. *ONCOSPERMA FASCICULATUM* Thwaites. Phoenicaceae. **Palm.**

Seeds collected in Kingston. A graceful cluster palm, 40 to 60 feet high, with spiny stems and equally pinnate leaves about 18 feet long. Native to Ceylon.

For previous introduction see 103730.

105461. *THUNBERGIA ERECTA* (Benth.) T. Anders. Acanthaceae.

Plants purchased in the Castleton Gardens, Kingston. Variety *alba*, a form with white flowers.

For previous introduction see 103933.

105462. *DIOSCOREA ALATA* L. Dioscoreaceae. **Winged yam.**

From Florida. Tubers presented by H. O. Albert, Brooksville; originally from Hawaii. Received May 3, 1934.

A strain of the Hawaiian purple-skinned yam (F. P. I. 47446) with nearly pure-

105462—Continued.

white flesh instead of the purple-streaked or tinted flesh common in the ordinary form of this yam. The tubers are of desirable form and size, weighing usually 12 to 20 ounces each.

For previous introduction see 101189.

105463 to 105466. *AMYGDALUS PERSICA* L. Amygdalaceae. Peach.

From Argentina. Seeds presented by the manager of the Tigre Packing Co., Province of Buenos Aires, through A. M. Warren, American consul general, Buenos Aires. Received May 1, 1934.

A collection of seeds from trees native to the lower end of the delta of the Parana River, Argentina. Introduced for the use of Department specialists interested in plant breeding.

105463. Fruit ripens the end of February.

105464. Fruit ripens the first week in March.

105465. Fruit ripens the first week in March.

105466. [No data.]

105467. *SOJA MAX* (L.) Piper. Fabaceae. Soybean.

From Spain. Seeds presented by Alfonso Regoyos, Madrid. Received May 9, 1934.

A variety, originally from Chosen, which is most promising under semiarid conditions in Spain.

105468 to 105471.

From French Indo-China. Seeds presented by M. Poilane, Institut des Recherches Agronomiques de l'Indochine, Division de Botanique Forestiere, Cholon, Cochinchina. Received May 3, 1934.

105468. *BAUHINIA MALABARICA* Roxb. Caesalpiniaceae.

For previous introduction and description see 105240.

105469. *CROTALARIA* sp. Fabaceae.

105470. (Undetermined.)

A leguminous shrub with foliage excellent for shading crops.

105471. (Undetermined.)

A leguminous shrub whose leaves are browsed by cattle.

105472 to 105477.

From the Union of Soviet Socialist Republics. Seeds presented by the Alma Ata Botanic Garden, Alma Ata, Kazakstan. Received May 4, 1934.

105472. *ALTHAEA NUDIFLORA* Lindl. Malvaceae.

A biennial 6 feet high, with large roundish cordate, three-lobed, rough-hairy leaves and white flowers. Native to the Altai Mountains, Siberia.

For previous introduction see 104636.

105473. *HEDYSARUM SONGARICUM* Bong. Fabaceae.

An erect herbaceous perennial, a foot or more high, with several branched stems, small compound leaves, and pink flowers in spikelike clusters. Native to central Asia.

105472 to 105477—Continued.

105474. *IRIS ALBERTI* Regel. Iridaceae.

A bearded iris with glaucous sword-shaped leaves, about as long as the stem, and purplish flowers, yellowish toward the base, nearly 2 inches long. Native to Turkistan.

105475. *ROSA* sp. Rosaceae.105476. *TULIPA OSTROWSKIANA* Regel. Liliaceae. Tulip.

A tulip from eastern Turkistan, with a stem about 8 inches high, bearing three linear-lanceolate leaves and a solitary flower. The perianth segments are cinnamon-purple and more or less spreading.

105477. *TULIPA* sp. Liliaceae.105478 to 105482. *SOLANUM TUBEROSUM* L. Solanaceae. Potato.

From Norway. Tubers presented by A. P. Lunden, Akervektforsakene Norges Landbrukskole i Aas. Received May 11, 1934.

A collection of wart-immune potatoes introduced for the use of Department specialists.

105478. *Arnica*. Of German origin.105479. *Hindenburg*. Of German origin.

105480. *Hindenburg* × *Centifolia*, plant 9. A cross made at the garden at Aas. A medium early potato, which is resistant to common scab.

105481. *Hindenburg* × *Centifolia*, plant 15. A cross made at the garden at Aas. Matures rather late and is resistant to late blight of foliage and tubers.

105482. *Jubel*. Of German origin.

105483 to 105577.

From Spain. Plants purchased from Viveros Manuel San Juan, Sabinan, Zaragoza Province. Received May 4, 1934.

Introduced for the use of Department specialists.

105483 to 105497. *AMYGDALUS PERSICA* L. Amygdalaceae. Peach.105483. *Agra*.105484. *Amarillo de Sastago*.105485. *Anteado*.105486. *Blanca*.105487. *Blanquilla*.105488. *De Conserva*.105489. *De Gallur amarillo*.105490. *De Gallur encarnado*.105491. *De Grio*.105492. *De Zuera*.105493. *Encarnado de Agosto*.105494. *Encarnado tardio*.105495. *Espartana*.105496. *Jeróninia*.105497. *Zaragozano encarnado*.105498 to 105535. *MALUS SYLVESTRIS* Mill. Malaceae. Apple.105498. *Bella de Jardines*.105499. *Calvilla amarilla de Oquendo*.105500. *Camuesca castellana de verano*.

105578. CHRYSANTHEMUM SP.

From Normal, Ill. Plants presented by A. M. Augustine, American Association of Nurserymen. Received May 11, 1934.

A chrysanthemum, originally from Germany, which bears bronze and pink flowers with a pineapple odor.

105579. SOJA MAX (L.) Piper. Fabaceae. Soybean.

From the Union of Soviet Socialist Republics. Seeds presented by J. W. Pincus, of the Amtorg Corporation, New York City. Received May 11, 1934.

A soybean which was developed under French conditions by Prof. L. Rouest. The seed is medium large, olive yellow with a black hilum.

105580 and 105581.

From Mexico. Seeds presented by Dr. C. A. Purpus, Hacienda Zacuapam, Huatusco, Vera Cruz. Received May 11, 1934.

105580. CHAMAEDOREA SP. Phoenicaceae. Palm.

A shade-loving palm, apparently of the section of genus to which *Chamaedorca sartorii* belongs, in which the seedlings have simple bifid leaves.

105580 and 105581—Continued.

105581. *IPOMOEA TUXTLENSIS* House. Convolvulaceae.

A slender perennial vine 6 to 12 feet long, softly pubescent, with ovate-cordate leaves 2 to 3 inches long and deep-purple flowers about 1½ inches across. Native to Chiapas, Mexico.

105582. *CUCURBITA MOSCHATA* Duchesne. Cucurbitaceae. Cushaw.

From Washington, D. C. Seeds presented by A. J. Pieters, Bureau of Plant Industry. Received May 16, 1934.

A globular green cushaw, originally from northern Africa. The plant roots at all the internodes, so that if part of the vine is injured by insects the rest of the plant continues to grow.

105583. *ASTRAGALUS DAVURICUS* (Pall.) DC. Fabaceae. Milkvetch.

From China. Seeds presented by S. T. Shen, Yenching University, Peiping. Received May 10, 1934.

A perennial 3 to 5 feet high, with purple flowers, that grows wild around Peiping and is considered to be promising as a green manure.

For previous introduction see 90545.

105584 to 105645.

From Nanking, China. Seeds collected in Kwangsi Province by Albert N. Steward and H. C. Cho, University of Nanking. Received April 28, 1934.

105584. *ADINA* sp. Rubiaceae.

Sha Tung Kua. No. F. 101. Collected October 25, 1933, at Ta Tseh Tsuen, Yung Hsien. A small evergreen tree with small flowers in globose heads and globose green fruits one-half inch in diameter.

105585. *ALANGIUM CHINENSE* (Lour.) Rehd. Cornaceae.

No. F. 85. Collected August 25, 1933, at Ta Tseh Shan, Yung Hsien, in forest at 1,600 feet above sea level. An evergreen tree of remarkably rapid growth, reaching its full height of 50 feet in 5 years, after which the trunk merely thickens. The small, whitish, fragrant flowers are in cymes, and the ovate black fruits are one-half inch long.

For previous introduction see 93175.

105586. *ALBIZZIA* sp. Mimosaceae.

No. F. 43. Collected October 1, 1933, at Tseh Tsuen, Yung Hsien, at 1,000 feet altitude, along the roadside.

105587. *ALBIZZIA* sp. Mimosaceae.

No. F. 112. Collected November 10, 1933, in a valley at Kwei Ling, Hsien. A small tree with pods nearly 2 inches long.

105588. *ALBURITES FORDII* Hemsl. Euphorbiaceae. Tung-oil tree.

Tung Tze. No. F. 23. Collected at Loh Hoh Tsuen, Ling Yui Hsien, June 1, 1933, at 3,000 feet altitude.

105589. *ALNUS* sp. Betulaceae. Alder.

Pei Fan Mu. No. F. 4. Collected March 16, 1933, in the valley foothills at Loh Hoh Tsuen, Ling Yui Hsien. A small tree about 20 feet high, fairly common in this region.

105584 to 105645—Continued.

105590. *BENZOIN* sp. Lauraceae. Spicebush.

No. F. 34. Collected September 1, 1933, at 1,000 feet altitude in a valley at Ta Tseh Tsuen, Yung Hsien. A small tree about 10 feet high with black fruits.

105591. *BENZOIN* sp. Lauraceae. Spicebush.

No. F. 89. Collected October 21, 1933, along a stream at Chang An, Yung Hsien, at 1,500 feet altitude. A moderate-sized tree with globose black fruits about two-fifths of an inch in diameter.

105592. *CALLICARPA* sp. Verbenaceae.

Tze Chu. No. F. 99. Collected October 26, 1933, at 1,100 feet altitude at Ta Tseh Tsuen, Yung Hsien. A small tree with globose violet fruits.

105593. *CELTIS* sp. Ulmaceae.

Ching P'oh. No. F. 79. Collected October 21, 1933, in dense forest, 1,500 feet altitude at Chang An, Yung Hsien. A tree with globose green fruits.

105594. *CITRUS GRANDIS* (L.) Osbeck. Rutaceae. Grapefruit.

Yu Tze. No. F. 67. Collected October 25, 1933, at 1,500 feet altitude at Chang An, Yung Hsien. A cultivated tree with yellow fruits of good flavor.

105595. *CITRUS* sp. Rutaceae.

Chu Tze. No. F. 2. Collected March 2, 1933, in the market at Ling Yui Hsien. A lemon-yellow fruit, 6 inches in diameter, of good flavor but not very juicy.

105596. *CUNNINGHAMIA LANCEOLATA* (L.) Hook. Pinaceae. China-fir.

Shan Muh. No. F. 69. Collected October 20, 1933, on a slope at 1,600 feet altitude at Ta Tseh Tsuen, Yung Hsien. A common forest tree about 65 feet tall.

For previous introduction see 99157.

105597. *DIOSPYROS KAKI* L. f. Diospyraceae. Kaki persimmon.

Yah Shih Tze. No. F. 83. Collected November 2, 1933, in a valley at 1,000 feet altitude at Ta Tseh Tsuen, Yung Hsien. A small tree with ovoid yellow fruits over an inch long.

105598. *DIOSPYROS SINENSIS* Hemsl. Diospyraceae. Persimmon.

Shih Tze. No. F. 88. Collected in a cultivated field at 1,000 feet altitude at Ta Tseh Tsuen, Yung Hsien. A small semievergreen Chinese tree with a short thick trunk, widespread branches, and spiny branchlets, thick oblong-lanceolate leaves 2 to 3 inches long, and globose or ovoid golden-yellow edible fruits nearly 2 inches long.

For previous introduction see 95650.

105599. *ELAEAGNUS* sp. Elaeagnaceae.

Hu Teh Tze. No. F. 14. Collected May 6, 1933, on a slope at 4,000 feet altitude at Chu Tung, Ling Yui Hsien. An ornamental deciduous tree with small but fragrant flowers and red edible fruits.

105600. *EUSCAPHIS JAPONICA* (Thunb.) Dipp. Staphyleaceae.

Yeh Yah Chung. No. F. 52. Collected October 20, 1933, in a valley at 1,000 feet altitude near Ta Tu Tsuen, Yung

105584 to 105645—Continued.

Hsien. A shrub or small tree with compound leaves composed of 7 to 11 ovate-lanceolate serrate leaflets 1 to 3 inches long. The small white flowers, in upright panicles, are followed by brown-red pods which open, exposing the steel-blue fruits.

For previous introduction see 102938.

105601 to 105607. *FICUS* spp. Moraceae.105601. *FICUS* sp.

Yen Pa Teu. No. F. 19. Collected May 10, 1933, on a rocky slope at 3,500 feet altitude near Loh Hoh Tsuen, Ling Yui Hsien. A woody vine with black globose fruits.

105602. *FICUS* sp.

No. F. 20. Collected May 20, 1933, in a valley at 3,500 feet altitude near Loh Hoh Tsuen, Ling Yui Hsien. A small tree with black edible fruits.

105603. *FICUS* sp.

No. F. 30. Collected August 12, 1933, in mixed forest at 1,600 feet altitude, near Ta Tseh Tsuen, Yung Hsien. A tree over 30 feet high with yellow fruits.

105604. *FICUS* sp.

No. F. 39. Collected June 14, 1933, in a valley at 3,000 feet altitude near Nê I, Ling Yui Hsien. A vine with red fruits.

105605. *FICUS* sp.

No. F. 63. Collected October 23, 1933, in a forest at 600 feet altitude at Ch'ang An, Yung Hsien. A shrub with globose yellow fruits.

105606. *FICUS* sp.

No. F. 65. Collected October 23, 1933, on a rocky slope at 600 feet altitude near Ch'ang An, Yung Hsien. A small tree.

105607. *FICUS PUMILA* L.

No. F. 86. Collected October 30, 1933, in a valley at 1,100 feet altitude near Ta Tseh Tsuen, Yung Hsien. A woody vine with black ovate fruits nearly 3 inches long.

105608. *GARDENIA* sp. Rubiaceae.

Chih Tze Hua. No. F. 54. Collected October 20, 1933, in a valley at 1,100 feet altitude near Ta Tseh Tsuen, Yung Hsien. A shrub over 4 feet high with reddish-yellow fruits.

105609. *GLEDITSIA SINENSIS* Lam. Caesalpiniaceae. Chinese honeylocust.

No. F. 115. Collected November 10, 1933, along the roadside at 300 feet altitude, near Kwei Ling, Hsien. A large tree with black pods 10 inches long and over an inch wide.

For previous introduction see 90349.

105610. *ILEX* sp. Aquifoliaceae.

No. F. 87. Collected September 15, 1933, on a slope at 1,000 feet altitude, near Ta Tseh Tsuen, Yung Hsien. A shrub with globose fruits less than half an inch in diameter.

105584 to 105645—Continued.

105611. *LIQUIDAMBAR FORMOSANA* Hance. Hamamelidaceae. Formosa sweetgum.

Lo Lo Tung. No. F. 77. Collected November 20, 1933, in a valley at 1,100 feet altitude, near Ta Tseh Tsuen, Yung Hsien. A handsome tree up to 100 feet high, with a straight trunk, a much-branched head, and frequently buttressed roots. The leaves turn to chestnut brown or red in the autumn and are retained late into the winter. The fruits are globose spiny-headed capsules.

For previous introduction see 99187.

105612. *MELIA* sp. Meliaceae.

No. F. 24. Collected May 10, 1933, in a valley at 4,000 feet altitude, near Chu Tung, Ling Yui Hsien. A tree over 60 feet high, with handsome pinnate foliage and yellow globose fruits.

105613. *MELIA* sp. Meliaceae.

Ku Lien Muk. No. F. 82. Collected October 23, 1933, on the roadside at 600 feet altitude, near Ch'ang An, Yung Hsien. An ornamental tree about 30 feet high, with handsome pinnate foliage.

105614. *MUCUNA* sp. Fabaceae.

No. F. 13. Collected June 9, 1933, in a valley over 3,000 feet altitude, near Nê I, Ling Yui Hsien. An ornamental woody vine with pods about 18 inches long.

105615. *MYRICA* sp. Myricaceae.

Yang Mei. No. F. 9. Collected June 8, 1933, on a slope at 4,000 feet altitude, near Ping Shan, Ling Yui Hsien. A shrub over 6 feet high, with sour, red, edible fruits.

105616. *MYRICA* sp. Myricaceae.

Yang Mei. No. F. 21. Collected May 21, 1933, in a valley at 3,500 feet altitude near Loh Hoh Tsuen, Ling Yui Hsien. A small tree over 10 feet high, with red edible fruits.

105617. *ORMOSIA* sp. Fabaceae.

No. F. 29. Collected August 20, 1933, in a forest at 1,600 feet altitude, near Ta Tseh Tsuen, Yung Hsien. A tree about 35 feet high, with black pods containing red seeds.

105618. *PALURUS* sp. Rhamnaceae.

No. F. 106. Collected November 10, 1933, along a roadside at 300 feet altitude, near Kwei Ling, Hsien. A small deciduous tree with yellowish flowers and round flat brown fruits.

105619. *PITTIOSPORUM* sp. Pittosporaceae.

Hai Tung. No. F. 62. Collected October 25, 1933, in a valley at 1,100 feet altitude, near Ta Tseh Tsuen, Yung Hsien. A small evergreen tree about 10 feet high, with yellow globose fruits.

105620. *PITTIOSPORUM* sp. Pittosporaceae.

No. F. 74. Collected October 25, 1933, in a valley at 1,100 feet altitude, near Ta Tseh Tsuen, Yung Hsien. A small evergreen tree about 10 feet high, with globose capsules.

105621. *PRUNUS* sp. Amygdalaceae.

Ku Li. No. F. 26. Collected September 1, 1933, in a valley at 1,600 feet altitude, near Ta Tseh Tsuen, Yung Hsien. A tree about 15 feet high, with globose fruits, edible, but somewhat bitter.

105584 to 105645—Continued.

105622. PTEROCARYA STENOPTERA DC.
Juglandaceae. Chinese wingnut.

Feng Young. No. F. 56. Collected at about 700 feet altitude along a roadside near Ch'ang An, Yung Hsien. A large tree over 50 feet high, with large pinnate leaves 6 to 12 inches long, inconspicuous flowers, and small winged nuts.

105623. PUNICA GRANATUM L. Punicaceae. Pomegranate.

Shih Liu. No. F. 111. Collected in the Kwei Ling market. A small globose, reddish-yellow pomegranate about 3 inches in diameter.

105624. PYRUS sp. Malaceae.

Yeh Li. No. F. 68. Collected October 10, 1933, at 1,100 feet altitude, along the roadside near Ta Tseh Tsuen, Yung Hsien. A tree about 25 feet high, with dark-yellow globose fruits.

105625. PYRUS sp. Malaceae.

Lu. No. F. 92. Collected October 23, 1933, in a cultivated field near Ch'ang An, Yung Hsien. A globose yellow fruit about 1 inch in diameter.

105626. RADERMACHEERA sp. Bignoniaceae.

No. F. 114. Collected November 10, 1933, along the roadside near Kwei Ling City. A handsome tree with large pinnate leaves and terminal panicles of yellowish flowers.

105627. REEVESIA sp. Sterculiaceae.

No. F. 48. Collected October 15, 1933, along a roadside at 1,100 feet altitude, near Ta Tseh Tsuen, Yung Hsien. An evergreen tree over 30 feet high. The reevesias have alternate entire leaves and dense corymbs of white or pink flowers.

105628. RHUS sp. Anacardiaceae.

Yeh Chih Shu. No. F. 38. Collected October 14, 1933, at 1,100 feet altitude, in a valley near Ta Tseh Tsuen, Yung Hsien.

105629 to 105632. RUBUS spp. Rosaceae.

105629. RUBUS sp.

No. F. 5. A vine collected on a slope at 3,500 feet altitude, near Loh Hoh Tsuen, Ling Yui Hsien. The edible fruits are dark red.

105630. RUBUS sp.

Hwang Pao. No. F. 8. Collected June 6, 1933, at 3,500 feet altitude in a valley near Loh Hoh Tsuen, Ling Yui Hsien. A shrub about 5 feet high, with sweet, edible, yellow fruits.

105631. RUBUS sp.

Shan Pao Tze. No. F. 11. Collected June 14, 1933, on the slope of Lao Shan, at 4,000 feet altitude, near Né Kwang, Ling Yui Hsien. A shrub over 10 feet high, with edible yellow fruits.

105632. RUBUS sp.

No. F. 18. Collected June 6, 1933, in a valley at 3,900 feet altitude, near Né Hung, Ling Yui Hsien. A shrub over 6 feet high, with hairy red fruits.

105633. SAPINDUS MUKOROSI Gaertn. Sapindaceae. Soapberry.

Wu Hwan Tze. No. F. 108. Collected November 10, 1933, in a valley near Kwei

105584 to 105645—Continued.

Ling, Hsien. A Chinese tree about 35 feet high, with alternate pinnate leaves and round yellow fruits an inch in diameter.

For previous introduction see 50724.

105634. SAPIUM SEBIFERUM (L.) Roxb. Euphorbiaceae. Chinese tallowtree.

Wu Chu. No. F. 55. Collected November 10, 1933, in a valley at 1,100 feet altitude near Ta Tseh Tsuen, Yung Hsien. A tree 25 feet high, with rhombic-ovate leaves, handsomely red colored with age, and inconspicuous flowers in terminal racemes. The oil from the seeds is used for making machine oil and the tallow from the outer seed coat for making candles.

For previous introduction see 95655.

105635. SORBUS sp. Malaceae.

No. F. 90. Collected October 25, 1933, at 1,600 feet altitude at Ta Tseh Shan, Yung Hsien. A small tree.

105636. SPIRAEA sp. Rosaceae.

Chen Chu Hwa. No. F. 46. Collected September 18, 1933, in a valley at 6,500 feet altitude near Ling Wang Shan, San Kiang Hsien. A shrub over 4 feet high, with yellow fruits.

105637. STRANVAESIA sp. Malaceae.

Shan Hu Shu. No. F. 98. Collected September 18, 1933, in dense forest at 6,500 feet altitude near Ling Wang Shan, San Kiang Hsien. A small tree with globose red edible fruits.

105638. STYRAX sp. Styracaceae.

No. F. 45. Collected October 2, 1933, at 1,600 feet altitude at the edge of the forest near Ta Tseh Tsuen, Yung Hsien. A tree about 35 feet high, with white flowers and grayish drupes.

105639. THEA sp. Theaceae.

Cha Tze. No. F. 22. Collected May 6, 1933, in a cultivated field at 4,000 feet altitude at Chu Tung, Ling Yui Hsien. A small tree about 10 feet high, from whose seeds oil is obtained.

105640. THEA sp. Theaceae.

Cha Tze. No. F. 44. Collected October 20, 1933, on a slope at 1,100 feet altitude at Ta Tseh Tsuen, Yung Hsien. A cultivated tree 75 feet high, with reddish-green fruits and black seeds which are a source of oil.

105641 to 105643. VIBURNUM spp. Caprifoliaceae.

105641. VIBURNUM sp.

No. F. 35. Collected September 18, 1933, in a valley at 6,500 feet altitude near Ling Wang Shan, San Kiang Hsien. A small tree over 6 feet high, with edible red fruits.

105642. VIBURNUM sp.

No. F. 51. Collected October 25, 1933, in a valley at 1,100 feet altitude near Ta Tseh Tsuen, Yung Hsien. A small tree about 8 feet high, with red ovate fruits.

105584 to 105645—Continued.

105643. *VIBURNUM* sp.

No. F. 100. Collected September 17, 1933, at 6,500 feet altitude near Ling Wang Shan, San Kiang Hsien. A tree about 10 feet high, with small globose red edible fruits.

105644. *VITIS* sp. Vitaceae.

Pu Tao. No. F. 91. Collected October 23, 1933, at Ch'ang An, Yung Hsien. A vine with black globose fruits.

105645. *WISTARIA* sp. Fabaceae.

No. F. 102. Collected October 20, 1933, in a valley at 1,100 feet altitude near Ta Tseh Tsuen, Yung Hsien. A vine with pods over 5 inches long and less than half an inch wide.

105646 to 105652.

From China. Seeds presented by H. H. Chung, Wu-Han University, Wuchang, Hupeh. Received May 9, 1934.

Nos. 105646 to 105648 were collected in the Lushan Mountains, Kiangsi Province, by H. H. Chung and S. C. Sun.

105646. *ACER* sp. Aceraceae. **Maple.**105647. *CEPHALOTAXUS FORTUNEI* Hook. Taxaceae. **Chinese plum-yew.**

A small tree up to 30 feet high, native to central China. The linear leaves, 2 to 3 inches long, spread nearly horizontally and are glossy green above with two pale bands beneath, and the ovoid purple fruits are 1 inch long.

For previous introduction see 100521.

105648. *CORNUS* sp. Cornaceae.105649. *EUCOMMIA ULMOIDES* Oliver. Trochodendraceae. **Tu-chung.**

Shih mien shu. Collected in Hupeh Province by S. C. Sun. A tree which reaches a height of 80 feet and seems to grow best when sheltered by other trees. It is native to the southwestern part of China. The native name means stone cotton tree, in reference to the rubber-like threads of shining whitish color which appear when the pieces of bark or leaf are snapped across.

For previous introduction see 98370.

Nos. 105650 to 105652 were collected in the Lushan Mountains, Kiangsi Province, by H. H. Chung and S. C. Sun.

105650. *LIRIODENDRON CHINENSE* (Hemsl.) Sargent. Magnoliaceae. **Chinese tuliptree.**

An ornamental deciduous tree up to 50 feet high, native to central China. The leaves, 5 to 6 inches long, have four acute or acuminate lobes, rounded or slightly cordate at the base; the lilylike flower is about 2 inches long. This variety is somewhat more tender than our native species, *Liriodendron tulipifera*.

For previous introduction see 104206.

105651. *NYSSA SINENSIS* Oliv. Cornaceae.

A deciduous shrub or small tree about 20 feet high, with oblong-elliptic, membranous leaves 4 to 6 inches long, inconspicuous flowers, and ovoid blue fruits about one-half inch long. The leaves become brilliant red in autumn. It is native to western China.

105646 to 105652—Continued.

105652. *SASSAFRAS TZUMU* Hemsl. Lauraceae.

The Chinese sassafras is common in moist woods in western Hupeh, China, where it becomes a handsome tree sometimes 100 feet tall with horizontal branches. The yellow flowers are produced in great quantity in early spring before the leaves unfold; the globose fruits are black with a glaucous bloom.

105653 to 105660.

From the Belgian Congo, Africa. Seeds presented by J. B. H. Lejeune, Director, Government Agronomic Station, Kisozi, Territories of Ruanda-Urundi. Received May 11, 1934.

105653 to 105655. *CROTALARIA* spp. Fabaceae.105653. *CROTALARIA INCANA* L.

A tropical American plant about 3 feet high, somewhat shrubby, and softly pubescent. The yellow flowers are in dense racemes 2 to 8 inches long.

105654. *CROTALARIA SPINOSA* Hochst.

A spiny perennial with an annual stem 6 to 18 inches long, oblanceolate leaflets one-third of an inch long, and scattered yellow flowers. Native to tropical Africa.

105655. *CROTALARIA* sp.105656. *ERYTHRINA* sp. Fabaceae.105657. *LUPINUS* sp. Fabaceae.105658. *PSEUDARTHRA HOOKERI* Wight and Arn. Fabaceae.

A tall herbaceous leguminous plant which, at a distance, looks like a pink spirea. It is abundant in the tree savanna country and may be useful as a green manure or even as an ornamental.

For previous introduction see 50052.

105659. *VICIA* sp. Fabaceae. **Vetch.**

105660. (Undetermined.)

105661 to 105675.

From southwestern China. Seeds presented by Lord Aberconway, Bodnant Gardens, Tal-y-Cafn, North Wales. Received May 10, 1934.

105661. *ACER CAPPADOCICUM SINICUM* Rehd. Aceraceae. **Maple.**

McL. no. 16. A Chinese maple, sometimes 50 feet high, with bright-green, five-lobed leaves about 3 inches long and small pale-yellow flowers. This variety differs from the typical form chiefly in having smaller leaves.

105662. *ANEMONE DEMISSA* Hook. f. and Thoms. Ranunculaceae.

McL. no. 60. A lovely alpine plant, common in limestone soil in mountain meadows at altitudes between 11,000 and 13,000 feet in Yunnan. The leaves form a basal rosette, and the large white flowers are in umbels.

Received as variety *villosa*, for which a place of publication has not been found.

For previous introduction see 100148.

105661 to 105675—Continued.

105663. *BERGENIA DELAVAYI* (Franch.) Engler. Saxifragaceae.

McL. no. 23. A handsome perennial with broadly obovate leaves 3 to 4 inches long and large purple flowers in small racemes. Native to Yunnan and closely allied to *Bergenia purpurascens*.

105664. *EUONYMUS HAMILTONIANUS* Wall. Celastraceae.

McL. no. 126. A large Himalayan shrub which, under favorable circumstances, becomes a moderate-sized tree 30 to 35 feet high, with a short straight trunk 4 to 5 feet in circumference. The clusters of greenish-white flowers are followed by yellow capsules, the seeds of which are entirely surrounded by a scarlet aril. The fruit begins to ripen in August, and the leaves are brilliantly colored in the autumn.

For previous introduction see 103773.

105665. *EUONYMUS ILICIFOLIA* Franch. Celastraceae.

McL. no. 121. A much-branched shrub 6 to 12 feet high, with evergreen, leathery, ovate-lanceolate leaves, remotely dentate, and small flowers. The foliage strongly resembles that of certain hollies. Native to Yunnan, China.

105666. *GLYCYRRHIZA ECHINATA* L. Fabaceae.

McL. no. 110. An upright, little-branched perennial, with compound leaves composed of 5 or 6 pairs of elliptic leaflets and bluish flowers in compact globose heads. Native to Europe and western Asia.

For previous introduction see 65868.

105667. *INCARVILLEA GRANDIFLORA BREVIPES* Sprague. Bignoniaceae.

McL. no. 33. A low perennial herb, native to Yunnan, China. The pinnately divided leaves, 1 foot long, are made up of ovate, nearly entire segments, and the brilliant-crimson, trumpet-shaped flowers, 2 to 3 inches long, are borne in clusters of 8 to 12 on scapes a foot high.

For previous introduction see 99877.

105668. *INDIGOFERA PENDULA* Franch. Fabaceae.

McL. no. 39. An exceedingly ornamental shrub 10 to 15 feet high, with handsome bluish-purple flowers in large pendulous racemes.

For previous introduction see 59419.

105669. *KETELEERIA DAVIDIANA* (Bertrand) Beissner. Pinaceae.

McL. no. P. 28. A coniferous tree, native to western China, which is closely allied to the firs. It sometimes becomes 100 feet tall, is of pyramidal habit, and has handsome green glossy firlike foliage. The tree is said to be somewhat tender to frost and therefore probably adapted for growing only in the southern half of the United States.

For previous introduction see 101964.

105670. *MELIOSMA CUNEIFOLIA* Franch. Sabiaceae.

McL. no. P. 80. A beautiful shrub or small tree up to 12 feet high. In habit it resembles the weeping willow, with

105661 to 105675—Continued.

drooping branches bearing at their tips large pyramidal clusters of cream-colored flowers.

For previous introduction see 55936.

105671. *PAEONIA DELAVAYI* Franch. Ranunculaceae. **Peony.**

McL. no. 5. A very attractive vigorous shrub 4 feet high, with deep-crimson flowers 3 inches in diameter.

For previous introduction see 103259.

105672. *PRIMULA LITTONIANA* Forrest. Primulaceae.

McL. no. 37. A handsome plant of the section *Muscarioides*, 2 to 3 feet tall, growing in swampy meadows in southwestern China between 10,000 and 11,000 feet altitude. The gray-green hairy leaves form a rosette from which rises the scapes bearing pendent deep indigo-blue flowers in densely packed spikes, sometimes 5 inches long. The blood-red bracts and calyxes of the flowers form a wonderful contrast to the blue flowers.

For previous introduction see 100026.

105673. *RHODODENDRON BEESIANUM* Diels. Ericaceae.

McL. no. 64. A shrub 15 to 20 feet high, with leathery purple-green, narrowly lanceolate leaves about 6 inches long and deep rich-rose flowers up to 2 inches across. Allied to *R. delavayi*, and native to Yunnan.

For previous introduction see 103430.

105674. *RHODODENDRON CUNEATUM* W. W. Smith. Ericaceae.

McL. no. 73. A small shrub 4 feet high, with elliptical-oval leaves, silky beneath, and deep lavender flowers.

For previous introduction see 97390.

105675. *BELAMCANDA CHINENSIS* (L.) DC.

McL. no. 201. A low-growing form with yellowish flowers.

105676 to 105706.

From Nanking, China. Seeds collected in Kwangsi Province by A. N. Steward and H. C. Cheo, University of Nanking. Received April 28, 1934.

105676. *BOEHMERIA* sp. Urticaceae.

No. F. 6. Collected June 6, 1933, on a rocky slope at Loh Hoh Tsuen, Ling Yui Hsien, at 3,500 feet altitude. A shrub about 10 feet high, with red fruits.

105677. *CALAMUS* sp. Phoenicaceae.

No. F. 32. Collected August 12, 1933, at 1,800 feet altitude in dense forest near Ta Tseh Tsuen, Yung Hsien. A climbing palm with spiny stems and yellow edible fruits.

105678. *CLERODENDRUM* sp. Verbenaceae.

No. F. 57. Collected October 1, 1933, in a valley at 1,200 feet altitude near Ta Tseh Tsuen, Yung Hsien. A small tree about 18 feet high.

105679. *EUONYMUS* sp. Celastraceae.

No. F. 58. Collected October 1, 1933, at 1,800 feet altitude in a forest near Ta Tseh Shan, Yung Hsien. A tree about 40 feet high, with round yellow fruits.

105676 to 105706—Continued.

105680. *EURYA* sp. Theaceae.

No. F. 70. Collected September 18, 1933, along a roadside at 6,600 feet altitude near Ling Wang Shan, San Kiang Hsien. A tree about 18 feet high, with black globular fruits.

105681. *FICUS* sp. Moraceae.

No. F. 15. Collected May 12, 1933, along a stream at 3,300 feet altitude near Nè I, Ling Yuin Hsien. A tree about 35 feet high, with red fruits.

105682. *MALLOTUS* sp. Euphorbiaceae.

No. F. 33. Collected August 3, 1933, at 1,200 feet altitude near Ta Tseh Tsuen, Yung Hsien. A tree about 18 feet high, with red fruits.

105683. *MALLOTUS* sp. Euphorbiaceae.

No. F. 64. Collected October 25, 1933, in a valley at 1,200 feet altitude near Ta Tseh Tsuen, Yung Hsien. A tree about 7 feet high, with round black spiny fruits.

105684. *NAGEIA* sp. Taxaceae.

No. F. 72. Collected October 16, 1933, in a valley at 1,200 feet altitude near Ta Tseh Tsuen, Yung Hsien. An evergreen tree 20 feet high, with globose green fruits.

105685. *RHODOMYRTUS TOMENTOSA* (Ait.) Wight. Myrtaceae. Downy rosemyrtle.

No. F. 109. Collected November 10, 1933, in the Kwei Ling market. A shrub with black edible fruits about one-half inch long. The fruits as well as the under sides of the leaves are covered with fine gray hairs.

For previous introduction see 65849.

105686. *CORIARIA* sp. Coriariaceae.

No. F. 7. Collected June 8, 1933, on a slope at nearly 4,000 feet altitude near Loh Hoh Tsuen, Ling Yuin Hsien. A shrub over 6 feet high, with racemes of black fruits.

105687. (Undetermined.)

No. F. 10. Collected May 30, 1933, along a stream at 3,800 feet altitude near Nè I, Ling Yuin Hsien. A small tree 10 feet high, with black fruits.

105688. (Undetermined.)

No. F. 17. Collected May 6, 1933, in a valley at 4,300 feet altitude near Nè Hung, Ling Yuin Hsien. A leguminous tree over 60 feet high.

105689. (Undetermined.)

No. F. 27. Collected September 1, 1933, at 1,800 feet altitude along the roadside near Ta Tseh Tsuen, Yung Hsien. A tree over 30 feet high, with red fruits.

105690. (Undetermined.)

No. F. 28. Collected September 17, 1933, in a valley at 1,800 feet altitude near Ta Tseh Tsuen, Yung Hsien. A small tree about 6 feet high, with greenish-red fruits.

105691. (Undetermined.)

No. F. 31. Collected September 1, 1933, in a forest near Ta Tseh Shan, Yung Hsien. A tree over 30 feet high, with yellow edible fruits.

105676 to 105706—Continued.

105692. (Undetermined.)

Pei Tón. No. F. 37. Collected October 1, 1933, along the roadside at 1,200 feet altitude near Ta Tseh Tsuen, Yung Hsien. A tree about 25 feet high, with yellow fruits.

105693. (Undetermined.)

No. F. 40. Collected June 14, 1933, on a slope at 4,500 feet altitude near Nè Kwang, Ling Yuin Hsien. A small tree about 7 feet high, with green fruits.

105694. *MORUS* sp.

Feng Shu. No. F. 50. Collected October 15, 1933, in a valley at 1,200 feet altitude near Ta Tseh Tsuen, Yung Hsien. A tree about 25 feet high, with greenish-yellow globose fruits.

105695. *ANTIDESMA* sp. Euphorbiaceae.

No. F. 53. Collected October 1, 1933, in forest at 1,800 feet altitude near Ta Tseh Tsuen, Yung Hsien. A shrub about 8 feet high, with red edible fruits.

105696. *VITEX* sp. Verbenaceae.

No. F. 71. Collected October 6, 1933, in a forest near Ta Tseh Tsuen, Yung Hsien, at 3,800 feet altitude. A tree about 10 feet high, with digitate leaves.

105697. (Undetermined.)

No. F. 76. Collected October 23, 1933, in a dense forest at 6,000 feet altitude near Ch'ang An, Yung Hsien. A tree with egg-shaped black fruits.

105698. (Undetermined.)

No. F. 78. Collected October 23, 1933, in a rocky situation near Ch'ang An, Yung Hsien, at 6,000 feet altitude. A tree with globose yellow fruits.

105699. *CIPADESSA* sp. Meliaceae.

No. F. 80. Collected October 23, 1933, in a forest at 6,000 feet altitude near Ch'ang An, Yung Hsien. A small tree with globose black fruits.

105700. *PAVETTA* sp. Rubiaceae.

No. F. 81. Collected October 23, 1933, in a forest at 6,000 feet altitude near Ch'ang An, Yung Hsien. A shrub with globose green fruits.

105701. (Undetermined.)

No. F. 93. Collected October 8, 1933, in a valley near Ta Tseh Tsuen, Yung Hsien, at 1,200 feet altitude. A vine with greenish-red ovate fruits almost an inch long.

105702. *VITEX* sp. Verbenaceae.

No. F. 94. Collected October 23, 1933, on a rocky slope at 6,000 feet altitude near Ch'ang An, Yung Hsien. A tree with roundish green fruits about one-half inch in diameter.

105703. (Undetermined.)

No. F. 95. Collected October 20, 1933, at 1,200 feet altitude near Ta Tseh Tsuen, Yung Hsien. A shrub with ovate greenish fruits three-fifths of an inch long.

105704. (Undetermined.)

No. F. 96. Collected October 23, 1933, at 6,000 feet altitude near Ch'ang An, Yung Hsien. A vine with globose reddish-yellow fruits about an inch in diameter, found growing in rocky places.

105676 to 105706—Continued.

105705. *THEA JAPONICA* (L.) Baill. Theaceae.

No. F. 103. Collected October 20, 1933, in a valley at 1,200 feet altitude near Ta Tseh Tsuen, Yung Hsien. An evergreen shrub, native to Japan and China, sometimes becoming a small tree up to 40 feet high, with glossy deep-green leaves 3 to 4 inches long and solitary red flowers up to 4 inches wide, appearing at the end of the branchlets. The oil expressed from the seeds is used by the Japanese women for dressing their hair.

For previous introduction see 43923.

105706. *MORUS* sp. Moraceae.

No. F. 116. Collected November 10, 1933, near Chang Shan Park, Kwei Ling Hsien, at 300 feet altitude. A large tree with red globose fruits over an inch in diameter.

105707 to 105712.

From Africa. Seeds presented by the Superintendent of Plantations, East African Agricultural Research Station, Amani, Tanganyika Territory, through Robert M. Grey, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, Cuba. Received May 12, 1934.

105707. *ADENANTHERA MICROSPERMA* L. Mimosaceae.

A handsome deciduous tree, native to the East Indies, with spreading branches. The bipinnate leaves have 2 to 6 pairs of pinnae, each pinna having 2 to 12 pairs of oval, obtuse, glabrous leaflets. The small white and yellow fragrant flowers, borne in racemes, are followed by glossy scarlet biconvex seeds.

For previous introduction see 94176.

105708. *DEQUELIA DALBERGIOIDES* (Baker) Taub. Fabaceae.

A small spreading tree about 20 feet high, with rigid, dark-green compound leaves and copious racemes of pink flowers. Native to eastern India and Java.

For previous introduction see 69111.

105709. *ELETTARIA CARDAMOMUM* (L.) Maton. Zinziberaceae. Cardamon.

A perennial with large leafy shoots. The dried and powdered fruits of this tropical Asiatic plant are used as a spice.

For previous introduction see 98791.

105710. *FICUS NATALENSIS* Hochst. Moraceae.

A shrub or small tree with oblanceolate-obovate, papery dull-green leaves 2 to 3 inches long. The small globose-obovoid fruits, one-half inch long, are mostly in axillary pairs. Native to eastern Africa from the Nile to Natal.

105711. *INTSIA BIJUGA* (Colebr.) Kuntze (*Afzelia bijuga* Gray). Caesalpinaceae. Ipil.

A tall tree, 100 feet or more in height, with fragrant white and reddish flowers borne in large conspicuous clusters. The wood is valued as building material.

For previous introduction see 94193.

105712. *MAESOPSIS EMINII* Engler. Rhamnaceae.

A tropical shrub from eastern Africa, with thick, leathery, oblong acuminate leaves, small greenish flowers in small axillary clusters, and small ovoid fruits.

105713 and 105714.

From Brazil. Seeds collected by J. G. Myers, and presented through David Fairchild, Bureau of Plant Industry. Received May 15, 1934.

105713. *CUCURBITA PEPO* L. Cucurbitaceae. Pumpkin.

Jirimú caboco, or Indian pumpkin, collected in September 1933 at Santarem, Amazon. An excellent pumpkin with dry yellow flesh.

105714. *ROLLINIA DELICIOSA* Safford. Annonaceae. Biribá.

Collected in July 1933 at Manáos, Amazon. The fruit is like the sugar-apple in shape and color, but considerably larger and with soft drooping spines arranged in slight vertical ridges. The pulp is very smooth, almost custardlike, with a delicate flavor. The tree is said to fruit in 3 years from seed.

For previous introduction see 38171.

105715. *EORA BAUERI* (Wendl. and Drude) O. F. Cook (*Rhopalostylis baueri* Wendl. and Drude). Phoenicaceae. Norfolk Island palm.

From California. Seeds presented by David Barry, Jr., Los Angeles. Received May 15, 1934.

A tall spineless palm with equally pinatisect leaves 6 feet or more long, in a stiffly erect terminal cluster. The spadix is 1 to 2 feet long, the flowers are white, and the globose fruits are scarlet. Native to Norfolk Island.

105716. *ANNONA DIVERSIFOLIA* Safford. Annonaceae. Ilama.

From Guatemala. Seeds presented by Mariano Pecheco H., Director General de Agricultura. Received May 14, 1934.

Anona blanca. A small tree, native to Mexico and tropical America, with brown-gray, aromatic bark. The thin membranous leaves, 5 inches long, are broadly elliptical to oblanceolate. The broadly ovoid, densely tomentose fruit, about 6 inches long, is usually covered with stout thick protuberances. The golden-brown, nutlike seeds are embedded in the edible cream-colored or rose-tinted flesh.

For previous introduction see 101256.

105717 to 105719.

From Mexico. Seeds presented by Peter Heinz, Brownsville, Tex. Received May 21, 1934.

105717. *CEIBA* sp. Bombacaceae.

Collected on an arid mountain slope near Tasco. A tree whose seeds are in conspicuous bunches of cottony expanded capsules.

105718. *SERJANIA MEXICANA* Willd. Sapindaceae.

A climbing evergreen shrub with spiny stems, thick biternate leaves 2 to 4 inches long, and small fragrant white flowers. Native to Mexico. The plant is used as a fish poison in Mexico.

105719. (Undetermined.)

A shrub from 6 to 10 feet high, found on arid rocky slopes. The large flower clusters are like those of hydrangea.

105720 to 105725. NICOTIANA TABACUM
L. Solanaceae. **Tobacco.**

From Venezuela. Seeds presented by the Ministerio de Salubridad y de Agricultura y Cria, through Dr. H. Pittier, Museo Comercial, Caracas. Received May 19, 1934.

105720. *Tabaco corriente.* From Distrito Nigua, Estado Yaracuy.

105721. *Tabaco corriente.* From Municipio Caturao, Distrito Rivero, Estado Sucre.

105722. *Tabaco Guácharo.* From La Cueva del Guácharo, Estado Monagas.

105723. *Tabaco Negro.* From Municipio Santa Maria, Distrito Rivero, Estado Sucre.

105724. *Tabaco Negro.* From Municipio Santa Cruz, Distrito Rivero, Estado Sucre.

105725. *Tabaco Rabo de Gallo* (Cocktail). From Municipio Cocorote, Distrito San Feipe, Estado Yaracuy.

105726. CROTALARIA sp. Fabaceae.

From the Belgian Congo, Africa. Seeds presented by J. B. H. Lejeune, Director, Government Agronomic Station, Kisozi, Territories of Kuanda-Urundi. Received May 21, 1934.

105727 to 105734.

From Cuba. Seeds and plants presented by Robert M. Grey, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos. Received in May 1934.

105727. ARIKURYROBA SCHIZOPHYLLA
(Mart.) Bailey. Phoenicaceae. **Palm.**

A small slender-stemmed palm, about 15 feet high, with pinnate leaves. Native to Brazil.

For previous introduction see 104681.

105728. BAUHINIA RACEMOSA Lam. Caesapiaceae.

A small shrub with drooping branches and rounded leaves, the two lobes rounded oval, white-hairy beneath. The small yellow flowers are in racemes of 12 to 18. Native to eastern India.

105729. LIVISTONA CHINENSIS (Jacq.) R. Br. Phoenicaceae. Palm.

A palm, native to China, with a short thick trunk up to 6 feet high and 1 foot thick, having a crown of reniform palmately divided leaves 4 to 6 feet across on petioles about 5 feet long, which are armed below the middle with recurved brown spines more than an inch long.

For previous introduction see 93412.

105730. LIVISTONA COCHINCHINENSIS
(Blume) Mart. Phoenicaceae. **Palm.**

A slender palm about 50 feet high, with a crown of large fan-shaped leaves. It is native to Malacca.

For previous introduction see 104240.

105731. ADENIUM OBESUM (Forsk.) Roem. and Schult. Apocynaceae.

For previous introduction and description see 105448.

105727 to 105734—Continued.

105732. DOLICHANDRONE CRISPA Seem.
Bignoniaceae.

A large tropical tree, 40 to 60 feet high, with compound leaves a foot or less in length, the two to four broadly elliptic leaves being 2 to 4 inches long. The white flowers are in small corymbs. Native to southern India.

105733. FAGRAEA OBOVATA Wall.

Plants of a tropical tree of moderate size, with ovate or rounded thick leaves 5 or 6 inches long and fragrant white flowers, 2 inches long, in corymblike clusters. Native to Assam, India.

105734. LONCHOCARPUS NEUROSCAPHA
Benth. **Lancepod.**

An evergreen tree with alternate pinnate leaves and racemes of purplish pea-like flowers.

For previous introduction see 94776.

105735. ARTOCARPUS COMMUNIS Forst.
Breadnut.

From Central Mercedita, Pinar del Rio, Cuba. Seeds presented through W. A. Mace, Madruga, Cuba, and L. H. Dewey, Bureau of Plant Industry. Received June 1, 1934.

A tree, native to the East Indies, 30 to 40 feet high, with viscid milky juice and leathery ovate leaves 3 feet long, entire at the base but divided above into 3 to 9 lobes. The large fruits, 4 to 6 inches in diameter, are often seedless, but in this variety the seeds are present and are much the size, shape, and flavor of chestnuts.

For previous introduction see 80173.

105736. OLEA EUROPAEA L. Oleaceae.
Common olive.

From Spain. Cuttings presented by Julius Matz, Bureau of Plant Industry. Received June 25, 1934.

Variety *Zorzalena*. A relatively tender variety. The tree is leafy, compact, and a good early bearer whose fruit is grown for its oil.

105737 to 105743. HELIANTHUS TUBEROSUS L. Asteraceae.
Jerusalem-artichoke.

From the Union of Soviet Socialist Republics. Tubers presented by the Chicory Institute, Moscow. Received May 26, 1934.

105737. No. 8. 105741. No. 92.

105738. No. 9. 105742. No. 166.

105739. No. 48. 105743. No. 167.

105740. No. 53.

105744 and 105745.

From the Canal Zone. Seeds presented through David Fairechild, Bureau of Plant Industry. Received May 28, 1934.

105744. CAVANILLESIA PLATANIFOLIA
H. B. K. Bombacaceae.

A Colombian tree up to 100 feet high with a large thick trunk, smooth pale bark, large shallowly five- to seven-lobed leaves, and red flowers 1 inch long. The soft coarse pithlike wood is white or yellowish and is used for making canoes and rafts.

For previous introduction see 98928.

105744 and 105745—Continued.

105745. MYRCIARIA CAULIFLORA (Mart.)
Berg. Myrtaceae. Jaboticaba.

For previous introduction and description see 105309.

105746 to 105748. ALLIUM spp. Liliaceae.

From Cochinchina. Bulbs presented by the Directeur du Jardin Botanique et Zoologique de Saigon. Received May 25, 1934.

105746. ALLIUM CEPA L. Onion.

105747. ALLIUM SATIVUM L. Garlic.

105748. ALLIUM TRIQUETRUM L.

A bulbous plant with a three-angled stem, common on the coast of Algeria. In its usual surroundings this plant is a rather dwarfed weed of dry texture, but it has been found that when transplanted to good garden soil with plenty of fresh water it produces, during the winter, large plants with white, tender, and succulent underground parts. If the green leaves are removed, the rest of the stem forms a delicate vegetable with no odor of garlic.

For previous introduction see 82018.

105749 and 105750. NICOTIANA TABACUM L. Solanaceae. Tobacco.

From Puerto Rico. Seeds presented by Dr. J. A. B. Nolla, Department of Agriculture and Commerce, San Juan. Received June 8, 1934.

105749. *Ambalema*. A mosaic-resistant variety. Seed gathered under bags, but not pure lined.

105750. *Ambalema*. A pure-line variety which is mosaic resistant.

105751 to 105754. AVENA SATIVA L. Poaceae. Oats.

From Nanking, China. Seeds presented by Sheo Wang, Department of Agronomy, University of Nanking. Received May 23, 1934.

105755 to 105760. ZEA MAYS L. Poaceae. Corn.

From Peru. Seeds presented by L. S. Blaisdell, general manager, Southern Railway, Arequipa, through M. Cooper. Received May 23, 1934.

Native varieties grown near Puno in the region of Chucuito.

105761 to 105764. MACADAMIA TERNIFOLIA F. Muell. Proteaceae.

Queensland-nut.

From Queensland, Australia. Seeds presented by R. Allsopp, Queensland Acclimatization Society, Lawnton. Received June 11, 1934.

An evergreen tree up to 50 feet high, native to shady jungles in the eastern part of Australia where the soil is rich and the annual rainfall is over 60 inches. It is cultivated for its edible nuts which have sweet white flesh, with the flavor of chestnuts, incased in a shell which is, typically, very hard.

For previous introduction see 103738.

105761. Giant thin shell.

105761 to 105764—Continued.

105762. Giant thin shell.

105763. Mammoth thick shell.

105764. Thin shell no. 2.

105765 and 105766. CUCURBITA MAXIMA Duchesne. Cucurbitaceae. Squash.

From California. Seeds presented by Claude D. Tribble, Elk Grove. Received May 25, 1934.

A squash with thick flesh of the very finest grain and quality; it grows to a large size, averaging about 65 pounds, and originally came from Japan.

105767 and 105768. LINUM USITATISSIMUM L. Linaceae. Flax.

From the Netherlands. Seeds presented by B. C. Algra, Stiens, Zaadhandel. Received May 28, 1934.

Concurrent. A white-flowered variety that not only produces a large quantity of seed but also yields an excellent quality of fiber.

105769. ANTIGONON sp. Polygonaceae.

From Puerto Rico. Seeds presented by T. B. McClelland, Director, Agricultural Experiment Station, Mayaguez. Received June 7, 1934.

A very beautiful double antigonon, differing from the common *Rosa de montana* in having a much larger and very different flower, somewhat suggestive of a wild rose in appearance but of paler pink. The seeds were brought from Venezuela to Puerto Rico many years ago.

105770 to 105779. AVENA spp. Poaceae. Oats.

From India. Seeds presented by the Imperial economic botanist, Imperial Institute of Agricultural Research, Pusa. Received June 11, 1934.

A collection of hybrid oats, introduced for the use of Department specialists.

105770. AVENA sp.

Pusa Hybrid A.

105771. AVENA sp.

Pusa Hybrid D.

105772. AVENA sp.

Pusa Hybrid F.

105773. AVENA sp.

Pusa Hybrid G.

105774. AVENA sp.

Pusa K. S. no. 10.

105775. AVENA sp.

Pusa Hybrid IV-104.

105776. AVENA sp.

Pusa Hybrid IV-106.

105777. AVENA sp.

Pusa Hybrid VII-194.

105778. AVENA sp.

Pusa Hybrid VII-265.

105779. AVENA sp.

Pusa Hybrid VII-578.

105780. MELINIS MINUTIFLORA Beauv.
Poaceae. Molasses grass.

From Brazil. Seeds presented by B. H. Hunicutt, Mackenzie College, São Paulo. Received June 18, 1934.

Gordura grass. Collected from the highest altitude at which this is known to grow in Brazil.

105781 to 105786.

From Puerto Rico. Cuttings and plants collected by K. A. Ryerson, Bureau of Plant Industry. Received May 21, 1934.

105781. MAGNOLIA PORTORICENSIS Bello.
Magnoliaceae.

Cuttings from a handsome tree, endemic in the forests of western Puerto Rico, with leathery, broadly oval leaves about 6 inches long and terminal, solitary white flowers 4 inches in diameter with about 12 perianth divisions.

105782. TILLANDSIA sp. Bromeliaceae.
Plants.

105783. (Undetermined.)

Plant of an undetermined orchid.

105784. (Undetermined.)

Plants of an undetermined orchid.

105785. (Undetermined.)

Plants of an undetermined orchid.

105786. (Undetermined.)

A shrub with white flowers 1 inch across, resembling those of anemone, and red fruits. Collected in the mountains.

105787. LESPEDEZA SATSUMENSIS Nakai. Fabaceae.

From Japan. Seeds presented by T. Nakai, Director, Botanic Garden, Imperial University, Tokyo. Received May 28, 1934.

Collected at Kinsin, on Mount Isoma, Satsuma Province. This bushy shrub is a rare species and is found only on the summit of Mount Isoma. It has oblong-obovate leaflets up to four-fifths of an inch long, reflex or emarginate, and very short axillary racemes of deep purple flowers. Allied to *Lespedeza floribunda*, but differing chiefly in its smaller size and in having shorter racemes.

105788. HETEROPHRAGMA ADENOPHYLLUM (DC.) Seem. Bignoniaceae.

From Florida. Seeds presented by W. D. Carrier, Crescent City. Received June 14, 1934.

An ornamental African tree related to the catalpa, but adapted for cultivation in subtropical regions only, as it is very susceptible to frost. It reaches a height of 30 to 50 feet, with large opposite pinnate leaves and brownish-yellow woolly flowers in terminal panicles.

For previous introduction see 59679.

105789 to 105797. CASUARINA spp. Casuarinaceae.

From Western Australia. Seeds presented by C. A. Gardner, Government botanist, State Herbarium, Department of Agriculture, Perth. Received June 11, 1934.

105789 to 105797—Continued.

105789. CASUARINA ACUARIA F. Muell.

A leafless shrub with erect rigid branches and numerous deciduous branchlets; these are erect, slender but rigid, and each consists of but two internodes. The cones, globular and solitary or in small clusters, are about 1 inch in diameter. Native to Western Australia.

105790. CASUARINA ACUTIVALVIS F. Muell.

An erect branched shrub with the internodes marked by 12 lines of low linear-subulate teeth and with rather large globular cones. The minute dark-brown leaves are easily dislodged. Native to Victoria, Australia.

For previous introduction see 93780.

105791. CASUARINA CAMPESTRIS Diels.

A dioecious shrub 3 to 6 feet high, with numerous erect branches; native to Western Australia. The internodes are glaucous or shining green and striate.

For previous introduction see 93782.

105792. CASUARINA DECUSSATA Benth.

A small tree, native to Western Australia, closely allied to *Casuarina torulosa*, with slender elongated branches arranged in fours. The stems have a decussate appearance, owing to the prominence of alternate pairs of angles at the nodes.

For previous introduction see 93784.

105793. CASUARINA sp.

Received under the name "dielsiana", for which a place of publication has not been found.

105794. CASUARINA GLAUCA Sieber.

An Australian tree 60 to 70 feet high, usually straight and of rapid growth. The timber is red, beautifully marked, hard and tough and is there used for cabinetwork. In periods of drought the foliage is used for stock feed. When the trees are cut down, the young growth shoots up quickly from the stump. This variety grows in the coastal districts, marshy country, and frequently in land submerged with tidal water. It makes a very handsome shade tree.

For previous introduction see 93788.

105795. CASUARINA GREVILLEOIDES Diels.

A low much-branched shrub about 1 foot high, with the branches and branchlets much-jointed and the younger joints white tomentose. Native to Western Australia.

105796. CASUARINA HUMILIS Otto and Dietr.

An erect shrub 2 to 6 feet high, with the branchlets usually in whorls of four and the angles of the internodes prominent but obtuse. It is native to Western Australia.

For previous introduction see 93791.

105797. CASUARINA THUYOIDES Miquel.

A straggling shrub 3 to 5 feet high, with numerous spreading slender branchlets about 1 inch long arranged in whorls of four or five. The ribs on the nearly round internodes are scarcely noticeable. It is native to Western Australia.

For previous introduction see 93793.

105798. ACER NIVEUM Blume. Aceraceae. Maple.

From the Philippine Islands. Seeds presented by Arthur F. Fischer. Director of forestry, Department of Agriculture, Manila. Received June 12, 1934.

Collected in Bakiling National Park, Laguna. A large ornamental maple, sometimes over 100 feet tall, with undivided elliptic or oblong leaves 8 inches long, white glaucous beneath, and yellowish-green flowers in lax racemes. Native to upper Assam, India.

105799 to 105801.

From Java. Seeds presented by A. M. Cramer, Wonosobo. Received June 1, 1934.

105799. ALLIUM PORRUM L. Liliaceae. Leek.

Shimonita. A large, fast-growing, hollow-leaved Japanese variety of good flavor. It is grown from seed and seeds abundantly.

105800. BRASSICA PEKINENSIS (Lour.) Rupr. Brassicaceae. Pe'tsai.

White Longhead. The seed of this variety is imported from and grown in the Netherlands, where the seed is not sown before early July, to prevent flowering. This is the best of all varieties of pe'tsai; very sweet and of a fine flavor.

105801. BRASSICA PEKINENSIS (Lour.) Rupr. Brassicaceae. Pe'tsai.

Witte Reuzen or *Giant Round*. A variety grown in Japan which forms a very large round head.

105802 to 105820.

From the Union of Soviet Socialist Republics. Seeds presented by Hortus Botanicus Bakuensis, Baku, Azerbaïdhan. Received June 15, 1934.

Introduced for testing by soil-erosion specialists.

105802. AMYGDALUS COMMUNIS L. Amygdalaceae. Almond.**105803. AMYGDALUS FENZLIANA (Fritsch) Korsh. Amygdalaceae.**

A shrubby tree with long purplish branches and narrowly ovate leaves. The reddish flowers appear before the leaves in few-flowered clusters and are smaller than those of *Amygdalus communis*. The small peachlike fruits have rather dry flesh. Native to the Caucasus region.

For previous introduction see 43302.

105804. ARISTIDA PENNATA Trin. Poaceae. Grass.

A grass, native to Turkistan, where it is abundant in dry sandy places.

For previous introduction see 101979.

105805. ATRIPLEX INCISA Bieb. Chenopodiaceae.

A desert-loving annual, native to the Caucasus region, with rhombic-sinuate, shallowly incised leaves and small four-angled fruits.

105806. ATRIPLEX DESERTORUM (Iljin) D. Sosn. Chenopodiaceae.

A succulent desert plant.

105802 to 105820—Continued.**105807 to 105810. CALLIGONUM spp. Polygonaceae.****105807. CALLIGONUM CAPUT-MEDUSAE Schrenk.**

Native to northern and central Asia, where it is used as a sand binder.

105808. CALLIGONUM COMOSUM L'Her.

A densely branched shrub 10 to 15 feet high, with minute subulate leaves and small, ovate, densely-spiny, nut-like fruits. Native to the eastern Mediterranean region.

For previous introduction see 98208.

105809. CALLIGONUM ERIPODUM Bunge.

A slender-branched shrub with whitish branchlets and linear-subulate, minute leaves which are early deciduous. Native to Turkistan, where it is used as a sand binder.

For previous introduction see 94931.

105810. CALLIGONUM SETOSUM Litv.

A leafless shrub native to the Caspian region, where it is used as a sand binder.

For previous introduction see 98209.

105811. EPHEDRA MAJOR PROCERA (Fisch. and Mey.) Aschers and Graebn. Gnetaceae. Jointfir.

A leafless shrub, 4 to 5 feet high, native to the Caucasus, with stiff branches and nearly sessile flower clusters, followed by red fruits.

For previous introduction see 79906.

105812. HALIMODENDRON HALODENDRON (Pall.) Voss. Fabaceae. Salt-tree.

A hardy, drought-resistant, ornamental shrub 6 feet high, with pink flowers. Native to Turkistan.

For previous introduction see 73604.

105813. HALOXYLON AMMODENDRON (Meyer) Bunge. Chenopodiaceae. Saxaul.

A Persian shrub or sometimes a small tree with a thick gnarled trunk, either leafless or with rudimentary leaves, and small fruits with thin papery wings.

For previous introduction see 78481.

105814. LOTUS CORNICULATUS CILIATUS (Tenore) C. Koch. Fabaceae.

A variety with hairy leaflets and calyx.

105815. ONOBRYCHIS MICHAUXII DC. Fabaceae.

An erect perennial with oblong-elliptic, mucronate leaflets and elongate spikes of yellowish flowers. Native to Asia Minor.

105816. PROSOPIS STEPHANIANA (Bieb.) Kunth. Mimosaceae.

A deep-rooted shrubby legume which grows abundantly on dry lands in the interior plain of the island of Cyprus. Sheep and cattle browse on it, and the bees make good honey from its abundant flowers.

For previous introduction see 88697.

105817. RHAMNUS PALLASII Fisch. Rhamnaceae.

An ornamental deciduous shrub, native to very dry sterile places in the Caucasus region.

For previous introduction see 33002.

105802 to 105820—Continued.

105818. SALSOLA SUBAPHYLLA Meyer.
Chenopodiaceae.

A leafless, much-branched shrub about a foot high, native to desert places on the shores of the Caspian Sea.

For previous introduction see 98219.

105819. SCORZONERA RIGIDA Auch. Ci-
choriaceae.

A stemless perennial with rigid entire linear leaves and yellow flower heads on scapes four times as long as the leaves. Native to the mountainous regions of Asia Minor.

105820. (Undetermined.)

Received as *Eremosparton aphyllum*, but the seeds are not of that genus.

105821. BAUHINIA RACEMOSA Lam. Cae-
salpiniaceae.

From Cuba. Seeds presented by Robert M. Grey, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos. Received June 20, 1934.

105822 to 105828.

From California. Seeds presented by David Barry, Jr., Los Angeles. Received June 18, 1934.

105822. CYRTOSTACHYS RENDA Blume.
Phoenicaceae. **Palm.**

A tall slender palm, 25 to 30 feet high, crowned by a graceful cluster of pinnate leaves, with linear or ensiform segments and brownish-red petioles. Native to Sumatra.

For previous introduction see 99560.

105823. ERYTHEA EDULIS (Wendl.) S.
Wats. Phoenicaceae. **Guadaloupe palm.**

A stout spineless palm, 50 feet high, with a terminal cluster of much-divided leaves 3 feet across. The shining black fruits are produced on a long, white-tomentose, paniculate spadix. Native to the island of Guadaloupe, Baja California, Mexico.

For previous introduction see 77153.

105824. LICUALA PALUDOSA Griff. Phoe-
nicaceae. **Palm.**

A handsome dwarf palm, 4 to 10 feet high, with a smooth slender trunk and roundish fan-shaped leaves about 3 feet across. Native to Malacca.

105825. PHOENICOPHORUM BORSIGIANUM
(Koch.) Stuntz. Phoenicaceae. **Palm.**

A handsome, pinnate-leaved palm, native to the Seychelles Islands. When mature it is entirely spineless, whereas in the young state the deep orange-red petioles are clothed with black needlelike spines 1 to 3 inches long. The young leaves are orange beneath and mottled with orange spots above. The spadix is 3 to 6 feet long, divided into numerous slender branches, swollen at the base, and densely covered above with yellow flowers, each about one-fourth of an inch in diameter.

For previous introduction see 103731.

105822 to 105828—Continued.

105826. PHOENIX PUSILLA Gaertn. Phoe-
nicaceae. **Date palm.**

A dwarf palm about 4 feet high, with pinnate leaves having leafy petioles, dark-green, sword-shaped, rigid leaflets, and black fruits. The stem is said to contain a farinaceous pith. It is native to Ceylon.

For previous introduction see 103110.

105827. PHOENIX ZEYLANICA Trimen.
Phoenicaceae. **Ceylon date palm.**

A pinnate-leaved palm, native to Ceylon, with a stem 8 to 20 feet high and a crown of rather short leaves made up of numerous linear-lanceolate, light-green leaflets 7 to 10 inches long. The obovoid-oblong, violet-blue, edible fruits are half an inch long.

For previous introduction see 104699.

105828. SEAFORTHIA ELEGANS R. Br.
Phoenicaceae. **Palm.**

A palm up to 30 feet high, native to the south coast of Australia and the neighboring islands. The dark-green, pinnate fronds are eventually 15 feet long, and the small fruits are oval and very fibrous.

For previous introduction see 104342.

105829 to 105833.

From Australia. Plants and budwood presented by George Althofer, Dripstone, New South Wales. Received June 25, 1934.

Introduced for the use of Department specialists.

105829. AMYGDALUS PERSICA L. Amyg-
dalaceae. **Peach.**

Glen Ora.

105830. AMYGDALUS PERSICA L. Amyg-
dalaceae. **Peach.**

High's Early Canada.

105831. AMYGDALUS PERSICA NECTARINA
Ait. Amygdalaceae. **Nectarine.**

Irrewarra.

105832. PRUNUS SALICINA Lindl. Amyg-
dalaceae. **Japanese plum.**

Narrabeen plum (budwood).

105833. PRUNUS SALICINA Lindl. Amyg-
dalaceae. **Japanese plum.**

Wilson (budwood).

105834 and 105835.

From French Indo-China. Seeds presented by M. Pollane, Institut des Recherches Agronomiques de Indochine, Division de Botanique. Received October 13, 1933, Numbered in June 1934.

105834. UVARIA sp. Annonaceae.

A vine with edible fruits, collected at 1,500 feet altitude in Annam, Col d'Ailao.

105835. DIOSPYROS KAKI L. f. Diospy-
raceae. **Kaki persimmon.**

Collected at Col de Blao near Haut Donai in a forest at 3,000 feet altitude. A wild kaki which becomes 30 to 60 feet high with a trunk circumference of 2 to 3 feet. It is a vigorous tree with a large taproot, excellent as a stock for cultivated kakis.

105836. SACCHARUM OFFICINARUM L.
Poaceae. Sugarcane.

From Hawaii. Cuttings presented by the experiment station of the Hawaiian Sugar Planters' Association, Honolulu. Received June 23, 1934.

Introduced for the use of Department specialists.

105837 to 105863.

From Australia. Plants purchased from L. P. Rosen & Son, Carlingford, New South Wales. Received June 27, 1934.

A collection of fruit trees introduced under the following varietal names for the use of Department specialists.

105837 to 105854. AMYGDALUS PERSICA L.
Amygdalaceae. Peach.105837. *Aunt Becky.*105838. *Bell's Improved.*105839. *Blackburn.*105840. *Braddock.*105841. *Christmas Box.*105842. *Doncaster.*105843. *Edward VII.*105844. *Governor Rawson.*105845. *King of All.*105846. *La France.*105847. *Princess Royal.*105848. *Rennie.*105849. *Robert Stewart.*105850. *Roger Louis.*105851. *Rowe's Champion.*105852. *Ruby Red.*105853. *Shanghai Seedling.*105854. *Shanghai Slip.***105855 to 105858. AMYGDALUS PERSICA NECTARINA Ait.**
Amygdalaceae. Nectarine.105855. *Lady Carrington.*105856. *Lee's.*105857. *The Jury.*105858. *W. C. Fripp.***105859 to 105863. PRUNUS ARMENIACA L.**
Amygdalaceae. Apricot.105859. *Cattell Early.*105860. *Colorado.*105861. *Kingston Early.*105862. *Mansfield's.*105863. *Cullin's Early.***105864. CARICA QUERCIFOLIA (St. Hil.)**
Benth. and Hook. Papayaceae.

From France. Seeds presented by M. Garry Desloges, Caravan. Received June 30, 1934.

A small tree with palmately 3-lobed leaves and small fruits which contain a greater percentage of papain than those of *Carica papaya*. The plant is said to be hardy in southern California.

Received as *Carica hastaeifolia*, which is now considered a synonym of this species.

For previous introduction see 73837.

105865. TRITHRINAX BRASILIENSIS
Mart. Phoenicaceae. Palm.

From California. Seeds presented by David Barry, Jr., Los Angeles. Received June 25, 1934.

A slender-stemmed fan palm 6 to 12 feet high, with palmate-labelliform leaves divided into 20 or 30 segments. The much-branched spadix has numerous spirally arranged flowers. Native to Brazil.

105866 to 105868. CLEMATIS spp.
Ranunculaceae.

From Sydney, Australia. Seeds presented by the School of Botany, University of Sydney, New South Wales, through J. E. Spingarn, Armenia, N. Y. Received June 23, 1934.

105866 and 105867. CLEMATIS ARISTATA
R. Br.

An evergreen woody vine with trifoliate leaves of cordate to narrowly lanceolate, entire or serrate leaflets 1 to 3 inches long, and yellowish white flowers 2 inches across in short panicles. It is native to Australia.

For previous introduction see 88318.

105868. CLEMATIS GLYCINOIDES DC.

A woody climber that trails over rocks and bushes or ascends tall trees in several parts of Australia. The long-stalked leaves are three-parted and 1 to 3 inches long, and the white or yellowish flowers, in short clusters, are about 1½ inches across.

105869 to 105871.

From Egypt. Seeds presented by Thomas W. Brown, Director, horticultural section, Ministry of Agriculture, Giza. Received June 25, 1934.

105869. ACACIA LAETA R. Br.
Mimosaceae.

A small tree armed with short, black, hooked prickles or sometimes unarmed. The small glaucous leaves, 2 to 3 inches long, consist of two to three pairs of oblong-oblique leaflets, and the flowers are in small spikes. Native to Ethiopia.

105870 and 105871. BAUHINIA RETUSA
Ham. Caesalpinaceae.

A tree with rounded, stiff, leathery leaves about 5 inches long and small yellow flowers in large terminal panicles sometimes a foot long and broad. Native to the western Himalayas up to 4,000 feet altitude.

105872. WARSZEWICZIA COCCINEA
(Vahl.) Klotzsch. Rubiaceae.

From the Canal Zone. Seeds presented by J. E. Higgins, Canal Zone Experiment Gardens, through E. M. Dickins, Lake Worth, Fla. Received June 28, 1934.

An ornamental tree with dark-green foliage and clusters of small flowers each one-fourth inch across. One sepal of each cluster is brilliant scarlet and over 2 inches long, making a startling splash of color against the dark leaves. The tree blooms during the wet season, whereas most of the showy flowering trees of the Tropics bloom in the dry season. Native to Trinidad, British West Indies.

For previous introduction see 97986.

105873 to 105932.

From India. Seeds presented by Dr. Walter Koelz, through Prof. H. H. Bartlett, University of Michigan, Ann Arbor, Mich. Received June 12, 1934.

105873 and 105874. AMPHICOME ARGUTA Royle. Bignoniaceae.

A low herbaceous perennial, not over 3 feet high, native to northern India. The compound leaves are made up of 5 to 9 deeply serrate, lanceolate leaflets 2 inches long, and the rose-colored, funnel-shaped flowers, 1 inch long, are borne in terminal racemes 6 to 8 inches long.

105873. Collected on sunny bare cliffs at Urni, Rampur, Bashahr.

105874. Collected at Wangtu, Rampur, Bashahr.

105875. AMYGDALUS sp. Amygdalaceae.

From Roghi, Rampur, Bashahr. A wild white peach which becomes 30 feet high. The flowers are attractive, but the fruit is useless.

105876. ASTER sp. Asteraceae.

From Rapshu, at 1,300 feet altitude. A very attractive aster with purple flowers 6 inches in diameter.

105877. CITRUS sp. Rutaceae.

From Buzuri, Kulu. A thick-skinned, orange-colored lemon 6 inches long.

105878 to 105880. CLEMATIS spp. Ranunculaceae.

105878. CLEMATIS sp.

From Nago, Rampur, Bashahr, at 12,000 feet altitude in a cold dry situation. An attractive vine with yellow flowers.

105879. CLEMATIS sp.

From Kibor, Spiti, at 12,000 feet altitude in a dry cold situation.

105880. CLEMATIS sp.

From Sungram, Rampur, Bashahr, at 10,000 feet altitude.

105881. COLUTEA sp. Fabaceae.

From Rampur, Bashahr, at 10,000 feet altitude. The coluteas are ornamental leguminous shrubs, useful as soil binders.

105882. COTONEASTER sp. Malaceae.

A very attractive shrub, 3 feet high, with dark-green leaves.

105883. COTONEASTER sp. Malvaceae.

From Dankhar, Spiti, a dry cold region. A shrub 7 feet high, with very attractive carmine fruits.

105884. CUCURBITA PEPO L. Cucurbitaceae. Pumpkin.

From Nachar, Rampur, Bashahr. A cultivated green pumpkin which grows chiefly in a hot climate.

105885. EREMURUS HIMALAIICUS Baker. Liliaceae. Himalayan desertcandle.

From Hang La, Rampur, Bashahr, at 13,000 feet altitude. A tall herbaceous perennial, found growing in masses, with lanceolate leaves 1 to 2 feet long in a rosette at the base of the stem. This stem rises to 6 feet and bears a spike 2 to 3 feet long of white flowers. It is native to India.

For previous introduction see 91626.

105873 to 105932—Continued.

105886. HIPPOPHAE RHAMNOIDES L. Elaeagnaceae. Common sea-buckthorn.

From Po, Spiti, at 10,000 feet altitude. A hardy spiny deciduous shrub with silvery foliage and orange-yellow fruits, found along watercourses.

For previous introduction see 92240.

105887. HORDEUM VULGARE L. Poaceae. Barley.

From Gya, Ladakh, at 1,400 feet altitude.

105888. ILEX sp. Aquifoliaceae.

From Sarahan, Rampur, Bashahr. An attractive tree with a trunk 12 inches in diameter.

105889. IRIS sp. Iridaceae.

From Po, Spiti, in a field at 10,000 feet altitude.

105890. JASMINUM sp. Oleaceae.

From Bathad, Kulu. A vine which bears very fragrant white flowers throughout the summer.

105891. NEPETA sp. Menthaceae.

From Taho, Spiti, at 10,000 feet altitude. A prostrate annual mint with pale-lilac flowers; found in a dry cold atmosphere.

105892. NEPETA FLOCCOSA Benth. Menthaceae.

From Hemis, Ladakh, at 11,000 feet altitude. A stout herb up to 3 feet high, white woolly throughout, with rounded cordate long-stemmed leaflets 1 to 3 inches across and dense whorls of rose-colored or purple flowers. Native to northwestern India at altitudes of 7,000 to 11,000 feet.

105893. LILIUM GIGANTEUM Wall. Liliaceae. Giant lily.

From Bathad, Kulu. A lily, native to the Himalayas between 5,000 and 12,000 feet altitude, with bulbs that grow close to the surface. The hollow stems are 6 to 9 feet high, and the handsome cordate leaves are shining dark green above and paler beneath. The large fragrant white flowers, often 12 in a raceme, are slightly greenish without, and the inner surface of the segments is tinged with deep purple.

For previous introduction see 102833.

105894. LONICERA sp. Caprifoliaceae. Honeysuckle.

From Sungram, Rampur, Bashahr, on a cold semiarid slope at 10,000 feet altitude. A well-formed bush 7 feet high, with transparent white fruits that are eaten by birds.

105895. LONICERA BICOLOR Klotzsch. Caprifoliaceae. Honeysuckle.

From Sungram, Rampur, Bashahr, at 10,000 feet altitude. A small much-branched shrub with small, elliptic-ovicular, entire leaves, green and nearly glabrous above, more or less hairy beneath. The orange flowers are borne in pairs toward the ends of the branchlets. Native to the Himalayas, and closely allied to *L. hypoleuca*.

105873 to 105932—Continued.

105896. *MALUS* sp. Malaceae.

From Po, Spiti, in a cold dry climate at 10,000 feet altitude. A tree 2 feet in diameter, with pale-pink to white blossoms and very attractive fruits.

105897. *MEIBOMIA* sp. Fabaceae.

From Chaura, Rampur, Bashahr. A pink-flowered shrub 8 feet high, found in damp situations in semishade.

105898 to 105900. *PEDICULARIS* spp. Scrophulariaceae.

From Losar, Spiti, at 13,000 feet altitude. Found along the irrigation canals.

105898. *PEDICULARIS* sp.105899. *PEDICULARIS* sp.105900. *PEDICULARIS* sp.105901. *PINUS* sp. Pinaceae. Pine.

From Kulu, Kulu, Punjab. A 5-leaved pine.

105902. *PODOPHYLLUM EMODI* Wall. Berberidaceae.

From Bushero La, at 12,000 feet altitude. A forest mandrake of possible interest to wild-flower growers.

105903. *PRUNUS ARMENIACA* L. Amygdalaceae. Apricot.

From Balistan. This fruit is one of the principal foods of the hill people, who eat it fresh or stewed with barley flour. The fruit thus prepared needs no sugar. The edible seeds are used like almonds.

105904. *PYRACANTHA* sp. Malaceae.

From Arsu, Kulu. An attractive tree with a trunk 12 inches in diameter. It stands full sunshine but not severe cold.

105905. *PYRUS* sp. Malaceae.

From the Kulu Valley at 7,000 feet altitude. A wild pear tree with a trunk 2 feet in diameter. The flowers are attractive, and the small fruits are eaten by the natives.

105906. *RHAMNUS* sp. Rhamnaceae.

From Po, Spiti, at 11,000 feet altitude. A bushy shrub with blackish fruits.

105907. *RHAMNUS* sp. Rhamnaceae.105908. *RHODOENDRON ARBOREUM* J. E. Smith. Ericaceae. Tree rhododendron.

From Bathad, Kulu. A bushy tree found on slopes too sunny for pines, and also among oaks on shady cold slopes.

For previous introduction see 97657.

105909. *RHODOENDRON CAMPANULATUM* Don. Ericaceae.

From Bushero La, at 12,000 feet altitude, a region covered with snow in winter and never hot in summer, with monsoon rains from July to September. A large evergreen shrub of stiff spreading habit, sometimes 12 feet high, with oval leaves that are densely covered beneath with red-brown felt. The flowers, of various rosy purple shades and 2 inches across, are borne during April in rather loose clusters about 4 inches across. It is native to India.

For previous introduction see 80656.

105873 to 105932—Continued.

105910 to 105917. *ROSA* spp. Rosaceae. Rose.105910. *ROSA MOSCHATA* Mill.

Musk rose.

From Nacahr, Rampur, Bashahr.

105911. *ROSA* sp.

From Huling, Tibet, at 12,000 feet altitude; a cold dry region. A very attractive shrub 7 feet high, with abundant single pink flowers.

105912. *ROSA* sp.

From Nago, Rampur, Bashahr. An attractive bush 8 feet high, with single pink flowers.

105913. *ROSA* sp.

From Li, Rampur, Bashahr, at 10,000 feet altitude. A bush 8 feet high, with attractive single pink flowers.

105914. *ROSA* sp.

From Nachar, Rampur, Bashahr. A rambler, said to be native, but may be an escape.

105915. *ROSA* sp.105916. *ROSA* sp.105917. *ROSA* sp.

From Nago, Rampur, Bashahr. A shrubby rose 8 feet high, with very large hips.

105918. *SALVIA* sp. Menthaceae. Sage.

An attractive herb collected on a dry slope.

105919. *ULEX* sp. Fabaceae.

From Nachar, Rampur, Bashahr. A cultivated leguminous shrub 6 feet high, with yellow flowers which appear before the leaves.

105920. *VIBURNUM* sp. Caprifoliaceae.

From Pangli, Rampur, Bashahr, at 10,000 feet altitude. A well-formed bush.

105921. *VITIS VINIFERA* L. Vitaceae. European grape.

From Nago, Rampur, Bashahr, at 10,000 feet altitude where it is dry and cold. A cultivated Malaga grape with sweet white fruits in clusters a foot long. The origin is unknown, but it is not grown below this altitude because of the monsoon which splits the fruit, permitting the entry of decay-producing fungi.

105922. *VITIS VINIFERA* L. Vitaceae. European grape.

From Li, Rampur, Bashahr. Fruits said to be red and to ripen a month earlier than the white grape with smaller bunches.

105923. (Undetermined.)

From Nago, Rampur, Bashahr, on dry slopes at 15,000 feet altitude. A very attractive mint, 3 feet high, found growing in clumps with purple, blue, and pink flowers.

105924. (Undetermined.)

From Bathad, Kulu, at 9,000 altitude. An orchid found in dense forest.

105873 to 105932—Continued.

105925. (Undetermined.)

From Sungnam, Rampur, Bashahr. A very attractive bush, 8 feet high, with clusters of cream-colored flowers.

105926. (Undetermined.)

From Wangtu, Rampur, Bashahr. A very attractive composite shrub over 3 feet high with yellow flowers. Found chiefly on cliff faces.

105927. (Undetermined.)

From Banjar, Kulu. A very attractive tree 18 inches in diameter, with clusters of white flowers.

105928. (Undetermined.)

From Chaura, Rampur, Bashahr. An herb 6 feet high, found in deep shade.

105873 to 105932—Continued.

105929. (Undetermined.)

From Nachar, Rampur, Bashahr. A wild flower found in the soft earth in open or semishade.

105930. (Undetermined.)

From Nachar, Rampur, Bashahr. A wild flower found in open or semishade where it is not subject to heavy frost.

105931. (Undetermined.)

From Arsu, Kulu. A tree with very attractive long clusters of purple flowers. Will not stand frost.

105932. (Undetermined.)

From Nachar, Rampur, Bashahr. A very attractive bush.

INDEX OF COMMON AND SCIENTIFIC NAMES

Introductory statement-----	1
Inventory-----	3
Index of common and scientific names-----	24

INTRODUCTORY STATEMENT

This inventory, No. 120, is a record of the plant material received by the Division of Plant Exploration and Introduction from July 1 to September 30, 1934 (nos. 105933-106560).

Particular attention should be called to the introduction of seeds of 135 wheat crosses from Australia (nos. 106026-106053, 106146-106180, 106183-106188, 106192-106229, 106295-106310, 106315-106326), presented by the Director of Plant Breeding, Sydney, New South Wales. These crosses, in which American varieties appear frequently as one of the parents, were made chiefly at the Wagga Experiment Farm, Bomen, and their introduction into this country is a contribution to the plant materials available to Department specialists.

Also worthy of special note, and from the same part of the world, are seeds of an interesting lot of dry-land plants, including several native forage grasses (nos. 106467-106482). These were collected in semiarid central Australia and will be tested in the drier portions of the United States where the winters are not too severe. A number of forage grasses from desert regions likewise are included in a collection of miscellaneous seeds from South Africa (nos. 106073-106100), presented by the McGregor Museum at Kimberley, Cape Colony.

Tubers of 25 native Peruvian varieties of the potato (nos. 106390-106414) were presented by the Estación Experimental Agrícola, La Molina, Lima. Coming as these do from the general region where the potato is believed to have had its origin, this lot of tubers will have especial interest for plant breeders.

The Director of the Station Experimentale de Kisozi, Ruanda-Urundi, Africa, has sent in seeds (nos. 106452-106461) of native leguminous plants, suitable for testing as cover crops in the southern United States. All of these, with one exception, appear never before to have been introduced into this country.

The botanical determinations have been made and the nomenclature determined by Paul Russell, who has had general supervision of this inventory.

B. Y. MORRISON,

Principal Horticulturist, in Charge.

DIVISION OF PLANT EXPLORATION AND INTRODUCTION,
Washington, D. C., April 24, 1937.

INVENTORY¹

105933 to 105935. *CYNODON* spp. Poaceae. **Kweek grass.**

From the Union of South Africa. Seeds and plants presented by I. B. Pole Evans, Chief, Division of Plant Industry, Department of Agriculture, Pretoria. Received July 9, 1934.

105933. *CYNODON* sp.

Plants of a cold-resistant variety collected at nearly 6,000 feet altitude in the high country around Johannesburg.

105934. *CYNODON* sp.

Plants collected near Vereening, at nearly 3,000 feet altitude.

105935. *CYNODON* sp.

Seed from the Rietondale Pasture Station, Pretoria.

105936 to 105943.

From the Union of South Africa. Seeds presented by Ellis Thomas, School of Agriculture, Grooifontein, Middleburg Cape. Received July 9, 1934.

A collection of plants native to South Africa, introduced for Department specialists.

105936. *ATRIPLEX HORTENSIS* L. Chenopodiaceae. **Garden orach.**
Vaalbrak.

105937. *EURYOPS MULTIFIDUS* (Thunb.) DC. Asteraceae.

A stout bush a foot or more high, with linear-filiform leaves one-half to 1½ inches long and numerous small yellow flower heads on slender stems an inch long.

105938. *PEGOLETTIA* sp. Asteraceae.

Members of this genus are small, rigid, shrubby plants with yellow flower heads.

105939. *PENTZIA SPHAEROCEPHALA* DC. Asteraceae.

A rigid twiggy shrub with long erect branches and trifid leaves an inch or more long with linear lobes. The yellow flower heads are half an inch across.

105936 to 105943—Continued.

105940. *PHYMASPERMUM PARVIFOLIUM* (DC.) Benth. and Hook. Asteraceae.

A rigid, much-branched shrub, 1 to 2 feet high, with thinly silky tufted linear leaves up to an inch long and chrysanthemumlike flowers having reddish or yellow disk flowers and white rays. It is said to be a valuable pasture plant for sheep.

For previous introduction see 93291.

105941. *SALSOLA GLABRESCENS* Burtt-Davy. Chenopodiaceae.

A dwarf shrub 1 to 3 feet high, with very small ovate or triangular, spirally arranged leaves and inconspicuous flowers.

105942. *TETRAGONIA ARBUSCULA* Fenzl. Alizoaceae.

A much-branched, semishrubby perennial with fleshy leaves less than 1 inch long, varying from linear to ovate-oblong. The small inconspicuous flowers are borne in leafy racemes and are followed by 3- to 4-winged nutlike fruits.

For previous introduction see 91238.

105943. *TRIPTERIS PACHYPTERIS* Harv. Asteraceae.

A bushy shrub 1 to 3 feet high, with alternate linear leaves, entire or 3-toothed, and numerous small flower heads.

105944. *SACCHARUM OFFICINARUM* L. Poaceae. **Sugarcane.**

From the Dominican Republic. Cuttings presented by James C. Scarffe, San Pedro de Macoris. Received July 14, 1934.

Porvenir-30. An erect vigorous variety which becomes 7 to 9 feet high. It matures in 5 months, is fairly drought resistant, and has never been seen with mosaic.

Introduced for the use of Department specialists working with sugarcane.

105945 to 105949. *IPOMOEA BATATAS* (L.) Lam. Convolvulaceae. **Sweetpotato.**

¹It should be understood that the names of varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Division of Plant Exploration and Introduction, and, further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identification, therefore, must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this Division, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

105945 to 105949—Continued.

From the Union of Soviet Socialist Republics. Tubers presented by V. P. Alekseev, Chief, Foreign Plant Introduction, Leningrad. Received July 19 and 23, 1934.

A collection of tubers grown at the Institute of Applied Botany, Sukhum; introduced for the use of Department specialists.

105945. N-85. A creamy white, yellow-fleshed variety with moist flesh of excellent quality. The large tubers are short, smooth, of very good and regular shape.

105946. N-172.

105947. N-82. A heavy-yielding yellow-skinned, orange-fleshed variety of exceedingly high quality with a honey sweetness and aroma.

105948. N-67. 105949. N-25.

105950 to 105954. NICOTIANA TABACUM L. Solanaceae. Common tobacco.

From Colombia. Seeds presented by the Director, Ministerio de Agricultura y Comercio, Bogotá. Received July 9, 1934.

A collection of native tobacco types introduced for the use of Department specialists.

105950. [No data.]

105951.

105952.

105953. *Burley* variety.

105954. No. 12.

105955. INODES CAUSIARUM O. F. Cook. Phoenicaceae.

From Puerto Rico. Seeds presented by T. B. McClelland, Director, Agricultural Experiment Station, Mayaguez. Received July 6, 1934.

A palm which becomes 50 feet high, with a white trunk 2 feet in diameter and palmately divided leaves about 12 feet wide. Most of the palm-leaf hats made in Puerto Rico are from the leaves of this palm. This species of palm has proved hardy in Florida and deserves a wide distribution because of its striking beauty when young as well as when old.

For previous introduction see 96489.

105956. NICOTIANA TABACUM L. Solanaceae. Common tobacco.

From Peru. Seeds presented by Ing. J. A. Ocampo, Director, Granja Escuela del Cuzco, Keaira. Received July 10, 1934.

A native tobacco with pink flowers, found at 10,000 feet altitude in the vicinity of Cuzco.

105957 to 105959. CITRUS spp. Rutaceae.

From Palestine. Budsticks presented by S. H. Holzman, Rehovoth. Received July 16, 1934.

105957. CITRUS MEDICA L. Citron.

Yemen citron. Apart from its importance for religious purposes, this citron is sweet and has a very pleasant flavor.

105958. CITRUS SINENSIS (L.) Osbeck. Orange.

Avana.

105959. CITRUS SINENSIS (L.) Osbeck. Orange.

Avana blood.

105960 and 105961. NICOTIANA TABACUM L. Solanaceae. Common tobacco.

From Brazil. Seeds presented by the Ministerio da Agricultura, Industria e Comercio, Campo de Sementes Bragantina, Tracuateua. Received July 6, 1934.

Locally grown strains introduced for the use of Department specialists.

105960. NICOTIANA TABACUM L.

Americano tracuateua.

105961. NICOTIANA TABACUM L.

S. Gaugolo.

105962. RUBECKIA HIRTA L. Asteraceae. Black-eyed-susan.

From Texas. Seeds purchased from C. F. Wagner, Houston. Received July 2, 1934. Introduced for genetical studies.

105963 to 106016. HIBISCUS ROSA-SINENSIS L. Malvaceae. Chinese hibiscus.

From Puerto Rico. Cuttings presented by H. Atherton Lee, Director, Agricultural Experiment Station, Mayaguez. Received July 20, 1934.

106017. IPOMOEA BATATAS (L.) Lam. Convolvulaceae. Sweetpotato.

From Australia. Roots presented by H. Wenholz, Director of Plant Breeding, Department of Agriculture, Sydney, New South Wales. Received July 21, 1934.

Hawaii. From the Grafton Experiment Farm.

106018. ICHTHYOMETHIA PISCIPULA (L.)
Hitche. Fabaceae.

From the Virgin Islands. Seeds collected by W. A. Archer, Bureau of Plant Industry. Received July 18, 1934.

An attractive leguminous shade tree which becomes 50 feet high, with a spreading habit and large pinnate leaves. The large racemes of pale-pink flowers appear before the leaves and somewhat resemble those of the black locust.

For previous introduction see 99336.

106019. PRUNUS SARGENTII Rehder.
Amygdalaceae. Sargent cherry.

From Jamaica Plain, Mass. Seeds presented by the Arnold Arboretum. Received July 23, 1934.

A tall handsome tree, native to northern Japan, up to 75 feet high, with smooth, dark-brown bark and ovate or ovate-lanceolate sharply serrate leaves from 1 to 5 inches long. The single pink flowers, up to 1½ inches wide, are in few-flowered clusters, and the black fruits are about the size of peas.

For previous introduction see 93847.

106020. BRACHYPODIUM PINNATUM (L.)
Beauv. Poaceae. Grass.

From Italy. Seeds presented by Dr. Mario Calvino, San Remo. Received July 18, 1934.

A perennial grass which is used for grazing and for hay in Italy.

For previous introduction see 89820.

106021 to 106024. IRIS spp. Iridaceae.

From Turkey. Roots presented by Harold T. Pence, American Mission, Gaziantep. Received July 25, 1934.

106021. IRIS HISTRIOIDES Foster.

A bulbous iris of the Xiphium section, native to Asia Minor, with one or two leaves that appear with or after the flowers. The flowers, over 4 inches across, are vivid blue except for the triangular white patch on the upper part of the falls.

106022. IRIS SUSIANA L.

An *Oncocycclus* iris, with narrowly sword-shaped leaves 6 to 9 inches long and one or two flowers veined and dotted with brown black on a brownish-white ground. Native to Asia Minor and Iran.

106023. IRIS PERSICA L.

A short-stemmed iris of the section *Juno*, native to the mountainous regions of Asia Minor. The four to five linear-complicate leaves are barely 2 to 3 inches long at flowering time, becoming a foot long ultimately. The flowers are pale lilac with a dark-purple blotch at the top of the falls, an orange keel, and purple lines and spots.

106024. IRIS LUPINA Foster.

An *Oncocycclus* iris with a fleshy, creeping rhizome and about six erect narrow leaves 9 inches or more high. The stem, 6 inches high, bears a single flower with falls and standards greenish yellow marked with brownish-red veins. Native to Asia Minor.

106025. (Undetermined.)

From Burma. Seeds presented by Winfield H. Scott, American consul, Rangoon. Received July 23, 1935.

Received as *Cycas siamensis*, but the seeds appear to be of some leguminous plant allied to *Dalbergia*.

106026 to 106053. TRITICUM AESTIVUM
L. Poaceae. Common wheat.

From Australia. Seeds presented by H. Wenzholz, Director of Plant Breeding, Department of Agriculture, Sydney, New South Wales. Received July 27, 1934.

A collection of wheat crosses, grown at the Experiment Farms Cowra and Wagga, New South Wales, and introduced for the use of Department specialists.

106026. Bowmen × *Federation*. C. 8738.

106054. ALLIUM sp. Liliaceae.

From Spain. Seeds presented by Miguel Echeagaray, agricultural attaché, Spanish legation, Washington, D. C. Received July 25, 1934.

Bambosa. A very early maturing Spanish onion.

106055 to 106072.

From the Union of South Africa. Trees purchased from H. E. V. Pickstone & Bro., Simondium, Cape of Good Hope. Received July 30, 1934.

106073 to 106100.

From the Union of South Africa. Seeds presented by the McGregor Museum, Kimberley. Received July 18, 1934.

106073 to 106075. ALOE spp. Liliaceae.

106073. ALOE PRETORIENSIS Pole Evans.

An aloe with dense rosettes of tapering leaves, usually withered at the red tips, and a stoutish stem 4 to 5 inches in diameter. The dark-brown to black stem is extremely rough and clothed throughout its entire length by the remains of withered leafstalks. The most distinctive feature of the plant is its tall branched inflorescence with dense racemes of bright-scarlet flowers.

For previous introduction see 103101.

106074. ALOE sp.

106075. ALOE sp.

106076. ARCTOTIS STOCHADIFOLIA Berzius.
Asteraceae.

A bushy composite from the Cape of Good Hope, which has long hairy branches with whitish hairy leaves and large showy orange-colored flower heads.

For previous introduction see 64169.

106073 to 106100—Continued.

106077. STAPELIA sp. Asclepiadaceae.

106078. CELTIS RHAMNIFOLIA Presl.
Ulmaceae.

A tree about 20 feet high, with smooth, gray bark, ovate, abruptly acuminate leathery leaves, and inconspicuous flowers. Native to South Africa.

106079. CERATOTHECA TRILOBA E. Mey.
Pedaliaceae.

An erect annual plant up to 6 feet high. The obtusely quadrangular stems are hairy, and the coarsely crenate leaves, 1 to 6 inches long, vary from broadly cordate and 3-lobed near the base to lanceolate and sparingly crenate at the top of the plant. The solitary axillary flowers, 2 to 3 inches long, are lilac streaked with purple, and the loosely pubescent capsules, an inch long, have two horns at the tip.

For previous introduction see 103104.

106080 to 106082. CLEMATIS spp. Ranunculaceae.

106080. CLEMATIS BRACHIATA Thunb.

A climbing vine, native to southern Africa, with bipinnately- or tripinnately-parted leaves having ovate-toothed leaflets. The fragrant white flowers, 1 to 2 inches across, are borne in elongated panicles and are followed by orbicular margined fruits with long feathery tails.

For previous introduction see 94239.

106081. CLEMATIS sp.

106082. CLEMATIS sp.

106083. CUCUMIS sp. Cucurbitaceae.

106084. DIGITARIA sp. Poaceae.

106085. PAPPOPHORUM CENCHROIDES Licht.
Poaceae. Grass.

A hairy, tufted, perennial grass, with stems 1 to 3 feet tall and narrow acuminate leaves 3 to 8 inches long. Native to the Union of South Africa. Received as *Enneapogon mollis*, now considered a synonym of this species.

106086 to 106090. ERAGROSTIS spp. Poaceae.

106086. ERAGROSTIS BRIZANTHA Nees.

An annual grass, native to sandy foothills in South Africa, with numerous stems and slender, flat, rigid leaves 1 to 2 inches long.

106087. ERAGROSTIS OBTUSA Munro.

A densely caespitose perennial grass, native to South Africa, with wiry stems 6 to 18 inches high and linear, long-pointed leaves 2 to 5 inches long.

106088. ERAGROSTIS POROSA Nees.

A grass native to South Africa.

106089. ERAGROSTIS SUPERBA Peyr.

An excellent native pasture grass, about 3 feet tall, with broad compressed spikelets.

For previous introduction see 60454.

106090. ERAGROSTIS sp.

106091. GAZANIA LONGISCAPA DC. Asteraceae.

A nearly stemless perennial, native to the Cape of Good Hope. The white-woolly leaves are lanceolate and entire or pinnatisect with linear-lanceolate lobes

106073 to 106100—Continued.

and are 4 to 5 inches long. The showy yellow flower heads are borne on stems a foot long.

106092. GREWIA CANA Sond. Tiliaceae.

Rozijntjes bos (raisin bush). A branching shrub up to 5 feet high, with yellow flowers and black fruits, found up to 4,000 feet altitude in South Africa. The small sweet fruits, each containing a large stone, are eaten by the natives.

For previous introduction see 27519.

106093. HEURNIOPSIS DECIPIENS N. E. Brown. Asclepiadaceae.

A low succulent plant with 4-angled procumbent branches up to 3 inches long and half as thick and bell-shaped purple flowers 1 inch across, in small cymes. Native to South Africa.

106094. HYPARRHENIA HIRTA (L.) Stapf. Poaceae.

A perennial grass about 3 feet high, native to tropical and northern Africa.

For previous introduction see 89832.

106095. RHIGOZUM BREVISPINOSUM Kuntze. Bignoniaceae.

An erect shiny shrub 4 to 10 feet high. The oblong to oblanceolate leaves, 1 to 2 inches long, are tomentose and clustered at the tips of the branchlets, and the campanulate-funnel-shaped yellow or white flowers are less than an inch long and are axillary or fascicled in the leaf clusters.

For previous introduction see 103105.

106096. RHUS sp. Anacardiaceae.

106097. SESAMUM CAPENSE Burm. f. Pedaliaceae.

An erect simple or branched herbaceous plant up to 6 feet high. The leaves are palmately divided into three to five ovate to linear leaflets 1 to 3 inches long, and the tubular violet flowers are 1 inch long with spreading lobes about an inch across. The plant can thrive in very dry situations where the annual rainfall is only 4 inches.

For previous introduction see 103106.

106098. SOLANUM sp. Solanaceae.

A plant with yellow, rather dry fruits, 1 inch in diameter.

106099. VENIDIUM FASTUOSUM (Jacq.) Stapf. Asteraceae.

A showy annual a foot or more high, with lanceolate or obovate irregularly lobed leaves 1 to 2 inches long and terminal solitary bright-orange flower heads up to 4 inches across. Native to South Africa.

106100. VERNONIA sp. Asteraceae.

106101 and 106102.

From the Philippine Islands. Seeds presented by Arthur F. Fischer, Director, Bureau of Forestry, Manila. Received July 26, 1934.

106101. EUPHORIA DIDYMA Blanco. Sapindaceae.

Alpay or *alupag*. A small attractive tree up to 50 feet high, with compound leaves made up of prominently veined leathery lanceolate leaflets and compact terminal clusters of small flowers followed by green warty fruits an inch in

106101 and 106102—Continued.

diameter having a shell-like rind and juicy sweet translucent pulp enclosing a large seed. Native to the Philippine Islands.

For previous introduction see 100648.

106102. NEPHELIUM MUTABILE Blume. Sapindaceae. **Pulasan.**

A small Malayan tree 30 feet high, with compound leaves composed of two to four pairs of oblong to elliptic, acuminate leaflets 5 to 10 inches long. The red fruit, commonly borne in small clusters, is about the size of a walnut, the pericarp is thick and covered with short blunt stout fleshy spines. The flesh (properly the aril) is translucent, whitish, and juicy and of sweet, slightly acidulous flavor. It contains a single large oblong seed.

For previous introduction see 60171.

106103. DIOSCOREA sp. Dioscoreaceae.

From Japan. Tubers intercepted at New York by inspectors of the Bureau of Plant Quarantine. Received August 6, 1934.

A small kidney-shaped white yam weighing about 8¼ ounces. To be grown for identification and to test its value as a food plant.

106104. PHOENIX RECLINATA Jacq. Phoenicaceae. **Senegal date palm.**

From Africa. Seeds collected by Prof. N. J. G. Smith, near Grahamstown, South Africa, and presented by John S. L. Gilmore, Royal Botanic Gardens, Kew. Received July 26, 1934.

A date palm 20 to 30 feet high, native to tropical and subtropical parts of Africa. The reclinate pinnate leaves are 6 to 9 feet long and have rigid green leaflets. The yellowish fruits with sweet edible pulp are half an inch long.

For previous introduction see 104217.

106105. NIEREMBERGIA FRUTESCENS Durien. Solanaceae. **Tall cupflower.**

From China. Seeds presented by the Director, Botanical Garden, Dr. Sun Yat-Sen's Memorial Park, Nanking. Received February 17, 1933. Numbered in July 1934.

A half-hardy perennial, usually self sowing, with slender flaxlike habit and masses of 2-inch, lavender-tinted white salver-shaped flowers produced freely from midsummer until frost. Native to Chile.

106106. ACACIA GIRAFFAE Willd. Mimosaceae.

From the Union of South Africa. Seeds presented by the McGregor Museum, Kimberley. Received July 25, 1934.

The *Kameel-doorn* of the Transvaal is a valuable tree for arid regions in the warm Temperate Zone. The ripe pods are eaten greedily by stock. The tree thrives in sandy soil, attains a large size, and the dark reddish-brown wood is used by the natives in making spoons, knife handles, etc.

For previous introduction see 94235.

106107 to 106109.

From Cuba. Seeds presented by Robert M. Grey, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos. Received July 25, 1934.

106107 to 106109—Continued.

106107. *CELTIS SWARTZII* Planch.

An unarmed tree 25 to 45 feet high, native to the West Indies, with ovate-lanceolate, acuminate, serrate leaves 1 to 3 inches long and purple fruits one-third of an inch in diameter.

106108. *DILLENIA BURBIDGEI* (Hook. f.) Gilg. Dilleniaceae.

A small ornamental tree from Borneo with large leaves and very showy bright-yellow flowers 2 inches across.

For previous introduction see 66213.

106109. *DIOSPYROS HALESIOIDES* Griseb. Diospyraceae.

A Cuban tree with elliptic acute leaves about 1 inch long, hairy on both surfaces, and depressed-globose fruits 1 inch in diameter.

106110. *GARCINIA MANGOSTANA* L. Clusiaceae. **Mangosteen.**

From the Canal Zone. Seeds presented by J. E. Higgins, Director, Canal Zone Experiment Gardens, Summit. Received August 8, 1934.

106111. *BORASSUS FLABELLIFER* L. Phoenicaceae. **Palmyra palm.**

From Brazil. Seeds presented by Dr. Thomas Barbour, Harvard University, through Dr. Afranio Amaral, Butantan, São Paulo. Received August 8, 1934.

A large handsome palm, 60 to 70 feet high, with an unarmed ringed trunk and fan-shaped leaves 8 to 10 feet long. It is native to the dry coastal regions of Ceylon, thrives well in alkaline soil, and is said to be useful as a sand binder.

For previous introduction see 98487.

106112 to 106119.

From the Territories of Ruanda-Urundi, Belgian Congo. Seeds presented by J. B. Lejeune, Director, Station Experimentale de Kisozi. Received August 3, 1934.

106112. *ACACIA* sp. Mimosaceae.106113. *CASSIA* sp. Caesalpiniaceae.

A small climbing shrub collected at 4,500 feet altitude in Urundi Territory.

106114 to 106116. *CROTALARIA* spp. Fabaceae.106114. *CROTALARIA* sp.106115. *CROTALARIA* sp.106116. *CROTALARIA* sp.106117. *ERIOSEMA MONTANUM* Baker. Fabaceae.

An erect perennial with trifoliolate leaves having ovate leaflets 1 to 2 inches long and axillary racemes of yellow flowers. Collected at 6,500 feet altitude in Urundi Territory. It is native to Ethiopia.

106118. *INDIGOFERA* sp. Fabaceae.

Collected at 6,500 feet altitude in Urundi Territory.

106119. *MEIBOMIA* sp. Fabaceae.

A semiwoody legume collected at 3,500 feet altitude in Urundi Territory.

106120 to 106141. *TRITICUM AESTIVUM* L. Poaceae. **Common wheat.**

From Australia. Seeds presented by Lindley Walker Wheat Co., Ltd., Sydney, New South Wales. Received August 7, 1934.

Samples of a collection of wheats exhibited at the Royal Agricultural Show, Sydney, in 1934.

106120. *Robin*. From Cowra, New South Wales. Weak flour.106121 to 106123. *Comeback* variety.

106121. From Carnamah, Western Australia. Strong white wheat.

106122. From Merridin, Western Australia. Best bushel, strong white wheat.

106123. From Grenfell, New South Wales. Best strong white wheat.

106124. *Commonwealth Champion* variety. From Cudal, New South Wales.106125 to 106127. *Dundee* variety.

106125. From West Wyalong, New South Wales. Medium strong flour wheat.

106126. From Grenfell, New South Wales.

106127. From Cudal, New South Wales. Best bushel of wheat.

106128. *Commonwealth Champion* variety. From Cudal, New South Wales. Medium strong white wheat.106129 to 106131. *Ford* variety.

106129. From Cudal, New South Wales. Medium strong white wheat.

106130. From Grenfell, New South Wales. Medium strong flour wheat.

106131. From Cootamundra, New South Wales. Best medium strong white wheat.

106132 to 106135. *Nabawa* variety.

106132. From Euchareena, New South Wales. Best weak flour wheat.

106133. From Euchareena, New South Wales. Best bushel of wheat.

106134. From Euchareena, New South Wales. White wheat other than strong or medium strong.

106135. From Goolgowi, New South Wales. Best bushel of wheat.

106136. *Petatz Surprise* variety. From Barmedman, New South Wales. Soft white wheat.106137. *Ranes* variety. From Mungeribar, New South Wales. Soft white wheat.106138 to 106141. *Waratah* variety.

106138. From Cowra, New South Wales. Best bushel of weak flour wheat.

106139. From Euchareena, New South Wales. Weak flour wheat.

106140. From Euchareena, New South Wales. Best bushel of white wheat other than strong or medium strong.

106141. From Euchareena, New South Wales. Weak flour wheat.

106142 to 106145.

From the Philippine Islands. Seeds presented by Arthur F. Fischer, Director, Bureau of Forestry, Manila. Received August 7, 1934.

106142 to 106145—Continued.

106142. *ADONIDIA MERRILLII* Beccari. **Palm.**
Phoenicaceae.

Bonga de China or *bonga de Jolo*. A medium-sized palm with graceful, somewhat curved pinnate leaves, resembling the common betel-nut palm, but not so tall. The crimson fruits, less than an inch long, are borne just below the leaves. In Manila this palm is grown as an ornamental.

For previous introduction see 103976.

106143. *CARYOTA CUMINGII* Lodd. **Phoenicaceae.**
Palm.

A palm, native to the Philippine Islands, with a tall stout spineless ringed trunk about 20 feet high crowned by a few spreading bipinnate leaves. The small globular fruits are purple.

For previous introduction see 103734.

106144. *LITCHI PHILIPPINENSIS* Radlk. **Sapindaceae.**

A Philippine relative of the lychee (*Litchi chinensis*). The tree is about 50 feet high, with dark green pinnate leaves similar to those of the lychee and roundish oblong fruits about 1 inch long borne in loose terminal clusters. The tough leather-like shell encloses a scant edible pulp in which is embedded a relatively large seed. This seed is roasted and eaten.

For previous introduction see 94064.

106145. *SAGUERUS PINNATUS* Wurm. **Sugar palm.**
Phoenicaceae.

A handsome palm 20 to 40 feet high, with about 25 immense pinnate leaves and enormous bunches of fruit, the individual fruits being the size of an apple. A rich-flavored palm sugar is made from the sap which flows from the bruised fruitstalk.

For previous introduction see 99632.

106146 to 106180. *TRITICUM AESTIVUM* L. **Common wheat.**
Poaceae.

From Australia. Seeds presented by H. Wenholz, Director of Plant Breeding, New South Wales Department of Agriculture, Sydney. Received August 17, 1934.

A collection of common wheats, chiefly red-grained segregates of crosses of American and Australian varieties; introduced for the use of Department specialists.

From the Union of South Africa. Seeds presented by the McGregor Museum, Kimberley. Received August 11, 1934.

106181. *ACACIA STOLONIFERA* Burchell. **Mimosaceae.**

A spiny shrub said to have underground stoloniferous stems. The bipinnate leaves have 3 to 7 pairs of pinnae, each bearing 7 to 15 pairs of oblong-lanceolate leaflets. The stipular spines, in pairs, are spreading and are white with recurved brown tips. The heads of fragrant whitish flowers are followed by straight yellow obliquely striate pods. It is native to southern Africa.

For previous introduction see 94237.

106182. *OTHONNOPSIS* sp. **Asteraceae.**

A shrubby composite with yellow flowers.

106183 to 106188. *TRITICUM AESTIVUM* L. **Common wheat.**

106230 to 106248.

From New Zealand. Plants presented by H. R. Wright, Avondale, Auckland. Received August 21, 1934.

106230. *AMYGDALUS PERSICA* L. Amygdalaceae. Peach.

Gray seedling. An early, white-fleshed seedling of Elberta.

106231. *AMYGDALUS PERSICA* NECTARINA Ait. Amygdalaceae. Nectarine.

Riverhale. A 'white-fleshed cling, a cross between the *J. H. Hale* and the *John Rivers* nectarines.

106232. *AMYGDALUS PERSICA* NECTARINA Ait. Amygdalaceae. Nectarine.

Wright's orange nectarine. A second-generation seedling of *Paragon* peach × *Goldmine* nectarine.

106233 to 106236. *CITRUS LIMONIA* Osbeck. Rutaceae. Lemon.

106230 to 106248—Continued.

106233. *Doncaster*. A heavy-bearing Australian seedling.
106234. *Meyer cross*. A thornless cross between the *Lisbon* and the *Meyer* lemons.
106235. *Meyer thornless*. A thornless sport of the *Meyer* lemon.
106236. *Utility*. A sport of the *Sicily* lemon.
106237. DIOSPYROS sp. Diospyraceae.
Persimmon Charming. A persimmon of good quality.
106238. FRAGARIA sp. Rosaceae.
Strawberry.

Raspberry strawberry. Fruit of excellent quality.

106239. MALUS sp. Malaceae.
Bledisloe. A deep crimson crab apple, a cross between the *Delicious* apple and *Gorgeous* crab.

106240. MALUS SYLVESTRIS Mill. Malaceae.
Apple.
A *Delicious* seedling of excellent quality.

106241. MALUS sp. Malaceae.

Robert Nairn crab. Fruits small, orange yellow.

106242 to 106246. PRUNUS spp. Amygdalaceae.

106242. PRUNUS CERASIFERA Ehrh.
Bests Early. A very yellow cherry plum which can be cooked green.

106243. PRUNUS SALICINA × PISSARDI.
Haleardi. A heavy-bearing cross between the *Hale*, Japanese plum, and *Prunus cerasifera pissardi*.

106244. PRUNUS SALICINA Lindl.
Japanese plum.

Omega. A late-ripening, red-fleshed Japanese plum; the fruit keeps and ships well.

106245. PRUNUS SALICINA × CERASIFERA.
Lippiatt's Early. Japanese and cherry-plum cross.

106246. PRUNUS sp.
De Montford plum. A variety that bears well.

106247. PYRUS COMMUNIS L. Malaceae.
Common pear.

Bewre de Lindauer. Fruits large.

106248. PYRUS COMMUNIS L. Malaceae.
Common pear.

Laxton's Superb. A cross between the *Bartlett* and *Bewre* α .

106249 to 106251.

From British Guiana. Seeds presented by the Botanic Garden at Georgetown, through W. A. Archer, Bureau of Plant Industry. Received August 14, 1934.

106249. GUSTAVIA AUGUSTA L. Lecythidaceae.

No. 2348. A small evergreen tree, native to tropical America, which bears flowers 4 inches across, cream-white tinged with rose inside, and externally rose colored. The stamens form a circle in the

106249 to 106251—Continued.

center of the flower and are white at the base, with rosy filaments and yellow anthers.

For previous introduction see 98553.

106250. GUSTAVIA sp.
No. 2408. A small ornamental tree with showy yellow flowers.

106251. TALISIA sp. Sapindaceae.
No. 2378. *Mauraballi*. A tropical American tree with pinnate leaves and panicles of small flowers.

106252 and 106253. QUERCUS spp. Fagaceae.

From the Arboretum de Trang Bom, Cochinchina. Seeds collected by M. Poilane, Institut des Recherches Agronomiques de L'Indochine, Division de Botanique. Received August 21, 1934.

106252. QUERCUS sp.

106253. QUERCUS sp.

106254 to 106268.

From Palestine. Bulbs purchased from the American Colony Stores, Jerusalem. Received August 28, 1934.

106254 to 106257. IRIS spp. Iridaceae.

106254. IRIS AURANITICA Dinsm.

An iris of the section *Oncocyclus*, from the sandy regions in Palestine, with six nearly erect leaves 6 to 8 inches long and a bronze-yellow flower about 3 inches long, closely dotted with reddish brown.

106255. IRIS BASALTICA Dinsm.

A stout iris nearly 2 feet high, of the section *Oncocyclus*, with erect closely sheathing leaves a foot or more long and a flower with rounded falls and standards, closely veined and dotted with dark blue on a whitish ground. This has a taller stem and larger flowers than any other of the Palestine irises.

106256. IRIS BIGGERI Dinsm. *Bigger's iris*.

An *Oncocyclus* iris, about a foot high, with closely sheathing leaves 9 inches long. The large flower, 4 to 5 inches long, has reddish falls and whitish standards closely covered with purple veins. Native to rocky places in Palestine.

106257. IRIS GRANT-DUFFII Baker.

An iris of the section *Apogon*, found in swampy situations in Palestine. The stem is 6 inches high, while the narrow linear leaves are twice that height. The flower has greenish-yellow falls; the claw is veined with lilac on a yellowish-white ground.

106258. IRIS HAURANENSIS Dinsm.

An *Oncocyclus* iris with a compact rhizome and a stem 12 to 16 inches high. The erect narrow leaves, closely sheathing to the top, are about 5 inches long. The flower is white, so closely veined and dotted with dark purple that the ground color is almost entirely hidden. Native to Palestine.

106259. IRIS HELENÆ Barbey.

A slender-stemmed iris of the section *Oncocyclus*, with falcate leaves 3 to 4 inches long and a pale-lilac flower with fine red-brown veins. Native to the desert regions between Palestine and Egypt.

106254 to 106263—Continued.

106260. IRIS HERMONA Dinsm.

An iris, section *Oncocyclus*, with eight partly evergreen leaves a foot long that appear very early. The large flower, often 6 inches across, has falls veined with lilac and spotted pink on a creamy ground and standards thickly lined with faint purple on a white ground. Native to rocky places in Palestine.

106261. IRIS KASRUWANA Dinsm.

An iris of the section *Oncocyclus*, a foot or more high, with about eight acute leaves 6 to 8 inches long. The falls are dotted and veined with embossed dark-purple spots on a whitish ground, and the standards are minutely dotted and lined with purple on a white ground. Native to the mountains of Palestine.

106262. IRIS MELANOSTICTA Bornm.

An Apogon iris, native to Syria, with a caespitose-branching rhizome, leaves up to 32 inches long, and 1-flowered stems 6 inches high. The yellow falls are veined and spotted with black violet, and the standards are pale yellow. This iris resembles *Iris grant-duffii*, but it grows in drier soil and the flowers are spotted and appear much later.

106263. IRIS NAZARENA Dinsm.

An *Oncocyclus* iris from Palestine with a short rhizome, very long stolons, and a stout stem 12 to 20 inches high. The eight spreading, fanlike leaves are 9 to 16 inches long, and the large flower is often 6 inches wide. The falls are covered with embossed red-brown spots on a creamy ground, and the standards are heavily marked with blue veins and purple dots on a white ground.

106264. IRIS PALAESTINA (Baker) Boiss.

A winter-flowering Juno iris closely related to *Iris caucasica*, with falcate leaves 3 to 9 inches long and a very short stem bearing one to three flowers. These are pale yellow tinged with lilac, the outer segments are oblong with auriculate claws, and the narrowly lanceolate inner segments are very minute. Native to Palestine.

For previous introduction see 80869.

106265. IRIS SAMARIAE Dinsm.

Samaria iris.

An *Oncocyclus* iris from rocky hillsides in Palestine with a stout stem 12 to 16 inches high, leafy throughout. The 3 to 13 nearly erect, fan-shaped leaves are 8 to 16 inches long. The flower, about 5 inches in diameter, is purple lined and dotted on a creamy ground.

106266. IRIS VARTANI Foster.

The two slender leaves of this iris, of the section *Xiphium*, are 8 to 9 inches long, and the stem is very short. The solitary flower has slaty-lilac outer segments, while the inner ones, erect and narrow, are pale lilac. Native to Palestine.

106267. IRIS WESTII Dinsm.

A short-stemmed *Oncocyclus* iris, often with two stems and six gray-green, slightly falcate leaves 6 to 8 inches long. The large flower, resembling that of *Iris hermona*, has creamy-white falls covered closely with purple dots and pale-lilac standards covered with lilac-blue veins. Native to Palestine.

106254 to 106263—Continued.

106263. STERNBERGIA CLUSIANA Ker-Gawl. Amaryllidaceae.

A low-growing plant, native to Asia Minor, with short, 1-flowered stems. The pale-yellow, funnel-shaped flowers, about an inch long, are produced in the fall, and the narrow linear leaves, 3 to 4 inches long, appear in the spring.

106269 to 106273.

From China. Seeds collected at Patung, Western Hupeh, and presented by H. H. Chung, National Wu-Han University, Wu-chang, Hupeh. Received August 22, 1934.

106269. BETULA sp. Betulaceae. Birch.

106270. ELAEAGNUS sp. Elaeagnaceae.

106271. OSMANTHUS sp. Oleaceae.

106272. PRUNUS sp. Amygdalaceae.

106273. SALIX sp. Salicaceae. Willow.

106274. ELEOCHARIS TUBEROSA (Roxb.) Schult. Cyperaceae. Waternut.

From China. Tubers presented by G. Weidman Groff, Lingnan University, Canton. Received August 31, 1934.

Variety *Ma Tai*. A Chinese vegetable which grows very much in the same manner as wet-land rice. The corms or tuberous rhizomes are mostly eaten raw, but are also sliced or shredded in soups and in meat and rice dishes. The plants, which are grown on muck or clay soil, need a hot summer to mature.

For previous introduction see 102620.

106275 to 106294. SACCHARUM OFFICINARUM L. Poaceae. Sugarcane.

From Hawaii. Cuttings presented by the experiment station, Hawaiian Sugar Planters' Association, Honolulu. Received August 27, 1934.

Introduced for the use of Department specialists.

From British Guiana. Cuttings collected in the Botanic Garden, Georgetown, by W. A. Archer, Bureau of Plant Industry. Received August 14, 1934.

- 106311.** LONCHOCARPUS sp.
No. 2339. *Black Haiari.*
- 106312 and 106313.** LONCHOCARPUS NICOU (Aubl.) DC.

A woody vine climbing to the tops of trees, with alternate compound leaves made up of about seven sharp-pointed leaflets and axillary spikes of pea-shaped purple flowers. It is native to the Guianas and Peru.

For previous introduction see 97923.

- 106312.** No. 2415. *White Haiari.*
- 106313.** No. 2416. *Black Haiari.*
- 106314.** LONCHOCARPUS sp.
No. 2418. *White Haiari.*

106315 to 106326. TRITICUM AESTIVUM
L. Poaceae. Common wheat.

From Australia. Seeds grown at the Wagga Experiment Farm, Bomen, New South Wales, and presented by H. Wenholz, Director of Plant Breeding, Department of Agriculture, Sydney, New South Wales. Received August 30, 1934.

106327 to 106331.

From Australia. Seeds presented by C. A. Gardner, Government botanist, Department of Agriculture, Perth, Western Australia. Received August 25, 1934.

106327. CALOTHAMNUS GILESII F. Muell.
Myrtaceae.

A graceful evergreen shrub with linear terete leaves and loose lateral clusters of reddish flowers. Native to Australia.

For previous introduction see 77277.

106328. CONOSPERMUM BRACTEOSUM Meisn.
Proteaceae.

An undershrub with usually simple stems 1 to 2 feet high and petioled basal leaves having nearly orbicular blades 1 inch long. The stem leaves are bractlike, closely appressed, and only half an inch long. The flexuose spikes, 2 to 3 inches long, are in the axils of the upper leaves and bear small white or violet flowers densely covered with silky white hairs. It is native to Western Australia.

For previous introduction see 93835.

106329. HIBISCUS HUGELII Endl. Malvaceae.

A tall shrub, native to Australia, with 3- to 5-lobed coarsely toothed leaves 1 to 3 inches long and large violet-purple flowers.

For previous introduction see 95327.

106330. LEPTOSPERMUM SPINESCENS Endl.
Myrtaceae.

A low spiny evergreen shrub with very small lanceolate leaves one-fourth of an inch long and small solitary axillary white flowers. Native to southwestern Australia.

106331. PILEANTHUS PEDUNCULARIS Endl.
Myrtaceae.

A low shrub with opposite fleshy semiterete leaves crowded at the ends of the branches and small purplish flowers in the leaf axils.

106332 to 106343. EUCALYPTUS spp.
Myrtaceae.

From Australia. Seeds presented by F. H. Baker, Richmond, Victoria. Received August 25, 1934.

106332. EUCALYPTUS AMYGDALINA Labill.
Almond eucalyptus.

Peppermint gum. An Australian tree up to 300 feet high, with lanceolate leaves 4 inches long, crowded umbels of small flowers, and hemispheric fruits one-fourth of an inch broad. The leaves have a strong odor of peppermint and are rich in oil.

For previous introduction see 93228.

106333. EUCALYPTUS CALOPHYLLA Lindl.

Variety *Rosea*. A form with pink flowers.

106334. EUCALYPTUS CORYMBOSA J. E. Smith.

A medium-sized evergreen tree, native to Australia, with leathery lanceolate leaves and large corymbs of fragrant yellowish-white flowers.

106332 to 106343—Continued.

For previous introduction see 80066.

106335. EUCALYPTUS DIVERSICOLOR F. Muell. Karri gum.

A tall tree, up to 350 feet in height, native to Western Australia, straight in habit and a fairly rapid grower. The very dense and elastic wood is considered superior timber, being used by wheelwrights and for shipbuilding. The tree prefers a moist climate and is quite frost resistant, but it does not endure dry heat.

For previous introduction see 48988.

106336. EUCALYPTUS DIVES Schauer.

A small tree up to 12 feet in height, native to New South Wales. The large cordate leaves are opposite, but tend to become alternate toward the tips of the branches. The flowers are borne in dense axillary umbels.

For previous introduction see 75624.

106337. EUCALYPTUS ERYTHROCORYS F. Muell.

Usually a shrub 8 to 10 feet high, but sometimes a tree up to 30 feet. The broadly linear rigid leaves are 6 inches long, and the large flowers, in axillary clusters, have bright red fleshy caps over the buds and the long stamens are yellow. The ribbed, hemispherical fruits are 1 to 2 inches long. It is native to Western Australia.

For previous introduction see 93837.

106338. EUCALYPTUS GIGANTEA Hook. f.

A large tree often 300 feet high and 30 feet in diameter, with white bark and smooth glaucous branchlets. The ovate-lanceolate leaves are 4 to 6 inches long, and the small flowers, numerous in dense heads, are followed by spherical fruits. It is native to Australia.

For previous introduction see 90695.

106339. EUCALYPTUS LEHMANNI (Schauer) Preiss. Lehmann gum.

A large shrub or small tree, with rough reddish bark peeling off in irregular sheets. The greenish-yellow flowers open from July to September. Native to Western Australia.

For previous introduction see 104167.

106340. EUCALYPTUS MARGINATA J. E. Smith.

An Australian shrub or small tree, often clear of branches for two-thirds of its height. The hard durable wood is used for timber, piles, and railway ties. The tree will grow in a great variety of soils, but prefers moist, well-drained situations.

For previous introduction see 86402.

106341. EUCALYPTUS MICROCORYS F. Muell.

A tall tree with persistent wrinkled bark, thin broadly lanceolate leaves, and small white flowers. The yellowish timber is especially useful for ballroom floors because of its greasy nature. Native to Australia.

106342. EUCALYPTUS PREISSIANA Schau.

A shrubby eucalyptus about 8 feet high, with rigid branchlets, shining green, oblong-elliptic leaves nearly 4 inches long, and small yellowish flowers in axillary clusters. Native to southern Australia.

For previous introduction see 104171.

106332 to 106343—Continued.

106343. EUCALYPTUS PYRIFORMIS Turcz.

Red Mallet. A shrub or small tree, found in Western and southern Australia, where it attains a height of 8 to 10 feet. The very thick narrow leaves are rarely more than 3 inches long, and the large flowers are red when fresh. The yellowish-white timber is hard, heavy, and durable.

For previous introduction see 48997.

106344 to 106363.

From British Guiana. Material collected by W. A. Archer, Bureau of Plant Industry. Received August 27, 1934.

Unless otherwise mentioned, the following were introduced as seeds.

106344. ANACARDIUM GIGANTEUM Hance. Anacardiaceae.

No. 2324. A tropical tree with alternate, obovate, thick leaves about 5 inches long and small, kidney-shaped fruits. Native to Brazil.

106345. ANANAS SATIVUS Schult. f. Bromeliaceae. Pineapple.

No. 2353. Seedling of the *Montserrat* pineapple.

106346. CACOUCIA COCCINEA Aubl. Combretaceae.

No. 2373. A woody climber that reaches the tops of the tallest trees in British Guiana. The rigid ovate alternate leaves are long-acuminate, and the showy red flowers are in long terminal spikes.

106347. CARAPA GUIANENSIS Aubl. Meliaceae. Crabwood tree.

No. 2406. *Andiroba*, meaning "bitter oil." A quick-growing tree which becomes 60 feet high, with compound leaves 18 inches long, small axillary flowers, and thick-shelled russet-brown fruits about 3 inches in diameter containing two to six chestnutlike seeds. The bitter oil expressed from the seeds is used by the natives, who rub it into their skin to protect themselves from noxious insects; it is also made into a varnish or lacquer for iron objects, protecting them from rust.

For previous introduction see 44711.

106348. CLEOME POLYGAMA L. Capparidaceae.

No. 2414. An annual about 2 feet high, with compound leaves composed of three lanceolate leaflets 1 to 4 inches long and white or pale-rose flowers an inch long. Native to the West Indies.

106349. COMBRETUM sp. Combretaceae.

No. 2404. The combretums are woody climbers with racemes or spikes of small flowers which are sometimes very showy.

106350 to 106352. TEPHROSIA TOXICARIA Pers. Fabaceae.

A leguminous shrub up to 7 feet high, with leaves made up of nine or more leaflets and racemes of white and pink flowers. It is used as a cover crop.

For previous introduction see 101188.

106350. No. 2315.

106351. No. 2423.

106352. No. 2409.

106344 to 106363—Continued.

106353. CRINUM sp. Amaryllidaceae.

No. 2372.

106354. GUSTAVIA AUGUSTA L. Lecythidaceae.

No. 2399.

For previous introduction and description see 106249

106355. HIPPEASTRUM sp. Amaryllidaceae.

No. 2410. Bulbs.

106356. IPOMOEA TILIACEA (Will.) Choisy. Convolvulaceae.

No. 2306. *Casire*. Tubers of a perennial vine 6 feet or more long, with thin ovate-cordate leaves 2 to 3 inches long and purple, pink, or nearly white flowers about 2 inches long. Native to tropical America.

106357. LONCHOCARPUS sp. Fabaceae.

No. 2420. *Ebecoro*. Cuttings.

106358. PAULLINIA PINNATA L. Sapindaceae.

No. 2350. A strong-growing vine that climbs 30 to 40 feet to the tops of trees. The bright red fruits, the size of cherries, are borne in racemes 6 inches or more in length.

For previous introduction see 99001.

106359. SECURIDACA CORIACEA Bonpl. Polygalaceae.

No. 2349. A woody vine with alternate ovate emarginate leaves and pinkish flowers in lax panicles. Native to British Guiana.

106360. BANISTERIOPSIS LEPTOCARPA (Benth.) R. O. Williams. Malpighiaceae.

No. 2396. A climbing shrub with ovate leaves 3 to 4 inches long and yellow flowers in dense panicles. Native to British Guiana.

106361. SERJANIA MEMBRANACEA Splitg. Sapindaceae.

No. 2319. A tropical woody vine with alternate compound leaves and small white or yellowish flowers in axillary racemes. Native to Surinam.

106362. TALISIA sp. Sapindaceae.

No. 2378. *Mauraballi*.

106363. (Undetermined.)

No. 2410. Small bulb.

106364. CITRUS AURANTIFOLIA (Christm.) Swingle. Rutaceae.

Lime.

From Brazil. Budwood obtained at Estação Pomicultura, Deodoro, and presented by Harold Comper, American consulate, Rio de Janeiro. Received September 4, 1934.

Locally known as *limão cravo*, *limão rosa*, and *limão francez*. When young it makes a vigorous growth, but it is a short-lived tree.

106365 to 106369.

From India. Seeds presented by Dr. Walter Koelz, University of Michigan, Ann Arbor, Mich. Received September 5, 1934.

106365. AQUILEGIA sp. Ranunculaceae.

From Guntung, Purog, Kashmir, July 1933. A columbine with large, exquisitely scented, pale-blue flowers.

106365 to 106369—Continued.

106366. CITRUS sp. Rutaceae.

From Singapore. A very sweet Mandarin orange, 2½ inches in diameter, with orange-red skin.

106367. CITRUS sp. Rutaceae.

From Ceylon. A green-skinned orange 3 inches in diameter, with a fair flavor, but the inner skin is very tough.

106368. CUCUMIS MELO L. Cucurbitaceae. Muskmelon.

Sharbat amar (sirup pomegranate). Purchased at Kamaloporam, between Bombay and Madras, March 1934. A melon the size of a grapefruit, with a very fine flavor.

106369. CUCUMIS MELO L. Cucurbitaceae. Muskmelon.

From Poona, India, March 1934. A large yellow melon.

106370 to 106377.

From British Guiana. Collected by W. A. Archer, Bureau of Plant Industry. Received September 14, 1934.

106370. CARYOCAR NUCIFERUM L. Caryocaraceae. Sawarri tree.

No. 2337. A lofty tree, eventually 100 feet high, with trifoliate leaves and large purple flowers with very numerous white stamens. The large fruit, several inches in diameter, contains two to four flat kidney-shaped nuts with edible white almond-like meat. Native to British Guiana. (Seeds.)

106371. ANTONIA OVATA Pohl. Loganiaceae.

No. 2488. Plants of a tropical shrub, with thick leathery, oval-elliptic, dark-green leaves and small white flowers in large terminal cymes. It is native to Brazil.

106372. ASPIDOSPERMA EXCELSUM Benth. Apocynaceae.

No. 2483. *Garuru*. Plants of a handsome tree, with leathery elliptic leaves, shining green above and 4 to 6 inches long, and large yellow flowers. Native to sandy places in British Guiana.

106373. BAUHINIA sp. Caesalpinaceae.

No. 2476. Plants.

106374. JACARANDA COPAIA D. Don. Bignonaceae.

No. 2492. Seedlings of a large handsome tree 60 to 80 feet high, with opposite bipinnate leaves 1 to 2 feet long and sky-blue flowers in large terminal panicles. Native to British Guiana.

106375. CONOMORPHA MAGNOLIFOLIA Mez. Myrsinaceae.

No. 2437. *Teterumaballi*. Seedlings collected near Mazaruni Station of a tropical shrub with leathery, elliptic leaves up to 8 inches long and lax racemes of inconspicuous flowers.

Native to Surinam and British Guiana.

106376 and 106377. SERJANIA PAUCIDENTATA DC. Sapindaceae.

Seedlings of *Abaho*. A woody vine with biternate leaves, the leaflets oval, attenuate, and coarsely dentate at the apex. Native to French Guiana.

106376. No. 2445. From Kanw Creek, near Mazaruni Forest Station, August 11, 1934.

106377. No. 2462. Near Mazaruni Forest Station September 15, 1934.

106378. LUPINUS sp. Fabaceae.

From France. Seeds presented by Dr. J. Dufrenoy, Station de Pathologie Vegetale, Pont de la Maye, Gironde. Received September 4, 1934.

A hardy perennial, grown in the Pyrenees, but originally from Liberia.

106379. BAUHINIA TOMENTOSA L. Caesalpiniaceae. St. Thomas tree.

From Cuba. Seeds presented by Robert M. Grey, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos. Received September 5, 1934.

An erect shrub or small tree which has obtusely lobed leathery leaves, broader than long, and few-flowered clusters of pure yellow flowers. It is native to India.

For previous introduction see 98802.

106380. TARCHONANTHUS MINOR Less. Asteraceae.

From the Union of South Africa. Seeds presented by the McGregor Museum, Kimberley. Received September 10, 1934.

A strongly resin-scented shrub, native to southern Africa, with oblong to obovate, entire leaves up to 2 inches long and short racemes of small woolly flower heads. It is said to be a good stock feed and to be drought resistant.

For previous introduction see 98012.

106381 to 106386.

From India. Seeds presented by the forest botanist, Forest Research Institute, Dehra Dun, United Provinces. Received September 11, 1934.

106381. ALBUCA VIRIDIFLORA Jacq. Liliaceae.

A South African bulbous plant with six to nine linear-subulate, channeled, hairy leaves a foot long and green yellow-margined flowers in a lax raceme on a scape as long as the leaves.

106382. LAGERSTROEMIA FLORIBUNDA Jack. Lythraceae.

A handsome tropical tree, native to Malaya, with ovate-oblong acute leaves and very numerous pale-rose flowers in much-branched terminal panicles. Larger in all parts than *Lagerstroemia indica*.

106383. LAGERSTROEMIA TOMENTOSA Presl. Lythraceae.

A tall tropical tree 70 to 100 feet high, with elliptic-lanceolate leaves 3 to 6 inches long, hairy beneath, and purple flowers in axillary and terminal panicles. Native to Burma. Much larger than *Lagerstroemia indica*, but with less showy flowers.

106384. MUSA ARNOLDIANA Wildem. Musaceae.

A tropical banana relative about 12 feet high, with leaves 7 feet long and fruits 4 inches long.

For previous introduction see 75282.

106385. URGINEA INDICA (Roxb.) Kunth. Liliaceae.

A bulbous perennial 12 to 18 inches high, native to India and tropical America. The flower scape, appearing before the linear leaves, bears a raceme 6 to 12 inches long of drooping campanulate flowers an inch long, greenish white with green nerves.

106381 to 106386—Continued.

For previous introduction see 103630.

106386. ZEPHYRANTHES CITRINA Baker. Amaryllidaceae. Zephyrily.

A bulbous plant, unknown except in cultivation, with linear bright-green leaves a foot long and bright-yellow, red, or white flowers over an inch long on scapes about 5 inches high.

For previous introduction see 68125.

106387 and 106388. TRITICUM AESTIVUM L. Poaceae. Common wheat.

From Argentina. Seeds presented by the Director, Chacra Experimental de Alto de Sierra, San Juan. Received August 20, 1934.

106387. Alto de Sierra, 01-4.

106388. Alto de Sierra, 01-10-d4.

106389. QUERCUS sp. Fagaceae.

From Nanking, China. Seeds collected in Kwangsi Province by A. N. Steward and H. C. Cho, University of Nanking. Received April 28, 1934. Numbered in September 1934.

F. 84. *Li Shu*. Collected October 23, 1933, at 1,000 feet altitude at Ta Tseh Tsuen, Yung Hsien. A tree with ovate fruits an inch long and almost as wide.

106390 to 106414. SOLANUM TUBEROSUM L. Solanaceae. Potato.

From Peru. Tubers presented by the Estación Experimental Agrícola, La Molina, Lima. Received September 8, 1934.

A collection of potatoes introduced for the use of Department specialists.

106390. *Alalayso.* **106403.** *Huaccoto.*

106402. *Cuzqueña.*

106415. ZEA MAYS L. Poaceae. Corn.

From Sumatra. Seeds sent by Rev. Hagnar Alm, Tandjong, Balei, and intercepted by the plant quarantine office in New York. Received September 12, 1934.

106416 to 106444. Poaceae. Grass.

From Arizona. Seeds collected by R. E. Burton, Santa Cruz, Calif. Received September 5, 1934.

Collected for Department specialists.

106416. AGROPYRON PAUCIFLORUM (Schwein.) Hitchc.

Water Lily Canyon, July 30, 1934.

106416 to 106444—Continued.

106417. *AGROSTIS EXARATA* Trin.
Water Lily Canyon, July 1934.
106418. *AGROSTIS EXARATA* Trin.
Sego Canyon, July 1934.

106423. *BROMUS LAEVIPIES* Shear.
Water Lily Canyon, July 24, 1934.
- 106424 and 106425. *BROMUS MARGINATUS* Nees.
A perennial grass of some value for grazing, growing on alluvial soils under dry conditions.
For previous introduction see 24633.
106424. Water Lily Canyon.
106425. Sego Canyon between 6,800 and 7,500 feet altitude, July 10, 1934.
106426. *BROMUS MOLLIS* L.
Water Lily Canyon, July 16, 1934.
106427. *BROMUS TECTORUM GLABRATUS* Spenner.
Water Lily Canyon, July 21, 1934.
106428. *ELYMUS SALINA* Jones.
From the top of Skeleton Mesa, July 10, 1934.
106429. *ELYMUS SALINA* Jones.
Sego Canyon, July 15, 1934.
106430. *FESTUCA OCTOFLORA* Walt.
Water Lily Canyon, June 25, 1934.
106431. *MUHLENBERGIA POLYCAULIS* Scribn.
Water Lily Canyon, June 23, 1934.
106432. *MUHLENBERGIA PUNGENS* Thurb.
106433. *MUHLENBERGIA* sp.
Sego Canyon, August 5, 1934.
- 106434 and 106435. *ORYZOPSIS HYMENOIDES* (Roem. and Schult.) Ricker.
A deep-rooted, drought-resistant perennial grass found on steep alluvial banks. It is a good grazing grass, and the Indians used the seed as food.
106434. Water Lily Canyon, July 20, 1934.
106435. Sego Canyon, July 5 and 6, 1934.
106436. *ORYZOPSIS MICRANTHA* (Trin. and Rupr.) Thurb.
Water Lily Canyon, July 1, 1934. A rare grass in this region, found growing in the shade of oak trees.
106437. *PANICUM BULBOSUM* H. B. K.
Sego Canyon, August 3, 1934. A bulbous-rooted caespitose Mexican grass, with erect stems 3 to 4 feet high and narrow long-pointed leaves.
For previous introduction see 59354.

106416 to 106444—Continued.

- 106438 and 106439. *PANICUM LONGILIGULATUM* Nash.
A perennial grass with a good root system; it tolerates some shade and is food for grazing.
106438. Water Lily Canyon, June 25, 1934.
106439. Sego Canyon between 6,500 and 8,000 feet altitude, July 5, 1934.
106440. *POLYPOGON MONSPELIENSIS* (L.) Desf.
Keet Seel, July 28, 1934. An annual grass found on the Pacific coast, with soft bristly, green or yellowish spikes up to 6 inches long.
For previous introduction see 53067.
106441. *SPHENOPHOLIS OBTUSATA* (Michx.) Scribn.
From the top of Skeleton Mesa at 8,000 feet altitude.
106442. *SPOROBOLUS CRYPTANDRUS* (Torr.) A. Gray.
Sego Canyon, July 25, 1934.
106443. *STIPA COMATA* Trin. and Rupr.
Sego Canyon, July 10, 1934, and Water Lily Canyon, July 13, 1934.
106444. *STIPA SPECIOSA* Trin. and Rupr.
Water Lily Canyon, July 18, 1934.
106445. *IRIARTEA* sp. Phoenicaceae.
Palm.
From British Guiana. Seeds collected by W. A. Archer, Bureau of Plant Industry. Received August 27, 1934.
No. 2371. *Bobo* palm. The iriarteas are tall spineless palms with cylindrical or swollen trunks rising from pyramids of exposed roots, and with rather few unequally pinnate leaves. Native to tropical South America.
106446. *STIFFITIA CHRYSANTHA* Mikan. Asteraceae.
From Cape Town, Union of South Africa. Seeds presented by Dr. Thomas Barbour, Harvard University. Received September 4, 1934.
A shrub or small tree with alternate, ovate-lanceolate, entire leaves 3 to 5 inches long and golden-yellow flower heads about 3 inches across. Native to Brazil.
106447. *PHOENIX ROBUSTA* Hook. f. Phoenicaceae.
Palm.
From India. Seeds collected in the Godaveri district, Madras Presidency, and presented by the Royal Botanic Gardens, Kew, England. Received August 27, 1934.
A palm 15 to 20 feet high the trunk of which is clothed with the sheaths of the fallen leaves. The pinnate leaves, 3 feet long, have rigid fasciated leaflets. Native to Behar, British India.
106448. *PASSIFLORA MOLLISSIMA* (H. B. K.) Bailey. Passifloraceae.
From Colombia. Seeds presented by Eduardo Hernandez, Pijao, Department of Caldas. Received September 17, 1934.
A climbing plant which produces ovate pointed yellow acid fruits of excellent quality.
For previous introduction see 100701.

106449 to 106451.

From Colombia. Seeds presented by M. J. Rivero, Estación Agrícola Experimental, Palmira, Departamento del Valle del Cauca. Received September 13, 1934.

106449. GUILIELMA SP. Phoeniceaceae.
Palm.

A palm, native to the Valle del Cauca, which is more ornamental than *Guilielma utilis*.

106450. JUGLANS HONOREI Dode. Juglandaceae.

A wild walnut, native to the highlands of northern South America, which resembles closely the black walnut of the United States. The thick-shelled nut contains a kernel of mild pleasant flavor.

For previous introduction see 73394.

106451. PASSIFLORA MANICATA Pers. Passifloraceae.

An ornamental vine, native to Colombia, with red flowers which are followed by green fruits about 3 inches long. The seeds are smaller and the pulp is not so highly flavored as in some of the other varieties.

For previous introduction see 51567.

106452 to 106461.

From Ruanda-Urundi, Belgian Congo, Africa. Seeds presented by J. B. Lejeune, Director, Station Experimentale de Kisozi. Received September 15, 1934.

106452. CASSIA SP. Caesalpiniaceae.

106453. TEPHROSIA, SP. Fabaceae.

Collected in Urundi District.

106454. TEPHROSIA SP. Fabaceae.

Collected in Ruanda District.

106455. CROTALARIA SP. Fabaceae.

Collected in Urundi District.

106456. CROTALARIA SP. Fabaceae.

Collected in Urundi District.

106457. ERIOSEMA SP. Fabaceae.

Received under the name *Eriosema lejeunei*.

106458. MEIBOMIA LASIOCARPA (Beauv.) Kuntze. Fabaceae.

Collected in the Belgian Congo.

For previous introduction see 103618.

106459. DESMODIUM SALICIFOLIUM DC. Fabaceae.

A bushy shrub with lanceolate-oblong leaflets and flowers in terminal panicles. Native to the East Indies.

106460. VIGNA SP. Fabaceae.

Collected in Urundi District.

106461. (Undetermined.)

A perennial leguminous plant collected in Urundi District.

106462 to 106466.

From the Union of Soviet Socialist Republics. Bulbs presented by the Institute of Subtropical Cultures, Sukhum, Transcaucasia, through the Institute of Plant Industry, Leningrad. Received September 14, 1934.

106462. ARUM ELONGATUM Stev. Araceae.

An arum from Asia Minor, about a foot high, with brownish, broadly hastate-

106462 to 106466—Continued.

sagittate leaves. The spathe tube is oblong ovoid, white within, with the limb intense black purple.

106463. COLCHICUM UMBROSUM Stev. Melanthiaceae. Autumn crocus.

A low bulbous plant, native to the Caucasus, with about five narrow leaves and small clusters of lilac flowers.

For previous introduction see 67014.

106464. CROCUS SCHAROJANI Rupr. Iridaceae.

A crocus with a very small globose bulb. In the Caucasus region, where it is native, the leaves appear in the spring and remain until the bright-yellow flowers appear the latter part of July and August. The throat of the corolla is yellowish white, the anthers are pale yellow, and the style branches are orange red.

For previous introduction see 90616.

106465. ORNITHOGALUM BALANSAE Boiss. Liliaceae.

A low bulbous plant with two or three linear leaves 3 to 4 inches long and small white flowers in a small dense raceme, on a scape about as long as the leaves. Native to Armenia.

106466. SCILLA WINOGRADOWII Sosn. Liliaceae.

A squill from the Caucasus with one to three pale-blue suberect flowers more than three-fifths of an inch long. The leaves are oblong-linear or linear lanceolate.

106467 to 106482.

From central Australia. Seeds collected by Dr. T. G. Strehlow, University of Adelaide, Adelaide. Received September 14, 1934.

A collection of native Australian plants.

106467. BRACHIARIA GILESII (Benth.) Chase. Poaceae.

Naljara. Collected in the MacDonnell Ranges. A perennial grass with long leafy stolons and short firm leaves. The flowering culms, erect or ascending, are 6 to 18 inches high, and the edible seeds are eaten by the natives.

106468. CHLORIS VIRGATA Swartz. Poaceae. Feather fingergrass.

Collected at Alice Springs. A fine grazing grass.

106469. DACTYLOCTENIUM AEGYPTIUM (L.) Richter (*Eleusine aegyptiaca* Desf.). Poaceae.

Collected at Alice Springs. A tropical prostrate annual grass which forms mats by rooting at the nodes.

For previous introduction see 73115.

106470. ERAGROSTIS SP. Poaceae.

Collected at Alice Springs. A very nutritious fodder.

106471. ERYTHRINA SP. Fabaceae.

Collected north of Alice Springs, in the northern part of central Australia. *Intina*, or bean tree. The red seeds of this tree are used as ornaments by the natives, and the wood is used in the manufacture of shields and putchis (vessels) of all kinds. The beanwood is very light, one of the few soft woods found in central Australia.

106467 to 106482—Continued.

106472. *HIBISCUS* sp. Malvaceae.*Rose*. From the river banks near Alice Springs.106473. *MIDA ACUMINATA* (R. Br.) Kuntze. Santalaceae. **Quandong.***Pambala*, a native tree from the sand-hill country southwest of Alice Springs. An evergreen tree up to 30 feet high, with long narrow leaves which are eaten by sheep and cattle in times of drought. The inconspicuous flowers are in terminal clusters and are followed by red fruits 1 to 2 inches in diameter. The fleshy part of the fruit is used for jelly, and the kernel of the nut, besides being edible, contains an oil which may be burned for illumination.

For previous introduction see 77021.

106474. *NAGEIA* sp. Taxaceae.*Aragwia*. A native "plum" collected in the MacDonnell Ranges.106475. *PANICUM* sp. Poaceae. **Grass.***Ntenbera*. A grass with edible seeds, collected in the MacDonnell Ranges.106476. *PAPPOPHORUM AVENACEUM* Lindl. Poaceae. **Grass.**

An erect tufted perennial grass with whitish spikelike panicles.

106477. *PORTULACA* sp. Portulacaceae.*Manyeroo*. Collected in the MacDonnell Ranges. An herb with edible leaves which are used as a salad.106478. *SPOROBOLUS PALLIDUS* Lindl. Poaceae. **Grass.**

Collected in the MacDonnell Range. A caespitose grass with narrow leaves 6 to 12 inches high and a very loose panicle 3 to 5 inches long and broad.

106479. *STURTIA GOSSYPIOIDES* R. Br. Malvaceae.*Mountain Rose*. Collected in the Krichauff Ranges. A large shrub closely related to cotton (*Gossypium* spp.), with broadly oval, stiff leaves up to 2 inches long and large purple flowers.

For previous introduction see 90739.

106480. *XANTHORRHOEA* sp. Liliaceae.

Collected in the sand hills west of Hermansburg.

106481. (Undetermined.)

Uratnaya. Collected on the alluvial flats near Alice Springs.

106482. (Undetermined.)

Mbultjisa. A native "orange" from the MacDonnell Ranges.

106483 to 106498.

From British Guiana. Material collected by W. A. Archer, Bureau of Plant Industry. Received September 10, 1934.

Unless otherwise mentioned, the following were introduced as seeds.

106483. *ANANAS SATIVUS* Schult. f. Bromeliaceae. **Pineapple.**

No. 2451. Cuttings.

106484. *BAUHINIA* sp. Caesalpinaceae.

No. 2443. Cuttings.

106483 to 106498—Continued.

106485. *BYRSONIMA ALTISSIMA* (Aubl.) DC. Malpigiaceae.*Arakadako*. No. 2467. A tree 60 to 80 feet high, with ovate-oblong leaves, rough hairy beneath, and racemes of white flowers. Native to British Guiana.106486. *BYRSONIMA RUGOSA* Benth. Malpigiaceae.*Canoaballi*. No. 2440. A scandent shrub with obovate rugose leaves 5 to 7 inches long and yellow flowers in racemes 6 inches long. Native to British Guiana.106487. *CASSIA ALATA* L. Caesalpinaceae.

No. 2424. An erect shrub 5 to 10 feet high, with pinnate leaves up to 2 feet long and showy yellow flowers. Native to tropical America.

For previous introduction see 88426.

106488. *CLATHROTROPIS BRACHYPETALA* (Tul.) Kleinh. Fabaceae.No. 2452. *Arumatta*. A shrub or small tree with unequally pinnate leaves, the leaflets leathery, broadly elliptic oblong, 5 to 7 inches long, and small flowers in spreading racemes. Native to Surinam.106489. *HIPPEASTRUM SOLANDRIFLORUM* Herb. Amaryllidaceae.

No. 2448. Mazaruni Station, August 12, 1934. Bulbs of a plant 1½ feet high, with strap-shaped leaves 1 inch broad and an umbel of two to four flowers; these are 7 to 10 inches long, white with pink stripes. Native to northern South America.

106490. *EUPHORBIA COTINOIDES* Miq. Euphorbiaceae.

No. 2446. Cuttings of a cultivated shrub with red leaves.

106491. *LONCHOCARPUS RARIFLORUS* Mart. Fabaceae.

No. 2444. Cuttings of a woody plant, native to northern Brazil, with leathery ovate leaflets and rosy purple flowers about one-half inch long, in elongated racemes often over a foot long.

106492. *PITHECOLLOBIUM TRAPEZIFOLIUM* Benth. Mimosaceae.No. 2466. *Huruwasa*. A tropical tree, native to French Guiana, with compound leaves made up of two to four pairs of leaflets, each with five to nine pinnules. The flower heads are solitary in the axils.106493 to 160495. *SERJANIA PAUCIDENTATA* DC. Sapindaceae.106493. No. 2430. *Abaho*.

106494. No. 2445. Cuttings.

106495. No. 2462. *White Abaho*.106496. *SOLANUM LEUCOCARPON* Dun. Solanaceae.

No. 2470. A twiggy shrub with small paired leaves, one orbicular and the other one-third as large and lanceolate. The large white flowers are in cymes, and the round berries are shining white. Native to northern South America.

106497 and 106498. *CONOMORPHA MAGNOLIFOLIA* Mez. Myrsinaceae.

For previous introduction and description see 106375.

106497. No. 2437. Near Mazaruni Forest Station, August 10, 1934.

106498. [No Archer number.]

106499. CARICA PAPAYA L. Papayaceae. Papaya.

From California. Seeds presented by James Stewart, La Habra Heights. Received September 20, 1934.

A fine-flavored South African papaya, pollinized by a plant from the Sandwich Islands.

106500. LICANIA RIGIDA Benth. Rosaceae.

From Ceará, Brazil. Seeds collected by H. A. Gardner and presented by the Institute of Paint and Varnish Research, Washington, D. C., through the Bureau of Chemistry and Soils. Received September 26, 1934.

A large tropical tree of the Brazilian forests, with rigid leathery oblong leaves 3 to 5 inches long and shining green above. The greenish, ovoid-cylindrical fruits, about 2 inches long, yield an oil known as Oiticica oil, that is used in the paint and varnish industry.

106501. CARICA CANDAMARCENSIS Hook. f. Papayaceae.

From Chile. Seeds purchased through Arthur W. Burrows, American consular agent, Coquimbo. Received October 10, 1934.

A small papaya $3\frac{1}{2}$ by $4\frac{1}{2}$ inches, with very thin flesh which is highly acid and is used only in making preserves and sirups. The fruit is yellow when ripe with a spicy aromatic flavor and fragrance, but is never eaten fresh.

106502 to 106505.

From Brazil. Seeds presented by J. I. Case Co., through Reginald S. Castleman, American consul, Porto Alegre. Received September 20, 1934.

106502. ORYZA SATIVA L. Poaceae. Rice.

Santa Maria. A new type of rice developed near Rio Pardo, State of Rio Grande do Sul, which develops abnormally large ears and is a heavy yielder.

106503 to 106505. TRITICUM AESTIVUM L. Poaceae. Common wheat.

Rust-immune wheat developed in Rio Grande do Sul.

106503. *Fronteira.*

106504. *Fronoso.*

106505. *Surpreza.*

106506. CARAPA GUIANENSIS Aubl. Meliaceae.

From Brazil. Seeds collected in the Jardim Botânico, Rio de Janeiro, by H. A. Gardner and presented by G. S. Jamieson, Bureau of Chemistry and Soils. Received September 27, 1934.

For previous introduction and description see 106347.

106507. KIGELIA PINNATA (Jacq.) DC. Bignoniaceae.

From East Africa. Seeds collected by Mrs. Thomas Barbour on the road between Ressano Garcia and Lourenço Marques, Mozambique. Received September 24, 1934.

The "sausage tree" of eastern tropical Africa becomes 30 to 50 feet high, with

106507—Continued.

rough ternate leaves made up of seven to nine elliptic-oblong leaflets; the large claret-colored flowers are in long spikes, and the blunt sausagelike fruits are 12 to 18 inches long.

106508 and 106509. TRIFOLIUM SUBTERRANEUM L. Fabaceae. Subterranean clover.

From Australia. Seeds presented by F. H. Brunning Pty. Ltd., Melbourne. Received September 28, 1934.

106508. *Dwalganup.* An extra early strain.

106509. *Wenigup.* A late clover.

106510 to 106519.

From British Guiana. Material collected by W. A. Archer, Bureau of Plant Industry. Received September 13, 1934.

Unless otherwise mentioned the following were introduced as seeds.

106510. ANTONIA OVATA Pohl. Loganiaceae.

No. 2488. A tropical shrub with thick leathery oval-elliptic dark-green leaves and small white flowers in large terminal cymes. It is native to Brazil.

For the introduction of plants see 106371.

106511. ASPIDOSPERMA EXCELSUM Benth. Apocynaceae.

No. 2483. *Garuru.* A handsome tree with leathery elliptic leaves shining green above and 4 to 6 inches long and large yellow flowers. Native to sandy places in British Guiana.

For the introduction of plants see 106372.

106512. CAPSICUM ANNUUM L. Solanaceae. Common redpepper.

No. 2493. A cultivated variety.

106513. CARYOCAR GLABRUM Pers. Caryocaraceae.

No. 2490. Cuttings of a large tropical tree with opposite digitately 3- to 5-foliate leathery leaves, large greenish flowers, and hard-shelled nuts with white edible kernels. Native to northern South America.

106514. CASSIA BACILLARIS L. f. Caesalpinaceae.

No. 2478. Cuttings from a small tree of rather straggly habit with golden-yellow flowers in loose racemes.

For previous introduction see 97567.

106515. CITRULLUS VULGARIS Schrad. Cucurbitaceae.

No. 2491. A cultivated watermelon collected at Bartica, on the Essequiba River.

106516. CRINUM sp. Amaryllidaceae.

No. 2449. Bulbs of cultivated plants collected at Mazaruni Station.

106517. CRINUM sp. Amaryllidaceae.

No. 2450. Bulbs of cultivated plants.

106518. MAXIMILIANEA sp. Cochlospermaceae.

No. 2480. *Kanakuiballi.*

106510 to 106519—Continued.

106519. *CONOMORPHA MAGNOLIFOLIA* Mez. Myrsinaceae.

No. 2437. Cuttings. Near Mazaruni Forest Station August 10, 1934.

For previous introduction of seeds and a description see 106375.

106520 to 106535.

From Europe. Material collected by Edgar Anderson, Arnold Arboretum Balkan Expedition. Received September 18, 1934.

Unless otherwise mentioned, the following were introduced as seeds. All were collected in situations unusually far north for the particular species.

106520. *ACTAEA SPICATA* L. Ranunculaceae. Black baneberry.

No. 33. August 13, 1934. Rila Monastery, Bulgaria, at 4,500 feet altitude in gravelly loam. A herbaceous perennial 1 to 2 feet high, with racemes of deep-blue fruits in autumn.

For previous introduction see 81947.

106521. *CORONILLA VARIA* L. Fabaceae. Crownvetch.

No. 28. August 13, 1934. Rila Monastery, Bulgaria, at 4,200 feet altitude in stony soil. A prostrate or ascending perennial up to 4 feet high, with a thick rootstock, compound leaves, and pinkish flowers in dense umbels. It is native to central Europe.

For previous introduction see 104933.

106522. *CROCUS BANATICUS* Heuff. Iridaceae.

No. 63. Bulbs collected in Turda, Rumania. A Hungarian cocus with two or three linear-lanceolate leaves and short-stalked flowers, dark purple with several heart-shaped darker spots near the tips of the segments. The anthers are orange, a little longer than the white filaments, and the short orange-yellow style branches are somewhat fringed at the tips.

106523. *DIGITALIS AMBIGUA* Murr. Scrophulariaceae.

No. 51. August 18, 1934. Gabrovo Monastery, Bulgaria, at 3,000 feet altitude on a steep sunny slope in gravelly loam. A perennial or biennial 2 to 3 feet high, with sessile or clasping, ovate-lanceolate leaves and large flowers, yellowish marked with brown and 2 inches long. An unusually fine-flowered form. Native to Europe.

106524. *DIGITALIS VIRIDIFLORA* Lindl. Scrophulariaceae.

No. 27. August 13, 1934. Rila Monastery, Bulgaria, at 4,200 feet altitude, on a gentle slope in stony soil. An alpine, native to Greece, with hairy oblong dentate basal leaves, narrower above, and small yellowish-green flowers.

106525. *GERANIUM MACRORRHIZUM* L. Geraniaceae.

No. 32. August 13, 1934. Rila Monastery, Bulgaria, at 4,500 feet altitude. A large-rooted herbaceous perennial with a woody base and stems up to 2 feet high. The 3- to 5-lobed leaves are often colored red, and the blood-red flowers are in bunches at the end of the stems. Native to southern Europe.

For previous introduction see 91427.

106520 to 106535—Continued.

106526. *LUNARIA REDIVIVA* L. Brassicaceae.

No. 39. August 14, 1934. Bank of the na River, near the Rila Monastery, Bulgaria, at 4,200 feet altitude, in deep shade. A herbaceous perennial with large broadly cordate leaves, terminal racemes of gray-purple flowers, and large flat disk-shaped translucent fruits. Native to southern Europe.

106527. *PRIMULA VERIS SUAVEOLENS* Reichb. Primulaceae. Primrose.

No. 29. August 13, 1934. Rila Monastery, Bulgaria, at 4,200 feet altitude. A variety of the cowslip primrose with the calyx campanulate and the corolla almost flat. The cordate leaves are densely white tomentose beneath.

106528. *RHEUM RHAPONTICUM* L. Polygonaceae. Rhubarb.

No. 31. August 13, 1934. Ilenyi, Vrch-Rila, Bulgaria, at 6,000 feet altitude. Cultivated from wild plants by a monk at St. Luke's Shrine.

106529. *SAXIFRAGA ROTUNDFOLIA* L. Saxifragaceae.

No. 40. August 14, 1934. Banks of the Iliina River, near the Rila Monastery, Bulgaria, at 4,200 feet altitude, in deep shade. A herbaceous perennial 8 to 12 inches high, erect from a thickened rhizome, with thick, more or less hairy, roundish leaves and white flowers, spotted red or purple, in a branched panicle. Native to Europe.

106530. *SEMPERVIVUM BLANDUM* Schott. Crassulaceae.

From Turda, Rumania. Plants of an Austrian sempervivum with obovate, spatulate, pale gray-green leaves up to 2 inches long. The pink flowers, marked with a central stripe of bright carmine, are borne on a stem 7 to 10 inches high.

106531. *SOLDANELLA MONTANA* Willd. Primulaceae.

No. 30. August 13, 1934. Rila Monastery, Bulgaria, at 4,500 feet altitude. An alpine perennial up to 14 inches high with long-stemmed, roundish leaves, and violet flowers on slender scapes. Native to southeastern Europe.

106532. *THYMUS MOESIACUS* Velen. Menthaceae.

No. 41. August 13, 1934. Rila Monastery, Bulgaria, at 4,200 feet altitude. A Bulgarian thyme resembling *Thymus chamaedrys* in habit and size, with simple prostrate creeping stems and obovate-spatulate leaves.

106533. *THYMUS* sp. Menthaceae.

No. 12. August 9, 1934. Sofia, Bulgaria, at 2,000 feet altitude. A shrub found on a stony gravelly slope in the full sun.

106534. *VERBASCUM LYCHNITIS* L. Scrophulariaceae.

No. 25. August 13, 1934. Rila Monastery, Bulgaria, at 4,200 feet altitude. A tomentose biennial found in turf in full sun, with oblong-elliptic crenate leaves and panicles of small yellow flowers. Native to Europe and the Caucasus.

106535. *VERONICA URTICIFOLIA* Jacq. Scrophulariaceae.

No. 44. August 14, 1934. Found in gravelly loam in deep shade on the banks

106520 to 106535—Continued.

of the Iliña River, near the Rila Monastery, Bulgaria. A herbaceous perennial over a foot high, with narrowly ovate serrate rugose leaves and small pale-pink flowers in terminal racemes. Native to central Europe.

106536 to 106544.

From British Guiana. Seeds collected by W. A. Archer, Bureau of Plant Industry. Received September 30, 1934.

106536. CENTROSEMA PLUMIERI (Turp.) Benth. Fabaceae.

No. 2499. From Georgetown. A tropical ornamental vine, native to Brazil, with white and red flowers. It is of value as a green manure.

For previous introduction see 99807.

106537. CLEOME SPECIOSISSIMA Deppe. Capparidaceae.

No. 2497. From Georgetown. A showy annual, native to Jalapa, Mexico, with digitately 5- to 7-foliolate leaves, and deep-pink flowers in a terminal raceme.

106538 and 106539. CLIBADIUM SURINAMENSE L. Asteraceae.

Collected in the Northwest district. A large bushy perennial 8 to 10 feet high, with broadly ovate leaves and small white flower heads in dense clusters.

106538. No. 2405. **106539.** No. 2407.

106540. DIOCLEA MACRANTHA Huber. Fabaceae.

No. 2495. Mazaruni Forest Station, August 23, 1934. A perennial, somewhat woody, tropical climber with trifoliolate leaves, the leaflets broadly ovate and about 2 inches long. The small flowers are in axillary racemes. Native to northern Brazil.

106541. FICUS sp. Moraceae.

No. 2485. Macouri Creek, August 21, 1934. *Kumakaballi*. A semi-climbing shrub with milky sap. Birds eat the small fruits.

106542. GUETTARDA ACREANA K. Krause. Rubiaceae.

No. 2496. Kamira Falls, Cyuuni River, August 1934. A shrub or small tree with ovate or oblong leaves 3 to 6 inches long, crowded toward the ends of the branches, and small greenish-yellow axillary flowers one-third of an inch long.

106543. SERJANIA PYRAMIDATA Radlt. Sapindaceae.

No. 2498. Mabaruma, Northwest district, August 24, 1934. A woody climber, native to northwestern South America, with biternate leaves having ovate-elliptic leaflets 4 inches long. The winged fruits are more than 1 inch long.

106544. (Undetermined.)

No. 2500. Georgetown Botanic Garden, August 6, 1934.

106545 to 106558.

From Africa. Seeds presented by Dr. Thomas Barbour, Harvard University, Cambridge, Mass. Received September 24, 1934.

106545. ACACIA sp. Mimosaceae.

An acacia with handsome flowers, from the low veldt in eastern Transvaal.

106545 to 106558—Continued.

106546. ACACIA sp. Mimosaceae.

From Skukusa, Kriega Park, eastern Transvaal.

106547. ALBIZZIA sp. Mimosaceae.

From the eastern Transvaal.

106548. ARISTOLOCHIA GLAZIOVII M a s t. Aristolochiaceae.

An attractive perennial climber, native to the state of Rio de Janeiro, Brazil. The glabrous leaves, about 4 inches long and 1½ to 2 inches in width, are pandurate and deeply cordate lobed at the base, with the obtuse-subquadrate lobes parallel, and the petiole about 1 inch long. The strongly scented, solitary, axillary flowers are unequally ventricose below, while above the purple-spotted limb is about 2 inches long.

106549. BARYXYLUM AFRICANUM (Sond.) Pierre. Caesalpinaceae.

From Letaba, eastern Transvaal. A handsome yellow-flowered tree with a habit like a mimosa, native to tropical and subtropical Africa. It becomes 20 to 30 feet high.

For previous introduction see 93578.

106550. COMBRETUM sp. Combretaceae.

From the Oliphant River, eastern Transvaal. A climbing shrub with red flowers.

106551. COPAIVA MOPANE (Kirk) Kuntze. Caesalpinaceae.

From Letaba, Krupel Park, eastern Transvaal. Native names: *Mopani*, *ilipani*, *mu vanga*, and *mu wani*. A large forest tree from tropical Africa that grows in a semiarid country where water may stand over the soil after heavy rains. The stiff compound leaves, 2 to 3 inches long, are deep shiny green, and the roundish flat pods look very much like the leaflets. The dark heavy wood is very durable and resists the attacks of termites.

For previous introduction see 61644.

106552. ENCEPHALARTOS sp. Cycadaceae.

From the Botanic Garden, Lourenço Marques, Mozambique. Tall palmlike plants with a terminal tuft of thick, spiny, pinnate leaves.

106553. LONCHOCARPUS sp. Fabaceae.

From Letaba, Krupel Park, eastern Transvaal. A fine shade tree.

106554. (Undetermined.)

From Grand Lac, near Majunga, Madagascar.

106555. (Undetermined.)

From Letaba, eastern Transvaal.

106556 to 106558. HYPHAENE spp. Phoenicaceae.

106556. HYPHAENE sp.

From Majunga, Madagascar. A tall silver-gray palm.

106557. HYPHAENE sp.

From Majunga, Madagascar. A tall silver-gray palm.

106558. HYPHAENE sp.

A wild palm collected at Grand Lac, near Majunga, Madagascar.

106559 and 106560.

From Alaska. Seeds presented by Thomas Berryman, Kotzebue, through Dr. Ales Hrdlička, Smithsonian Institution, Washington, D. C. Received September 27, 1934.

106559. IRIS SETOSA Pall. Iridaceae.

Arctic iris.

This was originally described as an Asiatic plant, but forms that cannot be separated from it are found in North America. At least half a dozen forms

106559 and 106560—Continued.

come true from seed. The peculiarity of this iris is that the standards are reduced to small points about one-half inch long. The color is usually bluish purple or lavender, but some shades are so light as to be almost gray.

For previous introduction see 91030.

106560. NYMPHAEA sp. Nymphaeaceae.

Arctic lily.

UNITED STATES DEPARTMENT OF AGRICULTURE

INVENTORY No. 121

Washington, D. C.

Issued July 1938

PLANT MATERIAL INTRODUCED BY THE DIVISION OF PLANT EXPLORATION AND INTRODUCTION, BUREAU OF PLANT INDUSTRY, OCTOBER 1 TO DECEMBER 31, 1934 (Nos. 106561-107747)

CONTENTS

	Page
Introductory statement-----	1
Inventory-----	3
Index of common and scientific names-----	51

INTRODUCTORY STATEMENT

This inventory, No. 121, records the plant material (Nos. 106561-107747) received by the Division of Plant Exploration and Introduction during the period from October 1 to December 31, 1934. Much of this material may be credited to the agricultural exploring expeditions that were in the field, all of which were engaged in special projects for the Department.

Of the nearly 2,000 lots of seeds collected by Messrs. Westover and Enlow, a large proportion are from regions in Turkistan and Turkey where the low winter temperatures and scanty rainfall make it appear probable that plants growing under those conditions would be able to withstand the similar climatic conditions in many parts of our Western and Southwestern States. The plant material collected, which consists largely of grasses, leguminous plants, and local strains of vegetables, will also be useful, in large part, for the replanting of areas denuded by erosion.

Similar comments may be made on the results of the Asiatic expedition conducted by H. G. MacMillan and J. L. Stephens, as the result of which about 60 lots of seeds and plants of grasses and other forage plants were introduced.

Through the courtesy of the Botanical Institute at Ashkhabad, Turkmenistan, Union of Soviet Socialist Republics, the Bureau received 83 lots of seeds, mostly grasses and leguminous perennials and shrubs, and including several species never before introduced (Nos. 106828-106838, 106842-106913). Judging from their native habitat, many of these should be of use in the western and southwestern sections of the United States.

An expedition to the Balkan countries, made by Dr. Edgar Anderson, of the Arnold Arboretum, Jamaica Plain, Mass., resulted in the introduction of 33 lots of seeds of ornamental trees and shrubs (Nos. 107622-107644, 107720-107729). While many of these already are known in cultivation, the fact that the seeds were taken from plants growing in unusually cold, dry situations will, it is believed, extend northward their possible growing range in this country.

Many Australian plants have become acclimated to southern California and other parts of the Southwest. That part of the United States should benefit,

ultimately, through the introduction of 51 lots of seeds from New South Wales (Nos. 106673-106723), presented by Albert Morris, of Broken Hill. These include browsing plants of the genera *Acacia* and *Atriplex*, and several new or little-known shade trees and ornamental shrubs.

The botanical determinations of seeds have been made and the nomenclature determined by Paul Russell, who has had general supervision of this inventory.

B. Y. MORRISON,

Principal Horticulturist, in Charge.

DIVISION OF PLANT EXPLORATION AND INTRODUCTION,
Washington, D. C., December 28, 1937.

INVENTORY¹

106561 and 106562. MUSA PARADISIACA SAPIENTUM (L.) Kuntze. Musaceae.

Banana.

From the Philippine Islands. Plants presented by the College of Agriculture, Los Banos, Laguna, through the Bureau of Agriculture, Manila. Received October 11, 1934.

106561. Kanabanse. C. A. No. 5667.

106562. Martaban. C. A. No. 4971.

106563. HEVEA BRASILIENSIS (H. B. K.) Muell. Arg. Euphorbiaceae.

Para rubber-tree.

From Cuba. Seeds presented by Robert M. Grey, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received October 9, 1934.

A tropical tree, native to Brazil, extensively cultivated for rubber.

For previous introduction see 89078.

106564 to 106581.

From British Guiana. Material collected by W. A. Archer, Bureau of Plant Industry. Received October 1, 1934.

Introduced for the use of Department specialists; unless otherwise mentioned, the following were introduced as seeds.

106564. BAUHINIA sp. Caesalpiniaceae.

No. 2515. *Guayamupati*. Red Hill, Barima River, September 10, 1934. (Plants.)

106565. CAPSICUM ANNUM L. Solanaceae. Common redpepper.

No. 2511. *Weri weri*. Red Hill, Barima River, September 10, 1934. A small, round, cultivated redpepper, one-fourth inch in diameter.

106566. CASSIA OCCIDENTALIS L. Caesalpiniaceae.

106564 to 106581—Continued.

No. 2528. *Algaria*. Above Koriabo, Barima River, September 11, 1934. A shrub 2 feet high, with yellow flowers. It is cultivated by the Warrau Indians for the seeds, which are used to make necklaces for the children.

106567. CLATHROTROPIS BRACHYPETALA (Tul.) Kleinh. (Diptotropis brachypetalum Tul.). Fabaceae.

No. 2548. Mabaruma Compound, Northwest District, September 8, 1934. A large tree with unequally pinnate leaves, the leaflets leathery, broadly elliptic oblong, 3 to 7 inches long; and small white or pinkish flowers in spreading racemes. Native to Surinam and British Guiana.

For previous introduction see 106488.

106568. CLEOME MICRANTHA Desv. Caprifoliaceae.

No. 2525. Barima River below Koriabo, September 12, 1934. An erect spiny herb with white flowers. Native to British Guiana.

106569. CLIBADIUM sp. Asteraceae.

No. 2533. Above Koriabo on the Barima River, September 11, 1934. A shrub cultivated by the Warrau Indians of British Guiana.

106570. CLITORIA ARBORESCENS Ait. Fabaceae.

No. 2547. Mabaruma Hill, Northwest District, September 18, 1934. Cuttings of plant with purple and white flowers.

106571. CRINUM GIGANTEUM Andr. Amaryllidaceae.

No. 2532. Mabaruma Compound, Northwest District, September 6, 1934. A tropical African crinum with 12 or more membranous lanceolate leaves over 2 feet long and an umbel of about six large white fragrant flowers.

¹ It should be understood that the names of varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Division of Plant Exploration and Introduction, and, further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identification, therefore, must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this Division, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

106564 to 106581—Continued.

106572. CROTALARIA INCANA L. Fabaceae.

No. 2536. *Wurimaraka*. Wauna Sub-Experiment Station, Koriabo River, September 16, 1934. A tall shrub 15 to 20 feet high, with yellow flowers and red-woolly trifoliate leaves. Native to the West Indies.

For previous introduction see 98836.

106573. CUPANIA SCROBICULATA L. C. Rich. Sapindaceae.

No. 2538. *Kuleshiri*. Wauna Sub-Experiment Station, Koriabo River, September 16, 1934. A tree about 25 feet high, with alternate pinnate leaves and small white flowers in large panicles followed by reddish fruits. Native to French Guiana.

106574. MIMOSA POLYDACTYLA H. B. K. Mimosaceae.

No. 2546. *Shame bush*. Mabaruma Compound, Northwest District, September 18, 1934. A tropical shrub up to 2 feet high, with spiny branches, drooping, sensitive bipinnate leaves, and small pinkish flowers in ovoid heads. Native to tropical South America.

106575. BELLUCIA GROSSULARIOIDES (L.) Tr. Melastomaceae.

No. 2539. *Itara*. Wauna Sub-Experiment Station, Koriabo River, September 16, 1934. A tender evergreen tree with ovate-acuminate, denticulate, three-nerved leaves, and small axillary clusters of pinkish flowers. The bark is scraped and rubbed on paddles and wooden vessels to render the surface waterproof. Wood treated in this way appears to have been varnished.

106576. NICOTIANA TABACUM L. Solanaceae. Tobacco.

No. 2507. *Yure*. Arawak Indian name. "Buck tobacco." Dove's farm above Arakaka, on the Barima River, Northwest District, September 9, 1934. This pink-flowered tobacco, from 2 to 5 feet high, is cultivated by the Indians and gives a better crop than the American varieties.

106577 to 106579. PIPER spp. Piperaceae.

106577. PIPER sp.

No. 2540. Wauna Sub-Experiment Station, Koriabo River, September 16, 1934.

106578. PIPER sp.

No. 2541. Wauna Sub-Experiment Station, Koriabo River, September 16, 1934. A climbing shrub.

106579. PIPER sp.

No. 2535. Wauna Sub-Experiment Station, Koriabo River, September 16, 1934. A shrub 2 to 3 feet high or sometimes a small tree, native to tropical South America and the West Indies. The large, elliptical, somewhat leathery leaves are 6 to 16 inches long, and the flower spikes are obtuse, shorter than the leaves.

106580. POLYGONUM PUNCTATUM Elliott. Polygonaceae.

No. 2529. Barima River below Koriabo, September 12, 1934. A slender shrub, 2 to 3 feet high, with white flowers; growing on the moist river bank.

106564 to 106581—Continued.

106581. TRIPLARIS SURINAMENSIS Cham. Polygonaceae.

No. 2510. *Long John*. Near the Eclipse Falls, Barima River, September 9, 1934. A tree with pinkish flowers.

106582 to 106589.

From France. Plants purchased from V. Lemoine & Son, Nancy. Received October 12, 1934.

106582 to 106585. BUGINVILLEA spp. Nyctaginaceae.

106582. BUGINVILLEA GLABRA Choisy.

Formosa. A semiscandent, free-flowing variety with purplish-mauve bracts. Native to Brazil.

106583. BUGINVILLEA GLABRA Choisy.

Cypheri. Larger than the type with freely produced, large, deep-rose bracts.

106584. BUGINVILLEA sp.

Maud Chettleburg. Large, bright-rose bracts.

106585. BUGINVILLEA SPECTABILIS Willd.

A large strong-growing climber, rising by means of numerous stout hooked spines, with thick ovate, hairy leaves and large panicles of flowers with large bracts. This species is quite variable in the color of the bracts. Native to Brazil.

Mrs. Butt. A variety with delicate brick-red bracts.

For previous introduction see 99525.

106586 to 106589. HOYA spp. Asclepiadaceae.

106586. HOYA DALRYMPLIANA F. Muell.

A tropical evergreen twiner, with fleshy opposite leaves and umbels of showy flowers. Native to Australia.

106587. HOYA GLOBULOSA Hook. f. Waxplant.

A stout climber with orbicular leaves and dense globular umbels of cream-colored flowers. Native to the Sikkim Himalayas.

For previous introduction see 39687.

106588. HOYA LASIANTHA Korth.

A shrubby evergreen climber from the East Indies, with leathery, oblong-lanceolate leaves and small yellowish-green flowers in dense, long-stalked umbels. Native to the East Indies.

106589. HOYA MOTOSKEI Teijsm. and Binn.

An evergreen climber with fleshy opposite, ovate-orbicular leaves and globular, long-stalked umbels of flesh-colored flowers. Native to Japan.

106590 to 106597.

From British Guiana. Seeds collected by W. A. Archer, Bureau of Plant Industry. Received October 5, 1934.

Nos. 106590 to 106595 were collected in the Botanic Garden, Georgetown, September 27, 1934.

106590 to 106597—Continued.

106590 and 106591. *CENTROSEMA PLUMIERI* (Turp.) Benth. Fabaceae.

A tropical ornamental vine, native to Brazil, with white and red flowers. It is of value as a green manure.

For previous introduction see 99807.

106590. No. 2552.

106591. No. 2565.

106592. *CASSIA MULTIJUGA* L. Rich. Caesalpinaceae.

No. 2553. A small tree 15 to 20 feet high, with compound leaves made up of linear leaflets about half an inch long and large yellow flowers followed by flat, glabrous pods 6 inches long and less than 1 inch wide. It is native to Mexico, South America, and the West Indies.

For previous introduction see 92195.

106593. *CLEOME GLABRA* Taub. Capparidaceae.

No. 2556. Collected in the Botanic Garden, Georgetown, September 27, 1934.

Introduced for Department specialists.

106594. *TEPHROSIA NOCTIFLORA* Bojer. Fabaceae.

No. 2557. A bushy, brown-hairy plant with compound leaves about 4 inches long and lax, terminal racemes of reddish flowers which open late in the afternoon. Native to tropical Africa.

For previous introduction see 67841.

106595. *LONCHOCARPUS SERICEUS* (Poir.) H. B. K. Fabaceae.

No. 2564. A large tropical American tree, sometimes 70 feet tall, with odd-pinnate leaves and racemes of purple flowers.

106596. *PHYLLANTHUS NIRURI* L. Euphorbiaceae.

No. 2531. Collected along the Barima River, Northwest District, September 12, 1934. A glabrous annual about a foot high, native to tropical Asia. Introduced for testing by Department specialists.

106597. *RANDIA FORMOSA* (Jacq.) Schum. Rubiaceae.

No. 2567. Collected September 27, 1934. An attractive flowering shrub with long white fragrant flowers. Each flower has a long slender tube and flat salver-shaped corolla. The small edible fruits are striped different tints of greenish yellow and are about the size of a gooseberry.

For previous introduction see 97940.

106598 and 106599.

From British Honduras. Seeds purchased from William A. Schipp, botanical collector. Received October 12, 1934.

106598. *ARECA* sp. Phoenicaceae. Palm.

Received as *Reinhardtia gracilior*, but the seeds do not agree with those of that genus.

106599. *SCHIFFIA CONCOLOR* Burret. Phoenicaceae. Palm.

An unarmed fan-leaved palm which is sometimes 30 feet high, native to British Honduras. The leaves are about 2 feet across, pale green, and semicircular in outline. The small dry roundish fruits are about an inch in diameter.

106600. *CRINUM* sp. Amaryllidaceae.

From British Guiana. Bulbs collected by W. A. Archer, Bureau of Plant Industry. Received October 6, 1934.

No. 2550. Mabaruma Compound, Northwest District, September 19, 1934. An ornamental with pink flowers, grown under the name "lily-of-the-valley."

106601. *ARUM PALAESTINUM* Boiss. Araceae.

From Palestine. Bulbs presented by Henry N. Sweet, Boston, Mass. Received September 24, 1930. Numbered in September 1934.

The black calla of Palestine has ovate to hastate-sagittate leaves about 6 inches wide at the base and a spathe about as long as the leaves, with a short green tube and an elongated narrow limb. This limb is greenish on the outside and black purple within.

106602. *TRECVLIA AFRICANA* Decaisne. Moraceae.

From Portuguese Guinea, Africa. Seeds presented by Dr. Leon Croizat, New York. Received October 9, 1934.

A tropical African tree related to the breadfruit, finally about 80 feet high, with coriaceous, ovate-elliptic leaves 8 inches long and 4 inches broad. The large yellowish fruit, a foot or more in diameter, is said to weigh up to 30 pounds. Each fruit contains more than a thousand seeds the size of kidney beans, which are ground and used as meal by the natives.

For previous introduction see 98902.

106603 to 106612.

From Cuba. Seeds presented by Robert M. Grey, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received October 9, 1934.

106603. *ACACIA LAETA* R. Br. Mimosaceae.

Originally from the horticultural section, Giza, Egypt. A small tree armed with short, black, hooked prickles or sometimes unarmed. The small glaucous leaves, 2 to 3 inches long, consist of two to three pairs of oblique oblong leaflets, and the flowers are in small spikes. Native to Ethiopia.

For previous introduction see 105869.

106604. *BAUHINIA TOMENTOSA* L. Caesalpinaceae.

An erect shrub or small tree which has obtusely lobed leathery leaves, broader than long, and few-flowered clusters of pale-yellow flowers with the upper petals maroon spotted. Native to India.

For previous introduction see 98802.

106605. *BOMBACODENDRON VIDALIANUM* (Naves) Merr. and Rolfe. Malvaceae. Lanutan.

Originally from the Bureau of Forestry, Manila, Philippine Islands. A tropical tree valuable for its wood and also quite ornamental, with large white flowers with a red center, shaped like those of the tropical *Hibiscus rosa-sinensis*, and about 7 inches in diameter.

For previous introduction see 38486.

106603 to 106612—Continued.

106606. *DISTICTIS GNAPHALANTHA* (A. Rich.) Urban. Bignoniaceae.

A tropical woody vine with opposite trifoliate leaves and terminal panicles of white flowers. Native to Cuba.

106607. *INTSIA BIJUGA* (Colebr.) Kuntze. Caesalpinaceae.

A tall tree 100 feet or more in height, with fragrant white and reddish flowers borne in large conspicuous clusters. The wood is valued as building material.

For previous introduction see 105711.

106608. *JACARANDA SAGRAEANA* DC. Bignoniaceae.

A tropical tree with bipinnate leaves, the leaflets oval-rhomboid, and lax terminal panicles of bluish flowers. Native to Cuba.

106609. *JUGLANS INSULARIS* Griseb. Juglandaceae. Cuban walnut.

A comparatively rare Cuban tree found in the mountainous sections of the island up to 2,000 feet altitude, growing along small streams. It is erect, slender, about 40 feet high, with foliage somewhat finer than that of *Juglans nigra*. The nuts resemble those of *J. nigra* in size and appearance, but the septae being very thick and woody, the kernels are removed with difficulty.

For previous introduction see 90884.

106610. *PASSIFLORA MANICATA* Pers. Passifloraceae.

An ornamental vine, native to Colombia, with red flowers which are followed by green fruits about 3 inches long. The seeds are smaller, but the pulp is not so highly flavored as in some other varieties.

For previous introduction see 106451.

106611. *RUELLIA SPECTABILIS* (Nees) Britton. Acanthaceae.

A herbaceous perennial, native to southern South America, with opposite, linear-lanceolate leaves and beautiful deep-lavender flowers an inch across.

16612. *MAURANDYA ERUBESCENS* (D. Don) Gray. Scrophulariaceae.

Presented by M. J. Rivero, Colombia. A woody climber, with triangular serrate, alternate leaves and rosy pink trumpet-shaped flowers 3 inches long. Native to Mexico.

106613 to 106623.

From Algeria. Seeds presented by Frank A. Thackery, Bureau of Plant Industry, Indio, Calif. Received October 8, 1934.

Introduced for Department specialists.

106613. *ACACIA RADDIANA* Savi. Mimosaceae.

A tropical African tree, somewhat spiny, with bipinnate leaves and linear-oblong leaflets which are obtuse and one-fourth of an inch long.

106614. *ACACIA SEYAL* Delile. Mimosaceae.

A small and rather slender acacia with reddish-brown bark, ivory-white spines about 2 inches long, and heads of very fragrant flowers. The tree is common in tropical Africa north of the Equator and is one of the principal gum-yielding acacias of the Nile region.

For previous introduction see 59651.

106613 to 106623—Continued.

106615. *ATRIPLEX HALIMUS*. Chenopodiaceae.

A low-spreading north African shrub with gray foliage, used extensively in Morocco as a hedge plant close to the sea.

For previous introduction see 66773.

106616. *CALIGONUM COMOSUM* L'Her. Polygonoaceae.

A densely branched shrub 10 to 15 feet high, with minute subulate leaves and small ovate densely spiny nutlike fruits. Native to the eastern Mediterranean region.

For previous introduction see 105808.

106617. *CASSIA LANCEOLATA* Forsk. Caesalpinaceae.

A shrub with pinnate leaves composed of lanceolate leaflets 1 inch long and pale yellow flowers in long terminal racemes. Native to Arabia.

106618. *EUPHORBIA CALYPTRATA* Boiss. Euphorbiaceae.

An annual, or sometimes a perennial, 6 to 10 inches high with sessile entire narrow-linear leaves. Native to northern Africa.

106619. *GREWIA POPULIFOLIA* Vahl. Tiliaceae.

A shrub about 6 feet high, with stiff rounded-oblong leaves 1 to 2 inches long, cymes of small yellow flowers, and red fruits the size of small peas. Native to tropical Africa.

For previous introduction see 75399.

106620. *MAERUA CRASSIFOLIA* Forsk. Caprifoliaceae.

A shrub or small tree with small fleshy oval leaves less than one-half inch long and small white flowers. Native to Egypt.

106621. *NITRARIA SCHOBERI* L. Zygophyllaceae.

A hardy, densely branched shrub of spreading habit, with small bluish-green leaves and small berries which change from light green through red into a violet black. It is native to China, where it grows on strongly alkaline flats.

For previous introduction see 36800.

106622. *PULICARIA ALVEOLOSA* Batt. and Trab. Asteraceae.

A hairy, densely leafy herb with oblong irregularly dentate leaves and small yellow flower heads on slender stems. Native to Hoggar in the Sahara Desert.

106623. *STAFFIOLA BIPINNATA* (L.) Kuntze. Poaceae.

A perennial grass with a stout creeping rhizome, tufted erect stems 1 to 3 feet high, and long rigid leaves. Native to south-eastern Asia.

106624 to 106636.

From the Union of South Africa. Plants purchased from Dr. I. B. Pole Evans, Division of Plant Industry, Department of Agriculture, Pretoria. Received October 18, 1934.

Introduced for Department specialists.

106624 to 106635. *DIGITARIA* spp. Poaceae.

106624. *DIGITARIA DECUMBENS* Stent.

For previous introduction see 91767.

106624 to 106636—Continued.

106625. DIGITARIA sp.

Koster Strain.

106626. DIGITARIA sp.

Makarikari Strain.

106627. DIGITARIA sp.

Malmaniesoog Strain, Selection 1.

106628. DIGITARIA sp.

Malmaniesoog Strain, Selection 2.

106629. DIGITARIA sp.

Molopo Strain.

106630. DIGITARIA sp.

Pangola River Strain.

106631. DIGITARIA sp.

Port Elizabeth Strain, Selection 1.

106632. DIGITARIA sp.

Pretoria Small Strain.

106633. DIGITARIA sp.

Pretoria Strain "Irene."

106634. DIGITARIA SWAZILANDENSIS Stent.

For previous introduction see 91769.

106635. DIGITARIA sp.

Vakwe Camp Strain.

106636. PANICUM MEYERIANUM Nees. Poaceae.

A tall grass, 2 to 3 feet high, with rigid leaves about 8 inches long and large racemes 3 inches long and wide. Native to the Cape of Good Hope.

106637 to 106639.

From British Guiana. Seeds collected by W. A. Archer, Bureau of Plant Industry. Received October 1, 1934.

Introduced for Department specialists.

106637. BANISTERIA RETICULATA (Poir.) C. B. Robins. Malpighiaceae.

No. 2503. Barima River, September 8, 1934. A tropical shrub with opposite oblong-ovate leaves 6 to 12 inches long and small yellow flowers in panicle cymes.

106638. CALOPOGONIUM MUCUNOIDES Desv. Fabaceae.

No. 2542. Mabaruma Compound, Northwest District, September 18, 1934. A stout twining vine with rhombic-ovate leaflets and long-stalked racemes of pale-blue flowers. It forms a mat of foliage 1 to 2 feet thick and is used as a cover crop as well as for forage. Native to tropical America.

For previous introduction see 94228.

106639. LONCHOCARPUS LATIFOLIUS (Willd.) H. B. K. (*Amerimnon latifolium* Willd.). Fabaceae.

No. 2506. Above Koriabo on the Barima River, September 8, 1934.

106640 to 106645.

From the Union of Soviet Socialist Republics. Seeds and bulbs collected by H. L. Westover and C. R. Enlow, Bureau of Plant Industry. Received October 11, 1934.

106640 to 106645—Continued.

106640 to 106642. ALLIUM spp. Liliaceae.

106640. ALLIUM GIGANTEUM Regel.

No. 150-C. Kopet Dag, near Ashkhabad, June 1934. Bulbs. One of the largest members of the genus, with large bulbs and broad fleshy leaves about 18 inches long. The bright-lilac flower heads, 4 inches across, are on stalks about 4 feet high.

For previous introduction see 82387.

106641. ALLIUM sp.

150-D. Ashkhabad, June 20, 1934. Bulbs found in rolling wheatland near mountains.

106642. ALLIUM sp.

150-E. *Chrystophi*. Bulbs found in the mountains near Ashkhabad, June 20, 1934.

106643 and 106644. From Kopet Dag, south of Ashkhabad, near the Iranian (Persian) frontier, June 1934.

106643. GLADIOLUS sp. Iridaceae.

No. 148. Bulbs and seeds.

106644. HYACINTHUS sp. Liliaceae.

No. 149. Bulbs and seeds.

106645. TULIPA MICHELIANA Hoog. Liliaceae.

No. 150-A. Kopet Dag Mountains, near Ashkhabad, June 19, 1934. Bulbs and seeds of a tulip, native to the Caspian region, with a pubescent scape 12 inches high. The lanceolate to linear-lanceolate leaves, usually four, are striped with brown and have undulate margins. The large single flowers are lilac scarlet and vermilion scarlet inside, with black lanceolate blotches at the base.

For previous introduction see 100644.

106646 to 106648.

From Wales. Seeds presented by Dr. R. G. Stapledon, Welsh Plant Breeding Station, Aberystwyth. Received October 19, 1934.

Introduced for Department specialists.

106646. DACTYLIS GLOMERATA L. Poaceae.

Orchard grass.

S. 26.

106647. LOLIUM PERENNE L. Poaceae.

Perennial ryegrass.

S. 23.

106648. PHLEUM PRATENSE L. Poaceae.

Timothy.

S. 50.

106649. TARCHONANTHUS CAMPHORATUS L. Asteraceae.

From the Union of South Africa. Seeds presented by the McGregor Museum, Kimberley. Received October 20, 1934.

Vaalbos. An evergreen aromatic shrub 8 to 10 feet high, with lanceolate-oblong leaves 1 inch long and a terminal panicle of purple flower heads. The shrub is eaten by stock during droughts.

For previous introduction see 75401.

106650 to 106653.

From British Guiana. Cuttings collected by W. A. Archer, Bureau of Plant Industry. Received October 12, 1934.

Introduced for Department specialists.

106650 to 106653—Continued.

106650. *CLITORIA ARBORESCENS* Ait. Fabaceae.

No. 2537. Wauna Sub-Experiment Station, Koriabo River, September 16, 1934. A shrubby climber with trifoliolate leaves and purple flowers in long-stalked racemes. Native to Trinidad, British West Indies.

For previous introduction see 21327.

106651. *LONCHOCARPUS NICOU* (Aubl.) DC. Fabaceae.

No. 2520. Near Eclipse Falls, on the Barima River, September 10, 1934. *Red Haiari*. A strong-growing vine with three to five pinnate, papery leaves. The stems become reddish with age. Native to northern South America.

106652. *PHYLLANTHUS* sp. Euphorbiaceae.

No. 2521. Red Hill, on the Barima River, September 10, 1934. *Conuparu*.

106653. *PHYLLANTHUS ACUMINATUS* Vahl. Euphorbiaceae.

No. 2544. Mabaruma Compound, Northwest District, September 18, 1934. *White conuparu*. A bushy perennial 3 to 6 feet high with pinnate leaves. It is native to British and French Guiana.

106654. *COCCOTHRINAX CRINITA* Becc. Phoenicaceae.

From California. Seeds presented by David Barry, Jr., Los Angeles. Received October 16, 1934.

Palma petote, guano barbudo. A fan-leaved palm, native to Cuba, with a slender spineless trunk crowned by a large cluster of roundish leaves divided into narrow acute obliquely folded leaves. The juicy berrylike fruits are purplish black.

106655 to 106663. *DIGITARIA* spp. Poaceae. Grass.

From the Union of South Africa. Plants purchased from Dr. I. B. Pole Evans, Division of Plant Industry, Department of Agriculture, Pretoria. Received October 20, 1934.

Introduced for Department specialists.

106655. *DIGITARIA DIVERSINERVIS* (Nees) Stapf.

Unkomaas. A perennial grass with weak ascending stems up to 18 inches high and linear-lanceolate leaves 1 to 3 inches long. Native to the Cape of Good Hope.

106656. *DIGITARIA PENTZII MINOR* Stent.

A perennial, densely tufted grass, with numerous stolons and erect stems 2 to 3 feet high. Native to the Cape of Good Hope.

106657. *DIGITARIA SERIATA* Stapf.

Kuruman Strain. A perennial grass with a creeping branched rhizome. The erect culms are 4 feet or more high. Native to southwestern Africa.

106658. *DIGITARIA* sp.

Hamba Strain.

106659. *DIGITARIA* sp.

Inkinip Strain.

106660. *DIGITARIA* sp.

Port Elizabeth Strain, Selection No. 2.

106655 to 106663—Continued.

106661. *DIGITARIA* sp.

Steyn's Strain.

106662. *DIGITARIA* sp.

Theron's finger grass.

106663. *DIGITARIA* sp.

V 2.

106664. *STAPELIA CANTABRIGIENSIS* Berger. Asclepiadaceae.

From Pennsylvania. Plants presented by Mrs. J. Norman Henry, Gladwyne. Received October 25, 1934.

A hybrid stapelia of the *Stapeltonia* section. The four-angled, bright-green stems, covered with fine hairs, are about 6 inches high. The long-stalked flowers, nearly 5 inches across, are broadly campanulate, brownish red at the center, changing to red at the tips and greenish on the outside. These plants originated from seeds received from the Cambridge Botanic Garden in 1899 as *Stapelia hirsuta*.

106665. *CITRUS* sp. Rutaceae.

From French Indo-China. Seeds presented by M. Poilane, Institut des Recherches Agronomiques de Indochine, Division de Botanique. Received October 13, 1933. Numbered October 26, 1934.

A wild orange from dry, sandy, rocky soil, near the seashore, Nhatrang, Annam.

106666 to 106669. *ALLIUM SATIVUM* L. Liliaceae. Garlic.

From Bulgaria. Bulbs purchased through Cavendish W. Cannon, American vice consul, Sofia. Received October 27, 1934.

106666. *Radomir*, summer garlic. A very hot, strong garlic with 9 to 12 bulbils to each bulb.

106667. Ordinary summer garlic. A very hot, strong garlic with 12 to 14 bulbils to each bulb.

106668. *Devet Dishlia*, winter garlic. A mild-flavored garlic with 9 to 12 bulbils to each bulb.

106669. Ordinary winter garlic. A moderately hot garlic with 12 to 16 bulbils to each bulb.

106670. *PENNISSETUM NERVOSUM* (Nees) Trin. Poaceae.

From Ecuador. Seeds presented by Nelson Marquez, official agronomist, Subdirección de Agricultura del Litoral, Guayaquil. Received October 25, 1934.

A tropical American perennial grass 2 feet or more high, with rough, broadly linear leaves a foot long.

106671 and 106672.

From France. Seeds presented by A. Gérard, La Fosse, par Montoire sur Loir, Loir et Cher. Received October 25, 1934.

106671. *MAGNOLIA NICHOLSONIANA* Rehd. and Wils. Magnoliaceae.

A deciduous shrub or small tree, sometimes 20 feet high, closely allied to *Magnolia wilsonii*, from which it is distinguished by its vinous-red bark, shorter petioles, and oblong-obovate leaves with densely hairy under surfaces. The cup-shaped flowers, appearing before the

106671 and 106672—Continued.

leaves, are white with red pistils and about 6 inches across. This magnolia is native to western China.

For previous introduction see 66078.

106672. MAGNOLIA WILSONII (Finet and Gagn.) Rehd. Magnoliaceae.

A large shrub with pure white, deliciously fragrant flowers which are produced freely during late May and early June. It is native to western Szechwan, China.

For previous introduction see 62128.

106673 to 106723.

From Australia. Seeds presented by Albert Morris, Broken Hill, New South Wales. Received October 19, 1934.

Introduced for Department specialists.

106673 to 106693. ACACIA spp. Mimosaceae.**106673. ACACIA ANEURA** F. Muell.

Mulga or *Yarren*. A tall yellow-flowered shrub which, in times of drought, is considered a good forage for livestock. The wood is very hard and is valued as timber.

For previous introduction see 63698.

106674. ACACIA BRACHYBOTRYA Benth.

A handsome shrub several feet high, which is silvery white with a close silky pubescence. It bears a small number of axillary racemes of yellow flower heads and has very short leaves. Native to southeastern Australia.

For previous introduction see 75579.

106675. ACACIA CALAMIFOLIA Sweet.

A tall shrub or small tree with slender erect branches and filiform drooping phyllodes 1 to 2 inches long. The large yellow flower heads are in short erect racemes. It is said to be an excellent tannin species, containing 20 percent of tannin. Native to southeastern Australia.

For previous introduction see 48038.

106676. ACACIA DODONAEIFOLIA Willd.

A tall shrub, glabrous but very resinous, with oblong-linear phyllodes 2 to 4 inches long and numerous globular flower heads. Native to South Australia.

106677. ACACIA EXCELSA Benth.

A large forest tree with oblong-falcate phyllodes 2 to 3 inches long and small yellow flowers in dense globular heads. Native to Queensland, Australia.

106678. ACACIA FALCATA Willd.

An evergreen tree, 20 to 30 feet high, with few slender branches and small yellow flowers in dainty spherical clusters on racemes borne in the axils of the dark glossy green falcate leaves. The timber is hard, heavy, and tough.

For previous introduction see 80060.

106679. ACACIA GLADIIFORMIS A. Cunn.

A tall glabrous shrub with thick curved linear-lanceolate phyllodes 3 to 6 inches long and racemes of small dense flower heads. Native to New South Wales.

106673 to 106723—Continued.**106680. ACACIA HORRIDA** (L.) Willd.

Received as *A. karroo*, which is now referred to the above species. A spreading flat-topped spiny tree about 20 feet high, widely distributed throughout South Africa. The fragrant yellow flower heads are often visited by bees. It grows mostly in the open and seeds abundantly.

For previous introduction see 94236.

106681. ACACIA LONGIFOLIA SOPHORAE (Labill.) F. Muell.

A yellow-flowered, rapid-growing evergreen shrub or small tree, 15 to 20 feet high, excellent for preventing the encroachments of the sea along sandy coasts. It frequents the coast line of southeastern Australia and southern Queensland to South Australia, and also Tasmania.

For previous introduction see 91598.

106682. ACACIA MELANOXYLON R. Br.

An evergreen Australian tree up to 100 feet high, with lanceolate leathery phyllodes 4 inches long, heads of creamy flowers in short racemes, and reddish-brown twisted pods. The dark wood is very similar to black walnut and is used for the same purposes. The tree makes a rapid growth when young.

For previous introduction see 90841.

106683. ACACIA NOTABILIS F. Muell.

A tall handsome shrub native to the mountain slopes of southeastern Australia. The sword-shaped, almost linear phyllodes are 4 to 6 inches long, and the dense globular heads of about 50 flowers each are borne in short racemes.

For previous introduction see 47368.

106684. ACACIA OBLIQUA A. Cunn.

A much-branched shrub with small roundish or obovate phyllodes one-half inch or less long, and small flower heads on slender peduncles. Native to New South Wales.

106685. ACACIA PODALYRTAEFOLIA A. Cunn.

A gray pubescent shrub 4 to 6 feet high, with ovate phyllodes and numerous yellow flowers in long racemes at the ends of the branches. The pinkish wood is nicely marked. Native to Queensland.

For previous introduction see 104070.

106686. ACACIA PYCNANTHA Benth.

A small, rapid-growing tree up to 30 feet high, with coriaceous leaves and masses of fragrant bright-yellow flowers. The plant is useful as a sand binder.

For previous introduction see 54439.

106687. ACACIA RIGENS A. Cunn.

An Australian shrub 4 to 6 feet high, with threadlike compressed phyllodes 3 to 4 inches long and solitary yellow flower heads.

106688. ACACIA SALICINA Lindl.

A tall shrub or small tree, native to Australia, with pendulous branches and willowlike phyllodes up to 5 inches long. The yellow flowers are in short racemes of two or three globular heads.

For previous introduction see 90678.

106673 to 106723—Continued.

106689. ACACIA SALIGNA (Labill.) Wendl.

The *Weeping wattle*, an ornamental acacia found in Western Australia, is a tall shrub or small tree, 10 to 30 feet high, with long thick phyllodes and short clusters of rather large globular golden-yellow flower heads. This tree is said to be the principal source of tanbark in southwestern Australia.

For previous introduction see 56561.

106690. ACACIA SOWDENI Maiden.

A spreading shrub or small tree with handsome silvery foliage. The linear, slightly curved phyllodes are 3 inches long. Native to South Australia.

106691. ACACIA STENOPHYLLA A. Cunn.

An evergreen tree 40 to 60 feet high, with long narrow phyllodes 6 to 12 inches in length and small yellow flowers in globular heads. Native to New South Wales.

106692. ACACIA SUAVEOLENS (J. E. Smith) Willd.

An Australian shrub up to 6 feet high, with linear to lanceolate phyllodes and small heads of yellow flowers in axillary racemes.

For previous introduction see 90842.

106693. ACACIA WATTSIANA F. Muell.

A dense bushy shrub 4 to 5 feet high, with angular branches and leathery obovate-oblong, obtuse phyllodes up to 1 inch long. Native to South Australia.

106694. ALBIZZIA LOPHANTHA (Willd.) Benth. Mimosaceae. Plume albizzia.

A shrub or small tree up to 20 feet high, with compound leaves made up of 14 to 24 pairs of pinnae each bearing 60 pairs of small linear leaflets. The small yellow flowers are in spikes about 2 inches long. It is native to Australia.

For previous introduction see 92332.

106695 to 106699. ATRIPLEX spp. Chenopodiaceae. Saltbush.

106695. ATRIPLEX HALIMOIDES Tines.

Mealy or *gray saltbush*. A low-growing shrubby robust perennial about 1 foot high, with variable, ovate-lanceolate leaves which are covered with whitish, dustlike scales. It is native to the central desert regions of Australia where it affords excellent forage for both sheep and cattle.

For previous introduction see 46875.

106696. ATRIPLEX MORRISII Anderson.

A low annual, more or less farinose-hairy throughout, with small obovate dentate leaves. Native to Australia.

106697. ATRIPLEX NUMMULARIA Lindl.

A tall shrubby perennial sometimes reaching a height of 10 feet and covered all over with downy whitish scales. The leaves are mostly round, rather thick, and toothed along the margins. It is extensively planted and highly valued in central Australia for its remarkable drought-resisting qualities; livestock are very fond of it.

For previous introduction see 90735.

106698. ATRIPLEX SPONGIOSA F. Muell.

A low-growing plant less than a foot high, with numerous ascending stems,

106673 to 106723—Continued.

more or less farinose throughout. The rather thick orbicular leaves are less than an inch long. Native to Australia.

106699. ATRIPLEX VESICARIA Howard.

An erect bushy shrub, covered throughout with a scaly tomentum. The very small oblong-lanceolate leaves are less than an inch long. Native to southern Australia.

106700. BAUHINIA sp. Caesalpiniaceae.

106701. BRACHYCHITON sp. Sterculiaceae.

106702. CALLITRIS GLAUCA R. Br. Pinaceae.

A large tree sometimes 90 feet tall or sometimes a tall shrub with short crowded erect branchlets and very short glaucous green leaves. The brown heartwood and yellowish sapwood are easily worked and are suitable for building purposes. Native to Australia.

106703. CASUARINA HUMILIS Otto and Dietr. Casuarinaceae.

Received as *Casuarina lehmannii*, which is now referred to the above species. An erect shrub 2 to 6 feet high, with the branchlets usually in whorls of four and the angles of the internodes prominent but obtuse. Native to Western Australia.

For previous introduction see 105796.

106704. CASUARINA LEPIDOPHLOIA F. Muell. Casuarinaceae.

A small or moderately large tree with very slender, linear, faintly angled branchlets. The cones are depressed-globose and about 1 inch in diameter. This species had hitherto been confused with *Casuarina glauca*.

For previous introduction see 93792.

106705. CASSIA sp. Caesalpiniaceae.

106706. CHORIZEMA CORDATUM Lindl. Fabaceae.

A tall slender glabrous evergreen shrub, 7 to 10 feet high, with weak branches, more or less prickly leaves about 2 inches long, and numerous red flowers. It is propagated from cuttings and may be grown in the open in southern California and southern Florida, being excellent for training on pillars and trellises. In colder regions it is an attractive plant for the cool greenhouse. Native to Western Australia.

For previous introduction see 75552.

106707. CODONOCARPUS COTINIFOLIUS F. Muell. Phytolaccaceae.

A tall evergreen shrub or small tree 20 to 40 feet high, with rather thick, flat, roundish leaves up to 2 inches long and racemes of small inconspicuous flowers. Native to Victoria, Australia.

106708 to 106711. EUCALYPTUS spp. Myrtaceae.

106708. EUCALYPTUS CITRIODORA Hook.

A handsome fast-growing tree which in favorable situations becomes 60 to 100 feet high. The long narrow leaves, equally shiny on both sides, possess a pleasant odor closely resembling that of the lemon, giving the tree its specific name, *citriodora*. This eucalypt thrives in California in the frostless coast regions, but is not suited to the dry interior valleys.

For previous introduction see 38711.

106673 to 106723—Continued.

106709. EUCALYPTUS INCRASSATA PROTRUSA J. M. Black.

A shrub or small tree, up to 25 feet high, with smooth whitish bark and lanceolate, gray-green, thick, stiff leaves about 3 inches long. Native to dry regions in South Australia.

106710. EUCALYPTUS LEUCOXYLON MACROCARPA J. E. Brown.

A tall tree, native to South Australia, with rough bark on the trunk, but soft and white on the branches. The thick coriaceous leaves are lanceolate, falcate, and 3 to 6 inches long. The white or pink flowers are in long-stalked clusters of two to five, and the obovoid fruits are truncate.

For previous introduction see 75631.

106711. EUCALYPTUS TORQUATA Luehm.

A tree with lanceolate, oblique, leathery, dull, gray-green leaves 4 inches long and reddish-orange flowers in umbels of seven on a stalk 1 inch long. Native to Western Australia.

For previous introduction see 104168.

106712. ENCHYLAENA TOMENTOSA R. Br. Chenopodiaceae.

A procumbent or widely branched shrub up to 3 feet high, native to Australia. The branches are silvery woolly, the alternate linear leaves are about one-half inch long, and the small inconspicuous flowers develop into fleshy edible red or yellow berries about the size of a small pea.

For previous introduction see 99419.

106713. GREVILLEA HUGELII Meisn. Proteaceae.

A procumbent evergreen shrub with bipinnate leaves, the linear leaflets rigid, leathery, and 1 inch long. The reddish flowers are in small racemes. Native to Australia.

106714. HETERODENDRUM OLEAEFOLIUM Desf. Sapindaceae.

A gray-barked shrub with alternate, lanceolate, leathery leaves and very small flowers in axillary racemes. Native to Australia.

106715. INDIGOFERA AUSTRALIS Willd. Fabaceae.

An erect Australian shrub 2 to 4 feet high, with pinnately compound leaves and dense racemes of showy red flowers. It may be suitable for growing as an ornamental in the warmer parts of the United States.

For previous introduction see 98098.

106716 to 106718. KOCHIA spp. Chenopodiaceae.

106716. KOCHIA PYRAMIDATA Benth.

A rigid bushy shrub with cottony-pubescent twigs and leaves, the latter linear or terete, very short. Native to New South Wales.

106717. KOCHIA SEDIFOLIA F. Muell.

A bushy perennial, velvety-tomentose throughout, with short crowded leaves and small red solitary flowers. Native to dry situations in Australia.

106673 to 106723—Continued.

106718. KOCHIA TRIPTERA Benth.

A low, stout, spreading shrub with crowded linear semiterete leaves one-half inch long. Native to New South Wales.

106719. MELALEUCA HYPERICIFOLIA J. E. Smith. Myrtaceae.

A tall glabrous shrub with opposite lanceolate leaves 1 to 2 inches long, dotted beneath. The rich-red flowers are borne in dense spikes 2 inches long and nearly as wide. It is native to Australia.

For previous introduction see 95332.

106720. MELALEUCA PUBESCENS Schauer. Myrtaceae.

A tall shrub or small tree with small linear leaves, one-half inch long, crowded on the pubescent branches and small white flowers borne in loose cylindrical spikes. Native to Australia.

For previous introduction see 99439.

106721. MIDA ACUMINATA (R. Br.) Kuntze (*Fusanus acuminatus* R. Br.). Santalaceae. Quandong.

An Australian evergreen tree up to 30 feet high, with long narrow leaves which are eaten by sheep and cattle in times of drought. The inconspicuous flowers are in terminal clusters. The fleshy part of the fruit is used for jelly, and the kernel of the nut, besides being edible, contains an oil which may be used for illumination.

For previous introduction see 77021.

106722. STURTIA GOSSYPIOIDES R. Br. Malvaceae.

A large shrub closely related to cotton (*Gossypium* spp.), with broadly oval, stiff leaves up to 2 inches long and large purple flowers. Native to Australia.

For previous introduction see 106479.

106723. SWAINSONIA GREYANA Lindl. Fabaceae.

A bushy perennial, tomentose throughout, with dull-brownish pinnate leaves and large purple flowers in large axillary racemes. Native to Australia.

106724 to 106744.

From the Union of South Africa. Seeds presented by F. R. Long, Superintendent, St. George's Park, Port Elizabeth, Cape of Good Hope. Received October 24, 1934.

Introduced for Department specialists.

106724 to 106730. ALOE spp. Liliaceae.

A collection of aloes, native to the Cape of Good Hope.

106724. ALOE AFRICANA Mill.

A large plant with a simple trunk finally about 20 feet high. The few spreading or recurved leaves are triangular-oblong, up to 2 feet long, and the yellow flowers are borne on a stalk 2 feet high.

106725. ALOE ARBORESCENS Mill.

An arborescent succulent with a simple trunk 10 to 15 feet high, clothed at the top with dull-green, sinuately spreading, gradually narrowed leaves about 2 feet long, with prickly margins. The red flowers are in an elongated raceme.

For previous introduction see 79470.

106724 to 106744—Continued.

106726. *ALOE FEROX* Mill.

An aloe with a thick stem 10 to 15 feet high and a rosette of curved, glaucous lanceolate leaves 2 feet long by 5 inches wide and half an inch thick; both surfaces are prickly, and the purple margins are armed with large red-brown teeth. The flowering stem is 4 feet high, and the greenish-yellow flowers with smoky tipped segments are 1 to 2 inches long.

For previous introduction see 81118.

106727. *ALOE LINEATA* (Ait.) Haw.

A red-flowered aloe with lanceolate leaves a foot long in a dense rosette on a stem up to a foot high. The flowers, half an inch long, are in a dense raceme 6 inches long, on a simple peduncle about as long as the leaves.

106728. *ALOE MICROSTIGMA* Salm-Dyck.

A large aloe with an elongated stem bearing a rosette of 20 to 30 sword-shaped leaves 6 to 12 inches long and a dense raceme of greenish-yellow flowers on a scape a foot high.

106729. *ALOE SAPONARIA* (Ait.) Haw.

An aloe which grows in caespitose clusters, with ascending oblong-lanceolate acuminate leaves 7 inches long, often reddish with pale blotches and with long confluent brown marginal teeth. The red flowers are in a branched inflorescence 1 or 2 feet high.

For previous introduction see 81134.

106730. *ALOE STRIATA* Haw.

A low fleshy plant with a dense rosette of thick narrowly oblong leaves 1 to 2 feet long, obscurely spotted, and bright-red flowers, about an inch long, in 20 or more heads, borne on a stout branched peduncle.

For previous introduction see 88738.

106731. *ASTER FRUTICOSUS* L. Asteraceae.

A twiggy bush 2 to 3 feet high and across, with flat linear leaves and blue flower heads.

106732. *CAESALPINIA GILLIESII* (Hook.) Wall.

Bird of Paradise Tree. A tall shrub or small tree, native to Argentina, with pinnately compound leaves and terminal racemes of light-yellow flowers from which the brilliant red stamens protrude 3 to 5 inches.

For previous introduction see 76786.

106733. *CERATOTHECA TRILOBA* E. Mey. Pedaliaceae.

An erect annual plant up to 6 feet high. The obtusely quadrangular stems are hairy, and the coarsely crenate leaves, 1 to 6 inches long, vary from broadly cordate and 3-lobed near the base to lanceolate and sparingly crenate at the top of the plant. The solitary axillary flowers, 2 to 3 inches long, are lilac streaked with purple, and the loosely pubescent capsules, an inch long, have two horns at the tip.

For previous introduction see 106079.

106734. *ECHINUS* sp. Aizoaceae.

Received under the name "*echinatus*," for which a place of publication has not been found.

106724 to 106744—Continued.

106735. *ERYTHRINA CAFFRA* Thunb. Fabaceae.

A tree 30 to 40 feet high, with prickly branches, trifoliolate leaves with broadly ovate leaflets, and scarlet flowers borne in dense, many-flowered racemes. Native to southern Africa.

For previous introduction see 50151.

106736. *GLADIOLUS ALATUS* L. Iridaceae.

A very interesting plant with flowers of a delightful fragrance not unlike that of the sweet briar. The three upper petals are bright orange scarlet, and the three lower ones are yellowish tipped with orange scarlet. The bulbs are not larger than ordinary peas and cannot remain long out of the ground.

For previous introduction see 105284.

106737. *GLADIOLUS BLANDUS* Ait. Iridaceae.

A South African plant with sword-shaped leaves somewhat shorter than the stem, which is from 6 inches to 2 feet in height and bears 3 to 10 white or reddish-tinged scentless flowers.

For previous introduction see 105285.

106738. *GLOTTIPHYLLUM* sp. Aizoaceae.106739 to 106742. *MESEMBRYANTHEMUM* spp. Aizoaceae.106739. *MESEMBRYANTHEMUM AMOENUM* Salm-Dyck.

A low succulent plant with a woody branched stem, green somewhat triangular leaves, and reddish flowers. Native to the Cape of Good Hope.

106740 and 106741. *MESEMBRYANTHEMUM BLANDUM* Haw. Figmarigold.

An erect perennial succulent, 2 feet high, with numerous branches, compressed-triangular leaves 2 inches or less long, with minute dots, and pale-rose or white flowers 2 inches across. Native of South Africa.

106740. A form with pink flowers.

106741. A form with white flowers.

106742. *MESEMBRYANTHEMUM SPECIOSUM* Haw.

A fleshy shrub about 3 feet high, with distant, turgid-cylindric leaves one-half inch long and large deep-scarlet flowers nearly 2 inches across. Native to the Cape of Good Hope.

106743. *PROTEA* sp. Proteaceae.

A form with pink flowers.

106744. *SCHONLANDIA* sp. Aizoaceae.

Received under the name of "algoense," for which a place of publication has not been found.

106745. *SEMPERVIVUM KOSANINII* Praeger. Crassulaceae.

From Europe. Plant collected by Dr. Edgar Anderson, Arnold Arboretum Balkan expedition. Received November 1, 1934.

Peč, Yugoslavia, October 1934. A sempervivum, native to Macedonia, that forms open rosettes about 2 inches across, with oblanceolate, glandular-hairy, dark-green leaves, purple at the apex, and about 1 inch long. The red flowers, three-fourths of an inch wide, are produced on a leafy stem 6 to 8 inches high.

106746. MAACKIA AMURENSIS BUEGERI C. Schneid. Fabaceae.

From Washington, D. C. Seeds collected by O. M. Freeman, Bureau of Plant Industry, in the National Botanic Garden. Received November 2, 1934.

A deciduous tree about 15 feet high with odd-pinnate leaves; the 7 to 11 leaflets are pubescent and 2 to 3 inches long. The small white flowers are borne in dense upright racemes. Native to Japan.

For previous introduction see 77836.

106747 to 106801.

From the Union of Soviet Socialist Republics. Material collected in Turkistan by H. L. Westover and C. R. Enlow, agricultural explorers, Bureau of Plant Industry. Received October 30, 1934.

Introduced for Department specialists.

106747 to 106749. ALLIUM spp. Liliaceae.**106747. ALLIUM CAERULEUM** Pall. Onion.

No. 671. July 23, 1934. Bulbs and seeds collected in the mountains south of Alma Ata. A blue-flowered onion with slender grassy leaves and 14-inch stalks bearing close heads of small deep-blue flowers.

For previous introduction see 104627.

106748. ALLIUM sp.

No. 669. July 24, 1934. Bulbs from the foothills southeast of Alma Ata.

106749. ALLIUM sp.

No. 867. July 26, 1934. Bulbs from Issyk Kul, east of Alma Ata.

106750. AMARYLLIS sp. Amaryllidaceae.

No. 186. June 1934. Bulbs from south of Stalinabad, Tajikistan.

106751. AMARYLLIS sp. Amaryllidaceae.

No. 320. July 15, 1934. Bulbs from Chingan, east of Tashkent, Uzbekistan.

106752. ARISAEMA TRIPHYLLUM (L.) Torr. Araceae. Jack-in-the-pulpit.

No. 182. July 8, 1934. Bulbs from the Varsov River Canyon, Tajikistan.

106753. EREMURUS sp. Liliaceae.

No. 541. July 26, 1934. Roots collected at 6,800 feet altitude above Issyk Kul, near Alma Ata.

106754. FRITILLARIA sp. Liliaceae.

No. 191. July 8, 1934. Bulbs and seeds from the Varsov River Canyon, Tajikistan.

106755. HYACINTHUS ATROVIOLOACEUS (Regel) Macbride. Liliaceae. Hyacinth.

No. 524. July 1934. Bulbs from the Tashkent Botanic Garden. A hyacinth with four to six linear-ligulate leaves 4 to 8 inches long and a dense oblong raceme of dark-violet flowers on a scape about the same length as the leaves. Native to Bokhara.

106756 to 106766. IRIS spp. Iridaceae.**106756. IRIS ALBERTI** Regel.

No. 546. July 23, 1934. Roots from the mountains of Alma Ata, of a bearded iris with glaucous, sword-shaped leaves about as long as the stem and yellow or purplish flowers, yellow-

106747 to 106801—Continued.

ish toward the base, nearly 2 inches long. Native to Turkistan.

For previous introduction see 105474.

106757. IRIS BUCARICA Foster.

No. 244. July 1934. Bulbs and seeds from Tajikistan of one of the most vigorous of the Juno irises, this bears five to seven flowers on each of the stems. The stems are over a foot high, and the bright-green, narrow leaves are 8 to 12 inches long and about 2 inches broad. The bright-yellow, rounded-obovate falls are over 2 inches long, while the small standards are pure white. Native to eastern Bokhara.

106758. IRIS MAGNIFICA Vvedensky.

No. 525. July 1934. Bulbs from the Tashkent Botanic Garden. A stout iris of the Juno section, with light shining-green falcate leaves, 1 to 2 inches wide, and generally two, inodorous, pale-lilac flowers about 2 inches long, on a stem 10 to 16 inches high. Native to Turkistan.

106759. IRIS TENUIFOLIA Pallas.

No. 881. August 13, 1934. Bulbs from Chelkar. An iris of the Apogon section, usually with a very short stem and rigid narrow-linear leaves a foot long. The flowers are bluish purple. Native to eastern Asia.

106760. IRIS sp.

No. 179. July 1934. Bulbs collected at 5,500 feet altitude along the Varsov River, Tajikistan.

106761. IRIS sp.

No. 184. July 8, 1934. Bulbs from the Varsov River Canyon, 50 km north of Stalinabad, Tajikistan.

106762. IRIS sp.

No. 190. July 8, 1934. Bulbs from the Varsov River Canyon, 5,500 feet altitude, Stalinabad, Tajikistan.

106763. IRIS sp.

No. 315. July 16, 1934. Roots found in moist soil near Chingan, east of Tashkent, Uzbekistan.

106764. IRIS sp.

No. 317. July 15, 1934. Roots and seeds from Chingan, east of Tashkent, Uzbekistan.

106765. IRIS sp.

No. 396. July 15, 1934. Bulbs from the rocky slopes of Little Chingan, east of Tashkent.

106766. IRIS sp.

No. 700. August 4, 1934. Seeds and roots from the Karakol River, Issyk Kul.

106767 to 106769. IXIOLIRION spp. Amaryllidaceae.**106767. IXIOLIRION** sp.

No. 377. July 15, 1934. Seeds and bulbs from Chingan, east of Tashkent, Uzbekistan.

106768. IXIOLIRION sp.

No. 824. August 6, 1934. Seeds and bulbs from the Chu River Canyon, east of Tokmak.

106747 to 106801—Continued.

106769. *IXIOLIRION* sp.

No. 869. August 31, 1934. Bulbs from the foothills south of Frunze.

106770 to 106788. *TULIPA* spp. Liliaceae.
Tulip.106770. *TULIPA OSTROWSKIANA* Regel.

No. 544. July 23, 1934. Bulbs and seeds from Alma Ata. A tulip with a stem about 8 inches high, bearing three linear-lanceolate leaves and a solitary flower. The perianth segments are cinnamon purple and more or less spreading.

For previous introduction see 105476.

106771. *TULIPA* sp.

No. 539. July 25, 1934. Bulbs and seeds from the mountains south of Alma Ata. Received under the name "desifolia," for which a place of publication has not been found.

106772. *TULIPA POSTERIANA* Hoog.

No. 526. July 1934. Bulbs from the Tashkent Botanic Garden. A stout broadleaved tulip with large flowers, brilliant scarlet with yellow-black blotches. Native to Bokhara, central Asia.

106773. *TULIPA GREIGII* Regel.

No. 527. July 1934. Bulbs from the Tashkent Botanic Garden, of a handsome tulip native to Turkistan, with broadly campanulate, purplish-red flowers about 2 inches across, borne on a peduncle 3 to 8 inches high. The ovate-lanceolate green leaves are brown spotted.

106774. *TULIPA KAUFMANNIANA* Regel.

No. 528. July 1934. Bulbs from the Tashkent Botanic Garden of a tulip about 8 inches high, with yellowish-green, erect, narrowly oblong leaves and campanulate flowers. These vary in color from white tinged with pink to pale yellow blotched with carmine. Native to Turkistan.

106775. *TULIPA KOLPAKOWSKIANA* Regel.

No. 529. July 1934. Bulbs from the Tashkent Botanic Garden. A tulip with three erect-spreading, undulate, linear-lanceolate leaves and yellow flowers, the outer surface of which is sometimes reddish or purplish. Native to Turkistan and related to *Tulipa gesneriana*.

106776. *TULIPA KOROLKOVII* Regel.

No. 392. July 15, 1934. Bulbs and seeds from Chimgan, east of Tashkent, Uzbekistan. A low crimson-flowered tulip from Turkistan, 4 to 6 inches high, with narrowly lanceolate leaves exceeding the flowers.

106777. *TULIPA KUSCHKENSIS* B. Fedtsch.

No. 530. July 1934. Bulbs from the Tashkent Botanic Garden of a tulip about a foot high, with four to six undulate, sickle-shaped leaves with narrow white margins. The flower, yellow with the perianth segments black at the base, is about 2 inches long. Native to Turkistan.

106778. *TULIPA LANATA* Regel.

No. 531. July 1934. Bulbs from the Tashkent Botanic Garden of a rather large tulip with a stem over a foot high and three or four commonly fal-

106747 to 106801—Continued.

cate leaves exceeding the flower. The purple perianth segments are marked with large black spots on a yellow background. Native to Bokhara.

106779. *TULIPA LINIFOLIA* Regel.

No. 532. July 1934. Bulbs from the Tashkent Botanic Garden of a narrow-leaved tulip from Bokhara with a slender stem 2 to 5 inches high. The obovate perianth segments are purplish with dark blue-black blotches outlined with yellow.

106780. *TULIPA OSTROWSKIANA* Regel.

No. 533. July 1934. Bulbs from the Tashkent Botanic Garden.

For previous introduction and description see 106770.

106781. *TULIPA PRAESTANS* Hoog.

No. 534. July 1934. Bulbs from the Tashkent Botanic Garden of an attractive tulip native to Turkistan, with pale scarlet-vermillion flowers on peduncles up to a foot or more high. The peduncles as well as the light-green leaves are covered with minute white hairs.

106782. *TULIPA WILSONIANA* Hoog.

No. 535. July 1934. Bulbs from the Tashkent Botanic Garden of an alpine tulip from Turkistan with narrow purple-edged leaves and a deep-red flower on a stem 4 inches high.

106783. *TULIPA* sp.

No. 832. July 31, 1934. Bulbs and seeds from the foothills south of Frunze.

106784. *TULIPA* sp.

No. 193. July 1, 1934. Bulbs collected south of Stalinabad, Tajikistan.

106785. *TULIPA* sp.

No. 308. July 1934. Seeds from Tajikistan.

106786. *TULIPA* sp.

No. 399. July 19, 1934. The exact source of these bulbs is unknown; probably from near Stalinabad, Tajikistan.

106787. *TULIPA* sp.

No. 567. July 29, 1934. Bulbs and seeds from the mountain pass between Alma Ata and Frunze.

106788. *TULIPA* sp.

No. 584. July 26, 1934. Bulbs and seeds collected on the mountains near Issyk Kul, east of Alma Ata.

106789. *ALLIUM* sp. Liliaceae.

No. 607. July 26, 1934. Bulbs found at 6,500 feet altitude in the mountains above Issyk Kul, near Alma Ata.

106790 to 106795. *TULIPA* spp. Liliaceae.
Tulip.106790. *TULIPA* sp.

No. 607-A. July 26, 1934. Seeds collected at 6,500 feet altitude in the mountains above Issyk Kul, near Alma Ata.

106791. *TULIPA* sp.

No. 695. July 29, 1934. Bulbs and seeds collected on the river slopes between Alma Ata and Frunze.

106792. *TULIPA* sp.

No. 696. July 31, 1934. Bulbs and seeds from the foothills south of Frunze.

106747 to 106801—Continued.

106793. TULIPA sp.

No. 699. July 31, 1934. Bulbs from the foothills south of Frunze.

106794. TULIPA sp.

No. 769. August 4, 1934. Bulbs and seeds from the Karakol River, Issyk Kul.

106795. TULIPA sp.

No. 825. August 3, 1934. Bulbs and seeds from the Jetty August River Canyon, west of Issyk Kul.

106796. FRITILLARIA sp. Liliaceae.

No. 833. August 4, 1934. Bulbs and seeds from the Karakol River, Issyk Kul.

106797. TULIPA sp. Liliaceae.

No. 865. August 6, 1934. Bulbs from the Chu River, east of Tokmak.

106798. (Undetermined.)

No. 204. July 1, 1934. An unknown bulb from the mountains south of Stalinabad, Tajikistan.

106799. (Undetermined.)

No. 192. July 1, 1934. An unknown bulb from south of Stalinabad, Tajikistan.

106800. (Undetermined.)

No. 195. July 1, 1934. Seeds from the mountains near Stalinabad, Tajikistan.

106801. IRIS sp. Iridaceae.

No. 763. August 1934. Bulbs found in dry rocky soil near Frunze.

106802. ROSA ODORATA GIGANTEA (Collett) Rehd. and Wils. Rosaceae.

Giant tea rose.

From India. Seeds presented by F. H. Butcher, curator, Government Botanic Garden, Ootacamund. Received October 30, 1934.

A strong-climbing evergreen rose, native to Burma, with creamy-white, single flowers 4 to 6 inches across, followed by large yellowish hips. It resembles the Cherokee rose, but is hardy in the United States only in the South and on the Pacific coast.

For previous introduction see 91292.

106803. PRUNUS PROSTRATA Labill. Amygdalaceae. Mountain cherry.

From the Union of Soviet Socialist Republics. Seeds collected in Turkistan by H. L. Westover and C. R. Enlow, Bureau of Plant Industry. Received October 29, 1934.

No. 236. July 1, 1934. From the mountains near Stalinabad, Tajikistan. A low, widespread, drought-resistant deciduous shrub up to 3 feet high, with sharply serrate, broadly ovate leaves, pubescent beneath and over an inch long. The rose-colored flowers, less than an inch across, are followed by small red, nearly sessile fruits.

For previous introduction see 101880.

106804. LITCHI PHILIPPINENSIS Radlk. Sapindaceae.

From the Philippine Islands. Seeds presented by Arthur F. Fischer, Director of Forestry, Department of Agriculture and Commerce, Manila. Received November 2, 1934.

106804—Continued.

A Philippine relative of the lychee (*Litchi chinensis*). The tree is about 50 feet high, with dark-green pinnate leaves similar to those of the lychee and roundish oblong fruits about an inch long, borne in loose terminal clusters. The tough leathery shell encloses scanty edible pulp in which is embedded a relatively large seed. This seed is roasted and eaten. The tree may have value as a stock for the lychee.

For previous introduction see 106144.

106805. PHOENIX sp. Phoenicaceae.

From Africa. Seeds collected by J. F. Ward and presented by J. K. Mayo, Agricultural Department, Samiru-Zaria, Nigeria. Received November 2, 1934.

The wild date occurs quite commonly in the northern districts of Nigeria. It is practically always confined to swamps and stream sides and is commonly found in swampy glades growing on old decomposed antihills. These hills are mostly of darkish clay and, being raised above the surrounding level, do not get flooded.

106806 to 106813.

From Cuba. Seeds presented by Robert M. Grey, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received November 30, 1934.

106806. COFFEA ARABICA L. Rubiaceae. Arabian coffee.

Harrar variety.

106807. IKORA MACROTHYRSA Teijsm. and Binn. Rubiaceae.

A large shrub with linear-oblong leaves a foot long and attractive scarlet flowers in dense corymbs 8 inches across. Native to the East Indies where it thrives in regions of heavy rainfall.

For previous introduction see 70761.

106808. KOELREUTERIA FORMOSANA Hayata. Sapindaceae.

A large handsome tree with attractive, compound leaves and large terminal panicles of yellow flowers. Native to the island of Taiwan.

For previous introduction see 62345.

106809. LANGUAS SPECIOSA (Wendl.) Small. Zinziberaceae.

A herbaceous perennial 3 to 12 feet high, the stems clothed with the imbricated leaf bases. The large oblong-lanceolate leaves are 5 to 20 inches long, and the flowers, white tinged with red, are in terminal thyrsoid panicles. Native to the East Indies.

106810. PHYLLANTHUS GRANDIFOLIUS L. Euphorbiaceae.

A tall, symmetrical tree with thick alternate oblong-lanceolate leaves 4 inches long. Native to tropical America.

106811. PSIDIUM GUAJAVA L. Myrtaceae.

Peruviana. A Peruvian variety.

106812. PSIDIUM GUAJAVA L. Myrtaceae.

Pomiferum. A variety with round fruits. Presented by Carlos Jurgens, Pas-de-Manguera, Rio Pardo, Brazil.

106806 to 106813—Continued.

106813. RHUS LANCEA L. f. Anacardiaceae.

A small tree with gray bark and numerous slender branches. The leaves are long-stalked, and the lanceolate linear leaflets are 4 to 5 inches long. Native to the Cape of Good Hope.

106814 to 106827. TRITICUM AESTIVUM L. Poaceae. Common wheat.

From Italy. Seeds presented by the Director, Royal Experimental Station for Wheat-growing, Rieti. Received October 27, 1934.

Introduced for Department specialists.

106814. *Aziak 17-45*.106815. *Balilla*.106816. *Battisti*.106817. *Damiano*.106818. *Edda*.106819. *Fanfulla*.106820. *Fausto*.106821. *Fieramosca*.106822. *Filzi*.106823. *Mentana*.106824. *Mentana Mutico*.106825. *Oberdan*.106826. *Rismondo*.106827. *Villa Glori*.

106828 to 106838.

From the Union of Soviet Socialist Republics. Seeds presented by the Botanical Institute, Ashkhabad, Turkmenistan. Received October 26, 1934.

Introduced for Department specialists.

106828 to 106834. AGROPYRON spp. Poaceae.

106828. AGROPYRON BUONAPARTIS (Spreng.) Dur. and Schinz.

An annual grass, native to Asia Minor and central Asia, with erect culms and broadly linear leaves.

106829. AGROPYRON CRISTATUM (L.) Gaertn. Wheatgrass.

106830. AGROPYRON ORIENTALE (L.) Roem. and Schult.

An annual, much-branched grass, prostrate-ascending in habit, native to sandy places in Asia Minor and Turkistan.

For previous introduction see 101977.

106831. AGROPYRON POPOVII Drobov.

A perennial grass with erect stems. Native to Turkistan.

106832. AGROPYRON REPENS (L.) Beauv.

106833. AGROPYRON SIBIRICUM DESERTORUM Trautv.

A caespitose perennial grass with a fibrous root, slender erect leafy culms, and long rigid narrow-linear leaves. Native to central Asia.

106834. AGROPYRON TRITICEUM Gaertn.

An annual Siberian grass, much branched at the base, with stems up to 8 inches in length.

For previous introduction see 61391.

106829 to 106838—Continued.

106835. AGROSTIS TRANSCASPICA Litv. Poaceae.

A perennial grass 1 to 3 feet high, native to the Transcasian region.

106836. GASTRIDUM VENTRICOSUM (Gouan) Schinz. and Thell. (*Alopecurus ventricosus* Huds.). Poaceae. Grass.

An annual grass 8 to 16 inches tall, with scant rough foliage and dense, spike-like panicles. Native to France.

106837. AMYGDALUS BRAHUICA Boiss. Amygdalaceae.

A bushy shrub, armed with short spines, with small oblong-obtuse leaves and small flowers crowded toward the ends of the branchlets. Native to Asia Minor between 7,000 and 10,000 feet altitude.

106838. AMYGDALUS BUCHARICA Korsh. Amygdalaceae.

A small white-flowered tree from the hot dry regions of Turkistan. The fruits are about an inch long.

106839 and 106840. ZOYSIA JAPONICA Steud. Poaceae. Japanese lawngrass.

From Japan. Seeds purchased from the Chugai Shokubutsu Yen, Tamamoto, Kawabegun, near Kobe. Received November 20, 1934.

Introduced for the use of Department specialists.

106839. Korean strain.

106840. Japanese strain.

106841. ZENOBIA CASSINEFOLIA (Vent.) Pollard. Ericaceae.

From North Carolina. Seeds collected by G. M. Darrow, Bureau of Plant Industry. Received November 21, 1934.

A shrub 4 to 6 feet high, of irregular habit with ovate-oblong, dark shining-green leaves up to 2 inches long and white pendant bell-shaped flowers, less than an inch across, in axillary clusters. Native to the southeastern United States.

106842 to 106913.

From the Union of Soviet Socialist Republics. Seeds presented by the Botanical Institute, Ashkhabad, Turkmenistan. Received October 26, 1934.

Introduced for Department specialists.

106842 to 106844. ARISTIDA spp. Poaceae. Grass.

106842. ARISTIDA ARACHNOIDEA Litv.

A tufted grass about 10 inches high, with sharp, filiform leaves. Native to the Transcasian region.

106843. ARISTIDA PENNATA Trin.

A grass, native to Turkistan, where it is found in dry sandy places.

For previous introduction see 105804.

106844. ARISTIDA PENNATA KARELINI Trin. and Rupr.

A perennial grass of possible value as a forage crop. Native to the Caspian region.

For previous introduction see 98203.

106842 to 106913—Continued.

106845 to 106859. *ASTRAGALUS* spp. Fabaceae.

106845. *ASTRAGALUS ACKERBERGENSIS* Freyn.

A short-stemmed or stemless herbaceous perennial with a thick woody root and elliptic-obovate leaflets. Native to Asia Minor.

106846. *ASTRAGALUS ALOPECIAS* Pall.

A perennial with white-woolly ovate leaflets and pale-yellow flowers. Native to central Asia.

106847. *ASTRAGALUS BRACHYLOBUS* Fisch.

A shrub with linear-acute leaflets an inch long and small racemes much longer than the leaves. Native to Iran (Persia).

106848. *ASTRAGALUS COMMIXTUS* Bunge.

A dwarf annual with a very short stem, oblong-elliptic leaflets, and small white flowers. Native to Turkistan.

106849. *ASTRAGALUS CONFIRMANS* Freyn. and Bornm.

A shrub 3 to 5 feet high, with oblong-lanceolate, caducous leaves up to 2 inches long, and racemes of dark-violet flowers. Native to the Caspian region.

For previous introduction see 92967.

106850. *ASTRAGALUS FILICAULIS* Fisch. and Mey.

An erect annual leguminous plant 3 to 10 inches high, native to Asia Minor and Turkistan.

For previous introduction see 73182.

106851. *ASTRAGALUS GLOBICEPS* Bunge.

An erect perennial, native to Turkistan, with large compound leaves composed of 40 or more oblong leaflets about an inch long. The small flowers are in globular heads.

106852. *ASTRAGALUS LAGOCEPHALUS* Fisch. and Mey.

An erect perennial from semiarid regions in Turkistan. The leaflets are ovate elliptic, and the flowers are in short dense spikes.

106853. *ASTRAGALUS PAUCIJUGUS* Schrenk.

A much-branched shrub up to 6 feet high, with thick ovate-rounded leaflets half an inch long. Native to Turkistan.

106854. *ASTRAGALUS* sp.

Received under the name "piletocladus," for which a place of publication has not been found.

106855. *ASTRAGALUS RETAMOCARPUS* Boiss. and Hohen.

A hardy herbaceous perennial about 2 feet high, native to Asia Minor.

For previous introduction see 73183.

106856. *ASTRAGALUS SCHAHRUDENSIS* Bunge.

A hardy perennial, 2 feet high, with leaves 6 to 7 inches long. Native to northern and central Iran [Persia].

For previous introduction see 30553.

106842 to 106913—Continued.

106857. *ASTRAGALUS SIEVERSIIANUS* Pall.

A perennial herb with numerous ascending stems and pale-yellow flowers. Native to Turkistan.

106858. *ASTRAGALUS TURBINATUS* Bunge.

An erect hairy perennial with leaves often a foot long and rigid leaflets one-half inch in length. The yellowish flowers are in axillary clusters. Native to Turkistan.

106859. *ASTRAGALUS* sp.

Received as *Astragalus chinensis*, but the seeds are not of that species.

106860 to 106865. *BROMUS* spp. Poaceae. Grass.

106860. *BROMUS DANTHONIAE* Trin.

An annual grass, usually upright or ascending in habit. Native to southern Europe and central Asia.

For previous introduction see 61400.

106861. *BROMUS KOPETDAGHENSIS* Drobov.

A perennial grass with a creeping rootstalk and stems up to 2 feet high. Native to Turkistan.

106862. *BROMUS MACROSTACHYS* Desf.

An erect annual grass up to 2 feet high. The narrow compact panicle consists of a few large spikelets. It is native to Iran (Persia) and the Mediterranean region and is sometimes cultivated as an ornamental.

For previous introduction see 16041.

106863. *BROMUS PSEUDODANTHONIAE* Drobov.

An annual grass with a few slender stems 8 to 10 inches high. Native to Turkistan.

106864 and 106865. *BROMUS TECTORUM* L.
Downy chess.

A weedy annual grass with erect slender stems 1 to 2 feet tall and hairy narrow leaf blades. It will produce a good cover crop with very little rainfall. Native to Europe.

For previous introduction see 98287.

106866 to 106868. *CAREX* spp. Cyperaceae.

106866. *CAREX DIVISA* Huds.

A low sedge with a creeping, hard rootstock and short slender stems. Native to the seacoasts of southern Europe.

106867. *CAREX PACHYSTYLIS* Gay.

A low sedge with a creeping rootstock and flat narrow leaves. Native to western Asia.

106868. *CAREX PHYSODES* Bieb.

A perennial sedge, usually about 6 inches high, rarely more, with filiform leaves and panicles of brownish globose membranous perigynia, or sacs, half an inch long. Native to the sandy deserts of Turkistan.

For previous introduction see 98210.

106869. *CHONDRILLA PAUCIFLORA* Led. Cichoriaceae.

A biennial herb with a vertical root and numerous slender branches. The basal leaves are pinnatifid, and the yellow flower heads are solitary, terminating the branches. Native to Turkistan.

106842 to 106913—Continued.

106870. *COTINUS COGGYRIA* Scopoli (*Rhus cotinus* L.). Anacardiaceae.

Smoketree.

A spreading, rather dense shrub up to 15 feet high, with oval or obovate leaves over 3 inches long on slender petioles. The small flowers, usually purplish, are in a densely plumose panicle about 8 inches long. Native to central China and the Himalayas.

106871. *CRAMBE KOTSCHYANA* Boiss. Brassicaceae.

A perennial with cordate radical leaves about 8 inches long and rather large white flowers. Native to western Asia.

106872. *DELPHINIUM* spp. Ranunculaceae. **Larkspur.**

106872. *DELPHINIUM BITERNATUM* Huth.

A perennial herb with a thick root, erect hairy stem 3 to 4 feet high, biternate leaves, and dense racemes of yellow flowers. Native to Turkistan.

106873. *DELPHINIUM CAMPTOCARPUM* Fisch. and Mey.

A somewhat bushy annual 6 inches high, with biternate leaves and small, grayish-blue flowers. Native to sandy places in the southern part of the Union of Soviet Socialist Republics.

106874. *DELPHINIUM ORIENTALE* J. Gay.

An annual larkspur which closely resembles *Delphinium ajacis*, but differs in being from 12 to 18 inches high, with an upright branching stem bearing numerous dense racemes of violet, pink, or white flowers. Native to southern Europe.

For previous introduction see 81885.

106875. *DELPHINIUM PILOSULUM* (Trautv.) F. Fedtsch.

106876. *DELPHINIUM RUGULOSUM* Boiss.

An annual plant up to 5 inches high, often with several stems and with grayish-blue flowers.

For previous introduction see 61412.

106877. *DELPHINIUM SEMIBARBATUM* Bientert.

A low perennial about a foot high with fine-cut foliage and long lax racemes of small yellow flowers. Native to Iran (Persia).

106878. *ELYMUS GIGANTEUS* Vahl. Poaceae. **Siberian wild-rye.**

A tall erect perennial grass, native to Siberia.

For previous introduction see 61417.

106879. *ERAGROSTIS* sp. Poaceae.

106880. *HORDEUM VILBOSUM* L. Poaceae.

A perennial grass a foot or more high. Native to Asia Minor.

For previous introduction see 88926.

106881 and 106882. *KOELERIA PHLEOIDES* (Will.) Pers. Poaceae. **Grass.**

An annual grass with culms up to a foot high, narrow leaves, and dense spike-like panicles. Native to Europe.

106883. *LEPTALEUM FILIFOLIUM* (Willd.) DC. Brassicaceae.

A low annual 1 to 2 inches high, with subsessile linear leaves 1 inch long and

106842 to 106913—Continued.

small white flowers with linear petals. Native to Siberia.

106884. *LOLIUM PERSICUM* Boiss. and Hohen. Poaceae. **Grass.**

An annual grass, closely resembling *Lolium multiflorum*, which does well in a very hot dry region.

For previous introduction see 92234.

106885. *LOLIUM TEMULENTUM* LEPTOCHAR-
TON A. Br. Poaceae. **Grass.**

A tall annual grass about 3 feet high, with flat leaves and slender spikes. Native to Europe.

106886. *MEDICAGO MINIMA* (L.) Grufberg. Fabaceae. **Medick.**

A prostrate leguminous annual with stems about 2 feet long, native to dry situations in southern Europe.

For previous introduction see 69857.

106887 to 106890. *ONOBRYCHIS* spp. Fabaceae.

106887. *ONOBRYCHIS CHORASSANICA* Bunge.

An erect shrub with ovate-acute leaflets and purple flowers in long lax racemes. Native to Iran (Persia).

106888. *ONOBRYCHIS MICRANTHA* Schrenk.

An annual erect leguminous plant with very narrow acute leaflets, stems about 2 feet high, and dull-yellow flowers. Native to the Union of Soviet Socialist Republics.

For previous introduction see 73609.

106889. *ONOBRYCHIS PULCHELLA* Schrenk.

An annual less than a foot high with narrow leaflets and pink flowers. Native to the Union of Soviet Socialist Republics.

For previous introduction see 73611.

106890. *ONOBRYCHIS SINTENISII* Fr. and Sint.

106891. *PENNISETUM ORIENTALE* L. Rich. Poaceae.

A tall coarse species growing to a height of 6 feet and quite ornamental.

For previous introduction see 33613.

106892. *PHASEOLUS AUREUS* Roxb. Fabaceae. **Mung bean.**

106893. *PHASEOLUS CALCARATUS* Roxb. Fabaceae. **Rice bean.**

106894. *PHLEUM PANICULATUM* Huds. Poaceae. **Timothy.**

An erect or ascending annual grass 4 to 16 inches high. Native to the Mediterranean countries.

For previous introduction see 84475.

106895. *PISTACIA VERA* L. Anacardiaceae. **Pistache.**

106896. *PSORALEA DRUPACEA* Bunge. Fabaceae.

A woody perennial about a foot high, with roundish dentate leaflets nearly an inch long and small white flowers in dense axillary racemes. Native to Bokhara.

106897. *RHUS CORIARIA* L. Anacardiaceae. **Sumac.**

106842 to 106913—Continued.

A shrub up to 20 feet high, with greenish flowers and small crimson fruits. The leaves yield a commercial tannin. Native to southern Europe.

For previous introduction see 72634.

106898. RHUS SUCCEDANEA L. Anacardiaceae. Sumac.

A shrub or small tree up to 30 feet high, with grayish-green elliptic-oblong, long-pointed leaflets, and slender panicles of yellowish-green flowers. Native to eastern Asia.

For previous introduction see 48733.

106899. SACCHARUM SPONTANEUM L. Poaceae.

A grass closely related to sugarcane.

For previous introduction see 86174.

106900. SALSOLA ARBORESCENS RICHLERI Karel. Chenopodiaceae.

A much-branched shrub with semiterete leaves and small inconspicuous flowers. Native to the deserts of Siberia.

106901. SALSOLA RIGIDA Pall. Chenopodiaceae.

A small shrub, yellow hairy throughout, with prostrate or ascending branches and alternate linear leaves. Native to salty places in southwestern Asia.

106902 to 106905. STIPA spp. Poaceae. Grass.

106902. STIPA HOHENACKERIANA Trin. and Rupr.

A caespitose perennial grass with slender culms and long rigid leaves. Native to Transcaucasia and Iran (Persia).

106903. STIPA HOLOSERICEA Trin. and Rupr.

A tufted perennial grass with spreading stems and rigid leaves. Native to Asia Minor.

106904. STIPA SPLENDENS Trin. Feathergrass.

A coarse grass 6 feet high, native to the steppes of western Asia, with dense nodding panicles a foot long. The tough leaves and stalks are used to make brooms.

For previous introduction see 78482.

106905. STIPA SZOVITZIANA Trin.

A tufted perennial grass with fibrous roots and short rigid leaves. Native to Asia Minor, Arabia, and Iran (Persia).

106906. THALICTRUM MINUS L. Ranunculaceae. Low meadowrue.

A species 1 to 2 feet high, native to Europe, Asia, and northern Africa, with loose panicles of drooping yellow or greenish flowers.

For previous introduction see 95608.

106907. THALICTRUM SULTANABADENSE Stapf. Ranunculaceae.

A low herb about 6 inches high, with bifernate leaves and flowers in a leafy raceme. Native to Iran (Persia).

106908. TRIFOLIUM LAPPACEUM L. Fabaceae.

106842 to 106913—Continued.

This European clover has a somewhat reclining habit of growth; the rather soft and delicate stems are seldom more than 12 or 15 inches long.

For previous introduction see 97794.

106909 to 106913. TULIPA spp. Liliaceae. Tulip.

106909. TULIPA ANDROSSOWI Litv.

A wild tulip from central Asia, with a stem 4 to 10 inches high, bearing a single small white flower. The two linear-acute leaves are borne at about the middle of the stem.

106910. TULIPA BORSCHOWI Regel.

A Russian tulip with stems 12 to 18 inches high, bluish-green, narrowly ovate leaves up to 6 inches in length, and red flowers with black blotches at the base of the petals.

For previous introduction see 61447.

106911. TULIPA HOOGIANA B. Fedtsh.

A tulip of the section Eriobulbi, with a stem 6 to 18 inches high and four to six lanceolate-tapering leaves 8 to 10 inches long. The flower is scarlet, with a large black blotch bordered with orange on the inner side of each segment. Native to Bokhara.

106912. TULIPA KUSCHKENSIS B. Fedtsh.

For previous introduction and description see 106777.

106913. TULIPA MICHELIANA Hoog.

A tulip native to the Caspian region, with a pubescent scape 12 inches high. The lanceolate to linear-lanceolate leaves, usually four, are striped with brown and have undulate margins. The large single flowers are lilac scarlet and vermilion scarlet inside with black lanceolate blotches on the back.

For previous introduction see 100644.

106914 to 106932.

From British Guiana. Seeds collected by W. A. Archer, Bureau of Plant Industry. Received October 19, 1934.

Introduced for Department specialists.

From the Georgetown Botanic Garden, September 27, 1934.

106914. BARRINGTONIA ASIATICA (L.) Kurz. Lecythidaceae.

No. 2571. A handsome tree 50 feet high, with thick leathery bright-green leaves a foot long and racemes of large showy flowers having white petals and crimson-tipped stamens resembling a brush. The smooth shining-black fruits are shaped like a four-sided pyramid and are 3 to 4 inches long on each side. It is native to the East Indies.

For previous introduction see 97975.

106915. BAUHINIA GALPINI N. E. Br. Caesalpinjiaceae.

No. 2561. A small tree 15 feet high. The leaves, two lobed at the apex, are up to 3 inches long, and the brick-red flowers are borne continuously from spring to late autumn.

For previous introduction see 76775.

106914 to 106932—Continued.

106916. *CENTROSEMA PUBESCENS* Benth. Fabaceae.

No. 2582. A leguminous vine, native to tropical America, with trifoliolate leaves and small yellowish flowers. Used as a cover crop.

For previous introduction see 98981.

106917. *CASSIA GRANDIS* L. f. Caesalpinia-ceae.

No. 2569. A leguminous tree, 40 to 50 feet high, that produces masses of pale-pink flowers in the early spring, before the leaves appear. Native to Panama.

For previous introduction see 101077.

106918. *CASSIA SURATTENSIS* Burm. f. Caesalpinia-ceae.

No. 2560. A tropical leguminous shrub or small tree up to 15 feet high, with pale-green compound leaves and clusters of pale-yellow flowers. Native to the East Indies.

For previous introduction see 99696.

106919 to 106922. *CROTALARIA* spp. Fabaceae.

106919. *CROTALARIA QUINQUEFOLIA* L.

No. 2584. An annual plant cultivated in British Guiana as a cover crop.

106920. *CROTALARIA RETUSA* L.

No. 2577. A bushy plant with sulphur-yellow flowers with brown markings. Cultivated as a cover crop.

For previous introduction see 102603.

106921. *CROTALARIA SPECTABILIS* Roth.

No. 2583. A handsome shrub 3 to 5 feet high, native to India and sometimes cultivated for the sake of its yellowish-purple flowers, produced in dense lax racemes often 20 inches long. It is also cultivated as a cover crop.

For previous introduction see 86706.

106922. *CROTALARIA USARAMOENSIS* Baker f.

No. 2579. A leguminous plant which forms a dense low growth and endures partial shade. Cultivated as a cover crop.

For previous introduction see 97875.

106923. *DOLICHOS LABLAB* L. Fabaceae. Hyacinth-bean.

No. 2580. Cultivated as a cover crop.

106924. *ERYTHRINA VARIEGATA* Stickm. Fabaceae.

No. 2574. A tree 20 to 30 feet high, native throughout India, with clusters of large bright-red flowers which appear before the leaves. The pods, 4 to 8 inches long, contain dark-carmine seeds.

For previous introduction see 104126.

106925. *ERYTHRINA* sp. Fabaceae.

No. 2575. A small tree 20 to 30 feet high, with white seeds.

106926. *GUSTAVIA* sp. Lecythidaceae.

No. 2551. A medium-sized tree 30 feet high, with yellow flowers which shatter easily.

106927. *HIPPOMANE MANCINELLA* L. Euphorbiaceae.

106914 to 106932—Continued.

No. 2570. A tropical evergreen tree, sometimes 60 feet or more tall, with thick, shining, oval leaves 2 to 4 inches long. The acrid milky sap is poisonous, and the hard, brown, fine-grained wood is used in making furniture. Native to tropical America.

106928. *INDIGOFERA HIRSUTA* L. Fabaceae. Indigo.

No. 2555. An annual 3 feet high, with crimson flowers. Cultivated as a cover crop.

For previous introduction see 42173.

106929. *INDIGOFERA SUFFRUTICOSA* Mill. Fabaceae. Indigo.

No. 2585. A slender yellow-flowered bushy legume 3 to 5 feet high, producing a rather scanty growth, which is not considered one of the best cover crops. Native to tropical America.

For previous introduction see 99780.

106930. *LONCHOCARPUS SERICEUS* (Poir.) H. B. K. Fabaceae.

No. 2564.

For previous introduction and description see 106595.

106931. *PHASEOLUS LATHYROIDES* L. Fabaceae.

No. 2558. A semierect annual legume which makes a good growth on poor land. The dark-red flowers are very ornamental. It is cultivated as a cover crop.

For previous introduction see 97893.

106932. *ANDIRA INERMIS* (Sw.) H. B. K. Fabaceae. Cabbage angelin.

No. 2563. A slow-growing leguminous tree called, in Jamaica, cabbage tree, on account of its disagreeable odor. The purple flowers are followed by fleshy pods each containing one seed. The wood, which is very hard and durable, varies in the same tree from reddish yellow to black and takes on a high polish. It is used for all sorts of carpenter work. The tree is native to tropical America.

For previous introduction see 48509.

106933. *SORGHUM VULGARE* Pers. Poaceae. Sorghum.

From Mexico. Seeds presented by P. E. Baffert, Nogales, Ariz., at the request of Walter Douglas, of the Southern Pacific Railroad Co. of Mexico. Received November 5, 1934.

A prolific sorghum which becomes 10 to 12 feet tall in the Barrancas region, Jalisco, Mexico.

106934 and 106935. *SACCHARUM OFFICINARUM* L. Poaceae. Sugarcane.

From Australia. Cuttings presented by the Bureau of Sugar Experiment Stations, Brisbane, Queensland. Received November 14, 1934.

Introduced for Department specialists.

106934. S. J. No. 4. 106935. S. J. No. 7.

106936. *PHYLLANTHUS ACUMINATUS* Vahl. Euphorbiaceae.

From British Guiana. Cuttings collected by W. A. Archer, Bureau of Plant Industry.

106936—Continued.

Received August 14, 1934. Numbered November 1934.

Introduced for the use of Department specialists.

No. 2355. *Dakanani*. From Wauna on the Koriabo River, July 20, 1934. A bushy perennial 4 to 6 feet high. It is native to British and French Guiana.

106937 and 106938. *TULIPA* spp. Liliaceae. Tulip.

From the Union of Soviet Socialist Republics. Bulbs collected in Turkistan by H. L. Westover and C. R. Enlow, Bureau of Plant Industry. Received November 9, 1934.

Collected at Chelkar, August 13, 1934.

106937. No. 903. 106938. No. 901.

106939. *PINUS TORREYANA* Parry. Pinaceae. Soledad pine.

From California. Seeds purchased from John R. Fleming, La Jolla. Received November 19, 1934.

Obtained for Department specialists.

106940. *JATROPHA GOSSYPIFOLIA* L. Euphorbiaceae.

From British Guiana. Plants collected by W. A. Archer, Bureau of Plant Industry. Received November 6, 1934.

No. 2623. *Bellyache bush*. From near Georgetown, October 15, 1934. A woody perennial 2 to 6 feet high, with five-lobed leaves 4 to 6 inches across and dark-red flowers followed by globular warty fruits. Native to tropical America.

106941. *PERSEA AMERICANA* Mill. Lauraceae. Avocado.

From Florida. A tree, seedling "B" of the *Collinred* avocado, P. I. 62376, growing at the Plant Introduction Garden, Coconut Grove. Numbered November 28, 1934, for convenience in distribution.

106942 to 106945. *PRUNUS ARMENIACA* L. Amygdalaceae. Apricot.

From Czechoslovakia. Plants purchased from Dr. Joseph Blaha, Brno. Received November 17, 1934.

Introduced under the following varietal names for the use of Department specialists.

106942. *Joniska*.

106943. *Syrská*.

106944. *Velká raná*.

106945. *Velkopavlovická*.

106946 and 106947. *EUCHLAENA MEXICANA* Schrad. Poaceae. Teosinte.

From the Distrito Federal, Mexico. Seeds presented by Mrs. Walter Douglas, Mexico City. Received November 5, 1934.

Introduced for Department specialists.

A coarse annual grass, native to Mexico, where it was cultivated in prehistoric times. It resembles corn rather closely, and some botanists consider that corn is a hybrid of which teosinte is one of the parents.

For previous introduction see 95686.

106946. Seeds from plant No. 1.

106947. Seeds from plant No. 2.

106948. *AMYGDALUS PERSICA* L. Amygdalaceae. Peach.

From China. Seeds purchased through Peter Liu, Peiping. Received November 24, 1934.

Mao Tao (hairy peach); from the villages around Feicheng, where the seedlings are used as stocks for cultivated varieties of peaches.

106949 to 106960.

From British Guiana. Seeds collected by W. A. Archer, Bureau of Plant Industry. Received November 5, 1934.

Introduced for Department specialists.

Nos. 106949 to 106957 were collected in the Botanic Garden, Georgetown, September 27, 1934.

106949. *BARRINGTONIA ASIATICA* (L.) Kurz. Lecythidaceae.

No. 2571.

For previous introduction and description see 106914.

106950. *CARICA PAPAYA* L. Papayaceae. Papaya.

No. 2598.

106951. *CERBERA THEVETIA* L. (*Thevetia nereifolia* Juss.). Apocynaceae. Yellow oleander.

No. 2600. An ornamental, willow-leaved, yellow-flowered evergreen tree or shrub 10 to 15 feet high. Native to tropical America.

For previous introduction see 60396.

106952. *COCCINEA CORDIFOLIA* Cogn. Curbitaceae.

No. 2597. A perennial tropical vine with small, broadly ovate-cordate, deep-green leaves, white flowers, and intensely scarlet, oval, edible fruits about 2 inches long, which taste like cucumbers. Native to eastern India.

106953. *COBROUPTA GUIANENSIS* Aubl. Lecythidaceae.

No. 2591. *Cannonball tree*. A tall tropical tree with oblong-ovate leaves and odd, showy, yellow and red-tinged flowers about 2 inches long, in long racemes. The globular reddish-brown fruits are 6 to 8 inches in diameter.

For previous introduction see 98550.

106954. *TEPHROSIA NOCTIFLORA* Bojer. Fabaceae.

For previous introduction and description see 106594.

106955. *CROTALARIA STRIATA* DC. Fabaceae.

No. 2599. A low-growing, shrubby, ornamental, leguminous plant, native to India, with rounded green branches and elongated terminal clusters of drooping yellow flowers, the petals striped with deep orange brown. Cultivated as a cover crop.

For previous introduction see 76772.

106956. *GUSTAVIA AUGUSTA* L. Lecythidaceae.

No. 2593. A slender evergreen tree 20 feet high, native to tropical America, which bears flowers 4 inches across, creamy white, tinged with rose inside, and externally rose-colored. The stamens form a circle in the center of the flower and are white at the base with rosy filaments and yellow anthers.

For previous introduction see 106354.

106949 to 106960—Continued.

106957. *HURA CREPITANS* L. Euphorbiaceae. Sandboxtree.

No. 2595. An ornamental tree, native to the American Tropics, up to 100 feet high, with broad-ovate, repand-dentate, poplarlike, long-stemmed leaves. The small reddish flowers are followed by deeply ribbed capsules 3 inches wide and over an inch thick, which explode with a loud noise when ripe and throw the seeds many feet.

For previous introduction see 94192.

106958. *NICOTIANA TABACUM* L. Solanaceae. Tobacco.

No. 2602. *Bush* tobacco. A native strain collected at Rupununi by Carib Indians.

Nos. 106959 and 106960 were collected in the Botanic Garden, Georgetown, September 27, 1934.

106959. *PAULLINIA PINNATA* L. Sapindaceae.

No. 2554. A strong-growing vine that climbs 30 to 40 feet to the tops of trees. The bright-red fruits, the size of cherries, are borne in racemes 6 inches or more in length.

For previous introduction see 99001.

106960. *PHYLLANTHUS ACIDUS* (L.) Skeels. Euphorbiaceae. Star-gooseberry.

No. 2576. A shrub or tree up to 50 feet high, with ovate acute leaflets; flowers on separate branches below the foliage; the edible, white, very acid fruits are used for pickles or made into preserves. Native to the East Indies.

For previous introduction see 76491.

106961 to 106969.

From Arizona. Seeds collected by Robert Burton, Bureau of Plant Industry. Received October 26, 1934.

Collected for Department specialists.

106961. *AMELANCHIER UTAHENSIS* Koehne. Malaceae.

A dwarf shrub with thick branches, small roundish leaves, and short racemes of small white flowers. Native to the western United States.

106962. *ARCTOSTAPHYLOS PUNGENS* H. B. K. Ericaceae.

A shrub 3 to 10 feet high, with smooth red-brown bark, lanceolate to rounded leaves about an inch long, and small edible brown fruits one-fourth inch in diameter. Native to Mexico and the southwestern United States.

106963. *ATRIPLEX CANESCENS* (Pursh) James. Chenopodiaceae.

A shrub up to 3 feet high, with grayish-white stems and narrow-oblong leaves. Native to the western United States.

106964. *CERCOCARPUS INTRICATUS* S. Wats. Rosaceae.

A low rigid evergreen shrub with short revolute leaves, inconspicuous flowers, and small feathery tailed fruits. Native to the western United States.

106965. *RHAMNUS BETULAEFOLIA* Greene. Rhamnaceae.

A deciduous shrub with oval or elliptical, finely serrulate leaves 2 to 3 inches long. Native to New Mexico and Arizona.

106961 to 106969—Continued.

106966. *COWANIA MEXICANA* D. Don. Rosaceae.

A shrub up to 6 feet high, with small crowded cuneate three- to seven-cleft leaves less than half an inch long and creamy-white flowers an inch across. It is native to Mexico and the southwestern United States.

For previous introduction see 99410.

106967. *ELYMUS GLAUCUS* Buckl. Poaceae. Blue wild-rye.

A perennial grass with a loose or dense tuft of erect culms 2 to 4 feet high and lax flat leaves. Native to the western United States.

106968. *RIBES LACESTRE* (Pers.) Poir. Grossulariaceae.

A deciduous shrub 3 to 5 feet high, thickly covered with slender prickles. The leaves, 1 to 2½ inches wide and long, are deeply three- to five-lobed, and the funnel-shaped flowers, brownish crimson inside and creamy white or pinkish outside, are borne in drooping racemes 2 to 3 inches long. The small round black fruits are edible. Native to the northern and western United States.

For previous introduction see 40593.

106969. *SYMPHORICARPOS ROTUNDFOLIUS* Gray. Caprifoliaceae.

An upright shrub about 4 feet high, with elliptic acute leaves and small pinkish flowers in axillary pairs or small terminal spikes. Native to the western United States.

106970 to 106981.

From the Territory of Ruanda and Urundi, Belgian Congo. Seeds presented by J. B. H. Lejeune, Director, Government Experimental Station, Kisozi. Received October 30, 1934.

Introduced for Department specialists.

106970. *ACACIA* sp. Mimosaceae.

106971 to 106973. *CROTALARIA* spp. Fabaceae.

106971. *CROTALARIA DIGITATA* Hook.

An erect annual 1 or 2 feet high, white woolly throughout. The five or seven leaflets are obovate, and the large yellow flowers are in terminal racemes. Native to southern India.

For previous introduction see 99820.

106972. *CROTALARIA* sp.

106973. *CROTALARIA* sp.

106974. *DOLICHOS* sp. Fabaceae.

106975 to 106978. *INDIGOFERA* spp. Fabaceae. Indigo.

106975. *INDIGOFERA* sp.

106976. *INDIGOFERA* sp.

106977. *INDIGOFERA* sp.

106978. *INDIGOFERA* sp.

106979. *PHASEOLUS* sp. Fabaceae.

106980. *SESBANIA* sp. Fabaceae.

106981. (Undetermined.)

An unidentified leguminous plant.

106982 to 107002.

From British Guiana. Seeds collected by W. A. Archer, Bureau of Plant Industry. Received November 7, 1934.

Introduced for Department specialists.

106982. *ABELMOSCHUS ESCULENTUS* (L.) Moench. Malvaceae. Okra.

No. 2364. From near Georgetown, October 15, 1934. A cultivated variety with fruits $1\frac{1}{2}$ inches in diameter and $3\frac{1}{2}$ inches long.

Nos. 106983 to 106988 were collected in the Georgetown market, October 10, 1934.

106983. *ANNONA SQUAMOSA* L. Annonaceae. Sugar-apple.

No. 2604. The fruit is the size of an orange, with pale-green skin, the markings of which resemble dressed alligator hide.

For previous introduction see 100711.

106984. *CAPSICUM ANNUM* L. Solanaceae. Common redpepper.

No. 2610.

106985. *CARICA PAPAYA* L. Papayaceae. Papaya.

No. 2609.

106986. *CUCURBITA MOSCHATA* Duchesne. Cucurbitaceae. Cushaw.

No. 2605.

106987. *CUCURBITA PEPO* L. Cucurbitaceae. Pumpkin.

No. 2606.

106988. *DIOSPYROS DISCOLOR* Willd. Diospyraceae. Mabelo.

No. 2612. A medium-sized tree, native to the Philippine Islands, with shining green leaves 5 to 10 inches long, pubescent beneath. The velvety dull-reddish, thin-skinned fruits, 3 inches long and nearly 4 inches in diameter, have firm, rather dry flesh of a rather indefinite sweet flavor and four to eight large seeds.

For previous introduction see 101139.

106989. *RHYNCHOSIA MINIMA* (L.) DC. Fabaceae.

No. 2622. From near Georgetown, October 5, 1934. A leguminous vine 2 to 3 feet long, with pale-yellow flowers striped with lavender.

For previous introduction see 98990.

106990. *GLIRICIDIA SEPIUM* (Jacq.) Kunth. (*G. maculata* H. B. K.). Fabaceae.

No. 2603. Botanic Garden, Georgetown, October 10, 1934. A small tree up to 30 feet high with alternate compound leaves. The flowers resemble those of the black locust in size, but are pink.

For previous introduction see 80691.

106991. *GUSTAVIA* sp. Lecythidaceae.

No. 2613. Botanic Garden, Georgetown, October 11, 1934.

106992. *HURA CREPITANS* L. Euphorbiaceae. Sandboxtree.

No. 2595.

For previous introduction and description see 106957.

106982 to 107002—Continued.

106993. *JACQUINIA AURANTIACA* Ait. Theophrastaceae.

No. 2568. Botanic Garden, Georgetown, September 27, 1934. A shrub 15 feet high with orange-red flowers.

106994. *JATROPHA CURCAS* L. Euphorbiaceae.

No. 2630. From near Georgetown, October 15, 1934. A tropical American shrub or small tree 6 or 7 feet high. It is used as a hedge in the East Indies, and an oil obtained from the seeds is used in soap making. The leaves and sap are used medicinally.

For previous introduction see 74215.

106995. *JATROPHA PODAGRICA* Hook. Euphorbiaceae.

No. 2592. Botanic Garden, Georgetown, September 27, 1934. An ornamental shrub up to 4 feet high, with peltate, three- to five-lobed leaves 4 to 8 inches wide and orange flowers with scarlet petals. Native to tropical America.

For previous introduction see 103986.

106996. *LONCHOCARPUS SERICEUS* (Poir.) H. B. K. Fabaceae.

No. 2564. Botanic Garden, Georgetown, September 27, 1934.

For previous introduction and description see 106595.

106997. *LYCOPERSICON ESCULENTUM* Mill. Solanaceae. Tomato.

No. 2607. *Creole* tomato. Georgetown market, October 10, 1934. A cultivated variety.

106998. *NICOTIANA TABACUM* L. Solanaceae. Tobacco.

No. 2631. Near Georgetown, October 15, 1934. *Buck* tobacco. A variety grown in the dooryards of the natives. The leaves are used for smelling, and they are cured for smoking.

106999. *PASSIFLORA QUADRANGULARIS* L. Passifloraceae. Giant granadilla.

No. 2608. Georgetown market, October 10, 1934. An ornamental vine, native to Brazil, which is cultivated for its strongly perfumed fruits; these are yellow to orange and have flesh about an inch thick.

For previous introduction see 100499.

107000. *PHYLLANTHUS ACIDUS* (L.) Skeels. Euphorbiaceae. Star-gooseberry.

No. 2611. Georgetown market, October 10, 1934. *Otaheite* gooseberry.

For previous introduction and description see 106960.

107001. *QUASSIA AMARA* L. Simaroubaceae.

No. 2596. Botanic Garden, Georgetown, September 27, 1934. *Bitter wood*, *Indian cinchona*. A lofty tree native to northern South America, which resembles the ash, with large showy red flowers, followed by beautiful and decorative fruits arranged in fives around a fleshy peduncle. The wood of the tree is extremely bitter and is used by the natives as a substitute for quinine.

For previous introduction see 104261.

106982 to 107002—Continued.

107002. *SOPHORA TOMENTOSA* L. Fabaceae.

No. 2587. Botanic Garden, Georgetown, September 27, 1934. A shrub or small tree, native to India and Ceylon, with slender wandlike branches and pinnate leaves made up of 15 to 19 obovate leaflets, 1 to 2 inches long, densely gray hairy beneath. The yellow pea-shaped flowers, nearly an inch in length, are borne in racemes 6 inches long.

For previous introduction see 99700.

107003 and 107004.

From Africa. Seeds presented by the superintendent, Government Gardens, Khartoum, Anglo-Egyptian Sudan, through F. G. Walsingham, Atkins Institution, Arnold Arboretum, Soledad, Cienfuegos, Cuba. Received November 7, 1934.

107003. *ACACIA SEYAL* Delile. Mimosaceae.

For previous introduction and description see 106614.

107004. *BAUHINIA* sp. Caesalpiniaceae.

A red-flowered variety.

107005 to 107007.

From Brazil. Seeds collected by J. R. Swalson, Bureau of Plant Industry. Received November 6, 1934.

107005. *ANNONA SQUAMOSA* L. Annonaceae. Sugar-apple.

Piña, Azatas. From the mountains of Batarite, Ceará. A common fruit in this region.

107006. *PASSIFLORA EDULIS* Sims. Passifloraceae.

Maracuya. From Maranhao. The juice of this fruit has a pleasing flavor and is used for making cold drinks.

107007. *VITIS VINIFERA* L. Vitaceae. European grape.

Collected in the mountains of Beatrice, Ceará. Apparently everbearing.

107008 to 107134.

From the Union of Soviet Socialist Republics. Seeds collected in Turkistan by H. L. Westover and C. R. Enlow, Bureau of Plant Industry. Received October 29, 1934.

107008 and 107009. *AEGILOPS* spp. Poaceae.

July 3, 1934. From heavy soil, in permanent mountain pastures, adjacent to the Sultanabad Valley, Tajikistan.

107008. No. 230. 107009. No. 207.

107010 to 107012. *AGROPYRON* spp. Poaceae.

107010. *AGROPYRON* sp.

No. 174. July 1934. From mountain slope, Gissar Valley, Tajikistan.

107011. *AGROPYRON* sp.

No. 156. July 1934. From dry rocky slopes, Gissar Valley, Tajikistan.

107012. *AGROPYRON* sp.

No. 153. July 1934. From dry rocky mountain slopes, Gissar Valley, north of Stalinabad, Tajikistan.

107013. *ALLIUM* sp. Liliaceae.

No. 229. July 1, 1934. Mountains of Stalinabad, Tajikistan.

107008 to 107134—Continued.

107014. *ARNEBIA* sp. Boraginaceae.

No. 267. July 9, 1934. From the hills near Stalinabad, Tajikistan. A plant with yellow flowers marked with black.

107015. *AMYGDALUS* sp. Amygdalaceae.

No. 183. July 1, 1934. Rocky mountains south of Stalinabad, Tajikistan.

107016. *AMYGDALUS* sp. Amygdalaceae.

No. 188. July 8, 1934. From the Varsov River Canyon, north of Stalinabad, Tajikistan.

107017. *ANDROPOGON* sp. Poaceae.

No. 260. July 3, 1934. A perennial grass from the mountain pastures near Stalinabad, Tajikistan.

107018. *ARNEBIA* sp. Boraginaceae.

No. 234. July 4, 1934. From the foothills adjacent to the Sultanabad Valley, near Stalinabad, Tajikistan. A plant with yellow flowers marked with black.

107019 to 107025. *ASTRAGALUS* spp. Fabaceae.

107019. *ASTRAGALUS SIEVERSIANUS* Pall.

No. 162. July 1934. From a mountain slope, Gissar Valley, Tajikistan.

For previous introduction and description see 106857.

107020. *ASTRAGALUS* sp.

No. 196. July 1, 1934. From the Gissar Mountains, south of Stalinabad, in rocky soil. Good forage.

107021. *ASTRAGALUS* sp.

No. 205. July 1, 1934. From the mountains south of Stalinabad, growing in rocky soil.

107022. *ASTRAGALUS* sp.

No. 289. July 8, 1934. Varsov Canyon, 20 km north of Stalinabad, Tajikistan.

107023. *ASTRAGALUS* sp.

No. 231. July 1934. From the Varsov River Canyon, Tajikistan.

107024. *ASTRAGALUS* sp.

No. 187. June 1934. From the Varsov Canyon, Tajikistan.

107025. *ASTRAGALUS* sp.

No. 277. July 7, 1934. Varsov Canyon, north of Stalinabad.

107026. *ATRAPHAXIS* sp. Polygonaceae.

No. 242. July 1, 1934. Stalinabad, Tajikistan. A shrub growing in rocky mountain soil.

107027. *AVENA FATUA* L. Poaceae. Oats.

No. 219. June 30, 1934. Near railroad, Denan, Tajikistan, near Stalinabad. A wild oat, native to Asia.

For previous introduction see 69126.

107028. *AVENA LUDOVICIANA* Durieu. Poaceae. Grass.

No. 281. July 1, 1934. Stalinabad, Tajikistan. Found on dry hillsides growing in clay soil. An annual or biennial grass, very similar to *Avena sterilis*, but smaller. Native to southern Europe.

For previous introduction see 64094.

107008 to 107134—Continued.

107029 to 107040. *BROMUS* spp. Poaceae.
Grass.

107029. *BROMUS DANTHONIAE* Trin.

No. 237. July 1934. Mountains of Tajikistan.

For previous introduction and description see 106860.

107030. *BROMUS INERMIS* Leyss.

No. 226. July 3, 1934. Adjacent to the Sultanabad Valley, Tajikistan. A perennial upright European grass which forms a thick mat with creeping rhizomes. The stems are 1 to 3 feet high. A permanent mountain-pasture grass.

For previous introduction see 101647.

107031. *BROMUS OXYDON* Schrenk.

No. 223. July 1, 1934. From the foothills south of Stalinabad, Tajikistan. A tall annual grass up to 2 feet high, with flat linear leaves. Native to Turkistan.

107032. *BROMUS TECTORUM* L.

No. 198. July 1, 1934. Found in the foothills near Stalinabad in clay soils. An annual grass.

For previous introduction and description see 106865.

107033. *BROMUS* sp.

No. 288. June 30, 1934. From Denan, Tajikistan, near the railroad.

107034. *BROMUS* sp.

No. 202. July 4, 1934. From the Yavan Valley, Tajikistan, growing in clay soil.

107035. *BROMUS* sp.

No. 210. July 3, 1934. Found in mountain pastures adjacent to the Sultanabad Valley, Stalinabad, Tajikistan.

107036. *BROMUS* sp.

No. 249. July 1, 1934. From the foothills near Stalinabad, growing in clay soil.

107037. *BROMUS* sp.

No. 228. June 30, 1934. Found in heavy soil in the desert along the railroad between Kelif and Termez, Uzbekistan.

107038. *BROMUS* sp.

No. 238. July 4, 1934. From the Yavan Valley, Stalinabad, Tajikistan.

107039. *BROMUS* sp.

No. 261. June 30, 1934. Found in heavy soil in the desert along the railway between Kelif and Termez, Uzbekistan.

107040. *BROMUS* sp.

No. 269. July 1, 1934. Found in clay soil in the foothills near Stalinabad, Tajikistan.

107041. *CALAMAGROSTIS PSEUDOPHRAGMITES* (Hall. f.) Koel. Poaceae. Grass.

No. 278. July 1, 1934. From a dry rocky hillside, Stalinabad, Tajikistan. A perennial grass about 3 feet tall with creeping rhizomes. Native to central Europe.

107042. *CICER* sp. Fabaceae.

No. 178. July 8, 1934. From the Varsov River Canyon, at 5,500 feet altitude.

107008 to 107134—Continued.

107043. *CICER* sp. Fabaceae.

No. 221. July 2, 1934. Experiment Station, Stalinabad, Tajikistan. Occurring as a weed in wheatfields.

107044. *COLUTEA* sp. Fabaceae.

No. 189. July 1, 1934. From the mountains south of Stalinabad, Tajikistan. Received under the name "bukharica," for which a place of publication has not been found.

107045 and 107046. *CYNODON DACTYLON* (L.) Pers. Poaceae. Bermuda grass.

107045. No. 172. July 1934. From mountain slope, Gissar Valley, Tajikistan.

107046. No. 240. July 9, 1934. From clay hills, east of Stalinabad, Tajikistan.

107047 to 107049. *DACTYLIS GLOMERATA* L. Poaceae. Orchard grass.

107047. No. 168. July 1934. Mountain slope, Gissar Valley, Tajikistan.

107048. No. 206. July 1, 1934. Found in clay soil on the mountains south of Stalinabad, Tajikistan.

107049. No. 241. July 1, 1934. From the foothills, Stalinabad, Tajikistan.

107050 and 107051. *ELYMUS CAPUT-MEDUSAE* L. Poaceae.

107050. No. 201. July 1, 1934. From clay hills near Stalinabad, Tajikistan.

107051. No. 194. June 30, 1934. Found in heavy soil near the railroad at Denan, Tajikistan.

107052 and 107053. *ERAGROSTIS CILIANENSIS* (All.) Link. Poaceae. Grass.

For previous introduction see 101657.

107052. No. 215. July 4, 1934. Found in clay soil in the Yavan Valley, Tajikistan.

107053. No. 275. July 5, 1934. Found in heavy soil in the Yavan Valley, Tajikistan.

107054. *EREMURUS* sp. Liliaceae.

No. 262. July 3, 1934. From the Varsov River Canyon, north of Tajikistan.

107055. *EREMURUS* sp. Liliaceae.

No. 272. July 8, 1934. From the Varsov River Canyon, Tajikistan, at 5,500 feet altitude.

107056 to 107058. *FESTUCA* spp. Poaceae. Grass.

107056. *FESTUCA ELATIOR* L. Meadow fescue.

No. 158. July 1934. From the Gissar Valley, Tajikistan.

107057. *FESTUCA MYUROS* L.

No. 200. July 1, 1934. From the foothills south of Stalinabad. An annual grass with culms a foot high and narrow leaf blades. Native to Europe.

107058. *FESTUCA* sp.

No. 197. July 4, 1934. Found in heavy soil in the Yavan Valley south of Stalinabad.

107008 to 107134—Continued.

107059. FRITILLARIA BUCARICA Regel.
Liliaceae.

No. 233. July 1, 1934. From the mountains south of Stalinabad, Tajikistan, in rocky soil. A bulbous plant with an erect stem 6 to 18 inches high, with alternate ovate or lanceolate leaves and white flowers in terminal racemes. Native to Bokhara, central Asia.

107060 to 107062. HORDEUM spp. Poaceae.

107060 and 107061. HORDEUM BULBOSUM L.

For previous introduction see 106880.

107060. No. 224. July 1, 1934. Found in clay soil near Stalinabad, Tajikistan.

107061. No. 270. June 30, 1934. Near railroad, Denan, Tajikistan.

107062. HORDEUM SPONTANEUM C. Koch.

No. 209. July 1, 1934. Stalinabad, Tajikistan, in clay soil.

For previous introduction see 94850.

107063. IXIOLIRION sp. Amaryllidaceae.

No. 257. July 1, 1934. Gissar Mountains, south of Stalinabad, Tajikistan.

107064. KOELERIA sp. Poaceae. Grass.

No. 203. July 1, 1934. Found in clay soil in the foothills near Stalinabad, Tajikistan.

107065. KOELERIA PHLEOIDES (Vill.) Pers.
Poaceae. Grass.

No. 235. July 4, 1934. From the Ringantau Mountains, near Stalinabad, Tajikistan.

For previous introduction and description see 106881.

107066 to 107070. LATHYRUS spp. Fabaceae.

107066. LATHYRUS ANNUUS Hoefer.

No. 170. July 1934. Mountain slope, Gissar Valley, Tajikistan.

107067. LATHYRUS HIRSATUS L.

No. 159. July 1934. Gissar Valley, Tajikistan. A biennial vine with linear oblong leaflets and pale blue purple flowers. Native to Europe.

For previous introduction see 16998.

107068. LATHYRUS SPHAERICUS Retz.

No. 169. July 1934. Mountain slope, Gissar Valley, Tajikistan.

107069. LATHYRUS sp.

No. 185. July 8, 1934. Varsov Canyon, north of Stalinabad, Tajikistan. A plant with beautiful red flowers.

107070. LATHYRUS sp.

No. 227. July 1934. Varsov River, Tajikistan, at 5,000 feet altitude.

107071 to 107073. LOLIUM spp. Poaceae.
Grass.

107071. LOLIUM RIGIDUM Gaud.

No. 218. July 3, 1934. From a permanent mountain pasture adjacent to the Sultanabad Valley, near Stalinabad, Tajikistan. An annual, gray-green, bushy grass, with ascending stems up to 2 feet long. Native to southern and central Europe.

For previous introduction see 64632.

107008 to 107134—Continued.

107072 and 107073. LOLIUM TEMULENTUM
L. Darnel.

An annual European grass.

For previous introduction see 99138.

107072. No. 246. July 3, 1934. From a mountain wheatfield adjoining the Sultanabad Valley.

107073. No. 284. July 3, 1934. Collected on a mountain slope 25 km southeast of Stalinabad, on the Government horse farm, adjacent to the Sultanabad Valley.

107074. LONICERA sp. Caprifoliaceae.

No. 273. July 8, 1934. Varsov Canyon, Tajikistan.

107075 to 107081. MEDICAGO spp. Fabaceae.
Medick.

107075. MEDICAGO SATIVA L. Alfalfa.

No. 173. July 1934. Tajikistan.

107076. MEDICAGO sp.

No. 250. July 9, 1934. Found in clay soil on the hills east of Stalinabad, Tajikistan.

107077. MEDICAGO HISPIDA APICULATA
(Willd.) Urban.

No. 264. July 4, 1934. From the Yavan Valley, southeast of Stalinabad, Tajikistan.

107078. MEDICAGO ORBICULARIS (L.) All.

No. 245. July 1, 1934. From hillside in foothills near Stalinabad, Tajikistan.

For previous introduction see 90023.

107079. MEDICAGO sp.

No. 256. July 1, 1934. From clay soil in foothills near Stalinabad, Tajikistan.

107080. MEDICAGO ORBICULARIS (L.) All.

No. 247. July 4, 1934. From the Yavan Valley, Tajikistan.

107081. MEDICAGO sp.

No. 258. July 4, 1934. From the mountains adjacent to the Sultanabad Valley, Stalinabad, Tajikistan.

107082. MELICA sp. Poaceae. Grass.

No. 263. July 1, 1934. Found on very dry rocky soil in the mountains south of Stalinabad, Tajikistan.

107083. MELICA sp. Poaceae. Grass.

No. 199. July 1934. Found among rocks at 5,000 feet altitude along the Varsov River, Tajikistan.

107084. MELILOTUS ALBA DEST. Fabaceae.
White sweetclover.

No. 154. July 1934. From dry rocky slopes in the Gissar Valley, north of Stalinabad, Tajikistan.

For previous introduction see 90031.

107085. MELILOTUS OFFICINALIS (L.) Lam.
Fabaceae. Sweetclover.

No. 155. From the Gissar Valley, Tajikistan.

107086 to 107090. ONOBRYCHIS spp. Fabaceae.

107008 to 107134—Continued.

107086. *ONOBRYCHIS AMOENA* M. Popov and Vved.
No. 161. July 1934. From a mountain slope in the Gissar Valley, Tajikistan. An erect herb with slender stems over a foot high, lanceolate-linear leaflets, and yellow purple-streaked flowers in slender racemes. Native to central Asia.
107087. *ONOBRYCHIS GRANDIS* Lipsky.
No. 163. July 1934. From a mountain slope, Tajikistan. An herb over 3 feet high, with elliptic-obovate leaflets 2 inches long and flowers in long racemes. Native to Bokhara, central Asia.
107088. *ONOBRYCHIS PULCHELLA* Schrenk.
For previous introduction and description see 106889.
107089. *ONOBRYCHIS* sp.
No. 212. July 9, 1934. Found in clay soil in the foothills back of Stalinabad, Tajikistan.
107090. *ONOBRYCHIS* sp.
No. 286. July 4, 1934. From the Ringantau Mountains between Stalinabad and Yavan Valley, Tajikistan.
- 107091 to 107095. *ORYZOPSIS* spp. Poaceae.
Grass.
107091. *ORYZOPSIS* sp.
No. 211. July 1, 1934. Mountains of Stalinabad, Tajikistan.
107092. *ORYZOPSIS* sp.
No. 280. July 8, 1934. From the Varsov River Canyon, north of Stalinabad, Tajikistan.
107093. *ORYZOPSIS* sp.
No. 266. July 7, 1934. From the Varsov River Canyon, in the mountains north of Stalinabad.
107094. *ORYZOPSIS* sp.
No. 279. July 1, 1934. Found in rocky soil in the mountains south of Stalinabad, Tajikistan.
107095. *ORYZOPSIS* sp.
No. 292. July 7, 1934. Found in rocky soil north of Stalinabad in the Varsov River Canyon.
107096. *PAPAVER* sp. Papaveraceae.
Poppy.
No. 276. July 3, 1934. From the Varsov River Canyon, north of Stalinabad, Tajikistan.
107097. *PAPAVER* sp. Papaveraceae.
Poppy.
No. 232. July 8, 1934. Varsov River Canyon, Tajikistan. A yellow poppy.
107098. *PHALARIS MINOR* Retz. Poaceae.
Grass.
No. 287. July 4, 1934. From the Yavan Valley, Tajikistan.
107099. *PHALARIS MINOR* Retz. Poaceae.
Grass.
No. 290. June 30, 1934. Near the railroad, Denan, Tajikistan.
- 107100 to 107102. *PHLEUM* spp. Poaceae.
Grass.

107008 to 107134—Continued.

107100. *PHLEUM* sp.
No. 151. June 1934. From a dry rocky slope, Gissar Valley, north of Stalinabad, Tajikistan.
107101. *PHLEUM* sp.
No. 243. July 1, 1934. From dry foothills, Stalinabad, Tajikistan.
107102. *PHLEUM* sp.
No. 239. June 30, 1934. Denan, Tajikistan.
107103. *PIPTANTHUS* sp. Fabaceae.
No. 176. July 8, 1934. From the Government rest house, 20 km from Stalinabad.
107104. *PISUM* sp. Fabaceae.
No. 253. July 3, 1934. From a mountain wheatfield, adjacent to Sultanabad Valley, southeast of Stalinabad, Tajikistan.
- 107105 to 107111. *POA* spp. Poaceae.
Grass.
107105. *POA BULBOSA* L.
No. 208. July 1, 1934. Found in clay soil in the foothills near Stalinabad, Tajikistan.
For previous introduction see 84477.
107106. *POA* sp.
No. 213. July 4, 1934. Found in clay soil in the Yavan Valley, Stalinabad, Tajikistan.
107107. *POA* sp.
No. 220. July 8, 1934. Varsov River Canyon, Tajikistan, at 5,500 feet altitude.
107108. *POA* sp.
No. 285. July 8, 1934. Varsov River Canyon, north of Stalinabad, Tajikistan.
107109. *POA* sp.
No. 216. July 3, 1934. From permanent mountain pastures, adjacent to the Sultanabad Valley, Tajikistan.
107110. *POA* sp.
No. 225. July 7, 1934. From the Varsov River Canyon, in the mountains north of Stalinabad.
107111. *POA* sp.
No. 282. July 8, 1934. From the Varsov River Canyon, north of Stalinabad, Tajikistan.
107112. *POLYGONUM BUCCHARICUM* Greig. Polygonaceae.
No. 181. July 1, 1934. A perennial vine 3 feet high, with ovate leaves and branched panicles of small blue flowers, found in the mountains south of Stalinabad. Native to Bokhara.
107113. *POLYPOGON MONSPELIENSIS* (L.) Desf. Poaceae.
Grass.
No. 248. July 4, 1934. Found in salty soil in the Yavan Valley, Stalinabad, Tajikistan. An annual grass with soft bristly green or yellowish spikes up to 6 inches long.
For previous introduction see 106440.

107008 to 107134—Continued.

- 107114.** *PRUNUS ARMENIACA* L. Amygdalaceae. **Apricot.**
No. 177. June 30, 1934. Purchased at the station of Amirabad, Tajikistan.
- 107115.** *PRUNUS ARMENIACA* L. Amygdalaceae. **Apricot.**
No. 291. June 30, 1934. Cultivated apricots purchased at Termez, Uzbekistan.
- 107116.** *PUCCINELLIA* sp. Poaceae. **Grass.**
No. 222. July 7, 1934. Yavan Valley, Stalinabad, Tajikistan. A grass 3 feet tall, found in salty soil.
- 107117.** *SANGUISORBA MINOR* Scop. Rosaceae. **Small burnet.**
No. 157. July 1934. Dry rocky slopes of the Gissar Valley, Tajikistan. An exceedingly hardy and long-lived perennial up to 2 feet high; the young leaves, resembling the cucumber in flavor, are used as a salad. Native to France.
For previous introduction see 53921.
- 107118.** *SCABIOSA* sp. Dipsacaceae.
No. 255. July 3, 1934. From mountain pastures adjacent to the Sultanabad Valley, Stalinabad, Tajikistan.
- 107119.** *SCABIOSA* sp. Dipsacaceae.
No. 274. July 8, 1934. From the mountains north of Stalinabad, Tajikistan. An herb with reddish-purple flowers.
- 107120 to 107123.** *TRIFOLIUM* spp. Fabaceae. **Clover.**
- 107120.** *TRIFOLIUM LAPPACEUM* L.
No. 164. July 1934. From a mountain slope, Gissar Valley, Tajikistan.
- 107121.** *TRIFOLIUM PRATENSE* L. **Red clover.**
No. 175. July 1934. From the Gissar Valley, Tajikistan.
- 107122.** *TRIFOLIUM PROCUMBENS* L.
No. 251. July 1, 1934. From the mountains south of Stalinabad, Tajikistan.
- 107123.** *TRIFOLIUM REPENS* L. **White clover.**
No. 252. July 1, 1934. From the mountains south of Stalinabad, Tajikistan.
- 107124.** *TRIGONELLA* sp. Fabaceae.
No. 265. July 1, 1934. Stalinabad, Tajikistan. An excellent fodder crop, found on a rocky hillside.
- 107125 to 107132.** *VICIA* spp. Fabaceae. **Vetch.**
- 107125.** *VICIA ANGUSTIFOLIA* Grufberg. Fabaceae.
No. 160. July 1934. From a mountain slope, Gissar Valley, Tajikistan.
For previous introduction see 81051.
- 107126.** *VICIA HYRCANICA* Fisch. and Mey.
No. 166. July 1934. From mountain slopes, Gissar Valley, Tajikistan. An annual yellow-flowered vetch, cultivated in northern Iran (Persia) and Armenia.
For previous introduction see 73619.

107008 to 107134—Continued.

- 107127.** *VICIA LUTEA* L.
No. 167. July 1934. From a mountain slope, Gissar Valley, Tajikistan. An annual vetch with ascending stems up to 2 feet long, small linear-lanceolate leaflets, and bright-yellow flowers. Native to central Europe.
For previous introduction see 6962.
- 107128 and 107129.** *VICIA TENUIFOLIA* Roth.
A deep-rooted perennial, cut for hay, which thrives in very dry situations.
For previous introduction see 88702.
- 107128.** No. 171. July 1934. From a mountain slope, Gissar Valley, Tajikistan.
- 107129.** No. 180. July 1, 1934. From the experiment station, Stalinabad, Tajikistan, where it occurs as a bad weed in their wheatfields.
- 107130.** *VICIA* sp.
No. 268. July 9, 1934. Found in dry clay soil in fields east of Stalinabad, Tajikistan.
- 107131.** *VICIA* sp.
No. 268-a. July 9, 1934. Seeds mixed with No. 268 [107130].
- 107132.** *VICIA* sp.
No. 293. July 11, 1934. Gissar Mountains, south of Stalinabad, Tajikistan.
- 107133.** (Undetermined.)
No. 217. July 8, 1934. Varsov River, north of Stalinabad, Tajikistan. An herb with yellow flowers.
- 107134.** (Undetermined.)
No. 259. July 3, 1934. Experiment station, Stalinabad, Tajikistan. A pretty flowering plant growing as a weed in fields at the station.
- 107135 and 107136.** *FICUS LAEVIGATA* Vahl. Moraceae. **Fig.**
From British Guiana. Seeds presented by the Botanic Garden, Georgetown, through W. A. Archer, Bureau of Plant Industry. Received November 17, 1934.
A shrub or small tree up to 15 feet high, with medium-sized, glossy, ovate leaves and an abundance of globular white fruits, less than an inch in diameter, which turn pink as they ripen. Native to tropical America.
For previous introduction see 98850.
- 107137 to 107143.**
From the Union of South Africa. Seeds presented by the School of Agriculture, Grootfontein, Middleburg, Cape Province. Received November 10, 1934.
- 107137.** *ASTER FILIFOLIUS* Vent. Astera-ceae.
A much-branched shrub 2 to 3 feet high, with filiform leaves and flower heads with yellow disk and blue rays. Native to the Cape of Good Hope.
- 107138.** *ATRIPLEX HALIMUS* L. Chenopodiaceae.
For previous introduction and description see 106615.

107137 to 107143—Continued.

107139. *EURYOPS MULTIFIDUS* (Thunb.) DC. Asteraceae.

A stout bush a foot or more high, with linear filiform leaves $\frac{1}{2}$ to $1\frac{1}{2}$ inches long and numerous small yellow flower heads on slender stems an inch long.

For previous introduction see 105937.

107140 and 107141. *PENTZIA SPHAEROCEPHALA* DC. Asteraceae.

A rigid twiggy shrub with long erect branches and trifid leaves an inch or more long, with linear lobes. The yellow flower heads are half an inch across.

For previous introduction see 105939.

107140. *Groot Berg Gansie*.

107141. Typical form.

107142. *TETRAGONIA ARBUSCULA* Fenzl. Aizoaceae.

A much-branched, semishrubby perennial, with fleshy leaves less than an inch long, varying from linear to ovate-oblong. The small inconspicuous flowers are borne in leafy racemes and are followed by three- to four-winged, nutlike fruits.

For previous introduction see 105942.

107143. (Undetermined.)

A composite received as *Tripteris pachypteris*, but the seeds are not of that genus.

107144 to 107148.

From Cuba. Bulbs presented by Ing. Gonzalo M. Fortun, Director, Estaciones Experimentales, Santiago de las Vegas. Received November 16, 1934.

107144. *STERNBERGIA LUTEA* (L.) Ker-Gawl. Amaryllidaceae.

Brujita amarilla. A low bulbous plant with six to eight strap-shaped leaves becoming a foot long and one to four small yellow flowers about an inch long. Native to the Mediterranean region.

107145 to 107148. *ZEPHYRANTHES* spp. Amaryllidaceae. Zephyrilly.

107145. *ZEPHYRANTHES CARINATA* Herbert.

A bulbous perennial with linear leaves and a scape about a foot high, bearing a single rosy flower 3 to 5 inches across and 3 inches long. It is said to be the largest and choicest of the rosy-flowered zephyrillies and blooms in the summer. Native to the West Indies.

For previous introduction see 81496.

107146 and 107147. *ZEPHYRANTHES ROSEA* Lindl. Pink zephyrilly.

A tender bulbous autumn-blooming plant, native to Cuba, with linear, bright-green leaves and rose-colored flowers an inch long, on a peduncle 4 to 6 inches long.

For previous introduction see 80017.

107146. *Atamasco rosea*.

107147. *Atamasco rosea*, from Camaguey.

107148. *ZEPHYRANTHES TUBISPATHA* (L'Herit.) Herb.

Brujita blanca. A plant with four or five narrow-linear leaves 5 to 12

107144 to 107148—Continued.

inches long and a slender scape 4 inches long, bearing a white flower about 2 inches in length. Native to the West Indies.

107149 to 107168.

From British Guiana. Seeds collected by W. A. Archer, Bureau of Plant Industry. Received November 8, 1934.

Introduced for Department specialists.

107149. *HIPPOMANE MANCINELLA* L. Euphorbiaceae.

No. 2570. Botanic Garden, Georgetown, September 27, 1934.

For previous introduction and description see 106927.

107150. *ALBIZZIA LEBBECK* (L.) Benth. Mimosaceae.

No. 2645. Botanic Garden, Georgetown, October 17, 1934. A tropical Asiatic tree with doubly compound leaves made up of obliquely oval leaflets, axillary globular heads of greenish-yellow flowers, and long flat pods.

For previous introduction see 78330.

107151. *ALLIUM ASCALONICUM* L. Liliaceae. Shallot.

No. 2636. From the vicinity of Georgetown, October 15, 1934. A cultivated shallot.

For previous introduction see 66422.

107152 to 107155. *CAPSICUM ANNUUM* L. Solanaceae. Common redpepper.

Nos. 107152 to 107154 were collected near Georgetown, October 15, 1934.

107152. No. 2632. A bell-shaped, bright-red pepper.

107153. No. 2633. A yellow bell-shaped pepper.

107154. No. 2637. *Bird pepper*. The small fruits are orange red and less than an inch long.

107155. No. 2642. *Bukrumani*. Georgetown, October 17, 1934. A very hot pepper, used by the aborigines.

107156. *CASSIA HIRSUTA* L. Caesalpinjaceae.

No. 2619. Near Georgetown, October 15, 1934. An erect annual herb covered with long hairs. The compound leaves are made up of three to five pairs of ovate leaflets 2 to 3 inches long, and the orange flowers are borne in axillary racemes. Native to Brazil.

For previous introduction see 103607.

107157. *CLIBADIUM SURINAMENSE* L. Asteraceae.

No. 2620. Near Georgetown, October 15, 1934. A tropical shrub 4 to 10 feet high, with rigid, hairy, dark-green, ovate-cordate leaves and panicles of small, white, ovoid flower heads. Native to northern South America.

Nos. 107158 to 107160 were collected near Georgetown October 15, 1934.

107158. *CUCUMIS MELO* L. Cucurbitaceae. Muskmelon.

No. 2629. A muskmelon 8 inches long, with ribbed, pale-yellow surface and firm flesh.

107149 to 107168—Continued.

107159. CUCURBITA MOSCHATA Duchesne. Cucurbitaceae. Cushaw.

No. 2635. An oval cushaw about 18 inches long, with finely patterned green and white skin.

107160. CYCLANTHERA sp. Cucurbitaceae.

No. 2638. A vine cultivated for its yellow to orange-colored fruits which are used in curries or as a stewed vegetable. The bitter principle has to be removed first by boiling.

107161. DESMANTHUS VIRGATUS (L.) Willd. Mimosaceae.

No. 2643. Georgetown, October 17, 1934. A slender climbing shrub 5 to 6 feet high. The sensitive leaves are bipinnate, and the linear-compressed pods contain brown polished seeds which are used as beads.

For previous introduction see 93588.

107162. DREPANOCARPUS LUNATUS (L. f.) G. F. W. Meyer. Fabaceae.

No. 2616. Near Georgetown, British Guiana, October 15, 1934. A thorny shrub or small tree with three-foliolate leaves and bluish-white flowers in terminal racemes. Found growing near the sea, along creeks, and in drainage canals. Native to northern South America.

107163. FURCRAEA TUBEROSA (Mill.) Ait. Amaryllidaceae.

No. 2644. Georgetown, October 17, 1934. Bulbs of a fiber plant generally cultivated in northern South America; native country not known.

For previous introduction see 33668.

107164. JATROPHA GOSSYPIFOLIA L. Euphorbiaceae.

No. 2623. Near Georgetown, October 15, 1934.

For previous introduction and description see 106940.

107165. JATROPHA PODAGRICA Hook. Euphorbiaceae.

No. 2592. Botanic Garden, Georgetown, September 27, 1934.

For previous introduction and description see 106995.

107166. PAULLINIA PINNATA L. Sapindaceae.

No. 2554. Botanic Garden, Georgetown, September 27, 1934.

For previous introduction and description see 106959.

107167. QUASSIA AMARA L. Simaroubaceae.

No. 2615. Botanic Garden, Georgetown, October 11, 1934.

For previous introduction and description see 107001.

107168. SAPIUM HIPPOMANE G. F. W. Meyer. Euphorbiaceae.

No. 2581. Botanic Garden, Georgetown, September 27, 1934. A tropical tree 30 feet high, with lanceolate-oblong, leathery leaves about 6 inches long and blackish seeds. Native to tropical America.

107169 to 107181.

From England. Scions presented by the East Malling Research Station, Kent. Received April 13, 1933. Numbered November 22, 1934.

107169 to 107181—Continued.

Introduced under the following varietal names for the use of Department specialists.

107169 to 107179. MALUS SYLVESTRIS Mill. Malaceae. **Apple.**

107169. *Beauty of Bath.*

107170. *Blenheim Orange.*

107171. *Bramley's Seedling.*

107172. *Coz's Orange Pippin.*

107173. *Early Victoria.*

107174. *Grenadier.*

107175. *Lave's Prince Albert.*

107176. *Laxton's Superb.*

107177. *Lord Derby.*

107178. *Newton Wonder.*

107179. *Worcester Pearmain.*

107180 and 107181. PRUNUS DOMESTICA L. Amygdalaceae. **Common plum.**

107180. *Belle de Louvain.*

107181. *Cambridge Gage.*

107182 to 107186. PRUNUS DOMESTICA L. Amygdalaceae. **Common plum.**

From India. Plants purchased from the Saharanpur Botanic Garden. Received February 28, 1934. Numbered November 22, 1934.

Introduced under the following varietal names for the use of Department specialists.

107182. *Alucha purple.* **107185.** *Sumomo.*

107183. *Alucha red.* **107186.** *Sinka.*

107184. *Large yellow.*

107187 to 107190. PRUNUS spp. Amygdalaceae.

From Africa. Scions presented by Ernestine Fenzl, Tripoli. Received March 1, 1934. Numbered November 22, 1934.

107187. PRUNUS ARMENIACA L. **Apricot.**

Mesch-Mesch Amrah (red apricot). A rather small tree found in the Oasis of Tripoli, which bears apricots with a downy skin, having the color and fragrance of raspberries. The dark-green foliage is in vivid contrast with the red fruit which ripens the end of May.

For previous introduction see 93489.

107188. PRUNUS ARMENIACA L. **Apricot.**

A variety which matures the end of June. The tree is a more vigorous grower, the fruit is slightly larger than 107187, but it does not attain the uniform raspberry color, one side remaining a bright orange.

107189. PRUNUS CERASIFERA DIVARICATA (Ledeb.) C. Schneid. **Cherry plum.**

A good substitute where cherries cannot be grown.

107190. PRUNUS sp.

Early Castell.

107191. ASTREBLA ELYMOIDES Bailey and F. Muell. Poaceae. **Grass.**

From Australia. Seeds purchased from Arthur Yates & Co., Sydney, New South Wales. Received November 23, 1934.

Mitchell grass.

For previous introduction see 48977.

107192 to 107194. GOSYPIUM spp. Malvaceae. Cotton.

From British Guiana. Seeds collected by W. A. Archer, Bureau of Plant Industry. Received in October and November 1934.

Introduced for Department specialists.

107192. GOSYPIUM sp.

No. 2504. September 8, 1934, from Koriabo, on the Barima River. Cultivated plants found growing in the dooryard of a deserted dwelling. A tree cotton with pale-yellow flowers, which grows from 6 to 20 feet high. It is probably a hybrid of *Gossypium peruvianum*.

107193. GOSYPIUM sp.

No. 2618. October 15, 1934. Near Georgetown. A slender tree-like shrub 15 feet high, with green foliage and pale greenish-yellow flowers, each petal with a slight marking of purple near the inner base. Probably a hybrid of *Gossypium hirsutum* and *G. peruvianum*.

107194. GOSYPIUM sp.

No. 2624. October 15, 1934. Near Georgetown. A hybrid of *Gossypium peruvianum*, which is a slender tree-like shrub about 20 feet high. The petals of the pale-yellow flowers are mottled with faint brown spots. The outside of the calyx is dark red, as are the veins on the lower side of the leaf, the petioles, and the stems.

107195 to 107255. MALUS SYLVESTRIS Mill. Malaceae. Apple.

From the Union of Soviet Socialist Republics. Scions presented by the Michurin Research Institute of Fruit Production, through the Institute of Plant Industry, Leningrad. Received November 15, 1934.

Received under the following varietal names for Department specialists.

- 107195. *Antonovka Monastirskaja*.
- 107196. *Antonovka 1½ pounds*.
- 107197. *Antonovka Shafran*.
- 107198. *Antonovka Zheltaia* (yellow).
- 107199. *Arkad Zimmii* (winter).
- 107200. *Belfer kitaika* (Chinese bellflower).
- 107201. *Bellflower Phoenix*.
- 107202. *Bessemianka* (seedless).
- 107203. *Borsdorf Kitaika*.
- 107204. *Cecmpa Belfer Kitaika* (sister of Chinese bellflower).
- 107205. *Chelbi Kitaika*.
- 107206. *Chinese Shampansen*.
- 107207. *Danzigskoe Rebristoe* (ribbed Danzig).
- 107208. *Diana*.
- 107209. *Dushistii Ledenez*.
- 107210. *Durogoe*.
- 107211. *Filia*.
- 107212. *Flava*.
- 107213. *Iamnoie*.
- 107214. *Izumrudnoie*.
- 107215. *Kalvil Anis*.
- 107215. *Kalvil Record*.

107195 to 107255—Continued.

- 107217. *Kandil Kitaika*.
- 107218. *Kistevoe*.
- 107219. *Kitaika Anisovaia*.
- 107220. *Kitaika Arkadovaia*.
- 107221. *Kitaika Dessertnaia*.
- 107222. *Kitaika Dessertnaia*.
- 107223. *Kitaika Zolotaia* (Chinese golden).
- 107224. *Komsomolets*.
- 107225. *Korichnevoie* (brown).
- 107226. *Krasnii Shtandart* (Red standard).
- 107227. *Krasnoznamennoie*.
- 107228. *Kren Kitaika* (Chinese cream).
- 107229. *Kulon Kitaika*.
- 107230. *Oleg*.
- 107231. *Paradox*.
- 107232. *Phoenix*.
- 107233. *Pippin Chernenko*.
- 107234. *Pippin Chetvertii*.
- 107235. *Pippin Kitaika* (Chinese pippin).
- 107236. *Pippin Shafran*.
- 107237. *Pomon Kitaika*.
- 107238. *Rebristoe*.
- 107239. *Renet Bergamotnii*.
- 107240. *Renet Reshatnikova*.
- 107241. *Renet Sakharnii*.
- 107242. *Repa Iubileinaia*.
- 107243. *Rosmarin Ukrainskii*.
- 107244. *Rubinovoie*.
- 107245. *Severnii Bujon*.
- 107246. *Severnii Bujon*.
- 107247. *Shampansen Kitaika* (Chinese Shafran).
- 107248. *Shafran Osennii*.
- 107249. *Sinap Michurina*.
- 107250. *Sinap Michurina*.
- 107251. *Slovianka*.
- 107252. *Sovetskoe*.
- 107253. *Tayeshnoe*.
- 107254. *Titfler*.
- 107255. *Zimnee Sladkoe* (winter sweet).

107256 and 107257.

From Arizona. Seeds presented by the Boyce Thompson Southwestern Arboretum, Superior, through F. J. Crider. Received April 9, 1932. Numbered in November 1934.

107256. ECHINOCEREUS RIGIDISSIMUS (Engelm.) Rose. Cactaceae.

A short stout cylindrical cactus, with 16 to 20 coarse stiff straight white to brown spines in each interlocking cluster. The spines form broad bands of cluster and white around the surface of the plant. The large purple flowers are 3 inches long and as wide when fully expanded. Native to Arizona and New Mexico.

107256 and 107257—Continued.

107257. *FEROCACTUS LECONTEI* (Engelm.) Britt. and Rose. Cactaceae.

A slender cylindrical cactus, about 15 feet high, sometimes taller with stout interlocking spines, 1 to 3 inches long, pink with yellow tips, and yellow flowers about 2 inches long and half as wide. Native to the southwestern United States and northwestern Mexico.

107253 to 107263. *NEOMAMMILLARIA* spp. Cactaceae.

From Mexico. Seeds collected by Paul Russell and Max Souviron, Bureau of Plant Industry, in the Botanic Garden, Mexico City. Received September 20, 1930. Numbered in November 1934.

107258. *NEOMAMMILLARIA DEALBATA* (Dietr.) Britt. and Rose.

A globose or short-cylindrical cactus, 2 to 3 inches high, with the surface densely covered by the clusters of white appressed spines. The small carmine flowers are followed by small club-shaped fruits. Native to central Mexico.

107259. *NEOMAMMILLARIA MAGNIMAMMA* (Haw.) Britt. and Rose.

A globular cactus 4 inches in diameter, with very milky juice, often in a colony of 25 or more. The conical tubercles, two-fifths of an inch high, are crowned by three to five unequal, stout, whitish, or colored spines, and the cream-colored flowers are borne in the axils of the tubercles near the top of the plant. Native to central Mexico.

For previous introduction see 81183.

107260. *NEOMAMMILLARIA MYSTAX* (Mart.) Britt. and Rose.

A globose or short-cylindrical cactus 3 to 6 inches high, flat-topped, with thick-set tubercles filled with milky juice, and small white spines. The abundant dark-red flowers, three-fourths of an inch across, appear in two or three rows, and the red fruits are about 1 inch long. Native to south-central Mexico.

107261. *NEOMAMMILLARIA WILDII* (Dietr.) Britt. and Rose.

A small cylindrical or globose cactus that grows in small colonies. From the slender elongated tubercles arise pinkish hairs and bristles, also short yellow or white spines. The white flowers, half an inch across, are succeeded by club-shaped red fruits. Native to Hidalgo, Mexico.

107262. *NEOMAMMILLARIA* sp.

A rather small cylindrical-globose cactus with numerous short tubercles which bear short reddish-brown spines.

107263. *NEOMAMMILLARIA* sp.

A globular cactus with long tubercles and long pale-brown spines.

107264 and 107265. *NICOTIANA TABACUM* L. Solanaceae. Tobacco.

From South America. Seeds presented by Mario del Rio, chief, Estación Agronómica, Piura, Peru. Received November 22, 1934.

Introduced for Department specialists.

107264. *Silvestre*. A wild tobacco grown at 2,750 m above sea level.

107265. Commercial tobacco.

107266 and 107267.

From Cuba. Seeds presented by Robert M. Grey, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received November 11, 1934.

107266. *ARDISIA WALLICHII* A. DC. Myrsinaceae.

A low bushy perennial with thick obovate-acute leaves 4 to 5 inches long and white flowers in lax racemes. Native to Burma.

107267. *CINNAMOMUM CASSIA* Blume. Lauraceae. Chinese cinnamon.

A handsome evergreen tree with opposite leathery oblong-lanceolate leaves 3 to 6 inches long and very small yellowish flowers in terminal axillary panicles. Native to southern China.

For previous introduction see 6867.

107268 to 107271. *IRIS* spp. Iridaceae.

From Germany. Roots purchased from Karl Foerster, Bornim-Potsdam-Sanssouci. Received November 30, 1934.

107268. *Baron Gütz von Ococim*.

107269. *Jenny*.

107270. *Kazimir Missoua*.

107271. *Valery Germanis*.

107272. *ZOYSIA MATRELLA* (L.) Merr. Poaceae. Manila grass.

From South Manchuria. Seeds purchased from Manshu Nosan Shokai, Inc., Dairen. Received November 27, 1934.

A creeping grass, important for binding coast sands, which does well on alkali soils and also as a lawn grass. Said to be relished by stock.

107273 and 107274. *CITRUS NOBILIS DELICIOSA* (Ten.) Swingle. Rutaceae. Mandarin orange.

From Palestine. Budwood presented by S. H. Holzman, Rehovoth. Received December 1, 1934.

107273. *Denice*. A very early maturing orange, with about 12 seeds, of insipid flavor.

107274. *Pride of Ellendale*. Originally from Australia. This fruit has a fine flavor, the skin adheres well to the pulp, and it is a good shipper.

107275. *ALOE GLOBULIGEMMA* Pole Evans. Liliaceae.

From the Union of South Africa. Seeds presented by the McGregor Museum, Kimberley. Received November 26, 1934.

A stemless succulent with a rosette of erect-spreading, sword-shaped leaves 1 to 2 feet long, having cartilaginous, wavy-toothed margins. The flower stalk, 3 to 4 feet high, carries a dense raceme a foot long of tubular flowers which are globular and red in the bud, becoming elongated and sulphur-yellow tinged with red at the base. It is native to South Africa.

For previous introduction see 89992.

107276. *JUANIA AUSTRALIS* (Mart.) Drude. Phoenicaceae. Palm.

From Juan Fernandez Island. Seeds collected by Max Yunge and presented

107276—Continued.

through the American consul at Santiago, Chile. Received November 26, 1934.

A pinnate-leaved palm of moderate size, native to Juan Fernandez Island. The leaves are 4 to 5 feet long, with linear-acuminate pinnae, and the slender trunk is without spines.

For previous introduction see 91297.

107277. (Undetermined.)

From Ecuador. Roots presented by Mrs. Ynez Mexia, through the American consulate, Guayaquil. Received November 22, 1934.

107278 to 107284.

From Norway. Seeds presented by Prof. Olav Moen, horticultural division, Agricultural College, Aas. Received November 27, 1934.

Introduced under the following varietal names, for Department specialists.

107278 to 107280. BRASSICA OLERACEA CAPITATA L. Brassicaceae. Cabbage.

107278. No. 390. *Moens hvitkal*.

107279. No. 400. *Amager Faales Blatopp*.

107280. No. 426. *Tronder*.

107281. BRASSICA RAPA L. Brassicaceae. Turnip.

No. 516. *Trondhjensk*.

107282. DAUCUS CAROTA L. Apiaceae. Carrot.

No. 298. *Londoner torv*.

107283. PHASEOLUS VULGARIS L. Fabaceae. Common bean.

No. 151. *Erstling, Erikarud*.

107284. SPINACIA OLERACEA L. Chenopodiaceae. Common spinach.

No. 850. *Kongen av Danmark*.

107285 and 107286.

From the Isla de Pinos, Cuba. Bulbs presented by Charles F. Fetter, through G. L. Hoyt, Nueva Gerona. Received December 5, 1934.

107285. ZEPHYRANTHES sp. Amaryllidaceae.

A variety with pink flowers.

107286. ZEPHYRANTHES sp. Amaryllidaceae.

A variety with white flowers.

107287. PHELEUM PRATENSE L. Poaceae. Timothy.

From England. Seeds purchased from A. G. Leighton, Whitechurch, Shropshire, through R. C. Stapledon, Welsh Plant Breeding Station, Aberystwyth, Wales. Received December 1, 1934.

Strain *Timothy S. 48*; introduced for Department specialists.

107288. ACACIA BONARIENSIS Gillies. Mimosaceae.

From Argentina. Seeds presented by the Jardín Botánico, Buenos Aires, through the Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, Cuba. Received December 3, 1934.

An acacia with angular branches covered with scattered short recurved spines. The long bipinnate leaves and branches are gla-

107288—Continued.

brous; the youngest leaflets and the peduncles are silky hairy, as are also the short panicles of white flower spikes.

For previous introduction see 104103.

107289. PHOENIX RECLINATA Jacq. Phoenicaceae. Senegal date palm.

From Kenya Colony, Africa. Seeds collected by H. C. Sampson, economic botanist, Royal Botanic Gardens, Kew, England. Received July 26, 1934. Numbered in November 1934.

A date palm 20 to 30 feet high, but sometimes stemless, native to tropical and subtropical parts of Africa. The reclinate pinnate leaves are 6 to 9 feet long and have rigid green leaflets. The yellowish fruits with sweet edible pulp are half an inch long.

For previous introduction see 106104.

107290 to 107293.

From Argentina. Seeds presented by the Jardín Botánico, Buenos Aires, through the Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, Cuba. Received December 3, 1934.

107290. ALNUS JORULLENSIS H. B. K. Betulaceae.

A shrub or small tree 10 to 20 feet high, with smooth reddish-brown branches and oblong or obovate leaves 3 to 5 inches long. Native to southern Mexico.

107291. CEDRELA FISSILIS Vell. Meliaceae.

A tall ornamental tree, native to Brazil and Paraguay, with pinnate leaves 10 to 15 inches long and large panicles of small whitish flowers. Because of its handsome foliage it is suitable for growing as an avenue tree in the warmer parts of the United States.

For previous introduction see 65272.

107292. COMBRETUM FRUTICOSUM (Loefl.) Stuntz. Combretaceae.

Received as *C. micropetalum*, which is now referred to the above species. An ornamental climbing shrub, with opposite elliptic leaves and spikes of orange and green flowers. It is native to the temperate regions from Argentina to Brazil.

For previous introduction see 104111.

107293. ENTEROLOBIUM TIMBOUVA Mart. Mimosaceae. Timbo.

A large tree with bipinnate leaves made up of two to five pinnae, each bearing 10 to 20 pairs of falcate-oblong leaflets and large heads of greenish flowers followed by coriaceous kidney-shaped pods. It is native to Brazil.

For previous introduction see 88230.

107294 and 107295. SOLANUM MELONGENA L. Solanaceae. Eggplant.

From California. Seed presented by Claude D. Tribble, Elk Grove. Received December 5, 1934.

107294. Seeds from a native Syrian eggplant which grows 48 inches high and is well branched. The fruits are from 3½ to 8 inches long and 2 inches in diameter. The flavor is better than any of our domestic varieties.

107295. Seeds from California-grown plants from P. I. 107294.

107296. PISTACIA LENTISCUS L. Anacardiaceae. Lentisk.

From Palestine. Seeds presented by the Department of Agriculture and Forests, Jerusalem. Received November 30, 1934.

A wild shrub common in the Mediterranean regions where it grows on poor soil and withstands severe drought. It produces a gum used by the Arabs as a perfume; an edible oil known as shinia, used as a substitute for olive oil, is obtained from the berries.

For previous introduction see 99350.

107297 and 107298.

From Turkey. Plants collected by H. L. Westover and C. R. Enlow, Bureau of Plant Industry. Received December 3, 1934.

Introduced for Department specialists.

107297. CAREX sp. Cyperaceae.

From the market at Istanbul. An excellent shade-enduring plant used in Turkey for lawns under shade trees and for flower-bed borders.

107298. MEDICAGO SATIVA L. Fabaceae. Alfalfa.

Roots collected on dry mountain slopes north of Nallihan.

107299 to 107302. TRITICUM AESTIVUM L. Poaceae. Common wheat.

From Ireland. Seeds presented by M. Gaffrey, Albert Agricultural College, Glasnevin, Dublin. Received November 30, 1934.

A collection of wheat hybrids introduced for the use of Department specialists.

107299. *April Red* × *Ironmaster 7/1*. A spring type.

107300. *Ironmaster* × *Yeoman No. 8*. A winter type with stiff straw.

107301. *Ironmaster* × *Yeoman No. 14*. A winter type with very short stiff straw.

107302. Unselected; old land sort, spring wheat from Galway.

107303 and 107304. AVENA SATIVA L. Poaceae. Oats.

From Scotland. Seeds presented by the Scottish Society for Research in Plant Breeding, Corstorphine, Midlothian. Received November 30, 1934.

Introduced for the use of Department specialists.

107303. *Bell*.

107304. *Early Miller*.

107305. MEDICAGO SATIVA FAUREI Maire. Fabaceae. Alfalfa.

From Algeria. Seeds presented by Dr. R. Maire, University of Algiers, Algiers. Received December 11, 1934.

A variety with the habit of *Medicago falcata*. The yellow flowers are in short dense racemes. Native to the mountains of western Algeria.

107306 to 107308. SOLANUM TUBEROSUM L. Solanaceae. Potato.

From Germany. Tubers presented by Dr. A. Schlumberger, Berlin-Dahlem, Bio'ogi-

107306 to 107308—Continued.

sche Reichsanstalt, Institut für Kartoffelbau. Received December 17, 1934.

A collection of potato varieties, apparently scab-resistant, introduced for the use of Department specialists.

107306. *Ackersegen von Böhm*.

107307. *Gubel von Richter*.

107308. *Frühe Hornchen*.

107309 to 107325.

From the Union of Soviet Socialist Republics. Plants presented by the Mitchurin Research Institute of Fruit Production, Mitchurinsk, through the Institute of Plant Industry, Leningrad. Received December 13, 1934.

A collection of fruit trees introduced under the following varietal names, for the use of Department specialists.

107309 to 107324. MALUS SYLVESTRIS Mill. Malaceae. Apple.

107309. *Antonofka common*.

107310. *Antonofka She Haia* (yellow).

107311. *Autumn Shafran*.

107312. *Bellflower*.

107313. *Krem Kitaika* (Chinese cream).

107314. *Flava*.

107315. *Korichnoie*.

107316. *Oleg* (Ohleg).

107317. *Paradiska Mitchurin*.

107318. *Pippin Shafran*.

107319. *Renet Bergamotnii*.

107320. *Shafran-Kitaika* (Shafran-Chinese).

107321. *Winter Arcad Gold*.

107322. Unknown.

107323. Unknown.

107324. Unknown.

107325. PYRUS COMMUNIS L. Malaceae. Common pear.

Mitchurin Winter Pear.

107326 to 107423.

From the Union of Soviet Socialist Republics. Seeds collected in Turkistan by H. L. Westover and C. R. Enlow, Bureau of Plant Industry. Received October 31, 1934.

Introduced for the use of Department specialists.

107326 to 107330. AGROPYRON TRICHOPHORUM (Link) Richt. Poaceae. Grass.

107326. No. 330. July 15, 1934. From Little Chingan Mountains, east of Tashkent, Uzbekistan, on dry slopes.

107327. No. 369. July 15, 1934. Chot Kol River, east of Tashkent.

107328. No. 373. July 15, 1934. Chot Kol River Canyon, east of Tashkent.

107329. No. 389. July 15, 1934. Chot Kol River Canyon, 50 km east of Tashkent.

107330. No. 376. July 15, 1934. Chingan, east of Tashkent in dry soil.

107326 to 107423—Continued.

107331. *AGROSTIS* sp. Poaceae. Grass.

No. 301. July 8, 1934. Varsov River Canyon, north of Stalinabad, Tajikistan.

107332. *AGROSTIS* sp. Poaceae. Grass.

No. 350. July 11, 1934. Roadside, near Tashkent, Uzbekistan.

107333. *ALLIUM* sp. Liliaceae.

No. 326. July 15, 1934. Little Chimgan, east of Tashkent, Uzbekistan.

107334. *ALYSSUM* sp. Brassicaceae.

No. 351. July 15, 1934. Little Chimgan, east of Tashkent, Uzbekistan. A small flowering plant found in rocky soils.

107335 to 107337. *AMYGDALUS* spp. Amygdalaceae.

107335. *AMYGDALUS PERSICA* NECTARINA Ait. Nectarine.

No. 347. July 16, 1934. Tashkent, Uzbekistan. A nectarine of delicious quality.

107336. *AMYGDALUS* sp.

No. 324. July 15, 1934. Rocky slopes of Little Chimgan, east of Tashkent, Uzbekistan.

107337. *AMYGDALUS* sp.

No. 335. July 15, 1934. Little Chimgan, east of Tashkent, Uzbekistan. A small attractive shrub.

107338. *ANDROPOGON* sp. Poaceae. Grass.

No. 398. July 16, 1934. Chot Kol River, east of Tashkent.

107339 to 107346. *ASTRAGALUS* spp. Fabaceae.

107339. *ASTRAGALUS* sp.

No. 313. July 15, 1934. Rocky slopes of Little Chimgan, east of Tashkent, Uzbekistan.

107340. *ASTRAGALUS* sp.

No. 319. July 15, 1934. Little Chimgan, in the mountains east of Tashkent, Uzbekistan.

107341. *ASTRAGALUS* sp.

No. 329. July 15, 1934. Rocky slopes of Little Chimgan, east of Tashkent, Uzbekistan.

107342. *ASTRAGALUS* sp.

No. 339. July 15, 1934. Little Chimgan, in rocky soil, east of Tashkent, Uzbekistan.

107343. *ASTRAGALUS* sp.

No. 342. July 15, 1934. Little Chimgan, east of Tashkent.

107344. *ASTRAGALUS* sp.

No. 365. July 15, 1934. Little Chimgan, east of Tashkent.

107345. *ASTRAGALUS* sp.

No. 386. July 15, 1934. Little Chimgan, east of Tashkent.

107346. *ASTRAGALUS* sp.

No. 394. July 15, 1934. Rocky slopes of Little Chimgan, east of Tashkent.

107347. *BROMUS* sp. Poaceae. Grass.

No. 367. July 15, 1934. Mountain slope, Little Chimgan, east of Tashkent.

107326 to 107423—Continued.

107348. *BROMUS* sp. Poaceae. Grass.

No. 327. July 15, 1934. From dry slopes of Little Chimgan, east of Tashkent, Uzbekistan.

107349. *CICER* sp. Fabaceae.

No. 316. July 15, 1934.

107350. *DELPHINIUM* sp. Ranunculaceae.

No. 294. July 9, 1934. Stalinabad, Tajikistan. An annual flowering plant.

107351. *DELPHINIUM* sp. Ranunculaceae.

No. 302. July 3, 1934. Southeast of Stalinabad, adjacent to Sultanabad, in rocky pasture.

107352. *ELICHRYSUM* sp. Asteraceae.

No. 392-a. Chimgan, east of Tashkent, July 15, 1934. A beautiful yellow straw-flower.

107353. *ELYMUS CAPUT-MEDUSAE* L. Poaceae. Grass.

No. 343. July 16, 1934. Near the Chot Kol River, east of Tashkent. An erect annual grass.

For previous introduction see 53047.

107354. *EREMURUS SPECTABILIS* Bieb. Liliaceae.

No. 384. July 15, 1934. Chimgan, east of Tashkent. A handsome perennial 3 to 4 feet high, with light-green triangular leaves and yellow flowers in racemes often 6 inches long. Native to the Caucasus region.

107355. *ERODIUM* sp. Geraniaceae.

No. 307. July 7, 1934. Varsov River Canyon, north of Stalinabad, Tajikistan.

107356. *FERULA* sp. Apiaceae.

No. 328. July 15, 1934. Little Chimgan, east of Tashkent, Uzbekistan.

107357 to 107359. *FESTUCA* spp. Poaceae. Grass.

107357. *FESTUCA* sp.

No. 321. July 11, 1934. Plant Breeding Station near Tashkent. A wild grass found along the irrigation ditches and roadsides.

107358. *FESTUCA* sp.

No. 371. July 15, 1934. Chot Kol River, east of Tashkent.

107359. *FESTUCA* sp.

No. 382. July 17, 1934. Chimgan, east of Tashkent. A grass 4 feet tall, found in moist soils.

107360. *FRITILLARIA* sp. Liliaceae.

No. 380. July 15, 1934. Chimgan, east of Tashkent.

107361. *HORDEUM BULBOSUM* L. Poaceae. Grass.

No. 336. July 15, 1934. Little Chimgan, east of Tashkent, on mountain slopes.

107362. *HYPERICUM* sp. Hypericaceae.

No. 300. July 3, 1934. Stalinabad, adjacent to Sultanabad Valley, Tajikistan. A flowering plant found in permanent mountain pastures.

107363 to 107365. *IXIOLIRION* spp. Amaryllidaceae.

107363. *IXIOLIRION* sp.

No. 360. July 15, 1934. Chimgan, east of Tashkent, Uzbekistan.

107326 to 107423—Continued.

107364. IXIOLIRION sp.
No. 363. July 15, 1934. Chimgan, east of Tashkent, Uzbekistan.
107365. IXIOLIRION sp.
No. 299. July 8, 1934. From hillside in the Varsov River Canyon, Tajikistan.
107366. LATHYRUS sp. Fabaceae.
No. 306. July 1, 1934. Foothills north of Stalinabad, Tajikistan.
- 107367 to 107371. MEDICAGO spp. Fabaceae.
107367. MEDICAGO LUPULINA L.
Black medick.
No. 356. July 15, 1934. Little Chimgan, east of Tashkent, Uzbekistan.
- 107368 to 107370. MEDICAGO SATIVA L.
Alfalfa.
107368. No. 375. July 11, 1934. Middle Asia Plant Breeding Station. Wild alfalfa.
107369. No. 379. July 11, 1934. Collected in the mountains of Tajikistan by Mr. Kobeler, of the Middle Asia Plant Breeding Station. Wild alfalfa.
107370. No. 391. July 15, 1934. Collected in the mountains of Tajikistan by Mr. Kobeler, of the Middle Asia Plant Breeding Station. Wild alfalfa.
107371. MEDICAGO sp.
No. 310. July 3, 1934. From a mountain pasture adjacent to Sultana-bad Valley, southeast of Stalinabad, Tajikistan.
- 107372 to 107374. MELILOTUS spp. Fabaceae.
107372. MELILOTUS sp.
No. 338. July 11, 1934. Growing along an irrigation ditch at the Plant Breeding Station, Tashkent, Uzbekistan.
107373. MELILOTUS OFFICINALIS (L.) Lam. Sweetclover.
No. 355. July 16, 1934. Plant Breeding Station, Tashkent, on irrigation ditch banks.
107374. MELILOTUS sp.
No. 332. July 11, 1934. Roadside, near Tashkent, Uzbekistan, in clay soil.
107375. ONOBRYCHIS sp. Fabaceae.
No. 311. July 15, 1934. From the rocky slopes of Little Chimgan, east of Tashkent, Uzbekistan.
107376. ONOBRYCHIS sp. Fabaceae.
No. 323. July 15, 1934. On mountain slope, Little Chimgan, east of Tashkent, Uzbekistan.
- 107377 to 107380. ORYZOPSIS spp. Poaceae.
Grass.
107377. ORYZOPSIS sp.
No. 337. July 15, 1934. Found in rocky soil along the Little Chimgan, east of Tashkent, Uzbekistan.
107378. ORYZOPSIS sp.
No. 298. July 7, 1934. Found on the rocky slopes of the mountains in the Varsov River Canyon, north of Stalinabad, Tajikistan.

107326 to 107423—Continued.

107379. ORYZOPSIS sp.
No. 370. July 15, 1934. Chot Kol River, east of Tashkent.
107380. ORYZOPSIS sp.
No. 381. July 15, 1934. From gravelly slope on the Chimgan, east of Tashkent.
107381. OXYTROPIS sp. Fabaceae.
No. 333. July 15, 1934. Little Chimgan, east of Tashkent, Uzbekistan.
107382. PAPAVER sp. Papaveraceae.
No. 297. July 8, 1934. Varsov Canyon, north of Stalinabad, Tajikistan. A yellow-flowered poppy.
107383. PARACARYUM sp. Boraginaceae.
No. 344. July 15, 1934. Little Chimgan, east of Tashkent, Uzbekistan. A blue-flowered herb.
107384. PEDICULARIS sp. Scrophulariaceae.
No. 353. July 15, 1934. Little Chimgan, east of Tashkent. An annual flowering plant.
107385. PHALARIS sp. Poaceae. Grass.
No. 372. July 15, 1934. Chimgan, east of Tashkent.
- 107386 to 107394. POA spp. Poaceae. Grass.
107386. POA BULBOSA L.
No. 331. July 15, 1934. Found in clay loam soil on the Little Chimgan, east of Tashkent, Uzbekistan.
107387. POA sp.
No. 352. July 14, 1934. East of Tashkent, near the Chot Kol River.
107388. POA sp.
No. 340. July 15, 1934. Little Chimgan, east of Tashkent, Uzbekistan.
107389. POA sp.
No. 374. July 15, 1934. From moist mountain slopes, Chimgan, east of Tashkent, Uzbekistan.
107390. POA sp.
No. 388. July 15, 1934. Moist soils, Chimgan, east of Tashkent, Uzbekistan.
107391. POA sp.
No. 346. July 15, 1934. Little Chimgan, east of Tashkent, Uzbekistan.
107392. POA sp.
No. 296. July 7, 1934. Varsov River Canyon, north of Stalinabad.
107393. POA sp.
No. 361. July 15, 1934. Chimgan, east of Tashkent, in moist soil.
107394. POA sp.
No. 390. July 15, 1934. Chimgan, east of Tashkent, in fairly moist soil.
107395. POLYPOGON sp. Poaceae. Grass.
No. 362. July 11, 1934. From the roadside near Tashkent.
- 107396 to 107399. PRANGOS spp. Apiaceae.
107396. PRANGOS BUCCHARICA Fedtsch.
No. 378. July 1, 1934. From a mountain slope near Stalinabad, Tajikistan.

107326 to 107423—Continued.

kistan. A herbaceous perennial with branches somewhat whorled, narrow-oblong, deeply lacinate leaves, and dense umbels of small globular fruits. Native to Bokhara.

107397. PRANGOS TSCHINGANICA Fedtsch.

No. 397. July 15, 1934. Chimgan, east of Tashkent. A bushy herbaceous perennial, with deeply lacinate oblong leaves and dense umbels of small yellowish flowers. The plant is good forage in the fall when dry. Native to Tian Shan, central Asia.

107398. PRANGOS PABULARIA Lindl.

No. 393. July 15, 1934. Chimgan, east of Tashkent. A tall perennial, 4 to 5 feet high, with much-divided leaves a foot or more long and large umbels of small yellow flowers. Native to the Himalayas between 6,000 and 11,000 feet altitude. The plant is good fodder in the fall, when dry.

107399. PRANGOS sp.

No. 385. July 15, 1934. Mountain slope, Little Chimgan, east of Tashkent, Uzbekistan.

107400 to 107402. PRUNUS spp. Amygdalaceae.

107400 and 107401. PRUNUS ARMENIACA L. Apricot.

107400. No. 314. July 13, 1934. Tashkent, Uzbekistan. Cultivated apricots.

107401. No. 383. A cultivated apricot of excellent quality.

107402. PRUNUS sp.

No. 322. July 15, 1934. From the slopes of Little Chimgan, east of Tashkent, Uzbekistan. A semiprostrate shrub 10 to 12 inches high.

107403. PRUNUS sp.

No. 325. July 15, 1934. From the Little Chimgan, east of Tashkent, Uzbekistan.

107404. RHEUM sp. Polygonaceae.

No. 357. July 15, 1934. Little Chimgan, east of Tashkent, Uzbekistan. Received under the name "chimganica," for which a place of publication has not been found.

107405. RHEUM sp. Polygonaceae.

No. 395. July 15, 1934. Chimgan, east of Tashkent, Uzbekistan.

107406. ROSA sp. Rosaceae. Rose.

No. 334. July 15, 1934. Little Chimgan, east of Tashkent, Uzbekistan.

107407 to 107409. RUMEX spp. Polygonaceae.

107407. RUMEX sp.

No. 364. July 15, 1934. Chimgan, east of Tashkent. A flowering shrub.

107408. RUMEX sp.

No. 303. July 1, 1934. Varsov Canyon, north of Stalinabad, Tajikistan. A flowering shrub.

107409. RUMEX sp.

No. 304. July 7, 1934. Varsov Canyon, north of Stalinabad, Tajikistan. A flowering shrub.

107326 to 107423—Continued.

107410. SILENE sp. Silenaceae.

No. 345. July 15, 1934. Found growing among rocks on Little Chimgan, east of Tashkent, Uzbekistan.

107411. SILENE sp.

No. 295. July 7, 1934. Varsov Canyon, north of Stalinabad, Tajikistan. An annual flowering plant.

107412. STIPA PENNATA L. Poaceae. Feathergrass.

No. 366. June 1934. Source unknown.

107413 to 107416. TRIFOLIUM spp. Fabaceae.

107413 and 107414. TRIFOLIUM PRATENSE L. Red clover.

107413. No. 341. July 11, 1934. On the bank of an irrigation ditch, Cotton Breeding Station, Tashkent, Uzbekistan.

107414. No. 359. July 15, 1934. Chimgan, east of Tashkent, Uzbekistan. Near a stream.

107415 and 107416. TRIFOLIUM REPENS L. White clover.

107415. No. 305. July 8, 1934. Near the Varsov River, Tajikistan.

107416. No. 354. July 15, 1934. Chimgan Mountains, near Tashkent, near a stream.

107417 to 107419. TULIPA spp. Liliaceae. Tulip.

147417. TULIPA sp.

No. 368. July 15, 1934. On a rocky slope of Little Chimgan, east of Tashkent.

107418. TULIPA sp.

No. 318. July 15, 1934. Chimgan, east of Tashkent, Uzbekistan.

107419. TULIPA sp.

No. 348. July 15, 1934. Rocky soil on Little Chimgan, east of Tashkent, Uzbekistan.

107420. VICIA sp. Fabaceae. Vetch.

No. 309. July 8, 1934. From Varsov Canyon, north of Stalinabad, Tajikistan.

107421. VICIA sp. Fabaceae. Vetch.

No. 312. July 15, 1934. Rocky slopes of Little Chimgan, east of Tashkent, Uzbekistan.

107422. (Undetermined.)

No. 358. July 15, 1934. Chimgan, east of Tashkent, Uzbekistan. A beautiful flowering plant found in gravelly soil.

107423. GENTIANA sp. Gentianaceae. Gentian.

No. 214. July 3, 1934. From a mountain pasture, Tajikistan, adjacent to the Sultanabad Valley.

107424 and 107425.

From Ecuador. Seeds collected by Mrs. Ynes Mexia, in Santa Lucia, Canton Vinces, Province of Los Rios, and presented through the American Legation, Quito. Received November 22, 1934.

107424. PHYTELEPHAS sp. Phoenicaceae. Ivory nut palm.

No. 6586. Low pinnate-leaved palms.

107424 and 107425—Continued.

107425. SYAGRUS sp. Phoenicaceae. Palm.

No. 6580. *Palma mulatto*. A pinnate-leaved palm, related to the coconut.

107426. MALUS SYLVESTRIS Mill. Malaceae. Apple.

From Puerto Rico. Cuttings presented by J. A. B. Nolla, assistant commissioner, Department of Agriculture and Commerce, San Juan. Received December 26, 1934. Cuttings of an apple tree which originated in the highlands near Orocovis as a seedling from an imported American variety. The tree has borne two small crops.

107427 to 107431.

From the Union of Soviet Socialist Republics. Bulbs presented by the Botanical Institute, Ashkhabad, Turkmenistan, through H. L. Westover, Bureau of Plant Industry. Received December 22, 1934.

107427 to 107429. TULIPA spp. Liliaceae. Tulip.

107427. TULIPA KUSCHKENSIS B. Fedtsch.

For previous introduction and description, see 106777.

107428. TULIPA WILSONIANA Hoog.

For previous introduction and description see 106782.

107429. TULIPA sp.

107430. (Undetermined.)

107431. (Undetermined.)

107432. EORA SAPIDA (Soland.) Cook. Phoenicaceae. Nikau palm.

From California. Seeds presented by David Barry & Co., Los Angeles. Received December 19, 1934.

Seeds from a tree growing in Santa Barbara, Calif. A New Zealand palm 30 feet high, with a green ringed stem, pinnate leaves 14 feet long, and large clusters of pale-pink flowers.

For previous introduction see 101151.

107433 and 107434.

From the Union of South Africa. Seeds presented by the McGregor Museum, Kimberley. Received December 15, 1934.

107433. SALSOLA GLABRESCENS Burt-Davy. Chenopodiaceae.

A dwarf shrub up to 3 feet high, with very small, ovate, or triangular, spirally arranged leaves and inconspicuous flowers.

For previous introduction see 105941.

107434. TETRAGONIA ARBUSCULA Fenzl. Aizoaceae.

A much-branched, semishrubby perennial with fleshy leaves less than an inch long, varying from linear to ovate-oblong. The small inconspicuous flowers are borne in leafy racemes and are followed by three- to four-winged fruits. It is native to southern Africa.

For previous introduction and description see 107142.

107435. EUCHLAENA MEXICANA Schrad. Poaceae. Teosinte.

From Mexico. Seeds presented by the Government Experimental Station at Cha-

107435—Continued.

pingo, State of Mexico, through Walter Douglas, Mexico, D. F. Received December 19, 1934.

For previous introduction and description see 106947.

107436 to 107448. ILEX spp. Aquifoliaceae. Holly.

From New York. Seeds presented by J. B. Murray, Brooklyn. Received December 20, 1934.

107436 to 107445. ILEX AQUIFOLIUM L. English holly.

107436. Variety *Argentea marginata*.

107437. Variety *Argentea medico-picta*.

107438. Variety *Aurifodina*.

107439. Variety *Camelliaefolia*.

107440. Variety *Ciliata major*.

107441. Variety *Cookii*.

107442. Variety *Flavescens*.

107443. Variety *Fructu-luteo*.

107444. Variety *Integrifolia*.

107445. Variety *Rubicaulis aurea*.

107446. ILEX BEANII Rehder.

A hybrid (*Ilex aquifolium* × *dipyrena*) which is an evergreen tree with dull-green, elliptic, spine-tipped leaves 2 to 8 inches long and oval red berries.

107447. ILEX sp.

Received under the name "hendersonii," for which a place of publication has not been found.

107448. ILEX PLATYPHYLLA Web. and Berth.

An evergreen tree of pyramidal habit, 20 feet high, with leathery, broadly ovate leaves about 2 inches long and short cymes of white flowers. Native to the Canary Islands.

107449 to 107477.

From Surinam. Bulbs and seeds collected by W. A. Archer, Bureau of Plant Industry. Received December 1, 1934.

Unless otherwise noted, the introductions of this shipment were received as seeds. Introduced for Department specialists.

107449. ALLIUM CEPA L. Liliaceae. Onion.

No. 2696. November 6, 1934. Bulbs of a red onion from the market at Paramaribo. Said to have been imported from Madeira, Spain.

107450. ASCLEPIAS CURASSAVICA L. Asclepiadaceae. Bloodflower.

No. 2670. From Scotelweg, November 2, 1934. An ornamental herb 3 feet high with red and yellow flowers.

For previous introduction see 99772.

107451. DIOCLEA MACRANTHA Huber. Fabaceae.

No. 2659. November 2, 1934. From Scotelweg. *Kumatra*. A somewhat woody tropical climber with trifoliolate leaves, the leaflets broadly ovate and about 2 inches long. The small lavender flowers are in axillary racemes. Native to northern South America.

For previous introduction see 106540.

107449 to 107477—Continued.

107452. *DIOCLEA MACRANTHA* Huber. Fabaceae.

No. 2675. November 2, 1934. From Scotelweg. A legume with glabrous pods.

107453 and 107454. *CARICA PAPAYA* L. Papayaceae.

From Paramaribo, October 29, 1934.

107453. No. 2676, **107454.** No. 2677.

107455. *CERBERA THEVETIA* L. Apocynaceae.

Yellow oleander.

No. 2668. November 2, 1934. From near Scotelweg. *Jorro Jorro.*

For previous introduction and description see 106951.

107456. *LISIANTHUS ALATUS* Aubl. Gentianaceae.

No. 2653. Near Scotelweg, November 2, 1934. An annual, 1 to 3 feet high, with elliptical or elliptical-oblong, sessile leaves and terminal cymes of greenish-yellow flowers. Native to tropical America.

107457. *CLEOME PSORALEAEFOLIA* DC. Capriidaceae.

No. 2701. Near Paramaribo, November 9, 1934. An erect annual with digitate leaves of three leaflets and terminal corymbs of white flowers. Found growing as a weed in a cultivated field. Native to Brazil.

107458 and 107459. *CLIBADIUM SURINAMENSE* L. Asteraceae.

For previous introduction and description see 107157.

107458. No. 2647. November 2, 1934. Near Scotelweg.

107459. No. 2684. November 6, 1934. Collected 8 miles northwest of Paramaribo.

107460 to 107462. *TEPHROSIA* spp. Fabaceae.

107460. *TEPHROSIA TOXICARIA* Pers.

No. 2646. Georgetown, British Guiana, October 17, 1934. *Cure-for-all.* A shrub 6 feet high, with pale lavender-tinged flowers. The leaves of this plant are boiled and used as a cough and cold remedy.

107461. *TEPHROSIA CANDIDA* DC.

No. 2665. From near Scotelweg, November 2, 1934. A sparsely branched shrub 4 to 10 feet high, with white flowers.

For previous introduction see 98925.

107462. *TEPHROSIA TOXICARIA* Pers.

No. 2646-a. Near Scotelweg, November 2, 1934. A leguminous shrub 6 to 8 feet high, with leaves made up of nine or more leaflets and racemes of white and lavender flowers. It is used as a cover crop.

For previous introduction see 106352.

107463 to 107466. *CROTALARIA* spp. Fabaceae.

107463. *CROTALARIA RETUSA* L.

No. 2655. Near Scotelweg, November 2, 1934. *Gorro gorro.*

For previous introduction and description see 106920.

107449 to 107477—Continued.

107464. *CROTALARIA ANAGYROIDES* H. B. K.

No. 2666. Near Scotelweg, November 2, 1934. An open shrub over 6 feet high, with mucronate, pubescent, trifoliolate leaves and terminal racemes of brilliant yellow flowers.

For previous introduction see 98834.

107465 and 107466. *CROTALARIA STRIATA* DC.

November 6, 1934, 8 miles northwest of Paramaribo, on the highway. Leguminous plants 3 to 8 feet high, of possible use as a cover crop.

For previous introduction see 106955.

107465. No. 2686, **107466.** No. 2691.

107467. *EUPHORBIA GENICULATA* Ort. Euphorbiaceae.

No. 2664. Near Scotelweg, November 2, 1934. An annual with a stout stem and thin ovate leaves, native to the West Indies.

107468 to 107470. *GOSSYPIUM* spp. Malvaceae.

Cotton.

Near Scotelweg, November 2, 1934. Cotton cultivated by the Carib Indians.

107468. *GOSSYPIUM* sp.

No. 2671-A. A variety with green leaves.

107469. *GOSSYPIUM* sp.

No. 2671-B. A variety with red leaves.

107470. *GOSSYPIUM BARBADENSE* L.

No. 2667. A cotton which becomes 14 feet high, with yellow flowers which change to rose.

107471. *INDIGOPERA SUFFRUTICOSA* Mill. Fabaceae.

No. 2680. Eight miles northwest of Paramaribo on the highway, November 6, 1934. Plants from 2 to 5 feet high, with pale salmon-colored flowers.

For previous introduction see 99780.

107472 and 107473. *JATROPHA CURCAS* L. Euphorbiaceae.

107472. No. 2672. *Purgeernoot.* Near Scotelweg, November 2, 1934. A cultivated shrub.

107473. *Schijtnoot.* November 6, 1934. Found along the highway, northwest of Paramaribo. A shrub 10 to 15 feet high, with pale greenish flowers and frothy sap.

107474. *MUCUNA URENS* (L.) Medic. Fabaceae.

No. 2695. *Kowai.* November 6, 1934. Found along the highway northwest of Paramaribo. A wide-climbing woody vine with trifoliolate leaves of ovate-oblong, papery leaflets 3 to 5 inches long and dense heads of sulphur-yellow flowers 2 inches across followed by hispid pods, hanging down on long peduncles.

For previous introduction see 88160.

107475. *NICOTIANA TABACUM* L. Solanaceae.

Tobacco.

No. 2689. Near Scotelweg, November 2, 1934. A tobacco cultivated by the Javanese in Surinam. Source of seed unknown.

107449 to 107477—Continued.

107476. *PHYSALIS ORINOCENSIS* H. B. K.
Solanaceae.

No. 2663. Near Scotelweg, November 2, 1934. A perennial herb with ovate acute leaves about 2 inches long, native to northern South America.

107477. *ZEA MAYS* L. Poaceae. Corn.

No. 2698. Paramaribo, November 6, 1934. Native (?) corn, planted by all people, including Indians.

107478 to 107596.

From the Union of Soviet Socialist Republics. Seeds collected in Turkistan by H. L. Westover and C. R. Enlow, Bureau of Plant Industry. Received November 1, 1934.

Introduced for Department specialists.

Collected in the Botanic Garden, Tashkent.

107478. *AEGILOPS TRIUNCIALIS* L. Poaceae.
Grass.

No. 400. A thickly branched annual grass with ascending stems and flat rough leaves. It is native to dry places in the Mediterranean region.

For previous introduction see 78752.

107479. *AEGILOPS CRASSA* Boiss. Poaceae.
Grass.

No. 401. A decumbent annual grass with flat leaves. Native to Asia Minor.

107480. *AGRIOPHYLLUM MINUS* Fisch. and Mey. Chenopodiaceae.

No. 403. An annual, native to sandy deserts in Turkistan, with sessile linear-subulate leaves and inconspicuous axillary flowers.

For previous introduction see 98200.

107481. *AGROPYRON INTERMEDIUM* (Host)
Beauv. Poaceae. Grass.

No. 404. A very good grass for dry soils, especially on slopes.

For previous introduction see 56502.

107482. *AGROPYRON TRICOPHORUM* (Link)
Richt. Poaceae. Grass.

No. 405.

For previous introduction and description see 107330.

107483. *AGROSTIS INTERRUPTA* L. Poaceae.
Grass.

No. 406. An annual bushy grass up to 2 feet high, native to sandy places in the Mediterranean countries.

For previous introduction see 74158.

107484 to 107487. *ALLIUM* spp. Liliaceae.

107484. *ALLIUM JESDIANUM* Boiss. and
Buhse. Onion.

No. 407. A pink-flowered onion about 2 feet high, with flat linear leaves and a many-flowered umbel. Native to the mountains of Caucasus.

For previous introduction see 73599.

107485. *ALLIUM SEWERZOWI* Regel.
Onion.

No. 408. An onion with a scape about 6 inches high and linear-lanceolate leaves slightly exceeding the scape. The

107478 to 107596—Continued.

rosy-lilac flowers are in a hemispherical umbel. Native to Turkistan.

107486. *ALLIUM STENOPHYLLUM* Schrenk.
Onion.

No. 410. An onion with narrow-linear leaves and a fastigate-globose head of pinkish flowers. Native to central Asia.

107487. *ALLIUM SUWOROWI* Regel.

No. 409. A hardy bulbous plant with very narrow flat leaves up to 16 inches long and hemispherical umbels of fragrant violet-rose flowers. Native to the Kirghis Desert, central Asia.

For previous introduction see 73601.

107488. *ALYSSUM STRICTUM* Willd. Brassicaceae.

No. 411. July 1934. An annual alyssum with numerous ascending branches 18 inches high, oblong-linear leaves, and cylindrical racemes of yellow flowers. Native to Asia Minor.

For previous introduction see 90614.

107489. *ALYSSUM SZOVITSIANUM* Fisch. and Mey. Brassicaceae.

No. 412. An annual yellow-flowered alyssum from southeastern Europe, about a foot high, with oblong-linear leaves and pods sometimes an inch long.

For previous introduction see 90615.

107490. *ANDROPOGON ISCHAEMUM* L.
Poaceae.

No. 413.

For previous introduction see 84274.

107491 to 107496. *ASTRAGALUS* spp. Fabaceae.

107491. *ASTRAGALUS CAMPYLORHYNCHUS*
Fisch. and Mey.

No. 414. A low slender annual with linear, truncate leaflets. Native to northeastern Asia.

107492. *ASTRAGALUS CAMPYLOTRICHUS*
Bunge.

No. 415. An erect annual with linear-oblong leaflets. Native to Turkistan.

107493. *ASTRAGALUS FILICAULIS* Fisch.
and Mey.

No. 416.

For previous introduction and description see 106850.

107494. *ASTRAGALUS RETAMOCARPUS* Boiss.
and Hohen.

No. 417.

For previous introduction and description see 106855.

107495. *ASTRAGALUS SCHMALHAUSENI*
Bunge.

No. 418.

107496. *ASTRAGALUS SIEVERSIANUS* Pall.

No. 419. For previous introduction and description see 106857.

107497. *ATRIPLEX FLABELLUM* Bunge.
Chenopodiaceae.

No. 420. An annual about a foot high, with small cordate-dentate or five- to seven-lobed leaves. Native to Turkistan.

107478 to 107596—Continued.

107498. *BASSIA* sp. Chenopodiaceae.
No. 477.
107499. *BOISSIERA BROMOIDES* Hochst. Poaceae. Grass.
No. 421. A dwarf annual grass 6 inches or less high, with erect or ascending culms. Native to Asia Minor.
- 107500 to 107506. *BROMUS* spp. Poaceae. Grass.
107500. *BROMUS DANTHONIAE* Trin.
No. 422.
For previous introduction and description see 107029.
107501. *BROMUS INERMIS* Leyss. Common bromegrass.
No. 423.
For previous introduction and description see 107030.
107502. *BROMUS JAPONICUS* Thunb. Bromegrass.
No. 424. A biennial upright or ascending grass of wide distribution in Europe and Asia. It is commonly from 1 to 2 feet high.
For previous introduction see 98285.
107503. *BROMUS MACROSTACHYS* Desf.
For previous introduction and description see 106862.
107504. *BROMUS POPOVII* Drobov.
No. 426. An annual grass with erect or ascending culms 1 to 2 feet high. Native to Bokhara.
107505. *BROMUS SCOPARIUS* L.
No. 427. An annual grass with culms about a foot high and erect panicles 1 to 3 inches long. Native to Spain.
107506. *BROMUS SEVERTZOWI* Regel.
No. 428. An annual grass with erect culms up to 16 inches high. Native to Turkistan.
- 107507 to 107515. *CALLIGONUM* spp. Polygonaceae.
107507. *CALLIGONUM ARBORESCENS* Litv.
No. 430.
For previous introduction see 94927.
107508. *CALLIGONUM CAPUT-MEDUSAE* Schrenk.
No. 431.
For previous introduction see 105807.
107509. *CALLIGONUM COMOSUM TURKESTANICUM* Eug. Kor.
No. 432.
107510. *CALLIGONUM ELATUM* Litv.
No. 433.
107511. *CALLIGONUM ERIOPODUM* Bunge.
No. 434.
For previous introduction see 105809.
107512. *CALLIGONUM MEMBRANACEUM* Litv.
No. 435.

107478 to 107596—Continued.

107513. *CALLIGONUM SETOSUM* Litv.
No. 436.
For previous introduction see 105810.
107514. *CALLIGONUM TRISTE* Litv.
No. 437.
107515. *CALLIGONUM* sp.
No. 429.
107516. *CAREX PACHYSTYLIS* J. Gay. Cyperaceae.
No. 438.
For previous introduction see 106867.
107517. *CAREX PHYSODES* Bieb. Cyperaceae.
No. 439.
For previous introduction and description see 106868.
107518. *CONVOLVULUS LINEATUS* L. Convolvulaceae.
No. 442. A perennial vine with long-stalked oblong to linear leaves and pink flowers. Native to southern Europe and Asia Minor.
107519. *COUSINIA RADIANS* Bunge. Asteraceae.
No. 443. An herb a foot or more high, with pinnatifid clasping leaves and small dense heads of straw-colored flowers. Native to central Asia.
107520. *CRAMBE KOTSCHYANA* Boiss. Brassicaceae.
No. 444. For previous introduction and description see 106871.
107521. *DACTYLIS GLOMERATA* L. Poaceae. Orchard grass.
No. 445.
107522. *DELPHINIUM LONGIPEDUNCULATUM* Regel and Schmalh. Ranunculaceae.
No. 447. A perennial larkspur with rounded-cordate, palmately lobed leaves and long-stalked azure-blue flowers in lax racemes. Native to the mountains of Turkistan.
107523. *DELPHINIUM SEMIBARBATUM* Bien. Ranunculaceae.
No. 446. A low perennial a foot high, with palmately incised leaves and very small yellow flowers in long lax racemes. Native of Iran (Persia).
107524. *DIANTHUS CRINITUS* J. E. Smith. Silenaceae. Pink.
No. 448. A dwarf plant with very short linear leaves and a smooth stem bearing two to four erect purplish flowers. Native to Armenia.
For previous introduction see 101927.
- 107525 to 107528. *EREMURUS* spp. Liliaceae. Desertcandle.
107525. *EREMURUS HILARIAE* M. Popov and Vved.
No. 449. A perennial 1 to 3 feet high, with broadly linear leaves 8 to 16 inches long and a dense raceme of white flowers, yellow at the base of the perianth segments. Native to Turkistan.
107526. *EREMURUS INDERIENSIS* Regel.
No. 450. A hardy herbaceous perennial with a rosette of narrow-linear

107478 to 107596—Continued.

leaves and a raceme of purplish flowers on a scape up to 18 inches high. Native to Turkistan.

107527. EREMURUS OLGAE Regel.

No. 451. A hardy herbaceous perennial with white flowers produced in a dense raceme. Native to Turkistan.

For previous introduction see 73189.

107528. EREMURUS ROBUSTUS Regel.

Giant desertcandle.

No. 452. A tall hardy herbaceous perennial with pale-pink flowers on a stalk 5 to 8 feet high. Native to Turkistan.

For previous introduction see 91627.

107529. ERIANTHUS PURPURASCENS Anders. Poaceae. Grass.

No. 453. A tall stout grass several feet high, related to *Saccharum*, with leaves about an inch wide. Native to southern Asia.

107530 to 107539. FERULA spp. Apiaceae.

107530. FERULA ANGRENI Eug. Korovin.

No. 454.

107531. FERULA ASSA-FOETIDA L.

No. 455. A large herbaceous perennial, 6 to 12 feet high, with yellow flowers. The plant, which has a bad odor, is one source of *asafoetida*.

For previous introduction see 73192.

107532. FERULA CERATOPHYLLA Regel and Schmalh.

No. 456. A low herbaceous perennial 2 to 3 feet high, with the lower leaves rigid and trisect, the upper leaves smaller and incised. The small yellowish flowers are in umbels about an inch across. Native to Turkistan.

107533. FERULA DIVERSIVITTATA Regel and Schmalh.

No. 457. A perennial herb, native to Turkistan, with the lobes of the biternate leaves entire.

107534. FERULA FOETIDISSIMA Regel and Schmalh.

No. 458. A stout perennial herb with biternate, crenate-serrate leaves. Native to Turkistan.

107535. FERULA FOLIOSA Lipsky.

No. 459.

107536. FERULA KARATAVICA Regel and Schmalh.

No. 460. A perennial herb 3 to 4 feet high, with broad biternate leaves and umbels of small flat, ovate fruits. Native to Turkistan.

107537. FERULA OVINA Boiss.

No. 461. A tall coarse perennial 5 to 8 feet high, with finely divided leaves a foot or more in length. Native to Iran (Persia).

107538. FERULA PRANGIFOLIA Eug. Kor. No. 462.

107539. FERULA UGAMICA Eug. Kor.

No. 463.

107478 to 107596—Continued.

107540. FESTUCA ELATIOR ARUNDINACEA (Schreb.) Celak. Poaceae.

Fescue grass.

No. 464.

For previous introduction see 99119.

107541. FESTUCA ELATIOR L. Poaceae.

Meadow fescue.

No. 465.

107542 to 107544. FRITILLARIA spp. Liliaceae.

107542. FRITILLARIA BUCARICA Regel.

No. 466. A fritillaria from the mountains of eastern Bokhara.

For previous introduction and description see 107059.

107543. FRITILLARIA SEWERZOWI Regel.

No. 467. A bulbous plant with numerous ovate to lanceolate leaves up to 4 inches long and a terminal raceme of 5 to 12 purplish-green flowers. Native to central Asia.

107544. FRITILLARIA STENANTHERA Regel.

No. 468. A low bulbous plant about 3 inches high, with opposite, ovate oblong leaves. The small, lilac, violet-spotted flowers are one-half inch long. Native to Turkistan.

107545. GLADIOLUS SEGETUM Ker. Iridaceae.

No. 469. A European gladiolus of free habit, fond of warm dry soil and a sunny situation, with rather small rose-purple flowers.

For previous introduction see 69854.

107546. HEDYSARUM SEMENOWII Regel and Herd. Fabaceae.

No. 470. An erect hardy herbaceous perennial with purplish flowers. Native to Turkistan.

For previous introduction see 73975.

107547. HORDEUM BULBOSUM L. Poaceae. Grass.

No. 471.

For previous introduction and description see 107361.

107548. HYACINTHUS ATROVIOLEACEUS (Regel) Machbride. Liliaceae. Hyacinth.

No. 472.

For previous introduction and description see 106755.

107549. IMPERATA CYLINDRICA (L.) Beauv. Poaceae. Blady grass.

No. 473. A perennial grass native to the plains and hills of central and western India. The blades of this grass become 4 to 5 feet long. It resembles very closely the *esparto* of Spain and north Africa, and, when dried before making it into pulp, it yields as high as 68 percent of first-class paper-making pulp. In Queensland, Australia, this grass grows abundantly and three crops a year may be harvested.

For previous introduction see 49637.

107550. INCARVILLEA OLGAE Regel. Bigoniaceae.

No. 474. An erect biennial 3 to 4 feet high, with opposite pinnate leaves, the

107478 to 107596—Continued.

leaflets linear, oblong, and acute. The bell-shaped purple flowers are about an inch long. Native to central Asia.

107551. *INULA GRANDIS* Schrenk. Asteraceae.

No. 475. A bushy perennial with oblong leathery dentate-serrate leaves 6 to 8 inches long and yellow-rayed flowers. Native to Manchuria.

107552. *IXIOLIRION TATARICUM* (Pall.) Herbert. Amaryllidaceae.

No. 476. A bulbous herbaceous perennial which is native from the Caucasus through central Asia.

For previous introduction see 30817.

107553. *LACHNOPHYLLUM GOSSYPINUM* Bunge. Asteraceae.

No. 478. An annual composite related to erigeron, with slender stems, oblong leaves about one-half inch long, and small blue flower heads. Native to central Asia.

107554. *MALCOMIA AFRICANA* (Willd.) Ait. Brassicaceae.

No. 479. An annual about 9 inches high, with lanceolate dentate leaves and small purple flowers. Native to tropical Africa.

107555. *MALCOMIA TURKESTANICA* Litv. Brassicaceae.

No. 480. An annual with rigid stems about a foot high, with narrow-lanceolate, acute leaves about an inch long and small violet-rose flowers in elongated racemes. Native to Turkistan.

107556 to 107560. *MEDICAGO* spp. Fabaceae. Medick.

107556. *MEDICAGO FALCATA* L.

No. 481.

107557. *MEDICAGO LUPULINA* L.

Black medick.

No. 482.

107558. *MEDICAGO MINIMA* (L.) Grufberg.

No. 483.

For previous introduction and description see 106886.

107559. *MEDICAGO ORBICULARIS* (L.) All.

No. 484.

107560. *MEDICAGO SATIVA* L. Alfalfa.

No. 485.

107561 to 107563. *MELILOTUS* spp. Fabaceae. Sweetclover.

107561. *MELILOTUS ALBA* Desr.

No. 486.

White sweetclover.

107562. *MELILOTUS INDICA* (L.) All.

No. 487.

107563. *MELILOTUS OFFICINALIS* (L.) Lam.

No. 488.

107564 to 107568. *ONOBRYCHIS* spp. Fabaceae.

107564. *ONOBRYCHIS GRANDIS* Lipsky.

No. 489.

For previous introduction and description see 107087.

107478 to 107596—Continued.

107565. *ONOBRYCHIS CHORASSANICA* Bunge.

No. 490.

For previous introduction and description see 106887.

107566. *ONOBRYCHIS MICRANTHA* Schrenk.

No. 506.

For previous introduction and description see 106888.

107567. *ONOBRYCHIS PULCHELLA* Schrenk.

No. 491.

For previous introduction and description see 107088.

107568. *ONOBRYCHIS VULGARIS* Hill. Sanfoin.

No. 492.

107569. *PHLEUM PANICULATUM* Huds. Poaceae. Timothy.

No. 494.

107570. *PHLEUM* sp. Poaceae.

No. 493.

107571. *POA BULBOSA* L. Poaceae. Grass. No. 495. Wild alfalfa.

For previous introduction and description see 107386.

107572. *POA* sp. Poaceae. Grass.

No. 496.

107573. *POLYGONUM BALDSCHUANICUM* Regel.

No. 498. A large perennial 10 to 15 feet high, with a woody stem, cordate-hastate leaves, and terminal and axillary panicles of small reddish flowers. Native to Bokhara.

For previous introduction see 13599.

107574. *PROSOPIS STEPHANIANA* (Bieb.) Kunth. Mimosaceae.

No. 499. A deep-rooted shrubby legume which grows abundantly on dry lands in the island of Cyprus. Sheep and cattle browse on it and the bees make good honey from its abundant flowers.

For previous introduction see 105816.

107575. *SALSOLA ARBORESCENS* RICHLERI Karel. Chenopodiaceae.

No. 500.

For previous introduction and description see 106900.

107576. *SALSOLA SUBAPHYLLA* Meyer. Chenopodiaceae.

No. 501. A leafless, much-branched shrub about a foot high, native to desert places on the shores of the Caspian Sea.

For previous introduction see 105818.

107577. *SCALIGERIA ALLOIDES* Boiss. Apiaceae.

No. 504. A low herbaceous perennial 1 to 2 feet high, with pinnately incised leaves and white or pinkish flowers in umbels nearly 2 inches across. Native to Iran (Persia).

107478 to 107596—Continued.

107578. SCALIGERIA HIRTULA Lipsky. Apiaceae.

No. 505. A herb 1 to 3 feet high, with bisect or trisect leaves, the segments lanceolate and white margined. Native to central Asia.

107579 to 107583. TRIFOLIUM spp. Fabaceae. Clover.

107579. TRIFOLIUM FRAGIFERUM L.

No. 507.

107580. TRIFOLIUM PRATENSE L.

Red clover.

No. 508.

107581. TRIFOLIUM REPENS L.

White clover.

No. 509.

107582. TRIFOLIUM RESUPINATUM L.

Strawberry clover.

No. 510.

107583. TRIFOLIUM SQUARROSUM L.

No. 511.

107584. TRIGONELLA NOEANA Boiss. Fabaceae.

No. 512. A bushy annual with erect stems about 6 inches high, oblong-spatulate leaflets, and small solitary axillary yellow flowers. Native to Asia Minor.

107585 to 107592. TULIPA spp. Liliaceae. Tulip.

107585. TULIPA FOSTERIANA Hoog.

No. 513.

For the introduction of bulbs and the description see 106772.

107586. TULIPA GREIGII Regel.

No. 514.

For the introduction of bulbs and the description see 106773.

107587. TULIPA KAUFMANNIANA Regel.

No. 515.

107588. TULIPA KOLPAKOWSKIANA Regel.

No. 516.

For the introduction of bulbs and the description see 106775.

107589. TULIPA LANATA Regel.

No. 517.

For the introduction of bulbs and the description see 106778.

107590. TULIPA LINIFOLIA Regel.

No. 518.

For the introduction of bulbs and the description see 106779.

107591. TULIPA PRAESTANS Hoog.

No. 519.

For the introduction of bulbs and the description see 106781.

107592. TULIPA TURKESTANICA Regel.

No. 520. A tulip with two or rarely three linear-lanceolate leaves and with yellow flowers, violet within, on a scape 3 to 12 inches high. Native to Turkistan.

107478 to 107596—Continued.

107593. UNGERNIA TADSHIKORUM Vved. Amaryllidaceae.

No. 521. A bulbous plant from central Asia, with 8 to 12 linear bluish two-ranked leaves and pinkish or yellowish flowers borne on a stem about a foot high.

107594 to 107596. VICIA spp. Fabaceae.

107594. VICIA ERVILIA (L.) Willd.

Vetch.

No. 522.

For previous introduction see 98861.

107595. VICIA HYRCANICA Fisch. and Mey.

No. 523.

For previous introduction and description see 107126.

107596. VICIA sp.

No. 523-A. Oval-flattened seeds which were mixed with No. 523 (107595).

107597 to 107599. ALLIUM SATIVUM L. Liliaceae. Garlic.

From Germany. Bulbs presented by Dr. O. Knapp, Eisleben. Received December 29, 1934.

Wild garlic, said to be from the following localities:

107597. Thuringen.

107598. Spreewald, south of Berlin.

107599. Spreewald, south of Berlin.

107600 and 107601. HELIANTHUS TUBEROSUS L. Asteraceae.

Jerusalem-artichoke.

From France. Seeds presented by the experimental department of Vilmorin-Andrieux & Cie., Verrieres le Buisson. Received December 18, 1934.

Seeds grown in Algeria; introduced for the use of Department specialists.

107600. No. 2.

107601. No. 1.

107602. ZOYSIA MATRELLA (L.) Merr. Poaceae. Manila grass.

From Manchuria. Seeds purchased from Manshu Nosan Shokai, Inc., Dairen. Received December 20, 1934.

Introduced for Department specialists.

For previous introduction and description see 107272.

107603 to 107613. TRITICUM AESTIVUM L. Poaceae. Common wheat.

From Australia. Seeds presented by Dr. H. Wenholz, Wagga Experiment Farm, Department of Agriculture, Sydney, New South Wales. Received December 14, 1934.

Introduced for Department specialists.

107603. Apollo.

107604. Baroota Wonder.

107605. Bundar.

107606. Cadia.

107607. Exquisite.

107608. Firwhill.

107603 to 107613—Continued.

107609. *Ford*.107610. *Genoa*.107611. *Gluford*.107612. *Maharajah*.107613. *Nabawa*.

107614 to 107618.

From Algeria. Seeds and bulbs presented by Dr. René Maire, director of botanical service, University of Algiers, Algiers. Received December 27, 1934.

Introduced for Department specialists.

107614 to 107616. *ALLIUM* spp. Liliaceae.107614 and 107615. *ALLIUM CEPA* L. Onion.

107614. Seeds of a red onion, cultivated for centuries by the natives.

107615. Seeds of a white onion now grown in Algeria.

107616. *ALLIUM SATIVUM* L. Garlic.

Bulbs of a form cultivated by the natives.

107617 and 107618. *DAUCUS CAROTA* L. Apiaceae. Carrot.

107617. Seeds of a yellow carrot with a violet top.

107618. Seeds of a red carrot.

107619. *ALSEODAPHNE SEMECARPIFOLIA* Nees. Lauraceae.

From Cuba. Seeds presented by Robert M. Grey, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received December 26, 1934.

A small evergreen tree with oblong or obovate leaves 2 to 7 inches long and spreading panicles of very small flowers. Native to southern India.

107620 and 107621.

From India. Seeds presented by Partap Singh, deputy conservator of forests, Research Forest Division, Lahore, Punjab. Received December 24, 1934.

107620. *EPHEDRA GERARDIANA* Wall. Gnetaceae.

A stiff erect leafless shrub 2 to 4 feet high, native to India, with green branches, inconspicuous flowers, and bright red fruits.

For previous introduction see 77607.

107621. *PISTACIA INTEGERRIMA* Stewart. Anacardiaceae. Pistache.

A large tree up to 40 feet high, native to the warm slopes of the Himalayas in northern India. The aromatic pinnate leaves are made up of four to five pairs of lanceolate leaflets with an oblique base. The small inconspicuous flowers are in racemose clusters and are followed by the bright-green drupes which are about a fourth of an inch across. This tree yields the famous zebra-wood of India.

For previous introduction see 80035.

107622 to 107644.

From the Balkans. Seeds collected by Dr. Edgar Anderson, Arnold Arboretum Bal-

107622 to 107644—Continued.

kan expedition. Received December 19, 1934.

Seeds from plants growing in unusually dry, cold situations.

107622. *ACER TATARICUM* L. Aceraceae. Tatarian maple.

For previous introduction see 32422.

107623 and 107624. *CORNUS MAS* L. Cornaceae. Cornelian cherry.

For previous introduction see 28205.

107623. Environs of Sofia, Bulgaria.

107624. Bulgaria.

107625. *COTONEASTER INTEGERRIMA* Medic. Malaceae. European cotoneaster.

Bulgaria.

For previous introduction see 33156.

107626. *ILEX AQUIFOLIUM* L. Aquifoliaceae. English holly.

Sarajevo, Bosnia (Yugoslavia).

For previous introduction and description see 107445.

107627. *JUGLANS REGIA* L. Juglandaceae. Persian walnut.

Collected at 2,600 feet altitude, at Gabrovo, Bulgaria.

For previous introduction see 103653.

107628. *JUNIPERUS COMMUNIS* L. Pinaceae. Common juniper.

No. 58. Var. *Intermedia*. A dwarf alpine form.

107629. *JUNIPERUS EXCELSA* Willd. Pinaceae. Greek juniper.

No. 137.

107630 and 107631. *LIGUSTRUM VULGARE* L. Oleaceae. European privet.

107630. Sarajevo, Bosnia (Yugoslavia).

107631. No. 62. Cluj (Bratea), Rumania.

107632. *LONICERA NIGRA* L. Caprifoliaceae. Honeysuckle.

Bulgaria.

107633 to 107635. *MALUS* spp. Malaceae. Apple.107633 and 107634. *MALUS PUMILA* Mill. Paradise apple.

107633. Drenovo, Bulgaria.

107634. From the mountains near the Kamtchia River, Bulgaria.

107635. *MALUS SYLVESTRIS* Mill.

Vicinity of Trewna, Bulgaria.

107636. *PRUNUS LAUROCERASUS* L. Amygdalaceae. English cherry-laurel.

Sofia, Bulgaria.

For previous introduction see 103598.

107637 to 107639. *PYRUS COMMUNIS* L. Malaceae. Common pear.

107637. No. 2. Trewna, Bulgaria.

107638. No. 6. Drenovo, Bulgaria.

107639. No. 10. Gabrovo, Bulgaria.

107622 to 107644—Continued.

107640. RHAMNUS RUPESTRIS Scop.
Rhamnaceae. Buckthorn.

A low spreading shrub 2 to 3 feet high, with hairy branchlets, ovate to orbicular dull green leaves 1 to 2 inches long, and umbels of inconspicuous flowers followed by top-shaped fruits a quarter of an inch across, first red, then black. Native to the mountains of southeastern Europe.

For previous introduction see 89677.

107641. RHAMNUS SAXATILIS Jacq. Rhamnaceae. Buckthorn.

Bulgaria.

107642. SPIRAEA CHAMAEDRYFOLIA ULMIFOLIA Maxim. Rosaceae.

Bulgaria. An erect shrub up to 6 feet high with ovate, coarsely incised serrate leaves and white flowers one-half inch across, larger than those of the typical form. Native to southeastern Europe and eastern Asia.

107643. TAXUS BACCATA L. Taxaceae.
English yew.

Sarajevo, Bosnia (Yugoslavia).

107644. VIBURNUM LANTANA L. Caprifoliaceae. Wayfaring-tree.

107645 to 107717.

From Manchuria. Seeds and plants collected by H. G. MacMillan and J. L. Stephens, Bureau of Plant Industry. Received November 23, 1934.

Introduced for Department specialists.

Unless otherwise specified, these introductions are seeds.

107645 to 107648. AGROPYRON spp. Poaceae. Grass.

107645. AGROPYRON CANINUM (L.) Beauv. Awned wheatgrass.

No. 16. August 13, 1934. Hailar. A grass from 2 to 4½ feet high, found along sand ridges in shaded places, growing in scattered bunches.

107646. AGROPYRON CRISTATUM (L.) Gaertn. Wheatgrass.

Plants.

107647. AGROPYRON CRISTATUM PUBERULUM Boiss.

No. 2. August 11, 1934. Hailar. A tall plant with a well-developed root system.

107648. AGROPYRON sp.

No. 29. August 24, 1934. Hailar. A grass between 3 and 4 feet tall, found on fairly dry ground. Similar in growing habit to *Elymus excelsus*.

107649. AGROSTIS PERENNANS (Walt.) Tuck. Poaceae. Grass.

No. 5. August 11, 1934. Hailar. An erect perennial grass 1 to 3 feet high.

107650. AGROSTIS sp. Poaceae.

No. 21. August 20, 1934. Hailar. A grass up to 2 feet tall, with abundant seed; found in a delta.

107651. AMORPHA FRUTICOSA L. Fabaceae.

No. 14. July 9, 1934. Dairen.

107645 to 107717—Continued.

107652. ASPARAGUS sp. Convallariaceae.

No. 60. September 12, 1934. Hailar. Hardy plants, 1 to 2 feet tall, found on high sand ridges.

107653 to 107655. ASTRAGALUS spp. Fabaceae.

107653. ASTRAGALUS ADSURGENS Pall.

No. 39. September 3, 1934. Hailar. A bushy sprawling plant which blooms profusely. Found in alluvial soil, also in patches on sand ridges.

For previous introduction see 89723.

107654. ASTRAGALUS CHINENSIS L. f.

No. 53. September 12, 1934. Hailar. Found in exposed places along sandy ridges. A woody plant 2 to 5 feet tall, with small pendulous racemes of yellow flowers and extremely long, fibrous roots. Native to China.

For previous introduction see 89399.

107655. ASTRAGALUS sp.

No. 45. September 3, 1934. Hailar. A plant 6 to 12 inches high found growing in bunches on a high dry sand ridge east of Hailar.

107656. AVENA SATIVA L. Poaceae. Oats.

No. 15. July 31, 1934. Harbin, at the North Manchurian Railroad Experiment Station. A very hardy variety.

107657. BECKMANNIA SYZIGACHNE (Steud.) Fern. Poaceae.

No. 7. August 9, 1934. Hailar. A plant found in scattered small colonies in wet places in the river delta.

107658. BETULA sp. Betulaceae.

No. 63. September 15, 1934. Hailar. A very hardy ornamental shade tree, common in this region.

107659. BROMUS INERMIS Leyss. Poaceae. Common bromegrass.

No. 6. August 7, 1934. Hailar.

For previous introduction and description see 107501.

107660 to 107662. CALAMAGROSTIS EPIGEIOS (L.) Roth. Poaceae.

A stout perennial grass, native to Manchuria, where it grows on rather poor soil.

For previous introduction see 101648.

107660. No. 25. August 20, 1934. Hailar.

107661. No. 31. August 24, 1934. Hailar.

107662. No. 50. September 12, 1934. Hailar.

107663. CARAGANA MICROPHYLLA MANDSHURICA Kom. Fabaceae.

No. 11. July 31, 1934. Harbin Botanical Garden. A yellow-flowered bush grown as an ornamental. This variety is larger than the typical form, with elliptic leaflets.

107664. CARAGANA sp. Fabaceae.

No. 35. August 30, 1934. Hailar. A spiny shrub up to 4 feet tall, found in shifting sand and on the plains. Cattle graze the plant before the spines are mature.

107645 to 107717—Continued.

107665. *CRATAEGUS SANGUINEA* Pall. Malaceae.

No. 18. August 11, 1934. Hailar. An ornamental shrub 4 to 10 feet high, with small bright-orange to red globose fruits one-third of an inch in diameter, in rather dense corymbs.

For previous introduction see 82072.

107666 to 107672. *ELYMUS* spp. Poaceae. Grass.

107666 and 107667. *ELYMUS DAHURICUS* Turcz.

A grass 1 to 3 feet tall which spreads by means of rhizomes. It is found both on plains and sand ridges and is one of the common grazing grasses.

For previous introduction see 101656.

107666. No. 20. August 12, 1934. Hailar.

107667. No. 34. August 23, 1934. Hailar.

107668. *ELYMUS EXCELSUS* Turcz.

No. 30. August 24, 1934. Hailar. An upright grass 2 to 4 feet high, which somewhat resembles rye; found in the delta along the drainage ditches.

For previous introduction see 64626.

107669 to 107672. *ELYMUS PSEUDO-AGROPYRON* Trin.

A perennial grass with a creeping rhizome and flat leaves, found in sandy places where it is grazed closely. Native to Siberia.

107669. Plants.

107670. No. 4. August 4, 1934. Hailar.

107671. No. 41. August 30, 1934. Hailar.

107672. No. 37. August 30, 1934. Hailar.

107673. *ERAGROSTIS PILOSA* (L.) Beauv. Poaceae. Grass.

No. 23. August 20, 1934. A grass over 2 feet tall, found in the river delta.

107674. *EUONYMUS* sp. Celastraceae.

No. 57. September 12, 1934. Hailar. An ornamental shrub 2 to 4 feet tall, with light-pink to red fruits in clusters. Found on high sand ridges.

107675 and 107676. *FESTUCA OVINA* L. Poaceae. Sheep fescue.

107675. Plants.

107676. No. 1. August 7, 1934. Hailar.

107677. *GLYCERIA REMOTA* Fries. Poaceae. Grass.

No. 10. August 7, 1934. Hailar. A perennial grass 3 to 6 feet tall, with a creeping rhizome and simple culms. Native to northwestern Europe.

107678. *IRIS ENSATA* Thunb. Iridaceae.

No. 42. August 28, 1937. Hailar. Variety *Chinesis*. A very hardy form, 1 to 2 feet tall, found in moist plains around Hailar.

107645 to 107717—Continued.

107679. *LEPTOCHLOA* sp. Poaceae. Grass.

No. 64. September 12, 1934. Hailar. A bunch grass up to 12 inches high which resembles Bermuda grass but does not spread by taking root at the nodes. Appears to afford a considerable amount of grazing.

107680 to 107682. *LESPEDEZA* spp. Fabaceae.

Collected in the vicinity of Hailar.

107680. *LESPEDEZA CYSTOIDES* Nakai.

No. 49. September 12, 1934. A Siberian bushclover with cream-colored, purple-spotted flowers.

107681. *LESPEDEZA* sp.

No. 44. September 3, 1934. A perennial *lespedeza* 1½ to 2½ feet tall, found in dry sandy soil. The plants seed abundantly.

107682. *LESPEDEZA* sp.

No. 51. September 12, 1934. A perennial *lespedeza*, found in dry sandy soil, which is over 2 feet high and seeds abundantly.

107683. *MALUS* sp. Malaceae.

No. 54. September 12, 1934. Hailar. A hardy shrub up to 6 feet high, found on high sand ridges. The hard, moderately sour fruits the size of cherries are borne in clusters and are usually red.

107684 to 107688. *MEDICAGO* spp. Fabaceae. Medick.

107684 and 107685. *MEDICAGO FALCATA* L.

A sprawling plant 1 to 2 feet high, found in patches in the delta and low places on the plains. Heavily grazed by cattle.

107684. No. 46. September 3, 1934. Hailar.

107685. No. 55. September 12, 1934. Hailar.

107686. *MEDICAGO LUPULINA* L. Black medick.

No. 58. September 12, 1934. Hailar. Plants 10 to 18 inches high, found on the river plain. Very few seeds.

107687. *MEDICAGO RUTHENICA* (L.) Trautv.

No. 48. September 10, 1934. Hailar. A wild alfalfa found on the river delta and on sand ridges. It resembles common alfalfa in its habit of growth, and the main stem is sometimes 4 feet high.

For previous introduction see 90365.

107688. *MEDICAGO SATIVA* L. Alfalfa.

Presented by the North Manchurian Railroad Experiment Station, Harbin, September 21, 1934.

107689. *OXYTROPIS OXYPHYLLA* (Pall.) DC. Fabaceae.

No. 47. September 10, 1934. Hailar. Plants 6 to 12 inches high, but with roots 5 to 6 feet long. Found on sand ridges where vegetation is scant.

For previous introduction see 64767.

107690. *PANICUM* sp. Poaceae. Grass.

No. 59. September 12, 1934. Hailar. Found on the river delta, near a Chinese

107645 to 107717—Continued.

garden; apparently a domesticated plant. It is reported that the Chinese eat it.

107691. PAPAVER sp. Papaveraceae. Poppy.

No. 62. September 12, 1934. Hailar. A hardy, everblooming poppy found on high sand ridges. The lemon-yellow flowers are 1½ to 2 inches across.

107692. PHRAGMITES sp. Poaceae. Grass.

No. 56. September 12, 1934. Hailar. A wet-land grass, 4 to 6 feet tall, found occasionally on low ground on the river plain.

107693 to 107695. POA SPHONDYLODES Trin. Poaceae. Bluegrass.

Found along the edges of sand dunes and in depressions on the plains in the vicinity of Hailar. A good grazing grass.

For previous introduction see 64786.

107693. No. 3. August 5, 1934.

107694. Plants.

107695. No. 19. August 15, 1934.

107696. ROSA sp. Rosaceae. Rose.

No. 61. September 12, 1934. Hailar. Hardy plants, 1 to 3 feet tall, densely covered with small spines, found in wind-blown sand, and usually growing in clumps. The large red hips are abundantly produced.

107697. SALIX sp. Salicaceae. Willow. Plants.

107698. SETARIA ITALICA (L.) Beauv. Poaceae. Millet.

September 21, 1934. From the North Manchurian Railroad Experiment Station, Harbin.

107699. SETARIA VIRIDIS (L.) Beauv. Poaceae. Grass.

No. 40. August 30, 1934. A common grazing grass around Hailar, especially in the river delta.

107700 to 107704. STIPA spp. Poaceae. Grass.

107700. STIPA CAPILLATA L. Feathergrass.

No. 33. August 24, 1934. Hailar. A slender grass, up to 4 feet high, found in small bunches on both the sand ridges and plains. The abundant seeds are scattered by the wind as soon as mature.

107701 to 107703. STIPA SIBIRICA Lam.

An upright perennial grass, native to Siberia, up to 4 feet tall, with well-developed roots. It is found commonly in scattered bunches on the sand ridges and on the plains near Hailar.

107701. No. 17. August 13, 1934.

107702. No. 24. August 20, 1934.

107703. No. 38. August 30, 1934.

107704. STIPA SPLENDENS Trin. Feathergrass.

No. 22. August 20, 1934. Hailar. Erect, slender, dark-green plants over 4 feet tall, found in the sand. The abundant seed heads shatter as soon as the seed is ripe.

107645 to 107717—Continued.

107705. THERMOPSIS LANCEOLATA R. Br. Fabaceae.

No. 8. August 10, 1934. Hailar. A perennial herb up to 2 feet high, with oblong-lanceolate leaflets and bright-yellow flowers in terminal racemes. Native to Siberia and Alaska, where it is found in moist sandy places.

107706 and 107707. TRIFOLIUM LUPINASTER L. Fabaceae. Clover.

A wild clover, scantily furnished with foliage, that can withstand severe drought and is able to grow on very poor soil.

107706. No. 43. September 3, 1934. Hailar.

107707. No. 52. September 12, 1934. Hailar.

107708 to 107715. VICIA spp. Fabaceae. Vetch.

107708. VICIA AMOENA Fisch.

No. 28. August 24, 1934. Hailar, on a sandy ridge. A perennial hairy vetch, native to Siberia, with stems up to 2 feet high and purplish flowers.

107709 and 107710. VICIA AMOENA OBLONGIFOLIA Regel.

A variety with climbing, multiple-branched stems 6 to 8 feet long and elongate-oblong leaflets. The seed pods open as soon as the seed is mature. Native to eastern Siberia.

107709. No. 9. August 11, 1934. Hailar.

107710. No. 27. August 20, 1934. Hailar.

107711 and 107712. VICIA PSEUDO-OROBUS Fisch. and Mey.

Received as *Vicia tanakae*, now considered to be identical with the above species. A giant vetch, probably perennial, with many-branched stems 6 to 8 feet long, large leaflets, the basal ones over 2 inches long, and abundant flowers. Found growing in sand and climbing over shrubs.

107711. No. 26. August 20, 1934. Hailar.

107712. No. 32. August 24, 1934. Hailar.

107713. VICIA sp.

No. 36. September 3, 1934. Hailar.

107714. VICIA sp.

No. 12. June 6, 1934. Tokyo, Japan. A small feathery-leaved vetch resembling *Vicia monantha*, but smaller. Found growing among grasses as a volunteer in the Imperial Palace grounds.

107715. VICIA sp.

No. 13. June 6, 1934. Tokyo, Japan. A vetch which resembles *Vicia villosa* except that the young stems are glabrous. Found among grasses as a volunteer in the Imperial Palace grounds.

107716. (Undetermined.)

Plants of an undetermined grass.

107717. (Undetermined.)

Plants of an undetermined grass.

107718. POA BULBOSA L. Poaceae.

Grass.

From the Union of Soviet Socialist Republics. Seeds presented by the Botanical Garden, Academy of Science, Alma-Ata, Kazakstan. Received December 21, 1934.

Introduced for Department specialists.

For previous introduction see 78803.

107719. STIPA CALAMAGROSTIS (L.)

Wahlenb. Poaceae. Grass.

From France. Seeds presented by the Forest Service, at the request of J. Dufrenoy. Station Pathologie Vegetale, La Grande Ferrade, Pont-de-la-Maye. Received December 22, 1934.

Bauche grass. A grass valuable as a soil binder in the Pyrenees Mountains, up to about 4,000 feet altitude.

For previous introduction see 89955.

107720 to 107729.

From the Balkan region. Seeds collected by Dr. Edgar Anderson, Arnold Arboretum Balkan expedition. Received December 21, 1934.

Collected in unusually cold, dry regions; introduced for the use of Department specialists.

107720. ACTAEA SPICATA L. Ranunculaceae.

Black baneberry.

No. 33. Rila Mountains, Bulgaria. A low herbaceous perennial 1 to 2 feet high, with racemes of deep-blue fruits in autumn.

For previous introduction see 106520.

107721. CAMPANULA sp. Campanulaceae.

From Yugoslavia.

107722. CONVULVULUS sp. Convolvulaceae.

No. 107. From Cagan Pass, Rumania.

107723. FORSYTHIA EUROPAEA Degen. and Bald. Oleaceae.

No. 143. Peč, Yugoslavia. An upright shrub 3 to 6 feet high, with stiff, ovate-lanceolate, long-acuminate leaves about 2 inches long and golden-yellow flowers about an inch long. Native to Albania.

107724. HESPERIS DINARICA G. Beck. Brassicaceae.

No. 152. Ravna Mountains, Yugoslavia. An erect herbaceous perennial 2 to 3 feet high, with broadly lanceolate, denticulate, or sinuate-dentate leaves, and fragrant white flowers in dense terminal racemes. Native to Bosnia.

107725. ILEX OPACA Ait. Aquifoliaceae.

American holly.

107726. LIGUSTRUM VULGARE L. Oleaceae.

European privet.

Babadg, Dobrogea, Rumania. October 20, 1934. A shrub found on a steep slope in a half-shaded situation.

107727. LUNARIA sp. Brassicaceae.

From Cagan Pass, Rumania.

107728. PEDICULARIS COMOSUS L. Scrophulariaceae.

From Rumania. An alpine perennial with pinnatifid leaves, the lobes terminated by white spines. The yellowish-white flowers are in spikes. Native to Switzerland.

107720 to 107729—Continued.**107729. SYMPHYANDRA WANNERI Heuff. Campanulaceae.**

No. 26. Rila, Bulgaria. A low herbaceous perennial, native to the European Alps, up to 6 inches high, with oblong-ovate leaves and blue bell-shaped flowers about 1 inch long.

107730. ADENIUM OBESUM (Forsk.) Roem. and Schult. Apocynaceae.

From Jamaica. Seeds presented by M. S. Goodman, Department of Science and Agriculture, Hope, Kingston P. O. Received December 28, 1934.

A slow-growing shrub, not over 3 feet high, native to the dry regions of Arabia, and named after the desert port of Aden. The gorgeous rose-pink to white flowers are 3 inches across and remind one of enormous oleander blossoms. The flowers are borne so abundantly that they cover the entire shrub.

For previous introduction see 105731.

107731 to 107742.

From Surinam. Material collected by W. A. Archer, Bureau of Plant Industry. Received December 17, 1934.

Introduced for Department specialists.

107731. ANANAS COMOSUS (L.) Merr. Bromeliaceae.

Pineapple.

No. 2845. November 19, 1934. Sandrij 1. Suckers from a wild pineapple.

107732. ASPIDOSPERMA NITIDUM Benth. Apocynaceae.

No. 2775. November 17, 1934. Sandrij 1. Roots of Apukuita (Carib name), Par-elhout tree, from the jungle.

107733 to 107736. STIGMAPHYLLON spp. Malpighiaceae.**107733. STIGMAPHYLLON sp.**

No. 2770. November 17, 1934. Sandrij 1. Root cuttings.

107734. STIGMAPHYLLON FULGENS (Lam.) A. Juss.

No. 2776. November 12, 1934. Sandrij 1. Root cuttings of a climbing shrub with rounded-cordate leaves, silvery beneath. Native to northern South America.

107735. STIGMAPHYLLON sp.

No. 2715. November 12, 1934. Near Scotelweg. Roots.

107736. STIGMAPHYLLON FULGENS (Lam.) A. Juss.

No. 2658. November 2, 1934. Near Scotelweg. Root cuttings.

For previous introduction and description see 107734.

107737. CISSAMPELOS sp. Menispermaceae.

No. 2729. November 14, 1934. Eight miles northwest of Paramaribo. *Bocsi njamsie*. Roots.

107738. DIOSCOREA ALATA L. Dioscoreaceae.

Winged yam.

No. 2697. November 6, 1934. Paramaribo. *Njamsie*. Tubers from the market, said to be imported from the island of Madeira, Portugal.

For previous introductions see 105462.

107731 to 107742—Continued.

107739. *DIOSCOREA TRIFIDA* L. f. Dioscoreaceae. Yampie.

No. 2702. November 9, 1934. Paramaribo. *Napi*. Tubers from the market. A purple-fleshed variety.

For previous introduction see 102663.

107740. *FURCRAEA* sp. Amaryllidaceae.

No. 2740. November 17, 1934. Sandrij 1. *Mura* (Carib name). Found growing in white sand.

107741. *DIOCLEA* sp. Fabaceae.

No. 2713. November 12, 1934. Near Scotelweg. Roots of a vine which climbs to the tops of trees and has white and purple flowers.

107742. *LONCHOCARPUS NICOU* (Aubl.) DC. Fabaceae.

No. 2784. November 21, 1934. Sandrij 1. *Oeman nekoe*. Root cuttings of a plant cultivated in the forestry plots.

107743 to 107746. *GOSSYPIUM* spp. Malvaceae. Cotton.

From Africa. Seeds collected by Dr. and Mrs. Thomas Barbour, Cambridge, Mass.

107743 to 107746—Continued.

Received September 23, 1934. Numbered in December 1934.

107743. *GOSSYPIUM* sp.

March 8, 1934. Wild cotton from rocky kopjes north of the Letaba River, eastern Transvaal, near the Mozambique line.

107744. *GOSSYPIUM* sp.

March 8, 1934. Wild cotton from the bush near the Lower Sabi River on the low veldt, eastern Transvaal.

107745. *GOSSYPIUM* sp.

August 14, 1934. Wild cotton from a native dooryard at Bububu, Zanzibar.

107746. *GOSSYPIUM* sp.

August 11, 1934. Wild cotton, 7 miles inland from Majunga, Madagascar.

107747. *GOSSYPIUM* sp. Malvaceae. Cotton.

From British West Indies. Seeds presented by Dr. S. C. Harland, Trinidad. Received September 24, 1934. Numbered in December 1934.

Sea Island × (Contorta, G 2525) T.18 × T. 251.

Introduced for Department specialists.

INDEX OF COMMON AND SCIENTIFIC NAMES

- Abelmoschus esculentus*, 106982.

Index of common and scientific names.....	85

INTRODUCTORY STATEMENT

The present inventory, No. 122, is a record of the plant material (Nos. 107748-110197) received by the Division of Plant Exploration and Introduction during the period from January 1 to March 31, 1935.

Nearly one-half of the plant material recorded for this period was received from H. L. Westover and C. R. Enlow, of the Bureau of Plant Industry, who were still in the field, and whose expedition to the cold semiarid regions of Turkistan has resulted in the introduction of plant material of particular value for the Soil Conservation Service of this Department. This material will be tested in our Western and Southwestern States.

As a result of agricultural explorations carried on by W. A. Archer in Surinam and Venezuela during the early part of 1935, about 150 lots of seeds were sent in from those countries. The material collected by Dr. Archer included a number of leguminous plants of probable value as cover crops, local varieties of vegetables and tropical fruits, and several ornamental shrubs and trees destined for testing in southern Florida.

Large areas of eastern Ecuador are practically unknown, from a botanical point of view, and it is, therefore, with considerable interest that mention is made of five shipments of seeds collected in this area by the late Mrs. Ynes Mexia. Among the various items received were seeds of several species of *Juglans*, *Diospyros*, and *Datura*.

Further additions to chestnut material intended for the use of forest pathologists are recorded in three shipments of scions and seeds of *Castanea* spp., from eastern China, collected by Peter Liu, from whom, during the past decade, much Chinese plant material has been received. Mr. Liu also sent in scions of a number of new or little-known varieties of *Diospyros kaki* (Nos. 107775-107778; 108311, 108312).

A collection of walnut varieties, *Juglans* spp. (Nos. 110021-110051), obtained from Islington, Ontario, Canada, is for testing in the colder parts of the United States. Noteworthy also is a shipment of nearly 100 lots of tubers of frost-resistant potato varieties (Nos. 108120-108215), presented by the Union of Soviet Socialist Republics.

The botanical determinations of seeds introduced have been made and the nomenclature determined by Paul Russell, who has had general supervision of this inventory.

B. Y. MORRISON,
Principal Horticulturist, in Charge.

DIVISION OF PLANT EXPLORATION AND INTRODUCTION,
Washington, D. C., October 24, 1938.

INVENTORY¹

107748 and 107749. ALLIUM SATIVUM L.
Liliaceae. Garlic.

From Germany. Bulbs presented by Rudolf Neumüller. Frankenthal. Received January 10, 1935.

Locally grown varieties introduced for the use of Department specialists.

107748. From Furth.

107749. From Schweinfurt.

107750 to 107754.

From Surinam. Seeds collected by W. A. Archer, Bureau of Plant Industry. Received December 1, 1934.

107750. CALOPOGONIUM MUCUNOIDES Desv.
Fabaceae.

No. 2651. From near Scotelweg, November 2, 1934. A stout twining vine with rhombic-ovate leaflets and long-stalked racemes of pale-blue flowers. It forms a mat of foliage 1 to 2 feet thick and is used as a cover crop. Native to tropical America.

For previous introduction see 106638.

107751 to 107753. PHASEOLUS spp. Fabaceae.

107751. PHASEOLUS CAMPESTRIS Mart.

No. 2690. About 8 miles northwest of Paramaribo along the highway, November 6, 1934. A herbaceous climber with hairy trifoliolate leaves, the leaflets rhombic-ovate, and small flowers, which vary in color from red to yellow shading to green. Native to tropical South America.

107752. PHASEOLUS PANDURATUS Mart.

No. 2661. Near Scotelweg, November 2, 1934. A tropical vine with small, ovate-rounded, pubescent leaflets less than 1 inch long and white, purple-tinged flowers. Native to tropical South America.

107750 to 107754—Continued.

107753. PHASEOLUS sp.

No. 2703. About 8 miles northwest of Paramaribo along the highway, November 6, 1934.

107754. SESBANIA GRANDIFLORA Poir. Fabaceae.

No. 2693. About 8 miles northwest of Paramaribo along the highway, November 6, 1934. A small, rapid-growing, soft-wooded tree, 15 to 20 feet high, with pinnate leaves and large pendulous white flowers, followed by sickle-shaped pods. The leaves and young shoots are sometimes used as fodder.

For previous introduction see 69143.

107755. LESPEDEZA UEKII Nakai. Fabaceae.

From Japan. Seeds presented by Dr. T. Kaburaki, Director, Forest Experiment Station, Government General of Chosen, Keijo, Chosen. Received January 2, 1935.

Introduced for Department specialists.

A shrub with a creeping rhizome, broadly oblong, acute leaflets over an inch long, and reddish flowers in axillary racemes. Collected in Chinkai, Shogen-Gun, and Keisho-Nan-Do, Chosen, where it is native.

107756. GOSSYPIUM TRANSVAALENSE
Watt. Malvaceae.

From the Union of South Africa. Seeds presented by Dr. R. A. Dyer, Department of Agriculture, Pretoria. Received January 11, 1935.

A small bush with three- to five-lobed, reniform, velvety leaves 1 inch long and over an inch wide. The seeds are clothed with harsh, gray-white, greasy floss. Native to the Transvaal.

¹ It should be understood that the names of varieties of fruits, vegetables, cereals, and other plants used in this inventory are those under which the material was received when introduced by the Division of Plant Exploration and Introduction, and, further, that the printing of such names here does not constitute their official publication and adoption in this country. As the different varieties are studied, their entrance into the American trade forecast, and the use of varietal names for them in American literature becomes necessary, the foreign varietal designations appearing in this inventory will be subject to change with a view to bringing the forms of the names into harmony with recognized horticultural nomenclature.

It is a well-known fact that botanical descriptions, both technical and economic, seldom mention the seeds at all and rarely describe them in such a way as to make possible identification from the seeds alone. Many of the unusual plants listed in these inventories are appearing in this country for the first time, and there are no seed samples or herbarium specimens with ripe seeds with which the new arrivals may be compared. The only identification possible is to see that the sample received resembles seeds of other species of the same genus or of related genera. The responsibility for the identifications therefore must necessarily often rest with the person sending the material. If there is any question regarding the correctness of the identification of any plant received from this Division, herbarium specimens of leaves and flowers should be sent in so that definite identification can be made.

107757. NANNORRHOPS RITCHIEANA
(Griffith) Wendl. Phoenicaceae.

Mazri palm.

From India. Seeds presented by R. R. Stewart, Gordon College, American United Presbyterian Mission, Rawalpindi. Received January 4, 1935.

A small rare cluster palm, native to the mountains of Afghanistan and western India. The rigid, fan-shaped leaves are very glaucous both above and below and are about 3 feet long. In its native habitat this palm is often covered with snow in winter.

For previous introduction see 99604.

107758. RUBUS HAWAIIENSIS A. Gray.
Rosaceae. Akala.

From Hawaii. Seeds presented by W. T. Pope, senior horticulturist, Agricultural Experiment Station, Honolulu. Received January 11, 1935.

A wild raspberry native to Hawaii between 3,500 and 5,000 feet altitude, which grows over 15 feet high. The large fruits, $1\frac{1}{2}$ inches long and about 1 inch in diameter, have a rather sharp but pleasant acid flavor.

For previous introduction see 101344.

107759. POLYTRIAS AMAURA (Buchse)
Kuntze. Poaceae. Java grass.

From Puerto Rico. Seeds presented by Atherton Lee, Agricultural Experiment Station, Mayaguez. Received January 5, 1935.

A common lawn and pasture grass, native to low altitudes in Java.

For previous introduction see 77489.

107760 to 107769.

From Surinam. Seeds collected by W. A. Archer, Bureau of Plant Industry. Received January 9, 1935.

107760. CASSIA UNDULATA Benth. **Caesalpinaceae.**

No. 2707. Near Scotelweg, November 12, 1934. A shrub 10 to 12 feet high, with falcate-oblong leaflets 2 to 3 inches long and golden-yellow flowers in short dense panicles. Native to British Guiana.

107761. CESTRUM LATIFOLIUM TENUIFLORUM
(H. B. K.) O. E. Schulz. **Solanaceae.**

No. 2705. Near Scotelweg, November 12, 1934. A low bush with ovate acuminate leaves less than 4 inches long and axillary spikes of white flowers. Native to Venezuela.

107762. CLEOME ACULEATA L. **Capparidaceae.**

No. 2700. About 8 miles northeast of Paramaribo, along the highway, November 6, 1934. A tall annual up to 3 feet high, with digitately three-foliolate leaves and small solitary white flowers. Native to tropical America.

107763 to 107765. CLIBADIUM SURINAMENSE
L. **Asteraceae.**

Kunami-ran. Near Scotelweg, November 12, 1934. A large bushy perennial up to 10 feet high, with broadly ovate leaves and small white flower heads in dense clusters.

For previous introduction see 106539.

107763. No. 2716. A form with small leaves.

107760 to 107769—Continued.

107764. No. 2717. A form with large leaves.

107765. No. 2725. Typical form.

107766. EUPHORBIA BRASILIENSIS Lam. **Euphorbiaceae.**

No. 2719. Near Scotelweg, November 12, 1934. A herbaceous perennial, native to Brazil, with reddish stems 8 to 10 inches high, elliptic-oblong leaves, and small brownish and white flowers.

107767. POTHOMORPHE PELTATA (L.) Miq.
Piperaceae.

No. 2727. Near Scotelweg, November 12, 1934. An erect shrub with rounded-cordate, peltate leaves; closely allied to Piper. Native to western India.

107768. SOLANUM MELONGENA L. **Solanaceae. Eggplant.**

No. 2699. About 8 miles northwest of Paramaribo along the highway. A cultivated eggplant with small greenish-white fruits, $2\frac{1}{2}$ by 2 inches, shaped like a tomato.

107769. VISMIA CAYENNENSIS (Jacq.) Pers.
Hypericaceae.

No. 2706. About 8 miles northeast of Paramaribo on the highway, November 6, 1934. A shrub or small tree with small yellow flowers, whitish fuzzy on the inside and waxen on the outside.

107770 to 107778.

From China. Scions collected in Shantung Province by Peter Liu. Received January 4, 1935.

107770 to 107774. CASTANEA spp. **Fagaceae. Chestnut.**

107770. No. 1. Chia Lee (home chestnut). From the foothills of Sun Chia Tzu J'ang, near Nanking. The most common variety of this region; ripens about the middle of September.

107771. No. 2. Yu Lee. From the foothills of Sun Chia Tzu J'ang, near Nanking. Larger than the Chia Lee [107770], with a bright shining skin.

107772. No. 3. Kuei Hua Lee Tzu (cassia flower chestnut). Collected between Nanking and Shanghai in the foothills of Heui Shan, near Wush. One of the best in this region; ripens early in September.

107773. No. 4. Ta Ming Lee Tzu (large bright chestnut). From the village of Ta Ching Kou, northeast of Taian. The most common variety in Shantung and the best of all; ripens about the third week in September.

107774. No. 5. Hsiao Ming Lee Tzu (small bright chestnut). Smaller than *Ta Ming Lee Tzu* [107773]; ripens at the same time.

107775 to 107778. DIOSPYROS KAKI L. f.
Diospyraceae. Kaki.

107775. No. 6. Ho Shih (box persimmon) from near Ta Ching Kou, Shantung. Fruit 3 inches wide and over 2 inches high.

107776. No. 7. Tung Shih (freezing persimmon) from Ta Ching Kou, northeast of Taian, Shantung. Fruit $2\frac{1}{2}$ to 3 inches high and 2 inches wide; not good to eat until it has thawed after being frozen.

107770 to 107778—Continued.

107777. No. 8. *Shui Shih* (water persimmon) from Ta Ching Kou, north-east of Taian, Shantung. Fruit large, 2½ to 3 inches high and 2 inches wide; very sweet and moist and used for drying.

107778. No. 9. *Ssu Hung Shih* (four square red persimmon) from Ta Ching Kou near Taian, Shantung. Fruit small, red, 1 to 2 inches wide, shaped like a box.

107779 to 107782.

From Egypt. Seeds presented by Alfred Bircher, Middle Egypt Botanic Station, El Saff. Received January 7, 1935.

A collection of native vegetable varieties introduced for Department specialists.

107779. *ALLIUM CEPA* L. Liliaceae. Onion.

107780. *ALLIUM SATIVUM* L. Liliaceae. Garlic.

107781. *APIUM GRAVEOLENS* L. Apiaceae. Celery.

107782. *DAUCUS CAROTA* L. Apiaceae. Carrot.

107783. *AMYGDALUS PERSICA* L. Amygdalaceae. Peach.

From Yugoslavia. Scions presented by Ivo Volarie, State Agronomist, Samobov, Croatia. Received January 11, 1935.

Scions of a seedling peach from the Croatian shore of Lake Veglia.

107784 to 107786.

From India. Seeds presented by M. P. Sharma, Harrai, Sihora, Narsinghpur, Central Provinces. Received January 9, 1935.

A collection of native vegetable varieties introduced for Department specialists.

107784. *ALLIUM CEPA* L. Liliaceae. Onion.

107785. *ALLIUM SATIVUM* L. Liliaceae. Garlic.

107786. *DAUCUS CAROTA* L. Apiaceae. Carrot.

107787 to 107807.

From Surinam. Seeds collected by W. A. Archer, Bureau of Plant Industry. Received December 17, 1934.

Nos. 107787 to 107806 were collected at Sandrij No. 1 in November 1934.

107787. *ANTONIA OVATA* Pohl. Loganiaceae.

No. 2795. *Paloelipio*. A tropical shrub or sometimes a tall timber tree found in the jungle, with thick, leathery, oval-elliptic, dark-green leaves and small white flowers in large terminal cymes. It is native to Brazil.

For previous introduction see 106510.

107788. *BANISTERIOPSIS* sp. Malpighiaceae. No. 2761.

107789. *STIGMAPHYLLON FULGENS* (Lam.) A. Juss. Malpighiaceae.

No. 2798. Found at the edge of a savanna.

For previous introduction see 107736.

107787 to 107807—Continued.

107790 to 107792. *CENTROSEMA* spp. Fabaceae.

107790. *CENTROSEMA PUBESCENS* Benth. No. 2757. A leguminous vine, native to tropical America, with trifoliolate leaves and small yellowish flowers. Cultivated as a cover crop.

For previous introduction see 106916.

107791 and 107792. *CENTROSEMA BRASILIANA* (L.) Benth.

A slender leguminous vine 10 to 15 feet long. Native to the Provinces of Para and Bahia, Brazil.

For previous introduction see 33929.

107791. No. 2800. A form with lavender and white flowers.

107792. No. 2774. A form with flowers varying from blue to light blue.

107793. *BYRSONIMA CRASSIFOLIA* (L.) H. B. K. Malpighiaceae.

No. 2732. A loose semiprostrate shrub 2 feet high with yellow flowers. Found on the open savanna in pure-white sand.

For previous introduction see 52530.

107794. *CALOPOGONIUM MUCUNOIDES* Desv. Fabaceae.

No. 2787. A cultivated cover crop with pale-blue flowers. Found on the open savanna in pure-white sand.

For previous introduction and description see 107750.

107795. *CITRULLUS VULGARIS* Schrad. Cucurbitaceae. Watermelon.

No. 2802. Seed purchased originally from a Javanese, but now growing at the experiment station on the open savanna in pure-white sand. The melon is of a good color and the flesh is sweet.

107796 to 107798. *CLIBADIUM* spp. Astera-ceae.

From the open savanna in pure-white sand.

107796 and 107797. *CLIBADIUM SURINAMENSE* L.

For previous introduction and description see 107765.

107796. No. 2771. 107797. No. 2756.

107798. *CLIBADIUM SYLVESTRE* (Aubl.) Bail.

No. 2767. An herb 5 feet tall with dark-red stems.

107799. *TEPHROSIA TOXICARIA* (Sw.) Pers. (*Cracca toxicaria* (Pers.) Kuntze). Fabaceae.

No. 2768. A scanty shrub 2 to 3 feet high, with leaves made up of nine or more leaflets and racemes of greenish-white flowers with a purple spot at the base of the wings. It is used as a cover crop.

For previous introduction see 107462.

107800. *CROTALARIA VITELLINA* Ker. Fabaceae.

No. 2758. A slender shrub 8 to 10 feet high, found at the edge of the clearing, growing in pure-white sand.

107787 to 107807—Continued.

107801. *CUPANIA DIPHYLLO* Vahl. Sapindaceae.

No. 2741. A tree 30 feet high, found in the jungle.

107802. *GOSSYPIUM* sp. Malvaceae. Cotton.

No. 2769. A hybrid cotton 6 to 10 feet high with yellow flowers, found on the open savanna in pure-white sand.

107803. *INDIGOFERA HIRSUTA* L. Fabaceae. Indigo.

No. 2744. An annual 3 feet high with crimson flowers. Used as a cultivated cover crop at the Sandrij Experiment Station.

For previous introduction see 106928.

107804. *PASSIFLORA AURICULATA* H. B. K. Passifloraceae.

No. 2785. A shrubby climber found in the jungle, with ovate, obtuse, entire, shining leaves and whitish flowers. Native to northern South America.

107805. *PHASEOLUS PEDUNCULARIS* H. B. K. Fabaceae.

No. 2773. A tropical annual vine with narrowly ovate, acuminate leaflets and axillary racemes of small pinkish flowers. Native to Colombia.

107806. *PLUMERIA* sp. Apocynaceae.

No. 2793. A tree 20 feet high with reddish wood, milky latex, and cream-colored flowers. Found in white sand.

107807. *ZEA MAYS* L. Poaceae. Corn.

No. 2777. From a cooperative field of Carib Indians.

107808 to 107811.

From China. Seeds presented by Dr. Wang Tai Yih, the Sun Yat-Sen Tomb and Memorial Park Commission, Nanking. Received January 10, 1935.

A collection of native vegetables introduced for Department specialists.

107808. *ALLIUM CEPA* L. Liliaceae. Onion. White globe.

107809. *ALLIUM CEPA* L. Liliaceae. Onion. Yellow globe.

107810. *DAUCUS CAROTA* L. Apiaceae. Carrot.

107811. *DAUCUS CAROTA* L. Apiaceae. Carrot. Scarlet tong.

107812 to 107814.

From Siam. Bulbs presented by Dr. H. M. Smith, Department of Fisheries, Bangkok. Received January 5, 1935.

Locally grown bulbs.

107812. *CRINUM* sp. Amaryllidaceae.

107813. *HIPPEASTRUM EQUESTRE* (L. f.) Herb. Amaryllidaceae.

107814. (Undetermined.)

107815. *LICANIA* sp. Rosaceae.

From Guatemala, Central America. Seeds presented by Sr. Julio E. Castaneda de Ranero, Puebla Nuevo, through J. L.

107815—Continued.

Colom, Pan American Union, Washington, D. C. Received January 9, 1935.

The *Licanias* are tropical American shrubs or trees, some of which bear edible fruits.

107816 to 107818.

From Ecuador. Seeds and bulbs collected by Mrs. Ynes Mexia, Bureau of Plant Industry. Received January 18, 1935.

107816. *MAXIMILIANA* sp. Phoenicaceae. Palma real.

No. 6736-A. Canton Pujili, Province of Leon, November 24, 1934. A tree over 90 feet high, found in dense virgin forest. The orange fruits fall as they ripen.

107817. *EUCHARIS GRANDIFLORA* Planch. and Linden. Amaryllidaceae.

No. 6644. Bulbs of a Colombian *eucharis*, with two to four ovate-acuminate leaves about 4 inches long and three to five white flowers on a scape over a foot high. It resembles *Eucharis candida*, but the flowers are about twice as large.

107818. (Undetermined.)

Bulbs and seeds.

107819. *ERYTHRINA HERBACEA* L. Fabaceae. Coraltree.

From Texas. Seeds presented by W. L. Gillespy, Taylor. Received January 19, 1935.

A shrubby perennial with a very thick root and stems 2 to 4 feet high. The three leaflets are ovate to hastate, and the deep-scarlet flowers, 2 inches long, are in long loose racemes. Native to the West Indies and the Gulf States.

107820 to 107837.

From Ecuador. Seeds collected by Mrs. Ynes Mexia, Bureau of Plant Industry. Received January 7, 1935.

107820. *ROLLINIA* sp. Annonaceae.

No. 6736. Guayas Province. Tropical American shrubs or trees, closely related to *Annona*.

107821. *BANISTERIOPSIS QUITENSIS* Morton. Malpighiaceae.

No. 6636. Los Rios Province. A woody climber with ovate-lanceolate leaves 2 to 4 inches long and small yellow flowers in terminal clusters. Native to Ecuador.

107822. *BROWALLIA AMERICANA* L. Solanaceae.

No. 6565. Los Rios Province. A slender annual about 2 feet high, with smooth ovate leaves up to 2 inches long and solitary flowers less than an inch long. Native to tropical America.

107823. *CLIBADIUM SURINAMENSE* L. Asteraceae.

No. 6595. Los Rios Province. A shrub up to 8 feet high, with broadly ovate leaves and small white flowers in dense clusters.

For previous introduction see 106539.

107824. *CLIBADIUM SYLVESTRIS* (Aubl.) Baill. Asteraceae.

No. 6678. Los Rios Province.

For previous introduction and description see 107798.

107820 to 107837—Continued.

107825. *TEPHROSIA TOXICARIA* (Sw.) Pers. Fabaceae.

No. 6563. Los Rios Province.

For previous introduction and description see 107799.

107826. *DATURA CANDIDA* (Pers.) Safford. Solanaceae.

No. 6601-A. Canton Vinces, Los Rios Province, along the trail from Santa Lucia to Moraché. A shrub up to 15 feet high, with broadly ovate to oblong-ovate leaves about 20 inches long and large white flowers. Known only in cultivation; this is the large white flower *floripondio* of tropical America.

107827. *ERYTHRINA* sp. Fabaceae.

No. 6686-A. An ornamental from Los Rios Province.

107828. *ERYTHRINA* sp. Fabaceae.

No. 6586-A. November 17, 1934. Canton Vinces, Los Rios Province, along the trail from Heda to Santa Lucia at 180 feet altitude. A small tree, commonly found in the open woods, with red flowers which appear before the leaves.

107829. *GLIRICIDIA* sp. Fabaceae.

No. 6590-A. October 28, 1934. Quevedo, Canton Vinces, Los Rios Province. Presented by Gustavo Buchwald.

107830. *HIBISCUS* sp. Malvaceae.

No. 6656-A. November 1934. Quevedo, Canton Vinces, Los Rios Province. Presented by Dr. Frederico von Buchwald, who exports the seed to Germany where it is used as the base for perfumery and as a remedy for whooping cough.

107831. *PISCIDIA CARTHAGINENSIS* Jacq. Fabaceae.

No. 6760. Guayas Province. A low tree with unevenly pinnate leaves and lateral panicles of pink to purplish flowers, followed by winged fruits. Native to northern South America.

107832. *JACQUINIA SPRUCEI* Mez. Theophrastaceae.

No. 6766. Guayas Province. A tropical shrub with leathery elliptic, mucronate leaves nearly 2 inches long and terminal racemes of small yellowish flowers. Native to Ecuador.

107833. *PHYLLANTHUS BRASILIENSIS* (Aubl.) Muell. Arg. Euphorbiaceae.

No. 6689. Los Rios Province. A shrub 5 to 8 feet high, with alternate, roundish, pale-green leaves and inconspicuous flowers. Native to tropical Brazil.

107834. *SAPINDUS* sp. Sapindaceae.

No. 6553. Los Rios Province.

107835. *SOLANUM CONFERTISERIATUM* Bitter. Solanaceae.

No. 6568. Los Rios Province. A shrub or small tree 10 to 15 feet high, with broadly elliptic or obovate, grayish-green leaves about 7 inches long and white flowers one-half inch across. Native to Ecuador.

107836. *TECOMA GAUDICHAUDII* DC. Bignoniaceae.

No. 6742. Guayas Province. An arborescent shrub with opposite or alternate,

107820 to 107837—Continued.

elliptic-oblong, simple, coarsely serrate leaves and large yellow flowers in terminal panicles. Native to Colombia.

107837. *SWARTZIA* sp. Caesalpiniaceae.

No. 6570-A. *Arbol de Murcielago*. An ornamental leguminous tree with yellow flowers, from Los Rios Province.

107838. *AMYGDALUS PERSICA* L. Amygdalaceae. Peach.

From China. Seeds presented by Peter Liu, Peiping. Received January 17, 1935.

Mao Tao (hairy peach). Collected in the vicinity of Feicheng by Wen Ying Tang.

107839. *DIOSPYROS KAKI* L. f. Diospyraceae. Kaki.

From Virginia. Scions collected by K. A. Ryerson and W. E. Whitehouse, Bureau of Plant Industry, at the home of a Mr. Conklin, Smithfield. Received January 16, 1935.

107840. *SACCHARUM OFFICINARUM* L. Poaceae. Sugar cane.

From Spain. Cuttings presented by Arsenio Rueda y Maria, Granada, at the request of Julius Matz, through Señor Miguel de Echegaray, agricultural attaché of the Spanish Embassy, Washington, D. C. Received January 22, 1935.

Algarobena. The oldest variety grown in Spain.

Introduced for Department specialists.

107841. *CASSIA VIMINEA* L. Caesalpiniaceae.

From Cuba. Seeds presented by Robert M. Grey, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received January 16, 1935.

A trailing shrub, native to Jamaica, with compound leaves composed of two pairs of obliquely ovate leaflets and showy yellow flowers in terminal panicles.

107842. *PASSIFLORA* sp. Passifloraceae.

From Colombia. Seeds presented by Carlos Palacio, Pasto (Nariño). Received January 24, 1935.

Quijo. A vine bearing an orange-yellow, plum-shaped fruit the size of a small orange, with numerous seeds embedded in very sweet pulp of delicate flavor. It grows at 5,000 feet above sea level and begins bearing 2 years after planting. The fruit ships well and keeps in good condition for some time if stored in a cool place.

107843. *TEPHROSIA VOGELII* Hook. f. Fabaceae.

From Africa. Seeds presented by Miss Margaret Haines, Bangassou, French Equatorial Africa. Received January 24, 1935.

Introduced for Department specialists.

A shrubby legume native to tropical Africa.

For previous introduction see 98926.

107844 to 107849.

From Ecuador. Seeds collected by Mrs. Ynes Mexia, Bureau of Plant Industry. Received January 10, 1935.

107844 to 107849—Continued.

107844. *ACACIA PELLACANTHA* Vogel. Mimosaaceae.

No. 6763. Province of Guayas, October 1934. A spiny tree tomentose throughout, with bipinnate leaves and small flowers in dense axillary heads. Native to Peru at altitudes of 2,000 to 3,000 feet.

107845. *CERBERA THEVETIA* L. Apocynaceae. Yellow oleander.

No. 6748. Province of Guayas, December 10, 1934. An ornamental, willow-leaved, yellow-flowered tree or shrub 10 to 15 feet high. Native to tropical America.

For previous introduction see 106951.

107846. *DIOSPYROS PSIDIOIDES* H. B. K. Diospyraceae.

No. 6749. Province of Guayas, December 10, 1934. A low tree with alternate obovate-oblong entire leathery leaves 4 inches long and solitary small yellow edible fruits 1 inch in diameter. Native to Peru.

Nos. 107847 to 107849 were collected in the Province of Los Rios, October 1934.

Nos. 107847 to 107849 were collected in

No. 6660. A vine with large pods.

107848. *OCHROMA GRANDIFLORA* Rowlee. Bombacaceae.

No. 6637. A tall tree with mottled gray bark, entire orbicular leaves 8 inches wide, and large showy flowers 6 inches long. This tree is a source of kapok. Native to Ecuador.

107849. *SMILAX OFFICINALIS* H. B. K. Smilacaceae. Sarsaparilla.

No. 6638. A climbing shrub with square stems armed along the angles with small prickles. The glabrous leaves, often a foot long, are variable in form, often triangular or oblong-acute, cordate or somewhat auriculate at the base. The greenish-yellow flowers are in stalked umbels, and the cinnamon-brown roots are one of the principal sources of sarsaparilla.

For previous introduction see 45731.

107850. *SERJANIA* sp. Sapindaceae.

From Texas. Seeds presented by Peter Heinz, Brownsville. Received January 2, 1935.

A woody vine from the eastern, rainy side of the mountains below Taxco, Mexico. The vine is a vigorous grower; it climbs to the tops of trees and bears conspicuous reddish winged fruits.

107851 and 107852.

From the Union of South Africa. Bulbs purchased from E. G. Bryant, Prieska. Received January 5, 1935.

107851. *AMMOCHARIS FALCATA* Herb. Amaryllidaceae.

A tender bulbous plant from the Cape of Good Hope, with strap-shaped leaves up to 2 feet long and an umbel of 20 to 40 fragrant red flowers.

107852. *NERINE DUPARQUETIANA* (Baill.) Baker. Amaryllidaceae.

A nerine with strap-shaped leaves 8 to 12 inches long, contemporary with the flowers; the latter are funnel-shaped, white

107851 and 107852—Continued.

with a carmine keel, in umbels of 20. Native to the Kalahari region, South Africa.

107853 to 107864.

From the Union of Soviet Socialist Republics. Bulbs presented by the Botanical Institute, Turcomania, Ashkhabad, through H. L. Westover, Bureau of Plant Industry. Received January 3, 1935.

107853. *ALLIUM GIGANTEUM* Regel. Liliaceae.

One of the largest members of the genus, with large bulbs and broad fleshy leaves about 18 inches long. The bright-lilac flower heads, 4 inches across, are on stalks about 4 feet high.

For previous introduction see 106640.

107854. *IXIOLIRION TATARICUM* (Pall.) Herbert. Amaryllidaceae.

A bulbous herbaceous perennial, native from the Caucasus through central Asia, with awl-shaped leaves and terminal umbels of deep-blue or violet six-lobed flowers, which are borne in the spring.

For previous introduction see 107552.

107855 and 107856. *MUSCARI RACEMOSUM* (L.) Mill. Liliaceae.

A grape-hyacinth with five to six thick, almost cylindrical leaves about 5 inches long and dark-blue, fragrant flowers. Native to the Caucasus.

107857 to 107864. *TULIPA* spp. Liliaceae. Tulip.

107857. *TULIPA KUSCHKENSIS* B. Fedtsch.

A tulip about a foot high which has four to six undulate, sickle-shaped leaves with narrow white margins. The yellow flower, black at the base of the perianth segments, is about 2 inches long. Native to Turkistan.

For previous introduction see 107427.

107858. *TULIPA MICHELIANA* Hoog.

A tulip native to the Caspian region, with a pubescent scape 12 inches high. The lanceolate to linear-lanceolate leaves, usually four, are striped with brown and have undulate margins. The large single flowers are lilac scarlet and vermilion scarlet inside with black lanceolate blotches on the back.

For previous introduction see 106913.

107859. *TULIPA WILSONIANA* Hoog.

A dwarf tulip with narrow, purple-edged leaves and a deep-red flower on a stem 4 inches high. Native to Turkistan.

For previous introduction see 107428.

107860 to 107864.

The following numbers were received without labels.

107860. *TULIPA* sp.

107861. *TULIPA* sp.

107862. *TULIPA* sp.

107863. *TULIPA* sp.

107864. *TULIPA* sp.

107865 to 108014.

From the Union of Soviet Socialist Republics. Seeds collected in Turkistan by H. L. Westover and C. R. Enlow, Bureau of Plant Industry. Received November 2, 1934. Numbered in January 1935.

107865. *ACONITUM EXCELSUM* Reichb. Ranunculaceae.

No. 573. Alma Ata, foothills, July 23, 1934. A tall stout perennial with broadly palmate leaves and purple-lilac flowers nearly 1 inch long in an elongated raceme. Native to Siberia.

107866. *AEGILOPS SQUARROSA* L. Poaceae.

No. 656. Northeast of Alma Ata, July 25, 1934.

107867 to 107874. *AGROPYRON* spp. Poaceae. Wheatgrass.

107867. *AGROPYRON* sp.

No. 689. From the mountains surrounding Lake Issyk, July 26, 1934. Received under the name "brevisubulatum," for which a place of publication has not been found.

107868 and 107869. *AGROPYRON CANINUM* (L.) Beauv.

107868. No. 575. Mountains south of Alma Ata, July 23, 1934.

107869. No. 628. Mountains east of Alma Ata, July 24, 1934.

107870. *AGROPYRON CRISTATUM* (L.) Gaertn. Crested wheatgrass.

No. 557. On the steppe 40 miles west of Alma Ata.

107871. *AGROPYRON* sp.

No. 690. Near Lake Issyk, east of Alma Ata, July 25, 1934.

107872. *AGROPYRON SEMICOSTATUM* Nees.

No. 637. Lake Issyk Canyon in rocky soil, July 25, 1934.

107873. *AGROPYRON* sp.

No. 554. Alkali steppe 95 miles west of Alma Ata, July 29, 1934.

107874. *AGROPYRON* sp.

No. 560. Alkali steppe 95 miles west of Alma Ata, July 29, 1934.

107875 to 107877. *ALLIUM* spp. Liliaceae.

107875. *ALLIUM* sp.

No. 656. Alkali soil 100 miles west of Alma Ata, July 29, 1934. En route to Frunze.

107876. *ALLIUM* sp.

No. 595. Lake Issyk, east of Alma Ata, July 26, 1934.

107877. *ALLIUM* sp.

No. 688. Foothills southeast of Alma Ata, July 24, 1934.

107878. *ALTHAEA* sp. Malvaceae.

No. 648. From the roadside east of Alma Ata, July 24, 1934.

107879. *ALTHAEA NUDIFLORA* Lindl. Malvaceae.

No. 678. Alma Ata, July 26, 1934. A biennial 6 feet high, with large roundish cordate, three-lobed, rough-hairy leaves and white flowers. Native to central Asia.

For previous introduction see 105472.

107865 to 108014—Continued.

107880 and 107881. *ANDROPOGON ISCHAEMUM* L. Poaceae. Grass.

From the steppe northeast of Alma Ata, July 25, 1934. A leafy wild grass, 3 to 4 feet high, producing a large quantity of coarse feed.

For previous introduction see 81810.

107880. No. 621. 107881. No. 630.

107882. *ANDROSACE* sp. Primulaceae.

No. 598. Near Lake Issyk, east of Alma Ata, July 26, 1934.

107883. *ANDROSACE* sp. Primulaceae.

No. 603. Near Lake Issyk, east of Alma Ata, July 26, 1934.

107884. *ANEMONE NARCISSIFOLIA* L. Ranunculaceae.

No. 599. Near Lake Issyk, east of Alma Ata, July 26, 1934. A stout herbaceous perennial with stalked three- to five-parted, deeply cut basal leaves, sessile involucre leaves, and white flowers 1 inch across, with yellow anthers, in a small umbel. Native to Europe and Asia.

For previous introduction see 103175.

107885. *ANEMONE* sp. Ranunculaceae.

No. 605. Mountains of Lake Issyk, east of Alma Ata, July 26, 1934. A beautiful flowering plant.

107886 and 107887. *ANTHOXANTHUM ODORATUM* L. Poaceae. Sweet vernal grass.

107886. No. 601. Lake Issyk, east of Alma Ata, July 26, 1934.

107887. No. 661. Foothills southeast of Alma Ata, July 26, 1934.

107888 to 107890. *AQUILEGIA* spp. Ranunculaceae.

107888 and 107889. *AQUILEGIA KARELINI* Baker.

A perennial up to 2 feet high, with membranous, deeply lobed leaves and bright-blue or claret-purple flowers. Native to the Ala Tau Mountains.

107888. No. 643. Mountains south of Alma Ata, July 23, 1934.

107889. No. 681. Foothills southeast of Alma Ata, July 24, 1934.

107890. *AQUILEGIA* sp.

No. 600. Lake Issyk, east of Alma Ata, July 26, 1934.

107891. *ASTER ALPINUS* L. Asteraceae.

No. 597. Lake Issyk, east of Alma Ata, July 26, 1934. A perennial alpine, native to central Europe, with lanceolate, obtuse, hairy leaves and large sky-blue flowers.

107892. *ASTRAGALUS* sp.

No. 536. From a rocky slope of the Little Chimgan, July 15, 1934.

107893 to 107895. *AVENA* spp. Poaceae. Oats.

107893. *AVENA FATUA* L.

No. 617. Alma Ata Experiment Station, July 22, 1934.

107894 and 107895. *AVENA PUBESCENS* Huds.

From the mountains east of Alma Ata, July 24, 1934.

107865 to 108014—Continued.

107894. No. 655. 107895. No. 672.

107896. BERBERIS HETEROPODA Schrenk.
Berberidaceae. Turkistan barberry.

No. 674. Mountains south of Alma Ata, July 23, 1934. A handsome spreading shrub up to 6 feet high, with spines, when present, often 2 inches long; and broadly oval, pale blue-green, entire leaves an inch or two in length. The fragrant orange flowers are in five- to seven-flowered racemes, and the dark-blue berries are covered with a glaucous bloom. Native to Turkistan.

For previous introduction see 65238.

107897. BRACHYPODIUM PINNAEFUM (L.)
Beauv. Poaceae.

No. 627. From the foothills near Alma Ata, July 23, 1934. A perennial grass used for grazing.

For previous introduction see 106020.

107898 to 107901. BROMUS spp. Poaceae.
Brome grass.

107898. BROMUS INERMIS Leyss.

No. 618. From the steppe northeast of Alma Ata, July 25, 1934. Variety *sibiricus*.

107899. BROMUS sp.

No. 642. From the foothills near Alma Ata, July 23, 1934.

107900. BROMUS sp.

No. 562. From the alkali steppe 95 miles west of Alma Ata, July 29, 1934.

107901. BROMUS ARVENSIS L.

No. 610. From the mountains south of Alma Ata, July 23, 1934.

107902. CICER sp. Fabaceae.

No. 543. From the mountains near Alma Ata, July 27, 1934. Received under the name "Zangonicum," for which a place of publication has not been found.

107903 to 107905. CODONOPSIS OVATA Benth.
Campanulaceae.

A decumbent perennial up to 12 inches high, with small, ovate, acute or obtuse, hairy leaves less than an inch long. The bell-shaped flowers, about an inch long, white or pale blue speckled inside, are on long terminal peduncles. Native to the Himalayas.

107903. No. 548. Mountains above Lake
Issyk, near Alma Ata, July 26, 1934.107904. No. 647. Mountains near Alma
Ata, July 23, 1934. A form with
beautiful white bell-shaped flowers.107905. No. 659. Mountains east of
Alma Ata, July 24, 1934. A form
with blue-tinged white flowers.107906. CYNODON DACTYLON (L.) Pers.
Poaceae. Bermuda grass.

No. 556. Collected en route from Alma Ata to Frunze, July 29, 1934.

107907. DACTYLIS GLOMERATA L. Poaceae.
Orchard grass.

No. 654. From foothills en route from Alma Ata to Frunze, July 29, 1934.

107865 to 108014—Continued.

107908. DELPHINIUM sp. Ranunculaceae.
Larkspur.

No. 633. From the mountains south of Alma Ata, July 23, 1934. A form with blue flowers.

107909. DELPHINIUM sp. Ranunculaceae.
Larkspur.

No. 653. En route to Alma Ata, July 21, 1934. A form with yellow flowers.

107910 to 107912. ELYMUS spp. Poaceae.
Wild-rye.

107910 and 107911. ELYMUS SIBIRICUS L.

A tall grass with heavy overhanging heads; a promising grass for forage.

For previous introduction see 90139.

107910. No. 616. From the rocky
shore of Issyk Lake Canyon at 4,500
feet altitude, July 25, 1934.107911. No. 665. Issyk, east of Alma
Ata, July 25, 1934.107912. ELYMUS GIGANTEUS Vahl.
Siberian wild-rye.

No. 561. From the steppe 115 miles west of Alma Ata in alkali soil, July 29, 1934.

107913. EREMURUS ALTAIACUS (Pall.) Stev.
Liliaceae.

No. 682. Alma Ata, July 23, 1934. An ornamental desert plant with long linear leaves forming a rosette from which rises a columnar spike of star-shaped rosy-purple flowers.

107914. EREMURUS sp. Liliaceae.

No. 622. From foothills southeast of Alma Ata, July 24, 1934.

107915. ERYSIMUM sp. Brassicaceae.

No. 676. Near Lake Issyk, July 26, 1934. A plant with bright-orange flowers.

107916 to 107927. FESTUCA spp. Poaceae.
Fescue.107916. FESTUCA ELATIOR L.
Meadow fescue.

No. 641. Alma Ata Experiment Station, July 22, 1934.

107917. FESTUCA GIGANTEA (L.) Vill.
Great fescue.

No. 685. Foothills southeast of Alma Ata, July 24, 1934. A shady grass up to 3 feet high.

For previous introduction see 99125.

107918. FESTUCA ELATIOR L.
Meadow fescue.

No. 686. Alma Ata Experiment Station, July 22, 1934. A loosely tufted perennial grass with short creeping root-stalks and erect stems up to 4 feet high.

For previous introduction see 107056.

107919. FESTUCA sp.

No. 547. Mountains southeast of Alma Ata, July 24, 1934.

107920. FESTUCA OVINA DURIUSCULA (L.)
Koch.

No. 588. Foothills southeast of Alma Ata, July 24, 1934.

107865 to 108014—Continued.

107921. *FESTUCA OVINA* L.
No. 646. From the steppe northeast of Alma Ata, July 25, 1934.
107922. *FESTUCA RUBRA* L.
No. 619. Mountains east of Alma Ata, July 24, 1934.
107923. *FESTUCA* sp.
No. 582. Mountains southeast of Alma Ata, July 24, 1934.
107924. *FESTUCA ELATIOR* L.
No. 632. Issyk Lake Canyon at 4,500 feet altitude, July 25, 1934. Found among gravel and rocks.
107925. *FESTUCA OVINA* L.
No. 651. From a dry slope of the Little Alma Ata River, July 23, 1934.
107926. *FESTUCA* sp.
No. 559. From the steppe region 35 miles west of Alma Ata, July 29, 1934.
107927. *FESTUCA OVINA* L.
No. 580. Mountains east of Alma Ata, July 24, 1934.
107928. *AVENA* sp. Poaceae.
No. 594. July 26, 1934. Near Lake Issyk, east of Alma Ata, at 7,100 feet altitude.
107929. *FESTUCA* sp. Poaceae.
No. 649. Near Lake Issyk, east of Alma Ata, at 6,000 feet altitude, July 26, 1934.
107930. *FESTUCA ELATIOR* L. Poaceae.
No. 620. En route from Tashkent to Alma Ata, July 21, 1934. A bunch grass.
107931. *GERANIUM* sp. Geraniaceae.
No. 687. From Alma Ata, July 23, 1934.
107932. *HORDEUM BREVISUBULATUM* (Trin.) Link. Poaceae.
No. 698. Found in moist soil along the Karakol River in the mountains near Frunze, August 4, 1934.
107933. *IRIS ALBERTI* Regel. Iridaceae.
No. 606. Mountains south of Alma Ata, July 23, 1934. A bearded iris with glaucous, sword-shaped leaves about as long as the stem and purplish flowers, yellowish toward the base, nearly 2 inches long. Native to Turkistan.
107934. *ISOPYRUM ANEMONOIDES* Kar. and Kir. Ranunculaceae.
No. 593. Rocks of Lake Issyk, east of Alma Ata, July 26, 1934. A subalpine perennial with triternately incised leaves and small panicles of white flowers resembling those of anemone. Native to central Asia.
- 107935 to 107937. *IXIOLIRION* spp. Amarillidaceae.
107935. *IXIOLIRION TATARICUM* (Pall.) Herbert.
No. 623. East of Alma Ata, July 26, 1934.
For previous introduction and description see 107854.
107936. *IXIOLIRION* sp.
No. 609. Alma Ata, July 23, 1934.

107865 to 108014—Continued.

107937. *IXIOLIRION* sp.
No. 693. From Alma Ata, July 23, 1934.
107938. *JUNIPERUS* sp. Pinaceae.
No. 645. Near Lake Issyk at 7,000 feet altitude, July 26, 1934. A semiprostrate species.
107939. *KOELERIA CRISTATA* (L.) Pers. Poaceae. Grass.
No. 587. Mountains south of Alma Ata, July 24, 1934.
For previous introduction see 101660.
- 107940 to 107944. *LATHYRUS* spp. Fabaceae.
107940. *LATHYRUS GMELINI* (Fisch.) Fritsch.
No. 540. Foothills near Alma Ata, July 23, 1934. An excellent fodder plant. In protected situations, as among shrubs, this plant becomes 8 feet high, but it is usually between 3 and 4 feet.
For previous introduction see 32190.
107941. *LATHYRUS TUBEROSUS* L.
No. 612. Foothills near Alma Ata, July 23, 1934. A tuberous rooted lathyrus, native to northern Europe, which resembles the flat pea, *Lathyrus sylvestris*, but has red flowers.
For previous introduction see 91433.
107942. *LATHYRUS* sp.
No. 660. Alma Ata Experiment Station, July 22, 1934.
107943. *LATHYRUS PRATENSIS* L.
No. 635. Mountains south of Alma Ata, July 23, 1934. A form with yellow flowers.
107944. *LATHYRUS* sp.
No. 675. Mountains southeast of Alma Ata, July 24, 1934.
107945. *LIGULARIA MACROPHYLLA* DC. Asteraceae.
No. 625. South of Alma Ata, July 13, 1934. A hardy perennial 4 to 6 feet high, with large elliptic, dentate leaves a foot long and long panicles of yellow flowers. Used as a silage plant. Native to central Asia.
107946. *LONICERA HISPIDA* Pall. Caprifoliaceae. Honeysuckle.
No. 683. Alma Ata, July 23, 1934. A western Chinese shrub 3 to 5 feet high, with oblong leaves, yellowish flowers over an inch long subtended by whitish bracts nearly an inch long, and followed by oblong, bright-red berries.
For previous introduction see 76260.
107947. *MEDICAGO FALCATA* L. Fabaceae. Yellow-flowered alfalfa.
No. 650. East of Alma Ata, July 25, 1934.
107948. *MEDICAGO LUPULINA* L. Fabaceae. Black medick.
No. 664. Near the Little Alma Ata River, July 23, 1934.

107865 to 108014—Continued.

- 107949 to 107951. *MELICA* spp. Poaceae.
Grass.
107949. *MELICA* *ALTISSIMA* L.
No. 572. From foothills south of Alma Ata, July 23, 1934.
For previous introduction see 84455.
107950. *MELICA* *CILIATA* L.
No. 629. From dry slopes of mountains along the Little Alma Ata River, July 23, 1934.
For previous introduction see 84456.
107951. *MELICA* *CUPANI* Guss.
No. 591. From the mountains surrounding Lake Issyk, east of Alma Ata, July 26, 1934. A tall-growing species which seems to thrive in poor dry soil.
For previous introduction see 64954.
107952. *MELILOTUS* *OFFICINALIS* (L.) Lam. Fabaceae. Sweetclover.
No. 626. Alma Ata Experiment Station, July 22, 1934.
- 107953 and 107954. *MILIUM* *EFFUSUM* L. Poaceae. Millet grass.
For previous introduction see 84462.
107953. No. 611. From the mountains along the Little Alma Ata River, July 23, 1934.
107954. No. 673. Near Lake Issyk, east of Alma Ata, July 26, 1934.
107955. *MYRICARIA* *ALOPECUROIDES* Schrenk. Tamaricaceae.
No. 542. Near Lake Issyk, east of Alma Ata, July 26, 1934. A shrub with linear-lanceolate leaves and dense spikes of small pink flowers. Native to central Asia.
107956. *XYTROPIS* *ONYPHYLLA* (Pall.) DC. Fabaceae.
No. 574. From the foothills southeast of Alma Ata, July 24, 1934. Plants 6 to 12 inches high with roots 5 to 6 feet long, which thrive on poor dry soil.
For previous introduction see 107689.
107957. *PAEONIA* sp. Ranunculaceae.
No. 668. From the foothills south of Alma Ata, July 24, 1934. A hybrid of unknown parentage.
- 107958 to 107960. *PAPAVER* spp. Papaveraceae. Poppy.
107958. *PAPAVER* *CROCEUM* Ledeb.
No. 608. Near Lake Issyk, south of Alma Ata, July 26, 1934. A perennial poppy, native to rocky situations in central Asia. The leaves are pinnately divided, and the flowers are orange yellow.
107959. *PAPAVER* sp.
No. 666. Forty miles west of Alma Ata on very dry hills, July 24, 1934.
107960. *PAPAVER* *PAVONINUM* Schrenk.
No. 578. Stalinabad, Tajikistan, July 1, 1934. An annual poppy with hairy pinnately parted, oblong leaves and rather large, deep-pink flowers on long stems. Native to the region around Ala Kul, Siberia.

107865 to 108014—Continued.

107961. *PHALARIS* *ARUNDINACEA* L. Poaceae. Reed canary grass.
No. 570. From the mountains south of Alma Ata, July 23, 1934. A tall rough grass which is a good forage plant.
For previous introduction see 75349.
107962. *PHALARIS* sp. Poaceae. Grass.
No. 613. From the foothills near Alma Ata, July 23, 1934.
- 107963 to 107965. *PHLEUM* spp. Poaceae. Timothy.
107963. *PHLEUM* *ALPINUM* L.
No. 596. Near Lake Issyk, east of Alma Ata, July 26, 1935.
107964. *PHLEUM* *PHLEOIDES* (L.) Karst.
No. 590. From the mountains east of Alma Ata, July 24, 1934.
107965. *PHLEUM* sp.
No. 624. From the dry plains east of Alma Ata, July 25, 1934.
- 107966 to 107980. *POA* spp. Poaceae. Bluegrass.
107966. *POA* *ALPINA* L.
No. 652. From mountains surrounding Lake Issyk, July 26, 1934.
- 107967 and 107968. *POA* *BULBOSA* L.
107967. No. 553. From dry foothills 135 miles west of Alma Ata, July 29, 1934.
107968. No. 663. From the steppe northeast of Alma Ata, July 25, 1934.
- 107969 to 107971. *POA* *PRATENSIS* L. Kentucky bluegrass.
107969. No. 640. From mountains near Alma Ata at 4,000 feet altitude, July 24, 1934.
107970. No. 662. From foothills near Alma Ata, July 23, 1934.
107971. No. 657. Mountains south of Alma Ata, July 23, 1934.
107972. *POA* sp.
No. 604. Near Lake Issyk, east of Alma Ata, July 26, 1934.
107973. *POA* sp.
No. 667. Near Alma Ata, July 1934.
107974. *POA* sp.
No. 636. Mountains east of Alma Ata, July 24, 1934.
107975. *POA* sp.
No. 571. Mountains south of Alma Ata, July 23, 1934.
107976. *POA* sp.
No. 679. From a rocky slope in Lake Issyk Canyon at 4,500 feet altitude, July 25, 1934.
107977. *POA* sp.
No. 614. Lake Issyk region at 4,500 feet altitude, in rocky soil, July 25, 1934.
107978. *POA* *COMPRESSA* L.
No. 602. Lake Issyk, east of Alma Ata, July 26, 1934.

107865 to 108014—Continued.

107979. POA sp.
 No. 592. From the mountains near Lake Issyk, east of Alma Ata, July 26, 1934.
107980. POA sp.
 [No W. and E. number.] This seed was in a package with *Amygdalus* sp., which was collected July 15, 1934, on the Little Chingan, east of Uzbekistan.
107981. POLYGONUM SONGARICUM Schrenk. Polygonaceae.
 No. 639. Mountains of Alma Ata, July 23, 1934. A perennial over a foot high, with a thick rootstock, membranous ovate leaves about 3 inches long, and sessile racemes of purplish flowers. Native to central Asia.
107982. PRUNUS ARMENIACA L. Amygdalaceae. Apricot.
 No. 585. Tolgar, east of Alma Ata, July 26, 1934. Wild apricots.
- 107983 to 107985. PUCCINELLIA spp. Poaceae.
107983. PUCCINELLIA sp.
 No. 552. From the steppe region, 35 miles west of Alma Ata, July 29, 1934.
107984. PUCCINELLIA sp.
 No. 558. West of Alma Ata, 100 miles, in somewhat salty soil, July 29, 1934.
107985. PUCCINELLIA sp.
 No. 550. West of Alma Ata 100 miles, on somewhat salty soil, July 29, 1934.
107986. ROSA sp. Rosaceae. Rose.
 No. 586. Mountains of Lake Issyk, east of Alma Ata, July 26, 1934. A wild rose.
107987. ROSA sp. Rosaceae. Rose.
 No. 658. From near the Little Alma Ata River, July 23, 1934. A wild rose.
107988. RUMEX SONGARICUS Fisch. and Mey. Polygonaceae.
 No. 583. From the mountains near Lake Issyk, east of Alma Ata, July 26, 1934. An annual with oblong-ovate leaves, native to mountainous regions of central Asia.
107989. (Undetermined.)
 No. 563. From rocky mountain slopes, en route from Alma Ata to Frunze, July 29, 1934.
107990. SCABIOSA sp. Dipsacaceae.
 No. 654. East of Alma Ata, July 25, 1934.
107991. SILENE sp. Silenaceae.
 No. 564. En route from Alma Ata to Frunze, July 29, 1934. A rock flower.
- 107992 to 108001. STIPA spp. Poaceae. Feathergrass.
107992. STIPA CAPILLATA L.
 No. 577. From the steppe and foothills northeast of Alma Ata, July 25, 1934.
107993. STIPA CAPILLATA L.
 No. 576. From the foothills south-east of Alma Ata, July 24, 1934.

107865 to 108014—Continued.

107994. STIPA sp.
 No. 697. About 40 miles west of Alma Ata, July 29, 1934. A large bunch grass.
107995. STIPA sp.
 No. 579. From the mountains east of Alma Ata at 7,000 feet altitude, July 24, 1934.
107996. STIPA sp.
 No. 568. Along the railroad, east of Tulkibas, en route from Tashkent to Alma Ata, July 21, 1934.
107997. STIPA sp.
 No. 551. From dry foothills bordering the steppe, 135 miles west of Alma Ata, July 29, 1934.
107998. STIPA sp.
 No. 549. From the steppe, 38 miles west of Alma Ata, July 29, 1934.
107999. STIPA sp.
 No. 545. Along the railroad east of Samarakand, Uzbekistan, July 18, 1934.
108000. STIPA REDOWSKII Trin.
 No. 566. En route from Alma Ata to Frunze, July 29, 1934. A perennial bunch grass 1 to 3 feet high, from dry hills and plains. Native to central Asia.
108001. STIPA sp.
 No. 694. Along the railroad east of Tulkibas, en route from Tashkent to Alma Ata, July 21, 1934.
108002. THALICTRUM MINUS L. Ranunculaceae. Low meadowrue.
 No. 581. From the foothills near Alma Ata, July 23, 1934. A species 1 to 2 feet high, native to Europe, Asia, and northern Africa, with loose panicles of drooping yellow or greenish flowers.
 For previous introduction see 106906.
108003. THALICTRUM sp. Ranunculaceae.
 No. 634. Near Lake Issyk, July 26, 1934. Received under the name "setedum," for which a place of publication and description have not been found.
- 108004 to 108007. TRIFOLIUM spp. Fabaceae. Clover.
108004. TRIFOLIUM REPENS L. White clover.
 No. 631. Along the Little Alma Ata River, July 23, 1934.
108005. TRIFOLIUM PRATENSE L. Red clover.
 No. 569. Foothills near Alma Ata, July 23, 1934.
108006. TRIFOLIUM REPENS L. White clover.
 No. 677. Foothills near Alma Ata, July 23, 1934.
108007. TRIFOLIUM REPENS L. White clover.
 No. 692. Near Lake Issyk, east of Alma Ata, July 26, 1934.
108008. TRisetum sp. Poaceae. Grass.
 No. 639. Above Lake Issyk at 7,000 feet altitude, July 26, 1934.

107865 to 108014—Continued.

108009 to 108014. *VICIA* spp. Fabaceae.
Vetch.

108009. *VICIA SEPIUM* L.

No. 589. *Bush* vetch. From the foothills near Alma Ata, July 23, 1934. A perennial vetch native to Europe and Asia. It is semiupright or bushy in habit and is eaten by stock of all kinds.

For previous introduction see 52278.

108010 and 108011. *VICIA TENUIFOLIA* Roth.

A deep-rooted perennial, cut for hay, which thrives in very dry situations.

For previous introduction see 107129.

108010. No. 615. Foothills near Alma Ata, July 23, 1934.

108011. No. 537. Mountains south of Alma Ata, July 25, 1934.

108012. *VICIA* sp.

No. 538. Mountains south of Alma Ata, July 23, 1934.

108013. *VICIA* sp.

No. 644. Experiment station at Alma Ata, July 22, 1934.

108014. *VICIA* sp.

No. 670. Experiment station at Alma Ata, July 22, 1934.

108015. *LICANIA RIGIDA* Benth. Rosaceae.

From Ceará, Brazil. Seeds presented by H. A. Gardner, Institute of Paint and Varnish Research, Washington, D. C., through the Bureau of Chemistry and Soils. Received March 28, 1935.

A large tropical tree of the Brazilian forests, with rigid leathery oblong leaves, 3 to 5 inches long, and shining green above. The greenish, ovoid-cylindrical fruits, about 2 inches long, yield an oil known as oiticica oil, that is used in the paint and varnish industry.

For previous introduction see 106500.

108016. *AECHMEA MEXICANA* Baker. Bromeliaceae.

From Mexico. Plants purchased from Dr. C. A. Purpus, Zacuanam, Huatusco. Numbered in January 1935.

A tropical epiphyte, allied to the billbergias, with a basal rosette of large, long, fine-toothed leaves and a lax panicle of crimson flowers borne on a long stalk arising from the center of the plant. Native to Mexico.

108017. *CASTANEA* sp. Fagaceae.

From Indo-China. Seeds presented by M. Poilane, Annam, Institut des Recherches Agronomiques de l'Indochine, Division de Botanique. Numbered in January 1935.

108018. *EUPHORBIA* sp. Euphorbiaceae.

From Madagascar. Seeds presented by Miss Bargyla Rateaver, Fort Dauphin. Received March 22, 1935.

Introduced for Department specialists.

108019. *EUPHORBIA* sp.

From Mexico. Seeds presented by the V. D. Anderson Co., Cleveland, Ohio. Received April 9, 1935.

Introduced for Department specialists.

108020. *LIVISTONA ROTUNDFOLIA* (Lam.) Mart. Phoenicaceae. Java fan palm.

From Cuba. Plants presented by Robert M. Grey, Superintendent, Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos, through F. G. Walsingham. Received October 29, 1934. Numbered in January 1935.

Seedlings from seeds grown in Cuba. An erect fan-leaved palm, with a trunk ultimately about 50 feet high and 18 inches in diameter. The roundish leaves, with 60 to 80 segments, are 3 to 5 feet across.

For previous introduction see 104696.

108021. *SABAL MAURITIAEFORMIS* (Karst.) Griseb. and Wendl. Phoenicaceae.

From Cuba. Seedlings presented by the Department of Agriculture, British Guiana, through Robert M. Grey, Superintendent of the Atkins Institution of the Arnold Arboretum, Soledad, Cienfuegos. Received October 9, 1934.

A handsome West Indian fan-leaved palm with a trunk 60 to 80 feet in height and over a foot in diameter and large roundish leaves multifold to the middle, up to 12 feet in diameter. The black fruits are about the size of peas.

For previous introduction see 104703.

108022. *MANGIFERA INDICA* L. Anacardiaceae. Mango.

From Trinidad, British West Indies. Seeds presented by Dr. Doris M. Cochran, assistant curator of reptiles, United States National Museum. Numbered in January 1935.

Introduced for Department specialists.

108023. *EULOPHIA ANDAMENSIS* Reichb. Orchidaceae.

From Siam. Bulbs presented by Dr. H. M. Smith, Ministry of Lands and Agriculture, Bureau of Fisheries, Bangkok. Received January 5, 1935.

A terrestrial orchid, native to the Andaman Islands, with oblong-lanceolate acuminate leaves.

108024. *PHYLLOSTACHYS* sp. Poaceae.

From China. Plants presented by the Lingnan University, Canton. Numbered in January 1935.

No. 7484.

108025 to 108119.

From the Union of Soviet Socialist Republics. Seeds collected in Turkistan by H. L. Westover and C. R. Enlow, Bureau of Plant Industry. Received November 5, 1934. Numbered in January 1935.

Introduced for Department specialists.

108025. *ACONITUM* sp. Ranunculaceae.

No. 791. On the mountains along the Karakol River near Lake Issyk, August 4, 1934.

108026 to 108037. *AGROPYRON* spp. Poaceae. Wheatgrass.

108026 to 108032. *AGROPYRON CRISTATUM* (L.) Gaertn. Crested wheatgrass.

108026. No. 713. From dry clay foothills south of Frunze, July 31, 1934.

108025 to 108119—Continued.

108027. No. 726. Dry flat slope, Jetty Augus near Lake Issyk, August 3, 1934.
